While this act was under consideration in Congress, Governor Bullock was very active in his endeavors to influence the action of the members in accordance with his own views. He published a long letter dated May 21st, and addressed—"To the Republican Senators and Representatives in Congress who sustain the reconstruction acts." It was an argument on the general subject of the political condition of the State and the restrictions necessary for future security. Its statements were not allowed to pass unchallenged, but a reply was published by Hon. Nelson Tift, on the 4th of June. A variety of other documents and pamphlets were circulated, and the zealous Chief Magistrate of the State was even accused of using the public funds to forward his object, and of attempting to bribe several members of Congress to give their votes in favor of his schemes. These charges were never sufficiently substantiated, but it is quite certain that both parties used their utmost efforts, both at Washington and in the State of Georgia, to carry out their own designs. The result, as given above, was generally regarded as a triumph of what was popularly known as the anti-Bullock party.

The Legislature reassembled according to the terms of its adjournment, on the 6th of July, but at once took a recess until the 12th, to await the action of Congress. Hearing nothing definite from Washington, it then appointed its standing committees and proceeded to general legislation. On the 18th the Governor submitted the following message:

ATLANTA, July 18, 1870.

To the General Assembly.

GENTLEMEN: Unofficial information has been received, announcing the passage by Congress, and the approval by the President, of an act to admit Georgia to representation in Congress. An official copy of the act will doubtless be received from the Secretary of State of the United States within a few days.

The act having been adopted during the last hours of the session, Congress adjourned without having

admitted Senators or Representatives. By section 5 of the Reconstruction Act of March 2, 1867, the "actual admission of Senators and Representatives is made a condition precedent to the abrogation of military authority," and, unless otherwise ordered by the President, the military status will continue until the admission of Senators and Representatives, which will, without doubt, take place upon the reassembling of Congress in December next. But I am informed that the general commanding will make no objection to the General Assembly proceeding with legislation.

RUFUS B. BULLOCK.

The Legislature continued its sessions until the 25th of October, when it was adjourned by a proclamation of the Governor, in consequence of the failure of the two Houses to agree on a time for adjournment. A great number of acts were passed relating to the internal affairs of the State, only a few of which are of general interest. The subject occupying the largest share of attention was that of holding a State election in November, in accordance with the provisions of the constitution. A portion of the members contended that the government of the State was provisional until it was admitted to representation in Congress, and that the regular term of office of all persons elected in 1868 should date from the time of such admission. This would render an election in 1870 unnecessary, and continue all the State officials in their several positions two years beyond the time contemplated by the people at the time of their election. It was even claimed that the act of Congress admitting the State declared against the holding of an election in November of this year. A resolution, which was the text of a long and somewhat virulent debate, declared that the General Assembly, after its adjournment, should not meet again until the first of January, 1872, that no election for members of the General Assembly should take place until November, 1872, and that all officers should remain in office until after such election. It was soon found that this policy would not receive the countenance of the best men even of the Republican party in the State, and that it had no chance of being sustained at Washington. Several leading citizens, including H. P. Farrow, Senator-elect to Congress, and Nelson Tift, a Democrat elected for Representative in Congress in 1868, addressed letters to the members of the Legislature advising against the passage of the "prolongation resolution," as it was called, and public meetings were held in different parts of the State to protest against the attempt to perpetuate any person in office beyond the period for which he was chosen. The argument in all cases was the very obvious one that the whole matter of elections was settled by the constitution of 1868, and the effect of the late act of Congress was to forbid any departure from the mandates of that instrument. The subject continued under discussion several weeks, and numerous substitutes were offered in place of the original resolution, without bringing about

a definite settlement of the question. Finally, several prominent members appealed to Amos T. Ackerman, a citizen of Georgia, who had recently been appointed to the position of Attorney-General of the United States, for his opinion regarding the duty of the Legislature in the matter. He replied at considerable length, under date of August 8th. "The constitution of Georgia," he said, "had been, for all practical, legal, and political purposes, the fundamental State law ever since July, 1868;" and, whether the government was regarded as provisional or not, that instrument must control the affairs of the State, except when set aside by the "paramount authority exercised by the national Legislature." That constitution had provided the time of holding elections and fixed upon the terms of office in the State. If any one, elected for two years in 1868, should serve after 1870, he would not be serving "as the agent of the people, but by virtue of an unprecedented usurpation of his own." With regard to the apprehension that the Republican party would lose control of the State, if an election were held this year, he said: "We may better lose the State than keep it wrongfully. If we lose the State in a fair election, though it may be disagreeable, yet we shall have no right to complain. It is one of a freeman's privileges to vote perversely when so minded, and, if the majority choose so to vote, the rest of us must submit for the time, and trust that reflection and experience will bring them in the end to sounder politics. * * * But we shall not lose the State in a fair election, if our party shall be organized with tolerable efficiency, shall put forward suitable men for office, and shall take a stand on no false ground, that is, no ground that will isolate us from the Republicans of the whole country. Let the party be properly organized; let it be managed in no individual interests; let it commit itself sternly, thoroughly, and boldly, to an economical administration of the State government, to the cause of popular education, to an energetic administration of the local law, to the principles of the Republican party of the nation without abatement, without exception, without any compromises with local prejudice, and we shall not fail if the election be fair. But will the election be fair? Here is the serious rub. An unfair election is worse than no election. I have not forgotten the atrocities of November, 1868. But I trust that the Democratic frenzy, which then expressed itself in one of the most horrible pages that has ever been written in the history of Georgia, has subsided. If our people have not been brought to reason, moderation, and fairness, by two years more of reflection, two years of general prosperity, almost two years of liberal and just national administration, when will they come to reason? Let us try the experiment of trusting them. At least, let us prepare to try it. If the savage disposition of 1868 should reappear in formidable strength,

then there will be a reason, which does not now exist, for postponing the election. If the election should be held, and should be grossly unfair, perhaps some lawful means of correcting the wrong may be found, either in the State or out of the State. However that may be, it does not become us to do wrong for fear that our adversaries will do worse. Hitherto the excess of wrong has been immensely on their side. Let us leave it there."

His conclusion is as follows: "For these reasons, I think that an election should be held this year. The Legislature has control, under the constitution, of the particular time of the election, provided it shall not be so long deferred as to extend the terms beyond the constitutional period. I see no grave objection to a postponement of the election until about the 20th of December. By that time, organization could be complete. Legislation, if any is necessary, to secure fairness in the elections, could be perfected; and preparation could be made for enforcing it. There would be time, too, after the commencement of next session, for that body to prohibit the election if it discovered that the people of Georgia had mistaken its will."

An election law was subsequently framed in accordance with this advice, and, after considerable discussion, finally adopted on the 8d of October. This provides "that an election shall be held in this State, beginning on the 20th day of December, 1870, and ending on the 22d of said month of December, 1870, for members of Congress to serve during the unexpired term of the Forty-first Congress of the United States, and for members of the Forty-second Congress; for Senators in the State Senate from each district numbered in the constitution with an odd number; for members of the House of Representatives of the General Assembly; for Sheriffs, Clerks of the Superior Court, Tax Receivers and Tax Collectors, County Treasurers, Coroners, and County Surveyors, of the several counties of this State."

This was to be managed and superintended at the several county court-houses, or in the city election precincts, by five managers for each precinct, three of whom were to be appointed by the Governor, and two by the ordinary of the county. These managers are authorized to perform the duties ordinarily required in holding elections, and to preserve order at and near the polls, but they have "no power to refuse ballots of any male person of apparent full age, a resident of the county, who has not previously voted at the said election." It is further provided that "they shall not permit any person to challenge any vote, or hinder, or delay, or interfere with any other person in the free and speedy casting of his ballot." Another section declares:

SEC. 19. Nothing in this act prohibiting challenges at the polls shall be construed to authorize any one to vote who is not under the constitution a qualified

voter in the county of the election; but all persons not duly qualified to vote are, and shall continue to be, subject to all the pains and penalties fixed by law in case they vote illegally.

No provision, however, is made for the detection of fraudulent voters. Ample powers are given to the managers to prevent riots and disturbances, and all sheriffs, constables, and police officers, are for the time being made subject to their orders. They have power by parole to order arrests, and the officers under their direction are required to make such arrests without warrants. Full directions are given for receiving and counting the ballots.

Sec. 12. It shall be the duty of said managers to receive each ballot and deposit the same in a ballot-box; and it shall not be lawful for either of them, or for any clerk, to open any closed ballot until the polls are closed and the counting of the votes is commenced.

Sec. 13. It shall be the duty of said managers to prevent any person, except themselves and the three clerks by them to be appointed and sworn, to remain in the room when the ballots are received, so near the ballot-box or the polling-place as to examine the tickets or to handle any ticket, and they shall have the same power to enforce this as other duties herein cast upon them.

Sec. 14. The said managers may select three competent persons to act as clerks in keeping the list of voters and tally-sheets, but said clerks shall not be permitted to handle any ballot or examine the same.

Sec. 15. One of said managers shall receive the ballots from the voters and hand them to a second, who shall deposit the same in the box, and at no time shall any vote be received unless there be at least three of said managers present.

Sec. 16. Said managers, clerks, and officers, except police officers actually on duty, shall receive from the county treasurer three dollars for each day's duty at said election.

Sec. 17. It shall be in the power of said managers, or any three of them, to fine any sheriff, deputy sheriff, marshal, or police officer, not more than one hundred dollars, as for contempt, if he fail to obey any lawful order of said managers, or either of them, for the enforcement of the laws for keeping the peace, preserving order, and protecting the freedom of election, on the day of the election.

An oath is to be taken that these duties will be faithfully performed, and every fraudulent practice on the part of the managers is made a misdemeanor and punishable as such.

The financial condition of the State also required considerable attention in the Legislature. It was not such as to give any apprehension as to the solvency of the Treasury, but the quarrels between the Governor and Treasurer, and the uncertainty which existed with regard to the actual treatment of the public funds and the State debt, had undoubtedly injured the credit of the Commonwealth. Moreover, the action of the Legislature since the war had not served to increase the satisfaction of the people with the management of the public finances, or the confidence of others in the soundness of their condition. The debt amounted to only \$6,014,500, and had not been increased since 1867, while the State possessed available assets, which, according to the statement of the Governor, would sell at public auction for more than \$12,000,000; but a portion of this in-

debtedness was overdue, with no provision for its payment, and the greater part consisted of currency bonds bearing seven per cent. currency interest, and carrying a special mortgage on the Western and Atlantic Railroad. In accordance with a recommendation of the Governor, an act was now passed to authorize the issue of new bonds, to redeem those which had fallen due, and to fund the old currency bonds. These new bonds bear seven per cent. interest in gold, payable quarterly, and are redeemable in gold at the end of twenty years. This act may be said to place the finances of the State on a solid basis. No official statement has been made of the receipts and expenditures of the government for 1870, but in 1869 the former amounted to \$2,183,900.51 and the latter to \$1,857,825.98. On the 15th of January, 1870, there was a balance on hand of \$441,960.18. The Legislature during its session provided for levying and collecting a tax for the support of the government for the year 1870. It also authorized a lease of the State Railroad, known as the Atlantic and Western, at a monthly rental of not less than \$25,000.

Toward the close of the session an act was passed providing that, "in all suits pending or hereafter brought in or before any court in this State, founded upon any debt or contract made or implied before the first day of June, 1865, or upon any debt or contract in renewal thereof, it shall not be lawful for the plaintiff to have a verdict or judgment in his favor until he has made it clearly appear, to the tribunal trying the same, that all the legal taxes chargeable upon the same have been duly paid for each year since the making or implying of said debt or contract;" and that, "in all suits now pending, or hereafter to be brought in any court in this State, founded on any such contract, or upon any debt in renewal thereof, it shall be lawful for the defendant to plead and prove in defence, and as an offset to the same, any losses the said defendant may have suffered by or in consequence of the late war against the United States, by the people of this and other States, whether said losses be from the emancipation of slaves, the destruction or depreciation of property, or in any other way be fairly caused by said war and the results thereof."

Another important matter, disposed of by the Legislature during this session, was that of establishing a system of public education. First of all, an investigation was ordered respecting the condition of the school-fund, and it was ascertained that that fund amounted to \$242,000 and was secured by \$268,000 of seven per cent. bonds. An act was then passed, setting apart and securing this amount to the sole purpose of promoting popular education. This was followed by a bill "to establish a system of public instruction." This provides for a State Board of Education, to consist of the Governor, Attorney-General, Secretary of State, Comptroller-General, and State School Commissioner, which is to hold meetings at

the call of its presiding officer, and have the charge and control of the school property and funds of the State, which shall be confided to the State Treasurer for safe keeping. The board is also authorized to prescribe all text-books and books of reference to be used in the common schools, "provided that the Bible shall not be excluded from the public schools," and is required to make a report to the Legislature, at every annual session, "of all the doings of said board, with such observations upon the condition and efficiency of the system of popular education, and such suggestions as to the most practicable means of extending and improving it, as the experience and reflection of the board may dictate." The State School Commissioner is to be appointed by the Governor, and confirmed by the Senate, and is charged with the "administration of the system of public instruction and a general superintendence of the business relating to the common schools of the State, and of the school funds and school revenues set apart and appropriated for their support." He is required "to visit, at least once annually in their respective senatorial districts, the county commissioners in said senatorial districts, and who are hereby required to be present at such time and place as may be designated by the State Commissioner, for the purpose of examining into and consulting upon the school interests in said district, superintending and encouraging teachers' institutes, conferring with school officers, and counselling and delivering lectures on topics calculated to subserve the interest of popular education." He must also make an annual report of his labors and observations, including a statement of the number of schools of various grades, and the number of scholars in attendance, their sex and color, and the studies pursued, together with a full account of all expenditures, and the plans and improvements adopted, and "such other information, relative to the educational interests of the State, as he may think important." Provision is also made for county Boards of Education, and each county and incorporated city or town is to constitute one district, "for all purposes connected with the general interests of education in the county," to be divided into sub-districts by the county boards, in each of which a school is to be established of such a grade as the public good may require. Each county Board of Education is to "consist of one person from each militia district, and one person from each ward in any city in the county, and that in cities not laid off in wards, of three commissioners elected by the legal voters thereof, at the regular election for members of the General Assembly. The first board shall be elected on the eighth day of November, eighteen hundred and seventy, and shall hold their office for two years, or until successors are elected." They are to hold meetings once in three months, and to have "care and custody of all school-houses, sites, school libraries,

apparatus, or other property belonging to the district as now organized, or which may hereafter be organized, within the limits of their jurisdiction, with all power to control the same in such manner as they may think will best subserve the interest of common schools and the cause of education;" and may "establish in their respective counties such graded schools as they may deem proper, with full power in respect to such schools to employ, pay, and dismiss teachers; to build, repair, and furnish the necessary school-books, purchase or lease sites therefor, or rent suitable rooms, and make all other necessary provisions relative to such schools as they may deem proper; and it shall be the duty of said Board of Education to exercise all the powers conferred on local trustees, in respect to sub-district schools, whenever such local trustees shall neglect to discharge their duties in any sub-district, as required by this act; and it shall also be the further duty of said board to prescribe such rules and regulations for the government of schools within their jurisdiction, consistent with the regulations prescribed by the State Commissioners for the management of the same."

The county boards also examine and license all teachers. "If, from the ratio of correct answers, and other evidences disclosed by the examination, the applicant is found to possess knowledge which is sufficient, in the estimation of the board, to enable said applicant to successfully teach, in a common school of the State, orthography, reading, writing, arithmetic, English grammar, and geography, and to govern such a school, said commissioners shall give to said applicant a license of the first, second, or third grade, according to the ratio of correct answers, and other evidences of qualification, given upon said examination—the standard of which grade of license shall be fixed by the State Commissioner; and said license shall be good for one, two, or three years, according to its grade, and all applicants before being licensed shall produce to the commissioner satisfactory evidence of good moral character."

Among other acts of the Legislature, of minor importance, was one completing the purchase of the Kimball Opera-House at Atlanta, for the uses of a State capitol. The sum paid for this building was \$380,000, of which the city of Atlanta contributed \$180,000. A bill making some important changes with regard to the municipal election of the city of Savannah was vetoed by the Governor, and failed to become a law.

The election occurred on the appointed days, and resulted in the choice of five Democrats and two Republicans as members of Congress for the remainder of the Forty-first and for the Forty-second Congress. Those elected to the Forty-first Congress were subsequently admitted to their seats. The credentials of the Senators-elect were referred to the Judiciary Committee of the Senate, and three reports

were made. The majority were in favor of admitting Mr. Joshua Hill, and rejecting the claims of Messrs. Farrow and Whiteley. Mr. Miller they believed ineligible on account of having served as a surgeon in the Southern army. The minority reported in favor of Messrs. Farrow and Whiteley, while one member, Mr. Thurman, agreed with the majority with regard to the claims of Mr. Hill, but believed Miller also should be admitted. The majority report was adopted, and Mr. Hill sworn in as a Senator, the first which the State had had in Congress since 1861.

The general prosperity of the State has been greatly retarded by its political condition.

The Commissioners of Immigration, elected in 1869, zealously distributed circulars both in this country and in Europe, one of them going abroad for the purpose, and remaining fourteen months in Germany, but the practical results are not as yet very encouraging. In their report, rendered in August, 1870, the commissioners enumerate many hinderances to the work of securing immigrants for the State.

The population of the various counties of the State, according to the Federal census of 1870, is set forth in the following table. For the sake of comparison, the figures of the next preceding enumeration are given in a parallel column:

The following table of the agricultural products of the State covers the year 1869, but the figures are the latest to be obtained:

PRODUCTS.	Acres.	Bushels.	Value per bushel.
Wheat.....	205,344	2,170,000	\$1.05
Rye.....	11,550	75,000	1.51
Oats.....	97,550	1,500,000	.55
Corn.....	2,505,000	27,500,000	1.31
Barley.....	551	12,500	1.55
Potatoes.....	4,055	245,000	1.40

The same year 45,000 tons of hay, and 1,955,215 bushels of beans and peas, were raised. The whole number of acres of improved land in the State is 8,052,755. The

number of domestic animals in 1869 was as follows: Horses, 195,800; mules and asses, 200,150; milch-cows, 301,180; young cattle, 780,350; sheep, 850,212; swine, 2,150,300; value of domestic animals, \$45,372,734.

An agricultural fair was held at Atlanta in October, which was pronounced to be the most successful ever held in the State.

GERMAN-FRENCH WAR, THE.—On the 30th of June, the Prime-Minister of France, Emile Olivier, officially declared in the Corps Législatif that peace was more secure than ever. The satisfaction with which all Europe received this assurance lasted a very short time. Two days later the political horizon

was covered with a dark war-cloud, and, two weeks later, a war was formally declared, which was to be one of the greatest conflicts of the nineteenth century.

Rarely has a great war ostensibly arisen out of a more groundless pretext. The Provisional Government of Spain, after several unsuccessful attempts to induce a foreign prince to accept the Spanish crown, had resolved (July 4th) to propose to the Cortes Prince Leopold of Hohenzollern-Sigmaringen as King of Spain. In Paris this news produced great excitement. Two of the ministers, the Prime-Minister and the Duke de Gramont, declared (July 6th) in the Corps Législatif, that the candidacy of a prince of the house of Hohenzollern, agreed upon without the knowledge of the French Government, would be injurious to the honor and the influence of the French nation. In vain did a dispatch (July 7th) of the Spanish Minister of Foreign Affairs, Sagasta, assure France that the Prince of Hohenzollern was the free choice of the Spanish Government and had been elected without the coöperation of, or previous negotiation with, any other power of Europe. France demanded the formal withdrawal of the candidate, on the ground that the occupation of the throne of Spain by a prince of Hohenzollern was incompatible with her interests. The French ambassador at the court of Prussia, Count Benedetti, was instructed to demand (July 9th) of King William, who was at that time staying at Ems, to forbid the Prince of Hohenzollern to accept the Spanish crown. The demand met with a flat refusal; the King replying, that he had no right to give orders to a prince of Hohenzollern who was of age. At the same time (July 10th), a circular dispatch of the Prussian Government, addressed to the representatives of Prussia near the German Governments, made known that the Government of Prussia had no part whatever in the selection of Prince Leopold to the Spanish crown. As the French Government was not satisfied with the official declarations given by the Governments of Spain and Prussia, the situation appeared to become very grave. All fear of a war seemed, however, to be dispelled when (July 12th) Prince Leopold of his own accord declined to be a candidate for the crown. Thus, it was thought, all that France claimed had been conceded, but, to the utmost surprise of all Europe, the Duke de Gramont notified the ambassador of Prussia, Baron von Werther, that France was not satisfied, and that King William in an autograph letter to the Emperor Napoleon must guarantee that no Prince of Hohenzollern would be, in future, a candidate for the Spanish throne. As Count Bismarck, to whom these new claims of France were communicated by Baron von Werther, declined to lay them before the King, Count Benedetti obtruded himself into the presence of the King in a public walk, at Ems, to renew them in an imperious manner. The King, with great

indignation, refused to listen to the demands of the ambassador, who was notified by one of the adjutants of the King that he would not receive another audience about this affair.

On the next day, July 14th, Baron von Werther was recalled from Paris, and Count Benedetti from Ems. Military preparations on the grandest scale were at once made in both countries, and a frantic war-excitement seized the two hostile nations. King William (July 15th) returned to Berlin, where he was greeted with the wildest enthusiasm. Numerous addresses from all parts of Germany assured the King of the warmest approval of his attitude by the German people. On the 16th of July the Federal Council of the North-German Confederation met in Berlin and unanimously recognized the necessity of energetically repelling "the arrogance of France." Orders were at the same time given to mobilize not only the army of the North-German Confederation, but also those of the South-German States, which, according to the treaties of 1866, are in case of war placed under the supreme command of the King of Prussia. The Governments of South Germany, contrary to the expectation of France, promptly declared their readiness to fulfil the stipulation of the military treaties and to join the North-German Confederation in the war against her. In the French Corps Législatif, meanwhile, the Duke de Gramont had declared (July 15th) the conduct of Prussia to be unsatisfactory, and an affront to the honor and dignity of France. He considered that a *casus belli* had arisen. Emile Olivier, in the name of the Government, demanded the arming of the Garde Mobile, 500,000,000 francs for the land army, and 16,000,000 for the navy, all of which demands were granted by the Corps Législatif, only a few votes being given against them. The Senate (July 16th) unanimously granted the desired credit, and in a body waited upon the Emperor at St. Cloud, when its president thanked his Majesty for the steps which had been taken to vindicate the honor of France. An offer of mediation made by the English ambassador at Berlin, Lord Loftus, was declined by Count Bismarck, so long as France should not declare her readiness to accept the mediation of England.

On the 19th of July, the French chargé d'affaires, Le Sourd, formally presented to Count Bismarck the French declaration of war. It rests upon the following basis: 1. The insult offered at Ems to Count Benedetti, the French minister, and its approval by the Prussian Government. 2. The refusal of the King of Prussia to compel the withdrawal of Prince Leopold's name as a candidate for the Spanish throne; and 3. The fact that the King persisted in giving the prince liberty to accept the throne.

Immediately after the presentation of the declaration of war, the chancery of the French embassy at Berlin and the chancery of the

North-German embassy at Paris ceased their functions; the French ambassadors at Munich, Stuttgart, Karlsruhe, and Dresden, received their passports. The protection of the Germans in France was accepted by the ambassador of the United States; while the English ambassador in Prussia charged himself with the protection of the French in Germany. One more effort at mediation was made by the Pope, who wrote as follows to the King of Prussia, an identical letter being sent to the Emperor of France:

YOUR MAJESTY: In the present grave circumstances it may appear an unusual thing to receive a letter from me; but, as the vicar on earth of God and peace, I cannot do less than offer my mediation. It is my desire to witness the cessation of warlike preparations and to stop the evils, their inevitable consequences. My mediation is that of a sovereign whose small dominion excites no jealousy, and who inspires confidence by the moral and religious influence he personifies. May God lend an ear to my wishes, and listen also to those I form for your Majesty, to whom I would be united in the bonds of charity.

PIUS.

Given at the Vatican, *July 22, 1870.*

The King replied as follows:

MOST AUGUST PONTIFF: I am not surprised, but profoundly moved, at the touching words traced by your hand. They cause the voice of God and of peace to be heard. How could my heart refuse to listen to so powerful an appeal!

God witnesses that neither I nor my people devised or provoked war. Obeying the sacred duties which God imposes on sovereigns and nations, we take up the sword to defend the independence and honor of our country, ready to lay it down the moment those treasures are secure.

If your Holiness could offer me, from him who so unexpectedly declared war, assurances of sincerely pacific dispositions and guarantees against a similar attempt upon the peace and tranquillity of Europe, it certainly will not be I who will refuse to receive them from your venerable hands, united as I am with you in bonds of Christian charity and sincere friendship.

WILLIAM.

As the Emperor of France did not offer the assurances demanded by King William, the mediatorial offer of the Pope remained without results.

The speculations as to the attitude of the other powers were soon set at rest by formal declarations of neutrality; Belgium, Holland, and Switzerland, called out a considerable number of troops, to enforce their neutrality. France and Prussia, in turn, assured these states that their neutrality would be respected. The belligerent Governments continued for a time to issue diplomatic notes explanatory of the cause of war, and charging each other with duplicity and falsehood. None of these diplomatic documents produced so profound an impression as the publication by Count Bismarck of a secret treaty which, he stated, the French ambassador in 1866 had submitted to Prussia, and which proposed the concurrence of France in the unity of all Germany under the leadership of Prussia, in case Prussia should agree to the annexation of Belgium to France. In order to prevent any denial of his declara-

tion, Count Bismarck caused the photographic publication of the proposed treaty in the very handwriting of Benedetti. The reply of Benedetti, in the *Journal Officiel* of Paris, of July 29th, that the project of annexing Belgium to France did not proceed from Louis Napoleon, but from the Prussian Government, and that Count Bismarck dictated to him the articles of treaty, was regarded by public opinion as a more subtle than plausible subterfuge. When the war was formally declared, the fear was widely entertained in Germany that the eagerness of France to precipitate so colossal a contest indicated a very forward state of preparation on her part, and made an invasion of German soil by a French army at the commencement of the war probable. A great relief was therefore felt when, at the end of July, the German army was concentrated on the French frontier without finding an invading force to repel. At the beginning of August, an immense German force was guarding the border of the Prussian and the Hessian Rhine-provinces, the Bavarian Palatinate, and the grand-duchy of Baden. The commander-in-chief of the entire army was King William of Prussia, who, on the 31st of July, in company with Count Bismarck, the Minister of War, Von Roon, and General von Moltke, left Berlin to join the advance. General von Moltke was chief of the general staff of the entire German force, which was divided into three large armies. The first, or the right wing, consisting of the First, Seventh, Eighth, and Ninth Army Corps of Northern Germany, and the troops of Hesse-Darmstadt, was commanded by General Charles Frederick von Steinmetz. The second or centre, embracing the Guards, and the Second, Third, Fourth, Tenth, and Twelfth Army Corps of Northern Germany, was under the command of Prince Frederick Charles of Prussia. The Crown Prince of Prussia received the command of the left wing, consisting of the Fifth, Sixth, and Eleventh North-German corps, and the troops of Bavaria, Württemberg, and Baden. In addition to these three armies, there was a considerable force retained for the defence of the German coasts under the command of General Vogel von Falkenstein, and a reserve army, called the Army of the North, formed under the command of the Grand-duke of Mecklenburg.

The French army was under the command of the Emperor. General Leboeuf, Minister of War, was chief of the general staff. The troops ready for the field were divided into the Corps de Garde, commanded by General Bourbaki, and seven army corps, under the command of Marshal MacMahon, General Frossard, Marshal Bazaine, General de l'Admirault, General de Failly, Marshal Canrobert, and General Felix Douay. A few days later Marshal Bazaine was made the acting commander-in-chief, with his headquarters at Metz, and with the Army of the North (including the Fourth, Second, and Third Corps) under his immediate direction, while

Wm. W. W.

Marshal MacMahon was placed at the head of the Army of the South, consisting of the Fifth Corps, and Marshal Canrobert received the command of the Army of Reserve.

Immediately after the declaration of war, a few French regiments, which were collected at Forbach, endeavored, by repeated reconnoissances, to ascertain the strength of the Prussian garrison of Saarbrücken, and to interrupt the connection between this town and the fortress of Saar-Louis. On July 28d, the French

endeavored to take possession of the bridge near Wehrden, over the Saar, but they were driven back by the fire of the Prussians into the woods toward Clarenthal. Three French companies, which for the same purpose marched toward Gersweiler, were repulsed by Prussian fusileers, who were guarding the railroad bridge near Burdach, with a loss of eleven killed and wounded. Thirty Prussian uhlands burst the railroad tunnel between Saargemünd and Bitsch, thus for a time making the road

from Forbach to Hagonsau unavailable. On July 31st the French were repulsed with some loss near Ludweiler. On the next day they mounted seven pieces of artillery on the heights of Spichenen and bombarded the open town, without, however, doing much damage. The bombardment was repeated on July 30th, but an advance of the French infantry was repulsed by the German fusileers. The first important movement began on August 2d, when the corps of General Frossard, numbering about 30,000, advanced from St. Avold against Saarbrücken. This town had a garrison of only 900 men, several companies of which, upon learning the advance of the French, occupied the heights near the city. After detaining the French for a few hours, and inflicting upon them a loss of 6 killed and 67 wounded, the small band withdrew to the right bank of the Saar. The French occupied the heights around Saarbrücken, but not the town itself, and Napoleon telegraphed to the Empress: "Louis (the Prince Imperial) has received the baptism of fire. He displayed an admirable *sang froid*, and was in no way excited. He has preserved a ball which dropped close to him. There were soldiers who cried when they saw him so calm."

According to the plan of the campaign devised by Moltke, the three German armies were to advance by converging marches upon the Moselle, and there to form a junction. To that end the Third army, under the crown

prince, had first to occupy northern Alsace and the passes of the Vosges. On the side of the French, Marshal MacMahon, who with the First Corps was stationed in and near Strasbourg, was directed to prevent the union of the German armies. On July 26th a body of French infantry which was to occupy Rheinhelm, in the Bavarian palatinate, was repulsed by Prussian uhlands and Bavarian chasseurs. On July 28th there were several skirmishes near Weissenburg. On August 2d King William arrived at Metz, and issued an army order by which he assumed the chief command of all the German armies. Telegrams from the front informed him that all the armies were ready for an advance. The Third army began to move on August 4th. It was on this day to achieve two things in order to force a passage into Alsace. The Fifth and Eleventh Prussian Army Corps, and the Bavarian division Bothmer, were to take Weissenburg, while the divisions of Baden and Württemberg, under General Werder, were to march upon Lauterburg. Weissenburg and Lauterburg are both situated on the Lanter, and are connected by a chain of ditches and intrenchments (the so-called Weissenburg lines), which were intended to guard Alsace against an invasion from the north. About two miles south of Weissenburg, the Geisberg is situated, a hill rising about 250 feet above the valley. The defence of this key to Alsace was intrusted to the division of General Abel Douay, one of the

best "African" generals. At 8 o'clock the Bavarians, under Lieutenant-General Hartmann, began the attack upon Weissenburg, which was vigorously defended by the French, but had to surrender when the Fifth Prussian Corps arrived for the support of the Bavarians. The most difficult task of the day was the storming of the Geisberg, where General Douay had drawn up the best portion of his division. The French mitrailleuses made terrible havoc in the ranks of the three German regiments which stormed the hill, but availed nothing against the impetuous bravery of the German columns. About 12 o'clock General Douay himself fell, the French line broke, 800 prisoners fell into the hands of the Germans, and the key to Alsace was secured. The crown prince, who from the heights of Schweigen, near Weissenburg, had directed the battle, was received by his troops with indescribable enthusiasm. The town of Lauterburg was occupied by the troops of Baden, under General Beyer, and those of Württemberg, under General Obernitz, without encountering any resistance.

On August 5th the headquarters of the crown prince were at Sulz. It was at once ascertained that MacMahon, to arrest the advance of the victorious Germans, was rapidly concentrating his corps west of Wörth. In the morning of August 6th he occupied the line extending from Froschweiler to Morsbrunn, having his centre in Elsasshausen. On the German side, the Second Bavarian Corps (under General Hartmann) had its position at Lembach, north of Wörth; the Fifth Prussian Corps, under General Kirchbach, at Preuschedorf, east of Wörth; the First Bavarian Corps, under General Von der Tann, at Lampertsloch, south of the road leading from Sulz to

Wörth; the Eleventh Prussian Corps, under General Bose, at Holschloch; the Württemberg division at Gunstett; and the cavalry north of Sulz, at Schönenburg. Skirmishes between the outposts began early in the morning, and at 4 o'clock Wörth was occupied by the Germans. At 8 o'clock the Second Bavarian Corps began the battle, in which soon the whole artillery of the Fifth Corps took part. As the other corps were still a considerable distance from the scene of the battle, the Fifth Corps was ordered to fall back until all the troops would be in the position assigned to them. In the mean while, the Second Bavarian Corps had gained an advantageous position on the left flank of the enemy, which it abandoned when it received the order of the commander-in-chief. The French, thus relieved, and receiving by railroad large reinforcements from the corps of Faily and Canrobert, concentrated their whole strength against the Fifth German Corps, at Wörth. As the Eleventh German Corps could already be seen to be on the march from Gunstett, the Fifth Corps assumed the offensive. Three times it endeavored to penetrate across the Sauer and beyond Wörth, but each time it was driven back with immense slaughter. At 2 o'clock the engagement became general along the whole line. The Eleventh Corps attacked Elsasshausen, and the First Bavarian Corps appeared on the field from Gersdoff. Furious attacks were made and repulsed on both sides, but at length Elsasshausen was taken, and the Eleventh Corps, soon followed by the Württemberg division from the south, and the First Bavarian from the east, coöperated in the attack upon the last position of the French at Froschweiler. At 4 o'clock the victory of the Germans was complete, and the French, hotly pursued

by the German cavalry, put to flight. The loss of the French in killed and wounded was estimated at 10,000. Among the dead were Generals Colson and Raoul. Two eagles, 30 cannons, 6 mitrailleuses, 360,000 francs, and 8,000 prisoners, fell into the hands of the Germans. Most of the Turcos were either cap-

tured or killed. The Germans lost about 4,000 in killed and wounded.

On the same day on which MacMahon was defeated at Wörth, parts of the First and Second German armies, numbering in all twenty-seven battalions, gained a brilliant victory over the Second French Corps under

General Frossard, near Saarbrücken. On the approach of the Germans, Frossard withdrew his forces to the steep and partly-wooded heights of Spichern, which were considered an almost impregnable position. The heights rise several hundred feet above the valley in which Saarbrücken is situated, and which the German infantry had now to traverse without any cover. In many places the hills run out into the valley, flanking it in every direction. Though fatigued by forced marches, the Prussian troops at noon were ordered to storm the heights. They met with a formidable resistance, and suffered immense losses; the single division Stülpnagel alone losing 2,297 men. For several hours no progress was made, but when the artillery of the Fifth Division succeeded in mounting two batteries on the heights, the mitrailleuses were silenced, and the position of the French became untenable. They retreated in great haste during the night, leaving behind their dead and wounded. The Germans took about 2,000 unwounded prisoners and an immense amount of war material. On the next day, August 7th, the Prussians occupied Forbach and Saargemünd; on August 9th, St. Avold.

In consequence of these German successes the entire French army fell back. The corps of MacMahon, hotly pursued by the Germans, hastily retreated toward Nancy and Metz. The other corps retreated in the same direction, occupying a new position along the line of the Moselle. A proclamation by the Empress Eugénie, who had been appointed Regent of France, acknowledged that the French army had suffered a serious check, and called for the organization of the most vigorous resistance. The Ministerial Council declared Paris in a state of siege, and convoked the Chambers, which met on the 9th, and declared at once their want of confidence in the ministry, and caused the appointment of a new Cabinet with Count Palikao as president. Both the Senate and the Legislative Body adopted the propositions of the Government for an increase of the army, and for a reorganization of the National Guard. The war credit was raised to 1,000,000,000 francs, and the most extraordinary efforts were made to prepare for a more vigorous prosecution of the war.

On the 12th of August the First and Second German armies, or their right wing and centre, advanced along their whole line. Detached troops of the First Army had on this day a skirmish with the vanguard of the French concentrated near Metz under Marshal Bazaine, who had been appointed commander-in-chief of the entire French forces. He had under his orders five corps: the Guards, the Second Corps under Frossard, the Third under Decaen, the Fourth under L'Admirault, and the Sixth under Canrobert. At the same time Marshal MacMahon had his headquarters at Chalons, with his own corps, the First, the Fifth under Faily, and the Seventh under Felix Douay. Two

new corps, the Tenth and the Thirteenth, were to be organized near Chalons and near Paris, under Trochu and Vinoy. It was at first the plan of Bazaine to maintain his favorable position on the Neid, between Bouzonville and Metz, and there to fight a decisive battle. But when it became more evident from day to day that German forces in overwhelming numbers were massed against Metz, and the Crown Prince began to turn the right wing of the French, it was resolved, after leaving behind one corps in Metz for garrison duty, to abandon the line of the Moselle, fall back across the Meuse in the neighborhood of Verdun, and form at Chalons a junction with MacMahon and the new corps, and thus to oppose the further advance of the Germans by an army of more than 300,000 men. This change of position by the French is said to have been made in compliance with the advice of General Changarnier, who, though an ardent Orleanist, offered at the beginning of the war his services to the Emperor, and, though they were not accepted, went to Metz, where he had a long interview with Napoleon. The movement of the French was to begin on the 14th of August. At the headquarters of the German army it was regarded as a matter of the greatest importance to prevent the concentration of the French at Chalons, and to that end to cut off the retreat of Bazaine. Steinmetz accordingly was ordered to attack the retreating French in the rear, and as long as possible to detain them, while Prince Frederick Charles was to get to their front on the road from Metz to Verdun, and attack them in front and on the left. The most difficult part of this strategic operation was that assigned to Prince Frederick Charles. In order to secure the passage of the Moselle, he must seize and hold Pont-à-Mousson, a town about 12 miles south of Metz. His troops reached and secured the place only a few minutes before the arrival of a train with French troops from Metz, who, when they saw the town in the hands of the Germans, returned in great haste. It was apparent, nevertheless, that Prince Frederick Charles could not strike the road from Metz to Verdun before the 16th, and, as Bazaine intended to leave Metz on the 14th, it became the task of Steinmetz to detain him for at least two days. This led, on the same day, to the battle of Courcelles. General Steinmetz had under his orders three army corps: the First (East Prussian), under General Manteuffel; the Seventh (Westphalian), under General Zastrow; and the Eighth (Rhine-Prussian), under General Goben. The First Corps was stationed between the two roads leading to Boulay and St. Avold; the Seventh between the latter road and that leading to Faulquemont, the Eighth as a reserve behind both and near the town of Courcelles, which lies in the centre of this position. Two cavalry divisions were stationed near St. Barbe and Frontigny. The French occupied the line from Colombey over Montoy and Noisseville to Servigny. The

battle began in the afternoon with a violent attack by the Thirteenth Division of the Westphalian Corps upon the rear-guard of the Third French Corps, and soon the contest raged along the whole line. On the part of the French the Second, Third, and Fourth Corps were drawn into the fight; on the part of the Germans the First and Second corps, the divisions of the Fourth Corps and one regiment of the Ninth Corps (Manstein); the Eighth German Corps did not become involved. The cavalry on both sides took but

little part in the action, which was chiefly fought by the infantry and artillery. Both armies displayed great obstinacy, but at 10 o'clock the Germans were masters of the whole field, the French having been driven back toward the fortress. The loss of the Germans in dead and wounded was estimated at about 4,000, while the loss of the French was at least equally large. On the morning of August 15th General Steinmetz obtained the consent of Marshal Bazaine to an armistice for the burial of the dead of both armies. The result of the battle fully

corresponded with the intentions of the German headquarters. The enemy had been dislodged from the villages east of Metz which it occupied on the morning of the 14th, and the departure of the army from Metz on the 14th of August had been prevented.

The Army of the Moselle, under Marshal Bazaine (its official name still was the "Army of the Rhine"), left Metz on August 15th, accompanied by the Emperor and his son, in order to retreat over Verdun, Clermont, and St. Mennehoult, to Chalons, on the Marne. For its march to Verdun it had at its command three main roads: a northern one, about 88 miles long, over Briey and Etain, passing through an open and hilly country, with sparse woody tracts; a central one, about 84 miles

long, leading over Gravelotte, Conflans, and Etain, and traversing many heights and woody ravines; and a southern one, about 80 miles long, which leads over Gravelotte, Rezonville, Vionville, Mars la Tour, and Manheulles, and passes beyond Gravelotte, through several trough-shaped ravines, the narrow valleys of several creeks which flow into the Orne, and always in close proximity to villages. The line from Mars la Tour to Gravelotte, and the two lines leading from there northward to Jarny, constitute a triangle, the interior of which is sprinkled with villages, hamlets, and partly with woods. This triangle, so well adapted for defensive purposes, was the scene of the *battle of Vionville*, on August 16th. Bazaine chose for his retreat the southern road, as it is

the shortest, although it was the one the most exposed to an attack. He appears not to have been altogether unprepared for the advance of the enemy, but feared no serious danger, expecting at all events an escape by the central and northern roads unimpeded. To the Emperor, whose large retinue was a serious obstruction to the retreating army, the danger was represented as greater than it really was, and he was prevailed upon to separate from the army on the morning of August 16th, and to hasten from Gravelotte over Etain to Verdun, and thence to Chalons. To the inhabitants of Metz the Emperor had bidden farewell on August 14th by the following proclamation: "While I leave you to fight against the invader, I intrust to your patriotism the defence of this large city. You will not allow the enemy to take possession of this bulwark of France, and you will vie with the army in courage and sacrifices. I shall always retain a thankful memory for the reception which I have found within your walls, and I hope to be able in happier times to thank you for your noble attitude."

The Third Army Corps (Brandenburgers, under General Alvensleben) crossed the Moselle on the evening of August 15th near Noveant, Champey, and Pont-à-Mousson. It was the Fifth and Sixth infantry divisions under Generals Stülpnagel and Buddenbrock, the Sixth cavalry division under the Duke William of Mecklenburg, and the artillery of the corps. At midnight the advance-guards had arrived at the town of Gorze. At five o'clock on the morning of August 16th the advance was continued, General Buddenbrock with the artillery marching to the left against Mars la Tour, and General Stülpnagel with the cavalry division to the right against Vionville. Soon it was announced that Vionville and Flavigny a little more to the south, as well as the heights in the south and southwest, were occupied by the enemy. The bulk of the French army was located north and east of Vionville, in the direction toward Rezonville. The first skirmishes between the vanguards took place between eight and ten o'clock A. M. Soon after, the Division Buddenbrock took Vionville and Flavigny, while the Division Stülpnagel by a bayonet-charge repulsed several French battalions which endeavored to advance from Rezonville to Flavigny, and maintained the heights running from Gorze to Vionville against repeated attacks of the French. Fully appreciating the importance of the position, the French massed immense bodies of troops for its recovery; but the two German divisions, though suffering very heavy losses, bravely stood their ground against overwhelming numbers. Early in the afternoon, the Division Buddenbrock was in danger of having its position turned by the French, when the cavalry brigade of General Bredow, of the Tenth Corps, arrived in time to engage the French centre at Vionville. The task was one of extreme danger, and in undertaking to

perform it the brigade lost two-thirds of its men in dead and wounded; but it was successful. The Germans maintained their position until, about three o'clock, the whole of the Tenth Corps (Hanoverians, under General Voigt-Rheetz) appeared on the battle-field, and simultaneously with them, Prince Frederick Charles, who had ridden from Pont-à-Mousson to Vionville, a distance of fourteen miles, in one hour, and at once assumed the chief command. The battle continued to rage with unabated violence. The Westphalian cavalry brigade of General Wedell severely suffered in storming the heights to the northeast of Mars la Tour, and was subsequently driven back with great loss; but the fruit of its victory was saved by a brilliant attack from the cavalry division Rheinbaben upon the French. On the right wing of the Germans, the French in the afternoon, after occupying the "Bois des Oignons" and the "Bois de St. Arnould," southeast of Rezonville, and planting their artillery on the heights between Rezonville and Gravelotte, made a desperate effort to turn the position of the Division Stülpnagel, and to expose the Third and Tenth German Corps to an attack from all the five French corps on three sides. This danger was averted by the arrival of the Division Barnekow, of the Eighth Corps, and the Hesse-Darmstadt division of the Ninth Corps, under command of Prince Louis of Hesse-Darmstadt, the son-in-law of Queen Victoria. At seven o'clock the entire German line was on the advance; at nine o'clock the battle was over, and the French in full retreat. The Germans had won a complete victory, and had taken from the French 2 eagles, 8 guns, and 2,000 prisoners. But this victory had been dearly purchased, for their entire loss, killed and captured, was estimated at 17,000 men, among whom were 700 officers. Among the dead were Generals Döring and Wedell; among the wounded, Generals Rauch and Gruter. The Twenty-fourth Regiment alone had lost no less than 47 officers and 1,400 men.

On August 16th the headquarters of the King were moved from Hery to Pont-à-Mousson. The royal headquarters at this time consisted of about one thousand persons; and included the Civil Cabinet, the Military Cabinet, the latter under Adjutant-General von Treskow; the general staff of which Count Moltke was the chief, and General Podbielski quartermaster-general, the American General Sheridan, and the Russian Count Kutusow. In the evening of the same day Prince Frederick Charles returned from Vionville to Gorze, and as early as four o'clock the next morning (August 17th), he was on the battle-field to reconnoitre the movements of the enemy. The King, in consequence of a dispatch received by him from the prince at two o'clock, set out from Pont-à-Mousson at four o'clock, and two hours later joined the prince on the battle-field. A reconnaissance soon showed that the French meditated not a renewal of the battle, but the con-

tinnance of their retreat. As the southern and central roads from Metz and Verdun were controlled by the Germans, the northern road leading over Briey offered the only chance of escape, and the cavalry was, therefore, at once ordered to watch the French movement in this direction. The remainder of the day was spent in consultations by the King, the prince, General Moltke, and the chief of the general staff of the Second Army, General Stiehle. On the morning of August 18th, all the preparations for a general attack upon the positions of the French were completed. The King himself was on the battle-field at four o'clock, and assumed the command of both the First and Second Armies. Altogether, eight German army corps were ready to take part in the decisive battle, which was to cut off the retreat of the French; besides the five which had taken part in the battles of Courcelles and Vionville (Third, Seventh, Eighth, Ninth, and Tenth), the Second (Pomeranians), under command of General Fransecki, the Twelfth, containing the army of the kingdom of Saxony, under the Crown Prince Albert of Saxony, and the Corps of the Guard, under Prince August of Würtemberg. The German army was drawn up as follows: The right wing, south of Gravelotte, consisted of the Seventh and Eighth Corps, under General Steinmetz, to which the Second Corps, which left Pont-à-Mousson at two o'clock on the morning of the 18th, served as a reserve; the Ninth Corps, with the Hessian division, formed the centre; the left wing was composed of the Guard and the Twelfth Corps. The Third and Tenth Corps were a reserve for both the centre and left wing. On the French side the corps of l'Admirault was placed in the centre; the corps of Frossard and Decaen on the left, the corps of Canrobert on the right, and the Guard, as a reserve, on the right wing. The centre of the French army was at the village of Amanvillers, on both sides of which it held the heights of St. Privat, Leipsig, Moscow, St. Hubert, and Point du Jour. According to the German plan of battle, the Seventh and Eighth Corps were to take the heights and woods east and south of Gravelotte; the Ninth was to advance from Rezonville against Verneville and Amanvillers; on the left, the Guard was to march in a northerly direction over Doncourt upon St. Marie; still more to the left the Saxons were to march northward through Jarney, to pass by St. Marie, to cross the road of Briey to turn the positions of the French, and to attack their greatest bulwark, the village of St. Privat la Montagne, in flank and in the rear, while Duke August of Würtemberg would attack it in front. The battle was opened about noon by the Ninth Corps, which took Verneville and advanced upon Amanvillers, but was kept at bay by the brave resistance of the French. The Guard took the village of St. Ail, not far from Amanvillers, and, about three o'clock, after a brief but violent encounter with the enemy, the village

of St. Marie, thereby cutting off a further retreat of the French on the northern road from Metz to Verdun. At five o'clock p. m., Prince August, hoping that the Saxons would soon arrive, ordered an assault upon St. Privat, the highest point of the whole battle-field, and the key of the French position. The Germans fought with extraordinary bravery, but although St. Privat burned in several places, they were repulsed with immense slaughter, and were unable to make any headway, until, about seven o'clock, when the Saxon infantry, which had made a wider circuit than was expected, and caused the evacuation of Roncourt, arrived from the north. The attack was simultaneously and on all sides renewed both by the Guard and the Saxons; but still the French held out with desperate bravery, and although the whole place was burned down, the ruins were taken only step by step. Finally, under the cover of the darkness they effected a retreat on the road to Metz. In the centre, the Ninth Corps, reinforced by divisions of the Third and Tenth, especially their artillery, toward evening took Amanvillers, and compelled the enemy to retreat. On the right wing, General Steinmetz hastened to join in the battle, as soon as the thunder of cannon from Verneville notified him of the advance of the Ninth Corps. After one hour's firing he silenced the French artillery on the points of Point du Jour, which is separated from the heights of Gravelotte by a woody ravine. The brigade of Goltz took the village of Vaux and stormed the heights of Jussy. The Eighth Corps advanced from Rezonville against the bois de Genevaux, silenced the batteries of the enemy, took, after repeated attacks and most severe losses, St. Hubert, but was unable to get possession of the heights behind it. A last onset which the French made from the heights of Gravelotte was repulsed. Then the Second Corps, which had not yet taken any part in the battle, received orders to storm the heights of Rozerieulle, with the exception of St. Privat the best fortified and an apparently impregnable point of the French position. Again the French stood their ground with great bravery, and inflicted terrible losses upon the storming columns; but again it was of no avail; the heights were taken and the French driven back under the cannon of Fort St. Quentin. The German victory was complete. The Twelfth Corps received orders to dispatch two squadrons to destroy the railroad leading from Metz to Thionville and the telegraph, and also to send a larger force to Woippy, where the road branches off. The orders were executed during the night, and thus Metz was isolated on all sides. The loss of the German army, exclusive of the Second Corps, amounted to 520 officers and over 18,000 men.

The results of the battles near Metz were of decisive influence upon the progress of the war. The best portion of the French army was shut up in a fortress, and made unavail-

ble for a further resistance to the progress of the Germans. Although several German corps had to remain for the investment of Metz, landwehr regiments began to arrive in France, and to relieve the regular army. At the close of August, 80,000 landwehr infantry and four regiments of landwehr cavalry had entered the country, swelling the total number of German troops in France to about 600,000. At the same time three reserve army corps were organized in Germany, one on the Rhine, under the Grand-duke of Mecklenburg-Schwerin, a second in Berlin under General Canstein, and the third near Glogau, under General Löwenfeld.

The army of investment which was left at Metz consisted of the First Army, heretofore commanded by General Steinmetz, and the Second Army; the whole under the command of Prince Frederick Charles. It comprised the First, Second, Third, Seventh, Eighth, Ninth, and Tenth Corps, and two cavalry divisions. The remainder of the troops, which was at once to resume, under the command of the King, the advance into the interior, was divided into two armies, of which one, the Third Army, was placed under the command of the Crown Prince of Prussia; the other, the Fourth, under that of the Crown Prince of Saxony. The former comprised the Fifth, Sixth, and Eleventh North-German Corps, the two Bavarian Corps, the Württemberg division (that of Baden was investing Strasbourg), and one division of cavalry; to the other, the Fourth Army, belonged the Fourth and Twelfth Corps, the Guard, and two divisions of cavalry. Both armies were by converging marches to advance upon Chalons, the one from Nancy, where its headquarters were as late as August 16th, over Commercy, Ligny, Bar-le-Duc, and Vitry; the other from the battle-field near Metz, over Verdun and Menabould. Before the beginning of the advance, the King of Prussia and the crown prince had an interview at Pont-à-Mousson, the first meeting since their departure from Berlin. The King conferred the iron cross upon the crown prince; the latter declared, however, that he could wear this badge of distinction only on condition it should be at the same time conferred upon the chief of his staff, General Blumenthal; and the King at once complied with this wish. On the 23d of August the headquarters of the crown prince were removed from Vaucloueurs to Ligny, where on the 24th the King also arrived. While all were waiting for the King, the crown prince received the important news that Marshal MacMahon had evacuated Chalons. Accordingly, General Moltke, who arrived about two hours before the King, had at once a conference with General Blumenthal, in which the two strategists discussed a new and bold plan adapted to the altered military situation. The King on the same day left for Bar-le-Duc, where the chief headquarters were to be established; the crown prince set out from

Ligny on August 26th, and through Bar-le-Duc proceeded to Remigny.

The fortified camp at Chalons, which was regarded by the population of Paris as an impregnable buttress to the capital, was evacuated from August 21st to August 23d. Marshal MacMahon, accompanied by the Emperor and the Prince Imperial, proceeded on August 21st *via* Courcelles, to Reims; on August 23d the last French battalions left, and on August 25th the place was occupied by German troops. On the same day the small fortress of Vitry, which is situated about thirteen miles from Chalons, on the right bank of the Marne, and commands both the railroad which leads from St. Dizier or Bar-le-Duc to Chalons and Paris, and the southern road to Sezanne and Paris, capitulated. About 1,100 men, who already had left the fortress to join MacMahon, were overtaken by Prussian cavalry and captured.

At the German headquarters it was at first unknown whether MacMahon was moving for Paris or for Metz. Soon, however, the reconnaissances made in every direction, and, still more, some important information about the movements of the French armies which, in an imprudent correspondence from Mezières, was conveyed to a Belgian newspaper, and from Berlin at once telegraphed to the headquarters of the King, gave to General Moltke the assurance that MacMahon had marched to the relief of Bazaine. The positive information was received by General Moltke while at his breakfast, and, before the meal was finished, a plan, which aimed at cutting off the retreat of MacMahon toward Paris, and required for its successful execution forced marches during a few days, from four o'clock in the morning to ten in the evening, was decided upon. The army of the Prussian Crown Prince abandoned the march upon Paris, and, in order to flank MacMahon, hastened from Chalons, over Suippes to Vouziers, while the Fourth Army of the Saxon Crown Prince advanced from Verdun through the upper valley of the Meuse toward Dun and Stenay, its left wing retaining constant connection with the right wing of the Third Army. The royal headquarters were steadily moved forward between these two armies; being transferred, on August 26th, from Bar-le-Duc to Clermont, and on August 29th from Clermont to Grandpré. The French army consisted of the First, Fifth, Seventh, and Twelfth Corps, which had been concentrated in Chalons; of the Dumont Brigade, which had been recalled from Rome; of some divisions of the marine infantry; of four regiments which had belonged to the escort of the Emperor; and reinforcements received from Paris. In consequence of their forced marches, the Germans soon overtook the French. On August 27th, Saxon cavalry encountered six squadrons of a French regiment near *Buzancy*, eleven miles southeast of Stenay, and forced them to retreat. On the 29th the Saxon vanguard took the heights near *Nouart*, northeast of Buzancy;

and on the same day two squadrons of Prussian hussars stormed the village of Voncq, north of Vouziers, and made many prisoners. It was known in consequence of several reconnoissances that MacMahon had concentrated between *Beaumont* and *La Chêne*, and accordingly a simultaneous attack was ordered to be made on August 30th, by portions of the Third and Fourth Armies. The battle began at noon and lasted until night. The right of the French, which, after being driven from the village of *Oches*, had occupied a very strong position on the heights near the village of *Stonne*, was forced to retreat when the Fourth German Corps occupied *Beaumont*. The First Corps of the Bavarians drove the French northward toward *Raucourt*, and the Saxons inflicted heavy losses upon them while a retreat across the *Meuse* was effected to *Mouzon*. More than 7,000 prisoners, 20 cannon, and 11 mitrailleuses, were the trophies of the day of *Beaumont*. On the part of the French the corps of *Failly* was almost the only portion of the army which was actually engaged, but the whole army of *MacMahon* was delayed in its march, so as to facilitate the success of the German plan. On August 31st the German armies continued to advance, and again had several encounters at *Remilly*, *Bazeilles*, and *Carignan*, which were, however, less bloody than those of the preceding day. The army of the Saxon Crown Prince pushed forward beyond *Carignan* and *Mouzon*. From the west information was received that the army of the Crown Prince of Prussia had nearly completed the turning of the enemy's position. A division of Bavarians in the centre had orders to harass the enemy as much as possible, in order to lead him to believe that he had to face a whole army, and thus detain him. The French were chiefly concentrated near *Bazeilles* and *Douzy*. The latter place was captured, as was also the railroad bridge across the *Meuse* near *Bazeilles*.

In the evening of July 31st the iron circle around the army of *MacMahon* was nearly completed. It was at first intended to leave to the Fourth Army, after its forced marches and many encounters on August 30th and 31st, one day of rest, and to defer the decisive attack on *Sedan* to September 2d; but, at an interview held between the King and the crown prince, *Moltke*, and *Blumenthal*, on the evening of August 31st, it was deemed preferable not to wait, but to proceed with the assault early on the morning of September 1st; and the Crown Prince of Saxony was accordingly ordered at one o'clock in the night open fire at five o'clock. The plan of battle was as follows: The Twelfth Corps (Saxons), and, more to the right, the Guard, were to advance upon *Moncelle* and *Givonne*; the Fourth Corps partly to remain in reserve, and partly to support the attack of the Bavarian Corps upon *Bazeilles*. The latter were to cross the *Meuse* at *Remilly* and take *Bazeilles*;

the Second Bavarian Corps was to advance against *Wadelincourt* and *Frenois*, the Eleventh against *St. Menges*; the Fifth Corps was to support the movement, and the Württemberg Division to remain near *Donchery* for the protection of the road leading to *Mézières*. The centre of the French position was in the fortress of *Sedan*; its flank extended from *Givonne* along the *Ardennes*, which are situated in the rear of *Sedan*, to the road of *Mézières*. The crown prince, who had left his night-quarters in the village of *Chemery* at 4 o'clock in the morning, was to view the battle from a hill near *Donchery*; the King from a height south of *Frenois*. The battle was begun by the First Bavarian Corps under General *von der Tann*, to whose discretion it had been left to attack *Bazeilles* even during the night, and to arrest the enemy as much as possible until the arrival of the other corps. At four o'clock in the morning the vanguard of the First Corps advanced to storm *Bazeilles*. For six hours, the French, vigorously supported by the entire population, disputed the possession of this place with great obstinacy, but about ten o'clock they abandoned it. Soon after, a division of the Fourth Corps, which arrived for the support of the Bavarians, advanced beyond *Bazeilles* to the village of *Balan*, in and around which the battle raged until after four o'clock. It was taken by the Germans, partly retaken by the French, but finally, when fresh troops arrived, permanently occupied by the Germans, who drove the enemy back into the fortress of *Sedan*. As the people of *Bazeilles* continued to fire from their houses upon the German troops, even after the place had been occupied, and as they were charged with inhuman cruelties against the German wounded left in their houses, the enraged Bavarians burned down nearly the whole village. On the right flank of the Bavarians, the Saxons of the Twelfth Corps advanced at seven o'clock in the morning from *Douzy*, which had been occupied on August 31st, to the village of *La Moncelle*, posted their artillery on the height west of the village, and took from the *Zouaves* three mitrailleuses. In the afternoon one division of the corps under the command of Prince *George of Saxony*, advancing to the right, stormed the heights to the west of *Dagny*, and took about 2,000 prisoners. On this part of the battle-field fighting ceased about four o'clock p. m.; when the Saxons held the heights of *Moncelle* and *Dagny*. Still more to the right, the corps of the Guard marched upon *Givonne*, a place situated north of *Dagny*. After the enemy's vanguard between *Givonne* and *Villers-Ternay* had been driven back, and the artillery of the corps been mounted on the heights east of *Givonne*; the vanguard, about half-past nine o'clock in the morning, took *Givonne* and captured a battery with seven pieces and three mitrailleuses. One division turned toward *Dagny*, penetrated, in the midst of a violent infantry

valley situated between Givonne and the woods, about 4,000 prisoners were brought in; among them many officers of high rank. Altogether the Corps of the Guard, which on this day had about 25,000 men on the battle-field, made 9,000 prisoners, exclusive of the wounded. The march of the Prussian Crown Prince on the left wing was no less successful than that of the Saxons, the Bavarians, and the Guard. The Eleventh and Fifth Corps penetrated from Donchery over Briancourt upon St. Menges and Fleigneux. After a short but obstinate fight the enemy evacuated St. Menges and fell back upon its fortified main position between Floing and Illy. Here a violent artillery duel raged for several hours, the French being not only exposed in their flank to the fire of the Eleventh and a part of the Fifth German Corps, but in their rear also to the batteries of the Bavarians, who on the left bank of the Meuse had occupied Wadelincourt and Frenois. At one o'clock the Eleventh and a brigade of the Fifth Corps advanced for an assault upon Floing; at three o'clock the whole force of the French was in full retreat upon Sedan. The main body of the Fifth Corps in the mean while had turned against Illy and the adjoining heights. Its artillery crossed the creek near Fleigneux, and there established a connection with the Corps of the Guard. The possession of the height and wood south of Illy was violently disputed, but soon the French were pushed back and retreated into the Bois de la Garenne, where, as already stated, they fell into the hands of the Guard. At three o'clock the crown prince saw the whole force opposed to him in retreat to Sedan. On the extreme left the Würtemberg Division, which had to watch the road from Sedan to Mézières, had little opportunity to take part in the battle. At three o'clock it occupied a position near Donchery, and there received information that French troops were on the left bank of the Meuse advancing from Mézières upon the pontoon bridge near Nonvion. Reinforcements were at once sent to the battalion of chasseurs which had been left to defend the bridge, and after a short and light encounter the French retreated down the valley and over the heights of Ayvelles toward Mézières. Between three and four o'clock the battle rested on all sides. At four o'clock the crown prince announced to the headquarters, "Great Victory!" Soon after, he hastened to the King. As no white flag was yet discovered, the bombardment was ordered to begin at half-past four o'clock. Bavarian batteries fired the first shots. The flames burst forth from a magazine filled with straw. The French perceived that the Germans were in terrible earnest, and at once opened negotiations.

On the 31st of August the Emperor Napoleon had issued his last proclamation to the French army, showing a faint hope of final success. On the day before, the Prince Imperial had

been sent over Avesne, into the department du Nord, whence, after few days, he proceeded to Belgium. General MacMahon, the commander of the surrounded army, had been among its first victims, being wounded early on the morning of August 31st, at the attack upon Bazeilles by the Bavarians. He surrendered his chief command to General Ducrot, but soon after General de Wimpffen arrived on the battle-field with an order from the Minister of War, appointing him commander-in-chief, in case any accident should befall General MacMahon. In the afternoon of September 1st, when the French were retreating on all sides, Wimpffen proposed to Napoleon, who had been with fatalistic indifference in the thickest of the battle, to concentrate a large force, in order to break through the enemy's lines at Carignan, and to save him from being made a prisoner; but the Emperor refused to sacrifice any number of persons to save himself. In order to escape the mortification of signing the inevitable capitulation, Wimpffen then asked the Emperor to accept his resignation; but this was likewise refused. Soon after five o'clock, a French colonel left Sedan with a white flag. Suddenly the firing ceased; the news of the offered capitulation, and of the presence of Napoleon in the surrendered army, spread with lightning rapidity throughout the circle of the valleys and heights occupied by the German troops, who filled the air with their frantic shouts: "Victory, victory! the Emperor is there!" The King, in the mean while, had sent Lieutenant-Colonel Bronsart to Sedan, to demand an unconditional surrender. The Emperor, in return, sent his adjutant, General Reille, to the King with the following letter: "MY BROTHER—Since I have not been vouchsafed to meet death in the midst of my troops, I lay my sword at the feet of your Majesty." Before opening the letter, the King remarked: "But I demand as a first condition that the army lay down its arms;" then, after a few minutes' conversation, he replied to Napoleon as follows: "MY BROTHER—I accept your sword and ask you to appoint some one with whom the negotiations concerning the capitulation of your army may be conducted." General Reille at once returned, and the King appointed Moltke as military and Bismarck as political commissioner to meet the French commissioner at Donchery. The meeting of the commissioners took place in the same evening. On the part of the French, Wimpffen came himself. Moltke demanded an unconditional surrender of the fortress and the whole army; but offered to liberate all generals and officers, on giving a written pledge that they would not take up arms again in the course of the present war, nor act in any other manner against the interests of Germany. Wimpffen declared that, rather than sign such a capitulation, he would blow up himself and the fortress. Moltke, in reply, stated that, if the capitulation was not signed by nine o'clock the next

morning, the bombardment would begin anew. During the night from September 1st to September 2d, Napoleon resolved to endeavor, in a personal interview with King William, to obtain, if possible, more lenient conditions. The Emperor left Sedan at five o'clock on the morning of September 2d. Bismarck, who had spent the night in Donchery, being informed of the Emperor's arrival, hastened to meet him on the road from Sedan to Donchery, and in a small house near Donchery had a conversation with him, lasting for about half an hour. Bismarck declined to discuss the question of capitulation, as this belonged altogether to Moltke; the Emperor, on his part, declined to discuss the question of peace, referring Bismarck, concerning this point, to the regency in Paris. Moltke, who soon came to take part in the conference, was requested by the Emperor to present his wishes, concerning the capitulation, to the King. It was now between nine and ten o'clock. Bismarck proposed to the Emperor the castle of Bellevue near Frenois as a fit place for an interview between him and the King. The Emperor consented, and, preceded by an honorary escort of Prussian cuirassiers, he was accompanied by Bismarck to the castle. While Moltke was on his way to the King, General Podbielsky resumed the negotiations with Wimpffen. The King ratified the terms of capitulation as proposed by Moltke, and declared he would see Louis Napoleon only after the conclusion of the capitulation. Wimpffen yielded, and the capitulation was signed by him and Moltke. At twelve o'clock, the King, surrounded by the crown prince, the Grand-duke of Saxe-Weimar, Prince Luitpold of Bavaria, the Duke of Saxe-Coburg, and several other German princes, received the original treaty of capitulation from the hands of Bismarck and Moltke. About one hour later the King, accompanied by the princes just named, set out for the castle of Bellevue, where he was also joined by his brothers Charles and Albert, and the Princes William and Eugene of Württemberg. In one of the glass saloons of the castle he had an interview with Napoleon, lasting about fifteen minutes. He offered to the imperial captive the castle of Wilhelmshöhe near Kassel as his future residence, which was readily accepted. In the evening the King visited the bivouacs, in all of which he was received with immense enthusiasm, and with the universal shout, "On to Paris!" Napoleon left Bellevue on the morning of September 3d, being escorted by a squadron of Prussian hussars to the Belgian frontier. There he was received in the name of the Belgian Government by General Chazal, who accompanied him to the Prussian frontier. In the evening of September 5th he arrived at Wilhelmshöhe. By the capitulation about 88,000 men, inclusive of 4,000 officers and over 50 generals, fell into the hands of the Germans, 25,000 men had previously been captured in the battles around Sedan, and

25,000 in the battle at Beaumont. Moreover, 44,000 wounded were found. The Germans also captured 70 mitrailleuses, 400 cannon, 10,000 horses, and an immense amount of ammunition. The prisoners were sent into Germany, and there proportionally distributed among the several states.

While the Third and Fourth German armies were pursuing MacMahon, Prince Frederick Charles was pressing the siege of Metz. Strong intrenchments, thrown up around the fortress, secured each of the army corps against surprise, and enabled it, in case it was attacked by a superior force, to hold out until other corps could be summoned to its aid. Bridges had been made above and below Metz to facilitate communication, and telegraph-lines connected the headquarters of the several corps with each other, and with the headquarters of the commander-in-chief. During the last days of August, Marshal Bazaine seemed to be ready to cooperate with the movement of MacMahon. On August 31st, a strong force broke forth from the intrenched camp of the French against the road leading over Boulay to Saarlouis, and engaged the First Corps (East Prussians) under Manteuffel in a bloody battle between the villages of Noisseville and Servigny, north of the road, and the village of Retonfay, south of it. The French were at first successful; in the afternoon of August 31st, the German troops were obliged to abandon the villages of Vany, Faily, Chailly, and Vremy, and soon after midnight the German garrisons were expelled from the villages of Retonfay, Flanville, Servigny, and Noisseville. But the arrival of the Ninth German army corps and the Twenty-eighth Brigade of infantry soon turned the tide. The Germans recaptured all the villages which had been abandoned, took Montoy and Colombey, and drove the French back into the fortress.

As was to be expected, the news of Sedan produced the wildest revolutionary agitation in Paris. Immense crowds of people of all classes assembled on the boulevards, demanding arms and crying, "*Vive la république!*" and "Onward against the enemy!" In the Corps Législatif Jules Favre at once moved to depose the Emperor and his dynasty. As a last effort to remain master of the situation, the Minister of War, Count Palikao, moved the appointment of a committee for the defence of the country, reserving to himself the office of governor-general, while the ministers were to be appointed with the consent of the committee. Thiers seconded the motion, and moved an amendment, supported by forty-five members from the two centres, that a Constituent Assembly be called together. During the discussion a great number of people forced an entrance into the hall, demanding the abolition of the dynasty and the proclamation of a republic. The members of the majority fled before these threatening masses, while the most prominent speakers of the left vainly appealed

to the people to respect the freedom of deliberation and to listen in silence. The tumult at length became so great that nothing but the cry of "*Vive la république*" could be distinguished. Gambetta and the other leaders of the left then resolved to proceed to the Hôtel de Ville. In front of these headquarters of all French revolutions a great multitude had already assembled, filling the air with loud cries of "*Vive la république*." All Paris was in a fever of excitement. The National Guards, the Guards Mobile, and the troops of the line, fraternized with the people; the cries of "*Vive la république!*" and "We must drive the enemy out!" were heard on all sides. When Gambetta and his friends reached the Hôtel de Ville they constituted themselves a provisional government, and elected General Trochu President, and commander-in-chief of the military forces of the country; Jules Favre, Minister of Foreign Affairs; Gambetta, Interior; Picard, Finance; Fourichon, War and the Navy; Cremieux, Justice; Simon, Public Instruction and Worship; Dorian, Public Buildings; Magnin, Agriculture; Kératry, Chief of Police; and Arago, Mayor of the city of Paris. The first measures of the government were the proclamation of a general amnesty for political offences, the dissolution of the *Corps Législatif*, the abolition of the Senate, the removal of all restrictions upon the manufacture of arms, and the abrogation of political oaths. The first proclamation of the Provisional Government was enthusiastically received by the people. It reminded them that the republic of 1792 had once before repulsed the invading forces of the foreigner, and called upon them to drive the enemy out of the country now. "The revolution," said the proclamation, "has been made in order that the rights and the welfare of the people may be duly protected." "Fellow-citizens, guard the city which has been intrusted to you; to-morrow you will join the army in order to avenge our beloved country."

No opposition of any kind was offered by those lately in power, and the ministers, diplomatists, and those who had been in the confidence of the Emperor, disappeared one by one and sought refuge in Belgium or in England. The principal objects of the Provisional Government were the defence of the country, the formation of alliances, and the consolidation of their own power. The republic was recognized by the Government of the United States, by Switzerland, Spain, and Italy. The ambassadors of the other powers continued their diplomatic intercourse with France, but left Paris for Tours, where Cremieux and Glais-Bizoin represented the Provisional Government. Thiers accepted a diplomatic mission to London, Vienna, and St. Petersburg, which proved, however, unsuccessful.

The prefects of departments were mostly dismissed, on account of their sympathies with the imperial *régime*, and republicans appointed

in their place. All revenues formerly belonging to the budget of the imperial household were transferred to the budget of the state, while the family domains of Napoleon were administered by a special commission. The Orleanist prince, De Joinville, and the Dukes d'Aumale and Chartres, came to Paris, but they were not allowed to remain, and had to leave the country again. An attempt made on September 4th, by the majority of the members of the *Corps Législatif*, to establish an opposition government, failed; they were dispersed by military force.

A number of deputies from the southern departments established a Southern League for national defence, and selected Marseilles as the seat of administration, and Lyons as a central point for their operations of attack and defence. At Lyons, dissensions broke out among the republican leaders, and resulted in a split of the republican camp, the Red Republicans ruling in the lower part of the city and in Croix-Rousse, while the other districts adhered to the more moderate faction of the party.

The delegation of the Provisional Government at Tours was reinforced by Gambetta, who left Paris in a balloon, and soon became the virtual head of the Government. The extraordinary activity displayed by Gambetta, in conducting the administration of the country and in directing the military operations, was universally admired, though many of his decrees created great dissatisfaction. The clergy, the Catholic party, and many officers, were indignant at the appointment of Garibaldi to an important command, and the Archbishop of Tours expressed his deep mortification that France should share the honor of working out her salvation with a foreigner, a declared enemy of the Church.

On the 1st of November, the Provisional Government made a war loan, in London, of £10,000,000 sterling, but, as this sum was altogether inadequate to supply even the most pressing wants, the Government at Tours resolved to levy a war-tax of 25 per cent. of the ordinary annual contributions; the money to be paid in within ten days from the date of the decree. It was thought that the 200,000,000 francs required by the middle of November could be raised in this manner.

Immediately after the capitulation of Sedan, the Third and Fourth armies, under the command of the Crown Princes of Prussia and Saxony, resumed the march on Paris. Together the two armies consisted of eight and a half army corps, which approached their common goal by different routes. The northernmost road, taken by the Saxons, led through Laon and Soissons; the army of the Prussian Crown Prince advanced partly by way of Rheims, Château Thierry, and Meaux, and partly by a more southern road through Epernay, Montmirail, and Coulommiers. A deplorable accident took place on September 9th, on the

occasion of the capitulation of the fortress of Laon to Duke William of Mecklenburg. Immediately after the surrender, a fanatical soldier treacherously blew up the powder-magazine, thereby causing the death of 85 German soldiers, but at the same time of a much larger number of Gardes Mobile. On the 19th of September the troops of both armies arrived at Paris, and completely invested the city.

On September 12th the commander-in-chief of the First army, General von Steinmetz, was recalled; and both the First and Second army placed under Prince Frederick Charles. On September 22d and 23d the French tried, under the protection of the cannon of Fort St. Julien (situated at a height of 770 feet), to harass the investing army. The attack was repulsed by part of the East Prussians and the Westphalian Corps, and of the landwehr division Kummer, with the coöperation of the German batteries in the villages of Chicelles, Vany, Faily, and Servigny. A new sortie was made on September 27th, for the purpose of seizing the important supplies which had been collected at Ourcelles. The onset of the French, to whom the inhabitants of the village of Peltre, by means of hanging out French flags, had given important information, was rapid and unexpected. They took the village of Mercy le Haut, captured a part of the Fifty-fifth German infantry regiment, and succeeded in driving the larger portion of a herd of oxen into the fortress. Otherwise the sortie was not successful; the Germans recaptured the village of Mercy le Haut, burned Peltre, and forced the French to fall back. The capitulation of Strasbourg, on September 28th, produced a considerable change in the plan of investment. Sorties in a southerly direction were no longer to be expected, and henceforth the object of all the German movements was to prevent an escape of Bazaine, by way of Thionville, into Belgium. Early in the morning of October 2d, the German outposts were expelled from St. Agathe and Ladonchamps; but, in spite of superior numbers, the French were unable to gain any further advantages. The last and (next to the engagement at Noisseville) most important sortie took place on October 7th. The French force of about 20,000, including the two divisions of the Guard, fell in the afternoon upon the German landwehr, occupying St. Remy, Bellevue, les Grandes Tapes, and les Petites Tapes, and compelled them to evacuate these places. In the evening, however, all of them were recovered, after the Ninth Brigade of German infantry, under Colonel von Conta, had taken from the French the wood of Woippy. On the right bank of the Moselle the French made a violent attack upon the German front between Villers l'Orme and Nouilly, without being able to gain any advantage. The Germans suffered a loss of 65 officers and 1,665 men, but the designs of the French were totally foiled.

Bazaine, seeing the impossibility of sup-

porting much longer an army of 173,000 men in the fortress, which had only been provisioned for an army of about 20,000 for three months, began to open negotiations. At first he offered through General Boyer, who visited the royal headquarters, to surrender his army, but not the fortress. This was promptly refused. On October 27th the negotiations for the surrender of both the army and the fortress were brought to a close at the castle of Frescaty. Bazaine insisted, and the King, to whose decision this point was referred, conceded that all the French officers should retain their swords. All, who pledged themselves in writing not to take up arms against Germany during the remainder of the war, were exempted from captivity. The captured army consisted of about 150,000 troops of the Guard and line, and 20,000 Gardes Mobile, and comprised the corps of Generals Frossard (second), Lebœuf (third), l'Admirault (fourth), and Canrobert (sixth). With this army, 53 eagles and banners, 541 field-pieces, the material for 85 batteries, about 800 siege-pieces, 66 mitrailleuses, about 300,000 chassepots, a new powder-manufactory, and an immense amount of other war material, fell into the hands of the victors. The occupation of the forts around Metz took place on October 29th; the occupation of the fortress and city was, on account of serious disturbances on the part of the population and the National Guard, which in particular uttered violent threats against Bazaine, postponed to October 30th. On October 29th Marshal Bazaine arrived at the headquarters of Prince Frederick Charles, at Corny; on the next day, General Changarnier and Marshal Canrobert. General Kummer, whose landwehr division had specially distinguished itself in the battles around Metz, was appointed commander of the fortress.

On the 28th of October, the King, in reward for the brilliant victories won by them, appointed the crown prince and the Prince Frederick Charles general field-marshal, the highest military dignity known in Prussia. The dignity had never before been conferred upon a prince of the house of Prussia, and altogether, during the 280 years of the existence of the royal house of Brandenburg-Prussia, only upon sixty-two persons. General Moltke, who, on October 26th, had finished his seventieth year, received the title of count. On the same day (October 28th), a royal army order thanked the soldiers of the allied German armies for their services in the most glorious war of history, and stated that the King desired to distinguish and honor all by the appointment of his son and of Prince Frederick Charles as field-marshal. A proclamation from the French Government of Tours (Cremieux, Glais-Bizoin, Gambetta), announcing the capitulation, accused Bazaine of having committed treason; of having made himself a tool of the man of Sedan, and an accomplice of the conquerors; and of having, in disregard of the honor of the army, and even without making a last effort, delivered

over to the enemy 120,000 combatants, 20,000 wounded, his cannon, guns, standards, and the strongest citadel of France. Against these charges, General Boyer entered an indignant protest, from Brussels, on October 31st, and in the name of the whole Army of the Rhine, as well as of its honored chief, he declared that Gambetta, by speaking of infamy, outraged the public conscience no less than the brave soldiers.

A few days before the capitulation of Metz, on October 24th, the fortress of Schlettstadt, in Alsace, had surrendered. It was soon (November 7th) followed by the surrender of Fort Mortier, near New Breisach, and (November 10th) by the fortress of New Breisach. On November 8th, the important fortress of Verdun capitulated, thus removing the last obstruction to the direct railroad communication between Paris, Metz, and the Prussian Rhine province. In Schlettstadt, 2,400 prisoners were made; 5,000 in New Breisach, and 4,100 in Verdun. The capitulation of Schlettstadt and New Breisach nearly completed the occupation of Alsace, of which only Belfort remained in the hands of the French.

The investment of Paris was not to be completed without at least a few feeble attempts on the part of the French to delay it. On September 17th, the Fifth German army corps threw a pontoon bridge across the Seine, near Villeneuve. A brigade of infantry, with two squadrons of cavalry, and two batteries which occupied the heights of Limeil in order to protect the bridge, was attacked by six battalions of French infantry and successfully stood its ground. On the 18th of September, the Ninth Division of the Fifth German corps reached Bièvre; the Tenth Division, Palaiseau. A part of the Ninth Division had a severe engagement with the French in the neighborhood of Petit Bicêtre. The first attack of the French was repulsed. On the next day, September 20th, the attack was renewed with greater force, and a larger number of German troops became involved. At length, however, the French had to leave their position, which extended to the west of Plessis-Piquet. While the Fifth Corps was advancing to the occupation of Versailles, the Sixth, which, like the Fifth, had crossed the Seine near Villeneuve, advanced toward Paris by way of Villeneuve,

Le Roi, and Orly. The fire from a very strong intrenchment, which the enemy had thrown up south of its forts near Villejuif, arrested the further advance of the corps; but all the attacks made by the French were successfully repulsed. They lost about 1,000 prisoners, and had to fall back behind Châtillon, within the fortifications of Paris. The crown prince established his headquarters at Versailles, where 2,000 Gardes Mobile were made pris-

oners. General Trochu, in an order of the day, severely censured the First Regiment of Zouaves for its demoralization, and threatened severe measures against undisciplined and demoralized regiments. Numerous squadrons of cavalry maintained the connection of the army of the Prussian Crown Prince, south and west of Paris, with that of the Saxon Crown Prince, which invested Paris on the north.

Soon after the establishment of the repub-

lic, the new Minister of Foreign Affairs, Jules Favre, issued (September 6th) a circular to the diplomatic agents of France. He held imperial France alone responsible for the war, and, as the republic was desirous of peace, he insisted that there was no reason for continuing the war, and that the German armies should return home. In case they wanted to continue the war, he wished them to understand that France, restored to herself, would be unconquerable; that no foot of French soil, no stone of its fortresses, would be sacrificed. If Napoleon was responsible for the beginning of the war, King William would bear the responsibility for its continuance. When the German troops were with unexpected rapidity completing the investment of Paris, Favre, on September 17th, issued a second circular, in which he admitted that victorious Prussia, having been provoked to war, had a right to demand an indemnity; but again protested against "unacceptable conditions." A few days before the second French circular was issued, Count Bismarck, in two diplomatic circulars, dated Reims, September 18th, and Meaux, September 16th, had indicated the conditions on which victorious Germany, at the conclusion of peace, would insist. The Chancellor of the North-German Confederation stated that France was not so guiltless as Favre endeavored to prove, but that the aggressive war against Germany had been demanded by nearly the whole Senate and Corps Législatif, and nearly all the organs of public opinion. In consequence of the result of the present war, "Germany must be prepared for another attack from France, whatever conditions of peace she may impose. On that account, Germany must demand material guarantees against future aggressions, not from a transitory government, but from the French nation, which has shown a readiness to follow any leader in a war against Germany. Germany must render future attacks by France upon her southwestern frontier more difficult, by advancing this frontier, and by bringing the threatening fortresses into her power." As long as France remains in possession of Strasbourg and Metz, its offensive is strategically stronger than the German defensive, with regard to the entire south and the western bank of the Rhine in Northern Germany. In the hands of Germany, Strasbourg and Metz have a defensive character; for from Germany no disturbance of the peace of Europe is to be feared. At the same time Bismarck gave the neutral powers to understand that France would soon abandon her useless resistance if she clearly saw that she could not rely on aid from any foreign power. Those two circulars were not yet known in Paris when Favre wrote his second circular; but, anxious to ascertain the real demands of the Germans, Favre, through the mediation of the English ambassador, asked for an interview with Bismarck at the castle of Ferrières. The request

was gladly granted. Favre twice met Bismarck on September 19th, and a third time on September 20th. Bismarck declared that he could not enter into a detailed discussion of the frontier demanded by Germany until France accepted the principle of a cession of territory. At present, the line of Thionville, Metz, Saarburg, Pfalzburg, and the Vosges down to Belfort, would answer the intentions of the German Government. Favre was willing to pay any amount of indemnity, but persisted in rejecting the cession of territory as humiliating, yea, as dishonoring for France. Bismarck reminded Favre that France had but recently demanded the cession of territory from Italy and Germany, and that, in 1815, Landau and Saar-Louis, which for more than a hundred years had been French towns, had been restored to Germany; but Favre showed himself unyielding on this point. At the third interview, the question of an armistice was discussed, during which the elections for a Constituent Assembly were to be held. As the armistice was altogether in the interest of France, Bismarck declared the consent of his Government to the armistice to be dependent upon a military equivalent. As such, he demanded the surrender of Strasbourg, Toul, and a few smaller places; and, if Paris was to be allowed to receive fresh provisions, the occupation of one of the forts commanding the city. When this demand was absolutely refused, Bismarck declared, as the German ultimatum, that an armistice of from fourteen to twenty-one days would be allowed on condition that, in and before Paris, the military *status quo* be maintained; that hostilities in and before Metz, within a certain limit, be continued; and that the fortresses of Strasbourg, Toul, and Bitsch, be surrendered; the garrison of the former to be prisoners of war, while the two latter would be allowed to march off. Favre returned to Paris, and on the next day, September 21st, informed Bismarck that the Government did not accept the conditions of the armistice. The Government of Tours, on September 23d, issued a proclamation charging Prussia with the design of degrading France to the rank of a second-class power, and protesting that, rather than submit, Paris would allow itself to be buried beneath its walls. In a dispatch, dated October 1st, Bismarck stigmatized the charge of Gambetta as ridiculous.

Only three days after the interview between Favre and Bismarck, the fortress of Toul, which by many Frenchmen was regarded as impregnable, surrendered. The fortress was of great importance for the Germans, as being the only point on the railroad from Strasbourg to Paris in the hands of the French. The remainder of the railroad had been repaired by the Germans, and the occupation of Toul would therefore enable them to use the entire railroad from Strasbourg to Paris for the transportation of the artillery, ammunition, and provisions, needed for the siege of the French

capital. After the arrival (September 17th and 18th) of two trains of heavy rifled 24-pounders from Cologne, Toul succumbed, on September 23d, to a bombardment lasting eight hours. The capitulation was made on the same conditions as that of Sedan, and delivered into the hands of the Germans 109 officers, 2,240 men, 120 horses, 197 cannon (48 rifled), 3,000 guns, and a considerable amount of ammunition. Four days later, September 27th, Strasbourg, the capital of Alsace, capitulated. After the battles of Weissenburg and Wörth, the speedy occupation of Strasbourg was urgently demanded by the people of Germany, especially of Southern Germany. Although the city had belonged to France since 1681, it had occupied so prominent a place in the former history of the German Empire, that the people of Germany had never forgotten its loss. Poets and patriotic enthusiasts had never abandoned the hope that Strasbourg might once more become a German city; but never, until the retreat of the defeated French army from Alsace, had there been a strong or general feeling on this point among any considerable portion of the German people. Now it became, all at once, the voice of the whole German people, which was nearly unanimous in designating the reunion of Strasbourg, the whole of Alsace, and the German portion of Lorraine, as the most essential condition which their Government would be expected to insist on at the final conclusion of peace. The investment of Strasbourg began soon after the battle of Wörth. On August 14th, the Prussian Lieutenant-General von Werder assumed the chief command of the besieging army, which consisted of the division of Baden and several Prussian divisions. The bombardment began on August 24th. As the citizens of Strasbourg fully agreed with the commander of the fortress, General Uhrich, in favor of an energetic resistance, the regular siege operations were begun on August 27th. The French made several attempts to interrupt these operations, and even bombarded the open German town of Kehl, which lies opposite Strasbourg, on the right bank of the Rhine; but the siege-works advanced steadily, with but moderate losses to the besiegers. A deputation of the International Commission of Geneva received permission from the Prussian commander to conduct the aged and the sick, the women and the children, who wished to leave the city, into Switzerland, and about 800 accepted their invitation. The remainder of the population courageously braved the immense sufferings which the siege entailed, and the commander held out until September 27th, when, after several important outworks had been taken, General Uhrich agreed to a capitulation, on the same conditions which had been accepted at Sedan. The garrison, consisting of 17,111 men, was chiefly conducted into the fortress of Rastadt; besides them, the Germans took 1,070 cannon, 12,000 chassepots, 6,000 cwt.

of ammunition, and 50 railroad locomotives. When the French garrison defied before the Prussian and French commanders, a portion of them were intoxicated, and shouted, "We have been betrayed; Uhrich is a rascal!" The citizens of Strasbourg, in general, showed very hostile feelings against the Germans, and, during the first twenty-four hours after the occupation, two soldiers were murdered. The Germans, on the other hand, made extraordinary efforts to reconcile the captured city, and to dispose the people favorably for a union with Germany. The royal house of Prussia, and, after the precedence of Berlin, a large number of German cities, sent liberal contributions for repairing the losses and mitigating the sufferings caused by the war, and the universities and booksellers vied with each other in collecting books for replacing, as far as possible, the very valuable library which had been destroyed by the fire of the besieging army. On October 8th, the German Governor-General of Alsace, Count Bismarck-Bohlen, transferred his seat from Hagenau to Strasbourg, and he was soon followed by the prefect of the Department of the Lower Rhine, the Bavarian Count Luxburg.

When the army of MacMahon had surrendered at Sedan, and that of Bazaine had been shut up in Metz, the French Government made extraordinary efforts to organize two new armies; the one near Lyons, the other in the centre of France, on the Loire. Both had as a nucleus a number of regular troops, estimated at about 20,000 men; they were to be joined by from 50,000 to 60,000 Guards Mobile, and by National Gardes, so as to bring the strength of each to 70,000 or 80,000. Long before these numbers had been reached, the Army of Lyons was pushed forward toward the Vosges, and that of the Loire toward Orleans. The former had the special mission to cut the line of communication between the army besieging Paris and Germany. To thwart this plan was the task of the Fourteenth army corps, which, after the capitulation of Strasbourg, was formed of the division of Baden and some Prussian troops, and placed under the command of General von Werder. The corps was ordered to advance in the direction of Besançon and Dijon. On October 6th, a brigade of Baden troops, under General Degenfeld, numbering about 3,800 men, encountered, at Etival, a French force of about 12,000, belonging to the corps of General Cambriel. After a bloody engagement, which lasted for six hours, and in which the Germans took three places by a bayonet charge, the French were compelled to flee. The loss of the Germans was 374 killed and wounded, while the French lost about 1,400 killed and wounded, and 583 captives. This victory cleared nearly the whole of Southern Lorraine from franc-tireurs, who had of late become exceedingly troublesome. The whole of the Fourteenth Corps now advanced in a southwesterly direction, and soon the

establishment of a connection with Luneville, on the road leading from Strasbourg, through Nancy and Chalons to Paris, secured this German line against attack. On October 31st the headquarters of General von Werder were established at Vesoul, on the line leading from Mülhausen through Belfort to Paris. As information was received of the concentration of a large body of French troops under General Cambriel near Besançon, the whole division of Baden troops, under command of Lieutenant-General von Beyer, was ordered to drive them back. The division began its march on October 22d, defeated two French divisions which were to guard the French line of defence along the Oignon River, at the villages of Rioz and Etua, crossed the Oignon, and drove the French out of the village of Anxondessus, where they rallied for the last time, back toward Besançon. The Fourteenth Corps now was ordered to advance westward toward Dijon, formerly the capital of the kingdom of Burgundy. The town is of some strategical importance, as it is situated on the Paris-Lyons Railroad. The march of the corps was greatly harassed by franc-tireurs, as the rumor of a great French victory near Besançon was generally believed, and the peasants were eager to aid in cutting off the retreat of the Germans. A serious encounter took place on October 27th at Talmay, or Gray, with one-half of the corps of General Michel, who had succeeded the deposed General Cambriel, and it required four hours' fighting to drive the French from their strong positions. As the corps had been for several weeks cut off from the base of its supply, and had to live entirely upon the conquered country, General von Werder, on October 29th, deemed it best to order a retreat to Vesoul. Immediately after issuing this order, he learned that Dijon was not occupied by the French. General Beyer was consequently directed to take possession of the city, but, before this order could be executed, new French troops had arrived in the town. On October 30th the French made a desperate attempt to arrest the advance of the Germans, at first on the heights of St. Apollinaire, a village near Dijon, subsequently, when they were driven from St. Apollinaire, in the suburbs, and, finally, in the streets of the town. Several parts of the town were set on fire by the German artillery, and late in the evening the white flag was hoisted. On October 31st the capitulation was signed, and the town occupied by the Germans.

Near the scene on which the operations of the Fourteenth Corps were conducted, a new army was forming about this time under the command of Garibaldi. At the beginning of the war, the old revolutionary general had denounced the aggressive policy of Louis Napoleon; but, after the proclamation of the French Republic, his sympathies were strongly enlisted on the side of France. The French Government expected to be able to turn the fame

of Garibaldi to advantage, and he could not resist an invitation to draw his sword for the defence of a republic. He left his insular home at Caprera on October 6th, and at Bonifacio, in Corsica, embarked for Marseilles, where he arrived on October 7th. He had been preceded by a Garibaldian Legion, numbering from 500 to 600 men, who, on September 28th, had left Marseilles for Tours. On October 9th he arrived at Tours, and at once received from Gambetta the chief command over all the franc-tireurs and free corps. He expected that he would soon be joined by many thousands of red shirts from Italy and other countries, while Gambetta promised to add a sufficient number of National and Gardes Mobile to make "the Army of the Vosges" an irresistible corps. On October 14th, Garibaldi arrived at Besançon and Belfort, where he met with any thing but a friendly reception on the part of the commanding general, Cambriel, and the chief of the free corps for the defence of Southern Alsace, the deputy Keller. Gambetta had to hasten from Tours to Besançon (October 16th) to settle the conflict of authority. On October 18th, Garibaldi went from Besançon to Dôle, where he applied himself to the organization of the Army of the Vosges. He formed three brigades, which were commanded by the Polish General Bossak, Colonel Marin, and his son, Menotti Garibaldi. In his proclamation, Garibaldi assured his soldiers that they were fighting, not only for the French, but for the universal republic. The plan of Garibaldi embraced a march through the Southern Vosges and Upper Alsace, and an invasion of Baden, in the mountains of which country he hoped to be able to carry on a successful guerrilla war, and to cut the German communications. The plan was never executed, and, on November 6th and 9th, while the German troops occupied Montbéliard, Garibaldi marched westward to Autun. The town of Montbéliard or Mömpelgard, which for several centuries was in the possession of the Dukes of Würtemberg, was in 1793 annexed to France, and in 1801 formally ceded to it. It is distant no more than thirteen miles from Belfort, one of the strongest fortresses of France, and its well-fortified castle commands the railroad leading from Belfort to Besançon, and the canal connecting the Rhine with the Rhone. The operations of the Germans against Belfort had begun on November 3d, and, on November 9th, when Montbéliard and Delle, a small place near the frontier of Switzerland, were occupied, the fortress was completely isolated. The town of Belfort has about 8,400 inhabitants. The citadel which commands it is situated on an almost vertically ascending rock; it is, moreover, defended by the Forts de la Miotte and de la Justice, and by the strong bastions Des Barres and Des Hautes Perches. Tower and fortress were wholly inaccessible for ordinary artillery. The Germans established batteries on several of the

neighboring hills, and began a vigorous bombardment on December 3d. The sorties which were made by the garrison on November 16th and 23d were repulsed. The technical direction of the siege was assumed by General Mortens, who had greatly distinguished himself in this respect before Strasbourg.

The headquarters of General von Werder remained throughout the month of November in Dijon. Day by day flying columns were sent out in every direction, to harass the enemy, to prevent the concentration of hostile armies, to forage, and to enforce requisitions. Amid incessant skirmishes with the franc-tireurs, who found a safe refuge in the Côte d'Or Mountain, the flying columns advanced partly on the road leading to Dôle, and partly in a southwesterly direction toward Nuits. On November 19th, Ricciotti Garibaldi surprised three battalions of infantry and one squadron of cavalry, stationed at Châtillon-sur-Seine, capturing about one hundred men. The place itself was soon retaken by the Germans, who received reinforcements, and severely punished the inhabitants of Châtillon who had aided in the execution of the surprise. An attempt, made by Garibaldi himself on November 25th, to capture Dijon, failed. The advance of his troops, which numbered about 10,000 men, was arrested before he reached Dijon. While on the retreat to Autun, he was attacked by three German brigades, at the village of Pasques, and lost about 400 men. The conduct of the French Gardes Mobile, during this movement, was severely censured by Garibaldi, who says of them in a letter: "These cowards cannot stand the fire; they either throw themselves into the ditches, or fly like frightened sheep." In the evening of November 27th, General Werder returned to Dijon, and imprisoned about 200 of the inhabitants, who, hoping to be soon delivered by Garibaldi from the German occupation, had, during his absence, committed excesses against the German garrison. In order to reconnoitre the enemy's base of operations, his resources, and his connection with the regular troops, the brigade Keller, of the Baden troops, was ordered to make a raid against Autun. They arrived before the town on December 1st, but, while preparing for an attack, received an order from General Werder to return. While near the little town of Vandenesse, on December 3d, the brigade was surprised by a murderous fire from the castle Chateauneuf, which is situated on a steep and woody hill, and had been occupied by mobilized National Guards under General Cremer, and a battery. The whole brigade was in danger of being lost, but, through the heroic bravery of the first battalion of the Fifth Regiment of infantry, which stormed the hill and engaged the enemy for seven hours, it escaped with a loss of 153 men, and on December 4th safely arrived at Dijon.

While the corps of Werder, at the beginning

of October, marched against Vesoul, Besançon, and Dijon, another corps advanced upon Orleans on the Loire. Orleans, situated on the northern bend of the great curve which the Loire forms from the town of Nevers toward the north, has been of great strategical importance in the wars of ancient as well as modern times. For an army advancing from the south toward Paris, it has great advantages as a sally-port, while, on the other hand, it is a main point of support for an army which intends to isolate Northern France and cut it off from the south. From Orleans a railroad runs southward to Vierzon, and from there on the right through Limoges to Bordeaux, and, on the left, through Bourges to Lyons. If the German troops, advancing as far as Bourges and Nevers, could establish a connection with the army near Dijon, they would draw a line almost across the whole of France from east to west, dividing the country into two nearly equal parts, and would find it comparatively easy to retain a firm hold of the northern and more fertile part. The French Army of the Loire was found, by a large reconnaissance, to number from 80,000 to 40,000 men. It was to advance on three different roads toward Paris, to attack the army of the crown prince, and thus furnish an opportunity to the besieged to break through the German lines and raise the siege. To forestall this movement, the Bavarian General von der Tann was ordered to advance toward Orleans with the First Bavarian Corps and three Prussian divisions. Setting out from Longjumeau on October 6th, and advancing over Etampes and Angerville, Von der Tann pushed back the French centre which had chosen this road, and on October 10th reached Artenay, about ten miles from Orleans. There a French force, consisting of three batteries, four regiments of cavalry, and a numerous infantry, made a stand; but, after a severe hand-to-hand fight, in which six battalions of Zouaves distinguished themselves by great bravery, while the remainder of the infantry showed the greatest cowardice, the position of the French was flanked by the German cavalry, and they had to make a hasty retreat. They lost about 200 dead and wounded, and nearly 2,000 prisoners, while the total German loss amounted to about 100. On the next day, October 11th, a larger French force, numbering about 25,000 men, and commanded by the aged General La Motte Rouge, was met, and a hot battle was fought at the village of Ormes and near and in the suburbs of Orleans. Well intrenched in an advantageous position, the French successfully resisted until German pioneers secured for the artillery the occupation of a vineyard which commanded the whole battle-field and the French line of retreat. Now the German batteries soon silenced the French; the latter fell back and left the infantry at the mercy of the Germans. Several thousand were captured. The remainder, about 5 o'clock in the

evening, took to flight. Von der Tann ordered his army to halt in front of Orleans, but, intoxicated with victory, the Bavarians penetrated into the city. The French troops in Orleans were in a most demoralized condition, and, as soon as the Germans began to throw the first bombshells into the city, its surrender was resolved upon. At 8 o'clock in the evening the Germans entered. On the next day they imposed upon the city a contribution of 1,000,000 francs, which, at the earnest solicitation of the mayor, was reduced to 600,000 francs. The two wings of the French army of the Loire were not more successful than the centre. The right wing, on learning the advance of the Germans, fell back from Pithiviers toward Orleans without risking a battle, while the left wing was forced to retreat across the river Eure, and lost in a skirmish near Cherisy 1,000 prisoners. A few days after the capture of Orleans, the Twenty-second Prussian Division, under General Wettick, advanced toward the road leading from Paris to Tours. It captured, on October 18th, after a battle lasting five hours, Chateaudun; on October 21st, Chartres, the capital of the department Eure-et-Loire; and, on October 25th, Dreux. While generally successful, the corps of Von der Tann met with one accident. On October 8th a squadron of a cavalry regiment was surprised in the little town of Ablis, and with the exception of only 48 men, cut down or captured. As the inhabitants were charged with having aided, not only in carrying out the surprise, but in massacring the German soldiers, the whole town was burned down.

The Parisians, in the mean while, had made several attempts to interrupt the progress of the siege. On September 30th a sortie was made, chiefly directed against L'Hay, but branching off toward Chaisy le Roi in the east and Sèvres in the west. It was everywhere repulsed, and caused to the French a loss of 1,200 killed and wounded, and 800 unwounded prisoners. A sortie, on October 18th, was made to regain the heights of Clamart, which had been taken by the Germans on September 19th, and changed into a German outpost; it was equally unsuccessful. The only important result of the French cannonading was the destruction of the celebrated castle of St. Cloud. Several other sorties, on the next day, were easily repulsed by the Twelfth and Sixth Corps. About this time (October 16th) the town of Soissons capitulated, after a bombardment lasting for four days. The capitulation gave to the Germans not only 4,700 prisoners and 128 pieces of ordnance but also full control of a very important railroad, which not only increased the means of communication with Germany, but gave them easier access to the most fertile portion of France. On October 17th Montdidier was captured by Saxon cavalry after a brief defence; and on October 21st the Prussians entered the fortress of St. Quentin. The Grand-duke of Mecklenburg-Schwerin, gov-

ernor-general of all the parts of France which were occupied by German troops, with the exception of Alsace and Lorraine, transferred on October 23d his headquarters from Reims to the castle Ferrières near Paris; and a new corps (the Thirteenth), formed of the Würtemberg troops and of a division of Prussian landwehr which had arrived from Strasbourg, was placed under his chief command. From Paris an important sortie had been made in the mean while, under the command of Ducrot, in the direction of Bongival (west of Paris on the Seine); but, although the Germans were surprised, and the sortie was vigorously supported by the forts and by gunboats in the Seine, it was repulsed by Brandenburg and Schleswig-Holstein troops.

In order to organize the resistance of France more efficiently, the country had been divided into four military districts, each of which was placed under a military governor-general. Kératry received the supreme command of the Gardes Mobile, the National Guard, and the franc-tireurs of the western departments. On October 28th the German army which had conquered Metz began its new movements. One part of the Seventh Corps was sent out to besiege Thionville, while the other part remained to garrison Metz; the Third, Ninth, and Tenth Corps, under Frederick Charles, turned toward Central and Southern France, and the First, Second, and Eighth Corps, under Manteuffel, marched northward along the northern frontier. On the same day a new sortie was made from Paris in a northerly direction, which was so far successful, that the French took possession of Le Bourget, east of St. Denis. Trochu announced the success in a glowing proclamation, which created in the Parisians an enthusiastic hope for a turning of the tide. But the hope was of short duration. As early as October 29th the artillery of the Prussian Guard began successfully to bombard Le Bourget, and on October 30th it was retaken by the Prussian Guard under Budritzky, after a brilliant and most bloody battle. This reverse brought on the explosion of the excitement which for a long time had been manifest among the Reds of the suburbs Belleville and La Villette. Large masses of furious people, headed by Flourens, marched to the Hôtel de Ville, occupied it, made several members of the Provisional Government prisoners, and charged them with treason. Picard, with the aid of the National Guard, succeeded in clearing the town hall, and releasing the imprisoned members of the Government, and dispersing the crowd. At an election held on November 3d, the people of Paris, by a very large majority, gave to the Government a vote of confidence; but the insurrection had made so profound an impression, that Thiers deemed it best to make a new effort for the conclusion of an armistice. He thought at first of going to Paris in order to act in concert with the Paris members of the Government. But, when Bismarck

definitely refused to allow this, he went through Orleans to Versailles, where he arrived on October 30th. Bismarck was willing to concede an armistice of four weeks, during which the military situation was to remain unchanged. But Thiers, in the name of the Provisional Government, also demanded that Paris be allowed to take in fresh provisions, without offering for this concession a military compensation. This demand was rejected by Bismarck. On November 7th, Thiers returned to Tours without having accomplished any thing.

In the south, the Germans had, in the mean while, been compelled to abandon a few of the places which they had occupied. Any intention of marching upon Bourges was abandoned when it was learned that the fortifications of that place had been greatly strengthened. On Tours, General von der Tann hesitated to march, as it appeared dangerous to separate too far from the bulk of the Third Army. Soon it was seen that this precaution was well grounded; for the French army, in consequence of the zeal displayed by Gambetta, and the indefatigable efforts of able generals, in particular of the chief commander, General Aurelles de Paladines, increased to a much greater strength than the Germans had anticipated, and on November 5th, numbering about 100,000, began to advance on the right bank of the Loire. On November 7th the vanguard of the two armies met in the wood of Marchenoir. The French outnumbered the Germans, and the engagement, which by the French is called the battle near Poissy, ended in the retreat of the Germans. The French conceived the plan of turning the position of Von der Tann, in order to shut him up in Orleans; but Von der Tann saw their design, and on November 8th left Orleans with his corps, which numbered from 17,000 to 18,000 men. On the next day the two armies met at Coulmiers. The generalship of the French in this battle was, according to the testimony of the German officers, better than in any other battle of the war. The Bavarians were largely in the minority, still they successfully repulsed seven attacks upon their position. The engagement lasted from 7 o'clock in the morning until 5 in the evening, when the Bavarians began to retreat toward Toury, without being in the least harassed by the French. The French took in this battle two cannon (the first in the war) and twenty wagons of ammunition; but their losses were greater than those of the Germans. In Orleans, which the French occupied on November 10th, about 1,000 Germans, mostly sick and wounded soldiers, fell into their hands. The fear entertained in Germany, that this success of the French might have an influence upon the siege of Paris, proved to be groundless. Von der Tann was at once reinforced by several detached bodies of troops; moreover, the Grand-duke of Mecklenburg-Schwerin, with the Thirteenth Army Corps and the Third Bavarian Division, left the army

in front of Paris, in order to form a junction with him and to assume the chief command. This changed the situations all the more, because Prince Frederick Charles, who at first was supposed to have an intention of marching into the valley of the Rhone, likewise advanced by forced marches to the relief of Von der Tann. On November 13th the prince reached Fontainebleau; on the following days Troyes and Sez were occupied, in order to establish a connection with General von Werder. Nevertheless, Aurelles de Paladines made one attempt to throw himself between Paris and the Duke of Mecklenburg, but the latter, being informed of the movement, advanced upon Dreux, and on November 17th forced the whole French line to fall back. On the same day General von Tresckow dispersed a French corps of 17,000 men, took Dreux, and pursued the enemy to Le Mans.

With a view, probably, to a coöperation with the Army of the Loire, General Trochu, on November 12th, had completely reorganized the Army of Paris by dividing it into three armies; the first, consisting of 276 battalions of resident National Guards, under General Thomas; the second, consisting of the corps Vinoy, Renault, and Exea, under Ducrot; the third, comprising seven divisions, under General Trochu himself. Soon (November 27th) the vanguard of Frederick Charles struck the outposts of the Army of the Loire. The first skirmishes took place at Neuville, Bois Commun, and Maizières. An important and bloody encounter took place on November 28th, at Beaume-la-Rolande. The French lost about 1,000 killed, 4,000 wounded, and 1,600 prisoners were taken on this and the following day. The total loss of the Germans was about 1,000 men. The Grand-duke of Mecklenburg, who had driven back the French beyond Le Mans, and advanced in a southeasterly direction, in order to coöperate with Frederick Charles, was, on December 2d, attacked at Bazoches les-Hautes, thirteen miles north of Orleans, by the left wing of the Army of the Loire, which again endeavored to advance toward Paris. The French were defeated, and the Twenty-second Division advanced as far as Artenay. Eleven pieces of ordnance fell into the hands of the Germans, and the Seventeenth Division alone took 1,800 prisoners. On the next day the two armies met at Chevilly, and the French were again defeated. Prince Frederick Charles, on advancing from Pithiviers, where his headquarters had been on November 21st, encountered the right wing of the Army of the Loire at Chilleuse-aux-Bois, and drove it back into the wood of Orleans. On December 4th, the battle was renewed by both the German armies, and the French on all points forced to fall back upon Orleans. In the evening, the Ninth Corps (Manstein) stormed the railroad depot and the suburb St. Jeanne la Ruelle. During the night Orleans was evacuated by the French, who, being split into two

parts, retreated across the Loire. The Germans immediately reoccupied the city. Ten thousand prisoners, 77 pieces of ordnance, and five armed steamboats, were taken by them during these three days of fighting. On December 6th the German armies resumed their advance in the direction of Tours, Frederick Charles operating in the east against General Chanzy, and the grand-duke in the west against the so-called First Army, under Bourbaki. As Gambetta caused the appointment of a committee for investigating the causes of the evacuation of Orleans, Aurelles de Paladines resigned his command.

Before the news of the French defeats in the east and south was received in Paris, General Trochu made on November 29th the grand sortie which for some time had been announced. After violent firing from several forts and several feigned attacks on different points, a very large force was hurled against L'Hay, south of Fort Bicêtre between Villejuif and Sceaux. The attack was repulsed, but on the next day resumed with new energy. On the peninsula of St. Maur, which is formed by a curve of the Marne, and in the wood of Vincennes, about 100,000 men were concentrated and advanced against the Würtemberg and Saxon troops which were stationed at Bonneuil, Champigny, Brie, and Villiers on the Marne. The French obtained at first a decided success, and the places mentioned had to be abandoned by the Germans after a gallant defence. A part of the lost ground was regained when reinforcements for the Germans arrived. On the next day an armistice was granted to the French for burying their dead. During the night of the 1st of December the Germans suddenly attacked Champigny and Brie, which had remained in the hands of the French, and in the morning they occupied both villages. The French renewed the battle along the whole line, and inflicted very severe losses on the Germans, but after eight hours' fighting they had to fall back at all points. The Saxons lost in these engagements over 2,000 men, and the loss of the Würtemberg troops was equally great. On December 4th the French destroyed the bridges opposite the battle-field, and abandoned their last positions on the Marne. On December 5th Moltke informed Trochu of the defeat of the French Army of the Loire, and proposed to him to ascertain the real situation by sending a French officer to the scene of action. Trochu declined the offer, on the ground that he was sufficiently informed.

The First Army (First and Eighth Corps), under Manteuffel, was, in its operations against the French Army of the North, as successful as the other armies. On November 27th the French, who were intrenched in a camp on the left bank of the Somme, southeast of Amiens, advanced in a southeasterly direction toward Montdidier, but they were overtaken at Moreuil, and defeated in a battle

which lasted eight hours, and in which, on the part of the Germans, in particular the Eighth Corps (Goeben) distinguished itself. The Germans lost about 1,800; while the losses of the French were greater. On November 28th the corps of Goeben entered Amiens, and on November 30th the citadel of Amiens had also to capitulate. The French in a greatly discouraged condition fled northward, in order to find new points of support in the fortresses, especially in Lille. The German Eighth Corps from Amiens took the road to Rouen, and, after several successful skirmishes on December 4th, entered Rouen on December 5th. From there, one part of the corps turned toward the port of Dieppe, on the Channel, and the French Government saw itself obliged to declare a blockade of its own ports, Dieppe, Havre, and Fécamp. The siege of the French fortresses had, in the mean while, also made favorable progress. On November 25th, Thionville (Diedenhofen) surrendered to General Kamecke with 4,000 men and 200 pieces of ordnance; on November 27th, La Fère, between Laon and Quentin, with 2,000 men and 70 pieces of ordnance.

The transfer of the seat of the Provisional Government from Tours to Bordeaux destroyed the hopes of the Parisians for a union with the Army of the Loire. That part of this army which, under the command of Bourbaki, was retreating on the road to Bourges, was hotly pursued by Prince Frederick Charles, and, on December 8th, Vierzon on the Cher, an important railroad junction, was occupied by the Germans, who thus gained a firm footing in the cattle-abounding region of Berri and Nivernois. The Grand-duke of Mecklenburg found a more vigorous resistance on the part of General Chanzy, who was retreating with the Fifteenth, Sixteenth, and Seventeenth Corps and some fresh troops, along the right bank of the Loire through Blois to Tours. Occupying a firm position at the Forêt de Marchenoir, between Beaugency and Moré, on the Loire, he endeavored both to endanger the advance of the grand-duke upon Blois and to protect the transfer of the seat of the Government to Bordeaux. Here a series of bloody encounters took place; on December 7th, at Meung; on December 8th, at Beaugency; on December 9th, at Villorceau. The Germans remained victorious and took 6 pieces of ordnance and 1,500 prisoners; but they suffered themselves heavy losses and gained but little ground. The Hessian Division, which advanced on the left bank of the Loire over Cléry and St. Dié, repulsed an attack by the French at Montlivault, occupied the Castle of Chambord, and thereby compelled Chanzy to leave his favorable position and to continue his retreat. The Germans followed him closely, and on December 11th the Hessians occupied Blois. General Chanzy suddenly changed his line of retreat, taking the road to Le Mans. The Germans now had likewise to change

the route of their march; one part of the Second Army joined the grand-duke, and in the place of the First Bavarian Corps, which was sent to Orleans, the Tenth Corps resumed the pursuit. After a victorious engagement on December 15th, it occupied, on December 16th, Vendôme on the Loire. Other divisions advanced from Chartres after successful skirmishes beyond Châteaudun. On December 17th, the French were again beaten near Epuizay, and the retreat more and more resumed the nature of a flight. The Provisional Government, which at first had published the most brilliant accounts of pretended successes of the Armies of Paris and the Loire, at length found it necessary to issue an order clearly indicating the danger of the situation. On December 11th, a circular of Gambetta decreed the organization of regiments of gendarmes who were to receive orders directly from the Minister of War and to follow the army, in order to arrest all fugitives and to deliver them over to courts-martial. Another decree ordered the establishment of ten new camps. The execution of this decree would have formed a new army of nearly one and a half million of soldiers, but it was soon found to be impossible to collect so large a force. The remainder of the army of Orléans sought a refuge in the camp of Coulm near Le Mans, behind the Sarthe, where it was to form a junction with the remainder of the Army of Brittany. The Grand-duke of Mecklenburg continued to advance in this direction, while the Tenth Corps marched upon Tours. After a few bombshells had been thrown into the city, it hoisted the white flag and asked for a German garrison. The Germans, however, contented themselves with destroying the railroad to Paris, and encamped on the right bank of the Loire. The Third Corps, which had followed the army of Bourbaki as far as Gien, was recalled and took up a position between Blois and Tours. In the east, the Brigade Goltz, of the corps of General Werder, was ordered to operate against the fortress of Langres, which formed the chief support of the franc-tireurs in the Champagne. The franc-tireurs were, on December 16th, beaten in a three-hours' fight at Longeau, south of Langres, and driven back upon this fortress. A more important engagement took place on December 18th at Nuits, about thirteen miles south of Dijon, between the division of Baden (Von Glümer) and 20,000 Gardes Mobile. It lasted five hours, and ended in the occupation of the town by the Germans. The French lost 1,000 dead and wounded, 700 prisoners, and a vast amount of arms and ammunition; but the Germans likewise lost about 800 men. The corps of Werder had, in spite of its victories, a very difficult stand, as the franc-tireurs, however often they might be dispersed, found a safe refuge in the mountains, and as large bodies of troops arrived from Lyons for the purpose of raising the siege of Belfort. Garibaldi advanced from Au-

tun upon Chagny and Beaume, south of Nuits, and received various reinforcements, among them a Polish legion under Dombrowsky. In the north, the army of Manteuffel, after occupying Dieppe and Fécamp, marched in the direction of Havre, for the defence of which the most energetic measures were taken. But when Faidherbe surprised small divisions of German troops near La Fère and Ham, and seemed resolved to make a new movement for the relief of Paris, Manteuffel hastened back from Normandy, arrested his advance and compelled him to fall back, and pursued him as far as Amiens. On December 23d, Manteuffel encountered, not far from the former battle-field, the bulk of the Army of the North, which was encamped behind the Hallue, an affluent of the Somme. After a bloody battle, lasting from eleven o'clock in the morning to six in the evening, the Germans occupied all the villages which in the morning had been in possession of the French—among them Pont-Noyelles, the centre of their position. They also made 1,000 prisoners, but darkness prevented them from following up the victory. Faidherbe, on his part, claimed to have defeated the Germans, but did not explain the cause of his retreat to the Belgian frontier. Trochu, not being informed of this retreat, and expecting to coöperate with Faidherbe, made, on December 21st, another great sortie. Three divisions attacked the Prussian Guards near Stains and Le Bourget, and advanced in the east, on both sides of the Ourcq Canal, from Bobigny upon Sevran, and from Rosny and Neuilly sur Marne upon Ohelles, against the right wing of the Saxon corps. The vanguard of the Germans had to be withdrawn from Stains and Le Bourget, but, after being efficiently bombarded for a short time, both places were retaken by storm. The Saxons also had at first to evacuate Ville Evrard and Maison Blanche, which are situated opposite the Plateau of Avron, but regained them after a bloody engagement before evening. The attack had been repulsed so energetically that the fire of two batteries at Noisy was sufficient to repel, on December 22d, a new attack by the French upon the left wing of the Saxons. On December 27th the Germans began a vigorous fire upon Mont Avron, a height east of the city, of 350 feet, which had been, on December 21st, the chief support of the French sortie. The French batteries were silenced in the evening, and on December 29th the Twelfth Corps occupied Mont Avron, an important position, as it facilitated an efficient bombardment of Forts Noisy, Rosny, and Nogent.

Thus the close of the year saw the French everywhere defeated. On January 28, 1871, the capitulation of Paris virtually put an end to the war, which ceased altogether on February 26, 1871. The details must be reserved for the AMERICAN ANNUAL CYCLOPEDIA for 1871.

GERMANY. From 1806, when the old German Empire was dissolved by the abdication of Emperor Francis II., until 1870, Germany was only the collective name for a number of independent states, bound together by the feeling of a common nationality. The Congress of Vienna, in 1815, established a confederation of the German states, with a Federal Diet (Bundestag), consisting of the plenipotentiaries of the several governments and presided over by a representative of Austria, as a bond of union. The revolutionary movements of the year 1848 led to the convocation of a National Parliament, but the attempt to reestablish the empire failed, and, after a protracted state of transition, the old Federal Diet was restored. The war between Austria and Prussia in 1866 was the first great step toward the reconstruction of a united Germany. Twenty-two states formed under the presidency of Prussia the North-German Confederation, while, chiefly owing to the opposition of France to a union of all Germany, the South-German States of Bavaria, Württemberg, Baden, and a part of Hesse-Darmstadt, were left wholly independent and free, in case they saw fit to do so, to establish a South-German Confederation. For the year 1870 it was reserved to remove the last obstacles to a reunion of the northern and southern states, and to reintroduce the German

Empire into the family of European nations. The governments of the southern states concluded treaties with the North-German Confederation concerning their entrance into the union; all the princes and free towns requested King William of Prussia to assume the title of Emperor; the North-German Parliament expressed the same wish, and King William yielded to the general request. The treaties were ratified by the legislatures of the southern states, with the exception of the Lower Chamber of Bavaria, which delayed its assent until January, 1871. On the 18th of January, 1871, King William, by a formal proclamation, announced that he assumed the imperial title for himself and his successors. The new German Empire, which was thus reconstructed, embraced all the countries represented in the Federal Diet of 1815, except Austria, Limburg, Luxemburg, and Lichtenstein; on the other hand, the duchy of Schleswig, and the two Prussian provinces of Prussia and Posen, which did not belong to the Confederation of 1815, are parts of the new empire, and the victory of Germany over France in 1870 made it probable that, on the conclusion of peace, Alsace and Lorraine would also be annexed to Germany.

The area and population of the German States were, at the latest census, as follows:

STATES.	Square Miles.	Population, 1867.	Males.	Females.	No. of females to every 1,000 males.
Kingdom of Prussia, including Lauenburg.....	135,806	24,089,668	11,918,178	12,196,490	1,018

Total Germany.....	204,591	38,500,663	19,004,690	19,508,756	1,027

As regards nationality, the population of the middle and smaller states is exclusively German. The foreign element in Saxony consisted of 51,895 Vindes of Slavonian origin, while Prussia numbered, in 1867, 2,901,000 non-German inhabitants, almost exclusively in the eastern provinces. Altogether the North-German Confederation contained 26,946,000 Germans,

or 90 per cent., and 2,960,000 non-Germans, or 9.9 per cent. of the entire population.

Besides those enumerated in the following table, there were 2,500 Greek Catholics, 106,000 belonging to other Christian sects, and 5,200 not belonging to any of the denominations named. The religious statistics of Germany, in 1867, were as follows:

STATES.	Evangelicals.	Roman Catholics.	Jews.	PERCENTAGE.		
				Evangelical.	Catholic.	Jews.
Prussia, including Lauenburg.....	15,672,400	7,955,150	813,250	65.31	33.68	1.38

The public debt of the Confederation consists of a loan of 10,000,000 thalers, authorized by law of November 9, 1867, for army and marine purposes; besides, the concession for a loan of 100,000,000 thalers was given by a law of July 20, 1870, to cover the expenses incurred by the mobilization of the army. This loan was subscribed to at the rate of 88, and bears interest at 5 per cent. per annum.

The paper emission of the various states of the Confederation amounts to 40,652,742 thalers, as follows:

STATES.	Total Thalers.	For each Inhab.
Prussia.....	30,478,000	0.833
Saxony, 24,300,000 florins, or.....	12,000,000	4.950
Hesse.....	2,457,143	2.933
Weimar.....	600,000	2.117
Mecklenburg-Strelitz.....	600,000	5.600
Brunswick.....	600,000	1.980
Meiningen.....	600,000	3.330

Total.....	40,652,742	1.355

The following is a condensed statement of the budget for the year 1871, as established by the law of June 11, 1870:

REVENUE.	Thalers.
1. Duties and excise of consumption.....	43,574,500
2. Stamp duty.....	896,000
3. Administration of postal service (net revenue),	2,400,715
4. " telegraphs (net revenue).....	89,322
5. Various.....	124,338
6. State contributions.....	33,360,068

Total..... 77,446,337

The repartition of these separate contributions was made as follows:

VOL. X.—24 A

	Thalers.
Prussia.....	19,349,554
Lauenburg.....	40,365
Saxony.....	1,354,203
Hesse.....	307,635

The army budget is calculated for the maintenance of the regular army on a peace-footing. The minor states being exempt from contributions to the requisite fund, the above

66,856,638 thalers have to be provided for as follows: By Prussia, 60,290,919 thalers; Saxony, 4,879,816 thalers; Mecklenburg, 1,102,140 thalers; Hesse, 498,768 thalers.

The army of the North-German Confederation consists of one army corps of the Guard and of 12 provincial army corps, each of which is composed of two divisions. The army corps of the Guard and the Twelfth army corps (Saxony) have, moreover, a special cavalry division; while the Eleventh army corps comprises a third separate division, recruited in the grand-duchy of Hesse. According to an army order of July 16, 1870, the proportion of troops to be furnished for the army of the Confederation was: 1. Contingent of Prussia: 105 regiments of infantry, 14 battalions of chasseurs, 68 regiments of cavalry, 12 regiments of field artillery, nine regiments of artillery for fortresses, 12 battalions of sappers and miners, and 12 battalions for the train of the army. 2. Contingent of Saxony: nine regiments of infantry, two battalions of chasseurs, six regiments of cavalry, one regiment of field artillery, one regiment of artillery for fortresses, one battalion of sappers and miners, and one

battalion for the army train. 8. Contingent of the grand-duchy of Hesse: Four regiments of infantry, two battalions of chasseurs, two regiments of cavalry, six batteries of field artillery, one quarter of a battalion of sappers and miners, and one-half a battalion for the army train.

The former contingents of the smaller states of the Confederation have either been entirely abolished, and incorporated, in virtue of special conventions, with the Prussian army, or they form integral parts of the same, and are, therefore, not separately mentioned.

One regiment of infantry of the line numbers 1,601 men, rank and file (exclusive of officers), on a peace footing, and 8,029 men on a war footing. The corps of officers of the Prussian army, in 1869, consisted of one general field-marshal, one general master of the ordnance, 46 generals, 55 lieutenant-generals, 108 major-generals, 153 colonels of infantry, 51 colonels of cavalry, 88 colonels of artillery, 17 colonels of the corps of engineers, and two colonels for the army train. The numerical strength of the army of the North-German Confederation was:

	Battalions.	PEACE FOOTING.	WAR FOOTING.
		Men.	Men.
9 Regiments of Infantry of the Guard.....	27	18,176	27,451
109 Regiments of Infantry of the Line.....	338	172,374	320,121
1 Battalion of Chasseurs of the Guard.....	1	584	1,006
1 Battalion Sharpshooters of the Guard.....	1	534	1,006
16 Battalions Chasseurs of the Line.....	16	8,544	16,096
Total Infantry.....	388	200,172	371,689

The cavalry force of the army consisted of:

	Squadrons.	PEACE FOOTING.	WAR FOOTING.
		Men.	Men.
5 Regiments of Cavalry of the Guard.....	40	5,750	4,837
68 Regiments of Cavalry of the Line.....	340	47,766	41,380
Total Cavalry.....	380	53,486	46,187

The field artillery consisted of: One regiment of artillery of the guard, with 15 batteries; 60 field-pieces and 1,700 men on a peace footing, against 16 batteries, 96 field-pieces, and 3,181 men, on a war footing; 12 field artillery regiments of the line, with 181 batteries, 724 field-pieces, and 19,946 men, on a peace footing, against 192 batteries, 1,152 field-pieces, and 87,440 men, on a war footing; besides which, there was a small division of Hessian artillery (about one-third of a regiment), with six batteries, 24 field-pieces, and 677 men, on a peace footing, against 868 men on a war footing. This would make a total of field artillery on a peace footing, of 18½ regiments, 202 batteries, 808 guns, and 22,823 men, against a total of field artillery on a war footing, of 18½ regiments, 214 batteries, 1,272 guns, and 41,489 men.

Besides, there were 18½ battalions of sappers and miners, comprising 53 companies,

with 6,613 men on a peace footing, and 8,030 men on a war footing; and 13½ battalions of the army train, consisting of 27 companies, with 8,037 men, on a peace footing, against 44,540 men, on a war footing.

This would make a grand total for the field army, in times of peace, of 285,449 men and 808 guns, and, in times of war, of 511,826 men and 1,272 guns.

The seeming contradiction, in the figures given of the strength of the cavalry on a peace footing and on a war footing, is explained by the fact that part of the cavalry of the line is transferred to the army of the reserve during times of war, while only four squadrons of each regiment remain with the field army.

The formation of the army of the reserve takes place simultaneously with the mobilization of the regular army. It consists of one battalion for each regiment of infantry of the field army of one company for each battalion

of chasseurs and sappers and miners, of one squadron for each regiment of cavalry, of four batteries for each brigade of artillery, and of one division for each battalion of the army train. Thus the army of the reserve comprises:

	Men.	Guns.
118 Battalions of Infantry.....	118,636	..
18 Companies of Chasseurs.....	8,618	..
76 Squadrons of Cavalry.....	15,200	..
53 Batteries of Artillery.....	7,314	213
13 Companies of Sappers and Miners...	2,626	..
12 Divisions of the Army Train.....	6,536	..
	154,110	213
Besides which, there are Artisans with the Army of the Reserve to the No. of.	26,700	..
Making a total of.....	180,810	..

The army for garrison duty consists of 211 battalions of infantry, and 18 divisions of chasseurs, numbering, in all, on a peace footing, 3,584 men, and on a war footing, 219,502 men. The cavalry doing garrison duty, in times of war, comprises 64 squadrons, with 9,696 men, while the artillery consists of 22 divisions, with 88 companies and 9,782 men, on a peace footing, against 184 companies and 82,200 men on a war footing. The number of sappers and miners assigned to garrison duty (in time of war only) amounts to 3,684 men. This would make a total of garrison troops, in times of peace, of 13,366 men; in times of war, of 265,082 men. The total strength of the army thus amounts to:

	PEACE FOOT'G	WAR FOOTING.
	Men.	Men.
Field Army.....	265,551	511,836
Reserve.....	..	180,810
Garrison Troops.....	13,366	265,082
Total subaltern officers and men.....	293,917	957,718
To which must be added:		
Officers.....	13,128	15,000
Gendarmes.....	2,250	2,350
Royal Body-Guard.....	70	70
Mounted Corps of Chasseurs.....	17	17
Invalide.....	4,148	..
Pyrotechnical Division.....	206	839
Total.....	318,736	973,394

Of non-combatants there are 1,810 physicians, 517 paymasters, 580 veterinary surgeons, 462 gunsmiths, and 76 saddlers. The time of service in the regular army, and in the reserve and landwehr, is twelve years. On an average, 100,000 men are annually drafted, which, for nine years of furlough, would make a total of 900,000 men. Deducting 15 per cent. for sickness and mortality, there still remain 765,000 men, well drilled, and fit for field service. Thus, even after the army has been placed on a war footing, there are yet available 116,000 men, whose time of service has not expired.

The entire German army, including the contingents of Bavaria, Württemberg, and Ba-

den, with 153,000 men, consists of 1,128,894 men.

At the commencement of the year 1870, the German marine consisted of 38 screw steamers, of 8,466 horse-power, 36,552 tons, and 320 guns; seven sailing-vessels, of 5,863 tons, and 160 guns; 32 rowing-sloops, with two guns each, 64 guns; four rowing-boats, with one gun each, four guns. Total, 81 vessels and boats, with 548 guns.

According to the original plan, there still remain to be constructed up to the year 1877: 11 iron-clads, 11 corvettes, seven avisos, and three transports. Of these, there were in course of construction, on January 1, 1870, two iron-clad frigates, one iron-clad corvette, one corvette, three avisos, and two steamers for harbor service. The marine is under the command of one admiral, one vice-admiral, two rear-admirals, twenty-seven captains, and one hundred and seventy-nine lieutenants and second-lieutenants.

The merchant fleet of the North-German Confederation consisted, in 1870, of:

	Tons.	No. of Vessels.
Prussian.....	642,305	3,372
Hamburg.....	255,457	483
Bremen.....	226,230	305
Mecklenburg.....	89,585	440
Oldenburg.....	64,264	565
Lübeck.....	11,643	45
Total.....	1,299,968	5,110

Comprising 146 steamers, of 102,149 tons.

The commercial interests of all the German States are represented by the Zollverein (Customs Union), which was originally founded in 1828, and re-established on a new basis by a treaty of July 8, 1867, for the term of ten years, from January 1, 1868, till December 31, 1877. Its council of administration resides in Berlin.

After the above-mentioned treaty had been concluded, Lauenburg was admitted into the Zollverein on January 5, 1868; the city of Bergedorf, which forms part of the domain of the free city of Hamburg, on February 11, 1868; the Austrian district of Jungholz, on July 1, 1868; and the grand-duchies of Mecklenburg-Schwerin and Mecklenburg-Strelitz, together with the free city of Lübeck, on August 11, 1868.

The following parts of German states were still excluded from the Zollverein in 1870: Of Baden, about 22 square miles, with 5,347 inhabitants; of Prussia, 21 square miles, with 88,121 inhabitants; of Oldenburg, 2.55 square miles, with 2,591 inhabitants; of the territory of Bremen, 75.9 square miles, with 108,196 inhabitants; of Hamburg, 84 square miles, with 270,480 inhabitants. Total area of the Zollverein, 205,523 square miles; population, 38,302,890.

The duties (in thalers) on imports and exports in the Zollverein, during the year 1869, amounted to:

STATES.	Inhabitants.	Gross receipts.
Prussia.....	24,888,257	17,923,179
Lauenburg.....	54,167	19,906
Lübeck.....	44,686	170,608

Baden.....	1,438,585	1,276,774
Hesse, south of the Main.....	554,971	404,097
Total Zollverein.....	88,302,890	26,575,416

With the exception of a few small roads leading from the main lines to private manufacturing establishments, or to coal and iron mines, all the railroads of Germany, as well as those of the Austro-Hungarian Empire and of the Netherlands, belong to the "Association of German Railroad Companies," which has its centre at Berlin. The territory of the As-

sociation extended, on October 1, 1870, over 78 different railroads, of which 49 were German, 24 Austrian, and 5 belonging to foreign countries. Their total length was 18,412 miles.

The German-Austrian Postal Union comprises, besides all the German states and Luxemburg, the whole Austro-Hungarian Empire. In North Germany, since the establishment of the North-German Confederation, all the post-offices are under one central administration, the territory of which extended (in 1868) over an area of 168,478 square miles, with 80,476,036 inhabitants. The following is a condensed statement of the post-offices throughout Germany.

STATES.	No. Officers.	Revenue.	Expenditures.
N. Germany (1869)...	4,520	30,990,739	20,735,666 thalers*
Bavaria (1869)....	1,051
Württemberg (1869)...	425	2,938,199	2,938,199 florins.
Baden (1868)....	425	1,865,000	1,496,700 ..

The number of letters, pamphlets, and newspapers, passing through the post-offices, was as follows:

STATES.	Private Letters.	Official Letters.	Pamphlets.	Newspapers.
North-German Confederation (1869)	243,263,198	40,056,348	48,837,923	152,369,734
Bavaria..... (1868)	42,495,444	7,025,292	53,451,975
Württemberg..... (1869)	15,227,948	8,009,788	16,086,579
Baden..... (1868)	14,915,000	1,871,000	2,377,000	12,571,000

The German-Austrian Telegraph Union extends over all the German states, the Austro-Hungarian monarchy, and the Netherlands. The length of telegraph-lines, on January 1, 1869, was: In the North-German Confederation, 14,850 miles; length of wire, 48,558 miles; in Bavaria, length of lines, 2,491 miles, length of wire, 7,570 miles; in Württemberg, length of lines, 1,298 miles, length of wire, 2,575 miles; in Baden, length of lines, 1,027 miles, length of wire, 2,677 miles. The number of dispatches sent over the various lines in Germany, in 1868, was 8,113,102.

During the period from 1859 to 1861 the annual consumption of raw cotton averaged 1,808,000 hundred-weights net; from 1862 to 1865 the annual consumption fell off to 836,000 hundred-weights; while from 1866 to 1868 it had again increased to 1,364,000 hundred-weights per annum. The proportion of imported yarn to the quantity of yarn manufactured in home spinneries, out of the above-mentioned raw material, was, from 1859 to 1861, 44 per cent.; from 1862 to 1865, 28 per cent.; from 1866 to 1868, 26 per cent. This shows that the home production of yarn during the latter period has not fallen off in quantity as compared with the most favorable period previous to the cotton crisis, and has had nothing to fear from foreign competition. The export of cotton yarn increased from 20,959 hundred-weights, in 1859, to 69,270 hundred-weights, in 1868. For the manufacture of cotton goods, the following quantities of yarn (imported and home made) were absorbed: from 1859 to 1861,

1,482,000 hundred-weights; from 1862 to 1865, 806,000 hundred-weights; and from 1866 to 1868, 1,313,000 hundredweights annually. Thus, while there was a slight diminution in the manufacture of cotton goods, the production of yarn increased instead of declined. The proportion of cotton consumed in German spinneries to the quantity used in Great Britain was: from 1859 to 1861, 18.7 per cent.; from 1866 to 1868, 15.5 per cent. The total value of the cotton used in the states of the Zollverein during the eight years from 1861 to 1868 was estimated at \$223,650,000.

On the 14th of January the North-German Parliament was opened by the King of Prussia, who delivered the following speech from the throne:

HONORED GENTLEMEN OF THE PARLIAMENT OF THE NORTH-GERMAN CONFEDERATION: In the name of the confederate governments I bid you welcome to the last session of the legislative period. In this session you will be called upon to complete and further establish those institutions which have been created with your cooperation, and have come into existence through the unanimous exertions of the confederate governments. To my great gratification, the devoted labors of those persons who were intrusted with the preparation of a penal code for the North-German Confederacy have resulted in bringing that important work to such a degree of completion that it has already received the approval of the Federal Council, and is ready to be laid before you to-day. While this code perfects the national unity of the North-German Confederation in one of the most important fields of public law, it contains at the same time features which show a marked progress upon the penal laws at present in force in the

* One thaler = 60 cents; one florin = 40 cents.

territories of the Confederation, and which are in harmony with the requirements of science and the results of fruitful experience. The same has been the aim in a kindred branch of legislation, namely, in the proposed law for the protection of the rights of authors. The principle of the common right of nationality (*indigenat*), originated in the Federal Constitution, and further developed in the laws upon freedom of residence and in the trade regulations, will obtain its final extension in several directions by the adoption of the laws to be submitted to you. A bill respecting the acquirement and deprivation of the rights belonging to a subject of the Bund or state will be presented, to meet the wish expressed by you last session. The establishment of the principle of the freedom of residence has drawn attention to great inequalities, arising from the greatly-varying regulations in the several countries of the Bund, in connection with the rights of domicile and the support of the poor. The removal of these inequalities—suggested, indeed, by you—could not be long delayed, and a relief and dwelling-house bill will be introduced, which is calculated to remove the most prominent of the evils complained of. Those impediments still existing to the full development of the principle of freedom of residence, which arise from the state laws on direct taxation, are to be removed by a bill now before the Federal Council.

The position of the men belonging to the former Schleswig-Holstein army claims the same sympathy as was expressed in your last session but one with regard to the officers of that army. A bill on this subject will be laid before you. The reservation made in the federal consulates law, in favor of settling the competency of the federal consuls to celebrate marriages and to authenticate the position of individuals, will be dealt with by a bill to be presented to you, and the bill respecting the position of federal officials will again be submitted to you for decision. The increase of trade and the reform of the sugar-tax have enabled the Government, while maintaining the basis of prudent calculation, to fix in the federal budget, at a higher figure than in the previous budget, the estimates of the revenue from the customs, the taxes upon articles of consumption, and the surplus from the postal service. A prospect is therefore afforded that the greater portion of the still excessive expenditure necessitated by the development of federal institutions, and especially by the projected completion of the federal navy, will be covered by the Bund's own revenue.

Preparatory steps toward the arrangement contemplated in article four of the Treaty of Prague, for the national union of the North-German Confederation with the South-German States, are the object of my incessant attention. A jurisdiction treaty, which will be submitted to your approval, has been concluded with the grand-duchy of Baden, with the object of extending, in a national sense, beyond the frontiers of the federal territory, the principles of community of legal protection which obtain throughout the North-German Confederation by means of the law for affording legal assistance. By a bill, which is to be brought forward to supply defects in the law on weights and measures, it will become possible to unite in a common system, in that respect, with other German states, by the mutual admission of the reformed arrangements. In consequence of my mediation, the Bund has willingly cooperated in the establishment of a commission on the South German fortresses, by agreeing to an undivided proprietorship in the fortifications. The entirety of the treaties which connect the north of Germany with the south is a security for the safety and welfare of the common German fatherland, and affords those trusty guarantees which are inherent in the strength and complete organization of the North-German Bund. The confidence which our South-German allies repose in these guarantees is based upon complete reciprocity.

The sentiment of national unity to which the present treaties owe their existence, the mutually pledged word of German princes, and the community of supreme national interests, tend to give our relations with South Germany a solidity which is independent of the changing waves of political passions. When I spoke to you last year from this place, I expressed myself confident that my sincere efforts to gratify the wishes of nations and fulfil the requirements of civilization by the avoidance of any disturbance of peace could not, with the help of Providence, fail of success. It does my heart good to be able to announce to-day from the same place that my confidence was fully justified.

Among the governments as well as among the nations of the present day a conviction is successfully making way, to the effect that to each political community belong the task and the duty of fostering independently at home its own welfare and the principles of freedom and justice, and that the armed force of each country is destined to protect its own independence, not to assail that of others.

The legislative period of the present Parliament is approaching a close. By its former successful activity and the fruitful coöperation between the confederate governments and the Parliament in their labors, the federal institutions have been firmly founded, and have developed in a direction destined to prove most beneficial to the interests of the fatherland. The deliberations of the present session will be renewed, and your energetic activity is again claimed for the furtherance of this object. By fulfilling the tasks which will be laid before you, you will bring the successful career of the present Parliament to a termination which will cause the labors it has exacted to be rewarded with a nation's thanks, and secure for it a prominent place in the history of the institutions of the fatherland.

On February 18th, Dr. Simson was reelected president, and the Duke von Ujest and Count Benningsen vice-presidents of the Assembly, by 144, 143, and 101 votes respectively, out of 155. No opposition candidate received more than five votes. At the discussion of the treaty with Baden, Deputy Lasker, in behalf of the National Liberals, moved the earliest possible acceptance of the offer of Baden to become a member of the North-German Confederation. Count Bismarck, in reply, denounced the motion as an untimely one. He said that the acknowledged patriotic devotion of Baden needed no comment, but its entrance into the North-German Confederation would not settle the German question, but only tend to increase the opposition in the other South-German States. Mr. Lasker then withdrew his motion. On the 5th of March the Reichstag voted the extension of uniform weights and measures to the states of South Germany. Bills were adopted, securing the rights of authors, and abolishing capital punishment, but Count Bismarck declared, with regard to the latter, that the Federal Council would not approve it. A postal convention between the United States and the North-German Confederation was also ratified.

The King of Prussia closed the session of the Reichstag, May 27th, at Berlin, with the following speech from the throne:

HONORED GENTLEMEN: The task of the first Parliament of the Confederation was to introduce the most essential disposition of the constitutional

régime, under the form of organic laws, into the political and civil life of the people. You have, in the course of four laborious sessions, advanced the accomplishment of that work in such a manner that you, as well as myself, will feel a satisfaction, at the close of this legislative period, in casting a retrospective glance at the results of your devoted activity. The Confederation owes to those efforts the most important realization, and among others that of fixing the rules of federal nationality, the right of domicile, purchase of real property, and liberty of trades and professions.

You have regulated, by means of laws and treaties, the conditions for acquiring or forfeiting federal and state rights of citizenship, suppressing the exceptional taxes which in each country of the Confederation were imposed on individuals belonging to others, abolishing the police restrictions on marriages, establishing the independence of the particular rights of the state apart from the religious distinctions, directing the federal flag, protecting German navigation by legations and consulates, and regulating the effective action of the consuls and the rights attributed to those functionaries of the Confederation. By the abolition of the Elbe dues and by the establishment of proper rules, the liberty of the German rivers, so long desired, has been realized. The series of treaties by which the postal relations of the Confederation abroad were established on a liberal basis have been extended by arrangements concluded with Great Britain and the United States of America, and which measures you have sanctioned. The organization of the federal army is terminated, and the navy of the Confederation has, by means of the resources which you have guaranteed, entered on a course of development which promises to that branch of our national armament a rank corresponding to the legislative aspirations of the German nation. The finances of the Confederation have been established on a firmer basis. The taxation of articles of food, regulated by the Confederation, has been fixed in a uniform manner.

By the establishment of a stamp duty on bills of exchange a federal tax has been created in the interest of commercial freedom. The fixation of the common rules of law which the constitution requires has been hastened on in a manner which, four years back, we hardly dared to hope for. The bill on judicial assistance, and the treaties based on that measure concluded with Baden and Hesse, have, by anticipating your decisions relative to the new common law of procedure, the examination of which will soon be finished, obviated the difficulties opposed by the frontiers of the states to the efficacy of legal decisions. The suppression of restrictions on the interest on money, of imprisonment for debt, and of attachments on wages, has introduced some very important provisions into matters affecting political economy. The commercial code and the legislation concerning bills of exchange were voted by you as federal laws, and both of them, as well as the one on companies in shares and that on copyright, have been placed under the safeguard of the High Court, which will soon commence its operations. The first rank in this series of important measures belongs to the law which was adopted yesterday by you and the Federal Council. The penal code belongs to that totality of enactments by which the great object of German judicial unity is advanced in a remarkable manner; it could only be brought to a favorable termination by some sacrifices of opinion being made by you and the confederate governments for the accomplishment of a great national work, which was more difficult, and at the same time more productive, than the questions treated and the solutions they were to receive more profoundly affected the rights of the public. I thank you for your devotedness in making these sacrifices; you have thus met the wishes formed by the various governments.

HONORED GENTLEMEN: I may express the conviction

that the satisfaction with which, in this place, we perceive the striking results of the common activity will be shared throughout the German country and also beyond the frontiers. The great effects which have been achieved in so short a time, by means of a free accord between the federal governments and the representatives of the nation, render the whole people jointly interested in the accomplishment of the hopes attached to the creation of the Confederacy. All these facts prove that the German mind, without renouncing the free development in which its strength reposes, knows how to find union in the common love of all for the fatherland. The results obtained by confidence and incessant labor in the domain of prosperity and progress, of order and liberty in our own land, also give to foreigners the certitude that the Northern Confederation, in the realization of its interior reforms and of its constitutional national union with the states of the South, displays the German strength, not to menace others, but to solidly establish the general peace. That attitude procures us the confidence and consideration of foreign peoples and governments.

The Customs Parliament (Zollparlament) assembled on April 21st; the principal measures adopted were, the ratification of a treaty of commerce with Mexico; an increase of the rate of duty on coffee; the abolition of the onerous regulations controlling the manufacture of beet-root sugar; the adoption of a revised tariff, and the extension of uniform coinage to the states of South Germany. King William, in dismissing the members of the Parliament at the close of its three-years legislative period, on May 31st, expressed his satisfaction with the result of their deliberations, the adoption of the revised tariff, and of several other measures proposed by the allied governments. He called their action a praiseworthy concession to national feeling, and a sacrifice on all sides for the benefit of the fatherland.

The peaceable relations of the North-German Confederation, on which King William in his speeches from the throne had laid so great stress, were suddenly disturbed at the beginning of June. The offer of the Spanish crown to a prince of Hohenzollern seemed, in the opinion of the French Government, to involve both a danger and a threat to France. As Prince Leopold declared his readiness to accept the throne with the approval of King William, as the head of the house of Hohenzollern, France demanded that the King of Prussia should cause the prince to decline the offered throne. The war-cloud, so suddenly gathering over Europe, seemed to be happily dispersed when Prince Leopold declared that for the sake of peace he withdrew his acceptance of the throne. France, however, insisted that she could not be satisfied with this step, but must demand from Prussia a guarantee that no prince of the house of Hohenzollern should in future be permitted to ascend the Spanish throne. When this demand was indignantly rejected by Prussia, France began the great German-French War which was to entail on herself such dreadful consequences. (See GERMAN-FRENCH WAR and FRANCE.)

On July 14th, King William left Ems, where

he had stayed during the progress of the negotiations, for Berlin, and was received with enthusiastic demonstrations all along the route. On the 18th he made a speech to a great crowd of the people of Berlin who came to congratulate him. He said "he was not responsible for the war which had just broken out. He might personally be passive under outrage, but Germany, even from beyond the seas, had spoken. Sacrifices were sure. Prussia had been spoiled by her rapid victories in two wars, and perhaps a worse fate awaited her now. He, however, knew what to hope from God, the army, and the people." On the 19th the North-German Parliament was opened by the King with the following speech from the throne:

HONORED GENTLEMEN OF THE PARLIAMENT OF THE NORTH-GERMAN CONFEDERATION: When, at your first meeting, I bade you welcome from this place in the name of the allied governments, it was with joy and gratitude that I was able to bear witness to the fact that, by the help of God, success had rewarded my sincere efforts to meet the wishes of the people and the requirements of civilization by avoiding any disturbance of the peace of Europe. If, notwithstanding this assurance, the menace and imminence of war have now laid upon the confederate governments the duty of calling you together for an extraordinary session, you as well as ourselves will be animated with the conviction that the North-German Confederation has labored to improve the national forces, not to imperil, but to protect more efficiently universal peace; and that, when we call upon this national army to defend our independence, we only obey the mandates of honor and duty. The candidature of a German prince for the Spanish throne, with the bringing forward and withdrawal of which the confederate governments had nothing to do, and which interested the North-German Confederation only in so far as the government of a friendly country appeared to base upon its success the hope of acquiring for a sorely-tried people a pledge for a regular and peaceful government, afforded the Emperor of the French a pretext for a *casus belli*, put forward in a manner which has long been unknown in the annals of diplomatic intercourse, and adhered to after the removal of the very pretext itself, with that disregard for the people's right for the blessings of peace, of which the history of a former ruler of France affords so many analogous examples. If Germany in former centuries bore in silence such violations of her right and her honor, it was only because in her then divided state she knew not her own strength. To-day, when the links of all intellectual and rightful communion, which began to be formed at the time of the wars of liberation, slowly joined the different German races, the German nation contains within itself the will and the power to repel the renewed aggression of France. It is not arrogance that puts these words into my mouth. The confederate governments and myself are acting with full consciousness that victory and defeat are in the hands of Him who decides the fate of battles. With a clear eye we have measured the responsibility which, before the judgment-seat of God and of mankind, must fall upon him who drags into war two great and peace-loving nations, both equally enjoying and desiring the blessings of a Christian civilization and of an increasing prosperity, both called to a more wholesome rivalry than the sanguinary conflict of arms. Yet those who hold power in France have, by preconceived misstatements, found means to work upon the legitimate but excitable national sentiments of our great neighboring people, for the furtherance of personal interests and the gratifica-

tion of passions. The more the confederate governments are conscious of having done all our honor and dignity permitted to preserve to Europe the blessings of peace, and the more certain it shall appear to all minds that the sword has been thrust into our hands—the more confidently shall we rely upon the united will of the German governments, both of the North and South, and upon your love of country; and the more confidently shall we fight for our right against the violence of foreign invaders, inasmuch as we pursue no other object than the lasting establishment of peace in Europe. God will be with us, as He was with our forefathers.

The demands by the Government of an extraordinary war-credit, and of the prolongation of the legislative period in order to avoid the necessity of new elections, were granted by an almost unanimous vote, and the extraordinary session of the Reichstag closed on the 21st July, the ceremony of a formal dismissal of the deputies being dispensed with in view of the grave aspect of political affairs, and the enormous pressure of business in the chancery of the Bund.

On November 24th, the Reichstag again assembled in regular session. The Minister Delbrück, who by order of the King opened the Parliament, said it would have given his Majesty great satisfaction, if he could have been present to thank God, in the midst of the representatives of the nation, for the successes with which the German arms had been favored, and to acknowledge with profound gratitude how much the national attitude and the unanimity of Parliament, in affording the means necessary for carrying on the war, had aided those successes. After alluding to the glorious victories gained by the German armies, he expressed his regret that those who held power in France chose to sacrifice the strength of a noble nation in a hopeless struggle, instead of ordering the election of a National Assembly, which could deliberate on the present and future state of the country. He was of opinion that peace would be imperilled in future by the remembrances which this war would leave in France, when, by the recovery of her own strength, or by the alliances with other powers, she might feel herself strong enough to renew the struggle. It was, above all things, necessary that a strong frontier should be established for Germany, as a bar against the aggressions of future rulers of France. The Government felt sure that the patriotism of the North-German Parliament would not refuse the means still required for the attainment of those objects. The sentiments of unity had been strengthened in the German hearts, and peoples and princes were now convinced that stronger links of union than those afforded by international treaties were needed between the North and South. A Constitution for the German Confederation, which had been agreed upon by the North-German Confederation and the grand-duchies of Baden and Hesse-Darmstadt, and unanimously adopted by the Federal Council, would be laid before them for approval. An understanding had been

arrived at upon a similar basis with Bavaria, and it was hoped that the negotiations with Württemberg would also have a favorable result.

The treaty uniting the kingdom of Bavaria with the North-German Confederation was signed on November 23d, subject to the ratification of the Chambers.

On the 28th of November, the North-German Parliament granted the extraordinary war-credit demanded by the Government, by a vote of 178 yeas to 9 nays. On the same day, Minister Delbrück announced to the House the ratification by the Federal Council of the treaty providing for the entrance of the kingdom of Württemberg into the Confederation.

Early in December, Parliament voted an address to the King of Prussia, inviting him to assume the title of Emperor of Germany, with the assent of the other German sovereigns. A deputation of members was sent immediately to the royal headquarters before Paris, to present it to his Majesty. On December 6th the King of Bavaria, in a letter to King William, urged him to accept the offer, while the sovereigns of the other states also gave their assent.

On December 18th the King received the deputation of the Parliament of the North-German Confederation at Versailles, and addressed them as follows:

GENTLEMEN: In receiving you here on foreign territory, far distant from the German frontier, I am prompted to express my gratitude to that Providence whose wonderful dispensation has brought us together in this ancient royal residence. God has given us victories which we hardly dared to hope or to ask for. When, last summer, I asked your support in this great war, you gave me that support to its fullest extent. I thank you in my name and in that of the army and nation.

The victorious armies among which you have sought me have found, in the sacrificing spirit of the country, encouragement and support amid battles and privations.

The means voted for the continuation of the war by the late Diet have given a new proof that the nation is determined to exert all its energies. The political life of the Germans will develop itself all the more because the basis offered to the South-German allies is of their own free choice. I hope those states yet to be consulted will follow the same path.

The summons addressed to me by the King of Bavaria to reestablish the imperial dignity of the ancient German empire has deeply moved me, and not my own feelings nor even my own judgment has determined my decision only. In the unanimous voice of the German princes, the free cities, and the German nation, I can recognize a call of Providence, which I can obey with God's blessing. The King of Bavaria has informed me that the assent of all the German princes and free cities has been secured, and that the official ratification will shortly follow. Sure that the painful sacrifices which we are undergoing, and which touch my heart as yours, will not be in vain, we will not lay aside our arms until Germany's frontier has nothing to fear from future attacks.

The North-German Diet has been called upon to cooperate in the work of the unification of Germany. I thank it for its almost unanimous assent to the treaties giving organic expressions to the unity of the nation.

On the 21st, the Diet of Hesse-Darmstadt

approved the Federal treaties, and voted a further war-credit of 3,662,000 florins.

The proposition to consolidate the issues of the new loan of 100,000,000 thalers (\$69,000,000) was accepted on December 2d. On the 6th of the same month, the bankers of Berlin paid in 34,000,000 thalers (\$23,460,000), and announced their readiness to take 17,000,000 thalers more. Government decided to offer only about £3,000,000 outside of Germany. Bonds of the loan were issued of the denominations of 100, 500, and 1,000 thalers, dated November 1, 1870. In London, on December 11th, their price was 95½ plus interest accrued at the dates of the instalments, which, including deposits, were to be made, the first on December 22d, the second on January 20, 1871, and the third on February 28, 1871.

In an article on the position assumed by Denmark toward Germany, the semi-official *North-German Gazette* of April 14th alluded to some debates in the Danish Chambers on the naval budget, saying that these debates were in keeping with the attitude of Denmark with reference to article five of the Treaty of Prague. The obligations entered into toward Austria by Prussia in the treaty of peace were easy of fulfilment, but Denmark insisted upon the cession of North Schleswig as far as Flensburg, a territory which would embrace Alsen and Düppel. This demand could not be conceded. The Djennebrucht or Apenrade line would admit a discussion. From the debates in the Danish Rigsdag, says the *Gazette*, it was apparent that anxiety existed on the subject of an attack and bombardment of Copenhagen by a North-German fleet, and this fear was openly expressed in the secret sitting of the Chamber. It was therefore evident that at Copenhagen conjectures were indulged in with regard to eventualities which might force Germany to undertake, in self-defence, hostilities against the Danish capital. It seemed as if reliance was placed upon allies who could keep the high-sea against the North-German fleet, and that with this idea efforts had been made to induce these allies to keep up as large a force as possible, both on land and sea. The *Gazette* thought there was no hope of reconciliation with Denmark, and that nothing could be gained by making the attempt.

GOICOURIA, General Domingo DE, a Cuban revolutionist of great energy and executive ability, born in Cuba, in 1799; garroted at Principe Fort, Havana, by order of a drum-head court-martial, May 7, 1870. An enthusiastic patriot, he had early favored measures for the liberation of Cuba from the Spanish yoke, and was driven from the island by the Spanish Government nearly thirty years previous, in consequence of his liberal tendencies. He had made his home in Mississippi, and there he cooperated with Lopez in his disastrous filibustering expeditions in 1849-'52, though he did not go to Cuba in person. He

endeavored, but in vain, to restrain the rashness of Lopez, and effect a perfect internal organization before invading the island. After the death of Lopez, Goicouria applied himself to the organization of a new expedition on a larger scale, and General Quitman was chosen as its leader. Quitman entered into the scheme with great enthusiasm, and organized a staff embracing the names of Gustavus W. Smith, Mansfield Lovell, and George B. McClellan. Goicouria was business manager and treasurer to the enterprise, and proved a very efficient man in that position. Among the contributions to the cause, was a half-bushel of jewelry, given by the patriotic ladies of Cuba. From some reason never made public, this, the most respectable of the expeditions gotten up for the benefit of Cuba, was suddenly abandoned. After the failure of this scheme, General Goicouria became associated with General Walker in his noted Nicaraguan expedition; but they did not long agree, and Goicouria returned to the United States and engaged in mercantile pursuits, while the headstrong Walker perished like his filibustering predecessor Lopez. During the late civil war, Goicouria came to Louisiana and engaged in trade and transportation, not taking part in the war. When the Cuban revolution broke out, he became prominent in the movement, acting principally as an organizer and manager of expeditions from this country; but in an evil hour he was led to visit the camp of the insurgents, and was taken prisoner near Nuevitaa. He was treated with great cruelty by his captors, sent at once to prison, and his trial by court-martial took place the same day. He was executed at eight o'clock the next morning, and compelled at three A. M. to march two and a half miles to the place of execution.

GREAT BRITAIN, OR THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND.—Area, 120,879 English square miles, or 62,448,127 statute acres. Estimated population in 1870, 80,888,210. Government, a constitutional monarchy, in which the greater measure of actual power resides in the ministry, who represent the views of the majority of the House of Commons for the time being. Queen, Victoria I., who succeeded to the throne June 20, 1837, and was crowned June 28, 1838. Heir-apparent to the throne, her eldest son, Albert Edward, Prince of Wales. The Cabinet formed December 9, 1868, under the premiership of Rt. Hon. W. E. Gladstone, was partially changed in July, 1870, in consequence of the death of the Earl of Clarendon. (See **CLARENDON**, in this volume.) Earl Granville, who had been Secretary of State for the Colonies, was transferred to the Foreign Office; Earl Kimberley, who had been Lord Privy Seal, was made Secretary for the Colonies; Viscount Halifax, who had been Secretary of State for India in the last Palmerston Administration, was made Lord Privy Seal; and Rt. Hon. W. E. Forster, Vice-President of the

Committee of Privy Council on Education, was admitted a member of the Cabinet. The other members of the Cabinet were the same as in 1869. (See **ANNUAL CYCLOPEDIA** for 1869, art. **GREAT BRITAIN**.) The number of members of the House of Commons had been reduced to 652 by the disfranchising of two English and two Irish boroughs. The Gladstone Cabinet continued in power throughout the year, though with a slightly-waning majority in the House of Commons in consequence of its stringent measures for carrying the Irish Peace-Preservation Bill, and the alleged incompleteness and somewhat objectionable features of the Irish Land-Reform Bill. These bills, which were the most important measures of the session, were not passed without material amendments—some of them effecting considerable changes in their character. They were finally enacted by a large majority in the House of Commons, and a small one in the House of Lords. An act for the promotion of elementary education in England was also passed, which, while defective in many of its provisions, as will be found on trial, was yet a long step in advance on that important subject. The measure is only tentative, and is based, though with considerable differences, on the district-school laws in New England and New York. Elementary education, especially among the poorer classes in England, has been painfully neglected. By the new act the rate-bill system is maintained, but the local school-boards have the power to pay the whole or any part of the school-fees payable at any public elementary school by any child whose parents are in their opinion too poor to pay the same. Whether they will avail themselves of this option remains to be seen. The aversion of the tax-payers to be assessed for the benefit of others in this way, which has always been an obstacle to the success of public elementary education in England, will, we fear, lead the local boards to be very slow in coming to the conclusion that parents are too poor to pay the school-fees. They will be likely to incline to the other alternative, that the child can go without the instruction. The provision should have been made peremptory, not optional.

The course of the administration in regard to the Continental war, and the proposition of Russia in regard to the abrogation of a portion of the treaty of 1856, occasioned some animadversion; but, though not marked by the boldness and decision which characterized her Government in the times when she was the leading power in Europe, it is difficult to say that, under her present circumstances, she could have taken any other course without involving herself in a costly and protracted war. Discretion is, sometimes, the better part of valor.

The relations of Great Britain to the United States were not materially changed during the year. The Alabama's claims were held in abey-

ance, though early in 1871 a joint High Commission was appointed to meet at Washington for the settlement of all questions at issue between the two countries. The questions growing out of troubles concerning the fisheries on the coast of the eastern provinces of the North American colonies, which had occasioned some unpleasant feeling, were to be submitted to this commission for adjudication.

The railway system of the United Kingdom is still extending. Complete statistics from all the lines are not attainable of later date than January, 1868. At that time there were 14,247 miles of railway open for traffic; the total capital paid up, including shares, loans, floating debt, etc., of these lines, was £502,262,887 = \$2,511,314,485, or more than the nearly four times greater extent of railways in the United States. The total number of passengers carried the year previous was 287,807,904, an average of 20,201 per mile. The total amount of traffic receipts was £32,479,999 = \$197,240,000, or an average of £2,771 = \$13,855 per mile. The total working expenses were £19,843,952 = \$99,244,760, and the net receipts or profits were £19,631,047 = \$98,155,285. The increase in the length of lines has averaged, for several years, about 545 miles, so that in January, 1871, there should have been, and probably were, about 15,832 miles of railway open for traffic. The cost and amount of business were probably not increased in the same proportion. The receipts of the chief lines do not compare with those of our leading railroads, although their cost was greater. For instance, the Northeastern Railway, which in its various branches has 1,275 miles of railway, and cost for construction, etc., £40,683,885 = \$208,416,925, or about double the cost of the Pacific Railway, reported, as gross receipts in 1870, £1,020,804 = \$5,101,520. The London and Northwestern, with 1,504 miles open to traffic, and constructed at a cost of £58,485,490 = \$292,427,450, had in 1870 £1,588,661 = \$7,918,805, or less than half the gross receipts of the New York Central. The Great Western, with 1,886 miles of railway, costing £49,970,841 = \$249,851,705, had but £618,314 = \$3,091,570 of gross receipts. We might multiply examples, but these are sufficient. Our average rates of fare are not, we think, higher than theirs, perhaps not quite as high, but they must do much less business than our great lines; yet it would seem to be a more profitable business, for the stock of both the Northeastern and London and Northwestern is considerably above par—the former being held at 144 and the latter at 128. The Great Western has smaller receipts, and probably does less business than many of the shorter English lines, and its stock is held at 71.5. With the enormous cost of many of these roads, most of them ranging between \$150,000 and \$600,000 per mile, and three surpassing that sum, it would seem that they would be unable to earn enough to pay a dividend with their compara-

tively limited traffic, but nine of the leading roads, including nearly one-half the whole extent of railways in the United Kingdom, did pay dividends in 1870.

STATISTICS IN 1870.—I. FINANCES. 1. Revenue.—The gross receipts of the public revenue of the United Kingdom for the year ending March 31, 1870, were £78,960,009 15s. 7½d. = \$394,800,049, and the net receipts for the same period £75,674,196 8s. 0½d. = \$378,370,982. Of the gross receipts, there were collected from imported goods, as *customs* (under which head were included, in the order of their revenue productiveness, tobacco and snuff, sugar unrefined, tea, rum, brandy, wine, refined sugar, various spirits, coffee, currants, raisins, corn, molasses, chicory, Geneva cordials, cocoa, figs, etc.), £23,569,892 17s. 6d. = \$117,849,464; *excise* (which includes duties on home productions and occupations, as, for instance, on distilled spirits, malt, licenses, railways, hackney-carriages, sugar, chicory, etc.), £22,605,285 3s. 6½d. = \$113,026,426; *stamps* (which includes much the same items as with us), £9,545,751 6s. 4½d. = \$47,728,757; *taxes* (including land and assessed taxes, the property and income tax, and comprising, under the head of assessed taxes, those on houses, servants, carriages, riding and other horses, and armorial bearings), £14,980,602 15s. 8½d. = \$74,653,014; the post-office, £4,687,260 12s. 10½d. = \$23,436,303; the telegraph service, £107,479 16s. 9d. = \$537,399; the crown lands, £447,723 11s. 4d. = \$2,238,618, and miscellaneous items amounting to £3,205,252 10s. 6d. = \$16,026,268. There was an excess of revenue over expenditure of £6,369,501 = \$31,847,505. The revenue estimates for the year ending March 31, 1871, were, in all, £71,450,000 = \$357,350,000, and were made up of the following items: customs, £21,650,000; excise, £21,640,000; stamps, £3,700,000; income-tax, £7,600,000; assessed taxes, £2,850,000; post-office, £4,900,000; telegraphs, £675,000; crown lands, £885,000; miscellaneous, £3,050,000. The income tax was reduced to 4d. in the pound sterling, or 1½ per cent.; the grain customs duty was repealed; the duties on beer and ale, except spruce-beer, slightly reduced; the licenses and duties on tea-dealers, post-horses, stage and hackney carriages, were repealed; the fire-insurance stamp repealed, and for assessed taxes on the following, and some other articles, licenses were substituted: hair-powder, armorial bearings, carriages, horses, servants, and horse-dealers.

2. Expenditure.—The total expenditure of the Government of the United Kingdom for the year ending March 31, 1870, was £69,064,751 19s. 6d. = \$345,323,760. Of this amount the interest and management of the public debt absorbed £27,077,529 8s. = \$135,887,649.50; the charges on the Consolidated Fund (including the civil list, annuities and pensions, salaries and allowances, diplomatic salaries and pensions, courts of justice, and mis-

cellaneous charges) amounted to £1,730,183 5s. 5d. = \$3,650,666; the supply services (including the army, the navy, the Abyssinian expedition, miscellaneous civil services, salaries, superannuations, etc., of customs and inland revenue, and of the post-office, telegraph service, and packet service) required £40,221,058 16s. 1d. = \$201,105,294; and there was an expenditure of £200,000 = \$1,000,000 on fortifications. The estimated expenditure for the year ending March 31, 1871, was £67,118,000 = \$335,565,000, and included for the interest and management of the national debt, £26,650,000 = \$133,250,000; for the Consolidated Fund charges, £1,820,000 = \$9,100,000, and the supply service, £88,643,000 = \$443,215,000. The surplus thus created, the Chancellor of the Exchequer proposed to consume by a reduction of sugar-duties, and a further decrease of the income-tax. The national debt on the 31st of March, 1870, amounted to £747,551,048, to which is to be added the capital of the terminable annuities, a constantly-varying amount, which was computed to be, at that date, £58,180,380, making the total of national debt and liabilities, £800,681,428 = \$4,008,407,140.

II. ARMY AND NAVY.—1. *Army*.—The total army force (i. e., regulars) for the year 1870-'71 was 115,037 men. It was composed of the following officers, regiments, depots, and training-establishments: Officers on the general and departmental staff, 1,239; total regiments of different arms of the service, 5,037 officers; 11,197 non-commissioned officers, etc., and 90,593 rank and file; depots of Indian regiments, 227 officers, 454 non-commissioned officers, and 5,513 rank and file; recruiting and teaching-establishments, 23 officers, 85 non-commissioned officers, and 62 rank and file; training-schools and factories, 59 officers, 381 non-commissioned officers, and 17 rank and file, making an aggregate of 6,585 officers, non-commissioned officers, etc., 12,367; rank and file, 96,185, or a total force, officers and men, of 115,087. Provision was made by Parliament, August 2, 1870, for raising an additional number of land forces, not exceeding 20,000, during the continuance of the war in Europe. What proportion of this force was actually raised is unknown.

To this regular army intended for home service, must be added—1. The British Army in India, consisting of 2,941 officers, 4,734 non-commissioned officers, and 62,963 men of all arms. 2. The disembodied militia, the number of whom is stated at 128,971, and a grant of £720,034 = \$3,600,170 was voted in 1870-'71 for pay for twenty-seven days' training during the year. 3. The yeomanry cavalry, 15,435 in number, to whom was voted £1,874 = \$409,370. 4. The volunteer force, comprising 201,196 enrolled men, of whom 170,094 were efficient, and 31,102 non-efficient. The vote to them was £412,399 = \$2,061,995. 5. The army reserve, including enrolled pension-

ers, number not stated, but of no great efficiency. The money voted to them was £68,020 = \$340,100. The present Premier has introduced a bill into Parliament for preventing the sale of army commissions, capitalizing the value of his commission to a retiring officer, and thus preventing what has been the greatest source of demoralization and inefficiency in the army. The officers of the British Army have hitherto been almost exclusively the sons of the nobility or of the wealthy class, and no commission could be obtained in the army from lieutenant to lieutenant-colonel except by purchase—the money going in part to the officer who relinquished his commission, and a small part to the regiment. An established price had been put on each grade; that of lieutenant-colonel was worth \$52,500, and the purchaser might be far inferior in military knowledge or ability even to some privates in his command; if he could pay for the commission, he received it. The terrible demoralization of the French Army in the war of 1870, owing to the inefficiency and worthlessness of its officers, opened the eyes of thoughtful men in the British Parliament to the necessity of a thorough reform in their own army.

2. *Navy*.—The British Navy has always been the pride and boast of the British Government. The government and control of it is vested in the Five Lords of the Admiralty and the Financial Secretary, and its management under these, who change with each administration, is confided to a permanent secretary and seven heads of departments, the accountant-general, the controller of victualling, the superintendent of stores, the superintendent of contracts, the medical-director-general, the director of engineering and architectural works, and the director of transports. The appropriation for the navy for the year ending March 31, 1871, was £9,250,580 = \$46,252,650, a decrease of \$3,700,000 from the previous year. The number of seamen and marines provided for the naval service for the year 1870-'71 was as follows: For the fleet—seamen, 34,430; boys, 7,000; aggregate, 41,430. Marines afloat, 8,000; ashore, 6,000 = 14,000. Total, 55,430. For the coast-guard, 4,300; for Indian service, 1,270. Grand total, 61,000.

The British Navy consisted in February, 1870, of 408 vessels of all descriptions, of which 375 were steamers, with 15 more steamers building, and 18 sailing-vessels. Of these 52 were iron-clads, 27 of them wholly of iron, 15 of wood plated with iron, nine iron armored vessels building, and one armored sailing-vessel of the floating-battery class. There were 47 ships-of-the-line, all but two screw-steamers, and two of these building; 29 screw-frigates; and 3 paddle-frigates; 24 corvettes, 34 sloops, both classes screw-steamers, 50 gun-vessels, 58 gunboats, all screw or double-screw, and the remainder iron mortar-ships, storeships, tenders, tugs, transports, etc., etc.

At the end of August, 1870, there were in

commission 174 steamships, 25 coast-guard tenders, and 89 sailing-vessels, having a total horse-power of 57,205, carrying 1,984 guns, and with a total tonnage of 814,449 tons; there were also in reserve and building 818 steamships, having in all 64,286 horse-power, carrying 8,610 guns, and with a total tonnage of 818,845 tons. The iron-clad fleet, which is reckoned the most important division of the navy, consisted in September, 1870, of 54 vessels, of which, however, seven would not be completed under one, two, or three years. Forty-seven of these had cost somewhat more than sixty-five million dollars, aside from their armament. They are of various designs, and many of them armored so heavily that there is little probability of their being riddled by any opposing vessel. A number of them have also a ram-bow, which is a formidable addition to their power of offensive warfare. None of them have ever yet been tested in a naval battle, but there can hardly be a doubt that they would acquit themselves admirably there. Some of the best of them have, however, proved deficient in sea-worthiness. The Captain, a twin ship to the Monarch, and regarded by its designer, Captain Cowper Coles (*see* COLES, in this volume), as his *chef-d'œuvre*, foundered in the Bay of Biscay, in a moderate gale, from being top-heavy, and over 500 souls, including Captain Coles himself, went down in her. The problem seems as yet not fairly solved of building an armored ship completely protected, of high speed and perfect seaworthiness.

III. COMMERCIAL STATISTICS. 1. *Imports*.—The imports into the United Kingdom in the year ending December 31, 1869, were £295,480,214 = \$1,477,801,070, of which £225,043,720 = \$1,125,218,600 were from foreign countries, including £42,573,883 = \$212,866,915 from the United States, and £70,416,494 = \$352,082,470 from the British colonies and other possessions abroad. The imports from the United States, though only about one-seventh of her entire imports, and less than one-fifth of those from foreign countries, were yet very much larger than those from any other country. From France, which was next in rank, her imports were £38,527,377 = \$168,686,885.

2. *Exports*.—The total exports of the United Kingdom in the year ending December 31, 1869, were £287,015,052 = \$1,185,075,260, of which amount £51,891,747 was to British colonies and possessions, and £185,123,305 = \$925,616,525 was to foreign countries. Of this last sum £26,787,781 = \$138,938,655 was exported to the United States.

The heaviest item of importation in 1869 was as usual raw cotton, of which from all countries there was received 1,220,809,856 pounds, of the value of £56,834,709 = \$284,173,545. The heaviest export was cotton manufactures, which were sent out to the amount of £67,159,064 = \$335,795,320. The next largest item of import was wheat and other cereals, which were brought

in to the amount of £37,347,858 = \$186,736,790, and the second item of export was woollen goods, of which £22,625,190 = \$113,125,950 were sent out. The other leading articles of import were wool (358,461,669 pounds), tea, and raw sugar; and the other leading articles of export, iron, silver manufactures, and coal.

3. *Shipping*.—The total number of vessels belonging in the United Kingdom in 1869 was 21,881, of which 1,725 were steamers; the total tonnage was 5,577,303, of which 880,018 was of steam-vessels, and the number of men employed was 195,490, of whom 43,304 were employed on steam-vessels. The total tonnage of entrances and clearances at ports of the United Kingdom in 1869 was 34,910,281 tons, of which 28,789,167 were British, and 11,121,114 tons foreign vessels.

4. *Metals*.—Of pig-iron there was produced in the United Kingdom 5,445,757 tons, of the value of £13,614,397 = \$68,171,985; of copper, 8,291 tons, valued at £644,065 = \$3,220,325; of lead, 73,259 tons, valued at £1,397,415 = \$6,987,075; of tin, 9,760 tons, valued at £1,201,456 = \$6,007,280; of coal, 107,427,557 tons were raised, of the declared value of £26,856,882 = \$134,284,410.

IV. EDUCATIONAL STATISTICS. Primary education in the United Kingdom is advancing slowly but steadily. In 1869, the number of schools inspected in England and Wales was 8,592; the number of children who could be accommodated in these schools was 1,838,416, and the number in average attendance, 1,153,572, an increase over the previous year of 541 schools, accommodation for 112,000 pupils, and an average attendance of 93,500. In Scotland, the same year (1869), the number of schools inspected was 1,745, there was school accommodation for 237,928 children, and the actual average attendance was 179,214. In Ireland the number of primary schools was 6,707, of children on the rolls, 991,335, and of average daily attendance, 358,560; showing that primary education is better cared for in Ireland than in England and Wales. The total for the United Kingdom are, schools, 17,044; school accommodation for 3,069,779 children; an average daily attendance of 1,691,346 children, or an actual attendance on primary schools of about five per cent. of the population. The ratio is much too small as yet. It is to be hoped that the new law will make an improvement in this respect. The Government grants for the year 1870 were for public education in Great Britain £914,721 = \$4,573,605; and for the same purpose in Ireland £381,173 = \$1,905,860, a grand total of \$6,479,465. The schools of Great Britain receive from school-rates, subscriptions, endowments, etc., a little more than twice as much as from the Government, so that the actual expenditure in Great Britain is very nearly \$15,000,000. In Ireland, the sums received from other sources than the Government grant are \$2,250,000 in all.

GREECE, a kingdom in Southeastern Europe. Present ruler, George I., "King of the Hellenes," born December 24, 1845; the third son of the King of Denmark. Minister of the United States, at Athens, C. K. Tuckerman, accredited June 22, 1868. Area of Greece, including the Ionian Islands, 19,353 square miles; population, according to the census of 1856, 1,348,522. The population of the principal cities, in 1865, was: Athens, 41,298; Corfu, 25,000; Zante, 20,000; Syra, 18,511; Patras, 18,342. The revenue, according to the budget for 1870, amounted to \$6,070,000; expenditure, \$5,982,000. Public debt, \$41,631,610. The army, newly organized, in 1867, consists of 14,800 troops of the line, and 17,000 irregular troops. The fleet, in 1866, comprised 1 frigate of 50 guns; 2 corvettes, together of 48 guns; 1 side-wheel steamer of 6 guns; and 6 screw-steamers, together of 10 guns. Besides, there were 2 iron-clads and 26 smaller vessels and gunboats. The value of the imports, in 1865, was estimated at \$16,116,050; exports, \$9,225,000. The number of vessels entering Greek ports, in 1865, comprised 18,697 sea-faring vessels, together of 1,614,216 tons, and 79,596 vessels engaged in the coasting trade, together of 2,052,568 tons. Clearances, for trans-marine voyages, 12,291 vessels, together of 1,484,836 tons; for the coast, 82,775 vessels, together, of 2,078,118 tons. The merchant fleet, in 1866, consisted of 5,156 vessels, together of 297,424 tons; among which were 3,495 vessels for the coasting trade, together of 28,394 tons.

The only railroad in operation in 1870 was the road from Athens to the Piræus, a distance of five miles.

A great excitement was created throughout the civilized world by the report of the capture and subsequent murder of English and other tourists by Greek brigands. On the 11th of April, a party of tourists left Athens in two carriages, under the escort of four mounted gendarmes, with the intention of visiting the plains of Marathon. The company consisted of Lord and Lady Muncaster; Mr. Frederick Vynor; Mr. Herbert, one of the secretaries to the British legation; Count de Boyl, secretary to the Italian legation; and Mr. and Mrs. Lloyd, with their young child, five years of age. They were accompanied by a Suliot named Alexandros, the most experienced and intelligent dragoman in Greece. On traversing the plain they found a small detachment of six infantry soldiers, and afterward a larger one of twenty-five, apparently patrolling the road. After exploring the scene of one of the most interesting events in history, they started to return to Athens. The detachment of twenty-five men appears to have endeavored to keep company with them, but was unable to do so, and they again passed the smaller party of six men, who succeeded in keeping tolerably close in their rear. At half-past four p. m., entering a thickly-wooded part of the

road near the bridge of Pikerneas, two mounted gendarmes riding one on either side of the carriages, and two in front, a volley was suddenly fired into them, killing one of the gendarmes and mortally wounding another. The road was immediately filled with brigands, who forced the occupants out of the carriages, using much violence, striking, though not severely, Lady Muncaster, and tearing off her watch and lockets, and menacing with knives the lives of all. They hurried their captives up the side of Mount Pentelicus, but had scarcely got fifty yards from the road when the six infantry soldiers came up and at once commenced firing into the brigands, who returned the fire. The soldiers, finding themselves overmatched (the brigands being upward of twenty in number), happily discontinued the engagement, which would have been probably fatal to the captives, who were collected in a body in their midst. The brigands then hurried their prisoners up the slopes of Pentelicus, and after two hours' walking they put the ladies on the horses of the dismounted gendarmes, and, with one servant, let them go to Athens. The rest of the company were compelled to follow the brigands until nightfall. On the following day, they halted under some bushes, when it was agreed to ask that one of their number be allowed to go to Athens to arrange for payment of the ransom of £25,000 demanded by the brigands, and for an amnesty. They arranged that Lord Muncaster should be the person to go in and make the arrangements necessary for his own and companions' release, a promise being exacted by the brigands that, failing in his mission, he was to return, and that the lives of the others depended on his success. They promised to let Lord Muncaster go that night, but did not do so, as they could get no guide, and none of the brigands dared to be seen with one of their captives. On Tuesday, throughout the night, they walked over boggy plains, and up and down hills, wet through from heavy rain, in which they lay down for three hours, till six in the morning, when they started again and then stopped for the day in a ravine, where a shepherd was found and a small cart obtained, in which Lord Muncaster proceeded to Athens. He, of course, made immediate arrangements for sending food and clothing to his unfortunate friends, and for obtaining the money, which was promptly and generously placed at his disposal by a merchant in Athens. The only difficulty lay in the transport of so large a sum in gold. The Greek Government, instead of devising means for the transmission of the ransom and the consequent release of the prisoners, ordered troops to operate against the robbers, who, being closely pressed in their stronghold, cruelly murdered all the prisoners. Upon this, strong representations were made by the foreign powers to the Greek Government, which led to the resignation of General

Soutzos, Minister of War. The bodies of the prisoners were recovered and brought to Athens for interment; the King, the diplomatic corps, and an immense number of people, joined in the funeral procession. Lord Clarendon exchanged dispatches with Mr. Erskine, the British minister at Athens, and demanded a thorough investigation of the massacre. Five hundred Greek troops were sent in pursuit of the lawless band, and seven, who were captured, were decapitated and their heads publicly exposed in Athens. The Government were also in communication with the Turkish Government to intercept them should they cross into Turkish territory. In June the last surviving member of the band was captured. The inquiry into the causes of the murder was continued under the superintendence of the ambassadors of England and Italy. Several members of the Greek Cabinet were anxious to fix a limit to the investigation; but the King considered that the dignity and interests of Greece demanded the inquiry to be carried out without limit or impediment.

On his return from Corfu, on July 18th, the King appointed a new Cabinet, composed as follows: Deligiorgi, Minister of the Interior and of Foreign Affairs; Christiadi, Minister of Finance; Gidracaki, Minister of War; Brosio, Minister of Marine; and Bonplo, Minister of Justice. Another ministerial crisis took place in December, when the following new appointments were made: Coumendoros, President of the Council; Cotostavios, Minister of Justice; Bozzaris, Minister of War; Sotiropoulos, Minister of Finance; Christopoulos, Minister of Foreign Affairs; Amargyros, Minister of Marine.

In September the English Government demanded an indemnity of £10,000 for the widow of Mr. Lloyd, one of the massacred English tourists. The Greek Government acceded to the indemnity in principle, but stated that the Treasury was empty.

A destructive earthquake occurred in the Greek Archipelago in June. The town of Santorin was nearly destroyed, and several small islets were submerged; the King contributed fifteen thousand francs from his private purse for the relief of the sufferers.

A submarine telegraph cable was immersed between Athens and Syra, and thrown open to the public in September.

GRIER, ROBERT COOPER, LL. D., an eminent American jurist, born in Cumberland

County, Pa., March 5, 1794; died in Philadelphia, September 25, 1870. He was educated by his father, the Rev. Isaac Grier, until, at the age of seventeen, he entered the junior class of Dickinson College. He graduated in 1812, and, after teaching a year in the college, went to Northumberland, Pa., whither his father had removed in 1806, to take charge of an academy there. On the death of his father, in 1815, young Grier, then only twenty-one years of age, succeeded him as principal of the academy, and in the intervals of his professional duties studied law. He was admitted to the bar in 1817, and began the practice of his profession in Bloomsburg, Pa. In 1818 he removed to Danville, where he pursued his profession with energy and success, supporting his mother and ten brothers and sisters, whom he liberally educated. During the twenty years that followed he attained great eminence at the bar, and when, in 1838, he was appointed presiding Judge of the District Court of Alleghany, the appointment was recognized by the legal profession as one eminently fit to be made. His ability as a judge was so manifest that President Polk, in 1846, appointed him to the Supreme Court bench, in place of Justice Henry Baldwin, deceased. For twenty-three years Judge Grier filled this important position with great learning and ability. His opinions both in the Circuit Court and in the Supreme Court were always marked by sound judgment, profound legal knowledge, and thorough integrity and conscientiousness. His opinion, in 1851, of the points in the case of *Castner Hanway*, charged with resisting the execution of the Fugitive Slave law, a case in which H. H. Kline, of Philadelphia, was concerned, was characterized by the firmness, integrity, and high sense of justice, which were his well-known attributes as a judge. The prisoner was declared "not guilty," and was discharged. Judge Grier was originally a Federalist, but, though not a strenuous partisan, had acted with the Democratic party until the civil war, when he gave to the Government a firm and unquestioning support in its great struggle for existence. In 1869, having suffered for some time from infirm health, he resigned his seat on the bench, and the late Edwin M. Stanton was appointed his successor, but never took his seat. In private life Judge Grier was highly esteemed for his integrity, patriotism, and purity of character.

H

HAMBURG, a free city of the North-German Confederation. President of the Senate and first burgomaster for 1870, Dr. N. F. Haller. Area, 156 square miles; population in 1867, 305,196. The revenue for 1870 is estimated at 5,462,464 thalers, and the expenditures at 5,575,062 thalers, showing a de-

ficit of 112,598 thalers, which is to be covered by part of the balances on hand from previous years. The public debt on December 31, 1868, amounted to 30,619,023 thalers, exclusive of a railroad loan contracted in 1868. The imports by land and sea, in 1869, were as shown in the following table:

COUNTRIES.	Thalers.	COUNTRIES.	Thalers.
Great Britain.....	135,940,000	United States.....	17,510,000
France.....	11,970,000	Brazil.....	9,320,000
The Netherlands.....	7,320,000	West Coast of America.....	7,730,000
Belgium.....	4,300,000	Venezuela.....	4,070,000
German Ports.....	3,690,000	Cuba and Porto Rico.....	3,430,000
Northern Europe.....	3,500,000	Hayti and San Domingo.....	3,150,000
Italy.....	1,560,000	Mexico and Honduras.....	630,000
Spain.....	1,360,000	Other American Countries.....	970,000
Other Countries of Southern Europe.....	970,000		
Levant.....	810,000		
		Total.....	45,810,000
Total European ports.....	171,700,000	Asia.....	3,790,000
By way of Altona.....	26,680,000	Africa.....	870,000
		Australia.....	390,000
Total.....	198,380,000		198,380,000
Total maritime imports.....			249,240,000
Total by land and river.....			178,690,000
		Grand total of imports.....	427,930,000

As no declaration of the value of exports from Hamburg is demanded at the Hamburg custom-house, it is impossible to obtain reliable information concerning the export trade. The movement of transmarine shipping, in 1869, was as follows: Entered, 5,192 vessels, of 1,069,308 lasts, among which, 4,515 vessels with cargo, and 677 vessels in ballast; cleared, 5,201 vessels, of 1,063,964 lasts, of which, 3,851 with cargo, and 1,350 in ballast (1 last equal to 4,000 pounds). The merchant navy consisted, at the end of the year 1869, of 473 seafaring vessels, together of 127,421 lasts, among which, 86 screw-steamers, together of 19,698 lasts.

The number of emigrants from the port of Hamburg amounted, in 1869, to 47,294, hailing from:

North Germany.....	31,911	Austria.....	823
South Germany.....	5,419	Other Countries.....	9,113

HARPER, JOSEPH WESLEY, a distinguished publisher, the third in age of the well-known firm of Harper & Brothers, born in Newtown, L. I., December 25, 1801; died in Brooklyn, L. I., February 14, 1870. Like his elder brothers, James and John, he served an apprenticeship to the printing business, and on coming of age, in 1822, joined his brothers as a journeyman and very soon became foreman and proof-reader of the composing-room. In 1825 he and his younger brother, Fletcher, were admitted as members of the firm, and the old title of "J. & J. Harper" was changed to Harper & Brothers. He had acquired a thorough knowledge of his profession, and veteran printers, who served under him, say that he was the best foreman they ever knew. As the business of the young firm increased, each brother became the head of a department, in which intellectual labor took the place of mechanical service. To Wesley Harper, in this division of work, fell the department of literary correspondence. With the vast business of the house, the duties of this department were arduous, and often required the utmost delicacy, courtesy, and patience, for authors are almost proverbially irritable, and sometimes unreasonable. It can be said with truth of Wesley Harper that, in all the forty

years and more in which he conducted this correspondence, he never forgot to be courteous or thoughtful of the feelings of others, and, so far as is known, he had not an enemy among the thousands with whom he corresponded. More than this, in these years he had formed thousands of acquaintances, and to each his manner was so kind, considerate, tender, and so evidently full of interest in their circumstances and position, that no one of them ever left him without feeling that he had, in Mr. Wesley Harper, a warm personal friend. He had become, by the diligent use of his leisure, and his intercourse with many of the most eminent scholars of our own and other countries, a well-read, cultivated, and thoughtful man; but he was always modest in the presentation of his own views, and, although he had well-formed and decided opinions on most subjects of general interest, he never forced them on others, but rather sought to learn their sentiments. Of late years he had been in feeble health, and his eldest son had assisted him in his duties, and latterly had almost entirely taken the burden from his shoulders. The sudden death of his elder brother James, in March, 1869, affected him very seriously, and probably hastened his own dissolution. He was occasionally at his office after this sad event, but he missed the dead brother greatly, and his interest in the business seemed to have lessened. In a few months there came another attack of the old disease, which had so long threatened his life, and for weeks and months he was nigh the gates of the grave. During all this time he was not only perfectly conscious, but cheerful and composed. He was desirous, through this protracted struggle with death, of seeing those with whom he had been acquainted in his active life, and with each of them who visited him he conversed calmly and cheerfully. His death, at last, was so quiet and peaceful that none knew the exact moment of his departure. He died as he had lived, in charity and peace with all men.

HAYTI, a republic in the West Indies, forming part of the Island of San Domingo. Area, 10,205 square miles; population, in 1868, 572,000. After the capture and execu-

tion of the former President, Salnave, a provisional government was formed in December, 1869, with General Nissage Saget as President *pro tem*. On March 19, 1870, Saget was definitely elected President of the republic for the term of four years from May 15, 1870. The ministry was composed as follows: Senator Laporte, Minister of Foreign Affairs and Finances; B. Lallemand, Minister of Justice, of Public Worship, and Instruction; General P. Lorquet, Minister of the Interior and Agriculture; General Monplaisir Pierre, Minister of War and Marine. The United States Government was represented by E. D. Bassett, minister resident at Port-au-Prince. During the revolution of the Cacos against Salnave, the northern part of the republic had a provisional government, with Saget at its head, while the southern districts had a separate provisional government, of which Domingue was President. Both governments prohibited the circulation of Salnave's paper-currency, and each of them emitted paper-money of its own. At the beginning of 1870 the new provisional government, under Saget, again emitted 100,000,000 goudres of paper money, with the intention of redeeming the Salnave currency. Very little of the latter was offered for sale, however, owing to the extremely low offers made for it. In 1869, the value of one silver dollar (piastre forte) had risen to 4,000 goudres, or paper dollars. After the capture of Port-au-Prince, on December 20, 1869, it fell to 400, and afterward to 70 goudres, from which it again recovered, in June, 1870, to 400 goudres paper-money. The currency emitted by Salnave is now entirely worthless. The emission of the "Cacos" paper-money, up to December 31, 1869, was as follows:

	Goudres.
At St. Marc.....	215,000,000
At Aux Cayes.....	20,000,000
Paper-money brought into circulation by the provisional government, in 1870.....	100,000,000
Old lawful notes (Soullouque and Geoffard).....	100,000,000
Total.....	445,000,000

Besides, there are now in circulation at least 80,000,000 of counterfeit money, the spurious nature of which it is almost impossible to detect. This would make a total of paper-money in circulation of 525,000,000 goudres, which, at 400 goudres for one piastre forte, would be equal to 1,312,500 piastres. The public debt, including indemnity fund and loan of April 1, 1870, amounts to:

	Piastres fortes.
The public debt, including indemnity fund and loan of April 1, 1870.....	12,980,852
Payments due at fixed dates.....	4,899,770
Loan payable in 1888.....	4,712,790
Disbursements to be made this year.....	1,799,853
Total.....	24,393,265

There are no official or otherwise reliable reports of the commerce of the republic during 1869 and 1870.

After the flight of President Salnave from the palace at Port-au-Prince, on December 19, 1869, he went to Turgean and Peytonville,

where he was joined by a strong detachment of pickets. On the 20th, he set out with all his force for Limon, but, in view of the precautions taken by the government, he at once beat a retreat and retired to Fond Verrettes. On the 27th, a strong force, under General Zamor, was sent to pursue Salnave. On perceiving the enemy's approach, the ex-President did his utmost to unite his men, but in vain, and consequently he started for Barahona. But General Benjamin had cut off all retreat, and on the 8th of January Salnave and his troops tried to force a passage in the neighborhood of Anses-à-Pitre. A bloody encounter took place at Ousba between Salnave's followers and General Cabral's forces, in which the former lost one hundred killed and numerous wounded. The losses of General Cabral's men are reported as three dead and twenty-two wounded. The result was the capture of Salnave and all his followers on January 10, 1870. The prisoners were conducted to Salina, whence General Cabral informed the government of the important event. Here Salnave and Alfred Delva, St. Lucien Emmanuel, Ulysse Jean Marie, J. Baptiste Errie, and P. Paul St. Jean, were conducted to Fond Ravette and delivered into the hands of the authorities. On January 15th, the prisoners were brought into Port-au-Prince, after the execution of nine members of Salnave's ministry on the road leading to that city. They had been shot, one by one, in the presence of the captured President. A vast crowd lined the streets through which the prisoners passed, which increased to fully 8,000 people when opposite the United States consulate. Consul Bassett had previously taken into his house the wife and children of the unfortunate President, and also a number of others, who were afraid of remaining in their own houses. The trial of the ex-President took place on the same day; sentence of death was passed, and he was shot about six o'clock in the afternoon.

The government of President Saget made every effort to do away with the strong partisan feeling which had so long distracted the people. All political prisoners were liberated, and on January 30th the President issued a proclamation that the rebellion was virtually at an end, and that a general amnesty was accorded to all political offenders at home and abroad.

The National Assembly met at Port-au-Prince in March, and on the 19th of that month confirmed Nissage Saget as President for the term of four years, to expire on May 15, 1874.

The government, acting in accordance with the principles proclaimed by the revolution, issued a decree providing for the adjustment of all debts of the late administration, which had been legally contracted for the usual government expenses. Fifteen days were allowed to present claims from the creditors residing at Port-au-Prince, and thirty days to those in other

places. The government also sold four vessels-of-war, to diminish the expenses of the republic.

The first session of the Legislature under the new authorities closed on September 21st. Previous to the adjournment, a message from President Saget was received. It contained a comprehensive review of the situation of affairs in the country, and alluded to the fact that, although the revolutionary government, on its accession to power, had found things in a most deplorable state, order had been completely restored. The finances of Hayti, said Saget, were ruined; but it was hoped that, by honest and economical administration, the country would soon retrieve its position.

Nearly all the trade of Hayti being carried on with France and North Germany, the European war had a disastrous effect upon business. There was, on the other hand, a decided increase of importation from the United States. The total imports from Boston, New York, and other American ports, in 1869, did not exceed \$800,000; while, in 1870, the imports of the ten months ending October 31st were estimated at \$1,760,000. The arrivals from ports of the United States, during one month, numbered 40 vessels.

HERTZEN, ALEXANDER, an eminent Russian exile, revolutionist, and author, born in Moscow, in 1816; died in Paris, January 21, 1870. He was educated at the University of Moscow, and was one of its most brilliant and gifted students, but in 1834, while yet an undergraduate, he was arrested with some of his fellow-students on the charge of entertaining sentiments hostile to the Russian Government, and after a year's imprisonment condemned to exile, and sent, first to Perm, on the Siberian frontier, and subsequently to Viatka and Novgorod. Notwithstanding his alleged offences, he was authorized to enter into the civil service, and occupied different administrative and judicial positions up to the time when he was permitted to return to Moscow. After his return to his native city (about 1842), he spent some years exclusively in literary pursuits, and then obtained permission to make a tour through Europe. From that time he lived in France and England; during the revolution of February, 1848, he was in the former country, in intimate communication with the leaders. After a visit of some length in the south of Europe, he returned to England, and in 1851 established at London a revolutionary printing establishment, from which he sent forth up to the day of his death a constant stream of documents, periodicals, newspapers, and books, intended to promote a revolution in Russia. The first important work which issued from his press was, "On the Development of Revolutionary Ideas in Russia," a discussion of Panslavism in 1851; next, "Property baptized," an essay on the condition of the serfs, 1853; "Memoirs of the Empress Catharine," written by herself, with an Introduction," 1859. "The Russian World and the Revolu-

tion," 3 vols., 1860-'62; "New Phase of Russian Literature," 1864; "Prison and Exile," personal souvenirs, also in 1864; "*Comicio Rosta*," a narrative of his relations with Garibaldi, Mazzini, and Kossuth, 1865; etc. In 1857 he commenced a weekly journal in the Russian language, in London, with the title of *Kolokol* (The Clock), which was devoted to the dissemination of revolutionary and Panslavic opinions. In 1868 he caused a French edition of it also to appear at Geneva, weekly. But though nearly twenty years of his life was devoted exclusively to his self-consecrated revolutionary work, M. Herten was capable of taking a high rank in other and pleasanter fields of literary labor. As an essayist, a traveller, a novelist, and a philosopher, he had a very considerable reputation, and might easily have had more. His "Dilletantism in Science," published in 1842, under the *nom de plume* "Iskander," attracted much attention on its first publication in a St. Petersburg review, and still more after its republication as a volume. It was followed by a series of very brilliant philosophical essays, entitled "Letters upon the Study of Nature," which were very popular. In 1847 he published two novels which were widely read: "Who is to Blame?" and "Doctor Krupof." In 1848 appeared his "Memoirs of Travel," and in 1850 two new volumes of science, travel, and philosophy, combined: "The Other Side," and "Letters from France and Italy." Both were widely circulated in Germany, having been translated into German the year of their publication. But from that time forward the sturdy revolutionist gave himself up exclusively to political and revolutionary literature, and the benefits which his brilliant pen might have conferred on mankind were lost.

HESSE-DARMSTADT,* a grand-duchy of Germany. The province of Upper-Hesse forms part of the North-German Confederation. Grand-duke, Ludwig III., born June 9, 1806; succeeded his father, June 16, 1848. Area, 2,970 square miles; population, according to the census of 1867, 823,138.

In the session of the Chamber of Deputies, of December 19th, the treaty for the annexation of the grand-duchy to the North-German Confederation was ratified by a vote of forty against three. The extraordinary credit demanded by the Minister of War was unanimously voted.

HINMAN, JOEL, LL. D., a Connecticut jurist, Chief Justice of the Supreme Court of that State, born in Fairfield County, Conn., in 1802; died in Cheshire, Conn., February 21, 1870. He received a good academical education and was admitted to the New-Haven County bar about 1827. He was for some years a practising attorney in Waterbury, Conn., but, though

* For an account of the population of the large cities, see AMERICAN ANNUAL CYCLOPEDIA for 1868. An account of ecclesiastical statistics and finances is given in the CYCLOPEDIA for 1869.

regarded as a sound and industrious lawyer, who would conduct a case judiciously and carefully, he had attained no special eminence as an attorney when he was elected one of the Superior Court judges in 1842. When he accepted that position, he forsook all other ambitions and purposes in life, and determined to become, if not a brilliant or learned, a sound, safe, and honest judge. From his appointment to his death he rose in the estimation of the profession and the public. His opinions have been regarded as models of clearness and common-sense. He had been since 1850 one of the associate justices of the Supreme Court, and on the death of Chief-Justice Storrs, in 1861, he became Chief Justice. For this position he was admirably fitted. With his remarkable soundness of practical judgment, his superior knowledge of legal principles, his long experience on the bench, and his sterling integrity, he commanded the high respect and confidence of the legal profession and of the public. A rare equability of temper kept his mind free from those perturbations that sometimes affect the judgment. His judicial opinions, as recorded in the "Connecticut Reports" (and which extend through twenty volumes), though written in an unpretending style, are remarkably vigorous, sensible, and convincing. He was a man of much kindness of heart, and was especially considerate of the embarrassments of the younger practitioners before him.

HITCHCOCK, ETHAN ALLEN, major-general U. S. Volunteers, an American army officer and author, born in Vergennes, Vt., May 18, 1798; died in Hancock, Ga., August 5, 1870. He was, on his mother's side, a grandson of Ethan Allen. His father was a circuit judge during the Administration of President Washington. In 1817 he graduated at West Point, and, after the usual routine of recruiting and garrison service, was assigned to duty in the Military Academy at West Point, as assistant instructor in infantry tactics, from February, 1824, to April, 1827. After two years more of recruiting service he was recalled to West Point, and was commandant of cadets and instructor in infantry tactics from 1829 to 1838. From this time to 1849 he was engaged on the frontier and in the Florida War, and had been promoted to the rank of major and lieutenant-colonel. He was next ordered to the Texan frontier, and took part in most of the battles of the Mexican War, being a part of the time inspector-general on General Scott's staff. He received two brevets, colonel and brigadier-general, for his gallant conduct, and in 1851 was promoted to be colonel of the Second Infantry, and put in command of the Pacific Military Division, where he served from 1851 to 1854. In October, 1855, he resigned his commission in consequence of the refusal of Jefferson Davis, then Secretary of War, to confirm the leave of absence given him by General Scott. From 1855 to 1862 he resided at St. Louis, and was

engaged chiefly in literary pursuits. Soon after the commencement of the war, General Hitchcock was commissioned as major-general of volunteers. He was most of the time on duty at Washington, and was a warm personal friend, and, to some extent, a military adviser of President Lincoln. He acted as commissioner for the exchange of prisoners during some years of the civil war. General Hitchcock also shared the confidence of the late Secretary of War, Mr. Stanton, and was esteemed by his associates for his intellectual ability and purity of character. General Hitchcock early became an admirer of Emanuel Swedenborg, and seemed to have imbibed something of his mystical spirit. In 1855 he printed for private circulation a pamphlet intended to demonstrate that alchemy had a higher and more mystical purpose than the making of gold. In 1837 he published "Remarks upon Alchemy and the Alchemists;" in 1858, "Swedenborg a Hermetic Philosopher;" in 1860, "Christ the Spirit," in which he attempted to show that the Gospels were symbolical books, written by members of a secret society of the Jews; in 1863, "Red Book of Appin, and other Fairy Tales;" in 1865, "Remarks on the Sonnets of Shakespeare," etc.; "Spenser's Colin Clout Explained," etc.; in 1866, "Notes on the Vita Nuova of Dante," to explain its spiritual character and purpose.

HÜGEL, KARL ALEXANDER ANSELM, Baron von, an Austrian traveller and naturalist, born at Ratisbon, April 25, 1796; died at Brussels, October 2, 1870. He was the son of a high officer of the Austrian Government, and in his boyhood travelled with his father over a considerable portion of Germany and Italy. In 1811 he went to the University of Heidelberg to study law. At the time of the general arming of Germany against Napoleon I., he entered the Austrian Army at eighteen years of age, and won a captain's commission, and entered Paris with the allied armies. He was attached to the diplomatic mission sent to Norway, to force the king of that country to abdicate. A year or two later military service called him into the interior of France, where he remained till 1820 as commandant of Arles and Tarascon. He next made, with General Frimont, the campaign against Naples. In 1824 he returned to Austria to devote himself wholly to the study of the natural sciences, in which he had already made considerable proficiency. After ten years of study, Baron von Hügel resolved to undertake an extensive tour of scientific exploration. He engaged as companions of his travel a physician, a surgeon, a painter, and a naturalist, and embarked with them at Toulon, May 2, 1831. His tour occupied more than six years. He visited a large part of Africa, Asia, and Australia, and, after surmounting extreme difficulties and perils, returned by way of the Cape of Good Hope to Europe in 1837, bringing with him magnificent collections in natural science, which the Aus-

trian Government subsequently purchased, and a great number of important documents, which have served as the basis of valuable scientific reports and treatises. In 1850 he was sent to Florence as Austrian minister, and remained there till the expulsion of the Grand-duke in 1859, when he returned to Vienna. He was the founder and first president of the Austrian Horticultural Society, and a member of the Academy of Sciences of Vienna. His published works, which are very valuable, all relate to natural science and his explorations. The following are the most important: "Botanic Archives of the Society of Horticulture of the Austrian Empire," 1837; "Cashmere and the Empire of the Sikhs," 4 vols., 1840-'42; "The Basin of Cabul," 2 vols., 1851-'52; two addresses before the Association of German Naturalists, on his exploring tour, 1838 and 1843. Other works on botany and zoology have been prepared from his collections brought home in 1837.

HUNGARY, a country of Europe, formerly an independent kingdom, now united with Austria under one sovereign, but separated from it in point of administration.* The separate budget of the Hungarian crown-lands, consisting of Hungary, Croatia, Slavonia, Transylvania, and the Military Frontier, also designated as the trans-leithan provinces, shows a total revenue, for 1869, of 143,708,600 florins, against an expenditure of 158,201,795 florins, leaving a deficit of 9,493,195 florins. On January 1, 1870, the length of railroads in operation in the trans-leithan provinces amounted to 1,815 miles; in course of construction, 1,047 miles. The length of telegraph-lines, in 1869, was 6,284 miles; length of wire, 13,678 miles.

In December, 1860, the Hungarian Diet approved the budget for the year ending May 31, 1870, and passed a law for the abolition of corporal punishment. The Lower House, after a minute scrutiny of the budget for public instruction, came to the conclusion that the interests of the country would be best served by conferring full authority upon the ministry to introduce such reforms in the system of elementary schools as they might deem necessary. The budget was then approved almost unanimously. Minister Eötvös presented a law on liberty of conscience, and the unrestricted exercise of every form of religion.

A law, fixing the increase of the annual share of Hungary in the common budget of the empire, in consequence of the incorporation of the Military Frontier with the Hungarian crown-lands, was passed by 219 yeas against 12 nays.

A proposition, made in the Lower House of Deputies, for the prolongation of the tobacco monopoly, met with violent opposition, but was finally adopted upon the promise of the Minister of Finance that measures would be taken for its abolition in 1871.

* For statistics of the population and common finances of the Austro-Hungarian Empire, see article AUSTRIA.

After the outbreak of the German-French War, Count Andrássy, president of the ministerial council, stated, in behalf of the government, that it could only occupy a position of impartial benevolence toward each belligerent, but that, should any other power abandon its neutral attitude, Hungary might change her policy. A supplementary credit of five million florins was voted by the Diet, and authorization given to the government for the calling out of the army contingent for 1871 if necessary.

During the year 1870 the nationality question was again agitated throughout the trans-leithan provinces, and did not fail to create serious embarrassments for the ministry at Pesth. Count Andrássy had to make great efforts to allay the growing dissatisfaction of the Slavi. The discontent of the latter and other non-Magyar nationalities was partly due to administrative measures on the part of the government, partly to their dream of a complete autonomy, and the formation of a Croatian, Servian, and Roumanian state within the Austrian Empire. The influence of the people in the neighboring states of Servia and Roumania upon their brethren of the same nationality in the Hungarian crown-lands was not undervalued by Count Andrássy, who was anxious to remain on good terms with the governments of those countries. When the question about the Servian fortresses was raised by Turkey, the interference of Austrian diplomacy was solely due to the exertion of the Hungarian prime-minister in behalf of Servia, the interests of which country he likewise served through his action on the question of the projected Turkish railways through Servia.

The Diet of Croatia, on May 14th, appointed a committee to examine and revise the treaty of compromise with Hungary. The leaders of the Croatian and South Slavic parties had a meeting at Sissek, when the formation of a confederation of all the South Slavic countries was adopted in principle. The Sloventzi, however, declined to enter into the proposed plan, while the Croats opposed the union of Croatia, Slavonia, and Dalmatia, with the western provinces of Austria.

A new religious sect was established in Hungary some ten years ago, called the Nazarenes. They were at first but few in number, but during the last seven or eight years have made many converts, and attracted a good deal of attention on the part of the government. Their religious creed was for a long time wrapped up in mystery, until more recently the Hungarian press obtained full information concerning their tenets and principles of faith. The Nazarenes derive their creed exclusively from the New Testament, although they do not dispute the divine origin of the Old Testament, and acknowledge the historical and moral value of the apocryphal books. They say that according to the Bible there are only two sacraments, baptism and the Lord's Supper. They do not baptize children, because a child cannot comprehend the doctrine of faith. The adults must make a

solemn promise that they will be guided by the lessons of Christ, and must bring proof of their previous irreproachable life. When these conditions have been complied with, they are conducted to a secluded spot by the elders of the community, and immersed in water. Any male member of the congregation may perform the rite of baptism. Children receive their name immediately after birth, without awaiting baptism. With regard to the distribution of the Lord's Supper, they observe the same ceremonies as the Calvinists of the reformed Church. The Nazarenes regard matrimony as a purely civil institution. Their funeral ceremonies are extremely simple, all ostentation being strictly forbidden. The dead are not lamented, for they say that he who enters upon a better life ought not to be wept for. They have no holidays properly speaking, and do not consider Sunday sacred, inasmuch as the New Testament does not contain any positive command on that point. They have no ordained priests or clergy, but every man is authorized to explain the Holy Writ.

HUTTON, ABRAHAM B., an instructor of deaf-mutes, born at Albany, N. Y., December 10, 1798; died at Stuyvesant's Landing, on the Hudson, July 18, 1870. He was fond of study, and, having received a careful early academic training, he entered Union College in 1815, and graduated with honor in 1817. After spending some weeks at home, he commenced the study of the law in the office of Messrs. Henry & McKoun in Albany, but subsequently relinquished it, and in 1819 entered the Theological Seminary at Princeton. After remaining there some time, his throat became so seriously affected that, by the advice of his physician, he gave up his design of entering the ministry. An assistant teacher was at this time wanted in the Pennsylvania Institution for the Deaf and Dumb, then under the charge of Laurent Clefe, and Mr. Hutton was selected for that position. He soon became deeply interested in the deaf and dumb, and resolved to devote his life to the amelioration of their condition. In December, 1829, he received from the directors of the New-York Institution for the Deaf and Dumb an offer of the situation of assistant teacher, but declined; and two years later, upon the retirement of Mr. Weld from the principalship of the Pennsylvania Institution, Mr. Hutton was appointed his successor. After a full and careful examination of the two systems of instruction, he became convinced of the superiority of that of signs with its auxiliaries, dactylology, writing, etc., over artificial articulation and lip-reading, and found no reason to suggest any alteration of the Sicard system, introduced into the institution by Mr. Clero. For upward of forty years he discharged the arduous duties of principal with marked success and ability. About the beginning of 1869 his health began to give way under the wearing care of so many years, but he continued to discharge the duties of his position with un-

wearied devotion, until his fast-failing strength induced him to spend a portion of his summer vacation with his sister in Stuyvesant, in the hope of recruiting somewhat, but survived his arrival there only a few days. Mr. Hutton had a cultivated taste for the fine arts generally, and was skilful in several of the mechanic arts. In natural philosophy and chemistry he was well versed, and the new discoveries in those sciences were always a matter of special interest to him. His patience was inexhaustible, and his love for his pupils as well as love for his work was the great secret of his remarkable success.

HYDRAULIC PIPE. The history of hydraulic mining in California has been one of bold engineering feats. In the conveyance of large quantities of water under great pressure—as in supplying cities where the houses and streets are at various elevations—cast-iron pipes have been almost invariably employed, the proper proportions of which have been so well ascertained that little or no risk is incurred in their use. Wrought-iron pipes have been discarded, one of the most serious objections against this material being its tendency to rust. But in California, where transportation and other items of expense are so costly, the use of cast-iron renders many enterprises unprofitable, and other material must be employed, especially in gravel-mining, where water has to be conveyed for temporary purposes over great inequalities of ground, and in such quantities as to prohibit the use of cast-iron. Hence we find, in many places, that sheet-iron pipes are employed, and succeed under pressures which startle engineers of acknowledged ability.

The Spring Valley Water Company, in San Francisco, convey their city supply of water from their reservoirs over a distance of 17 miles in two lines of sheet-iron pipes, 80 inches in diameter. These pipes are made with the circular seams single riveted and the longitudinal seams double riveted, and with thicknesses and pressures as follows: No. 14 iron, 60 feet; No. 12, 100 feet; No. 11, 200 feet; and No. 9, 250 feet. It was made in lengths of 24 feet and dipped in boiling asphaltum, in which it was allowed to remain until a complete union had taken place. This, done properly, is a perfect protection against rust. This pipe has been in successful operation for many years. One line of 6,000 feet, after having been in use for ten years, was lifted and relaid in another place, being found in as good condition as when first put down.

The success of this pipe led to the employment of one of greater magnitude, to convey water to the Cherokee mines. A ditch had been constructed from Concow Creek to Yankee Hill, and from this place the water had to be carried across the ravine of the West Branch to the opposite mountain, whence it was conducted in a canal to the mines of Cherokee Flat.

The inlet to the pipe is 150 feet above the outlet, with a vertical height from the lowest

point to grade-line of *nine hundred* feet. The pipe is 30 inches in diameter, and is intended to carry 1,900 miners' inches of water. The thickness of iron used is No. 14 for 150 feet of pressure, No. 12 for 275 feet, No. 10 for 350 feet, No. 7 for 425 feet, $\frac{1}{2}$ for 600 feet, $\frac{1}{4}$ for 850 feet, and $\frac{3}{8}$ for 900 feet. The water is admitted at the upper end from a cistern, with sand-box, etc., for settling any sand or gravel brought in from the ditch. The pipe has here an elbow dipping into the water to prevent the entrance of any air. Fifty feet from the inlet there is a stand-pipe to allow the escape of any air which may have got into the pipe, and to guard against an overhead of water. At different places, especially where depressions occur, are placed air-valves, made with floats to allow the escape of air, which shut on the approach of water. If the water is drawn off, these open on the inside, preventing the collapsing of the pipe from atmospheric pressure. The pipe was laid in a trench (five feet deep), from one end to the other, and cov-

ered with earth to prevent any undue expansion and contraction in hot and in cold weather. It does not extend quite to the bottom of the ravine, but is carried over on a truss-bridge at a height of about 70 feet. It was laid in lengths of 23 feet, which were riveted one to the other continuously, man-holes being placed every 1,000 feet to allow the entrance of the workmen. The rivets used were: for No. 14 iron, $\frac{1}{2}$ wire; No. 12, $\frac{1}{2}$; No. 11, $\frac{1}{4}$; No. 9, $\frac{3}{8}$; and No. 7, $\frac{3}{8}$; driven cold. The first ($\frac{1}{2}$) was machine-riveted cold, hand-riveted hot; $\frac{1}{4}$; $\frac{3}{8}$; $\frac{3}{8}$; $\frac{3}{8}$, driven hot. A steam riveting-machine was employed for nearly all of the pipe, giving better results than the hand-labor.

The pipe was made at the rate of 1,100 feet per day. The punching and shearing were done by machinery expressly designed for this pipe, and worked as high as 30 tons of iron daily. The pipe was manufactured and laid in place, and the water run through, in four months. The capacity of the pipe is 1,900 miners' inches, or 50 cubic feet per second.

I

ILLINOIS. The most important event of the year in the State of Illinois has been the framing of a new constitution, and its ratification by the people. This work was undertaken and carried through with the greatest deliberation and care, and the result has been highly satisfactory to the citizens of the State, and to those interested in constitutional government everywhere. The new organic law probably presents one of the most complete and carefully-prepared systems now in operation, and many of its features are entirely new; introduced after thoughtful consideration, and ratified after a thorough public canvassing of their merits. The movement for a revision of the constitution was begun in 1867, when the Legislature passed an act submitting to the people the question of holding a convention for this purpose. At the election of 1868 there was a large majority in favor of the revision, and, in 1869, the Legislature took the necessary steps for the election of delegates and the holding of the convention. That body met on the 13th of December, and, after completing its organization and distributing the work of making the first drafts of the various portions of the instrument among the appropriate committees, adjourned over the holidays. It reassembled on the 5th of January, and continued its sessions until the 18th of May, with the exception of a recess of four weeks, from the 17th of March to the 15th of April. The provisions reported by the different committees, on which there proved to be the widest differences of opinion, and consequently the most extended debates, were finally submitted to a separate vote of the people.

The constitution, as finally adopted by the convention, and submitted to the suffrages of the electors of the State, consists of fourteen articles.

The first article simply defines the boundaries of the State. The second contains the Bill of Rights. This, besides the usual guarantees of civil and political liberty, has the following sections:

SECTION 3. The free exercise and enjoyment of religious profession and worship, without discrimination, shall forever be guaranteed; and no person shall be denied any civil or political right, privilege, or capacity, on account of his religious opinions; but the liberty of conscience hereby secured shall not be construed to dispense with oaths or affirmations, excuse acts of licentiousness, or justify practices inconsistent with the peace or safety of the State. No person shall be required to attend or support any ministry or place of worship against his consent, nor shall any preference be given by law to any religious denomination or mode of worship.

SEC. 4. Every person may freely speak, write, and publish on all subjects, being responsible for the abuse of that liberty; and, in all trials for libel, both civil and criminal, the truth, when published with good motives and for justifiable ends, shall be a sufficient defence.

SEC. 13. Private property shall not be taken or damaged for public use without just compensation. Such compensation, when not made by the State, shall be ascertained by a jury, as shall be prescribed by law. The fee of land taken for railroad tracks, without the consent of the owners thereof, shall remain in such owners, subject to the use for which it is taken.

SEC. 19. Every person ought to find a certain remedy in the laws for all injuries and wrongs which he may receive in his person, property, or reputation; he ought to obtain, by law, right and justice freely and without being obliged to purchase it, completely and without denial, promptly and without delay.

Article three makes the usual distribution

of the power of government into legislative, executive, and judicial, and article four is devoted to the legislative department. It provides that an election of members shall take place on the Tuesday next after the first Monday of November, 1870, and every two years thereafter, the Governor having power at any time to issue writs of election to fill vacancies. Persons who have been convicted of bribery, perjury, or other infamous crimes, and "any person who has been or may be a collector or holder of public moneys, who shall not have accounted for and paid over, according to law, all such moneys due from him," are rendered ineligible. All members of the General Assembly before entering upon their official duties are required to take the following oath:

"I do solemnly swear (or affirm) that I will support the Constitution of the United States and the constitution of the State of Illinois, and will faithfully discharge the duties of Senator (or Representative) according to the best of my ability; and that I have not, knowingly or intentionally, paid or contributed any thing, or made any promise in the nature of a bribe, to directly or indirectly influence any vote at the election at which I was chosen to fill the said office, and have not accepted, nor will I accept or receive, directly or indirectly, any money or other valuable thing, from any corporation, company, or person, for any vote or influence I may give or withhold on any bill, resolution, or appropriation, or for any other official act." This oath shall be administered by a Judge of the Supreme or Circuit Court in the hall of the House to which the member is elected, and the Secretary of State shall record and file the oath subscribed by each member. Any member who shall refuse to take the oath herein prescribed shall forfeit his office, and every member who shall be convicted of having sworn falsely, or of violating his said oath, shall forfeit his office and be disqualified thereafter from holding any office of profit or trust in this State.

There are to be 51 Senators elected for four years, and 153 Representatives chosen for two years, and an apportionment is to be made every ten years, by dividing the population of the State, as ascertained by the Federal census, by these two factors, in order to determine the senatorial and representative districts, each district containing as nearly as practicable an equal number of inhabitants, and being of contiguous and compact territory. At the time of each decennial apportionment after 1870, the number of Representatives is to be increased six for every 500,000 increase of population. The sessions of the Legislature are to begin on the first Monday in the January after the biennial election of members. The usual powers and duties are granted to the Legislature, but those having reference to the appropriation or use of public funds are very carefully guarded. The old constitution had been very lax in this regard, and great attention was paid to remedying its defects. Appropriation of money in any private bill is prohibited, and no money can be used for any other purpose than that for which it is appropriated by law. The following important pro-

visions are made restricting the power of the Legislature to incur indebtedness, and prohibiting fees and extra compensation to public officers:

SECTION 18. Each General Assembly shall provide for all the appropriations necessary for the ordinary and contingent expenses of the government until the expiration of the first fiscal quarter after the adjournment of the next regular session, the aggregate amount of which shall not be increased without a vote of two-thirds of the members elected to each House, nor exceed the amount of revenue authorized by law to be raised in such time; and all appropriations, general or special, requiring money to be paid out of the State Treasury, from funds belonging to the State, shall end with such fiscal quarter: *Provided*, the State may, to meet casual deficits or failures in revenues, contract debts, never to exceed in the aggregate two hundred and fifty thousand dollars; and moneys thus borrowed shall be applied to the purpose for which they were obtained, or to pay the debt thus created, and to no other purpose; and no other debt, except for the purpose of repelling invasion, suppressing insurrection, or defending the State in war (for payment of which the faith of the State shall be pledged), shall be contracted, unless the law authorizing the same shall, at a general election, have been submitted to the people, and have received a majority of the votes cast for members of the General Assembly at such election. The General Assembly shall provide for the publication of said law, for three months, at least, before the vote of the people shall be taken upon the same; and provision shall be made at the time for the payment of the interest annually, as it shall accrue, by a tax levied for the purpose, or from other sources of revenue; which law, providing for the payment of such interest by such tax, shall be irrevocable until such debt be paid: *And provided*, further, that the law levying the tax shall be submitted to the people with the law authorizing the debt to be contracted.

SEC. 19. The General Assembly shall never grant or authorize extra compensation, fee, or allowance, to any public officer, agent, servant, or contractor, after service has been rendered or a contract made, nor authorize the payment of any claim, or part thereof, hereafter created against the State under any agreement or contract made without express authority of law; and all such unauthorized agreements or contracts shall be null and void: *Provided*, the General Assembly may make appropriations for expenditures incurred in suppressing insurrection or repelling invasion.

SEC. 20. The State shall never pay, assume, or become responsible for the debts or liabilities of, or in any manner give, loan, or extend its credit to, or in aid of, any public or private corporation, association, or individual.

Each member is allowed five dollars per day for his services, and ten cents for every mile of necessary travel, together with fifty dollars per session for postage, stationery, and other incidental expenses.

One of the greatest abuses under the old constitution was that of special legislation, and it was determined to cut this down to the lowest possible point. The new instrument specifically prohibits such legislation with respect to a large number of matters in which it had been common, and the additional provision is made that, "in all other cases where a general law can be made applicable, no special law shall be enacted." Another attempt to reform an old abuse and promote economy was em-

bodied in a section requiring all work done for the State government, or material supplied to it, to be contracted for with the lowest responsible bidder, the Legislature fixing the maximum price. Among the miscellaneous provisions of this article are the following:

SECTION 27. The General Assembly shall have no power to authorize lotteries or gift enterprises, for any purpose, and shall pass laws to prohibit the sale of lottery or gift enterprise tickets in the State.

SEC. 28. No law shall be passed which shall operate to extend the term of any public officer after his election or appointment.

SEC. 29. It shall be the duty of the General Assembly to pass such laws as may be necessary for the protection of operative miners, by providing for ventilation, when the same may be required, and the construction of escapement shafts or such other appliances as may secure safety in all coal-mines, and to provide for the enforcement of said laws by such penalties and punishments as may be deemed proper.

Many important changes are also made in the article on the Executive Department. Formerly while the Legislature was at liberty to pass a law for any special or private purpose, and make appropriations at will, the Governor could exercise no check nor control over its action. The result had been that the capital was overrun with lobbyists during the sessions of the General Assembly, and they were enabled to carry every thing before them.

All the executive officers, except the Treasurer, are hereafter to be elected for a term of four years. The official term of the Treasurer is to be two years. There was considerable debate in the convention on the subject of the length of time most expedient for the terms of office in the several departments of government, some contending that frequent appeals to the popular suffrages tend to fix responsibility and secure an honest administration, and others arguing that experienced officials must necessarily be more efficient, and should therefore be retained in office. The terms finally settled upon were the result of a compromise between these different views.

The Governor is required, at the beginning of each session of the Legislature and at the end of his official term, to give information of the condition of the State, and recommend such measures as he may deem expedient. He must also "account to the General Assembly, and accompany his message with a statement of all moneys received and paid out by him from any funds subject to his order, with vouchers, and, at the commencement of each regular session, present estimates of the amount of money required to be raised by taxation for all purposes." The powers ordinarily exercised by a chief executive officer are conferred upon him, including that of putting a "veto" upon all measures which do not meet with his approval, and returning them for further consideration, after which they can be passed only by a two-thirds vote. The other executive officers have the usual powers and duties attached to their several positions. All are to receive fixed salaries, to be established by law,

and not to be increased or diminished during their official terms, and any fees, perquisites, and extra compensation, are prohibited. This last-named provision does away with what had been a prolific source of corruption under the old constitution. At the close of this article a definition of an office is given in the following terms:

SEC. 24. An office is a public position, created by the constitution or law, continuing during the pleasure of the appointing power, or for a fixed time, with a successor elected or appointed. An employment is an agency, for a temporary purpose, which ceases when that purpose is accomplished.

The sixth article vests the judicial powers of the State in a Supreme Court, Circuit Courts, County Courts, and justices of the peace, with special provisions for Cook County (containing the city of Chicago). The Supreme Court is to consist of seven judges, elected in separate districts for a term of nine years, and drawing a yearly salary of \$4,000. This is an increase of four in the number of judges. The Supreme Court is the tribunal of last appeal in the State, but appellate courts may be created after the year 1874, to be held by the judges of the Circuit Courts. The State is to be divided into circuits, not to exceed in number one for every 100,000 inhabitants, and in each of these a judge is to be elected to serve a term of six years and receive a salary of \$3,000 a year. The Circuit Courts have original jurisdiction of all causes in law and equity, and are to hold at least two terms every year in each county of the State. The County Courts have jurisdiction of matters of probate, settlement of estates, etc., and the judges are elected, one in each county, for a term of four years. The county of Cook forms a circuit by itself, with four judges, and has besides a Superior Court and a Criminal Court. The judges in all these are elected for six years, and receive salaries to be fixed by law. All justices of the peace, police magistrates, and constables, are to be elected, except in the city of Chicago, where, on the recommendation of a majority of the judges of the Circuit, Superior, and County Courts, the justices of the peace may be appointed by the Governor.

An attempt was made in the convention to provide in the judiciary article for a submission to a vote of the people in 1878 the questions whether the judges of the Supreme and Circuit Courts should not thereafter be appointed by the Governor, and hold office during life or good behavior. The subject was referred to the Judiciary Committee, but never reported on. Another innovation which was proposed, but not adopted, was one giving juries in all criminal cases the privilege "if in their minds the evidence warrants it, besides the verdict of 'guilty,' or 'not guilty,' to also bring in a verdict of 'not found'—such verdict of 'not found' to leave the accused in the same situation as now under the law, when a justice of the peace discharges a prisoner on

the examining trial, or when the grand jury ignores the bill in such case."

Among the general provisions of the judiciary article as adopted is the following:

SECTION 31. All judges of Courts of Record, inferior to the Supreme Court, shall, on or before the first day of June, of each year, report in writing to the judges of the Supreme Court such defects and omissions in the laws as their experience may suggest; and the judges of the Supreme Courts shall, on or before the first day of January, of each year, report in writing to the Governor such defects and omissions in the constitution and laws as they may find to exist, together with appropriate forms of bills to cure such defects and omissions in the laws. And the judges of the several Circuit Courts shall report to the next General Assembly the number of days they have held court in the several counties comprising their respective circuits the preceding two years.

The seventh article relates to the right of suffrage, and the section conferring that privilege is in the following words:

SECTION 1. Every person having resided in this State one year, in the county ninety days, and in the election district thirty days next preceding any election therein, who was an elector in this State on the first day of April, in the year of our Lord one thousand eight hundred and forty-eight, or obtained a certificate of naturalization before any Court of Record in this State prior to the first day of January, in the year of our Lord one thousand eight hundred and seventy, or who shall be a male citizen of the United States above the age of twenty-one years, shall be entitled to vote at such election.

There is no other restriction on the exercise of the right of voting except that the General Assembly is required to pass laws excluding therefrom "persons convicted of infamous crimes." Besides these provisions, three other propositions relating to the same subject were submitted in the convention. A minority of the committee to whom the article on suffrage was intrusted reported in favor of restricting the privilege to "white male inhabitants." A second minority report recommended that the question of striking out the word "white" be separately submitted to a vote of the people.

The question of woman suffrage also came up. During the early part of the sittings of the convention, a meeting of men and women in favor of female suffrage was held at Springfield, at which resolutions were passed calling upon the delegates to incorporate into the new constitution provisions allowing women to vote on the same terms with men, or at least to submit the question of allowing them this privilege to a vote of the people. In response to this appeal the following resolutions were offered and referred to the Committee on Suffrage:

Whereas, It is the pride and boast of the true American citizen that his country is a progressive one; taking no step backward, but always reaching forward to a more perfect freedom and equality; and,

Whereas, In sympathy with the progressive spirit, a majority of the States of the Federal Union have just conferred citizenship and suffrage upon the black man; and,

Whereas, There are found in the several counties of this State associations known as "Woman's Suffrage Associations," with a general head, which is now in session at the capital of the State, which associations, general and local, have demanded of this body a provision guaranteeing to their members and all other females in the State the right of suffrage; therefore be it

Resolved, That the Committee on the Right of Suffrage be instructed to report to this convention a proposition in accordance with this request and the request of the many petitions numerously signed which have from time to time been presented to this body.

Resolved, That the same committee report upon the propriety of submitting the suffrage proposition as an independent one, to be voted for or against by the women of the State, who if electors would be eligible under the election laws of the State, and that if a majority of all such women electors shall vote for said propositions then it shall become a part of the constitution, otherwise the propositions shall not be a part of the organic law of this State.

After the reports of the committee, Mr. Buxton proposed the following additional section:

The question of woman suffrage shall be submitted to a separate vote, at the time of the submission of the constitution, in such manner as may be provided in the schedule, and if, upon a canvass of the votes cast on the question, a majority thereof shall be found "for woman suffrage," then the word "male" shall be stricken out of section one of the suffrage article, otherwise not.

This was adopted by a vote of forty to twenty-one, but soon after protests were received from various parts of the State declaring that the women did not desire this supposed concession in their behalf. A petition from Peoria, signed by over 1,800 women, was in the following words:

To the Honorable the Constitutional Convention of the State of Illinois:

The undersigned, women of the county of —, fearing that a small minority of our countrywomen, by their boldness and misdirected zeal, may succeed in carrying a measure which we believe to be prejudicial to the highest interests of our sex, if not in direct opposition to both divine and natural laws, and understanding that petitions urging the omission of the word **MALE** from the constitution which you are engaged in preparing, have been presented to your honorable body, we feel it our duty to enter our solemn protest, and declare that we are unalterably opposed to any action upon your part, which shall confer upon the women of the State of Illinois the right of suffrage. And we also declare that we are opposed to any action upon the part of Congress looking to a like result through an amendment of the Federal Constitution. All of which is respectfully submitted to your honorable body.

At the meeting where this counter-movement was set on foot these resolutions were adopted:

Resolved, That we are unqualifiedly opposed to giving the elective franchise to women.

Resolved, That, while we admit the necessity of extensive reform, both in the political and social relations of life, we deny that the bestowal of the right of suffrage on woman would in any way hasten that reform.

Resolved, That woman's sphere of duty is distinct from man's, and is well defined; and that, as going to the polls forms no part of it, we will strenuously oppose this movement as an invasion of our right not to do man's work.

Resolved, Therefore, that we are the true advocates

of woman's rights, and that those of our sex who are clamoring for suffrage should call themselves the "man's rights" party, since they are grasping after duties, powers, and privileges that naturally belong to the stronger sex.

When the constitution was in the hands of the Committee on Revision, a motion was made, and carried by a vote of thirty-three to twenty-eight, that the committee be instructed "to strike out the section heretofore adopted by this convention, submitting to a vote of the people the question of female suffrage."

Another proposition, which was considered with the suffrage report, and finally reported, was expressed as follows:

SECTION —. Every person of sound mind and lawful age, having a residence in any election precinct or district in this State, shall be entitled to vote upon any proposition submitted at any meeting or election to raise money by taxation upon the property of such person liable to taxation, for any purpose whatever; and no person shall vote upon any proposition submitted to raise money by taxation at any such meeting or election unless such person is the owner of property that would be subjected to a tax if the proposition so submitted should be carried at such meeting or election.

Article eight directs the General Assembly to "provide a thorough and efficient system of free schools, whereby all the children of the State may receive a common-school education." An ineffectual attempt was made to obtain a declaration in favor of separate schools for white and colored children. Among the other propositions which failed to meet the approbation of a majority of the delegates was one prohibiting either the exclusion of the Bible from the schools or the compulsion of its use; one abolishing and forever prohibiting corporal punishment in the schools; and one compelling parents, having children of the school-age, to send them to the common schools, "provided sickness does not prevent or education is not elsewhere provided."

The following is among the sections adopted:

SECTION 8. Neither the General Assembly nor any county, city, town, township, school district, or other public corporation, shall ever make any appropriation or pay from any public fund whatever, in aid of any church or sectarian purpose, or to help support or sustain any school, academy, seminary, college, university, or other literary or scientific institution controlled by any church or sectarian denomination whatever; nor shall any grant or donation of land, money, or other personal property, ever be made by the State or any such public corporation, to any church or for any sectarian purpose.

The old constitution was entirely silent on the subject of education, and the present school system was created by the Legislature in 1849 without any express authority, much doubt being then and afterward entertained respecting its legality, although it was always heartily sustained by the people.

Article nine covers the subject of revenue, and provides for the levy and collection of taxes. The Legislature is prohibited from releasing, discharging, or commuting the taxes of any county, town, or district, or the in-

habitants thereof or property therein, and county authorities are not allowed to assess taxes amounting in the aggregate to more than seventy-five cents on one hundred dollars' valuation. Counties, cities, towns, school districts, and other municipal corporations, are forbidden to incur indebtedness amounting to more than five per cent. on value of taxable property therein.

The tenth article relates to the constitution and government of the counties. Besides the regular county officers, each county is to have a board of three commissioners, who shall "hold sessions for the transaction of county business as shall be provided by law;" and Cook County is to have fifteen commissioners, ten of whom are to be elected in Chicago. The county boards have power to fix within certain limits the compensation of all county officers, "with the amount of their necessary clerk-hire, stationery, fuel, and other expenses." All fees and allowances in excess of the regular compensation of county officers are to be paid into the Treasury, and each officer is required to make a sworn statement of their amount.

The eleventh article covers the important subject of corporations, one which was very inadequately provided for under the old constitution. It forbids the creation of corporations by special law, and declares that all charters or grants of special or exclusive privileges, which shall not have been in operation ten days before the constitution shall go into effect, shall thereafter have no validity. The General Assembly is directed to provide that, in all elections of directors or managers, the stockholders shall have the right to vote for the number of shares owned by them. The creation of a State bank is prohibited, and no law authorizing or creating corporations with banking powers can go into effect until it has been approved by a vote of the people. The suspension of specie payments by banking institutions is prohibited. The subject of railroad corporations received a large share of attention. Several resolutions were offered, and a good deal of discussion entered into touching the power and wealth of these organizations, and the danger of their encroaching upon the rights of the people, and invading with their influence all departments of the State government. One speaker declared that the people "must soon provide a remedy against the encroachment of this modern despotism upon public and private rights, or the time will come, and that speedily, when the railways of the State and of the country will go down in bloody strife before the rights and powers of the people." The result of an extended consideration of the subject was the adoption of the following sections:

SECTION 9. Every railroad corporation organized or doing business in this State, under the laws or authority thereof, shall have and maintain a public office or place in this State for the transaction of its business, where transfers of its stock shall be made, and in which shall be kept, for public inspection,

books, in which shall be recorded the amount of capital stock subscribed, and by whom; the names of the owners of its stock, and the amounts owned by them respectively; the amount of stock paid in, and by whom; the transfers of said stock; the amounts of its liabilities, and the names and place of residence of its officers. The directors of every railroad corporation shall annually make a report, under oath, to the Auditor of Public Accounts, or some officer to be designated by law, of all their acts and doings, which report shall include such matters relating to railroads as may be prescribed by law. And the General Assembly shall pass laws enforcing by suitable penalties the provisions of this section.

Sec. 10. The rolling-stock, and all other movable property belonging to any railroad company or corporation in this State, shall be considered personal property, and shall be liable to execution and sale in the same manner as the personal property of individuals, and the General Assembly shall pass no law exempting any such property from execution and sale.

Sec. 11. No railroad corporation shall consolidate its stock, property, or franchises with any other railroad corporation owning a parallel or competing line; and in no case shall any consolidation take place except upon public notice given, of at least sixty days, to all stockholders, in such manner as may be provided by law. A majority of the directors of any railroad corporation now incorporated, or hereafter to be incorporated by the laws of this State, shall be citizens and residents of this State.

Sec. 12. Railways heretofore constructed or that may hereafter be constructed in this State are hereby declared public highways, and shall be free to all persons for the transportation of their persons and property thereon, under such regulations as may be prescribed by law. And the General Assembly shall from time to time pass laws establishing reasonable maximum rates of charges for the transportation of passengers and freight on the different railroads in this State.

Sec. 13. No railroad corporation shall issue any stock or bonds, except for money, labor, or property actually received and applied to the purposes for which such corporation was created; and all stock dividends, and other fictitious increase of the capital stock or indebtedness of any such corporation, shall be void. The capital stock of no railroad corporation shall be increased for any purpose, except upon giving sixty days' public notice, in such manner as may be provided by law.

Sec. 14. The exercise of the power and the right of eminent domain shall never be so construed or abridged as to prevent the taking, by the General Assembly, of the property and franchises of incorporated companies already organized, and subjecting them to the public necessity the same as of individuals. The right of trial by jury shall be held inviolate in all trials of claims for compensation, when, in the exercise of the said right of eminent domain, any incorporated company shall be interested either for or against the exercise of said right.

Sec. 15. The General Assembly shall pass laws to correct abuses and prevent unjust discrimination and extortion in the rates of freight and passenger tariffs on the different railroads in this State, and enforce such laws by adequate penalties to the extent, if necessary for that purpose, of forfeiture of their property and franchises.

Article twelve authorizes the organization and equipment of a militia composed of "all able-bodied male persons resident in the State, between the ages of eighteen and forty-five," except such as are exempted by law. Those having conscientious scruples against bearing arms cannot be compelled to do militia duty "in time of peace," provided they "pay an equivalent" for their exemption.

The thirteenth article has reference to warehouses, and declares that all elevators or store-houses, where grain or other property is stored for a compensation, shall be public warehouses. The duty of the owners or managers is fixed by the following sections:

SECTION 2. The owner, lessee, or manager, of each and every public warehouse situated in any town or city of not less than one hundred thousand inhabitants, shall make weekly statements under oath, before some officer to be designated by law, and keep the same posted in some conspicuous place in the office of such warehouse, and shall also file a copy for public examination in such place as shall be designated by law, which statement shall correctly set forth the amount and grade of each and every kind of grain in such warehouse, together with such other property as may be stored therein, and what warehouse receipts have been issued, and are, at the time of making such statement, outstanding therefor; and shall, on the copy posted in the warehouse, note daily such changes as may be made in the quantity and grade of grain in such warehouse; and the different grades of grain shipped in separate lots shall not be mixed with inferior or superior grades without the consent of the owner or consignee thereof.

Sec. 3. The owners of property stored in any warehouse, or holder of a receipt for the same, shall always be at liberty to examine such property stored, and all the books and records of the warehouse in regard to such property.

All railroad companies are made responsible to the owner for the delivery of property shipped, at its destination, and required to give receipts for the amount, and, in all cases to make, or allow to be made, connections with their track, so that the "consignee, public warehouse, and any coal-bank or coal-yard may be reached by the cars of said railroad." It is made the duty of the General Assembly to pass laws to prevent the issue of fraudulent receipts, and to give full effect to this article of the constitution, "which shall be liberally construed, so as to protect producers and shippers." The occasion for careful provisions relating to warehouses is set forth in the following resolution, by which the subject was first introduced to the attention of the convention:

Resolved, That the facility with which our markets are manipulated, and perverted, by reason of fictitious and spurious receipts issued by storehouse men all over our State, calls for prompt and radical reform, and, unless something be done to prohibit this growing evil, the dignity that has heretofore characterized that department of trade (the commerce of our country) will have sunk to the humiliating level of the professional gambler. It is now a very common transaction for warehousemen to issue receipts representing grain in store, when, in fact, such receipts have no intrinsic value. Frauds of such magnitude cannot safely be tolerated in the light of our civilization.

Without admitting too much, therefore, let a clause be inserted in our constitution making it obligatory on the General Assembly to abate the nuisance by appropriate legislation.

The fourteenth and last article of the constitution relates to its future amendment. The Legislature may, by a two-thirds vote, submit to a popular ballot the question of holding a convention for the revision of that instrument,

or may itself propose amendments to be voted on at a regular election, but it cannot "propose amendments to more than one article at the same session, nor to the same article oftener than once in four years."

Besides the provisions contained in the several articles of the constitution, a number of others were proposed and discussed, and some of these were finally submitted to a separate vote of the people. The most important was one providing for a representation of the political minority in the lower branch of the Legislature. The principle involved in this section has been extensively discussed, but never before put in operation in this country. It was regarded by the convention and the press of the State in the light of an important experiment. The section, if adopted, was to take the place of the seventh and eighth sections of the legislative article, and is in the following words:

The House of Representatives shall consist of three times the number of the members of the Senate, and the term of office shall be two years. Three representatives shall be elected in each senatorial district at the general election in the year A. D. 1872, and every two years thereafter. In all elections of representatives aforesaid, each qualified voter may cast as many votes for one candidate as there are representatives to be elected, or may distribute the same, or equal parts thereof, among the candidates, as he shall see fit, and the candidate highest in votes shall be declared elected.

The subject of town and county subscriptions to railroads was also debated at considerable length, and the following provision finally adopted, subject to the approval of the people by a separate vote:

No county, town, township, or other municipality, shall ever become subscriber to the capital stock of any railroad or private corporation, or make donation to, or loan its credit in aid of such corporation: *Provided, however,* that the adoption of this article shall not be construed as affecting the right of any municipality to make such subscriptions where the same have been authorized, under existing laws, by a vote of the people of such municipalities prior to such adoption.

Two other matters which occupied a good deal of attention, and were also submitted to separate votes, related to the Illinois Central Railroad and the Illinois and Michigan Canal. When the former of these great works was first projected, in 1851, the State Legislature had not only granted to it a right of way through the entire length of the State, but had donated alternate sections of land on each side of the track, to aid in its construction. In return for this valuable grant the company was required to pay into the State Treasury seven per cent. of its revenue. An attempt was made in the convention to obtain a release of the company from this obligation. The section separately submitted, relating to this subject, was as follows:

No contract, obligation, or liability whatever, of the Illinois Central Railroad Company to pay any money into the State Treasury, nor any lien of the State upon or right to tax property of said company,

in accordance with the provisions of the charter of said company, approved February 10, 1857, shall be released, suspended, modified, altered, omitted or in any manner diminished or impaired by legislative or other authority; and all moneys derived from said company, after the payment of the State debt, shall be appropriated and set apart for the payment of the ordinary expenses of the State government, and for no other purposes whatever.

The Illinois and Michigan Canal was built by the State, and has always been under its control, and the question of allowing its sale or lease gave rise to the most protracted debate of the entire session of the convention. This work cost over \$6,000,000, and it was claimed had never been a profitable investment. On the one side, it was urged that its management by private owners would be more efficient and more for the interests of the people than it had ever been in the hands of State officials. On the other hand, it was argued that the canal might be made a valuable source of revenue to the State, and, if it had been badly managed heretofore, there should be a reform of the system rather than an abandonment of the property. The proposition finally submitted to the people was expressed as follows:

The Illinois and Michigan Canal shall never be sold or leased until the specific proposition for the sale or lease thereof shall first have been submitted to a vote of the people of the State, at a general election, and have been approved by a majority of all the votes polled at such election.

The General Assembly shall never loan the credit of the State, or make appropriations from the Treasury thereof, in aid of railroads or canals: *Provided,* that any surplus earnings of any canal may be appropriated for its enlargement or extension.

A Committee on Federal Relations had been originally appointed in the Constitutional Convention, and reported an article consisting of three sections, expressing their views of the relation which the State bore to the Federal Union. After some discussion, it was determined not to incorporate this in the constitution, but its substance was embodied in the following resolutions, which were adopted by a vote of 42 to 18:

Resolved, That the State of Illinois shall be and forever remain one of the United States of America, and a member of the American Federal Union; and no power exists in the people of this or any other State of the Federal Union to secede or dissolve their connection therewith, or perform any act tending to impair, subvert, or resist, the supreme authority of the United States.

Resolved, That every citizen of the State owes paramount allegiance to the Constitution and Government of the United States; and the laws and treaties made in pursuance thereof shall be the supreme law of the land.

Resolved, That the Constitution of the United States confers full powers on the Federal Government to maintain and perpetuate its existence; and whenever any State, or any portion of the States, or the people thereof, attempt to secede from the Federal Union, or forcibly resist the execution of its laws, the Federal Government may, by warrant of the Constitution, employ armed force in coercing and compelling obedience to its authority.

The following was also adopted:

Resolved, That we, the representatives of the people of the State of Illinois, in Constitutional Convention assembled, do hereby recommend to our representatives in the Congress of the United States, and request of them, that they labor to secure the removal of the national capital to some point in the Mississippi Valley.

A minority of the Committee on Federal Relations made a report expressing their dissent from the views set forth by the majority, and recommending the following as an article of the constitution:

The General Assembly shall not ratify any amendment to the Constitution of the United States until a general election for members of the General Assembly shall have been held, after such amendment shall have been proposed by Congress to the Legislatures of the respective States.

Arguments of considerable length were delivered on the right of the State to interfere with provisions of the Federal Constitution respecting the ratification of amendments, and the article was rejected by a vote of 22 to 88.

The work of framing the constitution having been finished, a schedule was appended providing for its submission to a vote of the people, at an election to be held on the first Saturday of July. Besides the vote on the instrument as a whole, and on the sections already mentioned as separately submitted, a distinct ballot was to be taken on the portion of the article on corporations relating to railroads, on the article entitled "Counties," that entitled "Warehouses," and on the question of requiring a three-fifths vote to remove a county-seat. The constitution, if adopted, was to go into operation on the 8th of August, and the Governor and Secretary of State were required to make the apportionment for members of the Legislature, founded on the census of 1870, provided it should be ascertained before the 28th of September, otherwise the State census of 1865 was to be used. Provision is made for holding the first election under the constitution in conformity with its requirements, so as to set all the machinery of government throughout the State, local as well as general, in full operation under the new system.

The special election at which the vote was taken on the constitution, and the various provisions separately submitted, was held on the 2d of July, and the result is fully set forth in the following proclamation of the Governor:

STATE OF ILLINOIS, DEPARTMENT OF STATE.

Pursuant to the provisions of section eleven of the schedule of the constitution adopted by the people of the State of Illinois, on Saturday, the second day of July, A. D. 1870, I, John M. Palmer, Governor of the State of Illinois, do hereby proclaim that, on the twenty-seventh day of July, A. D. 1870, the official abstracts of the vote cast on the said second day of July, A. D. 1870, by the electors of the several counties of the State of Illinois, for and against the adoption of the proposed new constitution of the State of Illinois, and for and against the adoption of the several articles severally submitted therewith, were duly canvassed by the Secretary of State, Auditor, and Treasurer of the State, in my presence, and that the result of said canvass was as follows:

For the new constitution, there were 134,227 votes.
Against the new constitution, there were 38,443 votes.
For the sections relating to railroads in the article entitled Corporations, 144,750 votes.
Against the sections relating to railroads, in the article entitled Corporations, 28,525 votes.
For the article entitled Counties, 130,615 votes.
Against the article entitled Counties, 81,644 votes.
For the article entitled Warehouses, 148,583 votes.
Against the article entitled Warehouses, 22,708 votes.
For a three-fifths vote to remove county-seats, 137,077 votes.
Against a three-fifths vote to remove county-seats, 41,417 votes.
For the section relating to the Illinois Central Railroad, 147,082 votes.
Against the section relating to the Illinois Central Railroad, 31,810 votes.
For the section relating to minority representation, 99,022 votes.
Against the section relating to minority representation, 70,080 votes.
For the section relating to municipal subscriptions to railroads or private corporations, 184,114 votes.
Against the section relating to municipal subscription to railroads or private corporations, 34,061 votes.
For the section relating to the canal, 142,540 votes.
Against the section relating to the canal, 37,017 votes.

And it further appearing from said abstracts that a majority of the votes cast was for the adoption of the proposed constitution, and for all the several articles separately submitted therewith:

Now, therefore, I, John M. Palmer, Governor of the State of Illinois, do further proclaim that on and after the eighth day of August, A. D. 1870, the aforesaid constitution, and the articles submitted therewith, will become the supreme law of the State of Illinois.

In testimony whereof, I have hereto set my hand and caused the great seal of State to [SEAL.] be affixed. Done at Springfield, this 27th day of July, A. D. 1870.

JOHN M. PALMER.

The four additional judges of the Supreme Court were chosen at the same election, and, when the court met and organized on the first Tuesday of September, it was composed of the following justices, the first three of whom held over from the old judiciary: Chas. B. Lawrence, Chief Justice; Pinkney H. Walker, Sidney Breese, Anthony Thornton, John M. Scott, Benjamin R. Sheldon, and William K. McAllister.

The apportionment of the members of Assembly among the different districts of the State was announced by Governor Palmer on the 24th of September. It was based on the Federal census of 1870, which allowed one representative to every 16,530 inhabitants, and in accordance with this ratio the one hundred and fifty-three members allowed to the Lower House were distributed among the ninety-seven representative districts.

The Republican State Convention met at Springfield on the 1st of September. The State officers to be nominated were: Member of Congress at large, Treasurer, Superintendent of Public Instruction, and two Penitentiary Commissioners. The convention named for these places, in the order in which they are enumerated, General John A. Logan, General Erastus H. Bates, Newton Bateman, Elmer A. Washburn, and Caspar Butz. The platform adopted was as follows:

Resolved, That we view with pride and gratification the great and glorious record of the Republican party,

whose achievements in behalf of national union, equal rights, equal laws, and the equal protection of all classes of citizens, irrespective of color or nativity, have far eclipsed those of all former parties; and that we congratulate the people upon its patriotic and successful career; upon the accomplishment of every policy it proposed, the enforcement of every principle it avowed, the redemption of every pledge it has given, and the overthrow of every enemy that sought to defeat its purposes. It has shown the world the form of government which possesses the greatest strength with the largest liberty and highest happiness of the citizen.

Resolved, That the Republican party deserves the confidence and continued support of the country for giving the poor man a free homestead; for building the Pacific Railway, and opening the wilderness to civilized occupation; for striking the shackles from a race of bondmen, and endowing them with citizenship; for crushing a wicked and gigantic rebellion, and saving the Union; for perfecting the great work of reconstruction; for restoring all the seceding members of the Union as free and equal States; for settling the disputed doctrine of the right of expatriation in accordance with the American theory; for vindicating the Monroe doctrine in the case of the French invasion of our sister republic; for maintaining the honor, preserving the integrity of the Union, and improving the national credit under most trying circumstances; and for elevating the American Union from the condition of a divided, discordant half slave-confederacy, to a homogeneous, united republic, first in the scale of nations in freedom, power, and influence.

Resolved, That the Republican party will in the future, as in the past, successfully insist and carry out all necessary measures and reforms which the progress and continued prosperity of the country require, and that it will deal wisely and honestly with the questions of finance, taxation, and currency, as they arise, and that there is no other party which has given evidence of any ability to deal with these questions, except by measures whose inevitable effect would be to produce universal bankruptcy.

Resolved, That we cordially indorse the Administration of President Grant as honest, economical, and efficient, and congratulate the country on its success in reducing the national debt \$160,000,000, and the interest thereof \$10,000,000, in the brief space of eighteen months; which was accomplished by fidelity in collection of the revenue, and retrenchment in the expenses of the Government; and we especially felicitate the public on the fact that this policy has enabled Congress to reduce internal taxation and tariff duties \$89,000,000 per annum, and will hereafter permit still further large abatements of taxes and duties on the necessities of life, without impairing the national credit, or embarrassing the machinery of administration.

Resolved, That to permit the control of the Government to pass into the hands of a party which refuses to accept in good faith the results of the suppression of the rebellion, would be a public calamity; and that its malicious attacks on the public credit, in the shape of repudiation, and its disregard of the public welfare, in the revival of the dead issues of reconstruction, deserve the emphatic condemnation of all patriotic citizens.

Resolved, That as taxation is a pecuniary burden imposed by public authority on the property of the people for the maintenance of government, the payment of its debts, and the promotion of the general welfare, Congress ought not to tax the substance or earnings of the citizen for any other purpose than those above indicated; and that it is wrongful and oppressive to enact revenue laws for the special advantage of one branch of business at the expense of another; and we hold that the best system of protection to industry is that which imposes the lightest burdens and fewest restrictions on the property and business of the people.

Resolved, That as the natural, inevitable place for the capital of the Republic is in the heart of the Mississippi Valley, toward which the centre of population, wealth, and power is gravitating, and as the removal of the capital from its present inconvenient and exposed locality is only a question of time, we oppose all further expenditures of public money for the enlargement of old government buildings or the erection of new ones, as a useless waste of the treasure of the people, and our Senators and Representatives in Congress are hereby requested to vote against all such appropriations in the future.

Resolved, That we congratulate the people of Illinois on the adoption of a constitution suited to the present growth and exigencies of the State, embodying the best teachings of political wisdom and experience, and containing the germs of the highest and noblest type of human government, and we tender our thanks to the late Constitutional Convention, for the persevering efforts and complete success with which they discharged the important and delicate duties committed to them.

Resolved, That, while adhering to our national policy of avoiding entangling alliances and complications with foreign powers, we heartily sympathize with the brave efforts of the German people to protect their fatherland against invasion and spoliation by the imperial despot who has suppressed freedom of speech and of the press in his own country, and finally signalized his career by plunging two great nations into a causeless and needless war.

The Democratic Convention assembled at Springfield on the 14th of September, and nominated the following ticket: For Congressman at large, William B. Anderson; State Treasurer, Charles Ridgeley; Superintendent of Public Instruction, Charles Frinse; Penitentiary Commissioners, F. T. Sherman and Thomas Redmond. The platform adopted was in the following language:

Resolved, That the happiness of the American people and the protection of their liberties are not to be found in a splendid government supported by powerful monopolies and aristocratic establishments, but, in the language of our great leader, Jackson, "in a plain system, devoid of pomp, protecting all, and granting favors to none; dispensing blessings like the dews of heaven, unseen and unfelt save in the freshness and beauty they contribute to produce." That it is the mission of the Democracy, in accordance with its time-honored principles, to reinstate the administration of the Government in these, its ancient ways, and, by the restoration of the practice of the virtues of frugality, honesty, and devotion to the public weal, to place the country again upon that course, the pursuit of which can alone render it for ages to come united, prosperous, and free.

Resolved, That we are in favor of free trade on principle, and while conceding the legality of a tariff for revenue simply, we denounce a protective tariff as not authorized under the Federal Constitution; as destructive of the best interests of our people, and as enriching the few at the expense of the many. That we are opposed to monopolies and to subsidizing corporations by the use of the people's money and the people's lands. That the bonds issued by the Federal Government should be subjected to Federal taxation, except when otherwise explicitly provided by law. That we are opposed to the present system of national banks, and all legislation of every kind which exalts capital at the expense of the people and the Government, and that so long as a paper currency is in use among our people we are in favor of the people furnishing their own obligations as such currency, and reaping the benefits to be derived therefrom. That the national debt should be paid at the earliest practicable mo-

ment, consistent with such reduction of taxation as the necessities of our people require, and to this end we insist upon the strictest economy in public affairs, the careful husbanding of the public resources, and the rigid accountability of all public servants.

Resolved, That we demand the overthrow of the party in power, because it stands committed to the destruction of the legitimate rights of the States, to the subversion of the executive and judiciary departments for partisan ends and to the erection of a consolidated government upon the ruins of the Federal system; because it is pledged to the policy of protection which it has enforced by oppressive legislation for the last ten years; to the continuance of an onerous and aggravating system of internal revenue taxation; to the postponement of the payment of the national debt; to the wholesale surrender to speculators of the public lands, and to the fostering of schemes of private aggrandizement; because it is extravagant, wasteful, and corrupt, sustaining and sustained by ring legislation; its most distinguished leaders unblushingly open to bribery and using the power of their official positions for private purposes; because, destitute of principle, it is held together solely by the cohesive power of public plunder.

Resolved, That the Democratic party now, as ever, profoundly sympathize with the efforts of the people everywhere to be free. That the great Republic of the United States necessarily occupies a position of perpetual antagonism toward the despotisms of the world, a position which the Democracy have no disposition to disavow, but which on the contrary they openly acknowledge, and will unhesitatingly maintain. That the Republic of France receives our hearty welcome into the family of free nations; that its people, endeared to us by traditional ties, have our sincerest sympathies in their release from thralldom; that we commend the Administration of the Federal Government for the recognition so far accorded to the Republic of France, and demand that the moral aid of its support shall be given, to the fullest extent, in behalf of the rule of the people inaugurated upon the overthrow of an imperial dynasty. That the inhabitants of Germany have our heartiest good wishes in their endeavor to bring about a united country; that we congratulate them on their valiant conduct in the pending war, and trust that the liberty which the defeat of the Emperor has given their sister states will be vindicated in their own persons, and a grand German republic be the glorious result of their efforts. That the island of Cuba has too long languished under the incubus of foreign despotism, and every effort of this country should be bent to the attainment of its liberation, that its people may partake of that freedom for which they long, and share in our fortunes, if they so elect. That we are not unmindful of the people of Ireland, and, fully recognizing the wrongs they have been called upon to endure, we trust that the tocsin of liberty now sounding has struck the hour of their redemption. That, while thus declaring our unalterable determination to require the whole weight of the government to be thrown in behalf of republican institutions, we protest against this country being drawn into taking sides in the quarrels of despots, and we condemn the leaders of the opposition for their desperate attempts, from unworthy motives, to commit our nation to the cause of any potentate claiming to rule a people by divine right.

Resolved, That in view of the administration of our own State affairs, we declare that the present administration has been more reckless in the expenditure of the public money than any that ever yet exercised the power of the State, and in proof of this we need say nothing more than call the attention of the tax-payers to the fact that the appropriations of the last Republican General Assembly have forced the Auditor of State to raise the levy of State taxes from six mills and five-tenths to thirteen mills on

the dollar to meet these corrupt and profligate expenditures. That all this is done by the party in power, while professing economy in the management of the public business. That we are opposed to the present management of the State Penitentiary, which we declare has cost the tax-payers of the State, for the last three years, nearly, if not quite, one thousand dollars per day, and which enormous sum we believe and charge to have been either squandered or stolen by the persons in charge of the same; that this expenditure can and should be avoided, and the prison made self-sustaining.

The financial condition of the State of Illinois is represented to be satisfactory. The public debt on the 30th of November was \$4,890,987.80, with \$3,082,104.22 in the Treasury applicable to its payment. This leaves a balance unprovided for of only \$1,808,883.20. The value of property in the State, as fixed by the tax assessors and equalized among the several counties by the Board of Equalization was as follows:

	Assessed.	Equalized.
Personal property.....	\$112,014,106	\$112,545,227
Railroad property.....	19,242,141	19,242,141
Lands.....	235,830,120	230,830,063
Town and city lots.....	121,886,226	116,966,637
Total.....	\$490,081,703	\$480,664,068

On this amount, as adjusted by the Board of Equalization, taxes are to be collected for the ensuing year as follows:

For revenue purposes.....	25 cents on \$100
For payment of the State debt.....	20 cents on 100
For support of common schools.....	20 cents on 100

This makes the total State taxation six and a half mills on the dollar, which will produce a revenue of \$3,124,316.88.

Public education in Illinois is represented to be in a very flourishing condition. The State Normal University was chartered in 1857, and now there is another in progress known as the Southern Normal University, located at Carbondale. The Industrial University at Quincy was founded in 1867, and was designed "to teach in the most thorough manner such branches of learning as are related to agriculture and the mechanic arts, and military tactics, without excluding other scientific and classical studies." There were during the past year about 150 students at the university, most of whom were devoting their attention to practical studies. The Illinois College, at Jacksonville, has 226 students and 15 instructors. The charitable institutions of the State are under the charge of a Board of Commissioners of Charities, created in 1869. There are institutions for the care of the insane, the blind, the deaf and dumb, and the feeble-minded, all located at Jacksonville. New insane asylums are in course of erection at Aurora, Union County, and at Elgin. The State Reform School at Pontiac was established in 1867, and is doing a useful work. There is also a Soldiers' College at Fulton, and a Home for Soldiers' Orphans.

The State occupied its own Penitentiary for the first time on the 1st of July, 1867. \$1,075,-

000 had been expended in its erection, and its personal property and appliances were valued at \$54,525. On the 1st of December, 1868, there were 1,162 convicts confined within its walls, and their support since the opening of the institution had cost \$463,569.60. On the 1st of December, 1870, the number of inmates was 1,339, an increase of 177 in two years.

The election occurred on the 8th of November. The total vote for Treasurer was 317,189, and Erastus N. Bates, the Republican candidate, had a majority of 28,661 over Charles Ridgeley, Democrat. The total vote for Congressmen at large was 316,496, of which John A. Logan, Republican, received 168,662, William B. Anderson, Democrat, 144,190, and J. W. Nichols, Prohibitionist, 3,444, making

Logan's majority over Anderson 24,672. The other State officers chosen were the Republican nominees. In the thirteen congressional districts, Republicans were elected to Congress from the first, second, third, fourth, sixth, seventh, and twelfth, and Democrats from the fifth, eighth, ninth, tenth, eleventh, and thirteenth districts. The Legislature of 1871 stands thirty-one Republicans and nineteen Democrats in the Senate, and ninety-three Republicans and seventy-eight Democrats in the House.

The population of Illinois, according to the last Federal census, is 2,522,410. The following table shows the number of inhabitants in each county, and furnishes a comparison with the result of the preceding enumerations:

COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.

The population of Chicago, which has risen to the rank of the fifth city in the Union, is 298,983. In 1860 it was 109,260, and in 1850, 29,963. The other important cities are Peoria, 25,787; Quincy, 24,053; and Springfield, 17,365.

INDIA, BRITISH, a dependency of Great Britain in Asia. The following information concerning its area and population is given by the statistical department of the India Office, in the "Statistical Tables relating to the Colonial and other Possessions of the United Kingdom, 1867: London, 1869."

	Square Miles.	Inhabitants.
Coorg, Hyderabad, Mysore.....	46,453	6,377,107

According to the "Finance and Revenue Accounts" presented to Parliament in 1870, the total net revenue for the year ending March 31, 1869, amounted to £40,012,925, and the total expenditure to £44,157,568. The estimates of the net income of India, for the year ending March 31, 1870, were £41,095,259; expenditure (including an extraordinary outlay for public works of £2,618,047), £44,276,801. In regard to the excess of expenditure over income for 1868-'69 the following explanation is given: In India there was an actual local surplus of £5,859,668; but the net expenditure in England was £8,803,841; adding to this the net guaranteed interest on railway capital in India with £1,709,470, there was an excess of expenditure over revenue of £4,144,643. In order to produce the much-desired equilibrium in Indian finance, some large reductions were proposed, including £784,551 in the army budget, and over a million in the ordinary outlay on public works as compared

with last year. The only change in taxation was that the income tax was to be raised from $1\frac{1}{4}$ to $2\frac{1}{4}$ per cent. The addition to the Indian debt, during the year ending March 31, 1870, was £4,250,000, making a total of £75,418,289. The total value of imports from foreign countries (United Kingdom included) into British India, for the year 1869, amounted to £50,943,191, while the total value of exports reached £53,706,880. The principal articles of export and their value were: Coffee, £1,111,027; cotton, raw, £19,707,877; dyes and drugs, £3,068,000; jute and jute-manufactures, £2,070,242; opium, £10,695,654; seeds of all sorts, £1,927,989; silk, £1,269,468; tea, £974,519; treasure, £1,890,844.

The paid-up capital of Indian railroads, to December 31, 1869, was £84,721,806; total interest paid thereon, £29,778,757; amount expended, £82,185,559. Railway communication is now open from Bombay to Madras and Calcutta, and the principal cantonments in India.

During the month of August the entire line of railroad between Calcutta and Lahore, the capital of the Punjab, was thrown open to commerce. The great iron bridge over the Sutlej was completed, and Calcutta was thus brought into direct communication with Mooltan, a distance of 1,554 miles.

On April 27th the first telegram was received in London direct from Calcutta; it reached its destination at eleven o'clock A. M. of the day on which it was written in Asia. Telegraphic service between India and England was greatly benefited by the completion of the Falmouth, Gibraltar, and Malta submarine cable, connecting at the latter island with the cables already established in the Mediterranean, and thence with lines from Suez to Bombay, thus making a direct telegraphic route from that part of India to England. On June 28d the Viceroy of India sent the following dispatch to the President of the United States:

BOMBAY, INDIA, June 23, 1870.

To the President of the United States, Washington: The Viceroy of India for the first time speaks direct by telegraph with the President of the United States. May this long line of uninterrupted communication be the emblem of lasting union between the Eastern and the Western world!

THE VICEROY OF INDIA.

The dispatch was received at Washington on the same day. In honor of the company which had completed the Bombay line, a banquet was given in London, at which a dispatch was read from Cyrus W. Field, stating that within one year a cable would be laid from India to China and Australia, and that before the end of 1872 a cable would be in operation between California, the Sandwich Islands, Japan, and China.

The Calcutta and Singapore Telegraph Company reported the immersion of a cable for the connection of the two cities, a distance of 1,825 miles; another cable was also laid between Bombay and Aden.

The receipts from private telegraphic messages, for 1867-'68, were £93,357; Government messages, £49,621; making a total of £142,978. In June, 1870, communication between London and Bombay by way of the new cable was completed. Dispatches are transmitted in from five to six hours.

During the civil war in the United States, the export of cotton from the Southern States to England was of course very limited; for not only was there a great falling off in production, but the blockade of the Southern ports also materially interfered with its shipment. The British spinners were greatly disturbed by this lack of supply, and prevailed upon the Government of India to urge the increased cultivation of cotton in that country. The desire to thus become gradually independent of the United States by creating another adequate source of supply was shared by the great majority of those interested in the cotton-trade in England. The Government of India readily complied, without taking into consideration the disastrous consequences which an excessive cultivation of cotton at the expense of the production of cereals could not fail to have in a densely-populated country. Mr. Forbes, the government commissary to whom the superintendence of the cotton culture had been intrusted, reports that in the western provinces of India alone there was an increase, in 1869, of nearly one million acres of cotton-lands over previous years. But, as the *Bombay Guardian* very pertinently remarks, one million acres of cotton more means one million acres of grain less, and increases the danger of famine exactly to that extent. It has always been difficult to establish an equilibrium between the production of grain and its consumption, but, whenever that equilibrium has not existed, there has been a famine in India. "The good people in Manchester," says the *Guardian*, "hold largely-attended meetings and pass resolutions to urge the increased production of cotton in these latitudes, without, apparently, deigning to inquire into the unavoidable consequences of such a measure to the people of India. This excessive cultivation of cotton was commenced seven years ago, and we have since had one famine after another in Madras, in Orissa, in the central provinces, in the northwest, and in Rajpootana. And, although we have not had any actual famine in the presidency of Bombay, it will come upon us without fail, unless the Government provides for an adequate culture of grain, or desists from its present policy, which has proved so fearfully destructive of life. We know on good authority that the population of Rajpootana has not only been decimated by the want of grain, but that *every third man there has died of hunger*. In Orissa, one million and a half of the inhabitants have perished from the same cause, while in the other provinces their number cannot fall short of half a million."

Another authority states that more than one million human beings were recently swept off in the northwestern provinces, and that the Government of India furnished rations, in 1869, to 4,470,086 inhabitants, in order to save them from starvation. During the period between the beginning of June and the end of October, 1869, 92,989 persons died of want and its attendant ills in the State of Gwalior. During the same period nearly 400,000 animals perished.

The first vessel reaching Bombay by way of the canal of Suez was the steamer Asia, which arrived in January, 1870. During the last week in May, 81,000 bales of cotton were shipped to Europe by the same route. A line of steamers was also started to run direct to England from Rangoon, via the Suez canal, for the conveyance of cotton. The first vessel of the line, the Carolina, left on August 2d, with a full cargo and several passengers.

According to an official report, the shipments of precious metals from Great Britain to India, in 1869, amounted to £9,053,186 against £10,189,904 in 1868; the average annual shipments of the last ten years comprised £18,445,191, making the enormous aggregate of £184,451,910, or \$650,747,244. The heaviest amount exported in any one year was in 1864, summing up £24,818,189, or \$117,700,085.

During June and July a Mohammedan circular was sent from village to village in the Jullinder Doab. It was called a "Durschut-nama" or "Note of Warning," and, although it was principally of a religious character, it contained a few sentences of a seditious nature, warning the people that there would be a complete change of government before the end of 1870. The paper professed to come from Mecca, but it could not be traced any farther than Delhi or Mynpoorie, and there was every reason to suppose that it had emanated from one of those places. It had silently passed from village to village, like the famous "chuppattie," before the great mutiny. Almost simultaneously with the appearance of this circular, 2,000 of the Thakoors in Rajpootana, with their followers, rebelled against their chief, but, although it was at first supposed to be a serious rising, the insurrection was promptly subdued by the energetic action of the government. The Black Mountain tribes at Agrora, according to a report from Delhi, made frequent raids into the adjoining country, and made it necessary for the government to dispatch a considerable force to preserve peace. At Allahabad fears were entertained of a native rising. On August 29th a panic prevailed, as ominous expressions of native servants spread the belief in an immediate revolt. Fortunately, on August 25th, two companies of the Fourteenth European regiment were dispatched to Allahabad, and on their arrival assisted in allaying the general uneasiness.

A new provincial government was established for the district of Assam in Bengal.

This district, which is traversed by the Brahmapootra, has of late become of considerable importance through the rapidly increasing cultivation of the tea-plant, and the highly-favorable results obtained. The country, which extends from Dardshilling to Aracan, contains extensive coal-mines, and is otherwise of great importance to commerce. The Assamese are addicted to the use of opium, of which they bought, in 1869, £160,000.

Mr. Forsyth, a high government official, was sent on a special mission to Yarkand, for the purpose of inducing the Kashgar government to reduce the transit duties upon merchandise. This transit duty formerly amounted to fifteen per cent., but was some years ago reduced to four per cent., and has never been entirely waived by the Kashgar government. A free-trade route to Cashmere has been established through the exertions of Mr. Cayley, another government envoy, the most important point on which is the city of Lee, in the district of Ladakh. From reports which he furnished to the government, it appears that trade between India and East Toorkistan was steadily increasing. In 1867 the movement of commerce was estimated at £55,494; during the next year, it increased to £108,840, while in 1869 it summed up £100,159. With the removal of the former restrictions a more decided increase was confidently expected. In 1869 the commerce between the Punjab and Yarkand had been more than doubled. The people of Yarkand came to India in unusual numbers, offering for sale nine hundred horses and mules, and a great quantity of gold and silver; some twelve hundred tradespeople and merchants from East Toorkistan emigrated to India out of fear of an advance of the Russians and of disorder in Yarkand. A nephew of the sovereign of East Toorkistan was appointed governor of Yarkand and the other provinces on the frontier, and was in command of a strong force of reliable troops. He had strengthened his advanced positions by considerable reinforcements, and had constructed several forts on the frontier. The Russians, on their part, had erected a formidable stronghold on the river Naryn, which they spanned by a bridge, thus coming within five days' march from Yarkand. The uneasiness became general among the inhabitants, and the wealthier classes removed into British India to await more tranquil times. The Russians claimed the right of settling at Kashgar, as guaranteed to them by a treaty with the Government of China; but, as the Chinese are no longer in possession of East Toorkistan, the governor of Yarkand did not consider himself bound by any such treaty, and would not allow any one to cross the frontier unless he was a Mohammedan trader.

During the month of June the cholera made dreadful ravages in different parts of India, and was particularly virulent at Madras.

INDIANA. The State of Indiana, according to the Federal census of 1870, has a popu-

lation of 1,573,941, an increase of 223,513 since 1860. The following table gives the figures for all the counties, taken from the last and the preceding enumerations:

COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.

The largest city in the State is Indianapolis, the capital, which has 36,565 inhabitants. In 1860 the population numbered 18,611, and in 1850 it was 8,084. The next two cities in point of size are Evansville, 22,830 inhabitants, and Fort Wayne, 17,718.

The principal agricultural products of the State, according to the latest official report, that of 1869, are as follows:

PRODUCTS.	Dollars.	Acre.	Value.
Indian Corn.....	73,000,000	2,146,221	\$51,100,000
Wheat.....	20,000,000	1,420,555	19,105,000
Rye.....	575,000	27,006	427,000
Oats.....	12,412,000	420,778	5,461,720
Barley.....	411,000	17,947	422,320
Buckwheat.....	808,000	24,240	251,400
Potatoes.....	4,700,000	44,511	2,050,000
Tobacco.....	7,000,000	8,375	972,000
Hay.....	1,300,000	502,899	12,624,000
Total.....		5,805,222	\$92,217,240

The labors of the State Geologist, Mr. Edward T. Cox, who was appointed in 1869, already show that Indiana is comparatively rich in mineral resources. He has found that a vein of block-coal, three miles in width, may be worked with profit all the way from the Ohio River to Warren County, a distance of one hundred and fifty miles. There are also valuable iron-mines, in which only a beginning has been made in developing their richness.

After making all allowances for funds available for the reduction of the debt, the Governor states it on the 5th of January, 1871, as follows:

FOREIGN DEBT.	
War-loan bonds.....	\$175,000 00
DOMESTIC DEBT.	
Non-negotiable bonds given to the School Fund.....	\$2,551,212 15

Sinking Fund moneys applied to redemption of the State debt, for which no non-negotiable bond has yet been given to School Fund.....	\$175,000 00
Vincennes University bonds.....	62,200 00
Total domestic debt.....	2,726,212 15
Entire debt, foreign and domestic, on the 5th day of January, 1871.....	2,901,212 15

The receipts and disbursements of the Treasury for the fiscal year, ending October 31, 1870, were as follows:

RECEIPTS.	
Surplus from preceding year.....	\$202,000 04
Delinquent revenue of former years.....	1,140,900 41
Common-school revenues.....	1,002,218 65
Sinking Fund.....	704,510 21
College Fund.....	15,025 02
Public Institutions.....	140,970 00
Miscellaneous.....	58,224 00
Total.....	\$2,223,841 44

DISBURSEMENTS.	
Ordinary Government expenses.....	\$125,400 75
Expenses of Executive Offices.....	9,000 25
Benevolent Institutions.....	277,400 25
Reformatory Institutions.....	228,294 74
Educational Institutions.....	20,221 21
Public indebtedness.....	1,108,778 25
Military expenses.....	4,227 00
College Fund.....	12,200 00
Common-School Fund.....	1,244,000 70
Revenue refunded.....	92,797 00
Miscellaneous.....	22,470 00
Total.....	\$2,522,404 79
Balance in the Treasury, November 1, 1870.....	264,124 05

Public education is improving in Indiana under the present system. Besides the common schools of the State, there is a university at Bloomington, which is in a flourishing condition. The Normal School at Terre Haute, which was founded in 1867, is in successful operation, and doing a good work. The Agricultural College, for the founding of which Government bonds were donated by act of

Congress in July, 1862, has been located in Tippecanoe County, about one and one-half mile from the city of Lafayette, on the Wabash River. It is to be called the "Perdue University," on account of a donation of \$150,000 as its endowment made by a Mr. Perdue. The one hundred acres of land on which it is situated were also a gift to the institution. Institutions for the education of the blind, and the deaf and dumb, and for the care of the insane, are located at Indianapolis, and are represented to be well managed and efficient.

There was no session of the Legislature during the year. The political canvass commenced early, the Democratic State Convention being held at Indianapolis on the 8th of January. A full State ticket was to be nominated, with the exception of Governor and Lieutenant-Governor. Speeches were delivered in the convention by Hon. D. W. Voorhees, Thomas H. Hendricks, and other prominent members of the party, and nominations were made as follows: for Secretary of State, Norman Eddy; Auditor of State, John O. Shoemaker; Treasurer of State, James B. Ryan; Attorney-General, Bayless W. Hanna; Superintendent of Public Instruction, Milton B. Hopkins; Judges of Supreme Court, James L. Worden, Alexander C. Downey, Samuel H. Buskirk, and John Pettit. The following is the platform adopted:

That the Democracy of Indiana, in delegate convention assembled, declare:

That the Federal Union, with all the rights and dignity of the several States, should be preserved; and, to secure that great national blessing, the Constitution must be respected and observed, and every approach to centralized despotism defeated, whether attempted by Congress or the Executive.

That recent events have, more than ever, convinced us of the infamous and revolutionary character of the reconstruction measures of Congress, and we denounce these measures as an invasion of the sovereign and sacred rights of the people, and of all the States.

That the independence of the Supreme Court of the United States is essential to the safety and security of the States and the people; and we declare that the measures of Congress, having in view the destruction of the powers of that Court to adjudicate on the constitutionality of the enactments of Congress, is a dangerous evidence of the usurpations of the legislative over the judicial department of the Government.

That we are in favor of a tariff for revenue only; and we demand that the burdens of taxation shall be fairly and equally adjusted, and that such an adjustment cannot be made without striking from the statute-book the present unjust and odious tariff laws—a system of taxation based upon favoritism, and which has destroyed American shipping and commerce, oppressed the people of the great agricultural regions, which compels the many to pay tribute to the few, and which has built up monopolies that control, not only every American market, but also the legislation of Congress; and we demand that the prime articles of necessity—such as tea, coffee, sugar, and salt—shall be placed upon the free list.

That we are willing to pay our national debt, in strict compliance with our contracts, whether it was made payable in gold or greenbacks, but we are unwilling to do more than that; and we declare that the five-twenty bonds are payable in greenbacks, or their

equivalent; and we condemn the policy of the Administration which is squandering millions of money by buying such bonds at a high rate of premium, when the Government has the clear right to redeem them at par.

That the national-bank system, organized in the interest of the bondholders, ought to be abolished, and greenbacks issued in lieu of such bank-paper, thus saving millions annually to the people, and giving to the whole people (instead of the few) the benefits of issuing a paper currency.

That the business interests of the country demand an increased and maintained volume of the currency; and the burden of the public debt, the high rate of interest and taxation, imperatively forbid the contraction of the currency in the interest of the bondholders.

That the shares of stock in the national banks ought to be subjected to school and municipal taxation on the same conditions as other property; and we demand of our State Legislature that the shares of such banks shall be subjected to equal taxation with other property of the State.

That the bonds of the United States ought to be taxed by Congress, for national purposes, to such an extent as will substantially equalize the taxation of such bonds with other property subject to local taxation.

That we denounce the action of our last Legislature in attempting to force upon the people the proposed fifteenth amendment to the Constitution of the United States, as in palpable violation of our State constitution, and we solemnly protest against Indiana being counted for said amendment; and we hereby declare our unalterable opposition to its ratification.

That any attempt to regulate the moral ideas, appetites, or innocent amusements of the people by legislation, is unwise and despotic.

That we are opposed to any changes in the naturalization laws of the United States, whereby admission to citizenship will be made more difficult or expensive; and we especially denounce the proposed plan of transferring the naturalization of aliens to the courts of the United States, and abridging the powers of State courts in that respect, as a hardship and expense to the poor and friendless candidate for American citizenship; we recognize the proposed change as the offshoot of intolerant "Know-nothingism"—the "twin relic" of radicalism itself.

The Republican State Convention took place at Indianapolis on the 22d of February. There were several colored men among the delegates, one of whom was added to the list of vice-presidents by a special vote. The nominations made were as follows: for Secretary of State, Max F. A. Hoffman; Auditor, John D. Evans; Treasurer, Robert H. Milroy; Attorney-General, Nelson Trussler; Superintendent of Public Instruction, Barnabas O. Hobbs; Judges of the Supreme Court, Charles A. Ray, Robert C. Gregory, John T. Elliot, and Andrew L. Osborne. All of these were renominations of the former incumbents, with the exception of the Treasurer, the Attorney-General, and one of the Judges, Mr. Osborne.

A platform was adopted, embodying the following declarations:

The Union Republican party of Indiana, assembled in convention at Indianapolis on the 22d day of February, 1870, make the following declaration of principles:

We congratulate the country on the restoration of law and order in the late rebellious States, under the reconstruction measures adopted by the General Government, and upon the return of peace and of fraternal

feeling among the people of all the States, under a Constitution securing an equality of political and civil rights of all citizens, without distinction of race or color; that we reverence the Constitution of the United States as the supreme law of the land, and a wise embodiment of the principles of free government, and, following its teachings, we will adopt, from time to time, such amendments as are necessary more completely to establish justice, insure domestic tranquillity, and secure the blessings of liberty to ourselves and our posterity; and that we rejoice at the ratification of the fifteenth amendment, which forever secures an equality of political rights to all men; and we extend to the colored man a helping hand, in the race of life, to improve and elevate his condition.

That the national debt, created in the defence and preservation of the Union, however great the burden, must be cheerfully borne, and honorably and honestly extinguished, in accordance with the letter and spirit of the several laws authorizing the debt, and that all attempts at repudiation of the principal or interest should meet the scorn and denunciation of any honest and patriotic people.

That we demand in every department of the Government, from the highest to the lowest, the strictest economy of all expenditures consistent with the requirements of the public service.

That a reduction of taxation is demanded, both of the tariff and internal taxes, until it reaches the lowest amount consistent with the credit and necessities of the Government; and that we are in favor of a tariff for revenue, believing that a proper adjustment of duties must necessarily afford the incidental protection to which any interest is entitled.

That we are in favor of a currency founded on the national credit, as abundant as the wants of the trade and commerce of the country demand; and that we disapprove of all laws in reference thereto which establish monopoly or inequality therein.

That we are opposed to the donations of the public lands, or the grant of subsidies in money to railroads or other corporations, and that we demand the reservation of the public domain for the use of actual settlers and educational purposes.

That we reaffirm that of all who were faithful in the trials of the late war here none are entitled to more honor than the brave soldiers and seamen who endured the hardships of the campaign and cruise, and imperilled their lives in the service of their country; and the bounties and pensions provided by law for those brave defenders of the nation are obligations never to be forgotten, and should be borne without cost to the recipient. The widows and orphans of the gallant dead are the wards of the nation, sacred, legally bequeathed to the nation for care.

That we approve the general course of our Senators and Republican Representatives in Congress, and express our full and entire confidence that they will act with wisdom and integrity in all that concerns the welfare of the people, and that we tender our thanks to Senator Morton for his exertions in so shaping the legislation of Congress on the reconstruction of the late rebel States as to secure the passage of the fifteenth amendment.

That we indorse the Administration of General Grant as President of the United States, and accept the increased collections of revenue, the reduction of the expenditures, and payment of a large portion of the public debt, as a fulfillment of his promises of economy, and rejoice that the victorious general of the Union armies should, as a civil officer, receive the last of the rebel States in its return to the national family.

Inasmuch as all republican governments depend for their stability and perpetuity on the intelligence and virtue of the people, it is the right and duty of the State and national authorities to establish, foster, and secure the highest moral and intellectual development of the people.

Resolved, That taxation for county and other local purposes has become so great as to be oppressive to the people; that our system of county administration needs reform, and we demand of our Representatives in the Legislature such changes in the statutes of the State as will protect the people from extravagant tax-leaves by local authorities; and, as an aid to this needed reform, we favor a reduction of fees for county officers, to a standard which will furnish a fair and reasonable compensation for the services rendered, and that no officers should be favored with salary, fees, or perquisites, beyond such fair and reasonable compensation.

Resolved, That the canal stocks issued under the legislation of 1846-'47, commonly called the "Butler Bill," were, by the terms of the contract, charged exclusively upon the Wabash and Erie Canal, its reservoirs and lands, and the faith of the State never having been, directly or indirectly, pledged for the payment or redemption thereof, said canal stocks therefore constitute no part of the outstanding debts or liabilities of the State. That the constitution of this State ought to be amended, at the earliest practicable period, so as to prevent the taking effect of any law or acts of the General Assembly proposing to recognize or create any liability of the State for the said canal stocks or any part thereof, until each proposition shall have been submitted to a direct vote of the people of the State, and approved by them; that we heartily indorse the administration of our State affairs by Governor Baker and his associate State officers, and especially congratulate the people that the time is so near when the State debt will be entirely liquidated.

There was no important issue in the canvass except that of general retrenchment and economy in the finances of the State. The subject of the Wabash and Erie Canal, which was broached in the thirteenth resolution of the Republican platform, occasioned considerable discussion, and probably had some effect on the election of members of the Legislature. In 1846 the State had become considerably embarrassed on account of the bonds which had been issued for public improvements, a large portion of which had furnished the means for building this canal. At the session of 1846-'47 a bill passed the Legislature making a settlement with the holders of the canal claims, whereby new bonds were given for one-half the debt, and a lien on the Wabash and Erie Canal, and the stock thereof, for the remainder, the canal in the mean time being placed in the hands of trustees for twenty-four years. As the railroad system of the State has been gradually built up, the canal has become more and more unprofitable, and at the last session of the Legislature an attempt was made by the holders of the stock to induce that body to provide for the resumption of its full obligations by the State. The matter was considerably agitated throughout the year, and will probably make its appearance in the Legislature of 1871. Both parties disclaimed any intention to bring about an assumption of the old canal debt, and such a course would evidently be unpopular.

The election took place on the 11th of October, and resulted in the choice of the Democratic ticket, by an average majority throughout the State of 2,864. The total number of

votes for Secretary of State was 317,550, of which 160,059 were for Norman Eddy, and 157,501 for Max F. A. Hoffman, giving the former a majority of 2,558. In the new Legislature there are in the Senate 26 Democrats and 24 Republicans; in the House of Representatives, 58 Democrats and 47 Republicans. Several of the members elected to the Legislature were Germans. The State has eleven members in the lower branch of Congress. In the Forty-second Congress the representatives from the first, second, third, sixth, and seventh districts will be Democrats, and those from the fourth, fifth, eighth, ninth, tenth, and eleventh, Republicans. The Senators are Oliver P. Morton and Daniel D. Pratt, both Republicans.

The first colored men who were ever permitted to act upon a jury in the State of Indiana served in the criminal court of Indianapolis in April, at the trial of a colored man for grand larceny. Three men out of the twelve were negroes on that occasion.

A meeting of the members of the bar from the different counties of the State was held at Indianapolis on the 30th of November, and a memorial was adopted to be presented to the Legislature, praying for an increase of the number of judges of the Supreme Court from four to five, the latter being the limit allowed by the constitution. The memorial was accompanied by two bills, one increasing the number of judges to five, and the other redistricting the State accordingly. There can be little doubt that the bills will be promptly passed. In this memorial the lawyers made the following statement regarding the judicial business of the State: "The work of the Court, in the nineteen years since the adoption of the present constitution, has resulted in the publication of thirty volumes of reports, including one then in press, averaging some six hundred pages to the volume. In the ninety-two counties of the State there are two District Courts, the Circuit and the Common Pleas. In addition to these, there are Criminal Courts in nine of the counties. From all these courts there is a direct appeal to the Supreme Court. These courts are administered by nineteen Circuit, twenty-four Common Pleas, and eight Criminal Court Judges, and the great increase in the number of appeals is doubtless, to some extent, the natural result of the diversity of so many different minds thus engaged in the administration of a somewhat complicated judicial system. There are over five hundred causes submitted within the last year and under advisement; enough to engage the attention of the present number of judges for more than a year and a half in their consideration, and more than enough to make three volumes of reports."

The divorce laws of the State of Indiana are attracting much attention throughout the country, on account of their laxity, and the readiness with which a person can obtain a legal

dissolution of the marriage tie, sometimes without the knowledge of the other party to the contract. The causes for which divorces may be granted under the existing statutes are as follows, viz.: 1. Adultery; 2. Impotency; 3. Abandonment for one year; 4. Cruel treatment of one party by the other; 5. Habitual drunkenness of either party; 6. The conviction, subsequent to the marriage, in any country, of either party of an infamous crime; 7. Any other cause for which the court shall deem it proper that a divorce should be granted. It is only necessary for any party applying for a divorce to reside in the county where the application is made for one year, no matter where his or her permanent residence may be, or where the other party may be living at the time; and publication in any obscure journal of that county is sufficient notice of the pending proceedings to the party defendant. If such party does not therefore appear at the trial, a decree is granted by default. In his message to the Legislature of 1871, the Governor recommended amendments in the divorce laws, embracing the following provisions:

1. Requiring the defendant, when a resident of the State, to be sued in the county of his or her residence.
2. Requiring the plaintiff not only to have been a resident of the State for one year prior to the filing of his petition, but that he should continue to reside in the State during the pendency of the suit and until the case is tried.
3. Vesting in the Circuit Court exclusive jurisdiction of applications for divorce.
4. Requiring the petition in every divorce case to show where the causes of divorce relied upon happened or accrued, and where the applicant resided at the time, and if they happened or accrued elsewhere than in this State and at a time when the plaintiff was not a resident of this State, then that no divorce shall be granted unless it be alleged in the petition and proved on the trial that the matters so relied upon would be a good cause of divorce by the laws of the State, place, or jurisdiction, within which the same happened or accrued.
5. Requiring the allegations as to the place where the cause or causes of divorce relied upon accrued, and the place of residence of the plaintiff at the time of their accruing, to be verified by affidavit appended to the petition, and also to be proved on the trial.

"With such amendments as these," he says, "we might well hope that Indiana divorces would soon cease to be advertised in any of the Atlantic cities as marketable commodities, and that refugees and fugitives from the justice of other States would no longer come to Indiana in quest of divorces, to be used on their return to their homes as licenses to violate the laws of our sister States."

IOWA. The State of Iowa formed a part of the territory acquired from France, by what is known as the Louisiana purchase, in 1803. Prior to 1812 it belonged to the Territory of Louisiana, and from that date to 1834 formed a part of the Missouri Territory. In 1834 it became a part of the Territory of Michigan, and in 1836 was included in the newly-organized Territory of Wisconsin. The Territory of Iowa was formed in 1838, and the State ad-

mitted into the Union December 28, 1846. Its permanent settlement began about 1830. The increase in population since its organization as a separate Territory is exhibited in the following table:

In 1838	22,839	In 1854	826,013
" 1840	43,114	" 1856	519,065
" 1844	75,162	" 1859	639,775
" 1846	97,688	" 1860	674,913
" 1847	116,651	" 1863	701,733
" 1849	152,988	" 1865	754,669
" 1850	191,982	" 1867	802,040
" 1861	204,774	" 1869	1,040,819
" 1862	230,718	" 1870	1,191,730

The following is shown by the Federal census of 1870 to be the population of the principal cities of the State:

Davenport	20,141
Dubuque	18,423
Burlington	15,178
Keokuk	13,769
Des Moines	12,860
Council Bluffs	10,021
Iowa City	7,099
Cedar Rapids	6,085

The following table gives the Federal census of the State by counties:

The development of the resources of the State has been no less rapid than the growth in population. Already it is the fourth in the Union in the production of corn, the fifth in wheat, and the sixth in live-stock. The largest share of attention thus far has been given to agriculture, and in no part of the country have greater intelligence and enterprise been shown in this important department of industry. Societies have been very generally formed to gather and distribute information and give encouragement in its various branches, and the State and county fairs of Iowa show the most satisfactory results of the industrial efforts of the people.

Much encouragement has been given at all times to immigration into the State, both from the older portions of the country and from Europe. The Legislature at its last session passed an act creating a Board of Immigration, to consist of seven members, appointed by the Governor, one from each congressional district, the Governor himself acting as president *ex officio*. It is the duty of this Board to do every thing which may well enhance immigration into the State. Its secretary, in the language of the act, "shall act as Commissioner of Im-

migration. He shall be a person who is familiar with the agricultural, mineral, and other resources of this State, and it shall be his duty to prepare, publish, and distribute pamphlets and documents, setting forth facts and statistics, illustrating the advantages and material resources of the State, and containing correct information for immigrants in relation to its climate, soil, production, schools, railroads, and all other matters of interest to said immigrants. It shall further be the duty of said Commissioner to maintain correspondence with associations and parties generally interested in immigration, and may publish or cause to be published, in Eastern journals, essays and articles, treating on, and describing truly, the agricultural, mineral, commercial, social, and other characteristics of the State."

The Board is authorized to send agents to the Eastern States, and to Europe, "for the purpose of aiding and advising immigration, and is required to cooperate with the Board of Immigration at Washington City, and to make regular reports of their labor and proceedings to the General Assembly of the State, accompanied by such references, suggestions, and statistics, as may furnish good and reliable

data and a proper basis for further legislation on the subject of immigration."

The Board of Immigration was appointed soon after the passage of the act, and immediately organized for the work. At its first meeting, which was held on the 6th of April, it was resolved that the Governor be requested to enter into correspondence and negotiations with the different railroad companies and other parties owning or controlling large tracts of land in the State of Iowa, requesting their coöperation and assistance in inducing immigration to said State.

The negotiation resulted in an agreement on the part of the principal railroad companies to defray the expenses of agents sent abroad to encourage immigration, and to pay for the distribution of pamphlets and of other printed matter furnished to their agents by the Board. Pamphlets and circulars were subsequently prepared, setting forth the advantages of Iowa as a place in which to make a permanent settlement, and the proper means were adopted for scattering these among the people of the Eastern States and the Eastern Hemisphere. An Immigrant Aid Society was also formed in the western part of the State to look after the interests of that particular section.

The Legislature met on the second Monday in January, and continued its sessions until about the middle of April. One hundred and eighty acts were passed and twenty-seven joint resolutions adopted. Among the more important acts was one making careful and thorough provision for the management of the two Insane Asylums of the State, which are located, the one at Mount Pleasant, and the other at Independence; one providing for the government of the State University at Iowa City; one authorizing the several counties to establish and maintain high-schools; and one creating a commission to revise the statutes of the State. Provision was also made for the establishment of an Industrial Home for the Blind, and for the erection of a new capitol building. The following appropriations were made for the benefit of the State institutions, making in the aggregate \$586,500:

Hospital for Insane at Independence	\$163,000
Capitol	150,000
Agricultural College	68,500
Blind Asylum	44,000
Deaf and Dumb Asylum, Council Bluffs	35,000
Hospital for Insane at Mount Pleasant	34,000
Orphans' Homes	25,000
State University	25,000
Penitentiary	25,000
Reform School	15,000

Resolutions were adopted on several matters of interest. One of these ratified the fifteenth amendment to the national Constitution, another favored a system of postal telegraphs, and a third recommended the removal of the national capital to the Mississippi Valley. The question of granting the right of suffrage to women was brought before the Legislature by a large number of petitions on the subject, and an amendment to the constitution, mak-

ing the concession asked for, was proposed, but after some discussion it was laid on the table. The question of the propriety of prohibiting the sale of intoxicating liquors was also discussed. A prohibitory law already existed in the State, and the question of its modification was considered. The result was the passage of an act allowing the several counties to determine whether the sale of ale, wine, and beer, should be prohibited or not within their own limits, by submitting the question to a vote of the people. An act was passed, providing for a submission to the people, at the election of 1870, of the question of holding a convention for the revision of the constitution, the result to be reported to the General Assembly at its next session.

Railroad legislation also demanded a large share of attention. A bill was proposed "to prescribe rules and regulations for railroads, and to establish uniform and reasonable rates of tariff for the transportation of certain freights thereon." This led to an extended debate, involving the expediency of interference of the government in the management or control of railroads, the dangerous power and influence which these corporations are attaining, and other kindred questions. The bill was finally defeated in the Senate, where it originated, by a vote of 20 in its favor to 21 against it. An act for the taxation of railroad property also occasioned much debate, and was finally passed. The following are its principal provisions:

That each railroad company, owning or operating a railroad in this State, shall annually, on or before the fifteenth day of February of each year, make out and file with the State Treasurer a sworn statement, setting forth: first, the amount of gross receipts of their railroad for the year ending the thirty-first day of December preceding; second, the number of miles of main track of their railroad in each county on the thirty-first day of December preceding; which statement shall be sworn to by the president and secretary of such company, and by the general superintendent of their railroad, or any two of them.

SECTION 2. The State Treasurer shall levy on said gross receipts a tax as follows, viz.: On the first \$3,000 or part thereof per mile, one per centum, and on receipts of over \$3,000, and under \$6,000 per mile, two per centum; and on the excess of receipts over \$6,000 per mile, three per centum, which taxes the said railroad companies shall pay on or before the first day of March, after which time said taxes if not paid shall become delinquent, and the same penalties and interest shall attach as on other taxes.

Sec. 3. After the said taxes become delinquent, the State Treasurer shall proceed to collect the same in the same manner and with the same rights and powers as a sheriff under execution, except that no process shall be necessary, to authorize the Treasurer to seize and sell property for the collection of said taxes.

Sec. 4. One fifth of the taxes levied and collected as aforesaid shall remain in the State Treasury to be used in the same manner as the several revenues of the State, and the other four-fifths of said taxes shall be apportioned by the State Treasurer to the several counties through which the said roads respectively run, in proportion to the number of miles of main track of road in each county, and shall be paid over by him to the treasurer of the county entitled thereto.

Sec. 5. If any railroad company shall fail to fur-

nish the sworn statement, required by this act on or before the time herein provided, the State Treasurer shall on or before the first day of March ascertain as nearly as possible the gross earnings of such delinquent company, and shall assess thereon the tax as herein provided, together with a penalty thereon of thirty per cent. for such neglect, which tax and penalty shall be collected as provided by the third section of this act. When the State Treasurer has to incur any expense either in the assessment or collection of said taxes after they become delinquent, he shall add one per centum on the amount of taxes due, which shall be his compensation for said assessment and collection. The taxes herein provided for shall be in lieu of all taxes for any and all purposes on the road-bed, right of way, track, rolling-stock, and necessary buildings for operating their road, except as hereinafter provided; but other property belonging to such company, whether personal or real, shall be taxed as property of individuals in the respective counties in which the same may be situated.

Sec. 6. No provision of this act shall be held to apply to any railroad bridge across the Mississippi or Missouri River, but such bridges shall be assessed and taxed on the same basis as the property of individuals.

An act was also passed "to enable townships, incorporated towns, and cities, to aid in the construction of railroads." In several instances the right to levy and collect taxes for this purpose was questioned, and an injunction asked for to prevent it. The district judge, however, refused to issue the injunction, and his action was sustained by the Supreme Court, which thereby affirmed the constitutionality of the law. Opposition to the payment of interest on bonds, issued by counties to aid in the construction of railroads, at one time threatened to result in an open defiance of the authority of the Federal courts, which had decided in favor of the validity of the law providing for its payment, but the energetic action of General Dix prevented any violent outbreak.

The election of the year was for members of Congress, judges of the Supreme Court, and the State executive officers, with the exception of Governor, who holds over till January, 1872. The Democratic Convention took place at Des Moines on the 10th of August, and nominated the following ticket: For Secretary of State, Chas. Dorr, of Polk County; for Auditor, W. N. Garner, of Louisa; for Treasurer, W. O. James, of Pottawattamie; for Attorney-General, H. M. Martin, of Scott. The platform, which was unanimously adopted, contained the following resolutions:

Resolved, That the present internal revenue system of the United States is unendurable in its oppressive exactions; that to impose burdens on one class of citizens, or upon one branch of industry, to build up another, and to support an army of office-holders to enforce their collection, are abuses of the taxing power. And that we are in favor of the collection of taxes through State governments.

Resolved, That we are opposed to the present unjust, unequal, and oppressive tariff system, and in favor of one which, while adapted to the purposes of raising the necessary revenue to provide for the liquidation of our national debt, and meet the expenditures of an economical administration, will not oppress labor, and build up monopolies.

Resolved, That we are in favor of such disposition of our public lands as will secure their occupation by

actual settlers, and prevent their absorption by mammoth monopolies.

Resolved, That we assert the right of the people by legislative enactment to regulate and control all moneyed corporations upon which extraordinary rights are conferred by charter.

Resolved, That we are opposed to any attempt to abridge the most full and free enjoyment of civil and religious liberty.

Resolved, That we cordially invite the electors of Iowa to coöperate with us in the support of the principles herein enunciated.

The Republican Convention assembled on the 17th of August, at Des Moines. The ticket put in nomination was as follows: Judges of the Supreme Court, Chester O. Cole, William E. Miller, James G. Day; Secretary of State, Edward Wright; Auditor, John Russell; Treasurer, Samuel E. Rankin; Register of State Land-Office, Aaron Brown; Attorney-General, Henry O'Connor.

The following platform was unanimously adopted:

Resolved, That we refer with pride to the history of the Republican party, and congratulate the country upon its successful career. It has given to the poor man a homestead; it has abolished slavery, and established manhood suffrage; crushed treason; given to us the Pacific Railroad; settled the doctrine of the right of expatriation, maintained the honor, integrity, and credit of our nation. It has vindicated the Monroe doctrine by preventing foreign powers from interfering with the governments on this continent; and to perpetuate it in power is the only safe guarantee for peace and prosperity in the future.

Resolved, That we heartily indorse the honest, faithful, and economical Administration of President Grant, by which our national debt has been so largely reduced, and our national credit and honor so firmly maintained.

Resolved, That a tariff for revenue is indispensable, and should be so adjusted as not to become prejudicial to the industrial interests of any class or section of the country, while securing to our home producers fair competition with foreign capital and labor.

Resolved, That we are opposed to any system or plan of granting public lands to railroad or other corporations without ample provision being made for securing their speedy sale at moderate prices, and occupancy upon fair and liberal terms by any and all who desire to purchase and settle upon them.

Resolved, That we are in favor of an economical and judicious management of the affairs of the State, and with this view we indorse the present administration of the State government, and recommend it to the favorable consideration of the people, and to future administrations.

Resolved, That we are in favor of such legislation as will protect the people from the oppression of monopolies controlled by and in the interest of corporations.

Resolved, That while, as Americans, we feel in duty bound to preserve a just and equitable neutrality in the contest now waging in Europe, yet we cannot forget that in our late war the sympathies and material aid of the German States were freely given us, and we do not hesitate to declare our unqualified sympathy with the earnest efforts of the Germans to maintain and defend their national unity; and we condemn the course which the Democratic press of the country has been and is now pursuing in support of a despotic, imperial dynasty, and a causeless war against a people desiring peace and aspiring to perfect liberty.

Resolved, That the Republican party of Iowa welcome to our shores all human beings of every nation,

irrespective of race or color, voluntarily seeking a home in our midst; and that all the rights and privileges which we, as citizens, demand for ourselves, we will freely accord to them.

Resolved, That we are in favor of amending our naturalization laws by striking out the word "white" from the same wherever it occurs.

The election took place on the 11th of October, and resulted in the choice of the Republican candidates by large majorities. The total vote for Secretary of State was 164,265, of which Wright received 108,877, and Dorr 60,888, making the majority of the former 42,489. The proposition for a convention to revise the State constitution was voted down, 82,039 to 24,846. The following members of Congress were elected in the six districts, all Republicans: first district, George W. McCrary, reelected; second, Aylett R. Cotton; third, William P. Wolf, to fill vacancy; fourth, William G. Donnan; fifth, Madison M. Walden; sixth, Francis W. Palmer, reelected; seventh, Jackson Orr.

The State institutions of Iowa are well organized and in a flourishing condition, but no statistics have been reported for the year 1870.

ITALY, a kingdom in Southern Europe. King, Victor Emmanuel, born March 14, 1820; succeeded his father, as King of Sardinia, on March 23, 1849; assumed the title of King of Italy on March 17, 1861. Heir-apparent to the throne, Prince Humbert, born March 14, 1844; married April 23, 1868, to Princess Marguerita of Savoy, daughter of the late Duke of Genoa, brother of King Victor Emmanuel. The ministry (December, 1869)

was composed as follows: E. Visconti-Venosta, President and Minister of Foreign Affairs; J. Lanza, Minister of the Interior; M. Raeli, Minister of Justice and of Public Worship; G. Sella, Minister of Finances; Lieutenant-General J. Govone, Minister of War; Rear-Admiral G. Acton, Minister of Marine; O. Correnti, Minister of Public Instruction; J. Gadda, Minister of Public Works; A. Castagnola, Minister of Commerce and Agriculture. The Government of the United States is represented by G. P. Marsh, envoy extraordinary and minister plenipotentiary at Florence (June 23, 1861). Count L. Corti was accredited Italian minister at Washington in May, 1870. The area of the kingdom is 109,748 square miles. The population, according to the census of January 1, 1870, 25,766,217, is as follows: * Province of Piedmont, 2,933,247; Liguria, 835,727; Lombardy, 3,296,610; Venetia, 2,718,633; Emilia, 2,121,653; Umbria, 545,017; Marca, 934,004; Tuscany, 2,118,401; Abruzzo Mountains, etc., 1,280,440; Campagna, 2,753,555; Apulia, 1,385,911; Basilicata, 514,765; Calabria, 1,198,279; Sicily, 2,512,124; Sardinia, 617,851. The census of 1861, which did not include Venetia (annexed 1866), contains the following report of the population as to nationality:

The entire population of the kingdom of Italy was at that time..... 31,777,334
Among these there were foreigners..... 68,639
Foreigners permanently residing in the kingdom..... 71,305

The division of the population, according to the languages spoken (census of 1861) was as follows:

PROVINCES.	Total Population.	INHABITANTS SPEAKING				Other Languages.
		Italian.	French.	German.	English.	
Piedmont.....	2,764,263	2,626,351	122,296	4,220	217	179
Liguria.....	771,473	769,337	960	235	533	498
Lombardy.....	3,104,886	3,102,428	1,191	877	165	177
Emilia, Marca, and Umbria.....	3,542,639	3,541,544	597	249	127	149
Tuscany.....	1,836,334	1,832,634	1,130	419	1,576	1,186
Neapolitan Provinces.....	6,787,369	6,730,698	6,664	1,894	2,238	55,525
Sicily.....	2,392,414	2,268,649	363	246	604	22,547
Sardinia.....	588,064	580,748	• 189	18	36	7,078
Total.....	31,777,334	31,541,379	134,435	8,143	5,546	87,331
Venetia, about.....	2,496,443	2,448,000	15,000	33,000.
Kingdom of Italy.....	34,273,776	33,990,000	136,000	23,000	6,000	120,000

Among those languages not specified in the above table, about 56,000 were Albanians and some 21,000 Greeks. The 33,000 inhabitants of Venetia, who speak neither Italian nor German, are of Slavonian extraction. The population was divided, according to sexes, as follows:

	Total Popu- lation.	Males.	Females.	No. of females in every 1,000 males.
Jan. 1, 1864	24,690,974	12,350,533	12,330,441	996
1865	24,382,632	12,453,745	11,928,886	968
1866	26,097,133	12,564,531	12,532,601	997
1867	26,344,193	12,691,448	12,652,744	997
1868	26,404,722	12,736,988	12,678,035	996

In the budget for the year 1870 the total revenue was estimated at \$180,596,160; ex-

penditures at \$212,219,084, showing a deficit of \$31,617,974. The interest on the public debt, payable in 1870, amounted to \$88,789,814. The army, in 1869, according to the budget of the Ministry of War, consisted of 183,441 on a peace footing, and of 578,721 on a war footing. On January 1, 1870, there were:

	Officers.	Men.
Under arms.....	11,332	147,873
Officers and men on furlough, 1st category	3,634	196,193
Men on furlough, 2d "	188,000
Total.....	14,966	531,576
Total officers and men.....		14,360
		546,442

* Since the occupation of the Papal States and the city of Rome, in September, 1870, they must be regarded as annexed to the kingdom of Italy. The area of the Papal States is 4,532 square miles; population, according to the census of January 1, 1863, 722,121.

The navy, on January 1, 1870, consisted of: 22 iron-clad steamers, carrying 201 guns; 29 screw-steamers, with 370 guns; and 32 side-wheel steamers, with 113 guns. Of sailing-vessels there were: 1 frigate of the second class, carrying 26 guns; 4 corvettes of the first, second, and third classes, with 52 guns; 2 brigantines, with 20 guns, and 1 transport with 6 guns. The marine officers were: 1 admiral; 5 vice-admirals; 12 rear-admirals; 36 captains of vessels-of-the-line; 28 captains of frigates of the first class, and 88 of the second class; 80 lieutenants of the first class, 145 of the second class, and 140 sub-lieutenants. Of sailors and machinists there were 11,193; artisans, 660. The marines consisted of two regiments of infantry, having 284 officers and 5,688 men.

The special commerce of the kingdom in 1868 (official) was:

	Imports.	Exports.
France.....	\$41,116,000	\$35,753,000
England.....	44,783,000	12,540,000
Austria.....	20,853,000	17,314,000
Switzerland.....	9,642,000	11,356,000
Turkey.....	4,902,000	1,919,000
Greece.....	950,000	646,000
Papal States.....	1,368,000	2,412,000
Netherlands.....	5,624,000	969,000
Russia.....	2,489,000	1,615,000
Other European Countries.....	4,560,000	4,294,000
Total Europe.....	\$141,987,000	\$69,224,000
United States.....	5,890,000	5,263,000
South America.....	1,805,000	3,705,000
W. Indies and Central America.....	1,811,000	247,000
Total America.....	\$9,006,000	\$9,215,000
Egypt.....	1,216,000	418,000
Other Countries.....	3,287,000	1,786,000
Grand total.....	\$155,496,000	\$100,643,000

The transit commerce, during the year 1868, was valued at \$15,782,000. The merchant marine on December 31, 1868, including Venetia, consisted of 17,946 vessels, of an aggregate tonnage of 882,829; among which were 101 steamers, having an aggregate tonnage of 23,442.

The receipts of the various railroads throughout the kingdom amounted, in 1868, to \$15,591,845; those of the telegraph-lines to \$865,077.*

The principal political and historical event, in 1870, was the annexation of the Papal States and the consequent abolition of the temporal power of the Pope. Owing to the outbreak of war between Germany and France, the latter power concluded to withdraw her army of occupation from Rome, and the Duke de Gramont sent a dispatch to that effect to the French minister, on July 26th, with instructions to read its contents to Cardinal Antonelli. The necessary arrangements having been terminated between France and Italy, the evacuation of Rome was immediately begun, and completed on August 11th. On August 4th

* For particular information concerning the railroads and telegraph-lines of Italy, see article EUNORZ.

the Italian Government issued a proclamation, renewing the stipulations, which are inserted below, of the September convention, by which it had bound itself to abstain from all attacks upon the Papal States, and to defend them against any invasion. This declaration of the Government caused an excitement among the republicans of Italy. A vast crowd assembled at Florence in the Piazza del Palazzo Vecchio, shouting for the republic, and trying to force an entrance into the tower of the palace to hoist the republican flag. The cry for the annexation of Rome becoming boisterous, negotiations were attempted with the Papal Government on the subject of the transfer of the Italian capital to Rome. It was assumed that nothing else could avert a revolution, which might imperil both the Pope and the King. As the Pope rejected all overtures, the King of Italy, with the assent of the provisional government of France, ordered an army of observation of 60,000 men, under command of General Cadorna, toward the frontier of the Papal States. A last effort to obtain a peaceful surrender of the city was made by Count Ponza di San Martino, who was authorized by King Victor Emmanuel to offer the following propositions to the Pope: The sovereignty of the Pope and his unrestricted jurisdiction within the limits of the city of Rome to be upheld and guaranteed by the Italian Government, and his civil list to be paid out of the state treasury. All nations and their representatives to have free access to the Pope; all church establishments in Rome to be neutralized; the ambassadors of the foreign powers near the Papal See to enjoy full immunity; the cardinals to retain their revenue and immunity; the salary of all military and civil functionaries to be paid as before; and the bishops and clergy throughout the kingdom of Italy to have the full and absolutely free exercise of their ecclesiastical functions.

These propositions were accompanied by the following autograph letter of King Victor Emmanuel, dated Florence, September 8, 1870:

MOST HOLY FATHER: With the affection of a son, with the faith of a Catholic, with the loyalty of a king, with the sentiment of an Italian, I address myself again, as I have done formerly, to the heart of your Holiness. A storm full of perils threatens Europe. Favored by the war which desolates the centre of the continent, the party of the cosmopolitan revolution increases in courage and audacity, and is preparing to strike, especially in Italy and in the provinces by your Holiness, the last blows at the monarchy and the papacy. I know, most Holy Father, that the greatness of your soul would not fall below the greatness of events, but for me, a Catholic king and an Italian king, and as such guardian and surety by the dispensation of Divine Providence and by the will of the nation of the destinies of all Italians, I feel the duty of taking, in the face of Europe and of Catholicity, the responsibility of maintaining order on the peninsula, and the security of the Holy See. Now, most Holy Father, the state of mind of the populations governed by your Holiness, and the presence among them of foreign troops coming from different places with different intentions, are a source of agitation and of peril evident to all. Chance or the ef-

ferveance of passions may lead to violence and to an effusion of blood, which it is my duty and yours, most Holy Father, to avoid and prevent. I see the indefeasible necessity for the security of Italy and the Holy See that my troops already guarding the frontiers should advance and occupy the positions which shall be indispensable to the security of your Holiness and to the maintenance of order. Your Holiness will not see a hostile act in this measure of precaution. My Government and my forces will restrict themselves absolutely to an action conservative and tutelary to the rights, easily reconcilable, of the Roman populations, with the inviolability of the Sovereign Pontiff and of his spiritual authority, and with the independence of the Holy See. If your Holiness, as I do not doubt, and as your sacred character and the goodness of your soul give me the right to hope, is inspired with a wish equal to mine of avoiding all conflict, and escaping the danger of violence, you will be able to take, with the Count Ponza di San Martino, who presents you this letter, and who is furnished with the necessary instructions by my Government, those measures which shall best conduce to the desired end. Will your Holiness permit me to hope still that the present moment, as solemn for Italy as for the Church and for the papacy, will give occasion to the exercise of that spirit of benevolence which has never been extinguished in your heart toward this land, which is also your own country, and of those sentiments of conciliation which I have always studied with an indefatigable perseverance to translate into acts, in order that, while satisfying the national aspirations, the chief of Catholicity, surrounded by the devotion of the Italian populations, might preserve on the banks of the Tiber a glorious seat independent of all human sovereignty?

Your Holiness in delivering Rome from the foreign troops, in freeing it from the continual peril of being the battle-field of subversive parties, will have accomplished a marvellous work, given peace to the Church, and shown to Europe, shocked by the horrors of war, how great battles can be won and immortal victories achieved by an act of justice and by a single word of affection.

I beg your Holiness to bestow upon me your Apostolic benediction, and I renew to your Holiness the expression of my profound respect. Your Holiness's most humble, most obedient, and most devoted son,
VICTOR EMMANUEL.

The reply of the Pope was delivered to Count Ponza di San Martino, who returned to Florence on the 13th. It was as follows:

To King Victor Emmanuel II.:

YOUR MAJESTY: Count Ponza di San Martino has consigned to me the letter your Majesty was pleased to address me, but it is unworthy an affectionate son who glories in professing the Catholic faith. I shall not now enter into the details of your letter, to avoid a renewal of that deep sorrow your first letter caused me. I give thanks to God, who has permitted your Majesty to fill the last days of my life with bitterness. For the rest, I cannot grant certain requests, or conform with certain principles contained in your letter. Again I call upon God, and into His hands commit my cause, which is His cause. I pray God to grant your Majesty many graces, to free you from dangers, and to dispense to you His mercy, which you so much need.

Given at the Vatican, September 11, 1870.

PIUS PP. IX.

The King immediately sent orders to General Cadorna to enter the Papal territory, and to occupy the city of Rome. He also ordered a *plebiscitum* to be taken as early as practicable on the question of "the unity of Italy."

General Cadorna divided his army into four columns, with which he immediately crossed

the frontier at four different points. Some skirmishes took place between the Italian troops and the Papal Zouaves, but the latter were forced to retire, and Cadorna advanced to within four miles of the city of Rome, while General Bixio took possession of Civita Vecchia without meeting with any serious resistance. The general then manœuvred his troops in such manner as to invest the city, preparatory to an attack if a peaceful surrender was not made. Meanwhile the Pope, seeing that the assault was near at hand, sent the following instructions to General Kanzler, the commander-in-chief of the Papal forces:

GENERAL: Now that a grand sacrifice, as well as the most enormous injustice, is about to be consummated—now that the troops of a Catholic King, without provocation, without even the semblance of a motive, are besieging the capital of the Catholic world, I feel the immediate necessity of thanking you, general, and all our troops, for the generous conduct which you have shown hitherto, for the affection of which you have given proof to the Holy See, and for your readiness to devote yourself solely to the defence of this metropolis. Let these lines remain as a solemn document to testify the discipline, loyalty, and valor of the troops which have been in the service of the Holy See. As for the duration of the defence, it is my duty to give orders that it may be prolonged only sufficiently to show protest, and that violence was used, and no more; in other words, negotiations will be entered into for the surrender of the city as soon as the first breach is made in the walls. At a time when the whole of Europe is deploring the great loss of life occasioned by a war at this moment raging between two great nations, it must not be said that the Vicar of Christ, even though unjustly assailed, gave his assent to prolonged bloodshed. Our cause is that of God, and in Him we place our whole confidence. I bless you from my heart—you, general, and all our troops. From the Vatican, September 12, 1870. PLO IX., Pope.

On the 20th orders were given for the immediate attack upon the city. At half-past ten o'clock in the morning, after a bombardment of some hours, a breach was opened on the right side of Porta Pia by the Italian artillery, and another at the Porta del Popolo. The walls were immediately passed, and the Papal troops were obliged to retreat toward the Vatican, while the Pope took refuge in the Castle of St. Angelo.

The resistance of the Papal troops was of only short duration, the Italian bersaglieri receiving the surrender of the Zouaves at the Piazza de Ceri, in the afternoon of the same day. The stipulations of the capitulation for the surrender of the city were arranged between General Cadorna, on the part of the Italian Government, and General Kanzler, as commander of the garrison, as follows:

VILLA ALBANI, September 20, 1870.

1. The city of Rome, except that part which is limited to the southern part of the walls of the Santo Spirito and comprehends Monte Vaticano and the Castle of St. Angelo, forming the so-called Leonine City, its complete armament, flags, arms, ammunition, and stores. All the material belonging to the government shall be consigned to the troops of his Majesty the King of Italy.

2. All the garrison of the city shall depart, receiving the honors of war, with flags, arms, and baggage.

After the honors shall have been rendered to them, they will lay down flags and arms. The officers shall have a right to carry with them their swords, horses, and any thing belonging to them. The foreign troops shall leave first; the others will follow, in the order of battle, with the left in front. The garrison will leave to-morrow morning, at seven.

3. The foreign troops shall be disbanded and immediately sent back to their respective countries. They will leave to-morrow by railway. The Government has the right of taking into consideration the rights of pension which they might have stipulated with the Papal Government.

4. The Roman troops will be formed at a depot without arms. The Government will take into consideration their claims as to their future situation.

5. The troops will be forwarded to-morrow to Civita Vecchia.

6. A mixed commission will be appointed, formed of an officer of artillery, one of the engineers, and a functionary of the administration. The commission will receive the consignment referred to in the fixed article for the city of Rome.

F. RAVOLTA, Chief of Staff, Papal Army.

F. D. PRINOLANO, Chief of Staff, Italian Army.

F. CADORENA, General commanding Italian Army.

Seen, approved, and ratified by the general commanding Rome. KANZLER.

On the same day the Cardinal Secretary of State (Antonelli) delivered, by order of the Pope, the following "protest" to each member of the diplomatic body accredited to the Holy See:

FROM THE VATICAN, September 20, 1870.

Your Excellency is well acquainted with the fact of the violent seizure of the greater part of the States of the Church made in June, 1859, and in the September of the following year, by the Government now installed at Florence. Equally matter of notoriety are the solemn reclamations and protests of the Holy See against that sacrilegious spoliation; reclamations and protests made either by allocutions pronounced in Consistory and published in due course, or else by notes addressed in the name of the Sovereign Pontiff by the undersigned Cardinal Secretary of State to the diplomatic body accredited to the Holy See.

The invading Government would assuredly not have failed to complete its sacrilegious spoliation if the French Government, well informed as to its ambitious projects, had not arrested them by taking under its protection the city of Rome, and the territory still remaining, and by keeping a garrison there.

But, as a consequence of certain compacts entered into between the French Government and that of Florence, compacts by which it was supposed that the conservation and tranquillity of the dominions yet left to the Holy See would be secured, the French troops were withdrawn. These Conventions, however, were not respected, and in September, 1867, some irregular bodies of men, urged forward by secret impulses, threw themselves upon the Pontifical territory with the perverse design of surprising and occupying Rome. Then it was that the French troops returned, and lending a strong-handed succor to our faithful soldiers who had already fought successfully against the invasion, they achieved on the plains of Mentana the repression of the audacious invaders, and caused the complete failure of their iniquitous designs.

Subsequently, however, the French Government, having withdrawn its troops on the occasion of the declaration of war against Prussia, did not neglect to remind the Government of Florence of the engagements which it had contracted by the convention specified above, and to obtain from that Government the most formal assurances on the subject. But the fortune of war having been unfavorable to France, the Government of Florence, taking advantage of those reverses to the prejudice of the agreement it had entered into, took the disloyal resolution to send an

overpowering army to complete the spoliation of the dominions of the Holy See; although perfect tranquillity reigned throughout them, in spite of very active instigations made from without, and in spite of the spontaneous and continual demonstrations of fidelity, attachment, and filial affection to the august person of the Holy Father that were made in all parts, and especially at Rome.

Before perpetrating this last act of terrible injustice, the Count Ponza di San Martino was sent to Rome as the bearer of a letter written by the King Victor Emmanuel to the Holy Father. That letter stated that the Government of Florence, not being able to restrain the ardor of the national aspirations nor the agitation of the "party of action," as it is called, found itself forced to occupy Rome and the territory yet remaining annexed to it. Your Excellency can easily imagine the profound grief and indignation which filled the heart of the Holy Father when this startling declaration was made to him. Nevertheless, unshaken in the fulfilment of his sacred duties, and fully trusting in Divine Providence, he resolutely rejected every proposal for accommodation, forasmuch as he is bound to preserve intact his sovereign power as it was transmitted to him by his predecessors.

In view of this fact, which has been brought to pass under the eyes of all Europe, and by which the most sacred principles of law and right, and especially those of the law of nations, are trampled under foot, his Holiness has commanded the undersigned Cardinal Secretary of State to remonstrate and protest loudly, and the undersigned does hereby, in the sacred name of his Holiness, remonstrate and protest against the unworthy and sacrilegious spoliation of the dominions of the Holy See, which has lately been brought to pass; and he at the same time declares the King and his Government to be responsible for all the mischiefs that have resulted, or shall result, to the Holy See and to the subjects of the Pontifical power from that violent and sacrilegious usurpation.

In conclusion, I have the command from his Holiness to declare, and the undersigned does hereby declare in the august name of his Holiness, that such usurpation is devoid of all effect, is null and invalid, and that it can never convey any prejudice to the indisputable and lawful rights of dominion and of possession, whether of the Holy Father himself or of his successors in perpetuity; and although the exercise of those rights may be forcibly prevented and hindered, yet his Holiness both knows his rights, and intends to conserve them intact, and reënter, at the proper time, into their actual possession.

In apprising your Excellency officially, by command of the Holy Father, of the deplorable event that has just taken place, and of the protests and remonstrances which necessarily follow it, in order that your Excellency may be enabled to bring the whole matter to the knowledge of your Government, the undersigned Cardinal Secretary cherishes the persuasion that your Government will be pleased to take into its earnest consideration the interest of the Supreme Head of the Catholic Church, now and henceforward placed in such circumstances that he is unable to exercise his spiritual authority with that full liberty and entire independence which are indispensable for it.

Having now carried into effect the commands of the Supreme Pontiff, it only remains that I subscribe myself, etc., etc.,

[Signed] J. CARDINAL ANTONELLI.

On the day following the capitulation, General Kanzler issued the following address to his troops:

UFFICIALI, SOTT' UFFICIALI E SOLDATI: The moment is arrived when we are called to take leave of each other and to quit the service of his Holiness, which has been dearer to us than all else in the world.

Rome has fallen; but thanks to your valor, your fidelity, and your spirit of union, it has fallen honor-

ably. There will be some of you, doubtless, who will lament that the defence was not kept up for a longer time, but a letter addressed to me by his Holiness, which will shortly be made public, will explain to you how this happened.

The testimony of our august Pontiff which it contains will be a consolation to all, and the best reward which, under existing circumstances, your services could receive.

Finally, it is my duty to acquaint you that, the army having been disbanded by superior force, his Holiness has been pleased to release you from the oath of fealty.

Adieu, beloved brothers in arms! Keep a place in your memory for your chief, who will ever cherish an affectionate recollection of you all.

(Signed) Il Generale pro Ministro,
KANZLER.

On the morning of the 22d the following proclamation was posted up throughout the city:

ROMANS! The excellence of our right and the valor of our arms have in a few hours brought me among you to restore to you liberty. Now your destinies, those of the nation itself, lie in your own hands. Strong by your sufferings, Italy will at least have the glory of solving that great problem which has been so terrible a burden to modern society. Thanks, Romans, also, in the name of the army, for the heart-felt reception you have given us! Continue to preserve as you did to this day public order, because without it there is no liberty possible. Romans! the morning of the 30th September, 1870, makes a memorable epoch in history. Rome is again restored, to be now and forever the great capital of a great nation. Long live the King! Long live Italy!

R. CADORNA.

After the Papal troops had left the Leonine City, the Swiss and Palatine guards remaining in accordance with the capitulation, an immense crowd of people assembled in front of the Vatican, waving tri-color cockades, and saluting the Papal residence with howls and hisses. General Cadorna, being anxious to establish an administration for the conquered city, accepted the assistance of the Roman Popular Circle, an organization numbering among its members some of the Roman noblemen. He also published the following notifications:

1. For the necessary unity of command in all public services, the commandant of the Fourth *Corps d'Armée*, together with the superior military authority, will have the high direction of all the political and administrative offices. 2. As was already made known in the first article of the notification of the 12th Inst., Major-General Masl, charged with the military command of the province, is invested with the necessary power for the protection of public order, having under his command the offices of police, of the telegraphs, and the post-office. 3. The public administrations continue to proceed as before, nothing being for the moment changed in the laws. The functionaries or employés who leave their offices will be considered as having resigned their places. 4. Sentences will be pronounced in the name of his Majesty Victor Emmanuel, by the grace of God and the will of the nation, King of Italy. 5. Nothing is changed as regards the payment of taxes and other revenues of the state, and as to the payment of public expenses. 6. The Italian money and the notes of the national bank will be received as legal tender in the public offices and in private payments.

After the installation of a provisional gov-

ernment, commissioned by General Cadorna, the prisons were searched, and all the political prisoners set free. The provisional government issued a manifesto setting forth the details regarding the *plebiscitum*. The vote was to be by ballot, and the people would have to decide on the question of the "unification of Italy." On October 2d the ballot was taken, and declared to have resulted in an overwhelming majority for "unification," etc. At the same time it was asserted by the established press of the city that the great mass of Roman citizens declined to vote, and that the ballots were chiefly cast by Italian soldiers and strangers in the city. Five days later, a deputation set out for Florence to communicate to King Victor Emmanuel the result. On receiving them, the King said that Italy owed not a little to fortune, but a great deal to the evident justice of her cause. Italians were now masters of their own destinies, and, after being divided for so many centuries, were united in the city which was the capital of the world. His Majesty said, in conclusion, that, as King and Catholic, he had proclaimed Italian unity, and remained firmly resolved to guarantee the liberty of the Church and the independence of the Sovereign Pontiff.

The following are the terms of the treaty of September 15, 1864, then still in force between Italy and France:

ARTICLE 1. Italy agrees not to attack the present territory of the Pope, and even prevent by force any attack proceeding from the exterior.

ART. 2. France will withdraw her troops gradually, as the army of the Pope becomes organized. The evacuation will, nevertheless, be accomplished within two years.

ART. 3. The Italian Government will make no protest against the organization of a Papal army, even composed of foreign Catholic volunteers, sufficient to maintain the authority of the Pope, and tranquillity both at Rome and the frontier of the Papal States; provided, however, that this force does not degenerate into a means of attack against the Italian Government.

ART. 4. Italy declares herself ready to enter into an arrangement for assuming a proportional part of the debt of the former States of the Church.

The following protest, in Latin, was addressed by the Pope to each cardinal, and was distributed on October 4th, in the three hundred vestries of Rome:

Pius IX., Pope. Beloved Son, Salutation and Apostolic Benediction.—Our Lord Jesus Christ, who humbles and elevates, mortifies and vivifies (1 Kings c. ii. v. 6), scourges and saves (Tobias, c. xiii. v. 2), has recently permitted that this city of Rome, the seat of the Supreme Pontificate, should fall into hostile hands, as well as the remaining portion of the Pontifical States which the enemy had for some time considered it expedient not to usurp. Yielding to the impulse of our fatherly love toward our beloved sons, the cardinals of the Holy Roman Church, and seeing in them coöperators in our supreme Apostolate, we have this day resolved, in our mourning and sorrow, to declare to them, as is required by the duty of our ministry, and as even the voice of our conscience urges us to do, the inmost feelings of our soul, which makes us to detest and publicly and openly to reprobate the state of things now existing. We, who, although unworthy and undeserving, ex-

exercise the power of the Vicar of our Lord Christ on earth, and who are the pastor over the whole house of Israel, find ourselves now practically wanting that freedom which is absolutely indispensable to us in order to govern the Church of God, and to maintain its rights; and we feel it is our duty to issue this protest, which we moreover intend to have published, that it may be known, as it is proper that it should, by the whole Catholic world. And, when we assert that this freedom has been ravished and taken from us, our adversaries could not reply that this complaint and this declaration are without foundation. Indeed, any one who possesses good sense will understand and confess that having no longer that supreme and free power, in virtue of which we enjoy the right of our civil Principate in the use of public means of conveyance, and in the public circulation of letters, and, being unable to trust the Government who has arrogated this power, we are really deprived of the necessary and speedy way, as well as of the free faculty of treating the affairs, which the Vicar of Jesus Christ and the common Father of the Faithful, to whom his sons so numerously come from all parts of the world, must treat and administer. This observation has again been confirmed by a fact within the last few days. Persons going out of our Palace of the Vatican have been searched by soldiers of the new Government, who wanted to know if they were not carrying something under their clothes. A complaint was lodged against this proceeding, and the reply was that it had been done by mistake, and an apology was offered for it. But who can ignore how easily errors of this kind can be repeated, and lead to others? Moreover, public education in this august city is threatened with a very serious evil. Before long the academic year will be opened at the university. This establishment, which has heretofore enjoyed exemplary tranquillity and order, although about twelve hundred young men are there assembled, being the sole place where so many Christian and honest parents can send their children to be instructed without the risk of being corrupted; this establishment, either on account of the false and erroneous doctrines which are now prevailing, or on account of the animus of those who have been chosen to propagate them, must fall, as will be easily understood, into a state very different from what it was. It was made known that the laws in operation in Rome should remain in their integrity and inviolability after the occupation, but, in spite of such declarations, the parish registers are taken away by force and examined, and it is not difficult to guess that such information is therein searched for as will doubtless be useful to draw up conscription lists, and for other ends, which are easily imagined. It must be added that attacks and offences inspired by the desire of vengeance and by party spirit are left unpunished, and that a similar impunity is assured to the authors of those shameful and unworthy outrages with which our faithful bodies of troops, who have so well deserved of society and religion, have been loaded, to the great grief of all honest people. Lastly, ordinances and decrees concerning Church property have already shown the tendency of the usurpers. Therefore, against all those things already accomplished, as well as against those still worse, which are imminent, we intend to protest, in virtue of our supreme authority, as we now protest through the present letters, by means of which we let you know, beloved son, and also each of the cardinals of the Holy Roman Church, a brief statement of those particular facts, moreover reserving to ourselves to enter into the matter more fully elsewhere. Meanwhile, let us fervently and incessantly pray Almighty God that he will enlighten the minds of our enemies, in order that they may cease loading their souls with the more and more overwhelming weight of ecclesiastical censures, and provoking upon themselves the terrible wrath of the living and all-seeing God, whose arm nobody can shun. We, on our

part, pray the Divine Majesty with constancy and humility, imploring also the intercession of the Immaculate Virgin and of the brother Apostles Peter and Paul, and let us do so with the holy confidence that we shall obtain what we ask, because the Lord helps those who are in tribulation who invoke Him in sincerity. Meanwhile, praying that our Lord Jesus Christ may bestow peace and joy on thee, beloved son, we, from the bottom of the heart, give the Apostolic blessing.

Given at Rome, near St. Peter's, on the 29th of September, the Feast of St. Michael the Archangel, in the twenty-fifth year of our Pontificate.

PIUS, PP. IX.

The following was reported as the total result of the *plébiscite* in the Roman provinces: Number of votes on the lists, 167,548; number who voted, 135,291; number who voted for annexation, 133,681; number who voted against annexation, 1,507; votes annulled, 103. The population of Rome is 217,378, and that of Rome and the provinces, in 1868, 723,121.

The Pope was subsequently informed by the Provisional government of France that it did not insist on the September convention with the purpose to enforce it, and the Marquis de Bonneville, French minister to the Papal court, received instructions to return to France.

A royal decree soon announced the annexation of the Papal States. General La Marmora, who was appointed Lieutenant-Governor of the Roman provinces, issued a proclamation on his arrival at Rome, on October 18th, in which he said that the *plébiscite* nobly crowned the national edifice. He hoped and believed that the Pope, as the head of the Church, would exercise his rights in perfect freedom. This feeling was sacred, but the national sentiment was no less sacred. He concluded by appealing to all to preserve order and tranquillity.

Signor Sella, Minister of Finance, remitted from Florence to the Pope 50,000 crowns, the amount of his civil list for the month of October, but the Papal Minister of Finance declined to receive it, and asked for the return of the Peter's pence taken from the Papal Treasury (see ROMAN CATHOLIC CHURCH). On taking formal possession of the Papal States, King Victor Emmanuel issued the following manifesto:

In the first place, all political and lay authority of the Pope and Holy See in Italy is abolished and will remain so.

2. The Pope will be entirely and completely free in the exercise of the ecclesiastical rights which he now possesses as supreme head of Roman Catholicism and the Church.

3. His Holiness the Pope will continue to enjoy all the honors and liberties which constitute the prerogatives of a sovereign prince. He will dispose and provide for his court as he has hitherto done to the present time.

4. A territorial immunity will be accorded to the Holy See, so that, being free and independent in this respect, it may, both at home and abroad, take care of the interests of religion and exercise the authority of the Church.

5. All Italian and foreign prelates, cardinals, archbishops, bishops, the members of the spiritual associations and ecclesiastical orders, will enjoy an entire immunity from civil interference at the place of resi-

dence of the supreme head of the Church, whether they be summoned by the Pope to attend a council of the Church or for any other religious purpose.

6. The Holy See will be enabled and permitted to communicate freely and independently, both at home and abroad, with all foreign powers and the clergy all over the world.

7. Special postal and telegraph services will be placed by the Italian Government wholly at the disposal of the Holy See.

8. The representatives of foreign powers at the court of the Holy See will enjoy the most complete liberty, as they do at other sovereign courts.

9. Papal legates and envoys will be treated just as are the ambassadors of foreign sovereigns at the Italian court.

10. The Pope and the Church shall enjoy an unlimited and unrestricted liberty of publication of the place of residence of the Holy See, as likewise of all personal, domiciliary and conciliary determinations, in order to avoid any conflict between the State and Church in future.

11. His Holiness the Pope shall enjoy full liberty to travel, at all times and in all seasons, in and out of the country. Italy will regard him in this respect as a foreign lay sovereign, and he shall be treated and honored as such throughout the entire territory of the kingdom.

12. The royal appanage of his Holiness, as well as the members of his court, shall be furnished by the kingdom of Italy, which will also assume the responsibility of the debts which have been hitherto contracted in the Pontifical States.

13. To assure the tranquillity of the Catholic world and of the other sovereign powers, Italy is disposed to guarantee the liberties of the Church and the independence of the Pope, sanctioning them by international treaty.

"By these concessions," added the royal state document, "the Italian Government seeks to prove to Europe that Italy respects the sovereignty of the Pope in conformity with the principle of a *free Church in a free state*."

Great influences were brought into operation in order to induce the Pope to leave Rome. He refused, on the plea that, while he protested against the usurpation of Italy, and yielded only to superior force, he still possessed the dignity of the Bishop of Rome, and could not, therefore, conscientiously abandon the diocese.

In the Italian Chamber of Deputies, on March 10th, Signor Sella, Minister of Finance, showed that, within the period from 1862 to 1867, the revenue of Italy had increased 47 per cent., while the expenditure had decreased 36 per cent. He regretted, however, to say that the constant increase of the public debt, caused by the tardiness of the administration in increasing the taxes and reducing expenses, still left a considerable deficit. The budget of 1870 exhibited a deficit of 110 million lire to be provided for. In conclusion, Signor Sella explained the means by which he meant to rid the country of this deficit.

On July 25th, the Chambers passed a law, authorizing the negotiation of a loan of six million lire.

On July 31st, Deputy Signor Laporta urged that, as the September convention had been violated by France, it should be abrogated by the Italian Government. The Prime-Minister replied that the adoption of such a course

would prevent the évacuation of Rome, and that it would be unbecoming to embarrass France just as she was going to war. Signor Lanza added that the Government did not fear internal disturbances, and would repress them, no matter by whom fomented.

In September the population of Nice sent an address to the Italian Parliament, expressive of the wish of the people to be reunited with the kingdom of Italy, and stating that ten years of the despotic rule of France had not been calculated to extinguish in their hearts the love of their old country. If Italy would secure a lasting peace, she stood in need not only of her natural capital, but also of her natural frontier toward the west. This document had scarcely reached Florence, when a revolution broke out in Nice. The French authorities were driven across the frontier, and all political prisoners liberated. Mentone also participated in the insurrection, but it was, however, soon suppressed.

Italian unity having been completed, the election of a new Parliament representing the whole country had become a necessity. Parliament was therefore dissolved by a royal decree of November 2d, and elections for members of the new Parliament ordered for the 20th of that month. The opening of the new Parliament was fixed for the 5th of December. The result of the election was a decisive triumph of the Government. All the members of the ministry were reelected, and the Government again had a strong working majority in the new Chambers.

The Spanish Government and the Cortes having resolved to tender the crown of Spain to the Duke of Aosta, second son of King Victor Emmanuel, a deputation of crown-bearers was ordered to proceed to Florence. They arrived on the 3d of December, and were received with unusual demonstrations of welcome. At the audience given them, the King said: "I confide my son to the loyalty of the Spaniards." When the crown was presented to the Duke of Aosta, he remarked: "I have before me a smooth, and, I hope, happy course to pursue. You present to my view a more extended horizon, and invite me to duties always elevated, but now of the utmost moment. I accept the noble mission, conscious of its difficulties."

Parliament was opened by the King on December 5th. In his speech from the throne, he declared that, with Rome as the capital, the national edifice, which was commenced by Charles Albert, was "crowned," and the freedom of Italy completed. It was now the task of the Chambers to make her great and happy. "While we are thus happy," he continued, "two nations, glorious representatives of civilization, are engaged in a horrible struggle. We will persist in our efforts to induce them to end the conflict, and prove that united Italy is an element of order, liberty, and peace in Europe." In reference to the Pope, his

Majesty said it was the duty of the nation to secure to the Supreme Pontiff the free exercise of his religious offices and the maintenance of his relations with the Catholic world. Improvements in the administration of the government and development of the military and educational system were promised. In regard to the election of the Prince Amadeus to the throne of Spain, the King said: "A sister nation has invited our son to rule over its destinies. We rejoice in the great honor conferred on our dynasty, and hope that it will bring equivalent benefits to Spain." The royal speech concluded with congratulations on the present condition, and hopes for the future career of the nation, and was received with enthusiastic cheers by the members.

Signor Brancheri, the Government candidate, was elected President by 189 votes, against 106 votes for the candidate of the opposition. On December 21st, Parliament passed the bill ratifying the vote of the Roman people for annexation to Italy, by a vote of 239 to 20. Two days later, the Chamber of Deputies passed by a vote of 192 yeas to 18 nays the bill providing for the removal of the capital from Florence to Rome within six months. A resolution, expressing the gratitude of the citizens of Florence to the Romans for their patriotism during the siege of the city, was adopted. The Chamber then adjourned, to meet on January 16.

The Duke of Aosta left Italy for Spain on December 23d.

J

JAPAN, an empire in Eastern Asia. The administration and the supreme executive power of the country are vested in the Mikado, the Tycoonate, which formerly shared in the administration of the empire, having been abolished. The United States Government was represented at the imperial court, in 1870, by C. E. De Long, minister resident at Yeddo. The area of the country, comprising Japan proper, and 8,850 islands, which are its dependencies, is reported as follows:

	BY ENGELHARDT.	BY SIEBOLD.
	Square Miles.	Square Miles.
Japan, or Nippon, with Sado, Oki, Awadsi, etc..	90,315	87,442
Stikokf.....	6,074	8,919
Kiasu and small islands..	17,364	15,685
Yesso and small islands..	31,147	27,585
Eighty-nine Bonin Islands	132
Kuriles.....	8,699	1,606
Total.....	149,899	141,259

Russia claims the island of Saghalien as be-

longing to her possessions on the Amoor. Of the Kurile islands, all those on the west side, inclusive of the island of Iturup, belong to Japan. The population of the empire, which was formerly estimated at from thirty-five to forty millions, has been recently computed at only twenty millions. The total revenue was estimated, according to the old budget of 1608 (which must be considered, however, far below its actual amount), at \$146,246,406, the greater portion of which remains in the hands of the princes, and of the governors of the provinces, the revenue proper of the Government for administrative purposes being thus reduced to a very limited compass.

A standing army of 12,000 men has been recently organized after the European plan. In time of war all the Sumurais liable to do military service must place themselves at the disposal of the Government.

The movement of commerce and of shipping, at the principal ports open to foreign nations, was, in 1869, as follows:

PORTS.	IMPORTS.	EXPORTS.	ENTERED.		CLEARED.	
	Value in Dollars.	Value in Dollars.	Ships.	Tonnage.	Ships.	Tonnage.
Yokohama.....	12,708,966	13,030,000	637	469,344	597	453,894
Hioo.....	6,822,261	2,124,312	428	301,301	398	295,071
Nagasaki.....	2,996,558	1,672,531	358	214,604	323	212,159
Hakodadi.....	738,926	990,711	130	52,247	129	51,965
Niigata.....	495,900	222,606	18	6,040	18	6,040
Total.....	22,812,651	18,950,189	1,571	1,043,436	1,475	1,019,079

The principal articles of export, in 1868, were: Silk, 19,000 bales, at 100 pounds each, to England and France; tea, 15,000,000 pounds to the United States; and Chow-Chow articles, 414,592 piculs (one picul=133 pounds) to China. The imports consisted of English, German, Dutch, and Swiss manufactures, which formerly reached the ports of Japan by way of England, but have of late been imported directly from Germany and Holland. On account

of the failure of the crops in 1867 and 1868, rice was imported from China and Siam to a considerable extent, mostly in German vessels. Another important article of import was English, Belgian, and German fire-arms.

At the end of 1869 Mr. Hulay, late Inspector-General of Customs at Yokohama, concluded for the Government a loan of £1,000,000 sterling to build a railroad from Yeddo to Kioto. In January, 1870, English engineers obtained a

contract to build three hundred miles of railroad. A telegraph-line between Yeddo and Yokohama was completed, and the first official message sent over the wires on January 7th. The line has since been thrown open to mercantile purposes. The great Northern Telegraph China and Japan Extension Company commenced the laying of their submarine cable, and, as the Russian line from the Siberian station of Srjetensk along the rivers Schilka and Amoor to Chabarowka and Wladiwostock was completed, Europe, Nagasaki in Japan, and Hong-Kong in China, will be in direct communication over these lines in the beginning of 1871.

The Japanese budget, for the year 1869, showed a deficit of £2,500,000 sterling, which is equal to one-half the imperial revenue. The Government gave notice to the foreign ministers that it will coin new Japanese dollars as soon as it can get workmen from the English Mint. The new dollar is intended to be a trifle finer and heavier than the Mexican dollar, and will, as soon as it shall attain a sufficiently wide circulation, supersede the old coin.

The rice crop of several of the provinces, in 1869, was again a total failure, and the Government prohibited the exportation of rice, except by special license, as provided by the treaties with foreign powers.

The Government is well aware of the feeble hold it has on the powerful daimios. In 1870, one daimio called into service all the able-bodied men in his provinces, of twenty years of age, and placed them under European instructors. A large proportion of them were armed with breech-loading rifles, and the rest would soon be similarly equipped. It was stated by another prominent daimio, that he could command, at any moment, one hundred thousand disciplined troops, with a reserve of another hundred thousand less thoroughly prepared, but no less devoted to his cause. On the other hand, however, the negotiations between the Imperial Government and several daimios resulted in the surrender by the latter of their war-vessels to the Mikado, who thus obtained control of the whole navy.

In spite of all the drawbacks of misgovernment and intestine strife, the people are in many respects making remarkable progress, especially in those parts of the empire whose inhabitants are in frequent contact with foreigners. A treaty of peace and commerce was exchanged between Spain and Japan in the month of March. Diplomatic intercourse is now established with all the principal civilized nations.

Rice riots were of frequent occurrence in many parts of Japan, the people being in a destitute condition. Large quantities of rice arrived from Saigon, and from 800,000 to 400,000 tons were ordered by the Government, to prevent the outbreak of a famine.

A great conflagration took place at Yeddo in March. The area laid desolate was computed at four or five miles in circumference, and every wooden building, from the Japanese Foreign

Office to the outer moat, had been entirely destroyed. A bridge over the Adori was burnt, and the traffic over it suspended.

A violent earthquake occurred in May, the severest since the great earthquake in 1855. At the great volcano of Assamayama, in the interior of the island of Nippon, which had been quiet for centuries, there were violent eruptions, accompanied by frequent earthquakes, destroying villages in the vicinity, and causing terror among the inhabitants of the province.

The Japanese Parliament met at Yeddo, July 21st, and remained in session until the latter part of August. The proceedings were not of great importance. A notification was issued by the municipal authorities of Yeddo, to the effect that all children between the ages of eight and fifteen years must attend the government schools that were established for their benefit. Six schools of this class were open in August in different parts of the city, and others were soon to be opened.

A special historical department was created by the Japanese Government, and constituted a branch of the Foreign Office. Two proclamations made known the fact of its formation to the local authorities, instructing them to search the records of their respective offices, and to forward to the Foreign Office at Yeddo every document, official or non-official, which they considered useful, from its interest or importance, for compiling the national annals.

A field-telegraph, which had been presented to the Mikado by the United States Government, was tried in the presence of the Mikado. A correspondent from Yeddo gave the following account of the trial:

By the Mikado's desire the apparatus was erected in the grounds of the palace, one terminus being his Majesty's private study, and the other the pleasure pavilion, which stands in the centre of the Maple Gardens, where were assembled three princes of the blood, the Prime Minister, and a host of members of the Privy Council, to receive and answer the imperial messages. The working of the wires was intrusted to two Japanese, and when all was ready a message arrived at the Pavilion announcing the presence of the Mikado at the terminus in the study. To this announcement a most respectful message was returned, thanking his Majesty for his gracious presence. Shortly after the message came, "The Emperor is highly pleased with the wonderful Western invention." At the Emperor's desire the apparatus was left standing in the grounds, in order that he might learn to work it himself.

The persecution of native Christians by the Government produced earnest remonstrances on the part of the foreign ambassadors. The Government appeared determined to remove a Christian colony near Nagasaki, established by Catholic missionaries several centuries ago, to a distant part of the empire. Consequently, in 1868, three hundred male adults were removed, while the women and children were left behind, with the promise of the Government to support them. This promise was not fulfilled, and the fate of those who had been

deported remained wrapped in mystery. In January, 1870, the remainder of the grown males of the colony, about seven hundred in number, were embarked on several government steamers, to be conveyed to various parts of Japan, principally to the north. The foreign consuls held several meetings with a view to prevent the execution of this measure. The English ambassador, Sir Harry Parkes, requested a delay of fourteen days, in order that he might confer with the government at Yeddo, but the respite was not granted. According to Japanese official reports the aggregate number of native Christians in the country was 3,600, of which 2,000 were at Urakami near Nagasaki, 100 at Omura, and 1,500 at Fubahori. Besides, there were Christians in Shimabara, Amakusa, Hirado, and other places, but their number could not be accurately stated.

The Buddhist priests were compelled to pay

to the Mikado the sum of 8,000,000 rios, or \$10,000,000, for the privilege of remaining in possession of their temples, monuments, and idols, and of observing their religious rites and customs without restriction.

An interview was granted by the Mikado to William H. Seward, ex-Secretary of State of the United States, during his presence in Japan, in October, 1870. The interview took place at the imperial palace at Tokei near Yeddo, and caused a considerable sensation among the Japanese officials and the diplomatic corps, the invitation to such an interview to a private individual being altogether without precedent. At the meeting all the rigid formalities which have hitherto obstructed free intercourse with strangers were for the first time laid aside, the reception of Mr. Seward being very cordial and free from all court etiquette.

K

KANSAS. The Legislature of Kansas meets annually, on the second Tuesday of January, at Topeka. The last session continued nearly to the 1st of March, but little legislation took place which has any interest for the general reader. An act was passed to enable husband and wife, or either of them, to be a witness for or against the other, or on behalf of any party, in cases where the other is interested in the result. A memorial to Congress, asking for the submission to the people of a sixteenth amendment to the Federal Constitution, allowing the right of suffrage to women, was adopted by a vote of 66 to 9 in the House of Representatives, but was laid on the table in the Senate by the casting vote of the Lieutenant-Governor. The Governor had occasion to exercise the veto power once during the session. A joint resolution had been adopted to appropriate a portion of the sinking fund to the payment of "current legislative expenses and the salaries of Supreme and District Court judges for the year 1870." This the Governor pronounced an unwarranted assumption of authority, as it created a "favored class of creditors of the State to the detriment of those with whom the people in their sovereign capacity have made a sacred contract." He proceeded to show where-in this action was in violation of the provisions of the constitution, which declared that "the Legislature shall provide each year for raising revenue sufficient to defray the current expenses of the State," and that the proceeds of no tax shall be applied to any other purpose than that for which the tax was levied. Such tampering with the sinking fund as was proposed by this resolution he thought would not be very "cheering to public creditors or satisfactory to a tax-paying people who had authoritatively and expressly prohibited any

such transactions." Notwithstanding this veto and the reasons given for it, the resolution was again adopted by a two-thirds majority in each House. The alternative of the members was to take their pay in the depreciated scrip of the State, or make an "unwarranted attack on the sinking fund," and they chose the latter course. An injunction against the payment of the members from this fund was afterward sued out, and a revenue bill passed to provide for the fiscal year 1870-'71, based on the following estimates:

Outstanding scrip (about).....	\$ 78,000
Legislative appropriations.....	275,000
Interest to be paid on scrip.....	15,000
Legislative expenses, 1871.....	30,000
Commission and mileage of County Treasurers..	30,000
Probable deficiency in collection of taxes.....	100,000
Total.....	\$528,000
Deduct from this probable amount to be paid by County Treasurers in July.....	50,000
Leaves to be provided for.....	\$478,000

Provision was thus made for redeeming the scrip of the State, which had depreciated in value and become an injury to the public credit. To raise the sum of money provided for in this bill, a tax of six mills on a dollar is required, the taxable property of the State being estimated at \$85,000,000.

A subject of great importance to the settlers in Kansas and one which not only occupied a large share of attention at the last session of the Legislature, but occasioned a good deal of discussion in Congress, was that of a disposition of lands heretofore occupied by Indians. Large tracts of territory have remained undisposed of by the Government, some of which have been reserved for the use of the Indians by treaty stipulations. On these white men have in many cases formed settlements, either with or without the consent of the Indian oc-

cupants, and made valuable improvements without sufficiently considering the validity of their titles either to the land or the increased value which their own labor has given to it. It has been decided by the Supreme Court that, even where a regular purchase was made, no valid title could be given by the Indians without the consent of the Secretary of the Interior at Washington. The operations of speculators in these lands have given rise to a great deal of scandal, and allegations of fraud have been freely made against persons in office, both within the State and at the national capital. The members of Congress from Kansas have been so far involved in the matter that a resolution was offered and pressed with considerable vigor in the Legislature, asking both the Senators and the Representative to resign their places. Explanations were made and the resolution did not pass, but very serious complaints were made against the Representative of the State in the Lower House of Congress, which were not satisfactorily explained, and which were the ground of a determined opposition to his reelection during the political campaign of the year.

The wish of the people of the State has undoubtedly been that the Federal Government should take steps for the removal of all Indian tribes from their borders, and the opening of these reserved lands to settlers, those who have already taken possession receiving a good title to their farms and improvements, and liberal provision being made from this fund of public property for the encouragement of railroad enterprise and the building up of schools. The Indians, too, have by their depredations caused a great deal of trouble, especially to the settlers upon lands which they look upon as their own, and there has been a feeling that they should be removed to the Indian Territory, to give place to the rapid advancement of civilization in Kansas. There has been in general no disposition wilfully to encroach upon the rights of the Indians, but the action of the Government in behalf of the settlers has not kept pace with the rapid progress which they have made in cultivating the unoccupied wilderness, and almost insensibly they have become involved in a complication of Indian titles and claims on reservations where there was scarcely an Indian occupant to a thousand acres. The troubles which have sprung from these and others causes led to several attacks on the settlers and on parties of railroad workmen last spring, and on one or more occasions the military authorities were called on to protect the citizens. The judicious distribution of a small force of troops, and the organization of a voluntary militia, prevented any serious outbreak.

A good deal of disturbance appears to have occurred on what were known as the "Cherokee Neutral Lands," in the early part of the year, and a company of troops was sent thither by the Governor to preserve order and en-

force the execution of the laws. This provoked the ire of certain persons interested in these lands, and a resolution was adopted in the Legislature at their instance, appointing several commissioners to investigate the ground for this proceeding. According to the report of a majority of the commissioners, they state:

As early as February, 1869, an organization existed on those lands known as "The Land League;" that such organization still exists there, and that its name now is "The Neutral Land Home-Protecting Corps;" that it was, and still is, a secret quasi-military organization, numbering fifteen hundred men, commanded by a general, and drilled into regiments, battalions and companies, commanded by colonels, lieutenant-colonels, majors, captains, and other officers with military designations; that one of the objects of said organization was to prevent the building of the Missouri River, Fort Scott, and Gulf Railroad through the Neutral Lands, until James F. Joy should relinquish his right or claim to those lands; that, in accordance with the settled purpose of the League, about two hundred of their number, being fully armed, marched on Baxter Springs to break up the railroad land-office at that place, and did, by threats and intimidation, compel its removal therefrom; that, during the spring and early summer of 1869, members of "The League" forcibly burned about twenty-six thousand railroad ties in Cherokee County, on those lands; also, that they arrested Colonel J. A. J. Chapman and Captain John Runk, Jr., engineers on the road, together with their party of assistants and laborers, and, after burning the wagons, tents, surveying-instruments, blankets, commissary stores, etc., drove the subordinates of the surveying-party from the lands, with orders never to return in the employ of the railroad company, under penalty of death, and that they then marched Colonel Chapman and Captain Runk several miles south, when they stripped off the coats from their prisoners, hoodwinked them, and administered to each of them fifteen lashes, and then ordered them to leave, to never return, and to never mention what had occurred, under penalty of death; also, that they forcibly drove from the line of the railroad, laborers, agents, and other employés, and from the Neutral Lands many persons because of their opposition to the League, and their friendship with the railroad company.

After an investigation, costing the State \$20,000, the commissioners justified the Governor in the employment of a military force in suppressing these disorders, and further state:

We find that, prior to the arrival of the troops on those lands, lawlessness prevailed, and terrorism reigned there; that but for their presence the railroad could not have been built through the lands, nor could persons who advocated the building of the road have safely remained there. We further find that, since troops have been stationed on those lands, order has prevailed throughout that region, although a very hostile feeling seems still to exist among the people; so intense, indeed, that, as we believe, should the troops be removed, collisions, resulting in bloodshed, would ensue. We therefore believe that there was a necessity for United States troops on the Neutral Lands at the time that they were stationed there; and we further believe that that necessity exists.

Although two minority reports were submitted, the Legislature adopted the views of the majority in a joint resolution, declaring:

That we heartily indorse the action of his Excellency the Governor, in causing the supremacy of the laws to be maintained, by having the troops of the United States stationed upon the Neutral Lands; and

that, while we sympathize with peaceably-disposed settlers upon these lands, we must condemn all mob violence and resistance to law, and advise all parties interested in the question of title to the Neutral Lands to appeal to the courts and peaceably abide the decision of the same.

Resolutions were also adopted appealing to Congress for the passage of measures which would settle all questions of title to these and other lands, and provide for the speedy removal of the Indians from the State.

A vigorous effort appears to have been made by Senator Ross to carry out the wishes of the people, but all his labors, according to his own representations, were rendered futile.

Several bills and resolutions passed the United States Senate at the session of 1869-'70 providing for the sale of reserved lands and the removal of the Indians, but they were defeated in the House of Representatives by the opposition or the inaction of Mr. Clarke, who was chairman of the Committee on Indian Affairs. His course in reference to all these matters of the Indian lands, and the rights of settlers thereon, is thus summed up by Senator Ross:

He has not brought to the consideration of the House a single measure for the benefit of the settlers.

He has permitted such as have been sent to his committee to sleep for months, until the adjournment of Congress, without uttering a single word in their behalf.

He has obstructed, by every means in his power, the passage of such as have been passed by the Senate.

He has attempted to bring obloquy upon those who have endeavored to serve the interests of the settlers, and expose the thieving schemes of his co-adjutors, and, when exposed, has lustily shouted, "Stop thief!" that they might the more safely get away with their stolen plunder.

These matters are mentioned at some length here because they formed almost the sole topic of discussion in the State during the year, and the principal issue in the congressional election, which is virtually a State affair, as but one Representative is sent to Washington. Mr. Clarke was seeking for reelection, and his alleged disregard of the interests and wishes of the people was the occasion of a vigorous opposition in his own party.

In the political campaign, as already stated, the principal issue was the election or defeat of Sidney Clarke for Congress. At the County Convention the main question in the selection of delegates for the General Republican Convention was whether the candidates were "Clarke men," or "anti-Clarke men." During the summer anti-Clarke meetings were held, and resolutions against the reelection of the derelict member were adopted. The result was, that when the State Convention met at Topeka, on the 8th of September, the majority were pledged against his renomination. On the first regular ballot the vote stood, 87 for D. P. Lowe, and 77 for Clarke, and the former was declared nominated for the Forty-second Congress. The rest of the ticket was as

follows: for Governor, James M. Harvey; Lieutenant-Governor, P. P. Elder; Secretary of State, W. H. Smallwood; Auditor, A. Thoman; Treasurer, J. E. Hayes; Attorney-General, A. L. Williams; Superintendent of Public Instruction, H. D. McCarty; Associate Justice in the Supreme Court, D. J. Brewer. The platform adopted by the convention was as follows:

I. The Union Republican party of Kansas, in delegate convention assembled, reaffirms its adherence to, and its faith in, the principles of universal liberty, justice, and humanity, which it has, during ten years past, zealously and successfully battled, and upon which it has now securely and forever established the foundations of the Government.

II. It points with pride to a career of victory unsullied by a single act of national cowardice, wrong, or inhumanity. It has, during its administration of public affairs, crushed the most gigantic rebellion that ever assailed the Government, broken the shackles of a race long enslaved, and elevated them to the dignity and privileges of citizenship, enacted and put into operation a beneficent homestead law, originated and perfected a splendid system of high-ways across the continent, secured the recognition of the doctrine of expatriation, and in all things proved itself equal to the sacred trusts committed to its hands.

III. The Republican party, with such a record, needs to make no flaunting promises of future fidelity to the great principles upon which its organization is based. But this convention of delegates, representing the Republicans of Kansas, takes occasion to express the convictions and purpose of the party:

1. To maintain and defend the fruits of its victory in the field, namely, the unity of the Republic, the abolition of slavery, the enfranchisement of the colored race, and equal rights for all.

2. To protect and preserve the fruits of its victory in legislation; namely, the homestead law in its whole letter and spirit, the law of expatriation, and a wholesome system of public improvements.

IV. In the future, as in the past, the Republican party will continue to advocate the measures which will promote economy, national honesty, domestic concord, and friendly relations with foreign powers—to the end that we may have a government of laws and not of men.

V. We cordially indorse the patriotic, honest, and economical Administration of President Grant, and hail with satisfaction the rapid reduction of the national debt, which its faithful collection of public revenues and honest application of them brought about.

VI. In the struggle now going on in Europe our sympathies are heartily with the German people. Their triumph is a victory of liberal principles. We rejoice in the overthrow of the Napoleonic dynasty, and earnestly pray that the war may result in the organization and permanent establishment of a republican form of government in France and other European nations.

VII. That the Republican party stands pledged to remove all disqualifications and restrictions imposed upon the late rebels, in the same measure as the spirit of disloyalty may die out and may be consistent with the safety of the loyal people.

VIII. In the distribution of public lands and Indian reserves, we demand the full protection of the rights of settlers, and the reservation of the sixteenth and thirty-sixth sections to which the State is entitled for educational purposes. Wholesale grants of territory to speculators are unfavorable to the interests of the community, and inconsistent with the objects for which the national domain should be distributed. We especially condemn the policy of disposing of Indian reservations to railroad or land monopolies, and insist that such lands be undeniably opened to

actual settlement, at not more than one dollar and twenty-five cents per acre.

The policy of granting subsidies of public lands to capitalists and monopolies is condemned, and we repudiate the action of certain of our Republican Representatives in Congress in the sale of the Cherokee Neutral Lands.

After this action by the convention, Mr. Clarke is said to have used his influence to divide the party on local issues, to secure the nomination of two separate tickets for local officers. The Republican State Central Committee, in a published card, made the following statements:

We have the unpleasant fact forced upon our attention in the very outset of our endeavors to complete arrangements for the campaign, that the Hon. Sidney Clarke, the present member of Congress, objects, not only to giving us aid himself, but that he is exerting all his influence in preventing those, who are enjoying the profits and emoluments of position accorded them by the partiality of the party, from making contributions. The committee have proof that he is expending, and has been expending, large sums for the purpose of continuing himself in office, and has made assessments upon office-holders, on the grounds of his pretense that they are under obligations to him for their positions, and not the party; and that he is using the money so collected to divide and breed discord and inharmony in the party and in localities. Both his money thus procured, and the full force of his argument, are used to defeat the Republican nominees for legislative office, and elect Democratic candidates. Now, the question presents itself, Shall the means and influence of the party be scattered and misapplied to gratify the inordinate ambition of one man, or shall they be combined to keep it organized and to advance its

principles and high aims, by securing for it the largest and most pronounced triumph? You must answer this question as best suits you, but it is well that all should remember that Mr. Clarke is Congressman by the voice of the Republican party, and that a period has been put to his official career in that capacity by a fiat of the party. It is a voluntary matter with you to choose whom you will aid in this election—the Republican party, in its legitimately-organized character, or Mr. Clarke, who has already illustrated his fealty to the party and attachment to its great principles, by revenging himself upon it for not continuing to favor him with its legislative honors.

The information is overwhelming of Clarke's perfidy and purpose to defeat the Republican nominees for the Legislature not in favor of him, and of his unfriendly action toward Judge Lowe and the committee.

The Democratic convention was held at Topeka on the 15th of September, and nominated Isaac Sharp for Governor, and R. O. Foster for member of Congress.

The election occurred on the 8th of November, and resulted in the election of the Republican candidates. The whole vote for Governor was 60,064, of which Harvey received 40,061, and Sharp 20,038, making the majority of the former 20,028. The vote for member of Congress was 61,120; for Lowe, 40,868; for Foster, 20,757; Lowe's majority 19,606.

The population of Kansas, according to the census of 1870, is 379,497, an increase of 235.99 per cent. since 1860, when it numbered 107,206. The following is a full statement by counties:

The six largest cities of the State are the following: Leavenworth, 20,665 inhabitants; Lawrence, 8,315; Atchison, 7,011; Topeka, 5,796; Fort Scott, 4,160; Junction City, 3,100.

The finances of the State are in a promising condition. Its liabilities amount to \$1,593,306.52, and its resources to \$903,729.02. The receipts of the Treasury for the last fiscal year were \$1,428,696.17, and the expenditures

\$1,867,611.92, leaving an unexpended balance of \$60,847.14.

The following are the educational statistics of the year, which show a considerable increase over the preceding twelve months:

Number of school districts.....	2,068
Increase for the year.....	361
Number of male persons between the ages of 5 and 21 years.....	53,254
Increase for the year.....	4,247

Number of female persons of school age.....	56,969
Increase for the year.....	12,479
Total number of persons of school age.....	109,344
Increase for the year.....	16,737
Number of male persons enrolled in public schools.....	32,183
Increase for the year.....	1,936
Number of female persons enrolled in public schools.....	31,085
Increase for the year.....	2,551
Whole number of persons enrolled in public schools.....	63,218
Increase for the year.....	4,537
Average daily attendance in public schools.....	39,401
Increase for the year.....	8,277
Average length of time school has been taught.....	5.2 months.
Increase for the year.....	.3 months.
Number of male teachers employed in public schools.....	1,079
Increase for the year.....	130
Number of female teachers employed in public schools.....	1,161
Increase for the year.....	43
Average wages paid to male teachers in public schools.....	\$39 60
Increase for the year.....	2 53
Average wages paid to female teachers in public schools.....	31 10
Increase for the year.....	2 13
Amount paid for teachers' wages.....	\$18,596 31
Increase for the year.....	25,836 37
Amount expended for repairs and incidentals.....	98,644 33
Increase for the year.....	19,300 57
Amount received on the semi-annual dividend of State school money.....	139,267 37
Increase for the year.....	23,721 57
Amount raised by district tax for the support of public schools.....	518,323 85
Increase for the year.....	89,339 87
Total amount derived from various sources for public schools.....	673,041 41
Increase for the year.....	107,730 24
Number of school-houses: log, 353; frame, 864; brick, 46; stone, 239. Total.....	1,501
Increase for the year.....	288
Total value of school-houses.....	\$1,530,041 40
Increase for the year.....	438,147 40

The State University, at Lawrence, is in a flourishing condition, and three new buildings are in course of construction. An Agricultural College is in successful operation at Manhattan. It has a liberal endowment, derived from a donation of 90,000 acres of land from the General Government. There is a Normal School at Emporia, attended during the year by 190 male and 131 female students.

There is a Blind Asylum at Wyandott, at which there were 23 pupils during the year. The Deaf and Dumb Asylum at Olathe had 41 inmates supported at an expense of \$6,500. The Asylum for the Insane at Ossawatimie had charge of 41 persons at the close of the year. On the 30th of November there were 209 convicts in the Penitentiary, an increase of 23 during the year. There were no escapes, but one death, and very little sickness in the institution.

The Kansas Pacific Railroad was finished on the 15th of August, and extends from Kansas City, Mo., to Denver, making, with the Denver Pacific Railroad, which connects with the Union Pacific at Cheyenne, a line of 735 miles. The Leavenworth, Lawrence, and Galveston Railroad has been opened to Humboldt, on its way to the southern coast.

KEMPER, Right Rev. JACKSON, D.D., LL.D., Protestant Episcopal Bishop of the Diocese of Wisconsin, an American clergyman born in Pleasant Valley, Dutchess County, N. Y., De-

cember 24, 1789; died at Delafield, Wis., May 25, 1870. He was educated at Columbia College, New-York City, graduating in 1809. After spending some time in teaching and in the study of theology, he became assistant minister of Christ Church, Philadelphia, in 1811, and remained there till 1831; he was called to the rectorship of St. Paul's, Norwalk, in 1831, and in 1835 was consecrated missionary bishop of Missouri and Indiana, being the first missionary bishop of the Protestant Episcopal Church in America. His labors were very arduous, but were performed with great cheerfulness. When dioceses were organized in these States, he was transferred, at his own request, to a new missionary field, the Territory of Wisconsin, to which Iowa, and subsequently Minnesota, was added. In 1854 separate dioceses having been organized in Wisconsin and Iowa, he was consecrated Bishop of Wisconsin. In 1868, notwithstanding his great age, he attended the General Council of Bishops, in London, and received from Cambridge University the degree of LL. D. Bishop Kemper was highly esteemed, not only by the members of his own communion, but by all who knew him, for his courteous manners, his attainments as a scholar, and his abundant missionary labors on the frontier.

KENNEDY, JOHN PENDLETON, LL. D., an American statesman, scholar, and author, born in Baltimore, Md., October, 1795; died in Newport, R. I., August 18, 1870. He graduated at Baltimore College, in 1812. In 1814 he entered the army as a volunteer, taking part in the battles of Bladensburg and North Point. After leaving the service he devoted himself to the study of law, and was admitted to the bar in 1816. Two years after that event he made his first essay in authorship by publishing, in connection with Peter Hoffmann Cruse, "The Red Book," a series of miscellaneous articles in prose and verse, issued every fortnight. In 1820 he was elected to the Maryland House of Delegates, and rechosen the next two years. In 1823 he received from President Monroe the appointment of secretary of legation to Chili, but was led to withdraw his acceptance before the mission sailed. Being an ardent supporter of the Whig party, he labored diligently with his pen in defence of his political opinions. He was always an active opponent of the extension of slavery, and an earnest supporter of the doctrine of protection to American industry. In 1831 he was a delegate to the National Convention of the Friends of Manufacturing Industry, and was one of the committee appointed to draft an address setting forth the protectionist view. In 1838 he was elected to Congress upon the Protection platform, and soon became a leading member in the House. In the presidential campaign of 1840 he was one of the electors on the Harrison ticket. In 1841 he was again elected to Congress, and was prominent in the controversy between President Tyler and the

Whig party. In 1843 he was once more returned to Congress. At the next election he was defeated by a small vote, but in 1846 was returned to the Maryland House of Delegates, and made Speaker. In 1852 Mr. Kennedy was appointed by Mr. Fillmore Secretary of the Navy, an office in which two of his literary brethren—Paulding and Bancroft—had preceded him. It was mainly to his efforts while in this position that the success of Commodore Perry's Japan Expedition, and of Dr. Kane's second Arctic voyage, was due. On the accession of Franklin Pierce to the presidency, Mr. Kennedy retired finally from political life. At the breaking out of the war, true to his record, he warmly espoused the Northern side, and, after the close of the struggle, actively advocated the election of General Grant to the presidency. At the time of his death he was provost of his Alma Mater, the University of Maryland, Vice-President of the Maryland Historical Society, and a member of many scientific and literary associations. He was also chairman of the Trustees of the Peabody Academy of Baltimore, and a member of the Board of Trustees of the Peabody Southern Educational Fund. His principal literary works were "Swallow Barn; or, a Sojourn in the Old Dominion," a sketch of Virginia life and customs, published in 1832. "Horse-Shoe Robinson, a tale of the Tory ascendancy," 1835. This was an historical novel, giving the experience of a soldier in the Revolution, and it achieved a decided success. "Rob of the Bowl," a novel detailing the ancient troubles between the Roman Catholics and Protestants in Maryland, followed in 1838. "Annals of Quodlibet," a political satire, was published in 1840. "Life of William Wirt," 1849, an exceedingly valuable work, as it contains much of the political history of the time, which the author was specially qualified to record. Among the minor literary productions of Mr. Kennedy were numerous discourses delivered on public occasions, and a host of contributions to periodicals. Many excellent political papers issued from his pen; among them his "Defence of the Whigs" in 1844, and a review of Cambreleng's report on commerce and navigation, in which he presents able arguments in favor of a protective tariff. While he achieved great success in his novels, he will be longest remembered by his "Life of Wirt," his "Defence of the Whigs," and his other political and biographical writings. His style is remarkable for its simplicity, vigor, clearness, and elegance.

KENTUCKY. From the returns of the Federal census, taken in 1870 (see table on the following page), it appears that Kentucky has a population of 1,321,001, which shows an increase of 165,320 since 1860. This gain is distributed among about eighty counties. Of the remaining thirty-five, six are new counties, formed since 1860 out of territory then included in other counties. Their formation

will account for the decrease of population in some fifteen others. About fourteen have fallen off from other causes. Some counties have decreased because the abolition of slavery has induced many negroes and not a few whites to migrate to the cities and towns located on rivers and railroads. Paris, Lexington, Frankfort, and other cities, have grown by accessions from the rural population of their own and the surrounding counties. The net increase of Jefferson County, including Louisville, is 29,581, but the population of Louisville was 68,033 in 1860, and is now 100,732—showing an increase of 32,699—while the population of Jefferson County, without the city, was 21,871 in 1860, and is now but 18,208, showing a decrease of 3,663.

There are 20,568,652 acres of land in the State, valued at \$217,672,826, and 61,535 town lots, worth \$93,546,957. The number of horses in the State was 851,205, and their value \$21,125,808; mules, 88,472, valued at \$5,850,314; cattle, 620,713, value \$7,911,460. The amount of taxable property owned by negroes is stated at \$2,528,671.

The State debt of Kentucky at the end of the fiscal year, which falls on the 10th of October, was \$1,424,394, of which \$68,394 is over-due. The past-due indebtedness is represented by bonds of the State, as follows:

Bonds bearing 5 per cent. interest, due May, 1865.....	\$5,000 00
Bonds bearing 5 per cent. interest, due April, 1867.....	5,000 00
Bonds bearing 5 per cent. interest, due July, 1868.....	15,000 00
Bonds bearing 6 per cent. interest, maturity not given.....	394 00
Bonds bearing 6 per cent. interest, due November, 1870.....	48,000 00
	<hr/> \$63,394 00

That portion of the debt not due is represented by the following bonds:

Bonds maturing in 1871.....	\$40,000 00
Bonds maturing in 1872.....	250,000 00
Bonds maturing in 1873.....	519,000 00
Bonds maturing in 1874.....	136,000 00
Bonds maturing in 1875.....	20,000 00
Bonds maturing in 1876.....	2,000 00
Military bonds, bearing 6 per cent. interest, due in 1896.....	809,000 00
	<hr/> \$1,434,394 00

The Sinking Fund resources to meet this indebtedness are:

Balance in the Treasury October 10, 1870....	\$408,908 31
Amount belonging to the Sinking Fund, but not transferred.....	32,558 81
Amount loaned by Sinking Fund to Kentucky River Navigation Company.....	10,000 00
7,789 shares Bank of Kentucky stock, at par.....	778,890 00
400 shares Bank of Louisville stock, at par..	40,000 00
200 shares of preferred stock of Louisville, Cincinnati, and Lexington Railroad.....	26,000 00
2,178 shares, stock of Lexington and Frankfort Railroad, estimated at 50 cents.....	108,900 00
Bonds of Louisville and Frankfort Railroad. Turnpike road stock held by State in various turnpikes in Kentucky, amounting to \$2,544,359 65—estimated at cash value..	254,433 96
Amount loaned by Commissioners of Sinking Fund under several acts of the Legislature to Revenue Department proper....	515,179 98
	<hr/> \$2,539,297 46

						Total.....	1,321,001	1,155,681

This leaves a surplus in the resources of the Sinking Fund of \$1,114,908.46. There is a considerable sum still due from the United States to the State of Kentucky for money advanced for military expenses during the war. Of this, \$175,884.57 were collected during the year, and \$1,173,761.86 remain to be paid.

The revenue of the State during the last fiscal year was:

Amount received from sheriffs from October 11, 1869, to October 10, 1870.....	\$707,301 41
Amount received from corporations.....	\$17,300 70
Total.....	\$924,602 11
Balance in Treasury on October 10, 1869.....	72,148 83
	\$996,750 93

The expenditures amounted to \$1,082,639.92, leaving a deficit on the 10th of October, 1870, of \$85,888.99. This deficit was caused by extraordinary appropriations made by the last Legislature without any provision to meet them except the ordinary revenue. Most of the present indebtedness of the State was created by this habit of making extraordinary appropriations without any provision for their payment. A deficit is thus produced in the Treasury, and bonds have been issued from time to time to supply it. The general revenue system of the State, too, is sadly in need of reform. On this subject the Governor says:

Our revenue system calls loudly for revision and reform. Its present defects are glaring and patent. The constitutional requirement of uniform and equal assessment of taxable property is almost wholly disregarded. A proper and equal assessment of property throughout the Commonwealth would double its value. It is assessed at one-sixth or one-tenth

of its value in some sections of the State, while in others it is returned at three-fourths or four-fifths. Some assessors adopt a specie, others a currency standard. Flagrant injustice to the tax-payer, and a diminished amount of revenue, are the natural results of existing inequality in assessments. Great irregularity exists, also, in the collection and payment of the revenue.

In his last message to the Legislature he recommends "an enactment creating a board, to consist of the Auditor, Treasurer, and Attorney-General, who shall prepare and report to the next General Assembly a codification and revision of all the revenue laws of the Commonwealth, with power to frame a system which shall equalize assessments, increase the revenue, and regulate its prompt collection."

The number of convicts in the Penitentiary on January 1, 1871, was 680. Of these, 645 are males, and 35 females. The number received during the past year was 319. The number discharged on time during the year was 192. The number of deaths during the year was 20. Of the whole number of convicts, 866 are white, and 814 are colored. The Penitentiary is already overcrowded, and the number of convicts is rapidly increasing. Larger accommodations will soon be imperatively demanded, and there is a conviction, to use the language of the Governor, "of the absolute necessity for a thorough change and reformation of the existing prison system." A House of Reform is in process of construction, and will be ready for use on the 1st of July, 1871. It will cost about \$48,000, and will accommodate from 75 to 100 boys.

The school revenue of the State amounts to \$776,239.56, and the number of children enjoying its benefits is 890,118. This allows about \$2 per year for each child.

The Legislature which met on the 6th of December, 1869, at Frankfort, continued in session until the 22d of March, 1870, and then adjourned to the 4th of the following January. This was the regular biennial session of the General Assembly, which is limited by law to sixty days, unless extended by a two-thirds vote of both Houses. Such extension was voted, and the actual number of days of the session was upward of eighty. During this time nearly 900 bills and resolutions were passed, but very few of them were measures of importance. Although the Legislature at a former session had refused to ratify the fifteenth amendment of the Federal Constitution, the question was brought up again and referred to the Committee on Federal Relations, who reported adversely upon it. Their report was approved by a large majority.

The bill for imposing an additional tax of 15 cents on every \$100 of taxable property in the State for the benefit of the Common School Fund, which had been before the Legislature at the previous session, was now passed. It contains the following provisions:

The additional tax imposed by this act, and the taxes and assessments for common-school purposes imposed by acts heretofore passed, shall be levied and collected of the property of white persons only. The revenue arising from the Common School Fund heretofore created, and that arising from the taxation imposed by this and all previous acts, shall be expended for the education of white children exclusively.

The act entitled "An act for the benefit of the negroes and mulattoes of this Commonwealth," approved March 9, 1867, and the amendments thereto, subsequently passed, are not intended by this act to be altered, amended, or in any way affected, but the same are hereby left in full force for the purposes of their passage.

A bill was also passed "to amend and reduce into one the several acts in relation to common schools." This does not materially change the system of education of the State. There is a State Superintendent of Public Instruction, a board of commissioners of public schools in each county, and local trustees in the districts, all of whom are elected by a vote of the people whose interests they represent. The trustees are required annually to make a census of the white children of their several districts between the ages of 6 and 20 years, and the result is to be reported to the State Superintendent by the county commissioners. The school year begins on the 1st of July, and there must be in each district a common school for at least five months of 22 school-days each. The wages of teachers are fixed by law, and range from \$20 to \$40 per month.

Perhaps the most important legislation of the session was that relating to corporations. A general law was passed for the incorporation and regulation of insurance companies, and a

Bureau of Insurance was established in connection with the office of the Auditor of Accounts. Any persons intending to form an insurance company are required to file a declaration of such intention with the Commissioner of Insurance, who is the head of the Bureau, and the charter of the company, when formed, must be filed with the same officer, and certain security deposited in his office as a guarantee of a legal and regular transaction of business. Agents of the companies are required to take out licenses, and a sworn statement of the business of each company must be made annually, and lodged with the commissioner. This officer is appointed by the State Auditor, and continues in office during the term for which the Auditor is elected, and until a successor is named. His salary, which is \$4,000 a year, and those of his clerks and subordinates, are paid from a fund formed by certain fees and allowances paid by insurance companies in their transactions with the Bureau. The commissioner is required to visit and inquire into the affairs of any insurance company doing business in the State, on the requisition of five or more persons, each of whom is a stockholder or creditor of the company, or in any way pecuniarily interested therein, provided such requisition shall contain a sworn statement that the persons making the same believe the company to be in an unsound condition. He may also make such an examination if he suspects the correctness of the annual statement of the company, or if that statement indicates any unsoundness in the condition of its affairs. At such times he shall have access to its books and papers, and shall thoroughly inspect and examine all its affairs, and make such inquiries as are necessary to ascertain its condition and ability to fulfil its engagements, and whether it has complied with all the provisions of law applicable to its transactions.

In case of companies not organized under the laws of the State he has a similar power to examine into their affairs, and, if they refuse to permit this, the Auditor shall, at the request of the commissioner, revoke all certificates granted to such companies, and require their agents to discontinue issuing or renewing policies under a penalty of \$500 for each offence. The commissioner is authorized to summon and examine, under oath, the directors, officers, and agents of any insurance company, and such other person as he may think proper, in relation to the affairs, transactions, and condition of said company. Whoever, without justifiable cause, refuses to appear and testify when so required, or obstructs the commissioner in the discharge of his duty, shall, for each offence, be punished by a fine not exceeding one thousand dollars, or by imprisonment not exceeding one year; and if the directors, officers, or agents of any insurance company not incorporated by the Commonwealth of Kentucky, but transacting business therein, shall refuse to appear and testify when so required, the Auditor

shall, on requisition of the Insurance Commissioner, revoke the certificate of authority and license of such company and its agents. If, in the opinion of the commissioner, any company has violated the law, he is required to report the facts to the Auditor, and the Auditor shall notify the Attorney-General, whose duty it shall be to prosecute the offender if the evidence obtained in the investigation seems to warrant it. The commissioner is required to make a full report annually of the value of outstanding policies, and the returns of the several companies, and to keep a full record of all proceedings, which shall be open to public inspection, subject to such rules as may be made for their safe-keeping. Any person, on payment of certain fees, may have a certified copy of any paper, report, or document, in the office. In case the fees received by the Bureau are not sufficient to meet its expenses, the commissioner is authorized to supply the deficiency by the assessment of an equal amount upon each of the insurance companies doing business in the State.

The Insurance Bureau was organized in accordance with the provisions of this law, on the 20th of May, and Gustavus W. Smith was appointed to the responsible position of Commissioner of Insurance. A report was made at the end of the year, from which it appears that there are now one hundred and fifty-two insurance companies operating in the Commonwealth. Of these, sixteen were incorporated by the Legislature of Kentucky, one hundred and fifty-one by other American States, and five by foreign governments. Four Kentucky companies have ceased to do business, and gone into liquidation, and four others are reported as declining to do business. With reference to the value of this new department of the State government, Governor Thomson says, in his last message:

When we remember that two thousand millions of dollars are estimated as already invested in the purchase of policies issued by insurance companies, whose operations are daily expanding everywhere; that the practical operations of life-assurance companies have been heretofore involved in mystery; it must be a source of profound satisfaction to the people of Kentucky that a Bureau has been successfully established within the Commonwealth, under the sanction of law, where, by accurate calculations of competent and faithful actuaries, any policy-holder can promptly acquaint himself with the real condition of the affairs of any company; the extent of its business; the actual cash values of policies issued; and what constitutes a fair premium for any proposed contract of insurance; and yet this Bureau—so invaluable as a safeguard against fraud, ignorance, and imposition—has been put into successful operation without the increased expenditure of one dollar to the State.

A general law was also passed "for the organization of incorporated companies, except banking, assurance, and railroad companies." This requires all such corporations to adopt articles of incorporation, and file the same with the clerk of the county where their business is carried on, and to publish a notice specifying the following matters:

1. The names of the corporators, the name of the corporation, and its principal place of transacting business.
2. The general nature of the business proposed to be transacted.
3. The amount of capital stock authorized, the times when, and the conditions upon which, it is to be paid in.
4. The time of the commencement and termination of the corporation.
5. By what officers or persons the affairs of the corporation are to be conducted, and the times at which they are to be elected.
6. The highest amount of indebtedness or liability to which the corporation is at any time to subject itself.
7. Whether private property is to be exempt from the corporate debts.

Ample provisions are made for the security of the stockholders and the general public against fraud and the exercise of unlawful powers.

After the passage of these general laws, a resolution was adopted, declaring "that, from and after the fourth day of January, 1871, neither branch of the General Assembly will consider or pass any act incorporating any company that can be incorporated by the general laws of this Commonwealth."

As usual, considerable time was given to railroad legislation. Several new charters were granted, including one for a "road to be known as the Louisville, Memphis, and New Orleans," and to connect the cities mentioned in the title. An attempt was made by Cincinnati capitalists to secure a franchise for a railroad line connecting that metropolis with the South through the State of Kentucky. After a long debate, and many amendments intended to secure the rights of the State, the act containing the proposed grant was defeated. The opposition seems to have grown out of a popular jealousy of the power and influence of wealthy corporations in general, and of those belonging to other States in particular.

An act was prepared by a special committee of three, in the Lower House, providing that the election of members of Congress should take place not as heretofore, in November, but on the first Monday of August. This, however, failed to pass. Among other important measures which were considered, but not adopted, was one establishing a Bureau of Immigration and Statistics, and one providing for a revision of the statutes of the State.

Before the close of the session, a preamble and resolution were introduced into the House of Representatives, declaring that, whereas outrages and murders had been committed in the State by a "society or organization known as the Ku-klux," therefore the Judiciary Committee be instructed to report measures for bringing the offenders to justice. After some consultation, the members arrived at the conclusion that no such organization existed, and adopted the resolution without the preamble; but no measures were introduced for the suppression of disorders. There were, however,

many instances of lawlessness in different parts of the State, and several proclamations were issued by the Governor in the course of the year, offering rewards for the apprehension of offenders against the law, whom the ordinary processes of the established tribunals failed to reach. No occasion, however, appeared on which it was deemed necessary to resort to military force in order to secure the peace of the community. The Governor, in his message to the Legislature of 1871, calls attention to the necessity of prompt and more stringent legislation for the more perfect preservation of order. "While in the main," he says, "there is, perhaps, as much security for life and property in Kentucky as in the adjacent States, it cannot be disguised that, since the close of the war, and as a kind of outgrowth of it, lawlessness has, to a greater degree than ever before, displayed itself everywhere. During and immediately following the war, Kentucky, from its geographical position as a border State, was subjected to a more severe ordeal from this cause than her neighbors; and accordingly, during the first years of my administration, lawlessness in some portions of the Commonwealth manifested itself in formidable organizations, which defied the local authority, and perpetrated deeds of open violence under pretext of restoring order and punishing crime. By the use of the militia at my command, and the exhibition of my firm purpose to suppress such practices at all hazards, tranquillity was restored, and there has not been for some time, in the localities which had suffered from such lawlessness, any demonstrations having the semblance of organized resistance to the law. Still, in various portions of the State, there have been committed by lawless persons, acting in bodies generally under cover of night, and sometimes in disguise, acts of violence upon individuals, either wholly innocent of offence or only subjects of criminal prosecution through the courts, most of which class of violators of the law have escaped detection and punishment."

He recommends that some efficient means be adopted to remedy these evils, and that the Executive be invested with greater "discretionary power in any sudden emergency to act where the public security requires it." He furthermore urges a thorough reorganization of the militia, as "an important adjunct in the enforcement of law."

The subject of inducing immigrants to settle in the State was discussed on several occasions by important public bodies.

The Governor took occasion to repeat his recommendation that a Bureau of Immigration be established which should send agents abroad to make known the advantages offered by Kentucky as a place in which to seek a home. "It is through such a channel alone," he says, "that we can make Europe accurately acquainted with the low price of our lands, under which lie such inexhaustible supplies of valu-

able coal and iron; our forests of lumber; our healthy climate; low rate of taxation; our extensive and expanding system of public schools; and the productive character of our soil."

The ratification of the fifteenth amendment to the Federal Constitution was celebrated by the freedmen and their friends in the different cities of the State in the early part of April. At Louisville, on the 8th, a very enthusiastic and imposing ceremony took place, at which the following resolutions were adopted:

Whereas, After almost a century from the date of the grand declaration made by the founders of this Republic, we at last realize in its fulness the fact therein announced, "That all men are created equal, endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness:"

Resolved, That we recognize in the adoption of the fifteenth amendment to the Constitution the grandest event that has occurred in the history of our country: a victory of right over wrong, of liberty over slavery, of freedom over oppression, and in this the complete and final triumph of the principles set forth in the ever-memorable Declaration of Independence.

Resolved, That as citizens we rejoice that the last vestige of human bondage has been struck out forever from our institutions, and that the laws of the nation now give equal rights to all men. We rejoice that henceforth all the avenues to places of trust, of honor, and of profit, are open alike to all; we believe that every citizen should stand upon his own merits, and that, as he demonstrates his fitness only, should he be preferred.

Resolved, That we will stand by and still support and uphold the Republican party, which crushed out the attempt to perpetuate human bondage, and which, by its heroic devotion to liberty, ground out of existence a rebellion which had its origin in wrong and its purpose the destruction of that government consecrated to freedom by the patriots of the Revolution.

Resolved, That we demand the entire abrogation and repeal of all laws now on the statute-books of our State, which discriminate between man and man. That the words "white," black, negro and mulatto, wherever they occur in our statutes, be erased. That our laws shall be for man and man; full and equal rights in all our courts of justice, and in political rights; and especially do we demand that taxes for school purposes shall be levied upon and collected equally from all citizens and property in the Commonwealth, and that every child in the State shall be entitled to share alike in the benefits of the same.

Resolved, That we most heartily indorse the courageous and manly stand taken by the President of the United States in his inaugural address, and his persistent energy in following up that position in favor of "manhood suffrage," until the final ratification of the fifteenth amendment has secured this to all. In imitation of his reply on a memorable occasion, we here announce that we have no terms to make with Kentucky Democracy. "We propose to move immediately upon their works. We demand an unconditional surrender" and the complete and final abrogation of all laws now on our statute-books which make distinction by reason of race, color, or previous condition of servitude.

Resolved, That we heartily indorse the bill recently introduced into Congress by Senator Morton, of Indiana, to enforce the provisions of the fifteenth amendment, and we earnestly urge upon Congress its speedy enactment into a law; that a law of this character is urgently needed to protect the newly-enfranchised citizens in their rights.

Resolved, That we have no feeling of bitterness toward those who sought to perpetuate slavery by war, and who have persistently, to the very last, re-

sisted the enfranchisement of all men. We only have feelings of sadness at their many shortcomings; at their illiberal and malignant spirit, and at the wickedness which has so long, and still appears to govern their hearts and divert their minds. We throw wide open our doors to all lovers of justice and right, without regard to *race, color, or creed*, and invite them to join us in administering the government on the principles of equal and exact justice to all, and we will gladly welcome to our ranks every erring, wandering sinner who returns.

The political canvass of the year in Kentucky was unimportant. There were no State officers to be elected, and therefore no general convention was held by either party. The election for members of Congress occurred on the 8th of November, and a Democrat was chosen in each of the nine districts, generally by large majorities.

Before the close of the year a call was issued by the chairman of the Democratic State Central Committee for a convention to be held on the 7th of January, 1871, at Frankfort, to nominate candidates for the regular State election of that year. Several of the county conventions, at which delegates were chosen, declared in favor of John Young Brown for Governor, and others named Thomas McCreery.

KING, AUSTIN A., a political leader in Missouri, born in Sullivan County, Tenn., September 20, 1801; died in St. Louis, April 22, 1870. After receiving what was esteemed a good education at that day, he studied law, and in 1830 removed to Missouri to practice. His talents gained him influence in his new home, and in 1834 he was chosen to the Legislature, and reelected in 1836. In 1837 he was appointed judge of the Circuit Court, and held the position till 1848, when he was chosen Governor of Missouri. In 1860 he zealously espoused the cause of Douglas, became a conspicuous champion of the policy and claims of that distinguished statesman, and was sent to Charleston as a Democratic delegate to the Presidential Convention at that place, where he made one of the most earnest and effective speeches delivered in that body, in behalf of his candidate. In 1862 he was restored to his old place as circuit judge of the Ray judicial district, but shortly afterward he resigned to take a seat in the Thirty-eighth Congress, to which he had been elected. After the expiration of his congressional term, he retired to his home at Richmond, and devoted himself to the practice of his profession and the cultivation of his farm. In person Mr. King was tall, dignified, of gentle manners and affable address. He was a man of strong intellect and great eloquence.

KINGSLEY, Right Rev. CALVIN, D. D., Bishop of the Methodist Episcopal Church;

died in Beyroot, Syria, aged 58 years. He was born in Annsville, Oneida County, N. Y., September 8, 1812, and was the eldest of a family of twelve children. His early opportunities for study were limited, but he laid the foundations of his education by night study, and the careful improvement of the intervals of his working-hours. It was early his purpose to enter the ministry, and by teaching in country schools he saved enough to partially defray the expenses of a collegiate education; in 1836 he entered Alleghany College, whence he graduated with honor in the year 1841, having twice left the institution to earn the money requisite for the completion of his course. In the year of his graduation he was elected professor of Mathematics in Alleghany College, and discharged the duties of that position for several years, taking upon himself also the work of preaching. In the year 1843 the Pennsylvania Legislature withdrew the appropriation for State colleges, and Prof. Kingsley was selected, in connection with others, for the work of raising funds for the endowment of his college, in which he was eminently successful. In 1844 he was stationed in Erie, Pa., and, at the close of his term as pastor, returned to the college, and remained for a number of years a member of the faculty. At the session of the General Conference at Boston, in the year 1852, he was at the head of his delegation, and made so favorable an impression, though a comparative stranger, that he received forty votes for bishop. In 1853 he received the degree of D. D. from Genesee College. In 1856 he was a prominent member of the General Conference, and a member of the Committee on Slavery. At this conference he was chosen editor of the *Western Christian Advocate*, succeeding Dr. Elliott in that position. Dr. Kingsley displayed much editorial ability in his connection with this paper, and it became a powerful influence in the West. In 1860 he was chairman of the Slavery Committee in the General Conference, and managed the discussion on that subject with great ability. He was at that time reelected editor of the *Advocate*, and at the breaking out of the war brought its whole support to the aid of the Government.

In 1864 Dr. Kingsley was elected bishop at the General Conference, and in the discharge of these duties started in the summer of 1869 upon a tour around the world. He went by the way of Oregon and California, and, having visited many points in Asia, had in his progress homeward reached Beyroot, where he suddenly died of disease of the heart. Dr. Kingsley was the author of a work on the "Resurrection of the Body."

L

LAWOESTINE, ALEXANDRE CHARLES ANATOLE ALEXIS, Marquis de, a French General and Senator, born in Paris December 25, 1786; died there May 1, 1870. He was descended on his father's side from a German ancestry, was the grandson of Madame de Genlis, and the godson of Louis Philippe. At the age of nineteen he was a sub-lieutenant of cavalry, and took part in the great campaigns of the French armies between 1805 and 1814. In Spain he served as aide-de-camp of General Sebastiani, and, in the campaign of 1812, in Russia, was promoted to be major after Moskowa, and colonel after the battle of Arcis-sur-Aube. At Waterloo he commanded the Third regiment of Chasseurs. Under the Bourbon Restoration he retired from the service, but, after the Revolution of 1830, he was made colonel of the Fifth Hussars, and was promoted to the lieutenant-generalship in 1841. After the revolution of 1848 he was removed from command, but was reinstated the following year. Having attached himself to the fortunes of the Prince-President, he was put in command of the National Guard of Paris some days before the *coup d'état*. In January, 1852, he was made a Senator; in October, 1863, appointed governor of the Hospital *des Invalides*, and authorized by the Emperor to receive the special title of "Excellency." The marquis was promoted to be Grand Officer of the Legion of Honor in 1847, and Grand Cross in 1858.

LEE, ROBERT EDWARD, LL. D., an American soldier and educator, born in Stratford, Westmoreland County, Va., January 19, 1807; died in Lexington, Va., October 12, 1870. He was the son of General Henry Lee, the "Light-Horse Harry Lee" of the Revolutionary War, the personal and political friend of Washington. His father died when he was eleven years of age; but his example and influence led him to aspire to the profession of arms, and in 1825, at the age of eighteen, he entered the Military Academy at West Point, where he was graduated in 1829, second in rank in a class of forty-six. Among his classmates were Generals O. M. Mitchel, James Barnes, Swords, C. P. Buckingham, Burbank, Brice, Thomas A. Davies, Hoffman, and Caleb C. Sibley, of the Union Army, and Generals Joseph E. Johnston, T. H. Holmes, and Blanchard, of the Confederate Army. The young cadet was at once appointed to a lieutenancy in the corps of Topographical Engineers, and through the uneventful years of military life between his appointment and the Mexican War rose only to the rank of captain. His singular capacities had, however, impressed themselves strongly on his superiors, and, when General Scott invaded Mexico, Captain Lee was appointed Chief Engineer of the army under General Wool. In

this branch of the service, Captain Lee, like the great Bonaparte, won his first recognition, and General Scott instantly advanced the young officer to whose skill he attributed the reduction of Vera Cruz. He was placed on the general staff and directed almost exclusively the engineering operations of the army of invasion. In every action subsequently fought during the campaign, General Scott took occasion to mention the skill, enterprise, and wonderful judgment, of his young aid. Lee received three promotions for his services in the campaign. In April, 1847, he was breveted major in recognition of his brilliant coöperation at Cerro Gordo; in August, for gallant and meritorious conduct at Contreras and Churubusco, he was raised to the rank of lieutenant-colonel; and in September of the same year received the brevet rank of colonel for services at Chapultepec. He was assigned in 1852 to the important post of Superintendent at West Point, retaining his field-rank.

In this position he remained three years, initiating valuable reforms and augmenting the efficiency of the Institute by wise measures and profitable suggestions to Congress. Through his recommendation, the course of study, which had hitherto covered but four years, was increased to five, rendering it as complete and rigorous as those in Europe. In the midst of this brilliant administrative career, Congress authorized the raising of two cavalry regiments, and of the second Brevet-Colonel Lee was appointed lieutenant-colonel. The regiment was commanded by Albert Sydney Johnston, who afterward preceded Colonel Lee in the command of the Army of Northern Virginia. The regiment, when organized, in 1855, was sent to Texas, and remained on duty on our Southwestern border until 1859, fighting Indians and performing general garrison duty. In the autumn of this year Colonel Lee returned to Washington and took active part in the hunting down of John Brown. He proceeded vigilantly against the feeble band at Harper's Ferry, and in a short time all who were not killed were prisoners. He resorted to no extreme measures, and it is on record that the prisoners were saved from the fury of the Virginia mob solely by his firmness.

In February, 1861, Colonel Lee rejoined his regiment at San Antonio, Texas, and remained there until December 12, 1860, when he returned to Virginia on leave of absence. On the 16th of March, 1861, he was commissioned colonel of the First Cavalry. On the 20th of April, 1861, Colonel Lee, after a service of twenty-five years, resigned his position in the United States Army, sending his letter of resignation to General Scott, at Washington. It was in the following terms:

ARLINGTON, VA., April 20, 1861.

GENERAL: Since my interview with you on the 18th inst., I have felt that I ought not longer to retain my commission in the Army. I therefore tender my resignation, which I request you will recommend for acceptance. It would have been presented at once but for the struggle it has cost me to separate myself from a service to which I have devoted all the best years of my life and all the ability I possessed.

During the whole of that time—more than a quarter of a century—I have experienced nothing but kindness from my superiors, and the most cordial friendship from my comrades. To no one, general, have I been as much indebted as to yourself for uniform kindness and consideration, and it has always been my ardent desire to meet your approbation. I shall carry to the grave the most grateful recollections of your kind consideration, and your name and fame will always be dear to me.

Save in defence of my native State, I never desire again to draw my sword. Be pleased to accept my most earnest wishes for the continuance of your happiness and prosperity, and believe me most truly yours,
R. E. LEE.

To his sister, the wife of an officer loyal to his flag, he wrote:

MY DEAR SISTER: I am grieved at my inability to see you. * * * I have been waiting for a more "convenient season" which has brought to many before me deep and lasting regret. We are now in a state of war which will yield to nothing. The whole South is in a state of revolution, into which Virginia, after a long struggle, has been drawn; and though I recognize no necessity for this state of things, and would have forborne and pleaded to the end for redress of grievances, real or supposed, yet in my own person I had to meet the question whether I should take part against my native State. With all my devotion to the Union, and the feeling of loyalty and duty of an American citizen, I have not been able to make up my mind to raise my hand against my relatives, my children, my home. I have, therefore, resigned my commission in the army, and save in defence of my native State—with the sincere hope that my poor services may never be needed—I hope I may never be called upon to draw my sword.

This was the only "definition" of his position ever given by him. From his early training, and all his State associations, he was a supporter of the doctrine of State rights. His resignation was instantly accepted, and he at once took up his residence in Richmond, as commander of the forces of Virginia, with the rank of major-general, to which he had been appointed by Governor Letcher. He remained in his State, and set to work to organize the State troops, declining any command that took him into the general service of the Confederacy. At this time Montgomery was the Confederate capital, and the Virginia troops were virtually independent; but, soon after the assumption of command by General Lee, the seat of government was transferred to Richmond, and he was formally recognized as one of the insurgent chiefs, receiving the rank—hitherto unknown in this country—of full general, the commission coming from the Confederate War Department. He was thus placed third on the list of the Confederate army roster, Cooper and Albert Sydney Johnston only outranking him in priority of appointment. He was assigned to command the forces in Western Virginia, to oppose Generals McClellan and Rose-

crans. The campaign was one of the feeblest of the whole list of Confederate operations, and the brilliant promise of Lee was obscured by disaster, bad management, and defeat. In two or three decisive actions, McClellan, or rather Rosecrans, captured or destroyed his army and finished the campaign in West Virginia. Transferred from this field he took command on the coast and established his headquarters at Charleston, S. C. His only aim was to defend the coast towns, and he seems to have been successful in holding the less exposed points. Here he remained until spring. Meantime the Confederates had grown tired of Jefferson Davis as a military leader, and earnestly pressed General Lee for the position of general-in-chief of their armies. The desire was acquiesced in by the President, and General Lee was transferred to Richmond as sole director of all the armies of the Confederacy, subject only to the supervision of the President. He assumed his new office in March, 1862, just as McClellan was cautiously preparing his Peninsular invasion. The presence of Lee as an organizer was at once felt in all the Confederate armies, and new vigor seemed to inspire the Army of Northern Virginia, which had heretofore met with no marked success since the affair at Bull Run. In May the army of General McClellan lay advantageously posted about the northern approaches of Richmond, and the North was in daily expectation of the fall of the Confederate capital.

Early on the 31st began that fearful series of battles which resulted in the failure of McClellan, and the transfer of operations north of the Potomac. At Seven Pines, on May 31st, General J. E. Johnston was badly wounded, and General Lee took the field in person. He established his lines firmly and immediately assumed the offensive, against the entire right wing of McClellan's army. This movement he followed up with vigor, and in less than a week the Army of the Potomac was protected by the gunboats at Harrison's Landing on James River. At Malvern Hill, however, the tide was turned, the Confederates were repulsed with very heavy loss, and the ablest officers criticised Lee harshly for endangering his army and capital by so ill-judged an action.

Early in this series of brilliant offensive operations, General Lee had dispatched General Jackson, with his corps, to move up the valley and drive McDowell and Banks back upon Washington and Harper's Ferry. As soon as McClellan was paralyzed, Lee began a northward movement with all his forces, and in a very short time appeared with Jackson in the Valley and on the plains of Manassas. The movement began on the 18th of August, and Pope's army was demolished and driven back upon Washington by the 2d of September. The suggestion of this campaign, beyond all question the most brilliant and vigorous of the Confederate movements during the war, is claimed by the friends of Jefferson Davis, who

urge that Lee was forced, against his written protest, to advance upon Washington. However this may be, the conduct of the campaign reflects the greatest lustre upon Lee and his lieutenants.

Up to the defeat of Pope, and the crushing of the Army of Northern Virginia, brilliant success had attended the legions of Lee. Soon, however, Lee met at Antietam a repulse hardly less disastrous than the whole series he had inflicted upon the Northern army. General McClellan, with the remnants of his old army, and recruits hastily summoned to the field, met the combined Confederate armies, flushed with continuous triumphs from the James to the Potomac, and drove them back.

On the 29th of January, 1863, General Burnside, who had succeeded McClellan, attacked Lee's position at Fredericksburg. The slaughter was frightful, and Lee had merely to hold his own to gain the victory—a victory, however, which was more the result of unfavorable weather and inefficiency among Burnside's subordinates than of the skill or bravery of General Lee's army. After this action, Lee's army was greatly depleted by the detachment of Generals Longstreet and Hill's corps, sent to aid the armies in Southern Virginia and North Carolina.

Early in the spring Lee prepared for a new invasion of the North, and, after, by skilful strategy, defeating Hooker at Chancellorsville, and throwing him off his guard for a time, he marched northward in several columns, crossed the Potomac, at Harper's Ferry, Williamsport, Edward's Ferry, etc., and invaded Chambersburg, York, and other towns in Pennsylvania. Meade succeeding Hooker, rapidly formed his combinations, and while Lee, with his usual laxity, made trivial diversions with his cavalry, the Federal army hastened toward Gettysburg, and presented a formidable front when Lee had concentrated his veteran troops there. The story of Gettysburg is too well known to need repetition here. By a singular combination of chances, or skilful generalship, the fragments of the army retreated successfully over a long line held by an enemy, and almost unmolested reached its impregnable position on the Rappahannock. Here the peculiar genius of Lee again came into play, and from the remnants of his old army and the raw material of new levies he mobilized an army that held Grant in check through the almost daily battling of an entire twelve months. He met Grant in the Wilderness with an army of at first not over 50,000 men (though soon reinforced to somewhat more than 80,000), and so skilfully conceived were his movements, and so admirable his positions, that the second day's fight closed with little more than the results of a drawn battle. Then followed in rapid succession the struggles through the Wilderness, the change of front to Cold Harbor, the crossing of the James, and the siege of Petersburg. Through this campaign Lee shone with the most

conspicuous lustre. Outnumbered at all points, he kept in check a greatly superior army, and with one arm held Grant, while with the other he preserved his capital. None were more cordial in attestation of the ability and skill exhibited by Lee in the conduct of this great campaign, than his able and eventually successful antagonist. While manœuvring his own battalions in the Wilderness and on the Chickahominy, General Lee still kept a vigilant eye on the approaches to Richmond, and by his direction General Beauregard was summoned from South Carolina to confront Butler on the Appomattox. Keeping Grant's army constantly on the move and fighting all the time, Lee reached Richmond and was secure, for a time at least, to reorganize and fill up his fearfully-diminished ranks. Little time was gained, however. Grant struck vigorously for the southern defences of Richmond. He moved with celerity for Petersburg, but Lee was ahead and held the town with a handful of men till his favorite corps reached the place. The siege of Petersburg is an historical picture, whose details cannot be retouched without weakening. Surrounded on all sides, the beleaguered Confederacy, through Lee, put forth every effort. The struggle at the mine, the death-grip at Fort Steadman, showed the lingering life of a hopeless cause. Lee, hoping against hope, ordered the attack on that last fatal day, and failed utterly. On the 2d of April, 1865, his line was broken at all points, and his army, scattered and broken, laid down its arms to General Grant at Appomattox Court-House, Virginia, on the 9th, General Lee consummating the capitulation in the following note in answer to the proposition of General Grant:

HEADQUARTERS ARMY OF NORTHERN VIRGINIA, }
April 9, 1865.

GENERAL: I have received your letter of this date, containing the terms of the surrender of the Army of Northern Virginia, as proposed by you. As they are substantially the same as those expressed in your letter of the 8th inst., they are accepted. I proceed to designate the proper officers to carry the stipulations into effect.

R. E. LEE, General.

Lieutenant-General U. S. Grant.

The next day General Lee took formal leave of his army in the following address:

HEADQUARTERS ARMY OF NORTHERN VIRGINIA, }
April 10, 1865.

After four years of arduous service, marked by unsurpassed courage and fortitude, the Army of Northern Virginia has been compelled to yield to overwhelming numbers and resources.

I need not tell the survivors of so many hard-fought battles, who have remained steadfast to the last, that I have consented to this result from no distrust of them, but, feeling that valor and devotion could accomplish nothing that could compensate for the loss that would have attended the continuation of the contest, I have determined to avoid the useless sacrifice of those whose past services have endeared them to their countrymen.

By the terms of agreement, officers and men can return to their homes, and remain there until exchanged. You will take with you the satisfaction that proceeds from consciousness of duty faithfully performed, and I earnestly pray that a merciful God will extend to you His blessing and protection. With

an unceasing admiration of your constancy and devotion to your country, and a grateful remembrance of your kind and generous consideration of myself, I bid you an affectionate farewell.

R. E. LEE, General.

General Lee was called to the presidency of Washington College, Lexington, Va., on the 28th of September, 1865. His executive ability, his enlarged views of a liberal culture, his extraordinary power in the government of men, his wonderful influence over the minds of the young, and his steady and earnest devotion to duty, made the college spring, as by the touch of magic, from its depression after the war to a condition of permanent and widely-spreading usefulness. As president, in his relation to the faculty, he was genial, courteous, and considerate. Toward the students he was firm in discipline, yet forbearing, sympathetic, and encouraging to all. During the five years, 1865-'70, in the discharge of his official duties as president of the college, which were entered upon under most trying circumstances, and maintained with severe patience and noble devotion to the end of his life, he exhibited qualities not less illustrious than any which he displayed in his military career, and which, as they were necessary to complete the perfect harmony of his character, connected his fame in a peculiar sense with the history of Washington College. On all occasions he sedulously avoided notoriety, and sought to quiet the asperities of the people of the South, and to pave the way for a reconciliation between the lately hostile sections, and unquestionably accomplished much toward so laudable an end.

General Lee was a man of distinguished personal presence, and, at the commencement of the late war, remarkable for a commanding manly beauty. Conscious, as he undoubtedly was, of the possession of high intellectual abilities as well as of great personal attractiveness, he was singularly devoid of pretension or conceit. A man of pure morals, and of rare courtesy and refinement, his death was a great loss to the South, and indeed to the whole country, which was, of late, under obligations to him for his efforts to promote harmony and peace.

LEMON, MARK, a dramatist and editor, born in London, November 30, 1809; died in London May 23, 1870. He received his education at the Grammar-School of Cheam, Surrey, and early began to write for the press. Some of his childish productions were well worthy of preservation. He was for some time engaged as a dramatic writer, and occasionally appeared upon the stage, though his public performances were generally in aid of distressed actors. On the establishment of *Punch*, a British comic periodical, in 1841, he became assistant editor, and, two years later, upon the retirement of Mr. Mayhew, the chief editor, succeeded that gentleman in the editorial chair, and retained the control of the paper until his death. In addition to his contribu-

tions to *Punch*, Mr. Lemon was the author of over sixty dramatic pieces and numerous articles published in London periodicals. He also edited a collection of jests, and wrote about a hundred songs, many of which appeared in the *London Illustrated News*, of which he was for many years literary editor. In 1849 he published "The Enchanted Doll;" in 1859, "A Christmas Hamper, a Collection of Stories in Prose and Verse;" in 1863, "Wait for the End;" in 1864, "Legends of Number Nip," and "Loved at Last;" and, in 1866, "Falkner Lyle," "Story of Two Wives," "Leighton Hall," etc. Mr. Lemon was an assistant of Mr. Dickens in the conduct of *Household Words*. He was a man whose sympathies with the poor, the unfortunate, and the oppressed, were always broad and hearty; he had all of Thackeray's hatred of shams and snobbery, and in all the pages of *Punch*, while he was its editor, there was never any indication of a disposition to truckle to wealth, power, or title, or to be other than the fearless advocate of the right and true; and these characteristics made its satire so terribly effective. England never lost a manlier man than Mark Lemon.

LEOPOLD II., JEAN JOSEPH FERDINAND CHARLES, ex-Grand-duke of Tuscany, born in Florence, October 3, 1797; died in Rome, January 29, 1870. He was the second son of the Grand-duke Ferdinand III., was educated at Würzburg, Germany, where he became a brilliant scholar, particularly in German and Italian literature. In 1814 he returned to Florence, and in 1817 was married to the Princess Marie Anne, daughter of Maximilian of Saxony. Having succeeded his father, January 17, 1824, he continued the administrative traditions of Leopold I., known as Emperor of Germany under the title of Leopold II., and who had made the duchy of Tuscany one of the most flourishing states of Italy. At the outbreak of the Italian revolution in 1848, the duchy, under the Grand-duke's administration, was the most advanced of all the Italian states in liberty, toleration, and the material amelioration of the condition of its inhabitants, and that prince was one of the first to yield to the exigencies of the time. But the demands of the revolutionists more than kept pace with his concessions. The progress of the democratic party, the pressure for coöperation with Piedmont in the war against Austria, and the bold measures of the republican ministry, compelled him to fly from Florence. After the downfall of the revolution, which had not (in Tuscany) any real root in the country, the return of Leopold was hailed with joy by the people. Had he been at this time wise and independent enough to pursue steadily his old plans of progress and education, Tuscany might still have been an independent state and he its ruler to the day of his death. Thus it happened that, when the second revolution came in 1859, he was again compelled to fly. He abdicated in favor of his son, Ferdinand IV.,

July 21, 1859, but it was too late; Tuscany was arrayed against Austria during the whole of the war of 1859, and soon after its close, notwithstanding the provisions of the Treaty of Villa Franca, was annexed to Sardinia, and the Tuscan princes were forced to remain in exile. Leopold II. was in private life a man of fine attainments as a scholar and antiquarian. He had edited and published in most sumptuous style the works of Lorenzo di Medici in 4 vols., folio: Florence, 1825.

LIBERIA, a republic of Western Africa, founded in 1822; declaration of independence dated July 26, 1847. President, elected January 8, 1870, E. J. Roge; Vice-President, J. S. Smith; Secretary of State, J. N. Lewis. The Legislature is composed of the Senate and the House of Representatives; the Vice-President of the republic is Speaker of the Senate, which consists of 8 members, elected for the term of four years; the House of Representatives has 18 members, elected for the term of two years. The republic has concluded commercial treaties with the United States, the North-German Confederation, Great Britain, France, Belgium, Denmark, Italy, the Netherlands, Sweden, Portugal, Austria, and Hayti.

The Republic of Liberia, originally a colony of emancipated slaves from the United States, under the auspices of the American Colonization Society, has now had a government of its own for more than twenty years. The hopes which were entertained by its founders and by the Colonization Society in the United States, in regard to the development and welfare of the young republic, have been thus far but partly realized. The country is uncommonly rich in natural resources, but the Liberians are unwilling to apply themselves to agricultural pursuits, and do not, up to this time, produce a sufficiency of the necessities of life for their own subsistence. Shipments of flour and salt-beef are annually made from the United States, and distributed among the inhabitants. The consul of the North-German Confederation at Monrovia reported to his government, in 1868, that the commerce of the country was still entirely disproportionate to its natural resources, to the great extent of the coast, and the available harbors. The attention of the trading class of the population was almost exclusively directed to the traffic with the wild natives in the interior, with whom they exchange articles of European manufacture against palm-oil, dye-woods, and ivory, which constitute the staple articles for export. In 1868, the imports of manufactured articles from North-German ports were estimated at \$200,000.

Concerning the immigration of negroes from America, the consul reports as follows:

The immigrants, after landing at the port of destination, are furnished with the necessities of life for the next six months, the provisions being, however, not generally of good quality. They are then brought under shelter in large barns, in which from one hundred to one hundred and fifty live together. Flour, butter,

ham, and cheese, soon get spoiled, and become utterly unpalatable; many of the new-comers are prostrated by fever during the first month of their residence in the country, while hardly one of them remains exempt from disease during the second month. Their temporary residence soon becomes extremely filthy, which circumstance, together with the insufficient medical attendance, produces great mortality, one fourth of their number being carried off during the first six months after their arrival. After the lapse of this period, the surviving immigrants are compelled to leave their provisional abode, without finding new homes, and without sufficient means to erect comfortable dwelling-houses. They build miserable huts, and commence the tilling and cultivation of a small patch of land, on which they raise potatoes and manioc. The majority remain in a suffering condition, and a great many of them die before they are one year in the country. It might be profitable to plant coffee-trees; unfortunately, however, they do not become productive until they are six years old.

The public schools are in a wretched condition, all the flattering reports to the contrary notwithstanding. It appears to me that it would be decidedly more appropriate to keep these ignorant people in a country, where there are better schools, where all the means of their gradual civilization are abundant, and where they can easily provide for their own material welfare, rather than to send them over here, where the greater number of them inevitably relapse into complete barbarism.

LITERATURE AND LITERARY PROGRESS IN 1870. The year 1870, if the number only of publications be considered, would compare not unfavorably with the preceding twelvemonth in respect to literary productiveness. But the number of books that lay claim to notice, as solid additions to the literature of the English language in America, is small. This, indeed, proves nothing as to our intellectual activity. The valuable books that issued from the press last year were written in the years preceding; the books written last year, or in process of writing, will be published and reported hereafter. While war and political agitations have checked literary pursuits in a large part of Europe, and the Vatican Council, with its anti-climax of the downfall of the temporal power, added to the intensity with which the public mind is determined to the consideration of religious and ecclesiastical topics—with a decided revolutionary tendency—we in this country could not look for exemption from their influence. Our traditional isolation from Europe, politically, may be maintained for an indefinite period. Interest here coincides with a conservative and reverential sense of duty to maintain the policy of Washington. But the telegraph and rapid mail communication bring us into close neighborhood with the Old World, and vicinity excites sympathy. So our periodical writing is on topics similar to those that occupy European writers, and the people's thoughts follow. On our side of the sea there is a new set of political and social questions coming up, demanding settlement, the remote prospect of action on them encouraging independent speculation. This suspense of action gives an aimless look to discussion. But, though the total product does not amount to much in the lists of new books, it is enough to indicate

that an increased attention is attracted to the higher departments of political inquiry.

A change in the law of copyright has been made, enlarging the subjects of copyright and making some changes in the method of securing its benefits. To "books, maps, charts, musical compositions, prints, cuts, engravings, dramatic compositions, and photographs," are now added, as subjects of copyright, negatives of photographs, paintings, drawings, chromos, statues, statuary, and models, or designs, intended to be perfected, as works of the fine arts. To obtain a copyright, application is now to be made to the Librarian of Congress, and not, as formerly, to the Clerk of the District Court. The applicant sends to the address of the Librarian, by mail, a printed copy of the title of the book, or other article, or a description of the painting, drawing, etc., for which a copyright is desired; and, within ten days after publication, two copies of the book, or other article, and a photograph of the painting, etc. These go free of postage, if the words "copyright matter" are written upon the package. By the same law, the records of copyright that have been heretofore preserved in the Clerks' offices are transferred to Washington. However the convenience of the Government may be promoted by these changes of process, that of authors and publishers would have been more consulted by leaving the old machinery of the law untouched. So large a proportion of the copyrights on record has been obtained at New York and Boston, that the removal of the records to Washington does not by any means increase the facilities for consulting them. One incidental benefit resulting from the change is, that the direct communication with the Librarian makes it more certain that the Library of Congress will have every copyrighted book. Already the effect is shown in the steady increase of the collection.

In the law of international copyright, no change has taken place, and the state of things alluded to in last year's review of literary movements is not altered unless for the worse. The competition in republishing the writings of popular English authors has increased to such a degree that only a very large demand could render their publication here profitable. But, with the large and increasing number of readers, the sale of some books is large enough to admit a not unprofitable division of the receipts among two or more rival houses. It is no doubt true, also, that the result of such competition is to make some classes of books cheap, to the advantage of readers with slender purses. But such benefit is dearly purchased by a system which denies the claim of literary property as such to protection, virtually offers a bounty on English over American literature, and thus tends to the discouragement of American authors.

In reviewing the literary product of the past year, we give for obvious reasons the

first place to books written, not merely published here. And among these, if we have regard to the quantity produced, the precedence clearly belongs to

Theology and Religion.—Including popular and juvenile books, the volume of literature under this head is relatively large. "Essays on the Supernatural Origin of Christianity," by Prof. George P. Fisher, is the reissue of a work that had merited and received a very favorable public estimate, with additional matter bringing it up to the latest developments of opinion and criticism on the topics it embraces. "Primary Truths of Religion," by Bishop Clark, of the Protestant Episcopal Diocese of Rhode Island, is a discussion of some of those principles the acceptance of which is antecedent to and is implied in a faith in revealed religion, marked by an absence of conventional phraseology, and by a tone of candor, and a style combining ease of expression with due seriousness and weight of thinking. Of the same general description is "Steps of Belief," by Dr. James Freeman Clarke, who by a somewhat similar path would lead from atheism or secularism, through deism, to Christianity, to Protestant Christianity, and to Liberal Protestantism as the ultimatum. "Letter and Spirit," by the Rev. Richard Metcalf, applies the distinction intimated in the title to vindicate the Unitarian interpretation of "the letter." "Pater Mundi; or, Modern Science testifying to the Heavenly Father," by the Rev. E. F. Burr, is an attempt to make science in its recent developments serve the argument of Natural Theology. It shows a command of scientific knowledge, and a skill in using it, which are of advantage to the force of the argument, an advantage subject to some deduction, from a sometimes unchastened luxuriance of style. "Every-Day Subjects in Sunday Sermons," by the Rev. R. L. Collier, without any special profundity of thought, connects moral ideas in very pleasing association with the observations and experiences of daily life. "The Doctrine of the Holy Spirit," by James B. Walker, is offered as a second volume of "The Philosophy of the Plan of Salvation," a remarkable book, still deservedly popular; "Living Questions of the Age," by the same author, falls below the reputation gained by his earlier work. The Rev. H. W. Beecher's "Sermons" and "Lecture-Room Talks," though not productions likely to add to his reputation, exhibit the qualities which account for and sustain it. An indifferent theologian and a rash exegete, and inclined to dispute the jurisdiction of logic in religion, his power of imagination and breadth of sympathy, his capacity for intense passion, and versatility of resource, give him an unequalled influence in the pulpit, on the platform, or through the press. A remarkable exemplification of his hold on men's minds is seen in such a phenomenon as a volume of "Morning and Evening Exercises" selected from his writings. "Music Hall Sermons," by

the Rev. W. H. H. Murray, of Adirondack fame, so entitled from the place where they were delivered, we suspect, owe more of their success to the author's celebrity in other matters than to any intrinsic superiority. "Miracles, Past and Present," by the Rev. William Mountford, as the title intimates, argues the credibility of miracles on grounds which, making them less exceptional events than in the popular notion, makes them also perhaps of less theological significance. The discussion is conducted in a style of remarkable freshness, and is agreeable reading even when one is obliged to protest against the thoughts that are so pleasantly uttered. The author combines a sincere faith in Christianity, as a revealed system, with openness to conviction, on sufficient evidence, of revelations more recently made by alleged "Spiritual" media. "Holy Matrimony," by the Rev. J. A. Bolles, sets forth with considerable force that view of the subject which is held by a portion of the Protestant Episcopal Church, and which approaches the Roman Catholic doctrine. "The Christian Rule of Marriage," by the Rev. Howard Malcom, D. D., discusses (to state the topic more fully), with logical force, the rule that should govern the Christian in contracting marriage, but leading to a conclusion which is seldom practically recognized in cases where the question actually arises. "The Extent and Efficacy of the Atonement," by the same author, argues with like energy of style, and earnest zeal, in behalf of the high Calvinistic doctrine on that subject. "The Christian Law of Marriage," by Hugh Davey Evans, LL. D., is a work of great ability, written in a style of considerate, judicial calmness, and presenting what may be termed a moderately strict ecclesiastical view of the subject, but stated with the skill of a good lawyer. The biographical sketch of the author adds much to the value and interest of the volume. His character was such as it is good to become acquainted with. "The Invitation Heeded," by the Rev. James Kent Stone, D. D., sets forth, in a pleasing style and an excellent spirit, the reasons which led the author to leave the Protestant Episcopal and enter the Roman Catholic Church. A review of it, under the title, "How the Rev. Dr. Stone bettered his Condition," treats with extraordinary controversial ingenuity the issue that he provoked. "The Boston Lectures," 1870—"Christianity and Skepticism"—is a series of lectures delivered by eminent divines and scholars in the interest of Christianity as against prevailing tendencies to skepticism, and as a whole is worthy of their reputation and of the cause they champion. "The Signs of the Times, as connected with the Vatican Council," by Bishop A. O. Coxe, is of a character obviously indicated by the title, not so much a polemic against Rome, as a plea for Protestant unity. "Judaic Baptism," by the Rev. J. W. Dale, D. D., is one of a series of books treating very exhaustively of an old controversy,

but to which the author claims he has brought some fresh evidence. "God Sovereign and Man Free," by N. L. Rice, D. D., is an able vindication of the doctrines of divine foreordination and human freedom, and of their consistency. "Our Oriental Missions," by Bishop Edward Thomson, D. D., LL. D. (whose death on his passage homeward, from a visit to the East, was a great loss to the Methodist Episcopal Church), gives the results of observations in India and China, valuable to the supporters of the Methodist missions there, but not adding very much to the information of the general public. "The True Unity of Christ's Church," by the Rev. S. S. Schmucker, D. D., is "a renewed appeal" for "the reunion of the evangelical churches," Christian and fraternal in spirit, bearing ample evidence to the author's excellence, but, we fear, hardly practical in its proposals. "Work-day Christianity," by Alexander Clark, has its literary merit and pervading spirit vouched for by no less an authority than Mr. Bryant. "The Unseen World," by the Rev. R. C. Shimeall, is at once speculative, exegetical, polemic, and sentimental, offering a little for divers sorts of readers, in a remarkable combination. In small compass, under the title, "Successful Preaching," much sound instruction is given, in addresses to theological students, by three of the most successful preachers, Drs. John Hall, Theodore L. Cuyler, and H. W. Beecher. A more extensive and complete treatise on the same subject is that of Rev. Dr. J. A. Broadus: "A Treatise on the Preparation and Delivery of Sermons," exhibiting much critical acumen, "sound, roundabout sense," and felicity of statement and illustration, shaded by some slight negligences of style. Another work of merit in the same department is "Sacred Rhetoric; or, a Course of Lectures on Preaching," by Robert L. Dabney, D. D. "The Scripture Doctrine of the Person of Christ," by J. A. Reubelt, D. D., is said to be "freely translated from the German of W. F. Gess, with many additions." The freedom of translation, thus allowed, consists, in part at least, in modifying the author's text so as to make it utter the translator's views on matters in which they are not agreed—an unwarrantable liberty, it seems to us. The book is mainly orthodox, according to the ancient confessions, but free in speculation and as clear in style as the nature of the subject and the course of argument could well admit. "The Theology of Christ," by the Rev. J. P. Thompson, D. D., is a fresh, vigorous, candid, and very interesting discussion of the leading doctrines of evangelical religion, which are deduced exclusively from the words of Christ. "Our Seven Churches," by the Rev. Thomas K. Beecher, is a title given to a series of lectures in which the author gave, from his own point of view, a statement of good things which each of the different denominations of Christians could claim as peculiar to itself—very pleasant, not very profound. He suc-

ceeded in pleasing some of the "churches" so well, that they have circulated large editions of the lectures that concern themselves respectively. "Jesus; His Life and Work, as narrated by the Four Evangelists," by Howard Crosby, D. D., is a life of Christ, not dissertation upon it; and is founded on a strict exegesis, excluding, as far as possible, imaginations and conjectures. It is elegantly printed and illustrated. "Light at Evening-Time; a Book of Support and Comfort for the Aged," by John S. Holme, a volume that by its generous type would attract old eyes, is composed of appropriate selections from ancient, mediæval, and modern writers, with original contributions from several contemporaries of repute. Under the title "Living Words," some unwritten sermons of the late John McClintock, D. D., LL. D., from phonographic reports, are presented to the public. They are a fit but inadequate memorial of that excellent and variously gifted divine. "Presbyterian Reunion; a Memorial Volume," commemorates the reunion by a narrative of the course of proceedings through which it was reached; a review of the history of the two branches during the period of separation, biographical, statistical, and other matter, of great interest to the denomination concerned. Much good taste and good feeling are shown by the authors of the volume. "The Open Door," by the Rev. J. Hyatt Smith, properly comes under the department of fiction. But its polemical purpose, to advocate unrestricted communion, gives it a place here. Its literary merit is slight; its value as an argument, as is the case with most theological arguments, depends a good deal on the receptivity of the reader's mind. "Christianity and Greek Philosophy," by B. F. Cocker, D. D., investigates "the Relation between Reflective Thought in Greece and the Positive Teaching of Christ and His Apostles." Ancient philosophy is exhibited as a providential preparation for Christ, and bearing a part as truly as Judaism in the Divine arrangement for the education of the world. This conception of the best Pagan thought is not as novel as the author would seem to suppose; but, on the other hand, it is not so generally accepted as to render a work like this superfluous. It is popular in style, suggestive rather than definitive, and coming near to anticipate matters suitable for a promised volume on "Christianity and Modern Thought." The references made are to works generally accessible, and the discussion is neither so profound nor so wide in its range as to put it beyond the reach of the general reader.

A religious periodical that was distinguished for its liberal scholarship, as well as by its liberal religion, the *Christian Examiner*, has ceased to exist. The denomination whose views it represented have in its place an interest in a new monthly magazine called *Old and New*, very skilfully edited by the Rev. E. E. Hale. This periodical, though less theolo-

gical and less scholarly than that which it swallowed up, is probably superior to it as a means of popularizing the religious ideas it represents. Meanwhile, a monthly magazine, styled *The Examiner*, has been set up in Chicago as an organ of "radical Christianity," or anti-supernaturalism; Rev. E. C. Towne is editor. It is a bold, uncompromising work, showing more zeal than discretion or good taste.

Popular commentaries on the Bible are multiplied in a way to indicate a large demand for such works. Rev. N. Marshman Williams has commenced a series of notes on the Gospels, of which a volume on "Matthew" has been published; a similar series has been begun in like manner by the Rev. George W. Clark, who is also author of a very meritorious "Harmony of the Four Gospels in English." Rev. Henry Cowles, D. D., has added to his works on the Hebrew prophets a volume of "Notes on Proverbs, Ecclesiastes, and the Song of Solomon." His expositions, while giving evidence of careful and critical study, are in the best sense popular. A "Commentary on Paul's Epistle to the Romans," by William S. Plumer, D. D., LL. D., is copious in its citations of ancient and modern interpretations, strictly orthodox, and in style more dogmatic than critical. "Bible Notes for Daily Readers" is the title of a commentary on the whole Bible, by Ezra M. Hunt, M. D. It is creditable to his industry and sincerity, but, though his two comely volumes contain much excellent matter, we think that students of the Scriptures would be more benefited by a work showing a readier perception of the difficulties of Scripture, and skill in meeting them. Few works of a more learned and elaborate sort appear. The gigantic undertaking to produce in English, with large additions, Dr. J. P. Lange's "Commentary on the Holy Scriptures" (*Bibelwerk*), of which notice has been before made, still goes on, commanding a degree of patronage which would have been thought to be scarcely within possible expectation a few years ago. Volume vii. of the New Testament has appeared, containing four of the Pauline Epistles. Mention may be properly made here of the completion of the American edition of Dr. William Smith's "Dictionary of the Bible," under the editorial care of Prof. Hackett and Mr. Ezra Abbot. The work forms four volumes—one more than in the English edition—and is not excelled for thorough editing by any similar work. Much additional matter has been introduced, some corrections have been made, the facilities for reference have been increased, pictorial illustrations added, and it has a unique place among the means of biblical study. The following works, of which there is not room for particular notice, may be summarily mentioned:

An Essay on the Liturgy of the American Church. By the Rev. William P. Lewis.

The Expiatory Sacrifice of the Cross. By J. H.

Merle D'Aubigné, D. D. Translated from the French.

The Devout Christian's Help to Meditation on the Life of our Lord Jesus Christ. Edited by the Rev. T. J. Carter. 2 vols.

Why All Christians should read God's Written Word in Greek.

Sanctum Sanctorum; or, Proof-Sheets from an Editor's Table. By Theodore Tilton.

Good Things selected from the Congregationalist and Boston Recorder, 1868-'70.

A Manual Commentary on the General Canon Law, and the Constitution of the Protestant Episcopal Church in the United States. By Francis Vinton, S. T. D.

Annihilationism not of the Bible. By Rev. N. D. George.

Jesus. By W. H. Furness.

Home and Family Relations in the Light of Scripture.

What is Judaism? By Rev. Raphael D'C. Lewin. Sermons preached in Memorial Church, Baltimore, by Rev. Octavius Permichief. Edited by Charles Lanman.

A Biblical View of the Church Catechism in Reference to Baptismal Responsibilities. By M. R. F.

The Threefold Grace of the Holy Trinity. By John H. Egar, B. D.

The Song of the Redeemed. By Rev. J. W. Harsha. Early Scripture History. The book of Genesis.

Devotion to the Sacred Heart of Jesus. By S. Franco, S. J. Translated from the Italian.

The Church is Apostolic and Episcopal, not Papal and Monarchical. By the Rev. Andrew Field Freeman.

Prayers and Devotional Meditations, selected from the Psalms of David. By Elihu Burritt.

The Other Life. By William H. Holcomb, M. D. Shiloh; or, Without and Within. By W. M. L. Jay.

The Religion of Good Sense. By Edward Richer.

Discourses on the Rationality of the Christian Religion, etc. By Rev. Abel Silver.

Notes on the Books of Genesis, Exodus, Leviticus, and Numbers; 4 vols. By C. H. M.

The Book Above All; or, The Holy Bible, etc. By T. H. Stockton, D. D.

Opinions concerning the Bible Law of Marriage. By One of the People.

The Destiny of Man; a Discussion between Rev. S. P. Carlton (Universalist), and Elder W. D. Moore (Christian).

Conferences delivered in the Cathedral of Notre-Dame in Paris. By Rev. Père Lacordaire. Translated.

Whither Bound? A Book for the Impenitent. By A. M. M.

One Religion, Many Creeds. By Ross Winans.

The Bible Text Cyclopedia. Being Scripture Texts in the form of an Index of Subjects. By Rev. J. Inglis.

Sermons. By Rev. Russell Trevitt.

The Gospel of the Kingdom; a Kingdom not of This World, not in This World, but to come in the Heavenly Country, etc. By Senior Harvard.

Christ and His Church; Lectures in Advent, 1869. By Rev. Thomas S. Preston.

Experiences of the Higher Christian Life in the Baptist Denomination. Edited by John Q. Adams.

An Order of Services for the Use of the New Church. By Rev. J. C. Ager.

Crowned and Disrowned; or, the Rebel King and the Prophet in Ramah. By Rev. S. W. Culver. With an Introduction by Rev. G. W. Eaton, D. D.

The Two Great Books of Nature and Revelation; or, The Cosmos and the Logos. Being a History of the Origin and Progression of the Universe, etc. By George Field.

God is Love; or, Glimpses of the Father's Infinite Affection for His People.

The Church Idea; an Essay toward Unity. By William Reed Huntington.

Help to Devout Communion. By F. E. Lawrence.

Practical Expositions of the Whole Books of Ruth and Esther. With Three Sermons. By George Lawson, D. D. With a Memoir of his Life and Writings.

Disciplines for the Holy Baptism, Confirmation, Holy Communion, and Daily Life. By Rev. J. V. Lewis.

A Methodist in Search of the Church. By Rev. S. J. McMasters, D. D.

Romanism; its Decline and its Present Condition and Prospects in the United States. By Hiram Mattison, D. D.

Which is the Church? By Rev. G. W. Southwell.

The Career of the Christ-Idea in History. By Hudson Tuttle.

The Doctrine of Immortality. By James H. Whitmore.

Pictorial Life; or, Man's Nature, Views, Harmonies, etc. By Rev. E. H. Gillett, D. D., Rev. G. B. Cheever, D. D., Rev. Howard Crosby, D. D., and others. With Illustrations.

The Family and the Church; Advent Conferences. By the Rev. Father Hyacinthe.

A Doctrinal and Ritualistic View of the Holy Eucharist. By G. S. Lacy.

Jesus on the Throne of His Father David. By J. L. Lord.

Our Established Church.

The New Church Divine, not Swedenborgian. By Rev. Frank Sewall.

The Life and the True Light. By Rev. W. Blakie.

Conversations on Liberalism and the Church. By O. A. Brownson.

The Christ Coming in His Kingdom. By a Congregational Minister.

The Life, Passion, Death, and the Resurrection of the Lord Jesus Christ. By Rev. H. F. Formby.

Studies in Bible Lands. By Rev. W. L. Gage.

A Bible Hand-book. Theologically arranged by F. C. Halliday.

Creation, a Recent Work of God.

The Christ of God; or, the Relation of Christ to Christians. By R. Davidson.

POETRY.—One of the earliest of the books of mark came from the pen of a veteran in American Literature, the "Translation of Homer's Iliad," by William Cullen Bryant. Mr. Bryant's command over the English language, and his mastery of the harmonies of English verse, are exhibited at their best aspect in this the crowning work of his life, while he has come nearer than any of his predecessors to furnishing a clear view, as through a transparent medium, of the story of Troy as Homer tells it. It is a fine example of the compass and flexibility of our English blank verse. Criticism of it has consisted mainly in the justification by instances in detail of the praise awarded in general. The only points of exception are such as might naturally have been anticipated: that the rapidity and energy of the original are not adequately represented; and that the style, admirably clear as it is, and graceful and picturesque, has not the special grace which comes of rich classic culture. But the version now bids fair to be the recognized best English Homer for readers barred from access to the Greek. The success which our venerable poet has gained in this translation will make especially welcome the announcement that he is engaged upon the "Odyssey," a poem even better adapted to the scope and the special tendencies of his art than the "Iliad."

Mr. William W. Story, who appeared before

the public as a poet before giving himself to sculpture, published, in England, "A Roman Lawyer in Jerusalem," a poem which made no sensation, but was highly appreciated by select circles of readers. Mr. C. G. Leland has continued the series of Breitmann ballads, giving us "Hans Breitmann in Church," etc. The vein has been pretty well worked, but as long as the public does not weary of it the author has obvious inducements to persevere. "Warp and Woof, a Book in Verse," by S. W. Duffield, shows force of thought, feeling, and of expression, with an ear attuned to metrical harmonies. The author is not one of the poets of whom Wordsworth speaks, who fail of recognition because "wanting the accomplishment of verse." His versification is sometimes very effective.

"Miriam, and other Poems," by John Greenleaf Whittier, though not enough to enhance, may help to diffuse the poet's well-earned fame. The poems are suffused with the calm religiousness, the tender "Indian summer" feeling, so characteristic of his later verse. Rev. Charles T. Brooks has followed up his previous successes in the same line by the translation of Schiller's "Homage of the Arts," with miscellaneous pieces from other German poets. To the admirable versions of Dante and Homer, by our two chief poets, is now to be added a translation of Goethe's "Faust," by Bayard Taylor—the first part of which has been published, and which bids fair to distance any former attempts in the competition for public favor. Mr. Taylor's original poems have not much impressed the public, but his success as a translator is unquestionable. James Russell Lowell and John G. Saxe have sent out complete editions of their poems, though their readers, while grateful for the largess, are hoping that their works are yet far from being complete. The publication of a cheaper edition of Mr. Longfellow's noble version of Dante gives opportunity, if possible, to popularize the great Florentine; though, while our own Milton is more talked about than read, it is not likely that the reading of Dante will become "the rage."

It would gratify Mr. Carlyle to learn that the cultivation of verse, if the number of printed volumes were a test, is declining among us. That may, however, prove only greater caution in the trade. We note the following titles:

Poems by Julius Rodenberg. Translated into English verse, and the Original Metres, with the German Text on the opposite page.

Haydn and other Poems. By the author of "Life Below."

Euthanasia, and other Poems. By Lavinia J. Lawrence.

The Royal Decrees of Scanderoun. Dedicated to the Sachems of Tammany.

Poems, by George A. Townsend.

Regimen Sanitatis Salernitanum. Code of Health of the School of Salerno. Translated into English Verse by John Ordronaux.

The Golden Crop, and other Poems. By Irving Van Wart.

Poems, by Emma C. Embury.

A Chaplet of Leaves. By Jennie T. Gould.

Ivy Leaves. By Mary Ellen Atkinson.

Poetical Works of David Bates. Edited by his Son. Albion and Rosamond, and Lesser Poems. By Robert Burton Rodney.

Episodes and Lyric Pieces. By Robert Kelley Weeks.

Verses, by H. H.

HISTORY.—Less has apparently been done, in a department for which the American mind has shown special aptitude, than in past years. Mr. Francis Parkman has revised his first history, "The Conspiracy of Pontiac," and indicated his purpose to continue the narrative of the French colonial history to its natural termination, in the period covered by this work. Completed according to his plan, he will have given to the world a series of historical studies worthy of comparison with any of the admirable works scholars have added to the literature of the English language. Rev. E. H. Gillett, D. D., undismayed by the merciless criticisms his "Life and Times of John Huss" underwent, has revised, improved, and reissued his volumes with the confidence of a deserved success. Dr. J. W. Draper has completed, by the publication of the third volume, his laboriously-studied and carefully-wrought "History of the American Civil War," a work in some respects superior to any previously attempted on that subject. His view of the causes of the strife is open to criticism, and will certainly be questioned by all who have not as yet accepted the philosophy of Buckle. But, when he gets out from the theory to the facts of the war, he shows a narrative and descriptive power not easily matched. Mr. Alexander H. Stephens has completed in two volumes his review of "The War between the States." The title shows the writer's Secession or State-rights point of view. The national Government is not recognized as a party to the contest. The work is an able plea for the "lost cause." Perhaps the fact that the cause it pleads is lost has led to an unwise neglect of this defence. The cause of national unity has been vindicated by the sword to which its foes appealed. But it is also needful that it be vindicated at the bar of history, and an earnest and skilful impeachment of it deserves attention.

Of special and local histories several deserve mention. Mr. Frederick Kidder's "History of the Boston Massacre" brings together the full documentary evidence in the case, a topic of less interest now even in Boston than in the years when the only wars in our experience that had much power to stir the people's pulses were wars with Great Britain, but not to be forgotten while memory of the Revolution survives. "Rome and Italy at the Opening of the Ecumenical Council," translated by the Rev. George Prentice, from the French of Edmond de Pressensé, D. D., depicts a moment of history—a moment before the opening of a new act. Mr. S. S. Randall's "History of the State of New York," intended as a school text-book, may not unprofitably become a

family classic in that State. Mr. Benson J. Lossing continues his illustrations of our national history, with "Lives of the Signers of the Declaration of Independence," including a historical view of the Declaration, and a sketch of the leading events connected with the adoption of the Articles of Confederation, and of the Federal Constitution. Mr. Lossing would have small claims to consideration as a philosophical or statesmanlike historian, but he has a keen eye for the points of popular interest.

Our colonial and Revolutionary history still engages the diligence of societies and individual investigators. Of works on colonial history we may mention, "History of the Virginia Company of London, with Letters to and from the First Colony, never before printed," by Edward D. Neill; "A Particular History of the French and Indian War" (1744-'49); "sometimes called Governor Shirley's War," with a memoir of Major-General Shirley, by Samuel G. Drake; "Historical Collections of Louisiana and Florida," by B. F. French; and Mr. C. W. Upham's pamphlet on "Salem Witchcraft and Cotton Mather," maintaining with much ability that a large measure of responsibility for the delusion rests on the ministers of the province, and especially on Mather. It is one of those questions that are not likely to be soon, if ever, finally settled. Of Revolutionary history, besides that of the "Boston Massacre," just noticed, we have "The Military and Civil History of the County of Essex, N. Y.; also the Military Annals of Crown Point and Ticonderoga," by W. C. Watson; and "The Battle of Long Island, with Connected Preceding Events and the Subsequent American Retreat," by Thomas W. Field. Besides these, the following may be named:

History of Oregon, from 1792 to 1849. By W. H. Gray.

History of the United States of America. By H. P. Peet.

Ohio Valley Historical Series, No. 5. An Account of the Remarkable Occurrences in the Life and Travels of James Smith during his Captivity with the Indians in 1755-'59, etc.—No. 6. Dr. Daniel Drake's Pioneer Life in Kentucky.

The Records of Living Officers of the United States Navy and Marine Corps; with a History of Naval Operations during the Rebellion of 1861-'65, etc. By Lewis R. Hainersly.

The Vermont Brigade in the Shenandoah Valley. By A. F. Walker.

The Documentary History of the Protestant Episcopal Church in the Diocese of Vermont.

The Early History of the Catholic Church in the Island of New York. By Bishop Bayley.

A History of the City of Brooklyn, etc. Vol. III. By Henry K. Stiles.

Mormonism; its Rise, Progress, and Present Condition, etc. By N. W. Green.

History of the Foundation of the Order of the Visitation.

Origin and History of the Pacific Railroad. By S. Bresson.

The Fortieth Congress of the United States; Historical and Biographical. By William H. Barnes.

History of the American Stage. By T. Allston Brown.

The History of Freemasonry, from its Origin to the

Present Day. By J. G. Findal. Revised by Brother D. Murray Lyon.

The Broken Seal; or, Personal Reminiscences of the Morgan Abduction and Murder. By Samuel D. Greene.

Nathan Read; His Invention of the Multi-Tubular Boiler and Portable High-Pressure Engine, and Discovery of the True Mode of applying Steam Power to Navigation and Railways. By David Read.

Remarkable Trials of All Countries. By Thomas Dunfey and T. J. Cummins.

A Compendium of the History of the Catholic Church, from the Commencement of the Christian Era to the Œcumenical Council at the Vatican. Compiled and translated from the Best Authors, by the Rev. Theodore Noethen.

The Huguenots, or Reformed French Church. By William Henry Foote, D. D.

History of the Irish Primitive Church. By Daniel De Vinné.

The Student's Manual of Oriental History. By Francis Lenormont; edited by E. Chevalier.

BIOGRAPHY.—The "Life of Rufus Choate," by President S. G. Brown, of Hamilton College, is mainly a reprint of the biographical memoir prefixed to an edition of Mr. Choate's works, published a few years ago. No fame is more evanescent than that of a great advocate. One is glad to see that of Mr. Choate, through the favor of a good biographer, struggling with destiny, holding still the public attention, and promising to add the life of another generation to his lease of popular remembrance. "Henry J. Raymond and the New York Press for Thirty Years," by A. Maverick, excited general and favorable expectation—and disappointed it. Interesting, but as a biography of Mr. Raymond inadequate. The "Personal and Military History of Philip Kearney, Major-General United States Volunteers," by John Watts Depuyster, is a record highly satisfactory to his companions in arms of the patriotic services of the subject. The "Memoir of the Rev. John Scudder, M. D.," by J. B. Waterbury, D. D., has the interest naturally awakened by Dr. Scudder's thirty-six years' missionary service, and his remembered effectiveness in exciting public sympathy at home for his mission; though no art can fix the impression of the living voice, and the increased familiarity with the subject deprives it of the excitement of novelty. This drawback does not apply to "The History of a Working-Man's Life," by Francis Mason, D. D. In this volume we have a narrative of his early life in England, his career in this country as a mechanic, as a student under difficulties for the ministry, his missionary life, and his repeated visits to this country and Europe. The style in its simplicity and pithiness reminds one of Franklin's autobiography. The life of an indefatigable worker is recorded under the fit title, "Work Here, Rest Hereafter;" Life of the Rev. Hiram Mattison, D. D., by the Rev. N. Vansant. The death of Dickens naturally set in motion many pens, most of which did their quota of eulogy or of criticism through the periodical and newspaper press. But some sought a more permanent association with the name of the great

romancer, and thence came two biographies, one by Charles Perkins, quite as good perhaps as could have been looked for in the short time that must have been at command between the announcement of Mr. Dickens's death and that of his "Life," but bearing unmistakable marks of haste. The book was gotten up with a comely external finish. The other was by R. Shelton Mackenzie, and with the advantage of a little more time for its preparation had a more decided advantage in the facility of so practised a *littérateur* as Dr. Mackenzie. This book is enriched with a large amount of anecdote and incident respecting Mr. Dickens and his literary contemporaries. Both works supplied merely a temporary resource. The "Life of Arthur Tappan" is a biography of rare and durable interest. The identification of the subject with the vital issue which was finally tried by the wager of battle in our great civil war made him, in spite of himself, though all his life a private citizen, assume the proportions of a public character. But scarcely less interesting to contemplate are his private character and life, and the training of the Puritan home where his nature received its determining direction. The man and his manner of life are admirably depicted by his surviving brother and sharer with him in the long obloquy and late triumph of the anti-slavery cause. In the "Life and Correspondence of George Read, a Signer of the Declaration of Independence," by his grandson, William Thompson Read, a contribution is made to our knowledge of the Revolution in the persons of actors not identified with either the Northern or the Southern centre of the movement—Massachusetts or Virginia. A life, not of startling incident, but crowded with various usefulness and crowned with much deserved honor, is commemorated—it is not easy fitly to describe it—by "Memoirs of the Life and Services of the Rt. Rev. Alonzo Potter, D. D., LL. D., Bishop of the Protestant Episcopal Church in the Diocese of Pennsylvania," by M. A. De Wolfe Howe, D. D. The "Biographical Annals of Williams College," by the Rev. Calvin Durfee, D. D., author of a History of the same institution, presents in its pages what may be called without invidiousness a truer history, a history of the men whose names have given it reputation, and the men whom the college has given to the world.

In this connection mention should be again made of Lippincott's (Thomas's) Biographical Dictionary. Its successive parts, as they have appeared, have confirmed the good impression made by its first issues, as of a work that for careful editing, strict regard for accuracy, and comprehensiveness of treatment, leaves not much to be desired. To these notices we add the titles following:

Memories of a Consecrated Life; or, A Memorial Sketch of Kate McClellan.

The Memories of Fifty Years....chiefly spent in the Southwest. By W. H. Sparks.

The Life of the Rev. Thomas Brainerd, D. D.

The Genial Showman. Reminiscences of the Life of Artemus Ward, and Pictures of a Showman's Career in the Western World. By Edward B. Hingston.

Archbishop McHale; his Life and Times. A Lecture. By Martin A. O'Brennan, LL. D.

The Pastor and Preacher; A Memorial of the late Baron Stow, D. D. By Rollin H. Neale.

Hugh Davey Evans, LL. D. A Memoir founded upon Recollections written by Himself. By the Rev. Hall Harrison, M. A.

The Life and Times of David Zeisberger, the Western Pioneer and Apostle of the Indians. By Edmund De Schweinitz.

Memoir of Washington Irving. With Selections from his Works and Criticisms. By Charles Adams, D. D.

Thomas Chalmers; A Biographical Study. By James Dodds.

Life and Letters of Louis Moreau Gottschalk. By Octavia Hensel, his Friend and Pupil.

Life of Bartholomew de Las Casas, of the Order of St. Dominic, Protector-General of the Indians and first Bishop of Chiapa and New Mexico. By one of the Dominican Fathers of New York.

Brigadier-General Thomas Francis Meagher. His Political and Military Career. By Captain W. F. Lyon.

PHILOSOPHY.—It might be rash to assert that little is doing in the higher departments of philosophic inquiry—if, in the present ardor for the science of things, it may be allowed us to assume that there is any thing higher—merely because not much is publishing. It is certain that those who are interested in metaphysical and ethical speculation manifest that interest in the face of a good deal of indifference or aversion. But there are such persons, and, if this article had to do with the probabilities of the future rather than with accomplished facts, it would not be difficult to show the evidence of a steady activity in this direction. Even as an accomplished fact, it is a significant circumstance that such a periodical as the *Journal of Speculative Philosophy* continues its regular appearance, laden with expositions of the German schools of thought. Another periodical, entitled *The Modern Thinker*, has been started as the organ of adventurous and not very reverent thinkers, hardly constituting a school, with what degree of acceptance among readers we lack information. But, of books of this kind, the number that appeared during the year was small, including, however, some of more than transient interest and value.

President McCosh, of the College of New-Jersey, has come before the public with a work on Formal Logic, entitled the "Laws of Discursive Thought." He criticises Sir William Hamilton's doctrine of the syllogism, rejecting the chief peculiarity he attempted to engraft upon it. The work is marked by the author's well-known ability, but has been criticised in a way to indicate that the science of logic has its boundaries and function yet to define. But it is a pleasure to welcome so eminent a thinker into the ranks of American authors.

"Principles of a System of Philosophy," by A. Bierbower, shows some acute thinking, but is, on the whole, more ambitious than success-

ful. In "The Nation; the Foundation of Civil Order and Political Life in the United States," by E. Mulford, the ambition and the success are more nearly equal, though achievement still falls below the aim. It is in many respects one of the most valuable works on the philosophy of politics that has been produced in the United States. It shows the fruit of extensive study and profound thought. It keenly criticises some political maxims that have been assumed as if self-evident, and lays down principles of great importance. But the style is wanting in vivacity, and sometimes in clearness, and one is compelled to conclude after reading it, and after all the admiration he has expended on it while reading, that the theme has not been fully *thought out* into definite statement and certain conclusions. An "Outline of Sir William Hamilton's Philosophy," by the Rev. J. Clark Murray, with an introduction by President McCosh—who vouches for the accuracy of the "outline"—is offered as a "text-book for students." If by this is meant a text-book for schools, we must doubt the wisdom of that purpose. But for those who desire to know what Hamilton's system is, and have not time to extract it from the lectures, discussions, notes, etc., among which its several parts were left scattered by the author, it is a convenient help.

SCIENCE.—Including popular expositions, and applications to economy and health, this includes a fruitful variety, in which, however, works on pure science bear a comparatively small proportion to the whole. The Smithsonian Institution gave to the world the sixteenth volume of its "Contributions to Knowledge," containing "Results of Meteorological Observations" at Brunswick, Maine, and at Marietta, Ohio, for fifty-two and thirty-three years respectively; the "Orbit and Phenomena of a Meteoric Fire-Ball," by Prof. J. H. Coffin; "The Gray Substance of the Medulla Oblongata," by John Dean; "On the Gliddon Mumy Case in the Museum of the Smithsonian Institution," by Charles Pickering; "On the Transatlantic Longitudes," by Benjamin Apthorp Gould; and on "The Indians of Cape Flattery, at the entrance of the Straits of Fuca, Washington Territory," by James G. Swan. "The Annual of Scientific Discovery," now become in some sort an "institution," brings together a large and various mass of topics, of both scientific and practical interest, is well edited, and makes a very good exposition of the results of investigation and experiment to date. In "Scientific Results of a Journey in Brazil," by Louis Agassiz and his travelling companions, "Geology and Physical Geography of Brazil," by Prof. C. F. Hartt, of the Cornell University, are gathered some of the rich returns from an expedition furnished and manned for its work as few have been of late years. "The Naturalist's Guide in Collecting and Preserving Objects of Natural History," with a complete Catalogue of the Birds of East-

ern Massachusetts, by C. J. Maynard, is a contribution to the knowledge of Nature at home. "Sketches of Creation," by Alexander Winchell, LL. D., is a popular view of the geological history of the earth, more especially of the Western Continent, not ill adapted to its end, but wanting in simplicity of style. "Talks about People's Stomachs," by Dio Lewis, A. M., M. D., is as lively and interesting in style as a sensation story, but the author deftly mingles profit with delight. Some of his counsels are likely to be taken *cum grano salis*. Dr. W. W. Hall is the author of several works bringing the doctrines of physiology, popularly stated, to bear on questions of diet and regimen. Without very high scientific pretension, they are marked by good sense and moderation. Of these, one of the most popular was "Health by Good Living;" another was entitled "Sleep; or, the Hygiene of the Night;" and a third, "Coughs and Colds; or, the Prevention, Cause, and Cure of Various Affections of the Throat." His prolificness of books is due in part to the fact that he is the editor of a *Journal of Health*. "How Crops Feed," by Prof. S. W. Johnson, is a companion volume to "How Crops Grow," by the same author, and equally worthy of notice as a popular exposition of applied science. Mention should also be made of "The American Ephemeris and Nautical Almanac," issued from the Bureau of Navigation at Washington; "A Guide to the Knowledge of Life, Vegetable and Animal—A Manual of Physiology," by R. J. Mann, Jr.; and an American edition, revised and especially adapted to the United States, of "Elements of Astronomy," by J. Norman Lockyer. But the appetite of the public for physical science is not to be measured by the number of books that are issued to satisfy the craving. A purely literary periodical is scarcely to be found. During the hard stress of civil war, a "neutral" paper or magazine was little better than traitorous. What was weighing on every soul demanded opportunity of utterance through all the organs of literary expression. That pressure removed, things refused to relapse into the old course. The demand has continued to be made that the periodical press shall publish on matters of which the people insist upon thinking, and, just now, science divides with politics the realm once sacred to "the amenities of literature."

TRAVEL.—Records of travel in the interest of science, rank with treatises. "The Andes, and the Amazon, or Across the Continent of South America," by Prof. J. Orton, is both scientific and descriptive, and the same may be said of other publications. But as the increasing facilities for locomotion draw every year more and more people from home, while the enlarging demand for literary pabulum tempts a larger percentage of the travellers to take the public into their confidence, books of tourists' notes are likely to multiply. Some publications of the last year, in this kind, are

of exceptional interest. "Alaska and its Resources," by O. H. Dall, and "Tent Life in Siberia," by George Kennan—both fruits of an unsuccessful, at any rate, unfinished enterprise to connect us with the Eastern Continent by a telegraph-line across Behring's Straits—have the attraction of unworldly novelty and adventure. The same regions are described in "Overland through Asia," by Thomas W. Knox. A deeper interest attaches to the publication of "Passages from the English Note-Books of Nathaniel Hawthorne," in which the writer is more to us than his topics, and the objects he looked on serve us as mirrors in which to study his image. A volume awakening melancholy associations is, "The Heart of the Continent," by the late Fitzhugh Ludlow. "The Seat of Empire," by O. C. Coffin, to wit, the Northwestern Territories, along and about the course of the Northern Pacific Railway, relates and tabulates facts that stimulate the imagination, and seem to warrant the prophecy of the title. To the voluminous literature of the Union Pacific Railway is added "Kansas and the Country Beyond," by Josiah Copley; and "Letters from the Pacific Slope, or First Impressions," by Harvey Rice. "Round the World," by Bishop Kingsley, of the Methodist Episcopal Church, claims notice, and "Narrative of a Journey to Mnsarda, the Capital of the Western Mandingoes," by Benjamin Anderson. Some reprinted works of European travellers will be noticed in another place.

Works of description, rather than of narrative, may conveniently be classified here; such as the new illustrated edition of "The White Hills," by the Rev. Thomas Starr King; Mr. Benjamin G. Willey's "History of the White Mountains;" "Scenes of Wonder and Curiosity in California," by J. M. Hutchings, a guide-book to the Yosemite; Forwood's "Historical and Descriptive Narrative of the Mammoth Cave of Kentucky;" Appletons' and Harper's "Guide-books for Foreign and American Travel," and similar works, of which every year witnesses the issue of more and better than their predecessors.

SOCIAL SCIENCE AND REFORM.—The activity of the public mind, upon matters that may be generally comprehended under this title, is somewhat remarkable. We all remember a time when the peace and prosperity of our country, the restraints upon vice, and the healthful elevation of public opinion, were held up as the results of our "institutions." Our statesmen and scholars, not less than stump and Fourth-of-July orators, seemed to think that the one true system of government had at last been found, so perfect an instrument of society that it might be called the method of Nature. It is not that now people are coming to a different opinion on the whole, but there is a growing conviction that we are in exigencies which the political machinery is not adjusted to meet. Changes are proposed in the representative system. Our revenue sys-

tems, the civil service, the relation of corporations to the State, questions on pauperism, prison reform, punishments, questions on every thing that is questionable, come up for discussion. They are to a great extent, as yet, in the speculative stage. A beginning has been made here and there toward changes, at least in the way of experiment, notably in the amended constitution of the State of Illinois.

The American Association for the Promotion of Social Science, though not attracting any considerable public attention to its proceedings, by its "Journal of Social Science," published annually, brings under notice numerous topics of great importance, and, by influence upon minds able to influence others, has perceptibly affected public opinion.

Political economy would perhaps claim a place under SCIENCE. But it can hardly be called as yet an exact science. Her knights claim to have repeatedly slain the dragon of Protection, but the monster raises its head as if little the worse for their onset. The protective policy is argued for by Mr. Horace Greeley, in "Essays designed to elucidate the Science of Political Economy," a volume which may owe some of its cogency to a willingness to be convinced, but even so it is good as a sign. Mr. W. M. Grosvenor, on the other hand, in "Does Protection Protect?" examines in a lively and forcible style the effects of different tariffs upon industry.

"The American System of Government," by Ezra C. Seaman, discusses with much earnestness, and with evidently full possession of the facts regarding its practical working, the present fashion of party government in comparison with the system of government intended by the framers of the Constitution. The defects of the book are, the tendency to an indiscriminate preference against whatever is new, and, where a real abuse is deservedly denounced, a failure to point out a remedy. The popular discussion of "the woman question" has made no perceptible advance. The conservative side of the question is vigorously upheld in "Ecce Fœmina," by Carlos White.

"Principles of Domestic Science," by Miss Catherine E. Beecher and Mrs. H. B. Stowe, is, for the most part, a reproduction, in another form and title, of "The American Woman's Home." But the amount of valuable thought and suggestion contained in it makes it worth serving up in different shapes, as it may reach more readers.

Mr. William O. Bourne's "History of the Public School Society of the City of New York" is an important contribution to the recorded experience to which there is always fresh occasion for appealing in the never-completed discussion of systems and methods of education. To that discussion some important volumes have been given, especially on the side of those who defend the hitherto generally accepted methods of higher education, which so many influences combine to disparage.

"Classical Study; its Value illustrated by Extracts from the Writings of Eminent Scholars," edited, with an Introduction, by S. H. Taylor, LL. D. (the able head of Phillips Academy, Andover, Mass., whose sudden death, as we write, is just reported by the press), as its title indicates, is a vindication, for classical studies, of the place they hold in the system of liberal education. "The American Colleges and the American Public," by Professor Noah Porter, of Yale College, is on the same side of that question, but also discusses, with a conservative leaning, other questions of education, and the possibility and proper direction of improvement in our collegiate system and methods. Prof. Porter unites the accomplishments of liberal learning to the practical judgment of a successful teacher, and has handled his theme with a more complete grasp of his subject in its various relations than is shown by many who claim the public attention to their thoughts upon it. "Proceedings of the Baptist National Educational Convention," held in Brooklyn, in April, while looking to the interests of the denomination for which it was acting, include a large amount of valuable suggestion and discussion on questions as broad as the range of Christian education.

The literature of the Temperance reform has some noticeable accessions: "Rational Temperance," by H. G. Spaulding (against prohibition); "Arts of Intoxication," by J. T. Orana, D. D., including the consideration of narcotics, as well as of alcoholic means of intoxication. "Opium and the Opium Appetite; with Notices of Alcoholic Beverages, Tobacco, and Cocoa, Tea, and Coffee, etc.," by Alonzo Calkins, M. D., takes a still wider range. The "National Temperance Society" has been doing much in the way of issuing popular books, tales, and tracts for general circulation, some of them having considerable literary merit, including "The Drinking Usages of Society," by Rt. Rev. Alonzo Potter, D. D. To the same purpose is "Intemperance, its Financial, Physical, Mental, Social, and Moral Evils, and its Cause and Remedy," by Thomas W. Deering, M. D.

A controversy as to the admission or exclusion of the Bible from use in the public schools has been active, calling out, with a good deal of newspaper and periodical writing, several books, e. g.: "The Bible and the Common Schools," by the author of "The Church, Rome and Dissent;" "The Question of the Hour;" "The Bible, and the School Fund," by R. W. Clark, D. D.; "The Catholic View of the Public School Question," by T. S. Preston; "The Bible in the School—Opinions of Individuals and of the Press, with Judicial Decisions;" "A Secular View of Religion in the State, and the Bible in the Public Schools," by E. P. Hurlbut.

LAW.—After the volumes of reported decisions, mention should be made of "Criminal Pleading and Practice, with Precedents," by J. Bassett; "A Treatise on the Law of De-

scant," by A. Bingham; "On the Law relating to Banks and Banking," by J. T. Morse, Jr.; "Lectures introductory to the Study of the Law," by George Sharswood; "Leading American Railway Cases, with Notes and Opinions," by Isaac Redfield; "Criminal Pleading and Practice," by J. Bassett; "A Guide for Administrators and Guardians in the Settlement of Estates," by G. A. Clifford, enlarged by J. Bassett; "Copyright and Patent Laws of the United States, 1790 to 1870;" "Analysis of American Law," by T. W. Powell; "A Treatise on Facts, as Subjects of Inquiry by a Jury," by James Ram—American edition with additions; "A Treatise on the Remedy by Ejectment, and the Law of Adverse Enjoyment in the United States," by Ransom H. Tyler; "A Treatise on the Law of the Domestic Relations," by James Schouler; "The Lawyer's Record Book," by William Aydelotte; "Practice, Pleading, and Forms in Actions, both Legal and Equitable," etc., specially adapted to practice in California, Nevada, etc., by Morris M. Estee; "A Treatise on the Validity of Verbal Agreements," by Montgomery H. Throop; "The Powers and Duties of Town and Parish Officers," etc., in Massachusetts, by W. A. Herrick; an excellent edition of "Blackstone's Commentaries," by Prof. I. M. Cooley; "A Selection of Cases on the Law of Contracts, with Notes and Citations," by C. C. Langdell; besides improved editions of several well-known and approved works.

CLASSICAL AND OTHER TEXT-BOOKS.—The freedom with which systems of education are canvassed, and new methods insisted upon, has not sensibly weakened the hold of classical studies, as instruments of culture, upon the approving judgment of educators. On the contrary, judging by the increasing merit of the classical texts edited for the use of schools and colleges, ancient literature was never more earnestly studied. The tendency to a wider survey of it is shown by the publication of such a work as the "Captivi, Trinummus, and Rudens," of Plautus, edited by Prof. C. S. Harrison, with judicious notes and other helps for the student. Plautus is needed to a complete course of Latinity—if with the present tendencies a complete course can be aimed at. A more significant indication is the appearance of an American edition of "An English-Greek Lexicon," by C. D. Yonge, "with many New Articles, an Appendix of Proper Names, and Pillon's Greek Synonymes," and by way of introduction "An Essay on the Order of Words in Attic Greek Prose," by Charles Short, LL. D., Professor of Latin in Columbia College. "Greek composition," says a notice of Prof. Short's essay in the London *Spectator*—in the number that comes to hand as we are writing—"is almost struggling for its life in England, and it is curious to see it receiving so handsome an acknowledgment from the very country whose utilitarianism seems most opposed to such studies." The "Greek Lexicon of the

Roman and Byzantine Periods," by E. A. Sophocles, A. M., is a work that would do honor to the learning of any nation. But that, along with the culture of the ancient languages and literature, increased attention is given to those studies which are of value for the philological knowledge of our own language, sufficiently appears by the publication of two such works as "A Comparative Grammar of the Anglo-Saxon Language," by Francis A. March, Professor in Lafayette College, and "Introduction to Anglo-Saxon," an Anglo-Saxon reader, with philological notes, a brief grammar, and a vocabulary, by the same author. Lafayette College has the honor of having taken the lead in the teaching of our vernacular language in a scientific and critical spirit. The great number of text-books issued for school and college use makes adequate examination nearly impossible, and an exhaustive catalogue would have little or no literary interest. We subjoin some titles selected from the mass, not meaning to raise any presumption that some volumes as meritorious may not be passed over:

The American Botanist and Florist. By A. Wood.
The Æneid of Virgil, with Dictionary. By Nathan Covington Brooks, LL. D.
Guyot's Geographical Series.—The Earth and its Inhabitants. Intermediate Geography.
A Manual of Composition and Rhetoric. By John S. Hart, LL. D.
Latin Lessons, adapted to the Manual of Latin Grammar. By W. F. Allen and J. H. Allen.
Latin Composition. By W. F. Allen.
A German Course for Schools and Colleges. By George F. Comfort. And
Teacher's Companion to the same.
Latin Primer. A First Book of Latin for Boys and Girls. Part I. By J. H. Allen.
Latin Grammar for Schools. By J. N. Madvig.
Translated by the Rev. George Wood, revised by Prof. T. A. Thatcher. New edition.
A Latin Grammar. By B. L. Gildersleeve.
Cæsar's Commentaries on the Gallic War, with Explanatory Notes, a Copious Dictionary, etc. By Albert Harkness.
Introduction to the Study of French. By Prof. Schele de Vere.
Manual for learning Spanish. (Mastery Series.) By J. Prendergast.
The French Echo; or, Dialogues to teach French Conversation. By J. H. Worman.
A German Reader in Prose and Verse, with Notes and Vocabulary. By William D. Whitney.
Practical Grammar of the German Language. By Hermann D. Wrage.
Ahn's German Handwriting. With Notes by G. Grauert.
Plays of Shakespeare, Selected and Prepared for Use in Schools, Clubs, Classes, and Families, with Introduction and Notes. By Henry N. Hudson.
Elocution: The Sources and Elements of its Power. By J. H. Mollvaine.
Elocution and Oratory. By C. A. Wiley.
The Natural Speaker. By J. Alden, D. D., LL. D.
The Young Composer; a Guide to English Grammar and Composition. By H. N. Day.
Bullions's School Grammar.
Choice Specimens of English Literature. By J. B. Shaw and William Smith. Adapted to American Students, by B. N. Martin.
The Student's Mythology; a Compendium of Greek, Roman, Egyptian, Assyrian, Persian, Hindoo,

Chinese, Thibetian, Scandinavian, Aztec, and Peruvian Mythologies. By C. A. White.

Elements of the Hebrew Language. By Rev. A. D. Jones, A. M.

Manual of Topography, and Text-Book of Topographical Drawing. By J. Enthoffer, United States Coast-Survey.

General Atlas. By C. W. Colton. With Letter-Press Descriptions, by R. S. Fisher.

The American Drawing Book. By J. G. Chapman. Revised edition.

The First Book of Botany. By Eliza B. Youmans.

Elementary Treatise on Mechanics. By William G. Peck, LL. D.

A Condensed Etymology of the English Language, for Common Schools. By William W. Smith.

Lessons for Children in English and French, after Mrs. Barbauld's Method. Arranged by I. de Veitelle.

Physical Geography; accompanied with Nineteen Pages of Maps, etc., etc. By S. S. Cornell.

Introduction to the Latin Language. By Charles D. Morris, M. A.

The French Verb: containing the Theory and Model Conjugations of all the French Verbs, with a Dictionary of such Verbs as present any Peculiarities in their Uses or Conjugations, etc. By Ch. Reynal.

Greek Praxis, or Greek for Beginners. By J. A. Spencer, S. T. D.

Mental Arithmetic: combining a Complete System of Rapid Computations, etc. By John H. French, LL. D.

The Story of the Rocks; a Fourteen Weeks' Course in Popular Geology. By J. Dorman Steele, A. M., Ph. D.

Manual of Geography: a Complete Treatise on Mathematical, Civil, and Physical Geography. By M. F. Maury, LL. D.

A Concise School History of the United States, based on Seavey's Goodrich's History. By L. J. Campbell.

First Lessons in Greek. By James R. Boise.

Crittenden's Inductive and Practical Treatise on Book-keeping.

A Text-book of Elementary Chemistry, Theoretical and Inorganic. By Geo. F. Barker, M. D.

MEDICINE.—Including works for popular instruction, and new editions, the number of publications was considerable, among them these:

American Ophthalmological and Otological Societies' Transactions.

A Manual of Clinical Medicine. By T. H. Tanner. Revised by G. T. Fox.

Photographs of Skin Diseases, taken from Life. By H. F. Damon, M. D.

Obstetric Maxims, for the Use of Students. By Joseph G. Swayne.

On External Perineal Urthrotomy. By G. W. S. Gouley, M. D.

Diseases of Children. By J. F. Meigs, M. D., and W. Pepper, M. D.

Manual of the Chemical Examination of the Urine. By Austin Flint, Jr., M. D.

Modern Therapeutics. By G. H. Napheys, M. D.

Obstetric Operations. By Robert Barnes, M. D.

With Additions by B. F. Dawson, M. D.

A Practical Treatise on the Diagnosis, Pathology, and Treatment of Diseases of the Heart. By Austin Flint, M. D.

Handbook of Operative Surgery. By John H. Packard, M. D.

The Physiology and Pathology of the Sympathetic or Ganglionic Nervous System. By R. T. Edes, M. D.

Renal Diseases. By W. R. Basham, M. D.

A Guide to the Examination of the Urine. By J. Wickham Legge, M. D.

Golden Rules for the Treatment of Ovarian Diseases. By H. R. Storer, M. D.

On Sea-Sickness. By Fordyce Barker, M.D.
The Eclectic Practice in Diseases of Children. By John M. Scudder, M.D.

On the Wasting Diseases of Infants and Children. By Eustace Smith, M.D.

The Physical Exploration of the Rectum; with an Appendix on the Ligation of Hemorrhoidal Tumors. By W. Bodenhamer, M.D.

Maternity; a Popular Treatise for Young Wives and Mothers. By T. S. Verdi, M.D.

Conjugal Sins against the Laws of Life and Health. By A. K. Gardner.

The Preventive Obstacle, or Conjugal Onanism. From the French of Bergeret, by P. De Marmon, M.D.

Plain Talk about the Human System. By Edward Foote, M.D.

Personal Beauty; How to Cultivate and Preserve it. By D. G. Brinton and G. H. Napheys.

Practical Anatomy; a Manual of Dissections. By Christopher Heath, F. R. C. S.—Edited, with Additions, by William W. Keen, M.D.

Homœopathic Treatment of Hooping-cough. By C. von Bönninghausen, M.D. Translated, with Additions, by Carroll Dunham, M.D.

The Pathology and Treatment of Venereal Diseases; including the Results of Recent Investigations upon the Subject. By Freeman J. Bumstead, M.D. Third edition, enlarged.

The Clinical Guide; or, Pocket Repertory for the Treatment of Acute and Chronic Diseases. By J. H. G. Jahn. Translated by Charles J. Hempel, M.D. Revised and enlarged from the German third edition, enriched by the Addition of New Remedies. By Sam. Lillenthal, M.D.

Lectures, Clinical and Didactic, on the Diseases of Women. By E. Ludlow, M.D.

Lectures upon Diseases of the Rectum. By W. H. Van Buren, A. M., M.D.

Archives of Ophthalmology and Otolaryngology. Braithwaite's Retrospect.

THE USEFUL ARTS.—The practical genius of our time and country manifests itself in an extensive literature of invention, and the application of mechanical, chemical, and other sciences, of which we note the following:

Hydraulic Motors. By M. Bresse. Translated by F. A. Mahan, and revised by D. H. Mahan.

Long Span Railway Bridges—with numerous formulae and tables. By B. Baker.

Hand-book of the Steam-Engine. By John Bourne, C. E.

The Sheet-metal Worker's Instructor. By Reuben H. Warno.

The New Elements of Hand Railing. By Robert H. Riddell.

The Practical American Millwright and Miller. By David Craik.

Roasting of Gold and Silver Ores and Extraction of their Respective Metals without Quicksilver. By G. Kustel.

A Treatise on Roll-turning for the Manufacture of Iron. By Peter Turner, member of the Austrian Ministry of Mines, etc. Translated and adapted by John B. Pearce, Metallurgist.

New System of Ventilation. By H. A. Gouge. Carpenter's and Builder's Guide. By P. W. Plummer.

Barns, Out-buildings, Gates, and Fences. By G. E. Harney.

A Helping Hand for Town and Country; an American Home Book of Practical and Scientific Information. By Lyman C. Draper and W. A. Croft.

Peach Culture. By James A. Fulton.

The Gentleman's Stable Guide. By Robert McClive, M.D., V. S.

The Strawberry and its Culture. By J. M. Merriam, Jr.

Cranberry Culture. By Joseph J. White.

A Simple Flower-Garden for Country-women. By Ch. Barnard.

The Handy Book of Husbandry. By George E. Waring.

A Practical Treatise on Soluble or Water Glass, Silicates of Soda and Potash for Silicifying Stones, Mortar, Concrete, and Hydraulic Lime, rendering Wood and Timber Fire and Dry-rot Proof, etc. By Dr. Lewis Feuchtwanger.

Tactics for Non-Military Bodies. By Brevet Major-General Emory Upton.

A Set of Alphabets of all the Various Hands of Modern Use, with Examples in Each Style, etc., etc. Drawn and arranged by Frederick S. Copley.

School-House Architecture. Illustrated in Seventeen Designs, with Full Descriptive Drawings, etc. By Samuel F. Eveleth.

The Complete Phonographer. By James E. Manson, Official Stenographer to the Surrogate Court of New York.

Explosions of Steam-Bollers: how they are caused, and how they may be prevented. By J. R. Robinson, Steam-Engineer.

Illustrated Manual for Hunters and Trappers. By Joshua Hunter.

MUSIC AND ART.—In the criticism of either, scarcely any thing has come under notice beyond the current daily and weekly press reviews. The following musical books are exclusive of Sunday-school and other juvenile melodies:

The Tone Masters. A Musical Series. Three volumes [biographical].

First Steps in Music. By George B. Loomis.

Theoretical and Practical Harmony—with a Treatment of Thorough Bass, etc. By B. F. Baker.

New Method for the Reed Organ. By W. H. Clark.

Organ Companion. By the same author.

Short Voluntaries and Responses. By the same.

The Organist's Portfolio. A Series of Voluntaries, etc. Selected by Edward F. Rimbault.

The Victory: a collection of Religious and Secular Music, including the last Compositions of W. B. Bradbury. By W. F. Sherwin and C. G. Allen.

Songs of Yale. Edited by Charles S. Elliott.

New and Improved Method for the Guitar, to which is added a Selection of the most Popular Songs, etc. By W. L. Hayden.

The Sabbath Guest: a Collection of Anthems, Sentences, Chants, and Choruses. By L. O. Emerson and G. H. Morey.

The Princes of Art: Printers, Sculptors, and Engravers. Translated from the French by Mrs. S. B. Urbino.

FICTION.—In the department of prose fiction, no very striking success has marked the year. "Hedged In," by E. Stuart Phelps, is one of the most notable as a work of art, showing rare skill, and treating a difficult subject with delicacy, and with no less impressiveness. Of great merit in a different style, and of still greater popularity, is "An Old-fashioned Girl," by Miss Alcott, author of "Little Women." Some new ventures in this line by authors of note in other branches of literature have been made: "Joseph and his Friend," by Bayard Taylor, and "Beyond the Breakers," by Robert Dale Owen, for example. Both are works of decided merit, the one chiefly for its characters, and the other for the art shown in its construction, neither of them, however, making a marked impression. "The New Timothy,"

by W. M. Baker, is a tale with a clerical hero, having its scene in the South. It is fresh, racy, and met with a cordial reception. "Ten Times One is Ten, or the Possible Reformation," by Colonel Frederick Ingham—the familiar pseudonym of the Rev. Edward Everett Hale, is a well-told story by one of the best story-tellers we have. Like most of his other fictions, he has a purpose in view, indicated in the second title of the book. The charm of the tale need not be disturbed by any doubts as to the possibility of such things taking place, human nature being what it is. "Fifteen Years, a Picture from the Last Century," by Mrs. Thérèse Robinson ("Talvi"), is a posthumous publication, and shows the lack of that thorough finish which its author would have given it had there been time. But the volume does not need the association of such a memory to win to it the favorable appreciation of its readers. "Widow Goldsmith's Daughter," and its continuation, "Chris and Otho," by Julie P. Smith, show fertility of invention and power in delineation, with such defects of structure as indicate immaturity or defect of artistic capacity. "The Lady of the Ice," by James De Mille, is comedy carried to the verge of farce. Indeed, but for one character, the learned, chivalrous, and ridiculous Irish "ginthleman," the reader might almost resent the long play upon his curiosity, amusing as it is. "Margaret, a Tale of the Real and the Ideal, of Blight and Bloom," by the Rev. Sylvester Judd, by its reappearance after some years of neglect, bears witness to its vitality and truth to life in New-England. "Summer Drift-Wood for the Winter Fire," by Rose Porter, is a religious fiction superior to most of its class, in genuine feeling and purity of style. "Valerie Aylmer," by Christian Reid, the name assumed by Miss Frances C. Fisher, of Salisbury, N. C., made a very favorable impression for a first work. The Rev. Jacob Abbott, whose genius for interesting young readers is seldom surpassed, has reentered the field by publishing "The Juno Stories." But he has taught to others his art, and the volumes can hardly have the popularity they would have had if published earlier. "The Merman and the Figure-Head, a Christmas Story," by Clara F. Guernsey, is from a pen not unpractised in writing for the young, though this happens to be the only one of her tales we have read. It is an ingenious and instructive parable of society under a veil of very diverting fiction, fit for the appreciation of children of a larger growth. Some others claim mention:

Hammer and Rapier. By J. Esten Cooke.

The Schoolmaster of Abbach and Other Stories, after the German of Van Horn.

Askaros Kassia the Copt. A Romance of Modern Egypt.

The Shadow of Moloch Mountain. By Mrs. Jane G. Austin.

The Victory of the Vanquished. By the author of the "Schönberg-Cotta Family."

John Whopper the Newsboy.

What She Could. By the author of "The Wide Wide World."

Out of the Wilderness. By Mrs. J. D. Chaplin.

Adrift with a Vengeance. By Kinahan Cornwallis.

Up Broadway, and its Sequel. By Eleanor Kirk.

The Planter's Northern Bride. By Mrs. Caroline Lee Hentz.

Married in Haste. By Mrs. Ann S. Stephens.

At Last. By Marion Harland (M. V. Terhune.)

Romance of the Revolution of '76.

MISCELLANEOUS.—The issue of the second volume of Mr. S. Austin Allibone's "Dictionary of Authors," with the announcement that the third and concluding volume is completed and soon to follow, is ground for congratulating the author and the public. It is a unique work, the result of marvellous diligence put forth under the guidance of extraordinarily good judgment. The plan, now it is before the public, seems as obvious as the setting up of the egg by Columbus, but no one happened to hit upon it before, and its carrying out is as admirable as its conception. Owing to the length of time that the work has been in preparation, it is not brought down to the date of issue, in the biographical accounts of contemporary authors, or in the enumeration of their works. But the heaviest part of the task being happily accomplished, the necessary additions and amendments needed to bring the work up to any date can be made with comparative ease.

While Mr. Allibone tells us what books there are in our language, Prof. Noah Porter, of Yale, in his volume on "Books and Reading," tells young and inexperienced readers on what principles to select, and by what method to read books. The work, unlike most books of advice in this kind, is characterized by breadth, candor, a catholic taste, and unfailing good sense. "What to Read and How to Read," by Charles H. Moore, M. D., is little more than a classified list of books, with brief notes, and some good counsels. The judgments pronounced on authors are generally sound, and the work, being brought into small compass, may serve a useful purpose in aid of the selection of libraries.

Under the title, "Among my Books," Prof. James Russell Lowell has gathered a number of his critical essays, which, as they have from time to time appeared, have received more unqualified praise for discrimination, candor, wide intelligence, and delicacy of handling, than any other essays in literary criticism, especially of poetry, that have been produced among us. "Words and their Uses, Past and Present, a Study of the English Language," by Richard Grant White, as it sharply criticises contemporary writers, has been sharply criticised in return. But, though not immaculate in all its details, the book is a real service to the purity of English style, threatened as it is with a deluge of slang and ignorant pretension. "Society and Solitude" is the happy title of a new collection of Essays by Ralph Waldo Emerson—a cluster of ripe fruit from a rare tree. "Political and Miscellaneous Writings of William G. Goddard" recalls the memory of a noble

man, a good thinker, and a master of forcible and elegant English. But what he accomplished of literary work, though good as evidence of capacity, is hardly enough to give promise of very lasting fame. "A Battle of the Books," edited by Gail Hamilton, is marked by the author's sparkling wit, but must be pronounced a performance more spirited than judicious. Under the title, "Out of the Past," Mr. Parke Godwin collected some of his papers contributed at intervals for several years to periodicals. They are of various, some of them, perhaps, but not the greater part, of permanent interest. Mr. Bret Harte "awoke, and found himself famous," on the publication of "The Luck of Roaring Camp, and Other Sketches." Such instantaneous and wide-spread popularity is rare. And there is solid reason for it, though the question is open whether it is not one of the caprices of literary taste—a fashion of the time—rather than the sign of a permanent hold on men's admiration. A volume of his poems ought also to have been mentioned under the proper head; as also the poems, complete, of George Arnold. Equally sudden in his rise into popularity was Mr. Charles Dudley Warner, by the publication of a slender volume entitled "Mr. Summer in a Garden." Slight as it seemed, it was charged with humor enough to gain instant and decided favor with the public. Mr. Warner's volume was introduced by a prefatory letter from the Rev. Henry Ward Beecher. In future appearances, it may be fairly presumed, Mr. Warner will need no introducer.

"Lady Byron Vindicated," by Mrs. H. B. Stowe, restated and supported by confirmatory evidence and arguments the accusation against the poet's memory which had resounded through the civilized world. In the view of impartial criticism it will probably be concluded that, so far as Lady Byron needed vindication, the work is done and well done by Mrs. Stowe. As to Lord Byron, the verdict must be, after the Scotch formula, "not proven," rather than "not guilty." Enough is proved to show the existence of some dark mystery, at least. But it is not so easy to see on what ground it was the duty of Mrs. Stowe to make any publication on the subject. The only perceptible effect of it was to give an impulse to the sale of Byron's poems unprecedented in late years, and to call out some other publications of an unedifying description.

"Historic Americans," by Theodore Parker, is a series of lyceum lectures, which appears without the revision the author would doubtless have given before committing them to press. They consequently have some inaccuracies of statement, besides the occasional shock to traditional conceptions of the men such as his iconoclastic disposition took pleasure in causing. These little originalities of representation sometimes, like the wart in Cromwell's portrait, make the likeness more truthful, but sometimes give us an unpleasant impression of the artist.

"Sanctum Sanctorum" is the ill-judged title of a collection of newspaper leaders, by Theodore Tilton—brilliant, piquant, and adventurous. "Prenticeana, or Wit and Humor in Paragraphs," by George D. Prentice, with a biographical sketch by G. W. Griffin, gathers up a mass of "those jokes so remarkably queer" that used to delight newspaper readers and made the author's name universally and pleasantly familiar. But, as the men and the things jested about fade from people's recollection, the jests themselves grow fainter and less moving, while the effect of the best of them, read continuously, reminds one of Charles Lamb's simile of the swallowing six cross-buns daily, consecutively, for a fortnight. More varied, and appealing to more various sympathies, is the volume of brief essays by "Fanny Fern," bearing the original title of "Ginger Snaps." "The Method of Shakespeare as an Artist," by H. J. Ruggles, is a suggestive contribution to the work of Shakspearian criticism, a work that is of course to be as endless as the poet's fame.

"Life at Home," by the Rev. William Aikman, is one of those books of good counsel of which the supply is always so abundant, but above the average in quality, whether regard be had to the substantial value of the sentiments expressed and their intended effect, or—which is most to the present purpose—to its literary merit. "The Bazar Book of Decorum," so called from parts of it having appeared in that magazine of fashion and domestic wisdom, *Harper's Bazar*, is a series of advices on good manners. As politeness comes of growth in an atmosphere of culture, it is vain to dream of learning it from a text-book. But something may be done by that means, to mitigate faults and compensate for unavoidable defects; and what is possible in this respect is here done in the style of parental or avuncular admonition.

The translation of "Paris in 1851, or the *Coup d'Etat* of Napoleon III.," by Eugène Ténot, "with many Original Notes," by S. W. Adams and A. H. Brandon, was strangely opportune, coming as it did in the crisis of the empire, the origin of which the volume so vividly narrates. The history is all the more effective from the restraint under which it was written, which compelled the author to suppress all comments unfavorable to the government, and to limit himself to the statement of incontestable facts. As the naked facts are more damning than any possible adjectives or expletives, the result is a composition worth studying, for an energy that is felt rather than shown. The translators' notes are valuable. Of less intrinsic worth, though highly interesting, is a translation of "The Destroyer of the Second Republic," by Victor Hugo. A new revised and enlarged edition of "The Prose Writers of Germany," by the Rev. Dr. F. H. Hedge, indicates that the public appreciate the excellence of the selection and of

the style in which the extracts are presented in English. Just here may be thrown in a notice, omitted in its proper place, of "Hermann and Dorothea," by Goethe, admirably translated by Ellen Frothingham. Plutarch's "Morals," a reprint of an English translation "by several hands," corrected and revised by W. W. Goodwin, Ph. D., with an Introduction by R. W. Emerson, is a first-rate version of a second-rate classic.

Illustrated works and gift-books are produced in steadily diminishing quantity. One of the novelties was illustration by photographs. "Concord Sketches," being twelve photographs, from drawings by May Alcott, with preface by Louisa M. Alcott, and "Rip Van Winkle," with photographic illustrations, are good examples of the style. "The Song of the Sower," by Bryant, a poem full of exquisite pictorial effects, was published with engraved illustrations that fitly "bodied forth" the poet's visions. To these may be added "The Sunnyside Book," the themes of which are suggested by the title, and are well depicted in the accompanying plates; "Lays of the Holy Land," from ancient and modern poets; "Songs of Home," being a second part of the admired "Folk Songs;" "Light of the World," and other poems and hymns by eminent writers; "A Library of Poetry and Song," edited with the aid of W. C. Bryant; and "Our Poetical Favorites," a collection of the best minor poems in our language, by Prof. A. C. Kendrick.

Some changes and novelties in periodical publications deserve notice. The *Bibliotheca Sacra*, which has heretofore absorbed into itself the *Biblical Repository* and the *Christian Review*, has now also united in itself the *Theological Eclectic* of New Haven. A rumor went abroad that the *North American Review* was to be discontinued; it was happily without foundation, but the work appeared with some reduction of size. *Putnam's Magazine*, which inherited the name and prestige of a publication that marked a decided improvement in our periodical literature, has been merged with *Hours at Home*, in *Scribner's Monthly*; and the *Riverside Magazine*, a very cheery magazine for young people, shared the same destiny. The new venture has proved highly popular. *The Modern Thinker*, an organ for the most advanced speculations in philosophy, science, sociology, and religion, edited by D. Goodman, and *The Examiner* (before referred to), "an organ of Radical Christianity," are new undertakings;—also *The Christian Quarterly*, an able organ of the principles of the "Disciple" sect, popularly named "Campbellites;" *The American Antiquarian*, a Quarterly Journal devoted to the interests of collectors, etc.; *The Medical Times*, "a Semi-Monthly Journal of Medical and Surgical Science;" *The New Era*, a monthly periodical devoted to the interests of religion, and to the diffusion of knowledge on Judaism and Jewish literature.

The titles below represent an unclassified variety:

Sandwiches. By C. F. Browne (Artemus Ward).
The Oldest and the Newest Empire, China and the United States. By W. Speer, D. D.
My Apingi Kingdom. By Paul du Chaillu.
The Capture and Escape, or Life Among the Sioux. By Mrs. S. L. Larimer.

The River of the West. Life and Adventure beyond the Rocky Mountains.

The Maritime Canal of Suez: Memoir and Comparison of its Probable Results with those of a Ship Canal across Darien.

Interoceanic Ship Canals. An Essay on the Question of Location for a Ship Canal across the American Continent. By Henry Stuckie.

Life in Utah. By J. H. Beadle.

Crumbs Swept Up. By T. DeWitt Talmadge.

The Children's Crusade. An Episode of the Thirteenth Century. By George Zebriaka Gray.

These for Those, or, Our Indebtedness to Foreign Missions. By William Warren.

Presbyterian Reunion. A Memorial Volume.

Men and Mysteries of Wall Street. By James K. Medbery.

The Metric System considered with reference to its Introduction into the United States; embracing the Reports of the Hon. John Quincy Adams, and the Lecture of Sir John Herschel. By Charles Davies, LL. D.

American Political Economy. By Francis Bowen. Pocket Dictionary. By William G. Webster and William A. Wheeler.

The Mysteries of Masonry. Being the Outline of a Universal Philosophy.

Templar's Manual. A System of Tactics, Drill, and Ceremonial, appertaining to the Orders of Knighthood. By Order of the Grand Commandery of Illinois.

Masonic Prayers. By John K. Hall.

The American Chess-Player's Hand-book.

Woman and her Thirty Years' Pilgrimage. By W. W. Bliss, M. D.

Modern American Spiritualism. By Emma Hardinge.

The Physics and Physiology of Spiritualism. By W. A. Hammond, M. D.

The Fountain, with Jets of New Meaning. By Andrew Jackson Davis.

Vital Philosophy, a Survey of Substance, and an Exposition of Natural Religion. By J. S. McDonald.

Traces of Picture Writing in the Bible. By Rev. H. A. Miles.

Cosmology. By G. M. Ramsay.

The Composition of Indian Geographical Names. By J. H. Trumbull.

Fur, Fin, and Feather. A Compendium of the Game Laws of the United States and Canada; together with a list of Hunting and Fishing Localities, etc.

REPUBLICATIONS.—The demand for standard English literature continues to call out fresh and cheap editions, while contemporary writers in our language have the continued privilege of instructing and delighting a transatlantic public with small profit for the most part to themselves. The novels of Scott, Lord Lytton, Dickens, Thackeray, Mrs. Craik, "George Eliot," Anthony Trollope, Wilkie Collins, appear in numerous forms, some of them in competing editions. The publication of "Lothair" has revived the public interest in Mr. Disraeli's other novels, and an aside in the Byron controversy evoked a reprint of Godwin's "Caleb Williams." New editions of Miss Yonge's and Grace Aguilar's works are in course of publi-

cation. The writings of "George Sand" are appearing in a new translation. The novels of Miss Mühlbach continue popular, and those of Spielhagen are gaining in the appreciation of readers. The tales of George MacDonald are attracting a larger circle of readers. But to mention all that find ready circulation would be to name nearly the whole number. The appetite for prose fiction is the most indiscriminate of literary cravings. In poetry, three rival editions of Tennyson are in circulation. Dante Gabriel Rossetti's poems, a new volume of Morris's "Earthly Paradise," and some new poems by Miss Ingelow, have appeared; a new edition of the Rev. H. Bonar's "Hymns," and of Wordsworth's "Excursion"—the latter, surely, "a work of faith;" the works of S. Lover, and a few others. In connection with these may be mentioned a new edition of Warton's "History of English Poetry."

In biography, "The Life of Mary Russell Mitford, as told in Letters to her Friends;" the "Life of the Rev. Frederick W. Robertson," two rival editions, as also of his "Sermons;" "Charles Dickens, the Story of his Life," by the author of the "Life of Thackeray;" the "Private Life of Galileo," by Sister Maria Celeste (translated); Hezekiel's "Life of Bismarck" (translated); "Biographia Juridica, a Biographical Dictionary of the Judges of England;" and Hadyn's "Universal Index of Biography."

In science and philosophy there have been promptly reproduced here, the works of Herbert Spencer—"Principles of Psychology," and "Spontaneous Generation;" of Prof. T. H. Huxley—"Protoplasm, or the Physical Basis of Life" (which has been acutely reviewed in an essay entitled "As regards Protoplasm," by J. Hutchinson Sterling); and "Lay Sermons, Essays, and Reviews;" Sir John Lubbock's "Origin of Civilization;" Alfred Russell Wallace's "Contributions to the Theory of Natural Selection;" "The Uncivilized Races in all Countries," by Rev. J. G. Wood; "Observations on the Geology and Zoology of Abyssinia," by W. T. Blanford; "Mammalia," by Louis Figuier, with illustrations; "On Microscopical Manipulations," by W. T. Suffolk; "Geology and Revelation," by G. Molloy, D. D.; "Other Worlds than Ours: the Plurality of Worlds studied under the Light of recent Scientific Researches," by Richard A. Proctor, B. A., F. R. A. S.; "Hereditary Genius: an Inquiry into its Laws and Consequences," by Francis Galton; "Origin and Development of Religious Belief," by S. Baring-Gould; "On the Use of Wines in Health and Disease," by Francis E. Anstie, M. D.; "A Treatise on Diseases of the Eye," by J. Soelberg Wells; "Disease Germs, their Supposed Nature," by Lionel S. Beale, M. B., F. R. S.; and "A System of Medicine," by J. Russell Reynolds, M. D. To these may be added Prof. Thorold Rogers's new edition of Adam Smith's "Wealth of Nations," and a translation of Bastiat's "Soph-

isms of the Protectionists," in the department of Political Economy, and some of the volumes of the deservedly popular "Library of Wonders," which gives prominence to the wonders of Nature, though not excluding those of art and history.

In Theology and its related subjects, the best English works are, as a rule, published simultaneously or with little delay in this country. A new edition of South's "Sermons;" Bishop Temple's "Rugby School Sermons;" Bishop E. Harold Browne's "Exposition of the Thirty-nine Articles," with Introduction by Bishop Williams, of Connecticut; "Prophecy, a Preparation for Christ," the Bampton Lectures of the Rev. R. Payne Smith; "Immortality," the Hulsean Lectures of the Rev. J. J. Perowne; "Letters from Rome, on the Council," by "Quirinus;" "Letters of Spiritual Counsel and Guidance," by the Rev. J. Keble; "The Spirit of Life: or, Scripture Testimony to the Divine Person and Work of the Holy Ghost," by E. H. Bickersteth; "The Life of our Lord," by W. Hanna, D. D.; "The Administration of the Holy Spirit in the Body of Christ," by the Rev. G. Moberly; "The Early Years of Christianity—the Apostolic Era," by E. de Pressensé, D. D., translated by Annie Harwood, a work that is to occupy four volumes; Archbishop Whately's "Essays;" "Commentary on Ezekiel," by E. Henderson, D. D.; "The Martyr-Church—Christianity in Madagascar," by the Rev. William Ellis; and a "Dictionary of Doctrinal and Historical Theology," by J. Blunt, are the most noticeable.

A few books in the departments of Art, Criticism, and General Literature, shall close this enumeration: "The Arts in the Middle Ages, and at the Period of the Renaissance," by Paul Lacroix (illustrated); "The Philosophy of Art," by H. Taine, translated by J. Durand; "Lectures on Art," by John Ruskin; the useful and entertaining series of "Ancient Classics for English Readers;" "Legge's Translation of the Chinese Classics;" "Shakespeare and the Emblem Writers," by Henry Greene; "A Day by the Fire, and Other Papers hitherto Uncollected," by Leigh Hunt; Rev. Dr. Brewer's "Dictionary of Phrase and Fable;" Richard Cobden's Speeches; Lord Erskine's Speeches, edited by James Lambert High; a popular edition of "Short Studies on Great Subjects," by James Anthony Froude; cheap but readable editions of the Diaries of Pepys and Evelyn; Bacon's "Essays," with Whately's "Annotations," and "Notes and a Glossarial Index," by Franklin Fiske Heard; "The Rob Roy on the Jordan, Nile, Genessareth, the Dead Sea," etc., by J. Macgregor; "Days in North India," by Norman McLeod, D. D.; "The Unknown River," by Philip Gilbert Hamerton (illustrated); "Brevia: Short Essays and Aphorisms," by Arthur Helps; and W. S. Lander's "Pericles and Aspasia."

LONGSTREET, AUGUSTUS BALDWIN, LL. D., an American jurist, college president, and author, born in Augusta, Ga., September 22, 1790; died at Oxford, Miss., September 9, 1870. He was a son of William Longstreet, a distinguished inventor, and was early sent to school; but his attention was easily diverted from his studies, and his progress was slow in consequence until his association with George McDuffie, in his school, gave him a new stimulus. In 1818 he graduated at Yale College, and after a course of law in Litchfield, Conn., was admitted to practice in the Superior Court of Richmond County, Ga., in 1815. Shortly after his admission to the bar, he removed to the village of Greensborough, Ga. It was at this period of his life, and in this village, noted for the wit and humor of its society, and for its charming hospitality, that he first began the inimitable humorous sketches of wild life which have been published to the world as "Georgia Scenes." The room is still shown where Longstreet wrote his "Georgia Scenes," and many tales are handed down by tradition touching his wit and mirth-provoking humor. In the year 1822 he was the representative of Greene County in the General Assembly of Georgia. In 1821 he was appointed Judge of the Superior Court for the Ocmulgee Circuit, and acquired the title of judge, which never afterward forsook him. In 1824, having returned to Augusta, and begun the full practice of his profession, he became a candidate for Congress from that district. In the midst of the canvass, with every prospect of success, the sudden death of one of his children afflicted him so sorely as to induce him to withdraw from the contest, and impressed him so seriously as to cause him to desire to enter the Christian ministry. In 1838 he was received by the Conference as a minister in the Methodist Episcopal Church, and assigned for the following year, with the Rev. Caleb W. Key, to the pastorate of the church at Augusta, and discharged faithfully the ministrations of his office throughout the duration of the terrible scourge which swept the city that year as a malignant epidemic. In 1839 Judge Longstreet was elected President of Emory College. Subsequently he filled the same chair in the Centenary College, in Louisiana, in the University of South Carolina, and in the University of Mississippi. The latter position he held at the outbreak of the war. From an early period of life he was accustomed to write for newspapers, magazines, and reviews; and many of his speeches before literary societies, charges to juries, and sermons, have been published. His inaugural address on assuming the presidency of Emory College, his baccalaureate to the graduating class of the South Carolina College (1858), and a sermon on "Infidelity" before the Young Men's Christian Association, are among his best efforts. In politics, Judge Longstreet was an ardent State-rights man. His vigorous pen, under the signature of "Bob

Short," exerted a powerful influence in the days of nullification. It was during this heated term in politics that he established and edited the *Augusta Sentinel*, which ultimately became absorbed and consolidated with the *Augusta Chronicle*, under the title of the *Chronicle and Sentinel*, in 1838. Among his most noted efforts are his "Letters from Georgia to Massachusetts," "Letters to Clergymen of the Northern Methodist Church," speech in the Louisville Convention upon organizing the Southern Methodist Church, and a "Review of the Decision of the Supreme Court in the Case of McCulloch vs. The State of Maryland." Besides his humorous works, well known to the public, the "Georgia Scenes," and "Master William Mitten; or, the Youth of Brilliant Talents, who was ruined by Bad Luck," many of the periodicals were adorned by the productions of his classic pen, and his contributions are to be found in the *Magnolia Magazine*, *Southern Quarterly*, *Southern Literary Messenger*, the *Methodist Quarterly*, and others. At the time of his death he was a regular contributor to the *Nineteenth Century*.

LOPEZ, FRANCISCO SOLANO, Dictator and President of the Republic of Paraguay, a South American ruler, born in Asuncion, July 24, 1831; killed in battle on the left bank of the Aquidavan River, March 1, 1870. His parents were Charles Antonio Lopez (who, a short time after the death of the tyrant Francia, succeeded him in power), and Donna Joana Camillo. In 1849, during the war with Rosas, he was ordered by his father, with an army of 10,000 men, to devastate the missions of Corrientes, which he did in the most pitiless manner, being then only eighteen years of age, and having the rank of general. In 1852 he was accredited envoy extraordinary to the various European courts. At this time he was only twenty-two years of age. He delayed a year and a half in England, France, Germany, Spain, and Italy, and then returned to South America in 1854, attended by engineers, mechanics, and artisans, who were employed in the establishment of an arsenal at Asuncion, and the construction of a railway running into the interior of the country. They also accomplished many other useful works. Well would it have been for Paraguay if Lopez the First had lived twenty years longer to complete, with the aid of his son, the various projects which marked an era of progress so notable during the last years of the old dictator's administration. He was, without doubt, an absolute chief, but nevertheless a man of prudence and large views. It is certain that under his government Paraguay reached a degree of advancement which she had not known before. In 1858 a conspiracy was discovered to kill Lopez in the theatre, the result of which was the shooting of the brothers Decoud, and the imprisonment of twenty others. Since the fall of Rosas, in 1852, the navigation of the river Paraguay had been open to all flags, and

the commerce and industry of the country had been continually progressing. In 1859, a war having broken out between Buenos Ayres and General Urquiza, then President of the Argentine Confederation, Lopez the younger was sent by his father as a mediator, and succeeded in effecting a treaty of peace, which was concluded in San José de Flores. Lopez the elder, on his death-bed, September, 1862, bequeathed his power to his son, and the following month Congress ratified the act. The people thought that General Lopez would establish a free government, but a few of the wiser ones shook their heads, lamenting the death of the old dictator. Hardly had a year elapsed when the war of General Flores, in the Banda Oriental, led the new ruler to take part in the affairs of his neighbors. The war thus rashly undertaken by Lopez was destined to turn his flourishing country into a desert, though such a result was not yet foreseen. The Paraguayans still pursued their peaceful labors without any apprehensions of the terrible calamity which was shortly to overwhelm them. At the close of 1863, the culture of cotton had become general among the planters. Public works were being rapidly pushed forward at Asunción, and a railroad was completed half-way to Villa Rica. At this time the people and nation were prosperous. The Brazilian invasion of the Banda Oriental, in July, 1864, precipitated events. Lopez sent an ultimatum in August, declaring war against Brazil if she did not withdraw her army. On the 12th of November the steamer *Marquez de Olinda* was captured in Paraguayan waters, and on the 14th of December an expedition marched against Matto Grosso. At this time the Paraguayan army was composed of 70,000 men, well provided with artillery and war material, and supported by a flotilla of eight or nine steamers. If Lopez had contented himself with making war against Brazil within his own territory, it is probable that he would have been still ruling in Paraguay. But he was disgusted with the neutrality of the Argentine Republic, and, a passage for his army across the Missions having been denied him, he seized two Argentine steamers-of-war anchored in the port of Corrientes. From this resulted the triple alliance. The allies were obliged to take the defensive for a year at least. Then the war went on with varying success until the fall of Humaita, in February, 1868, when the wheel of fortune turned against Lopez forever. He resisted for some time in Angostura, which surrendered during the last month of the same year, and from that time there was only a guerrilla contest, the Paraguayans hurriedly retiring from place to place, and constantly diminishing in numbers by death or desertion. Early on the morning of the 1st of March Lopez, with one thousand men, was surprised by a Brazilian force of the same size, while encamped on the left bank of the Aquidavan, a stream twenty leagues to the south of the Apa,

and, like the latter, a tributary of the Paraguay. So sudden and impetuous was the attack of the Brazilians that the Paraguayans who guarded the artillery had no time to give the least warning. Lopez, with those officers who happened to be about him, tried frantically to form his troops into line to repel the assault. But, before this could be done to any extent, the Rio Grande horse were upon him, and his little party routed and driven to the nearest woods, where but few escaped. Lopez himself was killed in sight of General Camara, who in vain called upon him to surrender. The ex-dictator, already severely wounded, obstinately refused to yield, and meanwhile tried to escape. The thrust of a lance brought him to the ground. Up to a very short time it was believed that Lopez would escape to Bolivia, and this was, without doubt, his intention when he was overtaken by the Brazilian forces. He saved the allies from a grave responsibility by not surrendering himself, but preferring to die sword in hand.

LORD, NATHAN, D. D., LL. D., an American clergyman and educator, born in Berwick, Me., November 28, 1798; died at Hanover, N. H., September 9, 1870. He was fitted for college in his native place and graduated at Bowdoin College in 1809, at the early age of sixteen, after which he spent two years as an assistant in Phillips Academy, Exeter, N. H. Having devoted another year to general studies, he entered the Theological Seminary at Andover, Mass., completing his course in 1815, and the following year was ordained pastor of the Congregational Church in Amherst, N. H., where he remained twelve years. In 1828, upon the resignation of the Rev. Bennet Tyler, D. D., he was chosen President of Dartmouth College. At that time there were but two college buildings, Dartmouth Hall, and the old chapel, which latter has since been turned into a stable. Under the administration of President Lord, Thornton Hall, Wentworth Hall, and Reed Hall, were built, a new chapel was constructed in the central portion of Dartmouth Hall, and "Old Dartmouth" itself, after having stood for years in a rickety and dilapidated condition, was thoroughly repaired and renovated. Under his administration several new professorships were established; among them was one of Intellectual Philosophy. The accomplished Daniel Oliver, one of the ripest and best scholars ever connected with the college, gave a course of able and finished lectures in this department. The professorships of the Greek Language and Literature, of Astronomy and Meteorology, of Modern Languages, and of Natural History, were all established during the presidency of Dr. Lord. In his time, too, was built the observatory, and during his presidency the Chandler Scientific Department was founded by a gift of \$50,000 by the late Abiel Chandler, which at the time was the largest sum that had ever been given to the college. The finances, also, of the college

were greatly increased, and the graduating classes in a few years averaged seventy-five. In 1863 Dr. Lord retired from the presidency, having served in that capacity for a period of thirty-five years, and on the Board of Trust for the college, forty-two years. Dr. Lord was eminently fitted for the high and responsible position he occupied. His perception of character was intuitive, and, while dignified and firm, he was sympathizing and affectionate in his bearing toward the young men under his care. His intensely conservative disposition led him to uphold the institution of slavery, and brought down upon him the severe censure of the great body of the people of the North. But, while he clung to his views, his practice proved better than his theory, and Dartmouth was for many years the only college in the country where a colored student could be admitted, while under his care and protection they were treated with kindness and courtesy. As was to be expected from such a follower of the old and beaten paths, Dr. Lord in his theological views leaned strongly to the old school theology. Though a New-Englander by birth and education, his sympathies were with Princeton rather than with Andover or any other of the New-England theological schools. The strongly Calvinistic character of his theological views, while it had the depth and strength of a profound conviction, and entered into the very essence of his life, did not have the effect which it has sometimes had in other cases, of making him intolerant toward those who differed from him. His spirit was essentially catholic and charitable, and he loved those from whom his convictions led him to differ. Dr. Lord was a prolific writer, though he published comparatively little. Aside from his numerous occasional sermons and addresses, and his reviews, essays, and letters, most of which have been collected, his principal published works were: "Letter to the Rev. Daniel Dana, D. D., on Prof. Park's Theology of New England," 1852; "An Essay on the Millennium," 1854; "Letters to Ministers of the Gospel of All Denominations, on Slavery," 1854-'55; and a still later work defending his peculiar views on that subject.

LOUISIANA. A growing spirit of harmony and good-will among the different classes of the people of this State has been evinced during the past year. There has been a disposition on the part of all good citizens, irrespective of partisan differences, to "preserve order, enforce the laws, and render obedience to all legally-constituted authority." In calling attention to the general and peaceable acquiescence of the people in the results of the reconstruction policy of the General Government, Governor Warmouth says:

Their acceptance of it as a finality has been much more satisfactory in Louisiana than in any other State in the South. This must be attributed to the patriotism and wisdom of our people, and to those features of State policy which have led to this great

and desirable result. It has always been my sincere conviction that it is safe to trust to the good sense, the honor, and the sober second thought of the people. This conviction has determined my course on matters of State policy, even in matters where I was forced, for a short time, to differ from many of my political friends. The peaceable character of the late election, and the favorable condition of Louisiana, as compared with many other Southern States, have, I think, convinced both friends and foes that I was right. I have refrained from all severe and arbitrary measures, or recourse to mere force, appealing, on all occasions, and in all localities, to the justice and discretion of the people themselves. Under all circumstances, however, I have held myself in readiness to employ all the resources at my command, both civil and military, to enforce the laws, preserve order, and protect every citizen in his rights, so far as the authority of the Executive could be lawfully used. The good results of this spirit of harmony on all sides, upon the prosperity of the State, cannot be estimated.

The Legislature met on the 3d of January, when Governor Warmouth sent in a large number of messages, vetoing bills which had been passed by the preceding Legislature. Up to January 6th he had vetoed twenty-one bills, involving appropriations by the Legislature for various schemes to the amount of \$6,875,000—one appropriation, to the "Mississippi Valley Levee Company," having amounted to \$3,000,000. Perhaps, the most noteworthy veto was that of the bill entitled "An act forbidding unjust discrimination on account of color or race, and to provide means for enforcing the same." The object of this bill was to require keepers of places of public amusement, hotels, saloons, etc., and the proprietors of public conveyances, to receive all persons on equal terms, without distinction on account of color, and to provide for the arrest, by the metropolitan police, of persons violating its provisions, and the closing of the establishments wherein the alleged offences occurred. The Governor presented four objections to this bill: its violation of the ninety-fourth article of the State constitution, which withholds judicial powers from all officers except those named therein; its violation of the sixth article of the State constitution, which secures trial by jury; its violation of other articles which guarantee speedy trial and the privilege of trial; and because it was "an attempt to enforce civil rights by means of criminal procedure." These vetoes were noticed with commendation by the press of the State. The session continued until the 3d of March, when it expired by limitation of time, and an extra session was immediately convened by the Executive, the objects of which were stated in his proclamation, as follows:

To provide for the assessment and collection of the revenues of the State.

To make appropriations for the support of the State government.

Amendments to the present law relative to public education.

To provide for the floating indebtedness of the State.

The militia laws, the registration laws, and amendments to the charter of the city of New Orleans.

Reorganization of the land-office of the State, and to make provision for the survey of unsurveyed lands of the State.

An act is needed to restrict the powers of the courts to issue writs of mandamus against the officers of the city of New Orleans, for the object of collecting demands for money against the corporation.

To provide for the organization of the district courts of the parish of Orleans, and defining the jurisdiction of the several courts relative especially to injunctions, mandamus, etc.

Unfinished business relative to the floating indebtedness, and other matters important to the good government of the corporation of New Orleans.

And I do hereby indicate, as the length of said session herein called, the term of ten days, commencing with said Monday, March 7th.

One of the most important measures passed by the Legislature was the "Education Bill," adopted as a substitute for the "School Law" of 1869, which was found to be ineffective in practice. For the purposes of this bill the State is divided into six divisions, of which New Orleans forms one. The State Superintendent is required to nominate to the Governor, and the Governor to nominate to the Senate for its approval, a superintendent for each division, who is to hold office for three years, at a salary of \$2,500, except in the district of New Orleans, where the salary is fixed at \$4,000.

The division superintendents, with the State superintendent as president, constitute a Board of Education, having the supervision and control in regard to books, rules, and regulations of the public schools throughout the State. The division superintendents have full control in their respective divisions, and, with the exception of the State Superintendent, are the only persons authorized to issue certificates for the employment of teachers.

The State Board is authorized to appoint a Board of Directors for the schools in New Orleans, who "shall control the public school library or libraries; it shall be a penal offence, punishable with a fine of one thousand dollars and imprisonment at the discretion of any competent court, for any person or number of persons to usurp or control any public free school within said city; and it is hereby declared to be the intention of this statute to repeal all laws or parts of laws granting the control of public education in the city of New Orleans to the municipal authorities of said city; and it is further declared to be the intention of this law to connect the system of public schools in the city of New Orleans with the State system of education hereby organized and devised."

The State Board is also to appoint a board for every town, and city, and parish in the State, and each of the local boards is constituted a body "corporate and politic in law, with powers to sue and be sued," and is to have a secretary and treasurer.

It is also provided "that there shall be no public free schools within the State not under the control of the Boards of School Directors herein provided for." The general school-tax

throughout the State is fixed at two mills on the dollar, in addition to which a tax of two mills on the dollar is to be collected in each parish. The concluding sections of this important measure are as follows:

SECTION 42. *Be it further enacted, etc.,* That the Bible shall not be excluded from the public schools, but no pupil shall be required to read it contrary to the wishes of his parent or guardian.

SEC. 43. *Be it further enacted, etc.,* That any officer, school, municipal, parish, or State, or any teacher of any public school, who shall refuse to receive into any school any child between the ages of six and twenty-one years, who shall be lawfully entitled to admission into the same, and shall comply with such rules and regulations as may be presented by the Board of School Directors and the State Board of Education, shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be punished by a fine of not less than one hundred nor more than five hundred dollars, and by imprisonment in the parish jail for not less than one month nor more than six months; and all such causes shall have preference before other criminal cases upon the docket of the court before which they shall be brought; and such person so offending shall also be liable to an action for damages by the parent or guardian of the child so refused.

A measure which had occupied a large share of the attention of the Legislature throughout the session of 1869, and which was postponed without decisive action, was a new charter for the city of New Orleans. This measure was again taken up at this session of the Legislature, and a bill finally passed, which unites Jefferson City and Algiers with New Orleans under one charter, and provides for a government by a mayor and seven administrators, presiding over as many bureaus or departments. Provision was made that vacancies in these offices should be filled by appointment by the Governor prior to January 1, 1871, and subsequently by popular election.

The existing election laws being deemed inadequate to the protection of voters, and a general charge of intimidation and violence toward colored citizens at the election in November, 1868, having been made, it was deemed necessary to pass a new law on the subject, which was done under the title "An act to regulate the conduct and to maintain the freedom and purity of elections." In the bill, as introduced, the entire revisory power was given to the Governor, Lieutenant-Governor, Secretary of State, and two parish judges to be selected by them. These appoint supervisors of registration, who in turn select commissioners of election. Parish and district judges are forbidden to issue writs of mandamus or injunction, or other order, to compel a commissioner of election to do his duty; the latter is responsible only to the supervisor of registration, and he to the Governor. A strenuous opposition to the passage of this bill was made by the minority, the grounds of which were set forth in the report of the minority of the Judiciary Committee of the Senate. In this report it was claimed that autocratic power was given to the Governor, by transferring to him the authority of mayors, sher-

iffs, constables, magistrates, militia officers, and policemen, and empowering him in express terms to declare martial law at his discretion; that upon election-day the citizens at large are expressly forbidden to carry arms except under orders of the Executive, or those of his appointees. Further objection was made to the bill that it nullified parochial and municipal authority, by forbidding the Mayor of New Orleans, or his commissioners or officers, "from holding any election, and from doing any act toward the holding or conducting of any election," under penalty of fine and imprisonment; while in all other parishes the duty and functions of sheriffs, elected by the people, were superseded by supervisors and commissioners appointed by the Governor. It was further claimed by the minority that the bill attempted to "forestall and defeat the constitutional rights of the Senate and House of Representatives of the General Assembly to judge of the election and qualifications of its members. By the operation of this section, the Governor and his returning officers are enabled to withhold certificates of election to the General Assembly, whenever in their discretion they may see fit, in all cases where fraud, violence, bribery, or other irregularity, may be reported."

Subsequently amendments were made to the bill, the most important of which was that striking out the section authorizing the Governor to declare martial law in any parish during election or registration; as thus amended, the measure was adopted February 18th, and subsequently a registration bill was passed.

A measure having an important bearing upon the commercial interests of the State was the act passed February 21st, granting to the New Orleans, Mobile, and Chattanooga Railway Company a State aid of \$3,000,000 in bonds of the State, bearing interest at the rate of eight per cent. per annum. By the conditions of the grant this amount is to be paid to the company in four instalments, of \$750,000 each, the first on the completion of the road to the Bayou Lafourche, fifty-five miles, and the last when the road shall have been completed to the city of Houston, Texas. By the express terms of the act the road must be completed to Houston within three years and six months from the date of the formal acceptance by the company of the terms prescribed.

In anticipation of the meeting of the Legislature, the subject of legal reform was much discussed and subsequently brought before that body for consideration. It was said that almost half a century had elapsed since the Civil Code and the Code of Practice of Louisiana were framed and promulgated. The work of constructing them was intrusted to several very eminent lawyers, one of whom was an accomplished scholar in both the civil and commercial law. On its appearance, it was held among the legal profession, both in Europe and America, to be a work admirable for its conciseness of arrangement, and its

accurate and various learning, and it may be said that in the common-law States of the Federal Union, wherever the attempt has been made to reform the technicalities and crudities of the common law which they inherited from England, this civil code and code of practice have been the models upon which such changes have been effected. When they were adopted and promulgated, a very different state of things existed than that which now appears, and Louisiana is a vastly more important community in population, interests, and commercial importance, than she was at that time. In this connection particular stress was laid upon the faults in the law organizing the justices' courts in the city of New Orleans, which rendered them especially liable to extortion, corruption, and other abuses, as well on the part of the justices themselves, as of the constables and clerks. "Another most scandalous abuse of judicial power," it was said, "is the fact that the writ of injunction, which should never be issued except in rare instances, with great caution, and, in by far the greatest number of cases, only where a real necessity for it has been unequivocally shown, after timely notice to the party against whom it is asked, has been scattered with a profuse and a reckless hand, by certain district court judges during the past year or two, upon the mere affidavit of the party asking for it, without any other evidence that it was really necessary for the protection of his alleged rights."

The writ of mandamus also had been obtained *ex parte* for the purpose of procuring money, or orders for money, from the Auditor of Public Accounts, the City Treasurer of New Orleans, and the Board of Metropolitan Police and its treasurer. In the early part of the session a bill was introduced providing that the writ of mandamus and that of injunction should not issue except after notice to the opposite party, and rule to show cause why it should not issue. The only final action, however, taken on the subject was the passage, in the extra session, of a bill establishing the Eighth District Court in New Orleans, with exclusive jurisdiction in cases of mandamus and injunction.

At the beginning of the session of the Legislature much dissatisfaction was apparent among the people on account of the various schemes for appropriating the public money, and many charges of corruption were made against that body. A call was issued, inviting "all citizens opposed to the financial schemes now pending before the Legislature calculated to increase the burdens of the people, depreciate the bonds, and ruin the credit of the State, to create monopolies, eat out the substance of the people, and cripple commerce," to assemble in mass meeting, in New Orleans, on the 28th of January. At this meeting it was stated that the city debt was \$17,000,000, and the State debt \$28,000,000. Instead of efforts to reduce this amount, schemes were

on foot in the Legislature which, if carried out, would increase the State debt to \$54,000,000. Resolutions were adopted condemning the extravagant measures before the Legislature, and a committee appointed to wait on Governor Warmouth and solicit his coöperation in arresting the alleged corrupt schemes of the Legislature. In response to the address of the committee, Governor Warmouth made the following remarkable statements:

GENTLEMEN: I am very glad to see you personally. I desire to say something, however, relative to that meeting whose delegation you are. I do so in justice to myself and to the government which I represent. It is a fact, which is palpable to all of you, that I have as Governor of this State vetoed a great many bills, a very great many making subsidies and grants to individuals and to companies. Those bills, in a few instances, have been passed over my veto by the Legislature; for these acts, of course, I am personally not responsible; neither do I believe that the Legislature, taken as a body, are responsible for them. It is true that in a general sense they are responsible for their acts; but it is unfortunately the case that there are a great many men in our Legislature who are ignorant of the manipulations of lobbyists—men, many of whom have been only recently enfranchised. They of course have to be taken care of; nay, have to be nursed; they have to be taught and instructed; and I think, gentlemen, that if you will give me the assurance of your support—if you will only give me the assistance which you ought to give from your standing in this community—we shall be able to restrain these people from running into the excesses complained of in the resolutions which I have already read.

Let me make one complaint against you, gentlemen, as the representatives of those in whose behalf you appear. You charge the Legislature with passing corruptly many bills looking to the personal aggrandizement of individuals and corporations. Let me suggest to you that those individuals and corporations are your very best people. For instance, this bank bill that is being lobbied through the Legislature now. By the hardest kind of work we have been able to defeat that bill twice in the House, and now it is up again to be passed. Who are doing it? Your bank presidents. The best people of the city of New Orleans are crowding the lobbies of the Legislature, continually whispering into these men's ears bribes to pass this measure. How are we to defend the State against the interposition of these people, who are potent in their influence in this community?

Take another instance: The five-million bond bill passed through the Legislature at its first session, providing for the issue of bonds, the principal and interest of which were to be paid in gold to take up the city notes. That bill I vetoed. By whom was it lobbied through? By your Carondelet-Street brokers, who crowded the halls of the Legislature, and thronged the avenues leading to the capitol, taking out member after member, and suggesting bribes. That bill, as I said, I vetoed, and the very next day the House of Representatives, possibly through the influences of which I have spoken, passed it over my head. The bill went to the Senate. I walked into the Senate-chamber, and saw nearly every prominent broker of the city engaged in lobbying that bill through the Senate, and it was only by exposing the fact, that one of their emissaries had come into this very chamber and laid upon the desk of my secretary an order for \$50,000, that I was able to defeat it. Mr. Conway, the mayor of your city, came here and offered me any consideration to induce me to sign this bill.

Look, again, at this Nicolson pavement bill—taking \$200,000 out of the State Treasury for the benefit

of a private company. A gentleman of your city offered me a bribe of \$50,000, and one-sixth of the net profits, to sign that bill. I told him I could not sign the bill. Some of the most respectable men in the city are among the directors.

The hostility existing between Governor Warmouth and Auditor Wickliffe, at the close of 1869, was continued into the present year. The Governor having withdrawn his opposition to the Auditor's exercising the functions of his office, the conflict now centred upon the possession of an office in the State-house by the Auditor. Offices had been provided by the Legislature for this official and the State Treasurer, apart from the other State departments; but the Auditor, claiming that the law required him to keep his office in the State-house, transferred the property and archives of his office to apartments in the Mechanics' Institute, in New Orleans, which building had been leased for the use of the Governor, Secretary of State, and the General Assembly. As soon as Governor Warmouth was informed of this fact, he at once instructed the Chief of the Metropolitan Police to prevent the occupancy of the room by the Auditor, and to notify that officer that he must provide for himself other quarters. Auditor Wickliffe now obtained from Judge Collins, of the Seventh District Court, an injunction "against the said Chief of Police, commanding him, his agents and subordinates and police, to desist from interfering with petitioner in his possession of said room in the third story of the Mechanics' Institute, and from removing or attempting to remove from said room any of the office furniture, effects, or archives, of said office of Auditor." The Chief of Police not acting in obedience to this injunction, the Auditor applied to the sheriff to be placed in possession, and obtained an order from Judge Collins looking to the punishment of the Chief for contempt of court. At this juncture Governor Warmouth obtained from Judge Leamont, of the Fifth District Court, an injunction prohibiting the sheriff and Auditor from carrying out the orders issued by Judge Cooley, of the Sixth District Court, stating in his petition that he had, "in behalf of the State, hired the building known as the Mechanics' Institute for the use of the Governor, Secretary of State, General Assembly and its committees, and for no other permanent purpose," and "that it is essential to the public convenience that the office of the Auditor should be in the same building as that of the Treasurer, and that there is no consideration of convenience or propriety requiring that said office should be in the Mechanics' Institute."

The Governor having strengthened his position by obtaining other injunctions to prevent any interference with his control of the metropolitan police, his efforts proved successful in preventing the Auditor from occupying the offices in the Mechanics' Institute.

The Governor determined to bring the Au-

ditor to punishment for general corruption in office, and, in a special message to the Legislature, which convened on January 4th, referred as follows to the charges against that official:

His offences against the constitution and the laws of the State have seriously embarrassed the government, and rendered it difficult to pay the interest on the State bonds. He has been guilty of numerous acts involving extortion against individuals, and against the charitable institutions of the State; also involving fraud against the Commonwealth, and collusion with evil-disposed persons to defraud the same. He has extorted sums of money from the creditors of the State, as a condition precedent to the issuance to them of the certificates of indebtedness or warrants to which they were entitled by law.

The committee of the Legislature appointed to investigate these charges reported adversely to the Auditor, and the House decided, by a vote of seventy-two to two, to prefer articles of impeachment. The trial before the Senate, organized as a Court of Impeachment, was of short duration, and on the 3d of March resulted in the conviction of the accused. Pending the trial, the Auditor tried to escape the sentence of the court by resigning his office, but his resignation was not accepted, and it was decreed by the court "that George M. Wickliffe, Auditor of Public Accounts of the State of Louisiana, be and is hereby removed from said office, and that he be disqualified from holding any office of honor, trust, or profit in this State."

The litigation growing out of the act of the Legislature of March 8, 1869 (*see ANNUAL CYCLOPEDIA for 1869*), incorporating the Crescent City Live Stock Landing and Slaughter House Company, was continued into the present year. Contradictory decisions on the subject in different district courts had been given, and the cases had been carried to the Supreme Court of the State, which, in the beginning of the present year, rendered a decision in favor of the company, enjoining all persons from interfering with its privileges. The aggrieved parties then brought suit in the United States Circuit Court for an injunction against the company and for the purpose of enjoining the State courts and officers from proceeding further in the premises, claiming that the act incorporating the company was in violation of the Civil Rights Bill and the fourteenth amendment to the Federal Constitution. The Court decided that the Civil Rights Bill had nothing to do with the case, and that the act of Congress of 1793 prohibited United States courts from enjoining proceedings in State courts; but it granted the injunction against the company, on the ground that the act of incorporation created a monopoly, in violation of the fourteenth amendment. Upon this point Judge Bradley, in his opinion, remarked as follows:

But the fourteenth amendment prohibits any State from abridging the privileges or immunities of the citizens of the United States, whether its own citizens or any others. It not merely requires equality of privileges, but it demands that the privileges and immunities of all citizens shall be absolutely unabridged, unimpaired.

So far as relates to the question in hand, we may safely say that it is one of the privileges of every American citizen to adopt and follow such lawful industrial pursuit—not injurious to the community—as he may see fit, without unreasonable regulation or molestation, and without being restricted by any of those unjust, oppressive, and odious monopolies or exclusive privileges which have been condemned by all free governments.

These privileges cannot be invaded without sapping the very foundations of republican government. A republican government is not merely a government of the people, but it is a free government. Without being free, it is republican only in name, and not republican in truth, and any government which deprives its citizens of the right to engage in any lawful pursuit, subject only to reasonable restrictions, or at least subject only to such restrictions as are reasonably within the power of government to impose, is tyrannical and unrepublican. And, if, to limit arbitrary restrictions made for the benefit of a favored few, it takes away and destroys the citizens' property without trial or condemnation, it is guilty of violating all the fundamental privileges to which I have referred, and one of the fundamental principles of free government.

There is no more sacred right of citizenship than the right to pursue unmolested a lawful employment in a lawful manner. It is nothing more nor less than the sacred right of labor.

Writs of error were subsequently allowed, and the matter is now pending before the Supreme Court of the United States.

Under the provisions of the new school law there was due from the State, in December, to the various parishes, to be expended for the support of public schools, the sum of \$315,773, of which \$197,788 was apportioned to New Orleans. During the year a controversy arose between the City Board of New Orleans and the several ward Boards of that city, as to their respective rights and jurisdiction, which was carried into the courts, and in December still remained unsettled. As the result of this difficulty, the portion of the school-fund belonging to New Orleans remained in the State Treasury, no one having authority to receive and disburse it on the part of the city; in consequence of which the public-school teachers remained unpaid from August. To obviate this state of affairs, and to prevent the threatened closing of the schools of the city, Judge Dibble, of the Eighth District Court, on the application of the Attorney-General of the State, in December, appointed a receiver of the fund, with authority to make the necessary disbursements, when the salaries of the teachers were promptly paid. The proceeds of the Peabody Education Fund had been expended in this State for the benefit of the white children, under the direction of the local agent, Mr. Lusher. The State Superintendent of Education, Mr. Conway, addressed a letter to Dr. Sears, the general agent of that fund, requesting him to "transfer to the State Board of Education such portion of the Peabody fund as may at any time be set apart for the good of the State," on the alleged ground that "neither the sentiments nor the action of the present local agent is in harmony with the State system of public education."

In his reply, Dr. Sears used the following language:

In the distribution of our fund I should be most happy to cooperate with the State authorities. But I understand that the State public schools are so organized that the greater part of the white population are unwilling to send their children to them, and that consequently the benefit of the public money goes, in fact, to the colored children chiefly. If there is any feasible way of removing this inequality, bringing the white people generally into cooperation with you, the necessity for a local agency would cease, and we could act in concert with you.

We, ourselves, raise no question about mixed schools. We simply take the fact that the white children do not generally attend them, without passing on the propriety or impropriety of their course. We wish to promote universal education—to aid whole communities, if possible. If that cannot be, on account of peculiar circumstances, we must give the preference to those whose education is neglected. It is well known that we are helping the white children of Louisiana, as being the more destitute, from the fact of their unwillingness to attend mixed schools. We should give the preference to colored children were they in like circumstances.

Mr. Lusher has been requested to avoid controversy and antagonism with the State authorities, and has assured me of his wish and intention to do so.

Nominating conventions for the selection of candidates for State officers were held in the month of September, by both the Republican and Democratic parties. A feature of both conventions was the appearance of a large number of colored delegates. Inquiries having been addressed to the Democratic State Central Committee, with reference to the admission of colored delegates to the approaching Democratic Convention, the committee, in their address to the people of the State, expressed the views of the Democratic party on this subject as follows:

In order, therefore, to redeem our State, and release ourselves from the grasp of inefficient and corrupt men, it becomes us to unite as one man, without regard to race, color, or previous condition, and hurl them from place and power, and fill the offices with honest men and patriots. The interests of both white and black men are identical in this struggle. Whatever rights and privileges either enjoy under the Constitution are sacred, and it is the duty of every citizen to see that they are maintained. The Democratic party has always upheld and defended the Constitution of the country, and will now, as ever in the past, protect and defend every citizen in the full and free exercise of all rights guaranteed by that instrument. At the last election in New York, so triumphant for the Democracy, the only charge brought against the party was, that it favored the colored citizens in their constitutional privileges. The colored people of this State, therefore, may be assured that the Democracy will ever continue to live up to the grand principles that have so long characterized it.

Our platform is retrenchment and reform; to rid the State of its enormous debt; reduce taxation; have our levees rebuilt; restore confidence and promote harmony between capital and labor; between the colored man and the planter; between the latter and the merchant; to induce immigration, and to develop the vast agricultural wealth of the State. For the accomplishment of these purposes we ask the co-operation of all good citizens, under whatever name associated.

The election, which was held in November

—notwithstanding some trouble had been anticipated—was remarkable for its peaceful, quiet character, and was referred to by the Governor as the “most quiet, peaceable, and orderly election the State has witnessed for many years.”

The election resulted in a Republican success. James Graham, the Republican candidate for Auditor, was elected by a vote of 66,428 to 40,960, received by Allen Jumel, the Democratic candidate; and Antoine Dubrelet (Republican) was elected State Treasurer by a majority of 24,477 over his opponent, James D. Blair. The following Republican members of Congress were elected by large majorities: first district, J. Hall Sypher; second district, Lionel A. Sheldon; third district, C. B. Darroll; fourth district, James McCleery; fifth district, Frank Morey.

The Republicans also secured majorities in both branches of the Legislature. The most important feature of this election was the voting on the four constitutional amendments which had been submitted by the preceding General Assembly, and all of which were ratified by the votes of the people. The first of those amendments repeals the ninety-ninth article of the constitution. “This article,” says the Governor in his annual message—

“By reason of its disfranchisement of an influential class of our citizens, for political reasons, was obnoxious to them and their friends, as the result has proved, and was distasteful to almost all. Incorporated in our constitution by an unwise spirit of retaliation, and, by its peculiar phraseology, serving mainly to irritate and humiliate, while debarring from suffrage and office only the most scrupulous and upright of the class it was aimed against, and admitting all others, it had all the most odious features of disfranchisement, with none of its good effects, if such there be. It is to the lasting credit of the first Republican administration of Louisiana, that the amendment to strike out this last vestige of the war, in our constitution, was passed with the unanimous Republican vote of the General Assembly, and indorsed unanimously by the people. It is no longer a part of the constitution. Henceforth, in Louisiana, all disabilities resulting from the war are removed, and no citizen is disfranchised by its laws, except for crime or mental disability.

The second amendment limits the total amount of State indebtedness that can be contracted, up to the year 1890, to the sum of \$25,000,000. All indebtedness of whatever character contracted above this amount before that time is illegal, null, and void. It is claimed that this voluntary limitation by the people, of the amount of indebtedness which they will incur for a term of years, will have the double effect of increasing the credit of the State securities, thus lessening the interest the State will have to pay on any future loans, and of compelling rigid economy on the part of the State government. The third amendment disqualifies all officials, who have held public moneys, from voting or holding office until they have received from the proper authorities receipts in full for all funds that have been thus held by them. The fourth

amendment removes the ineligibility for a second term that was imposed by the constitution, upon any incumbent of the gubernatorial office, and leaves the reelection of a Governor to the good judgment of the people.

The finances of Louisiana are not in a prosperous condition, the State being burdened with a heavy debt. The receipts into the Treasury from all sources for the fiscal year ending November 30, 1870, were \$6,537,959; while the total expenditures for the same period amounted to \$7,050,636. The probable expenditures for the year 1871 are estimated at \$4,349,036. The amount of the State debt is disputed. The following is an estimate by the State Auditor:

Bonds actually issued.....	\$23,590,383 33
Miscellaneous indebtedness.....	887,533 96
Outstanding warrants.....	1,300,311 81
Outstanding certificates of indebtedness..	293,655 63
Obligations of the State to issue bonds (about).....	15,000,000 00

Grand total..... \$40,031,784 61

In the State Penitentiary there are 354 convicts, of whom 342 are males, and 12 females. In the department of convict-labor there are 200 looms, with the necessary machinery for manufacturing cotton and woollen fabrics, and the industry of the convicts has been attended with the most encouraging results. The erection of a building in the court of the prison has been recommended, the lower story of which shall be used for bathing purposes, and the upper story as a chapel.

During no year since the late war have greater efforts been made by the planters in this State, or with more encouraging results, in the cultivation of cotton, rice, sugar, etc. Especially has there been a marked increase in the production of rice during the past ten years, which is shown in the following unofficial statement:

YEAR.	Bbls.	Av. per bbl.	Total Value.
1860.....	7,300	\$13	\$94,900
1861.....	8,021	18	160,578
1862.....	8,636	20	172,720
1863.....	6,373	30	206,190
1864.....	9,666	23	246,650
1865.....	11,943	33	374,669
1866.....	20,464	20	409,280
1867.....	21,063	18	389,934
1868.....	41,317	17	702,399
1869.....	57,956	15	869,340

The last rice crop was the largest ever grown in the State; and, should the cultivation of rice continue to increase at the same rate it has for the past few years, Louisiana will soon surpass Georgia and the Carolinas in the production of this most valuable article. The vast extent of reclaimed marsh-lands that exist within her borders can be successfully converted into rice-fields, and thus give employment and support to her middling and poorer classes. The varieties which are the most common are the white Creole rice, which is probably the same kind introduced in 1718 by the Company of the West; the gold rice, planted in the parish

of Plaquemines for the first time about the year 1857; and the white-bearded rice introduced into this State a few years ago from South Carolina. The gold seed has been cultivated in South Carolina with success for nearly a century, while the white-bearded rice was first introduced into this country in the year 1842. Another variety, obtained from Honduras, was experimented upon the past season by a number of planters, which promises to equal in quality the best Carolina rice. There are now seven steam rice-mills in the rice-growing portions of the State, and two in New Orleans, which have been provided with the latest improvements requisite for the thorough cleaning and polishing of rough rice. The past season was also a highly-successful one in the result of the sugar crops. Many of the old plantations, which were ravaged during the war, have been restored and are again highly productive. There is still, however, a need of capital to rebuild burned sugar-houses, and provide machinery and other necessities for large crops. The average produce of sugar is estimated at about 1,350 pounds per acre, and of molasses about 70 pounds. The increase in the production of sugar of the past year over that of the preceding was 4,401,719 pounds; while there was a decrease of 357,651 gallons in the production of molasses, the latter deficiency indicating a greater richness in the cane. The following is an exhibit of the crops of sugar by hogsheads for twenty years:

Years.	Crops.	Years.	Crops.
1850-'51.....	241,308	1860-'61.....	223,733
1851-'52.....	288,541	1861-'62.....	459,410
1852-'53.....	381,331	1862-'63.....	87,331
1853-'54.....	449,234	1863-'64.....	76,960
1854-'55.....	318,635	1864-'65.....	9,980
1855-'56.....	281,497	1865-'66.....	17,685
1856-'57.....	70,970	1866-'67.....	39,000
1857-'58.....	279,697	1867-'68.....	28,523
1858-'59.....	263,296	1868-'69.....	84,256
1859-'60.....	221,840	1869-'70.....	87,099

Complete returns of the cotton crop had not been made at the close of the year, but the total yield in Louisiana for the past year was estimated by the United States Commissioner of Agriculture to be 495,000 bales. In every department of agriculture an urgent need of labor has been felt, which want is increasing the interest manifested in the question of the importation of Chinese labor and immigration.

The receipts of cotton at the port of New Orleans for the year ending September 1, 1870, were 1,208,000 bales, valued at \$120,000,000, against 841,216 bales for 1869, valued at \$98,826,055; the receipts of rice amounted to 57,956 barrels. The gross receipts of produce from the interior exceeded \$200,000,000 in value, while the receipts of manufactured articles from the North amounted to \$50,000,000. The exports to foreign ports for the fiscal year ending June 30, 1870, amounted to \$107,657,042, against \$75,883,790 for the previous year; the imports were valued at \$14,998,754, against \$11,775,553 for the previous year. The entire value of the

commerce of the city for the year was upward of \$500,000,000; 4,406 vessels were entered and cleared at the custom-house, with an aggregate tonnage of 3,126,819 tons. The arrivals of steamboats for the year were 3,650, against 3,259 for the previous year, embracing about 8,000,000 tons of river-trade. The exports coastwise amounted to almost \$60,000,000. A large number of sugar-refineries were in operation during the year, and the manufacture of cotton-seed oil, oil-cake, etc., was extensively pursued. Two extensive cotton-mills were also in successful operation in the city.

The following is a statement of the ninth census for this State, taken during the past year by the United States authorities, as compared with the census taken in 1860:

PARISHES.	1870.	1860.
Ascension.....	11,577	11,454
Assumption.....	12,284	12,379
Avoyelles.....	12,936	12,167

LUTHERANS. The *Lutheran Church Almanac* for 1871 (published at Allentown, Pa.) gives the following statistical view of the Lutheran Church in North America in the year 1870:

The American Lutherans, according to the *Church Almanac*, are divided into the following organizations:

1. *General Council (Allgemeine Kirchenversammlung)*. It comprises the Synods of Pennsylvania, New York, English Synod of Ohio, Pittsburg, Texas, Michigan, Union, Canada, Augustana, Minnesota, Illinois, and the English District Synod of Ohio. The German Synod of Iowa has not yet joined the Council, but sends delegates to its meetings. The Synods of Tennessee, and the Concordia Synod of Virginia, also are in friendly relations with the Council. The General Council was formally organized at Fort Wayne, in 1867. According to the doctrinal basis (articles 8 and 9) the General Council recognizes and professes the doctrines of the unaltered Confession of Augsburg, in their original sense, as fully agreeing with the pure, unadulterated truth, the sole rule and standard of which is the Word of

God. All that is set forth in the Confession of Augsburg as truth is accepted by the Council as being in full accord with the canonical books of the Old and New Testament; all that is rejected by the Confession is rejected by the Council, and all that is left undefined in the Confession shall, in the opinion of the Council, remain undefined in the Church. The other symbolical books of the Evangelical Lutheran Church, in particular the Apology of the Confession of Augsburg, the two Catechisms of Luther, the Articles of Smalcald, and the Book of Concord, contain, in the opinion of the General Council, the same doctrinal system and the same articles of faith, and therefore must be true and scriptural.

2. *General Synod.* This body, which was organized in 1820, comprises the Synods of Maryland, West Pennsylvania, Hartwick, East Ohio, Frankan, Alleghany, East Pennsylvania, Miami, Wittenberg, Olive, Northern Illinois, Southern Illinois, Central Pennsylvania, English Synod of Iowa, Northern Indiana, New Jersey, Central Illinois, New York, Susquehanna, Pittsburg, and Kansas. The General Synod also recognizes the Confession of Augsburg, but allows considerable difference of opinion among its members.

3. *General Synod in North America* (General Synod South) was organized during the late war. It embraced, in 1870, the Synods of North Carolina, South Carolina, Virginia, Southwest Virginia, Mississippi, Holston, and Georgia. This body also recognizes the Confession of Augsburg, and nearly agrees in this respect with the General Council.

4. The Synods of Missouri, Ohio, Wisconsin, and the Norwegian Synod, recognize each other as orthodox Lutheran Church bodies, exchange pulpits, and mutually admit their members to the Lord's Supper, send delegates to their Synods and pastoral conferences, and receive pastors and congregations from one synod into another upon a certificate of honorable dismissal. The Synods of Illinois and Minnesota, which still belong to the General Council, also exchange pulpits with the above synods, and mutually admit their members to the Lord's Supper. A permanent organization has not yet been effected. All these synods recognize all the symbolical books of the Lutheran Church, and agree on the whole with the General Council, except in four points, namely, the prohibition of an exchange of pulpits, and of admission to the Lord's Supper with the members of any other religious denomination, the condemnation of Millenarianism, and the excommunication of the members of secret societies, which points the synods belonging to this group desire, and the General Council refuses, to make a test of membership.

5. Two other synods, the Buffalo Synod (Grabau's), and the German Synod, of New York, recognize each other as orthodox, and agree in nearly all points with the synods of

the preceding group. The chief point of difference is the doctrine concerning the Christian ministry.

6. The following synods are thus far wholly independent: Tennessee, the Buffalo Synod (von Rohr's), the Concordia Synod, the Scandinavian, or Eielson's Synod, and the Norwegian-Danish Conference. All of them, it is believed, will, ere long, join one of the larger organizations.

The following table, dating from 1823, gives a synopsis of synods, congregations, and communicants:

YEARS.	Synods.	Pastors.	Congregations.	Communicants.
1823.....	..	178	900
1833.....	..	237	1,017
1845.....	23	538	1,307	135,090
1860.....	36	1,193	2,279	222,789
1861.....	38	1,322	2,300	246,788
1862.....	42	1,866	2,575	270,780
1863.....	43	1,431	2,677	285,217
1864.....	42	1,530	2,916	294,794
1865.....	42	1,559	2,825	310,677
1866.....	42	1,627	2,856	313,415
1867.....	42	1,644	2,915	323,823
1868.....	45	1,748	3,111	351,860
1869.....	47	1,865	3,228	372,305
1870.....	48	2,016	3,330	393,567
1871.....	52	2,096	3,544	425,577
Yr's gains	4	70	214	89,010

From the above figures it appears that the Lutherans in America, counting in all parties, have gained, within the past quarter of a century, 80 synods, 1,548 ministers, 2,287 congregations, and 290,577 communicants. In the past twenty-five years the number of ministers has multiplied almost fourfold; the number of synods has more than doubled, and the number of communicants has multiplied more than threefold. Since 1860 the Lutheran denomination has increased to the extent of 16 synods, 893 ministers, 1,265 congregations, and 192,777 communicants.

Thirty-two Lutheran papers were published in 1870, namely, eight English, sixteen German, two Swedish, and six Norwegian and Danish.

The General Council began its fourth general meeting in Lancaster, Ohio, on November 3d. The Rev. O. P. Krauth, D. D., of Philadelphia, was elected president; and, as not only English speaking, but also German, Swedish, and Norwegian synods are connected with this organization, the Council chose English, German, Swedish, and Norwegian secretaries. The Council spent most of its time in the discussion of the theses on justification, and the report of the committee on the questions put by the Minnesota Synod, which was at last passed with but one dissenting voice. The General Council having declared at its second meeting, held at Pittsburg, November, 1868, that heretics and fundamental errorists cannot be admitted to its altars as communicants, nor into its pulpits as teachers of our congregations, the Minnesota Synod inquired whether, by "fundamental errorists," those are to be understood who, with regard to the distinctive doc-

trines of the Lutheran Church, are not in harmony with the pure doctrines of the Word of God, as it is confessed and taught in the Church? The Council gives the following answer:

1. The General Council, with the Confessions and theologians of our Church, distinguishes between the doctrines which are fundamental to the existence of Christianity—that is, “essential to true knowledge of Christ, and faith in Him,” without which the hope of salvation is precluded; and doctrines which are fundamental to the complete integrity of Christianity—that is, to the full and absolute perfection of Christian doctrine, without which, in the judgment of charity, it may still be possible for persons to be saved.

2. In regard to the question referring to “fundamental errorists,” the committee submits the following: (a.) Although the General Council holds the distinctive doctrines of our Evangelical Lutheran Church as in such sense fundamental, that those who err in them err in fundamental doctrines; nevertheless, in employing the terms “fundamental errorists,” in the declarations made at Pittsburg, it understands not those who are the victims of involuntary mistake, but those who wilfully, wickedly, and persistently desert, in whole or in part, the Christian faith, especially as embodied in the Confessions of the Church Catholic, in the purest form in which it now exists on earth, to wit, the Evangelical Lutheran Church, and thus overturn or destroy the foundation in them confessed; and who hold, defend, and extend these errors in the face of the admonitions of the Church, and to the leading away of men from the path of life. (b.) The particular application of those principles and distinctions in the narrow sphere in which alone conflict of opinion on this subject is still possible, as already measurably decided by the declarations made at Pittsburg, the Council leaves, where it must needs be left, to the conscience and judgment of our faithful pastors and congregations, as the cases arise.

The Council adjourned on Wednesday evening, November 9th, to meet in Rochester, N. Y., in November, 1871.

LUXEMBURG, a grand-duchy of Europe, connected with the kingdom of Holland in the person of the sovereign. The grand-duchy in times of war derives its importance from the strategical advantages its possession would give either Prussia or France. The vicegerent or stadtholder (since February 5, 1850) is Prince Henry of the Netherlands, brother of the King, born June 18, 1820. The area comprises 999 square miles; population, on December 3, 1867, 199,958, of whom 100,307 were males, and 99,651 females. The city of Luxemburg had, in 1867, 14,634 inhabitants. The ecclesiastical statistics show the population to consist of 199,018 Roman Catholics, 861 Protestants, 565 Jews, and 19 members of other sects. The inhabitants are almost exclusively of German extraction. In 1867 the French-speaking population was estimated at from 3,000 to 4,000. According to the budget for 1869, the revenue consisted of \$995,298; expenditure, \$856,546. The public debt consists of two loans, contracted exclusively for railroad purposes, and amounting altogether to \$2,280,000; \$114,000 of which are annually reduced by amortization. The length of railroad in operation, in 1868, was 107 miles.

At the outbreak of the war between France and Germany, the representative of Luxemburg at Paris vainly attempted to obtain a recognition of its neutrality from the French Government, although Prussia had declared her readiness to recognize and respect its neutral position, provided that France was willing to make a similar declaration.

On October 23d Prince Henry arrived at Luxemburg, and was waited upon by the city authorities, who declared that the people of the grand-duchy firmly adhered to the principle of neutrality, and wished to see the independence of their country respected. The prince replied by assuring the people that their independence was in no way endangered, and that their neutrality was secured by the Treaty of London. A permanent committee was appointed to watch over the neutrality of the duchy.

On December 8d, Prussia informed the Government of the Grand-Duke that, as it had allowed a violation of the neutrality of the grand-duchy by the French, Prussia was no longer bound to respect the neutrality of the territory of Luxemburg. The following was the text of Count Bismarck's note, of which copies were transmitted to the European powers:

Prussia, at the outbreak of the war, declared that she would respect the neutrality of Luxemburg provided France did the same. If Luxemburg had sincerely endeavored to remain neutral, Prussia would have scrupulously observed a strict neutrality, but neither France nor Luxemburg has done so. The hostile feelings of the population of the duchy are shown in the treatment of all German officials. Prussia did not hold that Government responsible for the bad conduct toward her of individuals, but she thought that efforts should have been made to repress the reprovicioning of Thionville through trains from Luxemburg. Such a flagrant breach of the neutrality laws could not, however, have taken place without the connivance of the Government officials. Prussia lodged a complaint with the Government of Luxemburg, pointing out the consequences to which such a proceeding would inevitably lead, but her warning was unheeded.

After the fall of Metz numbers of French soldiers and officers passed through Luxemburg to evade the German troops, and to rejoin the French army north of the town of Luxemburg. The resident French consul was at the office of the railway station to assist fugitives in reaching France. Two thousand soldiers thus reinforced the French army, and the Government of Luxemburg did nothing to prevent it. This undoubtedly constitutes a gross violation of neutrality. The conditions on which Prussia bases her neutrality therefore ceased to exist, in consequence of which Prussia declares on her part that she considers herself no longer bound to regard the neutrality of Luxemburg. She reserves to herself the right to claim compensation from the duchy for losses sustained by Prussia consequent on the non-observance of her neutrality, and will take the necessary steps to secure herself against the recurrence of similar proceedings.

The King of Holland assured the Government of Luxemburg that he would defend the treaty of 1867, and the honor and independence of the duchy, and at the same time approved its course of action. The Prussian Government semi-officially announced that it had no designs against the grand-duchy, but was in-

clined to submit to arbitration its complaints relative to the violation of neutrality with a view to a claim for indemnity. An informal meeting of the Luxemburg deputies having been held to consider the complaints of Count von Bismarck, and especially those regarding M. Cussy, the French consul, and the shelter afforded French soldiers, Herr Fohr, representative of the duchy at Berlin, was sent to Versailles to explain the facts to the King of Prussia. The King replied that further explanation was expected, to justify the action of the Luxemburg Government. He hoped no future complications would arise. Diplomatic negotiations were impossible as long as the war continued.

The Luxemburg Chamber of Deputies, in its session of December 21st, adopted an address

proclaiming the attachment of the inhabitants to the ruling dynasty and institutions.

The British Cabinet, while protesting against the attitude of Prussia toward Luxemburg, intimated that the proceeding of Prussia in this question was analogous to that of Russia with regard to the treaty of 1856. Count Bismarck, in reply, denied this analogy, saying that, while Russia aimed at the abrogation of the Treaty of Paris, Prussia fully acknowledged the Treaty of London, and had no desire to be relieved from its obligations. But the renewal of a violation of the neutrality compact by either Luxemburg or France would necessarily cause the occupation of the neutral territory by the German army, the Prussian Government being determined to remove all similar obstacles to its strategical movements.

M

MACLISE, DANIEL, R. A., an eminent British painter, born in Cork, Ireland, January 25, 1811; died in London, April 26, 1870. In early childhood he showed great talent for drawing, but was placed as clerk in a banking-house in Cork, which at the age of sixteen he left, and proceeding to London became a student in the Royal Academy. Here he labored with zeal and perseverance, and during his course of study received all the medals for which he competed, including the gold medal twice successively. The summer of 1830 he spent in studying the galleries and *ateliers* of Paris, and during that time and the two next years he worked diligently, making designs and sketches for booksellers, contributing caricatures to *Fraser's Magazine*, and painting portraits. Mr. Maclise derived the inspiration for one of the first three pictures he exhibited at the British Institution from that scene of Moore's *Lalla Rookh* wherein Mokanna unveils his features to Zelica. Some of his other paintings were "All-hallow Eve," and a "Love Adventure of Francis I. with Diana of Poitiers." These established his fame, and he ceased to cultivate portrait-painting, at which he labored more from necessity than taste. In 1835 he exhibited the "Chivalrous Vow of the Ladies and the Peacock," and the Royal Academy, appreciating the ability he displayed in this work, elected him one of their Associates. This was followed by paintings showing great versatility and power of delineation. England in the days of chivalry, the plays of Shakespeare, and Italian scenes, furnished subjects for his brush, and were all treated with masterly skill. In 1841 he was elected a member of the Royal Academy. From that time he retained the place of one of the first painters in popularity, though he had to endure his share of adverse criticism, owing to the wide difference between his style and that of other painters. In 1842 his chief work was "The Play Scene" in Hamlet, which forms

a leading attraction in the Vernon Gallery at the Kensington Museum. He executed in the same year "The Return of the Knight" and "The Origin of the Harp." In 1843 appeared his "Actor's Reception of the Author, Gil Blas;" and in the following year "The Lady released by Sabrina from the Enchanted Chair." In 1847 he executed his famous design of Shakespeare's "Seven Ages." After that time his chief pictures were "The Spirit of Chivalry" and "The Spirit of Justice," both painted in oil and fresco for the apartments in the British House of Lords. In 1854 he exhibited a large and important picture, representing the marriage of Strongbow and Eva, at the time of the English invasion of Ireland, during the reign of Henry II. Among the smaller works of Mr. Maclise were a set of drawings, forty-two in all, illustrative of the Norman Conquest, exhibited by him in 1856, which made considerable impression. He had, up to the time of his death, charge of the execution of a series of cartoons to be painted in fresco for the Houses of Parliament, illustrative of the principal events in England's naval and military records. Of these, "The Death of Nelson," and "The Meeting of Blücher and Wellington after the Battle of Waterloo," were engraved on a large scale, in line, for the Art Union, and a fine picture of the former was in the Royal Academy Exhibition of 1866. After the refusal by Sir E. Landseer in 1866 of the presidency of the Royal Academy, it was offered to Maclise, who also declined the honor.

MAINE. The Legislature met on Wednesday, the 5th of January, and adjourned Thursday, March 24th, after having passed 336 acts and 105 resolves, which were approved by the Governor.

A bill to abolish the penalty of capital punishment occupied a great deal of the time of the session, but was finally lost in the House by a vote of fifty-six to sixty-nine. A bill to increase

the stringency of the prohibitory liquor law passed both Houses without opposition, and became a law, the Governor affixing his signature for that reason alone, as he stated in his message returning the act. A general incorporation act was passed, providing for the formation of manufacturing and other corporations, without special legislation. The act passed by the Legislature of 1869, providing for reviews in criminal cases, was repealed. An act was passed creating the office of Insurance Commissioner, and providing that the business of insurance of any kind shall only be carried on in the State by companies found by him to be solvent. Stringent acts for the protection of fish and game were passed.

The following is the Federal census of Maine, taken in the years 1860 and 1870:

COUNTIES.	1870.	1860.
Androscoggin	25,885	29,725
Aroostook	29,609	22,479
Cumberland	58,020	75,591
Franklin	18,507	20,403
Hancock	26,470	27,737
Kennebec	52,305	55,065
Knox	20,222	22,716
Lincoln	26,597	27,580
Oxford	33,488	36,696
Penobscot	74,891	74,731
Piscataquis	14,403	15,083
Sagadahoc	18,803	21,790
Somerset	24,611	26,753
Waldo	24,535	27,447
Washington	42,343	42,524
York	60,174	62,107
Total	626,468	628,279

On the 15th of June the Republican State Convention was held in Augusta, and was the largest ever assembled in the State, 1,294 delegates being present, and the voting consuming two hours. Sidney Perham was nominated for Governor.

The convention adopted the following resolutions:

Resolved, That we rejoice in the vast and varied natural resources of our State, and hold that it should be the constant effort of every department of the State government, by a wise, uniform, and far-seeing State policy, to develop these resources, and bring them into active operation, and thus to furnish profitable employment for our industrious people, and a home market for the produce of our farms, and to stay the tide of emigration from our State, and increase our wealth and population.

Resolved, That while we would maintain and preserve the sacredness of the public debt of the State and nation, and favor the gradual payment of the same according to the letter and spirit of the contract, we are also in favor of a reduction of the burdens of taxation, internal and external, so far as consistent with public credit and a wise regard to all the industrial interests of the country, and we are opposed to fostering one branch of industry at the expense of another, but hold that the burdens and the benefits should be equally distributed.

Resolved, That the shipping interests of the State and nation demand the care and protection of the Government, and the adoption of such measures as shall relieve the owners and builders of vessels.

Resolved, That we renew our adhesion to the principles of prohibition, and a vigorous and impartial enforcement of the laws to that end.

Resolved, That we have entire confidence in the

ability, integrity, and patriotism of the Hon. Sidney Perham, the nominee of this convention, and that, as additional evidence of the fidelity of the people of Maine to true Republican principles, we propose to elect him by a triumphant majority.

On the 23d of June the Democratic State Convention met at Portland, and, after an excited discussion, adjourned to meet in Bangor on the 16th of August, by a vote of 262 to 165. The convention reassembled at Bangor on the 16th of August, and nominated as candidate for Governor General Charles W. Roberts. The convention then adopted the following resolutions:

Resolved, That the national Administration has proved a failure. It has violated its sacred pledges to the people. It promised them economy and faithfulness in national affairs, but it has given them extravagance and corruption. It promised a republican form of government, but in many of the States it has established a military despotism, trying thereby to intimidate the people thereof, and make them subservient to their wicked rule.

Resolved, That the ordinary expenses of the General and State Governments are swelled beyond all precedent and calculations by the enormous increase of the number and salaries of their officers. In this we find glaring evidence of the existence of a system which is rapidly corrupting the public service, robbing labor of the bread it has earned, and endangering the liberties of the people.

Resolved, That the act passed by the last Legislature, which withdrew from the people of the several school-districts of this State the right to regulate the mode of educating their children as they might deem best, is one of the many dangerous attempts to abridge the rights of our citizens and abrogate a time-honored law and usage of this State.

Resolved, That the tariff for protection is mainly for the benefit of the wealthy and the monopolists; that free trade is the right of the people.

Resolved, That we invite the thoughtful consideration of the people of Maine, with whom ship-building and freighting have heretofore been successful pursuits, to the fact that the seaboard of Maine languishes and daily grows worse because of vexatious taxation and the refusal of the Republican Administration to afford adequate legislation.

Resolved, That, while the Democratic party is in favor of a judicious regulation by law of the sale of intoxicating liquors, they are opposed to the present prohibitory law and the restoration of the State constabulary.

Resolved, That the introduction of swarms of ignorant and heathenish Asiatics into this country, to cheapen and degrade labor, is fraught with immense danger to the best interests of the country, and ought to be vigorously resisted.

Resolved, That this convention, in presenting for the suffrage of the people of Maine the name of General Charles W. Roberts of Bangor as the Democratic candidate for Governor, recommend him as a citizen whose gallantry in the field is only equalled by his ability as a civilian, and his qualities as a gentleman, and as one well fitted to discharge the duties of Chief Magistrate in such a manner as will promote the best interests of the State.

Although the Democrats were hopelessly in the minority, the campaign was very vigorously conducted, and resulted as follows: Sidney Perham, 54,040; Charles W. Roberts, 44,584; Republican majority, 9,506.

On the presidential vote in 1868 the Republican majority was 26,986, and in 1869, with three candidates, the vote for Governor gave

the Republican candidate a majority of 12,406 votes over the Democratic candidate, and of 7,628 over both the Democratic and Temperance candidates combined. The election was one of an important character, as not only the Governor and members of the Legislature were to be elected, but also members of Congress, and indirectly a United States Senator, as the members of the Legislature then chosen were to elect a Senator for the full term. On this account both parties exerted themselves to the utmost to bring out a full vote.

The political complexion of the Legislature for 1871 is:

	Senate.	House.	Joint Ballot.
Republicans.....	28	113	141
Democrats.....	8	88	41
Republican majority....	25	75	100

The common-school system of the State has been in a good and constantly-improving condition during the year. The number of scholars, average attendance, and amount of money raised, were increased, while teachers were better paid than formerly. The expense of the common schools was about \$750,000, or \$8 a scholar. The Normal Schools have proved valuable auxiliaries in the school system; more than 600 young men and women have been connected with the two, upward of 100 graduates have been sent out, and most of them are employed in the State. Committees and county supervisors are unanimous in commendation of the excellent work done by the normal students wherever employed in the State.

The County Teachers' Institutes, established by the Legislature of 1870, have proved of great service, and more than 3,000 teachers were instructed at a cost of but \$4,000. The Board of County Supervisors appointed by the same Legislature was not organized until May, but has been of great value. The measures which will be urged upon the Legislature of 1871 will be the abolition of the district system, the employment of teachers by the Superintendent School Committee instead of by agents, compulsory attendance of scholars, and uniformity of text-books.

At the State Reform School the year has been a profitable one in all respects. The report of the Superintendent gives the following facts in reference to the school:

Whole number of boys received into the school since its opening.....	1,222
Number of boys in school December 1, 1869....	183
Whole number in school during year.....	254
Number who have violated trust.....	4
Escaped.....	4
Allowed to go on trial.....	19
Pardoned by Governor.....	1
Whole number remaining December 1, 1870....	160

There is a balance in the treasury of the institution of \$2,843.46.

The Insane Hospital has been crowded during the year to its utmost capacity, and the new wing which was completed in November does not afford the desired relief. The entire

expenditures have been \$91,149.28; receipts, \$88,272.92.

There were in the hospital, December 1, 1869, 837 patients—158 males and 179 females. There have been admitted since, 130—66 males and 64 females—making a total of 467 under treatment. The condition of the discharged is as follows: Recovered, 48—19 males and 29 females; improved, 19—10 males and 9 females; unimproved, 18—11 males and 7 females. Eighteen males and nine females have died. The number of deaths is one-sixth less than last year. The longest time spent in the hospital, for any one of those who died, was a few months over twenty-five years; the shortest time was less than one week, while the average time was about two years and three months. The civil condition of those admitted during the year is as follows: 27 males and 26 females are married; 32 males and 28 females are single; 6 are widowers and 11 are widows. Forty-two of the patients now in the hospital are supported entirely by the State; 252, being in indigent circumstances, receive State aid of \$1.50 per week toward their support, while 50 either pay their own bills or are supported by their friends. Since the opening of the hospital, in 1840, 3,639 patients have been admitted; 3,294 have been discharged, of whom 1,489 recovered, 686 improved, 554 unimproved, and 615 have died. Of the varied cases of insanity, a large proportion of those admitted have a morbid condition of brain, induced by dyspepsia. Healthful occupation has been found very beneficial in the treatment of this class.

The amount of receipts into the State Treasury, during the year 1870, is \$4,924,164.12; cash in the Treasury, January 1, 1870, \$235,930.63. Total, \$5,160,094.75. Whole amount of payments for the year 1870, \$5,041,846.64; cash in the Treasury, December 31, 1870, \$118,248.11. Total, \$5,160,094.75.

The State debt, a year since, was \$8,100,000, and by the payment of \$25,000 to Massachusetts, and \$8,000, the balance of a loan created in 1855, the debt has decreased \$33,000.

The amount of sales of liquors by the State Commissioner to cities and towns, during the year 1869, was \$95,195.65. A large majority of the cities, towns, and plantations in the State evidently have no agencies, or do not procure their liquors of the Commissioner.

Of the sixty-nine State banks doing business in the State in 1863, at the time of the congressional enactment establishing a national currency, and having a capital of \$8,008,000, fifty-seven have been replaced by national banks, four have been closed up without successors, three are in process of closing, and five, with a capital of \$445,000, have been rechartered. Forty-nine of these banks are still bound to redeem their outstanding circulation.

The present number of savings-banks in the State is forty-three. The total deposits of the savings-banks at the date of examination were

\$15,829,791.52. There has been a large increase of loans on real estate and collaterals, while the amount on names has decreased in the sum of \$414,614.75, still leaving the sum of \$398,363.47, the larger part of which is in notes taken prior to the passage of the law of 1869, prohibiting such loans.

The Board and Commissioners of Immigration give an account of the first attempt to add to the population from a foreign country. A commissioner sailed from the United States, April 30th, and arrived at Gothenburg, Sweden, on the 16th of May. On the 25th of June, a colony of 51 souls—22 men, 11 women, and 18 children—sailed from Gothenburg. On the 23d, just four months from the passage of the act by the Legislature authorizing the enterprise, and four weeks from the time they left Sweden, the emigrants were set down at their new home in the wilds of Maine, which is called "New Sweden." In September, 12 other settlers arrived from Sweden, and, in October, 20 more came. The colony now numbers 114 persons, of which 58 are men, 20 women, and 36 children.

A railroad war has interested the citizens of the entire State, and the issue is now in litigation, large amounts of money and important legal questions being involved. The complaint comes from certain stockholders in the Maine Central Railway, against the corporation, and is based upon certain contracts dated May 12, 1870, for the leasing to the Maine Central Railroad Company, by the Portland and Kennebec Railroad Company, of its railroad, depots, franchise, rolling-stock, and property of every description, for the term of nine hundred and ninety-nine years, and the assignment of the lease, held by the Portland and Kennebec Railroad Company, of the Somerset and Kennebec Railroad Company for a like term. These contracts further provide that the earnings of both roads shall, under the charge of the Maine Central, be appropriated for the location and building by the latter road of a new road from some point on their line in Danville to a point of junction with the Portland and Kennebec Railroad, and for a change of the gauge of their track and rolling stock to conform with that now in use by the latter road.

The complainants allege that these contracts are in fraud of the general right of the stockholders in law and equity, and in violation of chapter 57, page 81, of the revised statutes of 1857, and they pray that all the defendants may be enjoined against making any change in the gauge or width of the Maine Central Railroad or its rolling-stock, and against the construction of any new line of railroad from Danville junction to the Portland and Kennebec Railroad, and against the doing of any other act or thing under the contracts aforesaid.

The injunction was denied, and the merits of the case are now being tried in an equity suit.

MAN—HIS STATURE AND BULK. The President of the English Anthropological Society, Dr. Beddoe, has recently been at the pains to endeavor to ascertain the stature and bulk of the men between 23 and 50 years of age in the British Isles, and the result of his observations has been printed in the memoirs of that society. He fixed upon the limits of age mentioned, because at the age of 23 man is believed to have attained his full stature, and at that of 50 to enter into the period of the decline of life. The plan pursued was to forward to country doctors and other scientifically-educated persons, willing to take a little trouble for the interests of science, a formula to be filled up, requiring surname, age, birthplace, occupation, height, weight, and color of eyes, of as many men between the ages mentioned as each could examine. More wholesale statistics also helped out his researches, such as those furnishing the stature, bulk, etc., of the inmates in county lunatic asylums, and the official recruiting statistics of the War Office. His object for asking for names was to ascertain the extent of migrations that have taken place since they became general, as of Welsh into Liverpool, Highlanders into Glasgow, Cornish men into Devon, etc.

The commentary made by Dr. Beddoe upon the facts he has gathered together is, however, lucid and ingenious. He divides England and Wales into five districts, based upon the character of the industrial pursuits of the inhabitants, one being manufacturing, another mining, a third rural, a fourth more strictly agricultural, the fifth being the metropolis. Scotland forms a sixth district. This is his general summary for Great Britain:

Occupations.	Number.	Average Stature.		Average Weight.
		ft.	in.	lbs.
Miscellaneous out-door..	174	5	7.56	142.11
Clerks, etc.....	242	5	7.28	126.74
Masons, etc.....	100	5	7.15	139.12
Laborers.....	884	5	7.11	140.86
Iron-workers.....	209	5	7.11	140.22
Wood-workers.....	200	5	7.08	137.07
Bakers.....	34	5	6.91	142.06
Miners.....	67	5	6.91	138.21
Tailors and shoemakers..	135	5	6.89	134.49
Miscellaneous in-door....	385	5	6.77	132.53
Grooms.....	101	5	6.57	138.72

When the individuals yielding these figures are sifted into their respective districts, the average height and bulk of the various workers come out differently. In the Sussex group the laborers stand next in height to those engaged in miscellaneous out-door occupations; while in Kent these last fall below clerks, miners, laborers, wood-workers, those engaged in miscellaneous in-door occupations, and even grooms. Again, in Kent the 30 iron-workers measured are nearly at the bottom of the list, as far as stature is concerned, while in Lancashire and Yorkshire the 49 representatives of that industry head it. These differences are explained by various suggestions. The iron-workers are to some extent picked

men, because in some processes so much exertion and endurance of heat are required that none but strong youths adopt that branch of industry. In some counties, where the agricultural laborer is ill paid, the tall young men enlist, and so reduce the average height of those left on the soil; and in the neighborhood of the metropolis there is a special opening for strong tall men from the surrounding districts as railway porters, draymen, excavators, etc.

The lunatic and criminal returns show the curious fact that lunatics and criminals are on the average shorter than sane and honest men; also that dark eyes and black or very dark hair are more common among lunatics than in the general population. Scottish criminals are taller than Scottish lunatics and English criminals; and these last are below the average lunatic in stature and weight. Town-bred criminals are strikingly inferior to country-born criminals.

The private returns are, however, of a more pleasant interest; and the unravellings of the respective influences of race, soil, climate, and mode of life, are very suggestive. Roughly speaking, the natives of Scotland, and of the north and northeast of England, exceed in stature those of Wales and of the south and west of England; exceptions existing, notably, in the people of some of the large towns, and of some of the Hebrides in the northern division, and in those of Cornwall and the Scilly Islands in the southern. The Highlanders are tall and bulky. The Lowlanders of the ancient Norse district of Caithness, considered by former observers as the finest peasantry in Britain, come out in this scrutiny as no bigger than their neighbors. The Edinburgh and Glasgow townsmen are considerably smaller. The tallest men in Britain are found in Galloway, and the heaviest in Berwickshire. The borderers equal or surpass the average both in Scotland and England in both respects. The Danish counties, Lincolnshire, Nottinghamshire, Derbyshire, and Leicestershire, excluding the manufacturing towns, produce men rather high in stature. Norfolk can boast of both stature and weight, especially in the Danish settlement of Flegg. Suffolk can boast of weight only. The Isle of Ely produces tall men; but the southern part of Cambridge, like the south-midland counties generally, can show but an undersized population. The native Londoner stands very low in the scale of stature.

In the matter of weight, too, there is some peculiar information. Some Irish statistics show a remarkable uniformity in the several classes of returns relating to the weight of Irish peasants and laborers, which uniformity can only be attributed to the absence of corpulent persons. The average weight of an Irish peasant may be estimated at 138 pounds. The average weight of an Englishman is calculated at 145 pounds; and that of Scotsmen at 10 pounds higher.

Foreign observations brought to bear upon these show that the 380 Gloucestershire men examined by Dr. Beddoe and his friends average exactly the same height, and as nearly as possible the same weight, as the average adult inhabitants of Brussels. And the average weight of 40 Frenchmen, ascertained by Tanon, in 1783, is found to leave considerably less difference in favor of the southern Englishman than might be supposed from the popular belief in the superiority of the latter. In France only 77 per 1,000 are excluded by size from enlisting, the standard being 5 feet for troops of the line. In Northamptonshire 210 per 1,000 are excluded because they are less than the regulation height of 5 feet 5 inches. In other counties there is a larger proportion; and in Herefordshire 417 persons out of every 1,000 do not come up to the present regimental standard of a soldier. Twenty Icelanders, weighed and measured for the purpose of this inquiry, yielded an average stature of 5 feet 8.5 inches and weight of 156 pounds.

Looking at the facts in a comprehensive light, Dr. Beddoe finds a certain degree of conformity with the expectations a study of the various races and their settlements would naturally suggest. Wherever we know, from historical, topographical, or linguistic evidence, that the Scandinavian element is strong, we find stature decidedly high. Where there are Teutonic characteristics stature is low and weight high in proportion. The tall stature in some spots in Kent is accounted for by the presence of Jutes and Frisians. The same tall, large, red-haired people who occupied the Grampians in Agricola's time do so at the present day, the author finds, without appreciable change. A remnant of the northern Kymri is located to the west of Clydesdale and in Upper Galloway; and the same race, with a cross of the Teutonic element, abides still among the Cheviots and in Allandale, in South Northumberland; a tall people, with light hair, dark eyes, and moderate weight. The Cornish men maintain the large stature for which they have been celebrated for some centuries. The average stature of fair-haired people, in Britain generally, is higher than that of dark-haired men. Dark-haired men with light eyes are taller than others in Mull, Kenmore, Mar, and Lesmahagow.

The supposition that climate influences stature is unsupported. Differences of elevation seem to be also without consequences, except in the matter of corpulence, which does not occur at high levels.

But diet is found to have considerable consequences. The absence of luxuries, such as butcher's meat and fermented drinks, does not exercise the least deleterious effect upon either stature or bulk; but absolute scantiness of food does. Where the stature is greatest, milk and meal appear to have furnished the staple food of the district in other parts of the country; and where white bread is eaten, and there is

but a limited supply of milk, as in the large towns, stature declines.

To sum up, the author finds that the stature of man in the large towns of Britain is *proved* to be considerably below the standard of the nation; and believes it *possible* that such degeneration is hereditary and progressive. In Brussels it is the reverse of this, for there the inhabitants at the age of nineteen were found by MM. Quetelet and Villermé rather taller than those of the surrounding country. Wherever a race attains its maximum of physical development, it contains its maximum of ability and energy. Thus the inhabitant of Oude or the Punjab is as superior in courage and energy to the puny Bengali as he is in bodily conformation. And Scotland in general, Northumberland, Cumberland, parts of Yorkshire, etc., and Cornwall, are the portions of Great Britain which produce the finest and largest men, and it will be acknowledged that they also yield more than their share of ability and energy for the national benefit.

MARYLAND. The Legislature of the State, holding biennial sessions, met on the 5th of January, and continued in session during the constitutional period of ninety days, and adjourned on the 4th of March. Its political complexion was unanimously Democratic. The session was an unusually interesting one, and a large number of bills became laws. The fifteenth amendment to the Federal Constitution, having been submitted for ratification, was unanimously rejected. The subject of a new school law was early brought to the attention of the Legislature by the memorial of a committee of the State Teachers' Association addressed to the joint committee of the two Houses on education. The result of a careful consideration of this important subject was the passage, on the 4th of April, of an act providing a general system of free public schools. Under the new law, the supervision of the schools is vested in a State board, county boards, and school-district boards. The State Board is composed of four persons appointed by the Governor. Their term of office is two years. The principal of the State Normal School is also *ex officio* a member of this board. The county board is composed of three members, who are appointed by the judges of the Circuit Court for the term of two years. In counties having more than one hundred schools, five commissioners are to be appointed. The district boards are composed of three persons for each school, who are appointed by the county board of school commissioners, and hold office for one year. The general supervision of the school system is vested in the State Board, with the power to explain and enforce the law, and to decide all disputed questions arising under it. The county examiner is required to devote his whole time to the service of the public schools, and, in counties having more than eighty-five schools, an assistant examiner may be appointed. The schools are to

be kept open ten months in the year, and, if they are not open during seven and a half months in any year, the Comptroller is required to withhold one quarterly instalment of the public-school tax. A State tax of ten cents on each one hundred dollars of taxable property throughout the State is to be levied annually for the support of schools. The total amount of taxes paid for these by colored citizens, together with all donations made for that purpose, is to be set aside for maintaining schools for colored children; and the boards of county school commissioners are authorized to appropriate such additional sum as, in their judgment, may be needed to assist the schools for colored children. At this session, a registration law was passed, applicable to the city of Baltimore. An important act on the subject of banking was passed. It declares that associations for carrying on the business of banking may be formed by any number of persons, not less in any case than five, who shall enter into articles of association, which shall specify in general terms the object for which the association is formed.

Other measures of less importance were an insurance law, a new jury law, an act to protect oyster-beds and regulate the taking of oysters in the waters of the State, and an act for the protection of game in the waters of the Chesapeake Bay, which are frequented by immense numbers of wild-fowl. A controversy, known as the "oyster war," arose during the year between the State and Virginia, as to the jurisdiction of Sangier Sound, which attracted no little public attention. Certain citizens of Maryland, duly licensed by the laws of that State, had been arrested by the Virginia authorities and their vessels confiscated, while they were fishing for oysters in that sound. It was claimed, on the part of Maryland, that the boundary between the States at this point was in dispute, and that no interference should be made with the citizens of Maryland pending its settlement. On the part of Virginia, it was contended that the arrested parties were fishing on the Virginia side of the conventional line agreed upon in 1868, by the chief oyster inspectors of the two States, which line was to be observed till the final settlement of the boundary question. The arrested parties were subsequently released, and their property restored, and a joint commission agreed upon by the two States for the determination of the boundary. Subsequently, a similar question arose, with regard to the Pocomoke River, which had not been settled at the close of the year.

Several railroad projects have been brought to the attention of the public, which, if carried out, will have an important bearing upon the commercial and industrial interests of the State. The most important of these have reference to the construction of a railroad between Danville and Lynchburg in Virginia, a distance of sixty-three miles, known as the Danville and Lynch-

burg Railroad. The importance to the State of Maryland of completing this line is shown in the majority report of the Committee of Ways and Means in the City Council of Baltimore, as follows:

The staples of the South are articles of equal necessity in modern trade, and experience has proved the inability of any other region to compete in their production. Cotton alone, before the war, formed the basis of foreign commerce, and preserved the balance of exchange. How rapidly it is regaining its influence, is known to all. Add to this item the immense product of tobacco, and the importance of this trade is at once apparent. The rapid transportation required by modern commerce demands railroad facilities for the moving of Southern staples. Their capacity for supporting railroads is sufficiently shown by the comparative value of the productions of the Southwest. Sixty pounds of cotton are worth \$14; sixty pounds of wheat are not worth \$1.40; sixty pounds of Indian-corn are worth about \$1. What becomes of this trade? The bulk of it is carried by water to the Northern ports and Europe; some of it reaches Baltimore by the same means, and a still smaller amount by the existing railroads. It is beginning to be especially attracted to us by our facility for freighting it to Europe by the line of steamers recently established. One of the most cogent reasons for striking for Southern trade is the great increase that must follow, in our Western and European commerce, from making Baltimore a great depot for cotton and tobacco. But how are we to obtain it? Clearly we must preserve our coastwise connections. But it is patent to all that, when this trade once reaches the coast, we then meet our rivals—the Northern and European ports. Any plan, then, which would divert this trade from the sea-coast, and bring it directly to us by an interior line, should receive our support. A remedy is at hand. A glance at the map will show a vast system of railroads permeating the Southern country, and converging at Danville, in Virginia. Another glance will show a continuous line of rail between Baltimore and Lynchburg. Between Lynchburg and Danville there is a gap in our communications with the far South. This the Lynchburg and Danville Railroad proposes to fill, thus opening to the city of Baltimore a direct communication by the shortest route, almost an air-line, to the richest tobacco region of Virginia and North Carolina, and the cotton country of the Carolinas, Georgia, and Alabama, besides opening to us the shortest route for travel and freight with the cities of the South Atlantic and Gulf coasts. Nor must we overlook the almost incalculable benefit to be derived by our merchants from the consequent investment in our city of the proceeds of the sale of cotton and tobacco, in the various articles of consumption sent to the Southern country, and in the different kinds of fertilizers, which have become the subject of such lucrative traffic. It is such a communication, in fact, that, were there no railroads at all connecting by this route with that region, we should esteem it the best policy of the city, looking to its future prosperity, to expend millions in advancing a great trunk-line, believing that such outlay would realize even greater results, and in incomparably shorter time, than those achieved by the Baltimore and Ohio Railroad.

An ordinance was passed by the Council, granting the aid of the city by indorsing the bonds of the company to the amount of \$750,000. This ordinance was subsequently submitted to a vote of the people, and failed to receive popular approval; but, owing to its importance, it is probable that further efforts will be made in favor of the enterprise.

Early in March the City Council of Balti-

more passed an ordinance for the indorsement by the city of the bonds of the Western Maryland Railroad Company, to the amount of \$1,400,000. The ordinance was subsequently submitted to a vote of the people and ratified. The construction of the road was at once begun, and at the end of the year had been completed to Mechanicstown, distant sixty-two miles from Baltimore. Another project, having an important bearing upon the local interests of the State, was that of the Maryland Central Railroad Company. This company petitioned the city of Baltimore for aid to the extent of \$400,000, to enable them to raise the sum of \$1,500,000 for the purpose of building a road from Baltimore to the junction of the Philadelphia and Media Railroad with the Port Deposit road, at a point near the Susquehanna River. This road will pass through the most populous and fertile sections of Harford and Baltimore Counties, and will open a direct route to the Reading coal-fields. The aid of the city was also asked in behalf of the Kent County road, which is to extend from Rock Hall, on the Chesapeake Bay, twenty miles from Baltimore, to Chestertown, thence *via* Kennedyville to Massey's Cross Roads, there to form a junction with the Kent and Queen Anne road leading from Centreville, and connect the Delaware road at Townsend Station, a point twenty-nine miles south of Wilmington, Del. It is estimated that the completion of this road will bring Baltimore about two hours nearer the southern counties of the Eastern Shore than Philadelphia now is, and will make the former city the market for most of the Maryland and much of the Delaware trade.

A subject much agitated by the people, and which occupied a large share of the attention of the Legislature during nearly the whole session, was the relation of the State with the Baltimore and Ohio Railroad Company, which was finally carried into the courts.

The election held in November was for members of Congress, and resulted in the choice of the following candidates of the Democratic party: first district, Samuel Hambleton; second district, Stevenson Archer; third district, Thomas Sevan; fourth district, John Ritchie; fifth district, William H. Merrick. The whole vote for Congress was 134,108, and the Democratic majority 19,015. This election was noteworthy as being the first time the negroes of the State exercised the elective franchise granted them by the fifteenth amendment. A celebration was held in Baltimore on the 19th of May in honor of the passage of this amendment, when, among others, the following resolutions were passed, which may serve to indicate the views of the newly-enfranchised voters on public affairs:

Whereas, This mass meeting is assembled to celebrate the ratification of the fifteenth amendment; therefore,

Resolved, That we offer our united thanksgiving to Almighty God that by His wonderful providence we

stand to-day not only freemen, but vested with the right of suffrage as equal citizens in the land of our birth.

Resolved, That under God we owe the great result which this day's proceedings celebrate to the Republican Congress of the United States, to the great Republican party of the country, and to the illustrious soldier and statesman who now occupies the presidency.

Resolved, That to President Grant we tender our warm acknowledgments that his first words in office were for the fifteenth amendment, and that his wise and patriotic policy has so essentially contributed to its ratification that he has the merit and the glory, which no American has had since Washington, of consummating in peace as President what he won in war as the leader of the armies of his country.

Resolved, That we pledge the newly-enfranchised vote in Maryland to the Republican party, and that we look forward with confidence and satisfaction to the day—not long to be waited for—when we shall aid in placing our beloved State in line with the Republican States of the Union.

Resolved, That education is not so much the qualification for suffrage, as a right secured by suffrage, and that we claim the right of education for all the children of the State, and exhort all our people to avail themselves of every opportunity to educate themselves and their children.

Resolved, That we cherish the strongest interest in the prosperity of all the interests of this State and of all its people, and that we pledge ourselves that there shall be no cause to regret that a new body of citizens and voters are now, with fresh hopes and free hands, and a bright outlook into the future, to take their places in the contest of life as equal competitors, able to promote the welfare of the State and of the country as they never did or could do as serfs or slaves.

On the 9th of September, and about two months prior to the election, the Republican State Executive Committee addressed a communication to Governor Bowie, petitioning him forthwith to call an extra session of the Legislature, for the purpose of authorizing an extension of the time for registration. In the accompanying preamble and resolutions the grounds on which this request was based were stated as follows:

Whereas, It is believed that at least sixty thousand persons are entitled to be registered as voters, under the fifteenth amendment of the Constitution of the United States, and it has been represented to this committee that the time prescribed in said section of the registration law of the State of Maryland is not sufficiently long to give to all citizens of the United States the same and equal opportunity to become registered as voters; and

Whereas, It is further reported that vacancies exist in many of the districts of the counties of the State, in the officers of registration, which vacancies have not been filled, thus practically nullifying the provisions and requirements of the act of Congress enforcing the right of persons to vote; now, therefore, be it

Resolved, That the attention of his Excellency the Governor be and is hereby most respectfully directed to the limited time allowed by the act of Assembly referred to, within which the registrars are authorized to comply with the act of Congress aforesaid.

Resolved, That we feel justified in appealing to his Excellency, as the representative of the whole people in the State, to call forthwith an extra session of the Legislature for the purpose of extending the time of registration, in order that every qualified voter may have full and ample opportunity to exercise the elective franchise; and that we confidently hope, from the fair and impartial course he has heretofore

pursued in the execution of the laws, that he will not deny this appeal.

Governor Bowie declined to accede to this request on the ground that, under the provisions of the law, ample time was given to all persons to register who were entitled to do so under the fifteenth amendment, and that the reasons set forth would not justify the expense of an extra session of the Legislature. To the further complaint that there were vacancies to be filled, the Governor replied that he was "not aware of a single vacancy, spoken of in the resolutions, existing at present, or having existed for a fortnight past among the registrars," and closed by saying:

Could I believe that any considerable number of voters would be deprived of the elective franchise by the causes stated in your resolutions, I would not hesitate to convene the Legislature, notwithstanding my great objection to extra sessions, and the opposition of the people of Maryland generally to them. You cannot have forgotten the strong pressure used in the winter of 1869 for an extra session, and how much opposed the Republican party was to my calling one then. You will remember that, when convened, the constitution allows the session to continue thirty days. The expense might be very great to the State, and, as I am fully convinced that no one need be kept from the ballot-box by want of time to register, I am constrained respectfully to decline the request of your committee.

The receipts into the Treasury from all sources, for the fiscal year ending September 30, 1870, amounted to \$2,522,478.98. The disbursements for the same period were \$2,475,069.17; and there remained in the Treasury at the close of the fiscal year the sum of \$492,750.17. The aggregate funded debt of the State, for which interest has to be provided, is \$13,317,475.77, of which the sum of \$6,052,888.88 is sterling debt, on which the interest is payable in London. To meet these liabilities the State has available assets to the amount of \$7,817,420.03, leaving the sum of \$6,000,055.74, on which the interest must be provided by taxation, until the stocks now styled unproductive shall become remunerative to a sufficient extent to balance the account.

The number of schools in operation in the State during the year was 1,847, and of enrolled scholars 75,402. The sum of \$486,836 was paid for teachers' salaries, and \$68,109 for school-books. The total expenditures for school purposes were \$751,810. These statistics are all exclusive of the city of Baltimore. The Agricultural College is in a prosperous condition, as well as the Baltimore Female College, the latter having 128 pupils. The State contains 128 schools for colored children, with 5,458 pupils, but the only official support tendered them is the meagre proportion of taxes paid by colored citizens, which in 1869 amounted to \$951.26. The number of schools in the city of Baltimore is 119, with 23,913 pupils. The amount paid during the year by the city for schools for colored children was \$26,322.08.

The following statement, prepared by the special committee of the House of Delegates

on retrenchment, and submitted to the Legislature at its session this year, shows the expenses and assessed value of property in the different counties of the State:

COUNTIES.	Total Expenses, 1869.	Assessed Value of Property.	Relative Ex- penses to As- sessment.
Alleghany.....	\$16,337 11	\$15,713,000	10 cents.
Anne Arundel.....	16,338 66	10,573,754	15 "
Baltimore.....	27,666 61	30,744,351	7 "
Calvert.....	3,096 37	2,169,506	17 "
Caroline.....	6,374 39	4,169,633	15 "
Carroll.....	6,963 09	16,693,510	4 "
Cecil.....	7,430 46	14,073,062	5 "
Charles.....	7,677 53	8,106,883	24 "

Somerset.....	5,590 10	3,609,157	15 "
Talbot.....	10,958 96	7,631,353	14 "
Washington.....	12,967 34	20,110,731	6 "
Wicomico.....	4,634 03	4,439,463	15 "
Worcester.....	8,909 68	4,531,663	19 "

In the city of Baltimore there were issued during the year 3,012 permits for brick buildings, besides 696 for sheds and improvements. There were issued, in 1867, 1,800 permits, and in 1869, 2,879, showing an increase of 133 for the year. The number of new houses erected was 2,836, which, at an average of seven persons to each house, would represent an increased population of 19,852 inhabitants. There were 5,249 transfers of property during the year as against 4,216 the year previous, and an increase in the taxable value of the real estate of the city of \$6,615,275 as against \$5,641,178 during the year 1868, which was one of general prosperity. The increase is above three per cent. on the whole assessed value, which was about \$203,000,000. The rate of taxation was \$1.50 on \$100, against \$1.60 on \$100 for 1869. The whole amount raised by taxation was about two million and a quarter dollars. The census returns made during the year by the United States authorities, as compared with the same statistics for 1860, are as follows:

COUNTIES.	1870.	1860.
Alleghany.....	23,536	23,348
Anne Arundel.....	24,457	23,900
Baltimore.....	330,741	266,558
Calvert.....	9,865	10,447
Caroline.....	12,101	11,139
Carroll.....	23,619	24,533
Cecil.....	25,874	23,693
Charles.....	15,738	16,517
Dorchester.....	19,456	20,461
Frederick.....	47,573	46,591
Harford.....	22,605	23,415
Howard.....	14,150	13,338
Kent.....	17,102	13,367
Montgomery.....	20,563	18,323
Prince George's.....	31,138	25,337
Queen Anne's.....	16,171	15,961
St. Mary's.....	14,944	15,313
Somerset.....	16,190	24,993
Talbot.....	16,137	14,795
Washington.....	34,713
Wicomico.....	15,803	31,417
Worcester.....	16,419	20,661
Total.....	780,894	697,049

According to the same authority, the population of the city of Baltimore is 267,354, which places it sixth in point of population among the cities of the United States.

MASSACHUSETTS. The Legislature which convened at the beginning of the year, continued in session until the 28d of June, a period of 170 days, during which time 409 bills and 87 resolutions were passed. The unnecessary length of the sessions, for two or three years, has caused much impatience among the people, and has led the Governor to recommend the adoption of biennial sessions if the evils cannot be remedied in any other way. "The conviction is prevalent," he says, "that our general laws are well settled, and that the constant liability to change incident to annual sessions, half a year in length, is very injurious to business, and wholly unnecessary. Probably a Legislature sitting once in two years would meet all the real wants of the community. Now, there is scarcely time to learn the results of a law, before it may be altered or repealed. The cost of yearly sessions is a circumstance not to be disregarded, the expense now reaching annually nearly four hundred thousand dollars. Half of this would be saved to our tax-payers, already too heavily burdened."

The prohibitory law formed a prominent topic of discussion, and was amended so as to permit the sale of ale, porter, cider, strong beer, lager beer, in towns and cities that do not prohibit such sale. The Massachusetts Grand Lodge of the Knights of St. Crispin was chartered merely as a charitable institution, with a right to invest its funds in cooperative associations. A bill of great importance to Boston was passed, creating a commission to lay out one or more public parks in or near the city; the bill to be submitted to the voters of the city at the annual election in November, and before becoming a law to receive a two-thirds vote in its favor. It failed, by a few votes, to obtain the requisite popular majority. Efforts were made to pass ten-hour and eight-hour labor laws, but without success. An act was passed requiring assessors of cities and towns to make returns of the aggregate amount of the indebtedness of such cities or towns, for which notes, bonds, or other similar evidences of debt, the payment of which is not provided for by the taxation of the then current year, were outstanding on the 1st of May then next preceding; also a concise statement of the various purposes for which such indebtedness was incurred, and the amount incurred for each purpose. A compliance with this law will furnish the statistics for ascertaining at a glance the financial condition of every town in the Commonwealth; and the returns from year to year will show the growth and prosperity of the State.

One of the most important subjects before the Legislature, and one which received a large share of the attention of that body, as well as of the general public, had reference to the

Boston, Hartford, and Erie Railroad. In 1867 and 1868, that corporation had, upon its application to the Legislature, obtained aid which, with an additional subsidy voted by the Legislature in 1869, amounted to \$5,000,000. For this amount, scrip was issued from time to time upon the approval of the Governor and Council. It was stated by the directors, in their application to the Legislature in 1869, that this amount, together with the funds in hand, would be sufficient to complete the road to Fishkill. Early in January of this year it was ascertained by the Governor that the directors, owing to heavy losses sustained in speculating in the stock of the company, were about to apply for further State aid, and to an amount much larger than had been generally supposed necessary to complete and equip the road. Under these circumstances a committee of the Council was appointed to investigate the affairs of the company. The Governor, in his message transmitting to the Legislature the report of this committee, says that this report shows conclusively that, at the time the grant of \$5,000,000 was passed, the statement of the directors, that it would be sufficient to complete the road to Fishkill, was correct; but that at that very time a portion of the money was invested in the bonds and stock of the corporation, which were held in the expectation and hope of an advance in price; that, in addition to this, the directors had pledged a large amount of the bonds for advances, instead of selling them in the usual way; that in November, 1869, many of the bonds had been sold at reduced prices to pay the advances, and the result was a larger loss to the corporation than if they had been sold in the market at the time of their issue; that this loss, however, did not affect the State so directly as the loss arising from the speculation in the stock, which in one item alone was shown to be \$1,500,000; that the authority of the directors, by the act of incorporation, to take this course, was at least doubtful, and as trustees of a great corporation they certainly had no warrant for thus employing the money placed in their hands. "Under these circumstances," says the Governor, "I feel bound to continue to withhold my assent for any further issue of the bonds of the State until the whole matter has been passed upon by the Legislature, and the Council have fully concurred with me in this decision." Up to this time scrip to the amount of \$3,600,000 had been issued in aid of the company. The affairs of the company are set forth in the report of the investigating committee, as follows:

Cash in Bank.....	\$3,000,000
Acceptances of the Erie Railroad.....	1,574,000
Berdell Mortgage Bonds, after deducting \$4,000,000 for deposit with State Treasurer, and \$533,000 for redemption of outstanding bonds, estimated at 80 per cent.....	8,632,000
If to these amounts we add State loan, which, if granted, will be available from time to time as the work progresses.....	8,000,000
Fifty thousand shares of capital stock, at 20 cents.....	1,000,000
We have:.....	\$11,206,000

available means of the company in July, 1868, upon which they relied to enable them to complete the road.

This exhibit is made the starting-point of the investigation. The Berdell mortgage, before referred to, is a mortgage dated March 19, 1866, of the entire road and franchise of the company to R. H. Berdell and two others, trustees, for \$20,000,000 of bonds of \$1,000 each, to be invested by said trustees for the purpose of providing for and retaining all existing mortgage debts and prior liens, and completing and equipping the road. One provision of this mortgage is, that the trustees shall retain enough of said bonds to take up all the old prior mortgages on the road. It appears that on July 30, 1868, the company had exchanged

Berdell bonds for prior mortgage bonds.....	\$5,968,000
Sold to Erie Railroad.....	5,000,000
Making.....	\$10,968,000
Leaving to company and held to take up all underlying bonds, and for general use of the company.....	\$9,087,000
It appears on page eighteen of said document seven, that the old bonded debt not then retired was.....	2,790,800
Leaving.....	\$6,296,200
Which by the terms of the Berdell mortgage could be applied to the general use of the company, out of which must be taken by the terms of the act of 1867, to secure the State.....	4,000,000
Balance to be used in construction.....	\$2,296,200
Value at that time estimated at 80 per cent....	\$1,796,960

Subsequently three directors of the company were substituted as trustees, thus making the company substantially both mortgagor and mortgagee of its own property. These trustees did not retain Berdell bonds enough to take up the remaining prior mortgage bonds amounting to \$2,790,800, but issued the whole \$9,087,000 to themselves, and used them solely for the general purposes of the company, viz., \$3,600,000 of them were deposited in the State Treasury, and the balance, \$5,487,000, were pledged as collaterals at fifty instead of eighty per cent. The actual cash receipts of the company since July 1, 1868, were \$10,899,155.85; the actual cash payments for the same period were \$11,894,688.15, of which \$6,068,172.63 were expenses incurred in the construction of the road.

The matter was taken up in the Legislature, and a bill was introduced for a further loan of \$3,500,000 to the company, in addition to the original loan of \$5,000,000, which, with certain resolves relating to the foreclosing of the so-called Berdell mortgage, was referred to the Committee on Finance. The committee reported adversely; but the bill, with several alterations, passed both Houses a few days before the adjournment of the Legislature, but was vetoed by the Governor. The bill failed to pass over the veto of the Governor. A substitute was immediately introduced, but the two Houses failed to agree on its provisions, and the adjournment of the Legislature pre-

vented further action. Soon after the adjournment of the Legislature the Supreme Court of the State placed the property of the company in the hands of a receiver, after a careful and protracted hearing, which demonstrated that the corporation was hopelessly insolvent. Proceedings were subsequently had in the United States courts under the bankrupt act of Congress. These proceedings were resisted by the company, on the ground that a railroad corporation was not within the purview of the bankrupt act, but Judge Shepley, of the United States Circuit Court, decided that such a corporation was within the meaning of the act, and might be adjudged bankrupt. The Governor, referring to these proceedings in his message to the Legislature of 1871, says: "The early completion of the road is most desirable, and no doubt the work will be resumed as soon as the courts are able to unravel its complicated affairs and to give the rightful owners possession."

The financial policy adopted by the State has produced economy in expenditure, and fully sustained the credit of the Commonwealth at home and abroad. The total amount of indebtedness is stated at \$28,269,881.93, which is classified as follows:

Loans to railroad corporations	\$2,483,990 00
War loans	16,578,944 00
Ordinary loans	1,070,000 00
Total	\$27,197,164 00
Temporary loans	1,142,717 93

Making the total funded and unfunded debt \$28,269,881 93

The sinking funds for the redemption of this debt now amount to more than \$15,000,000.

The productive resources of the Commonwealth directly applicable under existing laws to the redemption of this debt are considered ample for that purpose.

Deducting the sinking funds, and other resources set apart for the payment of the public debt, the indebtedness of the State amounts to \$13,269,881.93. Within the last eight years more than \$12,000,000 have been expended for the relief of the disabled soldiers and their families, and the families of the slain. In addition to this, more than \$16,000,000 have been paid in bounties to soldiers since 1861.

In October, 1868, the deposits in the savings-banks of the State reached the sum of \$56,883,828.55. Since that date the increase has been as follows:

Amount in	Increase over previous year.
1867..... \$38,604,460 72	\$12,699,819 40
1868..... 97,406,860 34	12,603,899 62
1869..... 114,801,608 23	17,393,947 89
1870..... 138,382,271 59	22,480,663 36

In seven years the increase in the amount of deposits in these institutions has been over \$80,000,000, while the increase for the present year has been equal to more than forty per cent. of the total amount on deposit in 1868. It is very evident that a large share of this increase is not the savings of labor. The investments have been found to be safe, and almost as remunerative as in other money corporations,

where the funds are not so readily at the command of the owners. In his message to the Legislature of 1871, the Governor calls attention to the rivalry of the savings-banks in the exaction of high rates of interest on their loans, and recommends some legislation to restrain the abuse. He says further:

I again call your attention to the propriety of enlarging the amount of deposits which may be made by any one person. I can perceive no possible harm to the public in such an increase, but, on the contrary, much deception would be avoided if the depositors be permitted to place considerable amounts in banks convenient to their places of residence.

The rate of taxation on deposits in these institutions is only about one-half the average rate of the State. Owing to the great changes in our financial affairs, the drift of these institutions is, to become ordinary money corporations, and it is questionable whether such a great relief from the public burdens is longer justifiable. An increase of the tax would also tend to check the establishment of new banks where there are enough already for the accommodation of the public. In most of our large towns and cities there is no real necessity for more banks.

The work on the Hoosac Tunnel has progressed favorably during the year, and particularly during the last six months. On the 1st of January, 1870, there had been completed on the east end section 6,121 feet, and 4,506 at the west end, making an aggregate of 11,026 feet, with 14,005 feet to be completed. The depth of the central shaft was 798 feet, with 232 additional to be done. The cost of the work done up to that time was not far from \$500,000. On the 1st of January, 1871, there had been completed at both ends 13,622 feet, or very nearly 2 $\frac{1}{2}$ miles. The distance remaining was 11,409 feet, or very nearly 2 $\frac{1}{4}$ miles. This shows a gain for the year 1870 of 2,596 feet, or very nearly half a mile. The central shaft was finished down to the grade, and the contractors were working from that both ways. With the work thus progressing simultaneously at four places, it was thought that the progress would be very rapid, and the whole completed before the time specified in the contract, March 1, 1874. The cost of work performed by the present contractors up to January 1, 1871, was \$1,248,184.13, and the amount paid them by the State \$740,047.81, leaving a reserve of \$508,136.82, which is held as security for the faithful performance of the contract.

The number of passengers carried over the steam railroads of the State in 1866 was 22,126,881; in 1867, 23,660,401; in 1868, 24,916,021; in 1869, 28,186,391; in 1870 (ten months), 24,721,535; total since 1865, 123,551,226. Of these, 67 were fatally injured. During this period 175 employes were killed, 26 of them in consequence of coming in contact with bridges while on top of the cars. The average annual number of men regularly employed was 10,786; 205 persons were run over and killed while walking or lying on the track, viz., 41 in 1866, 41 in 1867, 44 in 1868, 40 in 1869, and 39 in ten months of 1870.

The larger part of the annual report of the railroad commissioners is devoted to a discussion of the general railroad problem—how cheap fares and freights may be secured; and the remedy of the last resort for unduly high rates—the purchase of the railroads by the State. The subject is regarded as highly important to the interests of the State, but it is asserted that Massachusetts cannot possibly control by her legislation the great through business, because that is mainly in the hands of the large organizations to which some of the Massachusetts railroads belong, but of which they constitute a small part. The plan recommended to the State by the commissioners is as follows:

Let the State adopt its own plan of railroad management, wholly independent of the private railroad corporations; having done this in such a manner as to commit itself to the least possible expense consistent with a perfect trial of a great experiment, recognizing it simply as a tentative effort, let the State then give the existing corporations distinctly to understand that the continuance of their corporate existence depends wholly on (1) the results of the experiment in operation; (2) on their own success in the process of competitive development side by side with it. All restraints should then be removed from the private corporations; they should be allowed, within the limits of the law, to freely follow their own devices: the two systems would thus be compelled to work their way out in visible and perfect contrast, and that which, at the expiration of a reasonable term of years, should prove itself to be the best, would undoubtedly be adopted with general acquiescence.

They also recommend that the State enter upon the experiment by purchasing the Fitchburg Railroad, as being the only one fully supplying the conditions for a perfect trial.

The State constabulary force at the end of the year consisted of 109 men, 68 of whom were under full pay, 22 under half pay, and 19 depended upon the State allowance for the service of criminal precepts. Within the year, 14,275 complaints of all kinds were issued, and the amount of fines and costs paid into the several county treasuries was \$192,710.75, \$60,000 more than the whole expenses of the office. The amount of stolen property recovered and restored was \$20,688.47. The prejudices heretofore existing against the State police have been substantially abandoned, and now, in a degree, many of the cities and towns cheerfully coöperate with them through their police, in the enforcement of the liquor and gambling laws, and the provisions of the general nuisance act.

The political canvass of the past year was one of the most important in the history of the State, and for the first time in many years doubts were entertained by shrewd observers as to the success of the Republican party. No less than four parties—exclusive of the woman's suffrage movement—were in the field. Two of these, the Prohibitory and the Labor Reform, were new parties, composed chiefly of those who had previously acted with the Republican and Democratic parties, and who

did not so much look forward to the success of their candidates, as they hoped to induce one of the other parties to adopt their principles, or to found a party that would ultimately achieve success. The campaign was opened by the Prohibitory party, who held their convention in Boston, on the 17th of August, and nominated candidates for the various State offices, at the head of which, as candidate for Governor, was Wendell Phillips. The principles of this party were set forth in their resolutions as follows:

Resolved, That the policy of the State toward the liquor traffic affects every political interest; that it affects production, expenditure, taxation, pauperism, prostitution, the peace of the streets, the repression of crime, the protection of person and property, the interests of labor, the purity of the ballot, and the success if not the existence of republican government.

Resolved, That a policy which thus affects every political interest ought to be decided by the people, and should by common consent have precedence of other issues.

Resolved, That we can have no hope from a divided party; that, representing the two extremes of a liquor policy, a divided party can neither decide for license nor for prohibition; that it can neither pronounce for the life nor for the death of the dram-shop system, and that its opposing forces neutralize each other so that it can neither adopt any policy, execute any laws, nor make any issue on this question.

Resolved, That there can be no greater peril than party competition for the liquor vote; and that any party not openly opposed to the traffic will engage in this competition—court the favor of the criminal classes—and barter the public morals, the purity of the ballot, and every object of good government, for party success.

Resolved, That this corrupt competition must be coexistent with the life and political power of the traffic; therefore an issue with it is the only remedy, and that no such issue can be made without independent political action.

Resolved, Therefore, that the organization of an independent political party is an inevitable necessity.

Resolved, That, as a political party, we seek a political object; that we aim at the extinction of the entire dram-shop system, national and State, because it is dangerous and injurious to every interest of the Commonwealth.

Resolved, That, while we recognize the importance of other reforms and other political measures, we purposely defer for the present thereon making party issues; that our first work is to place the State in unequivocal opposition to the dram-shop system, and that, until that object shall be secured, we will not be diverted therefrom by other issues.

Resolved, That the abolition of slavery and the preservation of our Union having been accomplished, there is no issue now before the country equal to that of prohibition; and we earnestly invite our fellow-citizens of all political parties to unite with us in giving this great reform a complete victory.

Resolved, That we invoke the blessing of Almighty God upon the proceedings of this day.

Resolved, That, in adopting Wendell Phillips as our standard-bearer, we place in nomination a radical temperance reformer, a fearless champion of truth, a brilliant scholar, a patriotic citizen, and a true man; and we believe that the gubernatorial chair which has been graced by so many honored and eminent citizens of Massachusetts has never been more ably filled than it would be by the man of our unanimous choice.

Resolved, That the other names upon our ticket are gentlemen well known to the whole community, of

honorable record, and of tried and true principles; and we commend them to the hearty and united support of all good citizens at the polls.

The convention of the Labor Reform party was held in Worcester, on the 8th of September, and was attended by 250 delegates. The enthusiasm manifested was very great, and the first nomination was that of Wendell Phillips for Governor by acclamation, thus making him the standard-bearer of the two parties. After forming the rest of the ticket, their platform was presented in the following resolutions:

Resolved, That we reaffirm the principles of the Declaration of Independence that "all men are created free and equal," and have certain "inalienable rights," to secure which is the only just and true purpose of government; therefore all laws creating distinction in favor of color, condition, nationality, or pursuit, are a clear violation of the fundamental principles of democratic government.

Resolved, That, as labor lies at the foundation of national prosperity, it is the duty and interest of both the State and the nation to foster and protect it; therefore all associations of working men or women formed with a view of promoting their moral or material interests should receive the same chartered rights and privileges at the hands of legislatures, both State and national, as are granted to associated capital, especially as the chartered rights of associated capital are derived solely from the people, who are the true source of power under democratic institutions.

Resolved, That a cardinal principle of the labor reform movement is the reduction of the hours of labor; therefore, be it resolved, that we insist upon the reduction of the hours of labor to eight hours for all labor employed at the public expense by States, counties, cities, and towns, as experiments, which the public is able to make and interested in making, since they will establish the preliminary claim necessary to prove finally that they mean a better paid and better educated labor.

Resolved, That we will demand, of every candidate who seeks our suffrage for political honor in the coming campaign, a faithful pledge and guarantee that, if elected, he will vote for the enactment of a law prohibiting all incorporated and other manufacturing establishments in this Commonwealth from employing females and minors more than ten hours per day, and we pledge ourselves to use all honorable means to defeat every candidate for office who will not pledge himself unreservedly to the enactment of such a law.

Resolved, That while we are implicitly opposed to any and all schemes of repudiation, yet we demand the immediate passage by Congress of a law providing for the speediest possible payment of the entire national debt, according to the terms of the contract, as due the laborer, who carries the principal burden, and as a measure calculated to secure honesty and economy in the administration of public affairs.

Resolved, That we demand the repeal of so much of the national banking law as allows banks to issue notes circulating as money, and the substitution thereof of legal-tender government notes as the best and safest currency the government ever had.

Resolved, That the public lands should be held in sacred trust by the Government for actual settlers, and should never be given into the possession of speculators and railroad monopolists.

Resolved, That while we welcome voluntary immigrants from every clime, and pledge them the protection of our laws and equal opportunity in every field of industry, still we are inflexibly opposed to the importation by capitalists of laborers from China and elsewhere for the purpose of degrading and cheapening American labor, and will resist it by all legal and constitutional means in our power.

Resolved, That we view with pride the fact that the soldiers and sailors were enlisted mainly from the ranks of the laboring classes, and that they fought heroically to maintain the national integrity and uphold the honor of Massachusetts, and we claim that, if true to her promises and herself, she should provide the means for equalizing the bounties to her soldiers and sailors on just and equitable principles.

Resolved, That we earnestly urge the friends of labor in this State to use all their influence individually and collectively to secure the election to public office of those candidates who are unequivocally committed to the principles embraced in this platform.

On the 5th of October, the Republican State Convention assembled at Worcester, and chose ex-Governor A. H. Bullock as the presiding officer. William Claflin was nominated for Governor almost unanimously, and the other nominations were, for Lieutenant-Governor, Joseph Tucker; for Secretary of State, Oliver Warner; for Attorney-General, Charles Allen; for Auditor, Charles Endicott; for Treasurer and Receiver-General, Charles Adams, Jr. The following were the resolutions:

The Republicans of Massachusetts congratulate their brethren throughout the country on the consummation, within the past year, of the greatest civil event in history since the formation of the Constitution—the adoption by the people of the last of the three great constitutional amendments, which secure personal freedom, equality before the law, and equality of political power, to all men born or naturalized in the United States; and, in asking for the continued confidence of the people, we point with just pride to the fact that these are the precious fruits of the Administration in peace of that candidate whose military administration had already triumphantly conducted the country to safety and prosperity through a war of unexampled magnitude and peril.

Resolved, That we cordially approve the vigorous and successful administration of General Grant, which in less than two years has introduced reform in revenue in all branches of the public service, has effected a reduction of the public debt unexampled in history, has made faithful and thorough collection of the revenues, and has vastly lightened the weight of taxation which oppressed the industries of the country, and gives promise of still further and larger reduction, and we take especial pleasure in the fact that in the accomplishment of these great results the President has been aided by Massachusetts administrative ability in the Treasury, Massachusetts integrity and energy at the head of the Committee on Appropriations, and Massachusetts firmness and sense at the head of the Committee on Claims.

Resolved, That, as the burden of the national debt has been incurred in defence of the common life of the Republic, and as the benefits of which it is the price, are to be permanent and enduring to the remotest generation, every proper effort should be made to fund the same at the lowest practicable rate of interest, and that the process of reduction should be so gradual as to bear with moderate weight only upon the people, and that taxation should be further reduced so as to relieve, as far as practicable, the pressure upon the industry of the nation.

Resolved, That the Republican party is pledged, by its past history and the cherished personal convictions of its members, to labor to carry out the great principles, which it has been the means of enacting into the fundamental law of the country, to their logical results, and especially to protect the newly-enfranchised citizens in the rights which are declared by the recent constitutional amendments, and to secure to them that education which will enable them to take full and intelligent share in the administration of the country.

Resolved, That the finances of the State should be administered with the greatest economy; that all useless and doubtful expenses should be cut off, and the credit of the Commonwealth only used in the clearest cases of public necessity.

Resolved, That the Republican party, which, in the ten years of its history, has accomplished more for the elevation of the laborers of America than had been accomplished before since the Government was formed, hears with surprise and indignation the claim of any other organization to arrogate to itself the title of "labor party;" that in our judgment the intellectual and social advancement of the laborers of the country, their improvement in wealth, comfort, and happiness, the security of their personal and political rights, are not only important objects of public care and regard, but are the very purpose for which the State was created, and are the end and object of all political effort.

Resolved, That a decent regard to the honor of the United States requires that measures shall be taken by the national Administration to vindicate the claim of the country upon Great Britain for proper reparation for the hostile action of that nation in prematurely and unnecessarily recognizing the rebel States as belligerents, and for permitting the fitting out in her ports of hostile cruisers to prey upon our commerce.

Resolved, That the Republican party favor laws wisely calculated to prevent tippling and drunkenness, and promote temperance and industry, and are in favor of the suppression of dram-shops, as tending to the destruction of good order and happiness of the people and all the material interests of the Commonwealth.

Resolved, That the administration of William Claflin as Governor of this Commonwealth has been characterized by wisdom, integrity, and firmness, and that we cordially recommend him to the voters of the Commonwealth for reelection.

The last political convention of the year was that of the Democratic party, which was held at Fitchburg, on the 12th of October, when the following nominations were made: for Governor, John Quincy Adams; for Lieutenant-Governor, James Chattaway; for Secretary of State, Luther Stephenson, Jr.; for Treasurer, and Receiver-General, Levi Heywood; for Auditor, Phineas Allen; for Attorney-General, William West Warren. The following platform was adopted:

Resolved, That the country demands from each political party at this time a bold and out-spoken assertion of its policy upon the living questions of to-day; and that the attempt on the part of the radical party to perpetuate its power, by merely boasting of its past achievements, must prove futile. No record, however fair, can atone for its wilful neglect of the industrial interests of the country, for the loss of our commercial importance, for over five years of peace wasted in attempting to govern the country upon a theory and policy that could only be excused by the necessities of war.

Resolved, That, in declaring its policy now, the Democratic party need only to revert to its cardinal principle of opposition to all consolidation or concentration of power in any hands, and to every unnecessary exercise of power, even where the right to exercise it is clearly given; not the most but the least possible government being best conducive to the happiness of mankind. In conformity with this maxim, the party now, as heretofore, will resist every stretch of power by either Federal or State Government, or by any one of the coordinate branches of either, and every plan of legislation which involves an undue interference with the reserved rights of the citizen, either in its

direct purpose, or by requiring for its attainment a resort to arbitrary and inquisitorial practices.

Resolved, That, proceeding upon these established principles, we adopt as our own the resolutions of our party in the great Democratic State of New York, that our tariff of duties, like all taxes, should have the one only lawful purpose of obtaining necessary revenue, and that the present system of favoritism, mis-called protection, levying taxes for the special benefit of a few capitalists, is simple robbery of the rest of the people, and that, except so far as the legitimate expenses of the Government may require, free trade is the true policy of the country; that we demand the simplification of our system of internal revenue, the abolition of useless and inquisitorial taxes, and the reduction of the whole volume of taxation, now in excess of the wants of the Government and the exigencies of public credit.

Resolved, That grants of land, or money, or credit, either by the Federal, or State Governments, to individuals, or to corporations formed for mere purposes of private gain, are all in some sort a diversion of public assets from their legitimate uses; involve the State in unnecessary complications with special interests; lead to gross corruption, and are inconsistent with a reasonable regard for the safety of popular institutions.

Resolved, That it is our proud boast that the oppressed of all nations can find with us a safe asylum, and here enjoy the blessings of a free Government; that consistency with our professions, not less than the highest welfare of both native and foreign born, requires that all who come to these shores should, as soon as practicable, become citizens, and have their equal influence in political affairs; and we denounce, as unrepugnant and monstrous, the attempt by Congress and our Legislature to prevent the naturalization of the poor by multiplying the expenses and the difficulties of complying with necessary legal formalities.

Resolved, That, on the other hand, independently of the question as to the expediency of bringing into intimate political and social relations two adverse races of men, we believe it to be wrong to stimulate by artificial means the irruption into our community of swarms of Mongolians, who have neither the wish nor the aptitude to assume the duties and responsibilities of citizenship, and are brought here by interested capitalists only as so much bone and muscle, to lower the dignity of labor, degrade the condition of our working-men, and create and perpetuate distinct classes in our social system.

Resolved, That the labor of the country, weak by its necessities, in its defenses against the cupidity of capitalists, and its ability to compel a recognition of its just rights, especially needs and merits the protection of just, equal, and adequate laws; and that, in view of the fact that the present high cost of living and consequent inadequacy of wages to provide sufficient means of support for our poorer people, as mainly due to the unjust currency system, the arbitrary and excessive taxation, and the many and great monopolies which have been inflicted upon us by the policy of the Republican party, the claim made by that party at its recent State Convention, that it has any sympathy with labor or the laborer, is preposterous and absurd.

Resolved, That we reaffirm an absolute hostility to every attempt to influence the decision of political questions by the formation of secret proscriptive organizations.

Resolved, That while we must regard it as an existing fact that suffrage is a right and not a privilege, and that any restriction upon its exercise should be founded in unmistakable public policy, we consider the proposition to extend the suffrage to the women of this Commonwealth as involving too many social considerations to be summarily treated as a mere political question; but there is a pressing duty upon the people of this State to remove at once and forever

all property or other qualifications, constitutional or statutory, upon the exercise by every man who is a citizen of the United States.

Resolved, That the implied censure passed by the convention at Worcester upon the national Administration, for its failure to vindicate the claims of this country against Great Britain, meets our warm approval, and that in its foreign as in its internal policy the Administration deserves our unqualified condemnation.

Resolved, That the railroad corporations of this Commonwealth were created by virtue of the sovereign prerogative of the State, for the public benefit, and that we assert the right and duty of the Commonwealth to exercise its authority to keep them within the scope of their organization, and enforce their management for the best interests of the whole people.

Resolved, That the French Republic, now rising in its strength from the ruins of an effete and corrupt empire, under its rallying-cry of liberty, equality, and fraternity, and which receives no encouragement from the crowned heads of Europe, deserves and receives our earnest and cordial sympathy and support.

The agitation of the question of woman suffrage was more general and earnest during the year than in former ones. As neither the Prohibitory nor the Labor Reform party had incorporated in its platform the question of female suffrage, the advocates of this cause called a convention, to be held before the assembling of the Republican and Democratic Conventions, in order to decide upon a policy for the campaign. Accordingly the Woman-Suffrage convention assembled in Boston, on the 29th of September, and organized with Mrs. Julia Ward Howe as presiding officer. The principal question for discussion was as to the expediency of nominating candidates for the various State offices, and thus forming a separate and distinct ticket. This measure was finally voted down, and it was decided to address the approaching Republican as well as the Democratic Convention in behalf of woman suffrage. The resolutions adopted were as follows:

Resolved, That the friends of woman's suffrage should no longer support any candidate for State or local office who is not in favor of the enfranchisement of women, and, in case no such candidate is put in nomination, that they should nominate and support independent candidates of their own.

And whereas the platforms of the Prohibition and Labor Reform parties are both silent on the question of woman suffrage, and whereas the conventions of the Republican and Democratic parties are about to meet for the declaration of principles and the nomination of candidates: therefore,

Resolved, That the proper committee be instructed to prepare and forward memorials on behalf of this convention to the conventions of the Republican and Democratic parties, with copies of these resolutions attached, respectfully requesting of each the adoption of woman suffrage as a part of their platforms; also that said committee are instructed to question every candidate upon the State ticket of every party in the field whether he will work for the establishment of woman's suffrage, and to publish his reply in the *Woman's Journal*; also that this committee shall meet in Boston on the 18th day of October next, after adjournment of the Republican and Democratic Conventions, to make nominations for a State ticket, if necessary.

Resolved, That all men and women who are in favor of woman suffrage are requested to meet in their re-

spective representative and senatorial districts, and to take such steps as will insure the election of a Representative pledged to work and vote for woman suffrage in the Legislature next winter.

Resolved, That the friends of woman's suffrage recognize in Wendell Phillips a leader second to none in his early, able, and constant advocacy of impartial suffrage; that he has earned our gratitude and has a right to claim our votes whenever they can be given under the forms of law and without complicating the cause of woman's suffrage with issues merely political.

Resolved, That the thanks of this convention are due to Hon. Henry Wilson, Senator of Massachusetts, for having introduced a bill into the Congress of the United States for the extension of suffrage to women in the District of Columbia and in the Territories, and we respectfully request him to renew the proposition to Congress next winter.

And whereas the Hon. Charles Sumner, Senator from Massachusetts, has declared that distinctions in suffrage founded on insurmountable qualifications are in violation of republican principles, and whereas sex is a qualification as insurmountable as color: therefore,

Resolved, That consistency to his own principles demands from the Hon. Charles Sumner next winter the submission of a sixteenth amendment to the Federal Constitution, prohibiting political distinctions on account of sex.

In accordance with one of the above resolutions, the "Woman-Suffrage State Central Committee" appeared before the Republican Convention on the 5th of October, and presented the following memorial:

To the Republican Convention of the State of Massachusetts:

The undersigned, having been appointed a State Central Committee, by the friends of woman suffrage assembled in convention at Tremont Temple, in Boston, on the 29th day of September, 1870, are instructed by and on behalf of said convention to lay before your honorable body the following memorial, with a copy of the resolutions of the said convention attached. We respectfully represent that, in violation of the Bill of Rights of the Commonwealth of Massachusetts, which expressly affirms that "all power resides originally in the people, and is derived from them," the women of Massachusetts—one-half of the entire people—are excluded from political power.

That, in violation of the Declaration of Independence, which declares, that "governments derive their just power from the consent of the governed," all the women of Massachusetts are governed without consent.

That, in violation of the fundamental principle of representative government, that "taxation without representation is tyranny," every woman in Massachusetts who is the owner of property is taxed without representation, and has no voice in the amount or expenditure of the taxes she is compelled to pay.

We therefore respectfully request that this convention of the Republican party, which has abolished political distinctions on account of race, color, or previous condition of servitude, will declare itself by resolution opposed to political distinctions on account of sex, and in favor of so amending our State constitution as to extend suffrage to women on the same terms and qualifications as are prescribed for men.

The question was brought before the convention in the form of the following resolution:

Resolved, That the Republican party of Massachusetts is mindful of its obligations to the loyal women of America for their patriotic devotion to the

cause of liberty; that we are heartily in favor of the enfranchisement of woman, and will hail the day when the educated intellect and enlightened conscience of the women of Massachusetts find direct expression at the ballot-box—

which, after an animated discussion, was lost by a vote of 196 to 189.

Efforts were now made to secure from the Democratic Convention a pledge in favor of woman suffrage, and a similar resolution was debated by that body, and rejected by a large majority.

The election was held on the 15th of November, and resulted in the choice of all the Republican candidates for State offices, as follows:

For William Claflin, Republican	79,549
" John Quincy Adams, Democrat	49,536
" Wendell Phillips, Labor Reform and Frohlibitionist	21,946

Total vote for Governor (including 206 scattering). 151,237

The Legislature elected was divided as follows:

	Senate.	House.	Joint ballot.
Republicans	34	195	229
Democrats	5	34	39
Labor Reformers	1	11	12
Republican majority	28	150	178

There has been a gradual decrease in pauperism throughout the State, which is due largely to the wise policy recently adopted. The chief feature of this policy has been to favor the system of segregation in preference to that of aggregation, by relieving the sick and poor through the town authorities, thus "saving a large regular expenditure for their support, and at the same time permitting them to enjoy the comforts of their homes, and the society of their relatives and friends." There are three almshouses for the accommodation of the poor of the State, located respectively at Tewksbury, Bridgewater, and Monson. The first is the most extensive; the last is used more especially as a primary school, and will soon be discontinued as an almshouse, in compliance with the recommendation of the inspectors, "that the time has come when the almshouse department might be abolished with positive advantage to the charitable purposes of the Commonwealth." During the year ending October 1, 1870, the number of paupers admitted into the almshouse at Tewksbury was 2,055; discharged, 2,090; supported, 2,745; deaths, 248; births, 58; weekly average, 54. The State appropriations for the year amounted to \$75,333, of which \$73,271 were for current expenses, which, divided by the average number of inmates, gives \$1.94 as the weekly cost of each inmate. The whole number of inmates in this institution, January 1, 1871, was 811; of whom 303 were men, 418 women, 46 boys, and 49 girls. There has been a gradual decrease in the number of inmates of the workhouse and almshouse at Bridgewater, the average number in both departments for the past year being 335 against 412 in 1869, 408 in 1868,

381 in 1867, 582 in 1865, and 579 in 1860. Of the average for 1870, 88 were in the almshouse, and 247 in the workhouse. To the former there were admitted during the year 266; born in the house, 21; in the house during the year, 868; died, 46; discharged, 249; remaining October 1, 1870, 264. In the workhouse during the year there were 501, of whom 264 remained at the end of the year. The total current expenses for the year amounted to \$35,332, of which the sum of \$3,201, arising from the labor of the inmates and former products, was reimbursed to the State, making the average weekly cost to the State for each inmate \$1.84. The total value of the property of the institution is about \$200,000. The average number of inmates of the institution at Monson during the year ending October 1, 1870, was 450, the smallest number for any year since its opening in 1854. Of this number 320 were in the primary school, and 130 in the almshouse.

In 1868 the average number at Monson was 646, of whom 233 were paupers. The great decrease in the number of paupers and pupils within the past two years is attributable in a large degree to the changes in the settlement laws made within that period, and the vigorous policy adopted in regard to tramps. In 1861 there were no less than 1,384 of these tramps, which number decreased to 467 in 1869, and for the past year does not exceed 250. All the children of the school who are old enough are taught to labor, and many of them render services as helps.

On the 1st of January, 1871, the total number in the primary school and almshouse department was 448; of whom 21 were men, 80 women, 302 boys, and 95 girls. The total number of inmates January 1, 1870, was 500. The current expenses for the year were \$48,781, and the average weekly cost of each inmate \$2.08.

On the 1st of January, 1871, there were in the three almshouses above referred to 364 men, 464 women, 85 boys, and 92 girls, making a total of 1,006; in the primary school 275 boys and 74 girls, and in the workhouse 108 men and 150 women. The report of the trustees of the Lunatic Hospital at Northampton shows the number of patients in this institution on the 30th of September, 1869, to have been 402, and the number admitted during the year 202, making the whole number having received the benefit of the institution 604. Of this number 166 were discharged, and 33 died, leaving 405 inmates of the hospital September 30, 1870. The proportion of deaths has been, with two exceptions, smaller than in any preceding year, and below the average annual mortality for the whole period since the founding of the hospital. The daily average of patients for the year was 408; 50 were discharged cured, 58 improved, 56 unimproved, and 2 not insane. The total number of patients in the hospital,

and the number who were discharged cured, are both larger than in any preceding year. The deaths were equal to 5.46 per cent. of the whole number of patients in the course of the year, and 8.07 per cent. of the daily average number of inmates. The receipts from all sources for the year were \$91,288.64, and the expenses \$84,776.23, leaving a balance of \$6,512.42 in the Treasury.

The number of patients under treatment in the Lunatic Hospital at Taunton during the year was 758; number of admissions, 375; discharges, 376; average number in the hospital 388. The percentage of the recoveries as compared with the admissions has been 29.89—which is less than the general average since the opening of the institution. Of the whole number admitted, 167 were of American parentage, and 218 foreign. The average annual cost of each patient is \$200.35, and the average weekly cost \$3.85. The total receipts for the year ending September 30, 1870, were \$77,497.42; total payments, \$67,783.79.

Of the 2,032 persons who have been admitted to the hospital, 1,075 pursued active out-door employment, 594 pursued active in-door employment, 347 were of sedentary habits, and the occupation of 16 was unknown. There were 480 laborers, 254 farmers, 186 seamen, 127 boot and shoe makers, 118 mill operatives, 80 traders, 73 carpenters, 67 clerks, 20 merchants, 19 clergymen, 14 physicians, 14 teachers, 5 lawyers, 4 actors, 2 editors. Of the assigned causes of insanity, the two greatest are intemperance, which is said to have caused 680 of the inmates to become insane, and ill-health, 611. Religious excitement caused 194; pecuniary trouble, 96; loss of friends, 88; spiritualism, 47; and hard work, 51. Of the total number of inmates, 2,437 have been supported by the State, 920 by towns, and 673 by individuals. A valuable addition of upward of 400 volumes has been made during the past year to their well-used library. The employment of patients as much as possible out-of-doors, even at the risk of looking through the neighborhood, occasionally, for an eloped patient, was commended. An important change in the management of this institution took place during the past year, occasioned by the resignation of Dr. Choate, who had given much satisfaction as superintendent since the opening of the hospital in 1854. The trustee selected as his successor Dr. William W. Godding, of Winchendon, who had gained much experience in the care and treatment of the insane as first assistant physician in the National Hospital for the Insane at Washington.

The report of the superintendent of the Lunatic Asylum at Worcester shows that 384 patients were received into the hospital during the year, of whom 196 were males, and 188 females. At the close of the preceding year the number of inmates was 376, of whom 190 were males, and 186 females. The number under treatment during the year was, there-

fore, 760—386 males, and 374 females. The daily average of patients in the hospital was 396; discharged 287; of whom 158 were recovered, 123 improved, 6 not improved, died 64. The number of admissions exceeded those of the previous year by 47; the number of discharges was 9 less, and the number of deaths 17 greater than in the preceding year. The ratio of recoveries was a fraction more than 45 per cent. to the number of those discharged, or a fraction more than 55 per cent. after deducting the number of those who died. The rate of mortality was somewhat greater than in 1869, but is regarded as moderate, considering the patients when admitted. The receipts from all sources for the year were \$90,428.31, and the expenditures were \$82,541.40, leaving a balance in the Treasury of \$7,886.91.

The State Prison of Massachusetts holds a very high rank among the penal institutions of the country, and has attracted the attention of the general public by the adoption of wise and humane reforms in prison discipline. During the past year there has been a marked improvement in the discipline of the prison. The school established more than a year ago has been very successful, and on the part of the attendants there has been a faithful devotion to their studies. Instruction is given three evenings a week to more than one hundred pupils, and the attendance would be still larger if there were adequate accommodations. In the winter months lectures are usually given once a week, which are fully attended and appreciated by the inmates.

By the report of the warden, Gideon Haynes, it appears that the whole number of convicts, October 1, 1869, was 593; number received under warrants from the courts, during the year ending September 30, 1870, was 177; escaped convicts returned, 2; remanded, having broken the condition of his pardon, 1; returned from the insane hospital, 1; discharged by expiration of sentence, 130; by remission of sentence, 63; died, 14; sent to the insane hospital, 2; escaped, 2; number remaining, September 30, 1870, 563. Of those received during the year, there were for arson, 6; assault with intent to murder, 6; with intent to rob, 6; breaking and entering, 54; burglary, 8; forgery, 5; larceny, 27; larceny from the person, 12; manslaughter, 7; murders, 7; robbery, 14. Financially speaking, the profits of the prison, for four years, have amounted in the aggregate to \$105,830.39. The receipts, in cash, for the year ending October 1, 1870 (paid into the Treasury of the Commonwealth), were \$138,899.96, which, with stock on hand amounting to \$10,147.45, gives a total of \$149,047.41. The cash expenditures for the same period were \$114,974.85, which, added to the stock on hand, October 1, 1869, \$7,290.87, makes a total of \$122,265.72, and a balance of \$26,781.69 in favor of the prison for the year.

The expenditures of the State Reform School for Boys, at Westborough, for 1870, were \$44,-

402.11, while the receipts from all sources were \$15,869.46, which, deducted from the expenditures, shows the actual cost to the State for each boy to be \$111.66 per year. The whole number of boys in school during the year was 474; of whom 261 were remaining, September 30, 1870. During the year 115 boys were apprenticed and on trial, and 74 were released on probation. The number of pupils in the Industrial School for Girls, at Lancaster, October 1, 1870, was 143. During the year 396 boys were provided for in the schoolships, of whom 216 were remaining at the end of the year. The trustees of the Massachusetts School for Idiotic and Feeble-minded Youth report the number of inmates at the beginning of the year to have been 87; entered during the year, 26; discharged, 30; in the institution at the end of the year 1870, 83. The trustees say, "idiots possess the attribute of educability." They are affected by culture even more than ordinary children and youth, because the less the force of individual character the greater its plasticity, and the more it is affected by extraneous influence. But they lack the innate power of development; they would grow as animals grow, were it not for other influences. Considering their low starting-point, however, idiotic children can be made to progress nearly as far as ordinary children; but no reliance must be placed upon their innate power of development and improvement. Every thing must be done for them. Idiots are more numerous among the children of the rich and of the poor than of the middling classes, who suffer neither from the enervation of riches nor the pinchings of poverty. The pupils come mainly from the actually poor. Many are of families that have been deteriorating physically, and are nearly run out. The stock has become vitiated by various causes, among which intemperance and physical excesses are prominent.

The commission appointed to consider the expediency of establishing an asylum for inebriates have recommended the passage of a bill "to establish the Massachusetts Asylum for Inebriates, which can be built by private subscription;" the institution to be managed by a board of directors, a part of whom shall be appointed by the Governor, and a part by the subscribers to the establishment. For the relief of the intemperate in prisons, the commission also recommend the establishment of an inebriate asylum, for the special purpose of treating cases selected from the several prisons.

The public schools of the State are in a flourishing condition. The following are the pecuniary statistics of the year:

The amount expended for instruction, raised by taxation, 18.....	\$3,125,052 09
Increase over last year.....	301,344 30
Amount raised by taxation, including income of surplus revenue, for each child in the State between the ages of five and fifteen years.....	11 54
Increase over last year.....	70

The Governor, in his message to the Legis-

lature of 1871, speaks of the lack of special technical instruction as a defect in the system, and recommends the establishment of technical schools. He also refers to the fact that a large proportion of the teachers are women, and that their average wages are only \$30.92 per month; and recommends an increase of compensation. He also recommends the establishment of a fifth normal school at Worcester.

The population of Boston, in 1870, was 250,526; in 1860, 177,841; in 1850, 136,881.

The following is the Federal census of Massachusetts, taken in the years 1860 and 1870:

COUNTIES.	1870.	1860.
Barnstable.....	32,774	35,990
Berkshire.....	64,837	55,120
Bristol.....	102,896	92,794
Dukes.....	3,787	4,403
Essex.....	200,643	165,611
Franklin.....	32,635	31,434
Hampden.....	78,409	87,366
Hampshire.....	44,388	37,323
Middlesex.....	274,353	216,254
Nantucket.....	4,123	6,094
Norfolk.....	89,443	109,150
Plymouth.....	65,365	64,768
Suffolk.....	270,802	192,700
Worcester.....	192,716	159,659
Total.....	1,457,351	1,221,066

MATTHEWS, JAMES M., D. D., a clergyman of the Reformed Dutch Church, born in Salem, Washington County, N. Y., in 1785; died in New-York City, January 28, 1870. He graduated at Union College in 1803, and at the Associate Reformed Seminary in 1807, and was licensed to preach the same year. He was assistant-professor in Dr. Mason's Seminary from 1809 to 1818; was preacher and pastor in the South Dutch Church in New York from 1812 to 1840. In 1818 the South Dutch Church withdrew from the Collegiate Church, and continued in Garden Street till 1835, when it was divided into the Murray Street Church, now the church on Fifth Avenue and Twenty-first Street (Dr. Rogers's), and the Washington Square Church (Dr. Hutton's). From 1831 to 1839, he was Chancellor of the University of the City of New York. From that time he did not hold public office, but was active in ecclesiastical affairs, maintaining up to the last days of his protracted life an activity and energy of mind and body almost without an equal. As late as the fall of 1870, the Christian Union Council, which assembled in New York, was organized by him, and it is said that the great labors he performed in connection with it were the final burdens that broke down his herculean constitution.

McCLINTOCK, Rev. JOHN, D. D., LL. D., a Methodist clergyman, professor, and author, born in Philadelphia in 1814; died in Madison, N. J., March 4, 1870. He graduated with honor at the University of Pennsylvania, in 1835, and immediately after was elected Professor of Mathematics in Dickinson College, Carlisle, Pa. After an experience of several

years in this position, he was elected to the chair of Greek and Latin Languages in the same institution, the duties of which he discharged until 1848, and the same year was elected editor of the *Methodist Quarterly Review*, which he conducted for a period of eight years with marked success. While in his hands, the *Quarterly* rendered especial service by its examination of the positive philosophy of Comte, and the detection of its errors. These expositions attracted the attention of the French philosopher, and led to some correspondence between him and Dr. McClintock. In 1856 he was appointed by the General Conference, in connection with Bishop Simpson, a delegate to represent the Methodist Episcopal Church in the English, Irish, French, and German Conferences. He was also present as a delegate from that church to the World's Convention, held in Berlin, during the same year. After his return, he was elected President of the Troy University, and in the interim of the organization of the college classes he was pastor of St. Paul's Church, New York. Here his preaching attracted large congregations, and he speedily took high rank as a pulpit orator. In June, 1860, he sailed for Paris, to take charge of the American chapel there, under the auspices of the American and Foreign Christian Union, where he remained during most of the years of the late civil war. Through his agency, pamphlets, elucidating the causes of the war, were prepared and circulated among the English people. His home at Paris became a rallying centre for Union Americans, and so wide-spread was his influence that he was recognized by his countrymen as an unofficial but most effective representative of the Northern people. Returning home at the close of the war, he resumed again his literary labors, which had been suspended for several years. In 1866, he was made chairman of the Central Centenary Committee, which gave so much spirit and success to the Centennial Commemoration of the Origin and History of American Methodism. In 1867, upon the establishment of the Drew Theological Seminary, in Madison, N. J., through the munificence of Mr. Daniel Drew, Dr. McClintock was chosen president, and in this position closed his laborious and useful life. Dr. McClintock's literary activity was incessant, and the fruit of it remains in numerous volumes. Besides frequent contributions to the *Methodist Quarterly Review*, and other periodicals, he prepared, in conjunction with Prof. Blumenthal, a translation of Neander's "Life of Christ," and, in conjunction with Prof. Crooks, of Dickinson College, a series of Latin and Greek elementary text-books, on the method of "Imitation and Constant Repetition." These latter volumes were the first published in our country in which this method of teaching the classic languages, now so generally practised, was thoroughly carried out. Also an "Analysis of Watson's Theological Institute,"

and "Sketches of Eminent Methodist Ministers." A series of letters in answer to a speech delivered in Congress by the Hon. Joseph R. Chandler, on the Roman Catholic question, was afterward collected into a volume entitled the "Temporal Power of the Pope." But his most important literary labor was the well-known *Theological and Biblical Cyclopædia*, on which he had been engaged for many years in association with Dr. James Strong. Of this great work three volumes have been published. It will doubtless long remain a monument of Dr. McClintock's breadth of scholarship and unflagging industry. Intellectually, Dr. McClintock was distinguished by his versatility, and his rapidity in the acquisition of knowledge. His erudition was broad, varied, and accurate; he was an able theologian, an author and editor of commanding influence, an accomplished educator, and an effective preacher.

MÉRIMÉE, PROSPER, a French Academician, Senator, scholar, dramatist, and man of letters, born in Paris, September 28, 1808; died, after a lingering illness, in Cannes, France, October 8, 1870. His early education in the University of Paris was thorough and critical. He subsequently studied law, and was admitted to the Parisian bar, but never practised—his fondness for literature rendering legal practice too irksome to him. After the Revolution of 1830, the Count d'Argout, then minister, selected him as secretary for his cabinet, and afterward appointed him secretary of the Board of Trade, and head-clerk of the Admiralty-Office. In 1831 he succeeded M. Vitet as the inspector of the ancient historical monuments of France, a post which he retained until the time of his death, and in which he acquired his reputation as a distinguished antiquarian and archaeologist. In 1848 the provisional government selected him as one of the commissioners charged to take the inventory of the possessions belonging to the Orleans family. Some time afterward, when the tribunals gave judgment against M. Libri, nominally for alleged robbery of the Royal Library (see LIBRI, ANNUAL CYCLOPEDIA for 1869), but really for adhering to the Orleans interest, the fidelity of M. Mérimée to the same cause led him to recriminate against the decision of the judges in two letters inserted in the *Revue des Deux Mondes*, for which he was fined, and imprisoned for fifteen days. In 1844 he succeeded M. Charles Nodier in the French Academy; in 1853 he was nominated Senator and free member of the Academy of Inscriptions; in 1860 he was made commander and in 1866 grand-officer of the Legion of Honor. The wide range of M. Prosper Mérimée's attainments enabled him to obtain distinction in the domains of archaeology, history, and romance. At the outset of his literary career he gained celebrity by his two apocryphal works, by imaginary authors—"The Theatre of Clara Gazul, a Spanish Comédienne" (1825), and "Guzla," a collection of Illyrian songs, attributed by him to Hyacin-

thus Maglanowich. "The Theatre of Clara Gazul," one of the most perfect examples of literary mystification, precipitated the romantic revolution in France, and, according to the expression of a well-known critic of the time, M. Mérimée was the Mazeppa of an army of which Victor Hugo was the Charles XII. He published afterward, anonymously, the "Jacquerie" (1828), depicting feudal scenes, followed by "The Carvajal Family" and the "Chronicle of the Reign of Charles IX." (1829). After this date he ventured to attach his signature to his literary productions, of which the following are the principal: "Tamango," "The Capture of the Redoubt," "Venus of Ile," "Souls in Purgatory," "The Vision of Charles XI," "The Plague of Toledo," "The Game of Triotrac," "The Etruscan Vase," "The Double Mistake," "Arsène Guillot," "Matteo Falcone," "Colomba." These charming stories were published between 1830 and 1840, in the *Revue de Paris* and the *Revue des Deux Mondes*, and afterward collected in volumes. "Carmen" (1847), "Episode of the History of Russia" (1852), "The Two Heritages" (1853), "The Inspector-General" (1853), "Outset of an Adventurer" (1853), are little novels, full of life and interest, and distinguished for their sobriety of style and elegance of language.

His archaeological works are the following: "Travels in the South of France" (1835), "Travels in the West of France" (1836), "Travels in Auvergne and Limousin" (1838), "Travels in Corsica" (1840), "Historical Monuments" (1848), "Paintings of the Church Saint-Savin" (1844), in which the wonders of Nature, the marvels of art, and the relics of history, are presented to the reader in the most attractive forms, which seldom fail to excite his interest and sympathy.

His miscellaneous works were: "Notice on the Life and Works of Michael Cervantes" (1828); "Essay on Social War" (1841); "History of Don Pedro I., King of Castile" (1843); "The False Demetrius" (1854); "Historical and Literary Fragments" (1855); "Introduction to the Stories and Poems of Modern Greece of Marino Vreto" (1855); and numerous articles in the *Revue des Deux Mondes*, the *Salon* of 1839, the *Archæological Review*, *Revue Contemporaine*, *Plutarque Français*, the *Globe*, *Constitutionnel*, *Moniteur*, *History of the Villes de France*, etc., equally distinguished for their sparkling wit, graceful humor, elegance of language, breadth of views, and soundness of judgment.

METALS. *The Henderson Steel Process.*—This, which is also called the Fluo-Titanic process, is fully described by the inventor, Mr. James Henderson, in *Nature*. He writes that the agents used are fluorine and oxygen combined. The former is derived from any fluoride, and the oxygen from any substance, capable of evolving that gas, which is adapted for use in the manufacture of wrought-iron and steel.

Fluor-spar and pure rich iron-ores are the most available and economical substances for producing these agents, and are applied finely powdered and mixed, and placed in receptacles, preferably, so as to act from the under side upward upon cast-iron in its molten state.

The most economical mode of application of this process is to treat the cast-iron, in the condition in which it flows from the blast-furnaces, with fluor-spar and iron-ore, applied in the "chills" or pig moulds used at blast-furnaces, by being spread over the bottom of the moulds.

The iron, when tapped from the blast-furnace, flows into the mould thus prepared: the heat of the iron causes fluorine and oxygen to be liberated, and, by reason of the affinities of these substances for silicon and phosphorus, these impurities are removed in the form of vapor. The reactions in the "chills" are similar to those of the boiling-puddling process, and last about five minutes. The metal, during this period, is covered with jets of flame and smoke. The resulting metal, with respect to silicon and phosphorus, is as pure as wrought-iron.

It is preferable to use iron-ores containing the largest amount of oxygen and the least of silicon and phosphorus. These conditions exist in "washed iron sands," and the red hematites of Cumberland and Lancashire. When using the hematite ores, varieties that are the easiest to reduce to powder are preferred; and the ordinary edge-running apparatus, with cast-iron rollers revolving in a pan, is an excellent one for the purpose.

The fluorspar and fine ore are passed through a sieve of not less than four hundred meshes to the square inch, and afterward mixed so thoroughly as to appear to be one substance, in the proportion of one part of fluor-spar to two parts by weight of iron-ore, and are spread one-fourth to three-eighths of an inch deep over the "chills;" then the iron is run upon them so as to form slabs one inch thick.

Mr. Henderson gives an analysis, comparing his refined cast-iron with the products of various English and German processes, showing that his process removes five times as much phosphorus as the others do, and that the product is free from silicon. He also claims a large saving (one-half) in fuel per ton of iron produced, and of forty per cent. of wages per ton, by reason of the diminished labor necessary, and other advantages. About seventy pounds of fluor-spar are required to refine a ton of iron.

The Sherman Process.—The London *Engineer* records the trials of steel made by the Sherman process, at the request of the Lords Commissioners of the Admiralty, at the Chatham Dockyard. The results obtained were very satisfactory, the samples showing a tensile strength of 86 tons of the original section of steel ship-plates, with an elongation of from $1\frac{1}{4}$ inch to $1\frac{1}{2}$ inch, in a length of 6 inches. The breaking strain, calculated from the reduced area at the point of fracture, was over 60 tons per square inch. Further samples of plates which were $\frac{7}{8}$ inch thick were bent double at a dull red heat, both with and across the grain, without showing signs of fracture, while a piece was also bent double cold, with the grain, with the same result, and another piece was similarly bent across the grain with but very slight fracture. Another of Mr. Sherman's samples, tested at Chatham, was a $1\frac{1}{2}$ -inch square bar of a tough class of steel, named

by the Admiralty officials "gun metal." This bar proved to have a tensile strength of 59 tons 645 pounds per square inch of original section, and its elongation was $5\frac{1}{4}$ inches in a length of two feet. This bar was also bent double cold, without sign of fracture. Tools of various kinds, made of this steel, were tested at Chat-ham with most satisfactory results.

Brady's Process.—*Nature* describes the results, but without giving the method, of the process invented by Sir Antonio Brady, for removing the sulphur and phosphorus from refuse iron. The experiments were conducted upon an iron worth, in pigs, only £2 5s. a ton. The application of the process costs but about 35s. a ton, and the residual iron is of a very superior quality. *Nature* says that it bears any and every test. One of the pieces exhibited had been beaten cold to the thinness of writing-paper at one end, drawn to a point at the other, and then twisted by hand eight turns in an inch at a single heating. Massive bars had been beaten cold until the surfaces on each side of the bend came into perfect contact, and a plate six inches wide and half an inch thick had been beaten until its edges were in contact, the flat surface remaining horizontal. In neither case were there any traces of a flaw, either at the convexity of the curve, where the metal was stretched, or at the concavity, where it was compressed. Holes in a thick plate had been enlarged by driving cones into them, and, in a word, the iron had been knocked about in every possible way. At a very low estimate it is worth £14 per ton, and, as there is plenty of the raw material to be had, the profit of the invention seems likely to be great.

Wheeler's Process.—The *United States Railway and Mining Reporter* gives an account of a process for uniting iron and steel discovered by Mr. E. Wheeler. He encases the steel with iron during the whole operation of heating and reduction. The steel is thus protected effectually from the decarbonizing effect of excessive heat, and can be safely heated to a perfect welding state in the usual iron furnaces, without flux of any kind, and in this condition may be rolled down and manipulated as readily as iron in ordinary rolls. The writer says:

We have seen the highest grade of cast tool steel, thus enclosed, and filled with iron, subjected to the intense heat of a heating furnace, and then rolled down into bars at the rate of five hundred feet per minute, and the steel, though perfectly welded to the iron, presented the same bright, clean fracture, when broken, as in the original state, and would harden as readily in a water-bath.

Mr. Wheeler showed us a car-axle rolled by his process at one heat, at the Pencoyd Works, consisting of a core of iron surrounded by a tube of steel, and both in turn by a shell of iron, the whole being as solid and perfect as a homogeneous mass of iron. This plan gives a steel journal, while the iron core and shell secure strength and prevent fracture or breakage of the steel.

The practical uses to which this cheap and effectual method of welding iron and steel can be applied are

innumerable. By it any grade or kind of steel may be used, from Bessemer or "puddled" to crucible, and it can be united to iron in any shape or proportion.

Dephosphorization of Iron.—The experiments made in Prussia to remove the phosphorus from iron, by introducing chloride of calcium into the blast powder, have not been successful. The theory was, that chloride of phosphorus would be formed and volatilized; but it was found that the chlorine was liberated from its combination at too low a temperature to effect any change. The results in the United States, where fluoride of calcium has been substituted for the chloride, have been much more encouraging, and a decrease in the amount of phosphorus, has really been effected thereby, some of it probably passing off in the form of a fluoride. The Prussian iron above alluded to contains 0.497 per cent. of phosphorus, and produces a highly cold-short and brittle Bessemer steel. Refining in a reverberatory furnace, by means of jets of air forced down upon the surface of the iron, was tried, but led to no favorable result. On puddling the iron and reconverting to cast-iron in a cupola, the percentage of phosphorus was reduced to 0.1. But this reconverted iron was found to be dearer than Cumberland iron delivered at the Bessemer steel-works in Silesia, and so the process was abandoned of a necessity. It was also found that iron, when treated in this manner, loses silicon, thereby unfitting it for conversion into Bessemer steel.

Treatment of Iron with Alkaline Metals.—*Van Nostrand's Magazine* gives a summary of the novel process suggested by MM. Gerard and Poulain of purifying iron by the agency of either metallic sodium or potassium. The first step in the process is to form an alloy of iron with the alkaline metal. This is done by forcing the vapor of the metal into a mass of molten iron—an expensive process, and hardly suitable for adoption on the large scale, but the inventors profess to be able to accomplish it cheaply and easily. They say that, if the coal or coke used to reduce the iron be saturated with a solution of carbonate of soda and dried before it goes into the furnace, or if common salt be employed with the fluxing materials, metallic sodium enters into combination with the iron. It may be so; but at present, so far as we know, there is only the assertion of the inventors for the fact.

An alloy of iron with sodium or potassium, when made by the first-mentioned process, is said to be very hard, but nevertheless malleable, and can be forged and welded. Either alloy oxidizes quickly in air or water, and, when a current of moist air or moist carbonic oxide is sent through while it is maintained in a state of fusion, as in a Bessemer's converter, the alloy is decomposed and the alkaline metal is said to combine with any metalloids, as silicon, sulphur, or phosphorus, and in this way these latter are removed from their mixture

with the iron. The final result of the operation is, therefore, a pure iron, but under some circumstances, not defined in the paper we quote from, steel is said to be produced. This is the third process we now have for refining iron by the aid of soda-salts. Which is the best of the three we must leave manufacturers to determine.

Incidentally, the authors mention a curious alloy of sodium and potassium. This is composed of 4 parts of the latter with 2½ parts of the former; and it has exactly the appearance and consistency of mercury, remaining liquid at the ordinary temperature of the air.

Russian Charcoal-Iron.—The Russian charcoal is still almost exclusively used for smelting, and there is no question as to the superior quality of the iron thus produced. From recent and carefully-collected information on the subject, the *Builder* ascertains that the production of iron in Russia now requires the consumption of only 110 tons of charcoal to 100 tons of iron made. The lowest price of birch charcoal in Russia is 6s. 6d. per ton; 8s. 2d. per ton is considered a cheap purchase; and 14s. 9d. per ton, and even more, is paid in some establishments. As this variation in price, however, is almost all due to the expense of land-carriage, there can be no doubt that the service of the great iron-works by light railways, which can be laid and relaid year after year to the portions of the forest from which the supply is taken (on the principle of allowing from sixty to eighty years for the regrowth of the timber), will keep down the cost of charcoal for smelting something below 10s. per ton of iron.

Bessemer Metal.—This variety of steel is now cast in ingots of five tons each, free from alloy, and fit to be used directly in the manufacture of heavy articles. In such masses, however, defects in the form of bubbles are apt to occur—more often near the periphery of the ingot than near its centre. A correspondent of the *Maschinen Constructeur* says that he has seen Bessemer metal used with great advantage for making the piston-rods of steam hammers which were used for hammering steel. Wrought-iron pistons and piston-rods of the same dimensions were used up in a short time, by the change of the iron from a fibrous to a granular structure, in consequence of the repeated concussions to which they were subjected. Bessemer metal has also been used for locomotive axles with excellent results. Its use for this purpose, as well as for boiler-plates, is continually increasing in Europe. It has not been employed for either of these purposes in England. The *Engineering and Mining Journal* remarks that the fact that it resists the oxidizing effects of a flame much better than wrought-iron is a strong argument for its use in boilers.

Malleable Cast-Iron.—This article is the subject of a paper in the *Journal of Applied Chemistry*, by Dr. Adolph Ott. The enormous

flexibility of malleable iron, according to Mr. R. Mallet, is attributable to the fact that small crystalline scales of graphite are uniformly disseminated through the mass. The most rigid materials become flexible when fibrous, or scaly, crystals of different natures are distributed through them, as, for instance, the flexible Indian sandstone with fibres of asbestos running through its quartz-crystals, and the itacolumite of Brazil, which contains mica crystals associated with the quartz mass. The specific gravity of malleable iron approaches very nearly that of cast-iron. Morin and Tresco have shown that the elasticity of malleable iron is considerably less than that of the most inferior wrought-iron. The absolute power of resistance is indicated as being 35 kilogrammes per square metre. Thin pieces, of a diameter not over one-quarter or three-eighths of an inch, may be bent while cold, without cracking; but they can rarely be restored to their original state without being partly or altogether fractured. However, the end of a rod may be forged till red hot, without a break or crack being produced; thin plates may safely be hammered into hollows, provided they are not too deep. Malleable iron will bear rolling to a small degree. All these manipulations bring about a closer grain, and a fracture similar to that of fine-grained steel-like iron. It may be pretty well forged at a low red heat, somewhat above a cherry-red heat, but, in endeavoring to beat it out, it tears and breaks to pieces. This temperature, and that beneath a bright-yellow heat, are those at which it may be best forged; but it is more than probable that various kinds act differently under the same circumstances. When hammered at yellow heat, malleable iron falls to pieces, and large, not uniformly cemented pieces, appear in the interior. With respect to the fusing-point of this material, it is a high one; it lies above that of gray or halved cast-iron, but probably not above that of many sorts of white or hard cast-iron, and certainly considerably below that of cast-steel.

Iron and Steel Crystals.—Mr. Schott, of Ilseberg, has made many microscopical examinations of the structure of steel and iron. He maintains that all crystals of iron are of the form of a double pyramid, the axis of which is variable as compared with the size of the base. The crystals of the coarser kinds are of about twice the height of those of the finest qualities. The more uniform the grain, the smaller the crystals, and the flatter the pyramids, which form each single element, the better is the quality, the greater is the cohesive force, and the finer the surface of the iron. These pyramids become flatter as the proportion of carbon contained in the steel decreases. Consequently, in cast-iron and in the crudest kinds of hard steel, the crystals approach more the cubical form, from which the octahedron proper is derived, and the opposite ex-

treme, or wrought-iron, has its pyramids flattened down to parallel surfaces or leaves, which in their arrangement produce what is called the fibre of the iron. The highest quality of steel has all its crystals in parallel positions, each crystal filling the interstices formed by the angular sides of its neighbors. The crystals stand with their axes in the direction of the pressure or percussive force exerted upon them in working, and consequently the fracture shows the sides or sharp corners of the parallel crystals. In reality, good steel shows, when examined under the microscope, large groups of fine crystals like the points of needles—all arranged in the same direction and parallel.

Melting Steel easily.—The *Iron Age* says that the difficulty of melting steel in sufficiently large mass for some purposes is well known, as, by the ordinary processes, owing to exposure of the gases of combustion and other causes, much deterioration of the quality is almost sure to be the result. As a partial remedy, the metal is usually melted in crucibles, but these are expensive and require constant renewal, and, when a heavy casting is to be made, it is necessary to use a large number of them, and it is difficult to regulate their temperature so that all shall be at exactly the proper melting-point at a given time. A German founder recently announced a method used by him, by which the difficulties mentioned above may be obviated, and steel in any quantity melted and cast as readily as iron. He dispenses with crucibles, and melts his steel in a hearth of burned fire-clay, capable of containing 1,800 pounds. The furnace is so arranged that at the proper time a bellows can be brought into play so as to bring the heat to the melting-point in a very short time, and thus avoid any continued strain upon the hearth. To protect the melted steel against the injurious influences of the gases of combustion, it is covered with a coating, one or two inches thick, of melted green bottle-glass, or furnace-slag, made in a charcoal iron furnace, great care being taken to exclude any sulphur. About 70 pounds of glass or slag will be needed for every 100 pounds of steel. If one hearth will not hold enough steel, several may be used. The melted metal is to be drawn off in the usual way into kettles, lined with clay, and transported to the mould for casting.

Bronze Guns.—A government committee in England have been investigating the merits of bronze ordnance. They have found that, by adopting a narrower groove than those in the French pattern of large guns, and carefully adjusting the height of the studs in relation to the groove, such a piece will endure a great amount of firing without becoming unserviceable. The *Engineer*, referring to the work of the committee, says:

Two guns have, at the hands of the committee, endured respectively 2,673 and 1,362 rounds with charges relatively higher than those of any other

rified gun in Europe, and still remain perfectly serviceable. These figures, translated into plain English, mean a life of 53 and 27 years' ordinary service. It is clear, therefore, that bronze may be perfectly serviceable for rifled field-guns. On the other hand, it was urged that these results could only be obtained by adopting very soft metal for the studs. But, as General Wilmot's committee observes, "when put to the test of experiment this objection is found to be completely without foundation. The zinc studs are but little liable to injury by the rough treatment. Nothing short of intentional injury can render the projectiles thus studded unserviceable." As to the scoring of the grooves, from which much was feared, the practice is not thereby materially affected, the scoring being confined to the loading side and bottom of the bore. Further, when shells were burst by the committee within the gun, the serviceability of the weapon was not interfered with. But, for all that, it is evident that if bronze can be made at once harder, more resisting, and more elastic, it will be, *pro tanto*, a superior metal for artillery purposes.

White Brass.—An alloy to which this name has been given, and which differs from the alloys commonly known as white metal (though in what respect is not stated) is well spoken of in English papers, in its application to journal-bearings. It is said not to clog the file, and to be susceptible of a high polish; at the same time its fusing-point is lower than that of ordinary brass, and it can be melted in a common ladle on a stove-fire. It can also be cast in metal moulds, or even in sand and loam, like ordinary gun-metal. For axle-bearings on railroads it has commanded approval on experiment. According to a report of a trial of the comparative merit of white brass and ordinary brass bearings on the Great Northern Railway, it appears that two white brass bearings, fitted under a break-van, lost only 2 ounces in weight in running 19,400 miles. Two ordinary brass bearings, fitted under the other end of the same van, and which travelled the same distance, lost 2 lbs. 4 oz. In another case a third-class carriage was fitted up in a similar manner, and ran 20,000 miles. Here the white-metal bearings lost only 2½ oz., while the ordinary brass bearings lost 1 lb. 6 oz. In another third-class carriage, similarly fitted, the diminution in the white-metal bearings was 2½ oz., while in the ordinary brass bearings it was 1 lb. 12 oz. in running 20,000 miles. The bearings ran perfectly cool, and were lubricated with oil.

Copper in a Bird's Plumage.—Prof. Church, of England, is the authority for the statement that traces of copper are found on the feathers of the turaco, or plantain-eater, of the Cape of Good Hope, a bird celebrated for its beauty. He says that it is an essential ingredient in the composition of the red coloring matter of the bird's plumage, constituting about six per cent. of the same, and cannot be removed from it without a destruction of the matter; in effect, all the ordinary means fail to detect it without the pigment be first destroyed and the ash then examined for the metal. The existence of the red plumage is dependent upon copper, which, obtained in

small quantities from the food, is stored up in this strange manner in the system of the animal, thus elaborating an element which is ordinarily regarded as poisonous to the animal economy.

Selenium in Commercial Copper.—M. Viollette gives the following directions for detecting the presence of the metalloid selenium in commercial copper: The metal is to be previously cut up and oxidized by heating it to redness in a muffle. The oxide is next to be placed in a combustion tube, and then in a gas or other furnace (as applied for elementary organic analysis), and heated to strong red heat for several hours in a current of dry and pure air freed from aqueous vapor and carbonic acid. If any selenium be present, there will appear, at the cooler portion of the tube, just outside in front of the furnace, a white-colored ring, composed of a volatile, crystalline, very hygrometric substance, readily soluble in water, and not colored blue on addition of ammonia, which indicates absence of copper. The aqueous solution yields an abundant precipitate with nitrate of silver, which is soluble in excess of nitric acid. Reducing agents turn this white-colored ring into a red-colored substance, which exhibits all the reactions of selenium. The copper operated upon was from Chili.

Desilvering Lead.—In some of the Hartz works the lead in ingots is placed in a large cast-iron pot, similar to that used in the Parkinson process. When the lead is melted and skimmed, about 28 oz. of melted zinc are added for each ounce of silver shown by assay to be in the lead. The alloy is kept melted for two hours, and constantly stirred. On cooling, a scum, which is a mixture of zinc, lead, and silver, is found on the surface. This is removed to a furnace; after the zinc is driven off by a dull-red heat, the remainder is cupelled in the usual way. The lead is further purified by throwing billets of green wood (or steam can be injected) into it. The charges for the furnaces around Rammelsberg are stated as follows by the *Mining Journal*: Twenty-one cwt. of ground ore, 11 cwt. of silicious slag, 4 cwt. of lead slag, and 36 cwt. of charcoal. The blast is applied, and the reduced lead falls into the hollow of the hearth, while the slag is skimmed off by ladles. The amount of sulphur in these ores is so considerable that, though they are roasted in heaps previous to being brought to the smelting-works, it is yet needful to add so much slag to prevent fusion of the ore until the chief part of the sulphur is driven off. North Germany raises 169,000 tons of lead-ore annually, and manufactures 40,000 tons of metal. Of this the greater part is sold as pig-lead, but about 800 tons of it are sold in the form of sheet-lead. The produce of silver, chiefly from the ores of galena, is 148,689 lbs. troy in the year. The lead-mining employs 15,784 hands, and the metallurgic refinement as many more.

A Cold Tinning Process.—M. Daubie, of France, has made a remarkable discovery of tinning by a cold process, by which the oxidation of iron can be prevented. It is essentially adapted for iron wire used in the fabrication of cards and wire cloth. His chief object is to guard against the softening of the iron treated, and this he does by its successive immersion in baths containing cold solutions of salt of tin with the addition of a certain amount of starch or other organic matter. The solution patented is composed as follows: To every 20 gallons of water add 6 pounds of rye flour, and let it boil half an hour; filter it, and add 112 lbs. of pyrophosphate of soda, 34 lbs. crystallized salt of tin, 184 lbs. of neutral protochloride of tin, and from 8 to 4 oz. of sulphuric acid. When the salts are dissolved the solution is distributed in eight or ten wooden vats, a little additional water being added to the first two or three of the vats. The wire is passed successively through the whole of the vats, and, if great brilliancy of surface is required, also through draw-plates at intervals, and the wire, while retaining all its rigidity, becomes covered with a brilliantly-polished coat of tin. Beautiful and inoxidizable cards and wire cloth have been produced by this process, which is applicable to wire for a hundred different purposes. M. Daubie, it is said, has also succeeded in silvering iron wire, by using, in place of the salts of tin in the solution, cyanide of silver and cyanide of potassium.

Tin in California.—Dr. Roessler, mineralogist of the Government Land-office at Washington, writes to the *Franklin Institute Journal* that the tin-ore from California sent to that office for analysis proves to contain 18.37 per cent. of tin. The black mineral in the ore is tormaline; the brownish-red the casiterite. The percentage of the metal found is almost twice as much as that in the several working ores of the Cornwall mines. The property from which the specimens came is said to consist of 50,000 acres of mineral lands, and over twenty openings have been made, from all of which ore was taken.

Alloys with Manganese.—An interesting report of attempts to utilize the metal manganese by alloying it with copper, tin, zinc, and lead, was read before the British Association by Mr. J. Fenwick Allen. Mr. Allen did not attempt to produce metallic manganese, on account of the extreme difficulty attendant upon its separation in a pure state from its ores—the metal being practically obtainable only after the oxide mixed with charcoal has been subjected in a plumbago crucible to an intense heat, for two or three hours. From the first, he also discarded using any of the ores of manganese, the iron and the silicon in them completely destroying the value of the product. He says:

Having obtained a comparatively pure oxide of manganese, recovered from the still-liquor, and having mixed this with oxide of copper, not metallic

copper, together with wood-charcoal, all finely ground and intimately mixed, the charge was put into a plumbago crucible, then heated in an air-furnace at an intense heat for from three to four hours. It was found when the pot was taken out, that, still suspended in the charcoal, and not run down to the bottom, were innumerable fine shots of a bright white metal; these being separated by washing and placed again in the crucible and heated, fused, I may say easily, into a prill or button covered with a green layer of vitreous slag.

The alloy was found to be very hard and very brittle when hot, but when cold, although still hard, it rolled with ease and was highly elastic. The proportions of alloy were about—copper 75 per cent., manganese 25 per cent. When the simple alloy had been produced in sufficient quantities, compound alloys with zinc were tried in various proportions, and these again rolled with complete success. Certain mixtures of copper, zinc, and manganese, possess the advantage, both over German silver and yellow metal, that, whereas the one will only roll cold, and the other hot, the manganese alloy rolls from hot to cold.

The laboratory experiments having been completed, an air-furnace was built in which a 100-lb. plumbago crucible was used. The results were precisely the same as those obtained in the laboratory, only it was found that, by stirring the charge a few minutes before the crucible was taken out of the fire, by far the greater portion of the metal that before was in small fine shot, needing very careful washing, now settled to the bottom of the pot, and could be poured out as a bar or ingot, the slag also melting, and the unconsumed charcoal floating on the top. This experiment was continued until several hundred-weights of the alloy were produced, so that it may be subjected to various tests, and also that some approximate estimate of its cost and value might be formed.

As a simple alloy in which the proportions of manganese ranged from five per cent. to thirty per cent., it is both malleable and ductile, with a tenacity considerably greater than that of copper.

With zinc, a compound alloy, very closely resembling some of the qualities, not the best, of German silver, is obtained. The alloy of copper and manganese would also combine with tin, lead, and other metals, and from these castings were made which were applied as bearings for machinery.

Alloy of Lead with Platinum.—M. A. Baer, having observed the experiments made by M. Deville, in which it was found that alloys of lead and platinum readily decomposed in consequence of the conversion of the lead into white-lead, tried the proportions of three parts of pure lead to one part of platinum. The resulting alloy was so brittle that it could be readily pulverized, and the powder then obtained was moistened with water and placed under a bell-jar, exposed to the action of carbonic acid, oxygen, and acetic acid. The conversion of the lead into white-lead took place rapidly; and, after it appeared that all the lead was converted into white-lead, the powder was treated with acetic acid, and the residue again exposed under the bell-jar to the action of the same substances. This process having been repeated several times, there remained at last a steel-grayish colored crystalline powder, which only appeared to be finely-divided platinum. On being treated, however, with dilute nitric acid, the author found that the powder consisted of an alloy of lead and plati-

num, which contained in 100 parts—platinum, 48.82; lead, 51.18; corresponding to the formula $Pt + Pb$. This alloy has a specific gravity of 15.77, is readily decomposed by mineral acids, but withstands boiling with acetic acid; and, when rapidly fused, it is, after cooling, a bismuth-like, crystalline, very brittle metallic mass. The alloy, submitted in a muffle to the process of oxidizing ignition, fuses, the lead is driven off, and platinum left.

Aluminium Weights.—Dr. T. L. Shipman writes as follows to the *Chemical News*, in praise of the value of aluminium for accuracy and unchangeableness in weights:

For the last ten years—that is, since May, 1880—I have made use of a set of aluminium (division of the gramme) weights. On the average these weights have been used at least twice or three times a day for a period of somewhat more than ten years. They were supplied by MM. Collet, Frères, of Paris. Latterly, I have tested them and found them as accurate as the day on which they were first used. They are almost as brilliant as when new. The larger weights, 0.5, 0.2, and 0.1 gramme, show slight traces of tarnish, but their weights are still quite accurate. During this period of ten years these weights have never been touched except by a pair of soft brass nippers, and they have never been left exposed to the air for more than a few minutes at a time. However, they have, of course, been exposed for a minute or two at intervals to an atmosphere more or less impregnated with acid or alkaline vapors, and if we add these odd minutes together, it will be found that these gramme divisions in aluminium have had to undergo a considerable amount of "atmospheric influence" during the period of which I speak. The set contains fourteen weights, from $\frac{1}{4}$ a gramme to $\frac{1}{4}$ a milligramme. As to brass or copper divisions, I have always considered them inaccurate, for they tarnish very rapidly in an atmosphere which, for that of a laboratory, might be considered tolerably pure.

Metallic Zirconium.—A German chemist, Franz, has obtained the metallic base of zirconia, in a nearly pure state. He first prepares the oxide of zirconia by treating the native mineral with bisulphate of potash, and the decomposition of the sulphate of zirconia, first by fusion with caustic soda, and next by treating the fused mass so obtained with sulphuric acid, and precipitating the zirconia from the aqueous solution of the sulphate by means of ammonia. Metallic zirconium was prepared by the decomposition of the fluoride of potassium and zirconium, $8KFl + ZrFl_3$, by means of aluminium and a high temperature. The metallic zirconium so obtained is not quite pure, and was found to consist, in 100 parts, of: zirconium, 98.34; aluminium, 1.03; and silicon, 0.17. The temperature required for this reduction so as to obtain crystalline zirconium is at least as high as that of the melting-point of copper.

Silver and the Chlorine Treatment.—In a book lately published on the success of the chlorine process for the extraction of silver from refractory ores, the author, Mr. G. Kus-tel, says that in Nevada and Idaho the ore contains only from 6 to 10 per cent. of sulphurets, yet gives a good result. As no pyrites

are within reach, the want of sulphuric acid must, when necessary, be made up by the use of some other substance, such as green vitriol, or copperas. Ores containing from 80 to 100 ounces of silver to the ton should be mixed with 10 per cent. of salt. Rich ore is often roasted with 20 per cent. of salt. If all the chlorine of the salt could be transferred to the silver, an insignificant amount of salt only would be required for ores containing 100 ounces of silver—not more than $8\frac{1}{2}$ pounds to the ton; but, in consequence of the different way in which the chlorine decomposes and unites with base metals and gases, the escape of chlorine from the surface of the ore without coming in contact with the silver, etc., a great deal more of the salt must be applied. Permanent stirring is not essential, and Mr. Kustel remarks that a good chloridizing roasting should give over 90 per cent. of the silver converted into chloride of silver, and show as little as possible of base metal chlorides, which are formed under the action of chlorine and hydrochloric acid.

Reducing Silver with Zinc.—In refining gold bullion by Miller's new chlorine process, the silver contained in the alloy is separated in the state of argentic chlorides. Mr. Leibus, assayer of the mint at Sydney, reduces this chloride to the metallic form on the large scale by a simple application of galvanism. A weak solution of common salt, or water alone, forms the exciting liquor, and the silver chloride and strips of zinc placed therein supply the galvanic elements. After about twenty-four hours, the action has nearly ceased, and the chloride is found to be changed to metallic silver, with a loss in the zinc of 24 or 25 per cent. of the weight of the chloride reduced. Mr. Leibus remarks that, by using a part of the resulting liquor from a previous reduction of argentic chloride, and which contains chloride of zinc, it has been found that the galvanic action sets in very rapidly, and accelerates thereby the completion of the reduction. No acid is used, and, therefore, the amount of zinc used in each reduction has invariably been found to be almost the theoretical quantity required to combine the chlorine of the argentic chloride treated with the metallic zinc, in order to form chloride of zinc.

The reduced silver is boiled out in acidulated water, in order to remove the basic oxy-chlorides, and finally in pure water. As soon as it is taken off the last boiling, it is immediately ready for the melting-pot, since the heat from the boiling water dries the porous mass of silver sufficiently to allow of its immediate melting.

Claudet's Silver Process.—The ingenious process invented by M. F. Claudet, for the separation of the small amount of silver found in ordinary copper liquors, illustrates the economy of modern chemistry, by which waste products are turned into sources of profit. The ores treated were iron pyrites imported into

Great Britain from Spain and Portugal, for the manufacture of sulphuric acid. These were found to contain between four and five per cent. of copper, and this copper carried silver, which tests showed to exist in the ore to the value of about 18 dwt. per ton. Claudet's process saves the silver by first concentrating the copper liquors by repeated washings of the ore, and then treating them as follows: The liquors are run into wooden cisterns, each of the capacity of about 2,700 gallons, where they are allowed to settle. The yield of silver, per gallon, is then ascertained by taking a measured quantity, to which are added hydrochloric acid, iodide of potassium, and a solution of acetate of lead. The precipitate thus obtained is thrown upon a filter, and, after being dried, is fused with a flux, consisting of a mixture of carbonate of soda, borax, and lampblack. The resulting argentiferous lead is passed to the cupel, and, from the weight of the button of silver obtained, the amount of that metal in a gallon of the liquor is estimated. The liquor from the settling-vat is now allowed to flow into another of slightly larger capacity, while, at the same time, the exact amount of a soluble iodide, necessary to precipitate the silver present, is run into it from a graduated tank, together with a quantity of water equal to about one-tenth the volume of the copper liquor. During the filling of the second tank its contents are constantly stirred, and, when filled, a little lime-water is added, and it is allowed to settle during forty-eight hours. The supernatant liquors are, after being assayed, run off, and the tank again filled, when the precipitate collected at the bottom is, about once a fortnight, washed into a vessel prepared for its reception. This precipitate is chiefly composed of sulphate of lead, iodide of silver, and salts of copper, from which the latter are readily removed by washing with water acidulated by hydrochloric acid. Thus freed from salts of copper, the precipitate is decomposed by metallic zinc, which reduces the iodide of silver completely, and, to a certain extent, sulphate of lead. The result of the decomposition is iodide of zinc, which can be employed to precipitate further quantities of silver, and a precipitate rich in silver and also containing a valuable amount of gold. The result of nearly six months' experience of this process at the Widnes Metal Works show that $\frac{1}{4}$ an ounce of silver and $1\frac{1}{2}$ grain of gold may be extracted from each ton of ore worked, at a total cost, including labor, loss of iodide, etc., of 8d. per ton, or 1s. 4d. per ounce of silver produced. If from this amount be deducted 6d., the value of the three grains of gold contained in each ounce of silver, the cost of production, per ounce of silver, will be reduced to 10d., and the expense of working a ton of ore to 5d. This leaves a profit of about 2s. on each ton of ore worked.

Economical Gold-Working.—The *Mining Journal* has a paper on the cheap and effective

working of gold-ores in the mines at Victoria. The Black Hill Company originally employed copper plates, in conjunction with ripple tables, and blankets, but the plates have for a long time been abandoned, and the blanket-tables are now stretched below the ripples. A small quantity of mercury is placed, about every twelve hours, in the stamp-boxes, and the ripple-grooves are also filled with it. Of the gold obtained by this process, 60 per cent. is retained in the stamp-boxes, 30 per cent. is absorbed upon the ripple-table, and 10 per cent. is arrested upon the blanketing. At the Clunes workings, ripple-tables of a peculiar form are employed. The grooves are wide and deep, the quantity of mercury required is large, and all the crushed material is forced through the quicksilver before it can pass off at the lower end of the table; by this means the gold is readily separated, while the residue, falling on to the blankets, is robbed of the small remaining portion of the metal that has escaped the quicksilver. At the Marlborough mines, ripples, plates, and the Chilian mill, are employed. A similar system prevails at another mine, where, in addition, shaking-pans are used, in which the crushed quartz is placed with the mercury, and the contents are well agitated. At the Prince of Wales mine, Chilian mills instead of stamps are used for breaking up the quartz, and the amalgamation is effected by means of shaking-tables and pans. This process gives very fair results, the mills

being effective, though slow in their action. It has been found that the use of hot water in the reducing-mills produces better results than cold.

METHODISTS. I. **METHODIST EPISCOPAL CHURCH.**—The Methodist Episcopal Church in 1870 had seventy-two Annual Conferences. The following is a summary of the statistics of the Church in 1870, as compared with 1869:

	1870.	Increase over 1869
Bishops.....	8
Travelling Preachers.....	9,198	398
Local Preachers.....	11,404	1,804
Total Preachers.....	21,604	2,204
Members in full connect'n.....	1,173,000	68,977
Members on probation.....	194,000	8,800
Total lay members.....	1,367,134	68,106
Adult baptisms.....	68,451	8,304
Infant baptisms.....	30,400	2,914
Total baptisms.....	138,854	8,728
No. of Churches.....	18,873	1,800
No. of Parsonages.....	4,179	371
Value of Church Edifices.....	\$12,614,803	\$2,351,246

The excess over the majority (three-fourths) required by the organic law of the Church is forty-five votes.

The report made by the Book Committee in November, 1869, in reference to the alleged irregularities in the management of particular departments of the Book Concern, did not satisfy the mind of the Church. The committee, according to provision made at the time of its adjournment, met again in New York on the 27th of January, 1871, and reached conclusions which the majority report set forth as follows: 1. On the question, "In respect to the management or conduct of the agents, or either of them, has there been any fraud or corruption in the Book Concern?" the committee were unanimous in giving an answer in the negative. 2. On the question, "Has there been any thing fraudulent or corrupt in the practice or conduct of any employé in the Book Concern, so far as the printing department is concerned?" the committee voted eleven in the negative, two of the committee declining to vote. 3. On the question, "Has there been any thing fraudulent or corrupt in the practice or conduct of any employé in the Book Concern in respect to the binding department?" the committee fully deliberated, and decided in the negative by a vote of nine to four. A minority report, signed by three members of the committee, was presented, which dissented from most of the findings of

the majority report, and reiterated the charges of mismanagement, with specification of particulars. In May a bill of charges against Dr. Lanahan, the junior book agent, who had insisted that there was mismanagement in the Concern, and that it ought to be investigated, was presented by a number of ministers and laymen of New York and vicinity. The charges were: 1. Official misconduct and malfeasance; 2. Neglect of official duty; 3. Untruthfulness, irascibility, slanderous disposition, and other objectionable personal characteristics, which unfit him for the position of assistant book agent; 4. Insubordination to his official superiors, the Book Committee, and violation of his pledges to them; 5. Want of business qualifications and capacity for the discharge of his official duties as such assistant book agent. The committee met, considered the charges, and adjourned till October without taking definite action upon them. At their meeting in October, they decided to suspend Dr. Lanahan, and to try him upon the charges. The trial was appointed for January 12, 1871.*

The number of churches is 13,873½, valued at \$52,614,591. Number of parsonages, 4,179; value, \$431,288. The total receipts of the Church Extension Society for 1870 were \$121,867.65. The estimates for 1871 are \$121,850. The appropriations of the Missionary Society for 1871 are, foreign, \$224,198.57; domestic, \$356,040.

The following is the statement of the missions of the Methodist Episcopal Church for 1869:

II. GENERAL SUMMARY.—The *Methodist Almanac* for 1871 gives the following summary

* The account of the trial belongs to 1871. It is proper to state, however, that Dr. Lanahan was restored to his official functions, and that a competent special committee was appointed to examine thoroughly the accounts and management of the Book Concern, and to report to the Book Committee at their annual meeting in 1873.

of the Methodist churches throughout the world. Some of the statistics are summaries of 1868; none reach later than July 1, 1870.

At the close of the year the aggregate membership of all the Methodist churches was estimated at 8,900,000.

III. METHODIST EPISCOPAL CHURCH, SOUTH.

—The sixth General Conference was held at Memphis, Tenn., commencing on the 4th of May, 1870. It was composed of 246 delegates, one-half of whom were laymen, and the other half preachers. On the 11th of May, Bishop Janes and the Rev. William L. Harris, as the representatives of a committee appointed by the General Conference of the Methodist Episcopal Church, appeared before the General Conference with the following address, on the subject of the reunion of the two Churches:

To the Bishop and General Conference of the Methodist Episcopal Church, South, in General Conference assembled:

DEAR BRETHREN: By the action and authority of the General Conference of the Methodist Episcopal Church, held in Chicago, in May, 1868, the undersigned were appointed a commission, in behalf of said Church, to treat with a similar commission from any other Methodist Church on the subject of union. The bishops of the Methodist Episcopal Church, who also constitute a part of this commission, in May, 1869, communicated to the bishops of the Methodist Episcopal Church, South, the fact that this commission had been appointed, and expressed to them the conviction that the commission would be happy to meet a similar one from the Methodist Episcopal Church, South, for the purpose contemplated in its appointment. At a meeting of this commission, held in Philadelphia, November 23, 1869, a resolution was adopted unanimously, approving the aforesaid action of the bishops. Nevertheless, the commission, as such, and as constituted by the General Conference, being desirous of discharging its duties in the fullest and most acceptable manner, deemed it proper to make a further communication on this subject addressed to the bishops and General Conference of the Methodist Episcopal Church, South, to meet at Memphis, May, 1870.

The fact that the General Conference of the Methodist Episcopal Church appointed this commission shows that, in the judgment of that body, there are now no sufficient reasons why a union may not be effected on terms equally honorable to all; and that the realization of such union is very important and desirable. Hoping that you may see this subject in the same light, and that it may be your pleasure to appoint a similar commission, to confer with us previous to the meeting of our next General Conference, in 1873; and praying that you may be prospered in all that pertains to the welfare of the Christian Church, and desiring your prayers on behalf of the Church we represent, that we may share a like prosperity, we are, dear brethren, yours in Christ Jesus,

E. S. JANES,	L. SCOTT,	} Commissioners.
M. SIMPSON,	E. R. AMES,	
D. W. CLARK,	E. THOMSON,	
L. HITCHCOCK,	D. CURRY,	
J. MCCLINTOCK,	J. LANAHAN,	
J. G. BRUCE,	T. EDDY,	
J. PIKE,	W. L. HARRIS,	

PHILADELPHIA, November 23, 1869.

In reply the Conference adopted the following resolutions unanimously:

Resolved, That we gratefully recognize that Providence which has guided us, multiplied us, strengthened our homes, preserved our integrity as a Church of Jesus Christ under trying conditions, both of war and peace. We earnestly desire to cultivate true Christian fellowship with every other branch of the Christian Church, and especially with our brethren of the several branches of Methodism in this country and Europe.

Resolved, That the action of our bishops at the last annual meeting at St. Louis, in response to the message from the bishops of the Methodist Episcopal Church, has the full indorsement of this General Conference, and accurately defines our position with reference to any overtures which may proceed from that Church having in them proper official recognition of this body, and that the distinguished commission now present of the General Conference of the Methodist Episcopal Church, which met at Chicago in 1868, appointed by them for the specific purpose expressed in the following resolution—namely,

Resolved, That the commission ordered by the General Conference to confer with a like commission from the African Methodist Episcopal Zion Church to arrange for a union of that body with our own, be also empowered to treat with a similar commission from any other Methodist Church that may desire a union"—cannot, in our judgment, without great violence in construing the language of said resolution, be reputed as having been constituted by that General Conference a commission to make proposals of union to the General Conference of the Methodist Episcopal Church, South.

Resolved, Moreover, that if this distinguished commission were fully clothed with authority to treat with us for union, it is the judgment of this Conference that the true interests of the Church of Christ require and demand the maintenance of our separate distinct organizations.

Resolved, That we tender to the Rev. Bishop E. S. Janes and the Rev. W. L. Harris, the leaders of the commission now present with us, our regard as brethren loved in the Lord, and express our sincere desire that the day may soon come when, with a proper Christian sentiment, fraternal relations between the two great branches of Northern and Southern Methodism shall be permanently established.

The foreign and domestic missions were consolidated into one board, to be composed of the bishops and one member for each conference. The principal mission is among the Indians. A very favorable report was rendered from it. The Indians are represented as being in a better condition than before the war.

In reply to a fraternal address from the General Conference of the Methodist Protestant Church, the Conference expressed the belief that "the recent efforts made by the authorities of our respective churches, to effect an organic union between these two members of the great Methodist family of this country, have not been entirely fruitless, and we hope the day may not be far distant when this bread cast upon the waters may be gathered in a complete organic unity of these two branches of Christ's Church, on a basis alike agreeable to both parties, already one in sympathy and doctrine, and nearly so in polity."

A memorial was presented from twelve colored ministers of different annual conferences, asking that a colored General Conference be formed, connected with and dependent on this body. The bishops had already organized a number of colored annual conferences, and intended, unless otherwise advised by the General Conference, to call a colored General Conference in the winter. Their course was approved.

The statistics of the Methodist Episcopal Church in 1869 were as follows:

CONFERENCES.	Travelling Preachers.	Local Preachers.	White Members.	Colored Members.
Baltimore	180	107	21,041	176
Virginia	154	146	28,897	815

Little Rock	18	59	12,348	163
Indian Mission	46	56	60	151
Texas	48	140	4,222	33
Trinity	26	119	9,739	714
East Texas	43	127	7,415	808
Northwest Texas	31	48	3,061	273
West Texas	16	14	1,040	271
Columbia	53	51	2,251
Pacific	50	46	4,694
Illinois
Total in 1869	2,646	4,153	540,830	12,686
Total in 1868	2,496	4,413	508,596	23,085
Increase	151	340	37,234
Decrease	12,399

In the Indian Mission Conference there are 3,079 Indian members; there are also 70 Indian members in the Holston Conference. Total of Indian members, 3,149, an increase of 848 from 1868. There are 187 superannuated preachers. The total number of members and preachers is 571,241, showing a net increase of 26,172 from 1868.

IV. THE COLORED METHODIST EPISCOPAL CHURCH.—The Colored Methodist Episcopal Church in America was organized in a general conference which met at Jackson, Tenn., December 16, 1870. It arose out of provisions made by the General Conference of the Methodist Episcopal Church, South, which met at New Orleans in 1866, authorizing the organization of the colored members of the Church into congregations, districts, and annual conferences, and ultimately into a general conference, with bishops of their own. At the time of the meeting of the General Conference of the Church, South, the bishops had organized five colored conferences. The General Conference sanctioned the steps that had been taken, and authorized the completion of the new organization.

William Henry Mills and Richard H. Vandenhurst were elected and ordained bishops. Steps were taken to prepare a discipline and hymn-book. The *Christian Index*, at Nashville, Tenn., was adopted as the official organ of the denomination. It was determined to depend for general literature and Sunday-School books on the publications of the book-room of the Methodist Episcopal Church, South. A condition of membership was adopted which excluded all whites. Nevertheless, the Rev.

Dr. Watson, of the Methodist Episcopal Church, South, was requested to act as editor of the *Index*. It is understood that all other members of the church will be chosen from among its own members.

V. THE METHODIST PROTESTANT CHURCH.—The Quadrennial General Conference of the Methodist Protestant Church met at Baltimore, on the 6th of May. The following are the names of the conferences which were represented: Maryland, Virginia, Alabama, Texas, South Carolina, Mississippi, West Tennessee, North Mississippi, North Arkansas, Holston, Arkansas, Des Moines, McCaine, Missouri, South Illinois, Western Virginia, Georgia, Tennessee, Illinois, and North Carolina. The Rev. Thomas M. Eddy, D. D., and the Rev. John Lanahan, D. D., were received as fraternal delegates from the Methodist Episcopal Church, and presented the address of the committee of that Church on reunion. The reply of the conference suggested:

As one step in the direction of this most desirable consummation (reunion of the churches), the committee would recommend the appointment (wherever it may be practicable) of fraternal messengers from the General and Annual Conferences of the various Methodist churches, to convey the Christian salutations of the bodies they respectively represent, and thus promote that mutual acquaintance, confidence, and brotherly love, which are essential to more thorough and efficient cooperation.

Another step would be, a recommendation, to the editors of the periodicals published by the churches respectively, to avoid irritating controversy, and the misrepresentation of each other's history, motives, and conduct; a recommendation to the ministers to arrange their respective plans of appointment, for ordinary and extraordinary religious services, so as to avoid even the appearance of desiring to stand in each other's way; but, on the contrary, whenever it is practicable, to render assistance in those labors of love which, if successful, must inure to the benefit of every Christian, inasmuch as souls are saved and God is glorified; and a recommendation, finally, to all the members of our respective churches to think and speak charitably of the words and acts of each other, remembering the precept of our Lord and Saviour, "All things whatsoever ye would that men should do to you, do ye even so to them."

A third step would be, cooperation in the great work of sending the Gospel to the heathen. Why may not one foreign missionary organization serve for all Methodism? Why should we go among the heathen to distract them with our various polities (neither of which may be adapted in all respects to the heathen), when the great want of the perishing is Christ and His salvation? The committee is not prepared at this time to suggest a plan for carrying out the idea, but, let it once receive the favorable considerations of the churches, and the wisdom of the churches will devise all the details for its successful prosecution.

The Rev. Alexander Clark, the Rev. Dr. Brown, and the Rev. Dr. Collier, appeared as fraternal messengers from the Methodist Episcopal Church, and spoke in favor of reunion. In reply, the conference declared that, whenever the conferences of this body should "see fit to place themselves again under the discipline of the Methodist Protestant Church," they would be cordially received.

The movements in the Virginia Annual Conference to unite with the Methodist Episcopal Church, South, without waiting the action of the General Conference, were condemned.

In reply to the address of the Rev. Drs. Linn, Kepler, and Huston, fraternal delegates from the Methodist Episcopal Church, South, the conference congratulated the latter church on the adoption of lay delegation, and expressed the hope that this step might be a sure indication of further modifications in policy, tending to bring the two churches still nearer together. No report of statistics was presented, the table being still incomplete. It appears, however, that in the Maryland district there are 10,950 members, 184 ministers and preachers, 175 churches, 10,720 Sabbath-school scholars, and church property to the value of \$528,411.

The Book Concern exhibits a stock and cash account of \$7,166.82 in excess of liabilities, and reports a net profit in four years of \$2,036.06. The circulation of the *Methodist Protestant* is 3,185.

VI. AFRICAN METHODIST EPISCOPAL CHURCH.—The African Methodist Episcopal Church reports 350,000 communicants, 25,000 probationers, 1,000 travelling preachers, 5,000 local preachers, and seven bishops.

VII. FREE METHODIST CHURCH.—The General Conference of the Free Methodist Church met at Aurora, Ill., on the 16th of October. The following is the statistical report:

	Members.	On Trial.	Ministers.	On Trial.
I. British Conference—Great Britain.....	348,471	20,433	1,222	178
Ireland and Irish Missions.....	19,968	880	165	26
Foreign Missions.....	68,531	6,005	232*	73*
II. French Conference.....	2,049	167	81	4
III. Australian Conference.....	55,556	10,091	315	95
IV. Canada Conference.....	61,199	3,489	406	96
V. Conference of Eastern British America.....	15,021	1,356	117	23
Total.....	570,790	42,321	2,366	497

There are also 872 ministers classed as "supernumeraries."

XI. PRIMITIVE METHODISTS.—The Primitive Methodist Church in England reports 162,000 members. The strength of this church is largely in its missions, which are home and colonial. Its Missionary Society was organized in 1843. Its progress is indicated by the following figures:

Income in 1843, about.....	\$4,425
" 1849, ".....	19,010
" 1856, ".....	52,070
" 1863, ".....	81,375
" 1869, ".....	101,990

The society has 81 home stations and 122 missionaries; 63 colonial stations and 80 missionaries; one foreign station and two missionaries. Total, 144 stations and 204 missionaries. The home stations are in England, Scotland, Ireland, and Wales; the colonial in Canada, Victoria, Tasmania, Queensland, South Australia, New South Wales, and New Zealand.

The Primitive Methodist Church in Canada

* Exclusive of missionaries in Ireland.

CONFERENCES.	Ministers in full Comm'n.	Ministers on Trial.	Communi-cants.	On Trial.
Genesee.....	28	3	1,737	227
Illinois.....	21	10	1,078	202
Susquehanna.....	23	6	1,197	257
Michigan.....	11	9	807	256
Total.....	77	27	4,814	962

The church property is valued at \$213,450.

VIII. WELSH CALVINISTIC METHODISTS.—The General Assembly of the Welsh Calvinistic Methodist Church met in Pittsburg, Pa., in October. This body is not numerous, but is widely scattered over the country. Provision was made for educating the ministry, in connection with the Board of Education of the Presbyterian Church. A professorship of the Welsh language and literature was arranged for students in Marietta College. A paper is published for this church called the *Cay Ffail*.

IX. METHODIST EPISCOPAL CHURCH IN CANADA.—The following are the statistics of the Methodist Episcopal Church of Canada:

		Net Increase.
Total members.....	20,240	549
Sunday-schools.....	288	60
Officers and teachers.....	2,129	343
Scholars.....	15,550	2,343

There are three conferences; the Niagara, the Ontario, and the Bay Quinte. The General Conference met at Ingersoll, August 31st.

X. WESLEYAN METHODIST CHURCH.—General View.

reports a net increase of 221 members. Eighty-eight preachers were assigned to stations at the last conference, and the work was divided into seven districts.

XII. UNITED METHODIST FREE CHURCHES.—The following are the statistics of the United Methodist Free Churches of England: Home Circuits—itinerant ministers, 269; supernumeraries, 13; local preachers, 3,309; class-leaders, 4,099; members, 62,888; members on trial, 5,786. Foreign Stations—itinerant ministers, 34; supernumeraries, 3; members, 5,269. In all, there are 68,157 members. The missionary receipts for the year were £7,800, and the expenditures, £7,388. The receipts of the Beneficent and Superannuation Fund were £3,490 18s. 8d.; Local Preachers' Fund (capital), £2,543.

XIII. METHODIST NEW CONNECTION.—The Methodist New Connection Church in England has, in the various mission-fields, 260 chapels, 114 missionaries, 211 local preachers, 10,050 church members, 625 probationers, 1,457 teachers, and 10,085 Sunday scholars.

XIV. METHODIST REFORM UNION.—The following are the statistical returns of the Wesleyan Reform Union of England: Chapels and preaching-places, 266; preachers, 608; preachers on trial, 96; leaders, 554; members, 8,221; members on trial, 294; schools, 175; teachers, 3,276; scholars, 18,210.

MEXICO, a republic in North America. President, Benito Juarez, a descendant of the Indian race of Tapatecos, born in 1807; elected President in 1861; reelected 1867, for the term from 1867 to 1871; Vice-President and Minister of Foreign Affairs, Lerdo de Tejada; Minister of the Interior, M. Saavedra (1869); Minister of Justice, J. M. Yglesias; Minister of Finance, M. Romero (December, 1867); Minister of War and of Marine, General J. Mejia (July, 1867); Minister of Public Works, B. Balcarcel. The United States Government was represented in Mexico, in 1870, by T. H. Nelson, envoy extraordinary and minister plenipotentiary. Don J. Mariscal (accredited August 11, 1869) was minister of Mexico at Washington.

The estimates of the area and population of the republic have always been greatly at variance. During the reign of the Emperor Maximilian, a new division of the country into departments was introduced, which has since been abandoned, the Government having re-established the old division into States, with some slight modifications of their former limits. The following table, said to be compiled from the latest and most reliable reports, has been published by Antonio Garcia y Cubas, in the *Boletin de la Sociedad de Geografia y Estadistica de la Republica mexicana*, 1869, No. 5:

STATES.	Area English sq. miles.	Population.	Inhabitants per sq. mile.
Sonora.....	81,035	147,133	1.82
Chihuahua.....	105,000	179,971	1.72
Coahuila.....	58,920	67,691	1.15
Nuevo-Leon.....	14,364	171,000	11.83
Tamaulipas.....	28,660	108,514	3.79
San Luis Potosi.....	28,891	297,735	12.77
Zacatecas.....	20,586	398,977	15.00
Agua Calientes.....	2,217	66,576	30.00
Durango.....	49,645	178,942	4.06
Sinaloa.....	26,928	161,157	6.22
Jalisco.....	48,989	924,890	18.88
Colima.....	3,398	48,649	20.38
Michuacan.....	21,610	618,072	28.59
Guanajuato.....	11,130	874,030	78.53
Querétaro.....	8,420	166,643	48.73
Mexico.....	9,599	599,810	62.49
Hidalgo.....	8,480	404,207	47.66
Morelos.....	1,898	121,409	63.97
Guerrero.....	24,227	270,000	11.14
Puebla.....	11,761	880,000	70.58
Tlaxcala.....	1,498	117,941	78.73
Vera Cruz.....	27,483	880,976	13.89
Oajaca.....	27,351	601,850	22.
Tabasco.....	12,717	83,707	6.53

Federal District.....	81	221,000	2,778.00
Lower California (Ter.)..	59,036	21,003	0.36
Total.....	761,663	8,743,614	

The population of the principal cities, according to the same report, was: Mexico, 200,000; Guadalajara, 70,000; Puebla, 75,500; Guanajuato, 68,000; Querétaro, 47,570; San Luis Potosi, 38,581; Colima, 31,000; Morelia,

25,000; Oajaca, 25,000; Merida, 23,500; Aguas Calientes, 22,584; Campeche, 15,196; Toluca, 12,000; Pachuca, 12,000; Zacatecas, 15,427; Durango, 12,449; San Cristobal, 10,475; Chihuahua, 12,000; Ouliacan, 10,000.

The budget for the year 1868-1869 estimated the total revenue at \$18,219,708, and the expenditure at \$18,694,438. In the message of the President, however, the revenue is reported at \$18,750,000, and the expenditure at \$18,500,000. The public debt, on August 1, 1865, amounted to \$317,357,250. The republican government does not consider itself responsible for the loans contracted by the Emperor Maximilian, nor does it sanction the pledge of the customs duties made to the creditors of the state by Maximilian, on July 30, 1866. In 1866, the entire debt was estimated at \$133,524,242, which included a foreign debt of \$52,750,000.

The army of the republic consisted, in 1867, of from 30,000 to 35,000 men.

The *Cuadros Estadísticos* (Mexico, 1870) contain the following estimate of imports, exports, and of duties, during the six months from July 1 to December 31, 1869:

Imports.....	\$2,580,000	Import duty.....	\$3,212,304
Exports.....	6,845,784	Export duty.....	221,219

The movement of shipping, during the same period, was as follows: Entered, 306 vessels, burden 242,536 tons; cleared, 366 vessels, burden 226,473 tons.

After the completion of the railroad from the city of Mexico to Puebla, thrown open to the public on the 21st of September, 1869, the entire length of railroads in operation within the republic was 304 miles. The aggregate length of telegraph lines amounted to 2,304 miles. A telegraphic line is now in course of construction from Monterey to Mier on the Rio Grande; from thence it will be extended, via Camargo and Reynosa, down to Matamoros. The intended connection with the Texas line, on the Rio Grande, would place Mexico in direct communication with the United States telegraph system, and consequently with Europe. Grants were given to telegraph companies, in November, 1870, to establish lines from Vera Cruz to Galveston, from Vera Cruz to Minatitlan, and a line via Yucatan to Cuba. A bill for the construction of the Tuxpan Railroad passed Congress during its last session.

The political situation of the republic in 1870 was very unsettled, the efforts of the Federal Government being repeatedly paralyzed by pronunciamientos and revolutionary movements in several of the States. On December 30, 1869, a proclamation was issued in San Luis Potosi against the General Government by Generals Aguirre, Martinez, and Laranaga, and the officers of their command, on the usual pretext that President Juarez had acted contrary to the Constitution, and had rendered no account to the people during eleven years. The pronunciamientos there-

fore resolved to refuse to recognize the Executive, but to recognize Congress, provided it accepted their revolutionary plan, and to make arrangements for a new election of Representatives. Aguirre addressed a circular to various members of Congress, urging them to take steps in his favor, and to secure the acceptance of the plan by Congress and the Supreme Court of Justice, in order to avoid bloodshed, cautioning them to consider that civil war would otherwise rend the republic.

The revolutionists seized 180 bars of silver, belonging to the English mining company of "Catorce." In addition to the forced loan, which Aguirre had previously levied upon the people, he decreed that all property should pay in advance one-third of the taxes for the next year. After allowing his soldiers to rob houses of inoffensive citizens, he demanded one-third of all licenses, and imposed a tax from six to ten dollars on a thousand on all landed property. General Trevina was sent to San Luis Potosi, commissioned by the Government to parley with the rebels. As his endeavors had no practical result, Congress authorized the Executive to put 4,000 of the National Guard in the field, and to use \$200,000 to defray the expenses of the campaign. The Governors of Guanajuato, Vera Cruz, Oajaca, and Hidalgo, organized troops for the national service. General Escobedo was intrusted with the command of the Federal troops, and immediately set out for San Luis at the head of a considerable force, while General Neri occupied Zacatecas, the Governor of that State having pronounced against the General Government after refusing to surrender a conducts which he had seized, together with \$150,000 abstracted from the mint. In the mean while, the revolution in the State of Puebla continued, and the southern portion of Jalisco also pronounced against Juarez, and rose in arms. In Puebla order was restored early in February, but in San Luis Potosi the troops of the Government under General Rocha suffered a severe defeat, losing twenty pieces of artillery. The revolutionary generals, Toledo and Martinez, formed a junction, and compelled Escobedo to retire to San Felipe, and subsequently to Guanajuato. The Government again raised 4,000 men, and conferred the command-in-chief of all the Federal troops upon General Alatorre.

Congress closed its session on January 22d, to reassemble early in April. The condition of the country at this time was more unsettled than at any previous period since the downfall of Maximilian.

Fortunately for the Government, there was an utter lack of harmony among the revolutionists. Among the dozens of proclamations which had been issued by as many revolutionary parties and bands, no two had pronounced for the same leader. During the month of February, the Government gained several important successes. General Escobedo repeat-

edly defeated the San Luis Potosi rebels and captured several hundreds of them, whom he set at liberty, in accordance with his promise. Colonel Carillo and General Rocha suppressed the movement in Jalisco, and joined the troops of the Government in San Luis Potosi. On the 18th a battle was fought near Olocosco, between the Government forces and the rebels, under command of General Dominguez, in which the latter were completely defeated, losing a considerable number of prisoners and arms. On February 25th the commander of the Federal troops made a successful assault upon the city of Coatepec, capturing many prisoners, horses, and arms, and scattering the rebels in all directions. The chief of this band of insurrectionists was a son of Santa Anna. The report of these successes inspired the Government and its adherents with new hope, as it was no longer doubted that the loyal army would remain master of the situation.

Early in March a message was received from General Escobedo, announcing that after occupying San Luis Potosi and gathering the materials abandoned by the rebel General Aguirre in his retreat he followed up the flying rebels with a portion of his troops and overtook them the second day after, and captured 600 men, three cannons, and ten wagons. Among the prisoners were Generals Exega and Lewiston.

While pursuing the insurgents on the Guadalupe road, Escobedo came up with the insurgent General Garcia de Cardena, and defeated him after an engagement of four hours. Many of the rebel officers and 1,900 men were taken prisoners, and all their artillery was captured. General Gallardo defeated the pronunciados in the northern part of the Sierra Puebla, and the Government troops occupied several towns in the State of Zacatecas. General Camacho captured the town of Jalapa after a sharp fight, making many prisoners, among them the son of Santa Anna. After these decisive reverses, the revolutionary movements appeared to be all on the wane. Generals Cardena and Huerta had succeeded in making their escape with some 500 men, General Toledo had about the same number, and these two bodies were all that was left of the formidable force which had recently menaced the Government.

The Mexican Congress opened its sessions on the 1st of April. The President sent in the following message:

It pleases me to-day to congratulate Congress upon the reopening of its sessions upon the day fixed by the Constitution. During your very short recess of two months the rebellion which originated in San Luis and Zacatecas has been promptly and effectually repressed. We can with reason hope in the future, relying with the fullest confidence upon the national good-will, and the firm support with which public opinion sustains and has sustained the legitimate authorities. Some persons, excited by their passions, have been for a long time provoking a civil war, preparing and combining the elements of a rebellion of greater magnitude than any since the termination of

the foreign war. Nevertheless, they are left isolated, the general reprobation of the people, and condemned by all good citizens, who calculate that hopes for the future of Mexico lie only in peace and legal order. The army has fought with loyalty and valor, and deserves the national esteem. After having destroyed the principal forces of the revolutionists, it has actively pursued those which remain and some small bands which still sustain themselves under the shadow of rebellion. Congress conferred upon the Executive various important powers, and decreed the suspension of some guarantees for a proper period, in order to secure the reestablishment of peace. Upon now returning this trust to Congress, it is a satisfaction to the Executive to manifest that he has made the least possible use thereof, endeavoring to fulfil his duty faithfully. The Executive is able to say that he has only made use of these powers in matters relative to the organization of the army and in declaring the criminality of the rebels. At the same time he has been careful to respect individual rights, and has maintained intact full liberty of the press, not even directing, in the case of some abuses thereby, the proceedings authorized by law. It was necessary to establish military authority, declaring the States of Jalisco, Querétaro, and Zacatecas, to be in a state of siege; but it has now been raised from these States and the people directed to proceed to the election in the States of Querétaro and Zacatecas of officers duly nominated there.

With reference to the public Treasury, the Executive has not made use of the powers which Congress conferred upon him; nevertheless, during this time all the various branches of administration have been properly conducted, without making any irregular exactions, without anticipating the imposts and taxes, and without making any contracts or compromises which leave a burden upon the Treasury.

The public improvements provided for in the appropriation bill have also been continued as far as possible, and the payment of the subventions decreed has not been suspended, as, for example, that on behalf of the Mexico and Vera Cruz Railroad. At the same time the proper amounts for the establishment of new telegraph-lines have been set apart, as, for example, those of Guerrero, Morelia, and Durango. In order to meet these obligations, among the greater of which have been those required for military operations, the fortunate circumstance has occurred of their having been demanded during those months of the year in which the greatest amount of impost duties is received.

The equalization of the national revenues with the national expenses will merit, without doubt, the principal attention of Congress in this period of its sessions, which is especially designed for the discussion of the appropriation bill. The grave importance of this matter and the necessity of not disregarding the various branches of administration are increased by the danger of new disturbances being occasioned, which will bring about immediately most painful sacrifices for the people, and all kinds of evils for society. The law passed by Congress a year since for the prosecution of highwaymen and kidnappers has served effectually in diminishing very much the number of these grave crimes. Unfortunately, there yet occur some cases of kidnapping, and, therefore, the President has thought it might accord with public opinion that he should recommend the continuance of the law for another year.

Among the projects of general utility, that which is of the greatest importance is the opening of a canal through the Isthmus of Tehuantepec, for the purpose of opening communication between the two oceans. A report has already been presented on this subject, and the Executive especially recommends Congress to take this into consideration during the present period of its sessions.

If it be possible, also, for Congress to occupy itself upon the report which has been presented with ref-

erence to constitutional reforms, the Executive believes it will benefit much the consolidation of our institutions and aid in securing the peace of the republic in the future.

Receive, citizen deputies, my sincere wishes for prudence in your deliberations, in order that great good and national prosperity may be obtained.

The financial report of Minister Romero contained the following passage on the "free zone" (*zona libre*) question:

Congress saw proper at the last session to approve, in the form of a resolution, not merely the continuation of the free zone in the State of Tamaulipas, but its extension into the States of Chihuahua and Coahuila. The opinion of the Executive on this delicate subject was minutely set before Congress during the discussion which took place at that time. The Executive still hopes, from the patriotism and sound judgment of the House, that, upon a renewed discussion of the matter, it will determine to reconsider its former resolution, and will think proper to decree the abolishment of the "free zone" in Tamaulipas, or at least to limit that privilege in such manner as the interest of the Treasury and legitimate trade require.

On the subject of claims against the Treasury, Señor Romero announced that, since the 28th of February, the total amount presented for liquidation and payment had been \$29,913,827, of which there had been recognized \$5,954,947, and rejected \$5,396,395, leaving pending \$18,562,484. The above claims did not include the foreign debt.

Congress passed the law, by a vote of 95 to 32, in conformity with a recommendation of the President, granting an extension for one year of the law suspending the writ of *habeas corpus*. The president, in urging this measure upon the attention of Congress, stated that, although the revolutionary movements had been suppressed for the time being, the situation was still very critical. Commerce and industry were everywhere prostrated, and travelling was becoming more and more insecure. Stages were robbed almost every day, and passengers left naked on the road. Under these circumstances, public credit was at the lowest ebb, and the Treasury was unable to meet the most pressing demands. The local and State governments in various parts of the republic were enforcing what they called "voluntary contributions."

On April 18th the authorities of Mazatlan seized the steamer Forward, on the plea that she was employed by the revolutionary General Vega. The captain protested, and claimed \$1,000 a day for her detention. On May 19th the steamer was seized by General Vega.

An amendment to the Constitution, creating a Senate, passed Congress, on April 28th, by a vote of 105 yeas to 49 nays, and was submitted to the States for ratification.

The revolutionist General Garcia Cardena, after again organizing a numerous band, attacked the town of Tuchiipila, on May 7th, and was repulsed; the Cuernavaca insurgents were also defeated, and fled into the State of Puebla. The forces of General Martinez, about five

hundred men, abandoned their commander in a body, and surrendered to the Government.

The national Congress adjourned on the 31st of May. President Juarez, in his closing message, said the revolutionists in San Luis Potosi and Zacatecas had been reduced to petty bands, and that measures had been taken by the Government, in cooperation with Congress, which would prove of great benefit to the country in future. The financial exigencies of the times, however, had not been fully provided for. Owing to the recent invasion of Mexican soil by the Guatemalians, President Juarez asked for a special session of Congress, but this request was denied.

On the 11th of May a disastrous earthquake took place at Miahutta. All the churches and nearly all the dwellings of the town and vicinity were destroyed. Near Pochutta the roads were blocked up by immense rocks which had fallen from the mountain-sides. The loss of life was considerable.

General Martinez, having been abandoned by his troops at San Luis Potosi, succeeded in rallying two thousand fresh revolutionists, with whom he fought his way with varying success to the Mexican border, where he invested the city of Matamoras. The appearance of the rebels before the city occasioned the greatest alarm among the inhabitants, although a strong force, under General Palacios occupied the place, and a large number of the inhabitants of the town and the neighboring country fled across the river, to seek refuge on American soil. The town of Brownsville, opposite Matamoras, in particular, was soon filled with American refugees. By a rapid concentration of troops the generals of the national Government succeeded, however, in routing the rebel General Martinez, and in capturing a number of prominent officers belonging to his command.

The city of Guaymas was surprised on the 28th of May, by an armed force under Colonel Viscayno, whose command was in the interest of General Placido Vega. The troops landed from the steamer Forward, formerly an English gunboat, and entered the city without opposition. The collector of customs was seized, possession of the custom-house taken, and notice given to the citizens to pay the outstanding dues, which were estimated at \$100,000, and which amount was collected. The invader carried away two vessels, and 5,000 muskets which they had seized in the city. The United States consul protested against the seizure of the arms. Forty tons of coal were taken from the Northern Transportation Company, and a draft on Ortis Brothers given in payment. A demand for \$25,000 was made upon the same firm, and the money not forthcoming, \$50,000 of merchandise was seized. The Government troops appearing on the 29th, Viscayno evacuated the place, the Forward steaming out of the harbor with the sailing-vessels in tow. During the occupation order was maintained,

and foreigners were unmolested. The prisoners were all released, with the exception of Mejia, of the Paymaster's Department, a son of the Minister of War. The United States consul urged his release, but Viscayno replied that his orders were positive to keep him prisoner.

At the request of the Mexican authorities, the United States consul at Guaymas sent the United States steamer-of-war Mohican in pursuit of the steamer Forward, as it was thought that the latter would visit La Paz, San Blas, Mazatlan, and other points. The steamer Mohican came up with the Forward near the mouth of the river Teceapane. The Forward, drawing but little water, steamed up the river, and the commander of the Mohican, in view of the impossibility of passing the bar at the mouth of the river, immediately manned the small boats for the purpose of continuing the pursuit of the Forward. Of this expedition Lieutenant J. M. Wainwright, of the Mohican, was placed in command by the officer commanding the United States war-vessel. On reaching a distance about forty miles from the sea, the Forward was discovered in the river apparently at anchor and abandoned. Lieutenant Wainwright, therefore, ordered her to be boarded, and in so doing the moment he and his men reached her deck, they were fired upon from the bushes along the banks of the river, with artillery and musketry, resulting in the killing of Lieutenant Wainwright, one seaman, and the wounding of five other seamen. The lieutenant did not die immediately, but was able to order the Forward to be set on fire, which was accordingly done, when they retired from her in the boats on which they came. The pirate was burned up completely. Viscayno, the commander of the expedition, had gone on shore with his men and arms, and it was his force which fired upon Wainwright.

An exciting discussion was kept up by the press of the capital and the country as to the right of American men-of-war to exercise authority in one of the rivers of Mexican territory, forty miles from the mouth thereof. In defence of the Americans, it was urged that the pirate Forward had on board property of American citizens, taken piratically from American merchants at Guaymas, to the amount of about \$18,000, and that, in the absence of Mexican war-vessels on the coast, the Mexican authorities, Davelas and Sepulveda, had admitted their inability to protect not only the interests of foreign merchants along the coast, but those of their own nationality, and had accordingly requested the commander of the Mohican to give chase to the Forward.

Early in July the rebel Generals Negrete and Villa were captured. As Negrete is one of the most popular Mexican generals, petitions for his pardon were sent in from all parts of the country, and many of the public journals strongly supported the popular demand for his release. The prisoner had been taken to jail, but, as the Government feared his forcible liber-

ation by a mob, he was afterward transferred to Santa Teresa prison, and turned over to the military authorities. The day following the arrest, a public meeting of the sympathizers of Negrete was held at the Plaza Armas. Speeches were made imploring clemency for the prisoners. The multitude shouted, "Death to Juarez!" "Death to Lerdo!" While the meeting was going on, a crowd surrounded Teresa prison, threatening to rescue the prisoner. Two companies of infantry arrived and dispersed them. Another crowd invaded the cathedral, and began ringing the bells. They were also dispersed by the troops. The Legislatures of several States and the public authorities of some of the larger cities were also convened, and joined in petitioning the President to exercise his pardoning power in case the trial should result in a sentence of death. Some of them sent special commissioners to the capital to convey their petitions to the President. The rebel General Pedro Martinez, shortly after his defeat at Oharco Escondido, appeared in the State of Vera Cruz, at the head of a strong cavalry force; and thence proceeded to Valle del Maiz, in the State of San Luis Potosi. He also issued a proclamation to the people of the State of Tamaulipas, attributing his recent defeat to the treachery of Generals Trevino and Naranjo, and promising an early return, and their relief from their present tyrannical government. He kept up correspondence with the revolutionists on the Rio Grande, whom he stimulated to action. On the night of July 22d a band of the latter, who had taken refuge in Brownsville, decided to renew the attack on Matamoras. The armed conspirators passed the river at night, within cannon-shot of Fort Brown, and threw up some rockets to give notice of their approach to accomplices in Matamoras, but General Palacio, the commander of the garrison, had timely information, and he caused Carlos Sanchez and Andres Valdovinos to be arrested; these two confessed their implication, and revealed what they knew of the plot.

On September 16th, Congress was reopened, and addressed by the President of the republic as follows:

CITIZEN DEPUTIES: We may congratulate ourselves upon seeing peace reestablished throughout the entire nation. A few parties of armed men, which remained on foot after the insurrection of San Luis and Zacatecas, have been actively pursued until they were dissolved. An equal and just meed of applause should be paid, as well to the good citizens who compose the army, as to the worthy authorities and forces of the States, which valiantly and patriotically combated the rebellion.

One of the first and most beneficent results of peace is the general security for persons and property which is now enjoyed, not only in the settlements, but also upon the routes of travel. The law of Congress against robbery and kidnapping has been effective for the repression of the evils caused by the prevalence of these crimes.

The Executive will immediately submit, for the consideration of Congress, the facts concerning the difficulties which have arisen in some States about

internal questions. He has thought it his duty to confine himself to respecting the sovereignty of the said States, and await the action of Congress in supplying the rules by which he should govern his conduct in these grave affairs, which so directly affect the essential bases of the Federal system. The Executive will present his plan of action, not with the pretence of possessing sufficient wisdom in such difficult and delicate questions, but on account of his desire that they be considered with all the speed which they deserve, in order that the wisdom of Congress may provide the most necessary rules, for the authorities of the Union to adopt in these cases, in a manner compatible with the internal sovereignty of the States.

There also remained pending the project concerning the regulations of mints, and the projects for a concession for the opening of the Tehuantepec Canal, which, if it shall prove practicable, will be of great importance to the republic, and to the commerce of the whole world.

There will be speedily presented several projects of laws, concerning some points relative to the administration of justice, and to public instruction.

There will also be submitted a plan for the establishment of coast-guard vessels, the necessity for which is proved anew by the recent painful occurrence at Guayamas. With the object of obtaining such vessels speedily, the Executive has already sent an agent abroad, immediately after that affair took place.

The inequality between our receipts and expenditures requires a special consideration of every thing which may conduce to the improvement of the condition of the Treasury. Undoubtedly Congress will regard this important matter with the attention it deserves, in order to reconcile all possible economy with the necessity for resources, with which to provide for all the indispensable requisites for the successful progress of the administration.

The patriotism and enlightenment which guide you in your deliberations, citizen deputies, inspire me with full confidence that you will labor in all things for the highest good and prosperity of the republic.

In the discussion which took place on the amnesty question, a majority of the deputies expressed themselves in favor of a generous measure, including nearly all political offenders, while Ministers Lerdo de Tejada, Yglesias, and Saavedra, were endeavoring to introduce some restrictions. The amnesty was voted on September 24th. The President returned the bill to Congress with an amendment, which materially changed it, and which was not approved by Congress. On October 18th the bill was finally passed by the Legislature in the following shape:

HALLS OF CONGRESS OF THE UNION, MEXICO, } October 18, 1870.

ARTICLE 1. Amnesty is conceded to all persons who, up to the 16th of the month of last September, may have been guilty of infidelity to the country, of sedition, conspiracy, and other crimes against the public order, as also the military men who, up to the same date, may have deserted.

ART. 2. There are not comprehended in the present amnesty—First, the regents and deputies of the so-called empire; second, the generals who commanded divisions of bodies of the army who may have passed over to the invaders.

ART. 3. Every person embraced in the two former fractions, whose fate may have been defined by the Executive of the Union, will enjoy with all its plenitude the favor of the present amnesty.

ART. 4. The Executive is authorized to extend it to individuals excepted in article two, when, in the judgment of the same Executive, the public peace may not be compromised.

ART. 5. All persons pardoned, whatever may be the penalty to which they may be now subjected, will be at once placed at liberty, and it shall supersede entirely the charges or trials which may be instituted for the crimes mentioned.

ART. 6. The present amnesty leaves untouched the rights of third parties, and those of the nation by the effects taken from the public funds.

ART. 7. The pardoned, although they return to the full enjoyment of their civil and political rights, are neither entitled to the right to return to employments, charges, grades, decorations, salaries, pensions, and claims upon the public pawn-shops, nor for the payments of credits against the Treasury and other favors and emoluments of which they may now be deprived, according to the laws.

ART. 8. All the pecuniary penalties imposed shall be remitted and have no effect. The goods embargoed or confiscated shall be immediately returned to the interested parties in the condition in which they may be found, provided that they may not have been alienated.

ART. 9. The Executive in carrying out this law will indicate the term of one month, counted from the promulgation in such capital of a district for the presentation of those pardoned who may be found with arms in their hands.

ART. 10. The individuals who, by failure of presentation in the time fixed by the Executive conformably to the former article, shall remain excluded from the present pardon, so also those whom the amnesty does not comprehend, will be judged according to the laws in force and by competent judges, and in no case according to the laws of January 26, 1862, January 29, and August 16, 1863, and August 12, 1867, which are now declared definitely annulled.

ART. 11. The persons comprehended in the exceptions of article two will not be condemned to death for the crimes committed up to date of publication of this law, and those upon whom that penalty according to article twenty-three of the Constitution ought to be imposed, will be commuted to greatest possible extent.

GERONIMO ELIZONDO, President of Congress.
GUILLERMO VALLE, JESUS ALFARO, Secretaries.

In compliance with that mentioned in article nine of the foregoing law, the President of the republic thought best to decree the following order:

GIVEN IN THE NATIONAL PALACE OF MEXICO, }
October 19, 1870.

To Manuel Saavedra, Minister of Gobernacion.

ARTICLE 1. In the term of one month, counting from the promulgation of this law at the capitals of each district, the pardoned who may be found with arms in their hands will present themselves in the federal district before the governor of it, in the territory of Lower California and the military district of Tepic before the respective political chiefs, and in the States before the corresponding governors, or before the political chiefs of the districts.

ART. 2. The political authorities of the districts before whom the pardoned present themselves will note down their names and the day of their presentation, giving cognizance of it to the governors in order that they may inform the Minister of Gobernacion.

ART. 3. The presentation in every case can be made by any of the legal means, but if it should not be made personally it will be ratified afterward by the same interested parties. Therefore I order that it shall be printed, published, and circulated, for its fulfillment.

BENITO JUAREZ.

The amnesty law was immediately carried into effect, by the release from prison of General Negrete and many other late revolutionists. As the news became known throughout

the republic, many insurgents, who had been secreted in the mountains and small towns, reported themselves to the officers of the Government.

Congress authorized the Governor of the State of Mexico, Don Mariano Riva Palacio, to organize a company for laying a railway from the capital to Toluca, with a branch to Quantitlan, the road to be completed within six years from the end of September, 1870. A bill was also passed, granting to a company the privilege of constructing a telegraph-line from Yucatan to Havana.

Mr. Nelson, the United States minister, addressed a communication to the Mexican Government, asking leave for the exploration of the Isthmus of Tehuantepec, by a commission of American engineers, who should report regarding the practicability of opening an inter-oceanic canal; he also expressed a desire that some Mexican engineers should take part in the expedition. President Juarez immediately gave the permission, and promised to name a commission of engineers to assist in the survey. The United States exploring expedition reached the isthmus about the middle of November, awaiting the arrival of the Mexican commissioners. The latter left for the isthmus on November 24th. Immediately after their arrival, the expedition started for Minatitlan, and began their labors.

On November 23d, Congress passed the bill granting a concession to Messrs. Mason and Wyatt, for the construction of three lines of railroad—one from Vera Cruz to some point on the proposed line of the Tehuantepec Railroad; a second from Lizardo or other point on the above first line to Cuernavaca; and the third from Cuernavaca, or some other point on the second line, to Acapulco, or some other point on the Pacific Ocean, in the State of Oajaca, Guerrero, or Michoacan.

The session of Congress was brought to a close on December 15th, when President Juarez made a speech, in the course of which he stated that the treaty of commerce and amity between Mexico and Italy had been signed by the latter power, and that both he and Congress deemed the present a suitable time for Mexico to resume her former relations with foreign powers.

An insurrection, which had broken out in the State of Guerrero, under the leadership of Alvarez, threatened to assume alarming proportions, but was represented by later reports to be waning.

Notwithstanding the continued prevalence of insurrections, there were many evidences of improvement. Schools were encouraged in all parts of the country. Most of the State governments favored the establishment of telegraphic lines. The Legislature authorized the Executive to construct a line from Ocuicatlan to the frontier of Puebla *via* the Mixteca. In Vera Cruz a committee was formed, under the presidency of Governor Hernandez, for the establishment of telegraphic lines throughout

the State, one to be constructed at once from Vera Cruz to Minatitlan. The government of Sonora projected a line from Guayamas, *via* Hermosillo and Ures, to the frontier of Arizona Territory. The wires from the city of Mexico and from Matamoras were to be connected with the Texas lines at Piedras Negras.

MICHIGAN. At the general election, held November 8th, the vote for Governor was as follows:

For Henry P. Baldwin, Republican.....	100,176
Charles C. Comstock, Democrat.....	83,391
Henry Fish, Temperance.....	2,710
Imperfect and scattering votes.....	230
Total	186,507
Republican plurality.....	16,785

The other State officers chosen were as follows: Morgan Bates, Lieutenant-Governor; Daniel Striker, Secretary of State; Victory P. Collier, State Treasurer; William Humphrey, Auditor-General; Dwight May, Attorney-General; Oramel Hosford, Superintendent of Public Instruction; Charles A. Edmonds, Commissioner of the State Land-Office; Witter J. Baxter, member of the State Board of Education, all Republicans.

The Legislature chosen was divided between the two parties as follows: Senate—Republicans, 27; Democrats, 5; total, 32. House of Representatives—Republicans, 70; Democrats, 80; total, 100. Republican majority on joint ballot, 62.

At this election several proposed amendments to the State constitution were voted upon. Three of these were proposed by the Legislature of 1869. The main purpose of the first was to abolish distinctions in civil and political rights and duties based upon color, but it also empowered the Legislature to provide for taking the votes of soldiers away from their places of residence in time of war, which could not be done, so far as the State elections were concerned, under the constitution as it stood. This was adopted—yeas 54,105, nays 50,598.

The second proposed to enlarge the powers of boards of supervisors of counties to raise moneys for public buildings, highways, and bridges, which was voted down—yeas 89,180, nays 61,904.

The third proposed to increase the salaries of State officers and circuit judges as follows: Governor, from \$1,000 to \$2,500; judges of circuit courts, from \$1,500 to \$2,000; State Treasurer, Auditor-General, and Superintendent of Public Instruction, from \$1,000 to \$2,000; Secretary of State, Attorney-General, and Commissioner of State Land-Office, from \$800 to \$2,000. This was voted down—yeas 36,109, nays 68,912.

The other amendments referred to railroads. To understand one of them, it is necessary to premise that previous to 1870 acts had been passed by the Legislature, authorizing towns and cities, and in some cases counties, to loan their credit to railroad corporations, and to

levy taxes to aid them either by way of donation or of subscriptions to stock, first submitting the question of the proposed aid to a vote of the people. Under these acts aid had been voted to railroad corporations in various forms to the amount of upward of \$6,000,000, and township and city bonds to a considerable amount had been issued and delivered to various corporations. The larger portion of the aid voted, however, was represented by bonds on deposit in the office of the State Treasurer, awaiting the performance of precedent conditions specified in the votes. One of the townships which had voted aid refusing to deliver the bonds voted, the Supreme Court was applied to for a *mandamus*, and in May, 1870, that court decided that all these votes were unconstitutional and void. The decision was based upon the fundamental principle that all taxation, to be valid, must be for a public purpose, and the court declared that to tax the community for the benefit of a private corporation which proposed to construct a railroad was no more within this principle than to levy a tax for the benefit of parties who proposed to erect a manufactory or a store, or to engage in any other private enterprise. The public might be incidentally benefited in either case; but these incidental benefits to spring from a private undertaking could not be recognized as giving it the character of a public object to which unwilling parties could be compelled to contribute; if it could, there would be no limit except the discretion of the Legislature as to the objects which taxation should embrace. After the decision was made, the Governor deemed it proper to convene the Legislature in special session to consider the subject, and, if thought best, to propose some constitutional amendment to meet the difficulty. That body convened in August, and various proposed amendments were submitted, but it was found impracticable to secure the requisite majority for any amendment sanctioning future municipal aid to railroads. The following were, however, agreed upon:

1. The Legislature may, from time to time, pass laws establishing reasonable maximum rates of charges for the transportation of passengers and freight on different railroads in this State, and shall prohibit running contracts between such railroad companies, whereby discrimination is made in favor of either of such companies as against other companies owning connecting or intersecting lines of railroads. This was adopted by the people—yeas 78,602, nays 51,897.

2. No railroad corporation shall consolidate its stock, property, or franchises, with any other corporation owning a parallel or competing line; and in no case shall any consolidation take place except upon public notice given of not less than sixty days to all stockholders, in such manner as shall be provided by law. Adopted—yeas 76,902, nays 51,194.

8. The Legislature may provide by law for the payment, by the counties, townships, and municipalities of this State, of all bonds or other obligations heretofore issued or incurred in pursuance of acts of the Legislature, by such counties, townships, and municipalities severally, for and in aid of any railroad company. Such bonds, or obligations, shall be paid by the county, township, or municipality, issuing or incurring the same; and in no event shall the State pay, or become liable for, any portion of such bonds or obligations. The Legislature shall submit to the electors of each of said several counties, townships, and municipalities, for their decision, the question of payment, together with the mode and manner of the same. Rejected—yeas 50,078, nays 78,458.

The political complexion of the boards of supervisors for the year was nearly the same as in 1869. The Republicans had majorities in 44 counties, the Democrats in 10, and 4 were tied.

The aggregate receipts to the Treasury for the year amounted to.....	\$1,718,533 73
Balance in Treasury, November 30, 1869.....	834,069 73
Available means for the year.....	\$2,552,603 44
Aggregate expenditures.....	2,094,305 47

Balance at close of fiscal year, Nov. 30, 1870, included with the receipts were Swamp-land warrants drawn in payment for construction of Swamp Land State Roads, to the amount of \$314,423.53. The cash receipts were less than the aggregate receipts to the Treasury by the face of these warrants, and amounted to.....	\$1,404,100 19
Of the cash, the receipts "in trust" were.....	866,829 06

Which taken from total cash, and there remains of cash receipts for general purposes.....	\$1,037,271 13
-------------------------------------------------------------------------------------------	----------------

The sources of revenue from which the collections were made were the following:

From direct taxes, including interest and charges thereon.....	\$582,738 37
From incidental collections.....	30,023 79
From specific taxes—Railroad Companies.....	\$312,308 05
From specific taxes—Telegraph Companies.....	1,811 30
From specific taxes—Insurance Companies.....	80,973 25
From specific taxes—Express Companies.....	1,505 00
From specific taxes—Mining Companies.....	4,357 11
From sale of Lands.....	500,253 61
From sale of War Bounty Bonds.....	110,169 90
From United States—war expenses refunded.....	44,000 00
	19,941 56
Total cash receipts as above stated.....	\$1,037,271 13

The aggregate expenditures for the fiscal year, as stated above, are in excess of cash disbursements by the amount of State Swamp-land expended in payment of Swamp-land warrants—such expenditure being \$314,423.53. The aggregate, less this amount, gives for cash expenditures, during the fiscal year closing Nov. 30, 1870, \$1,779,881 94	
The cash disbursements of amounts held "in trust" were.....	345,588 88

Giving, for disbursements for general purposes.....	\$1,434,293 06
-----------------------------------------------------	----------------

A classified detail of the items that enter into this amount shows that the disbursements were for the following:

For salaries of State officers, deputies, and clerks.....	\$30,432 66
For salaries of extra clerks in State offices.....	11,457 28
For salaries of Commissioner of Immigration.....	2,391 68
For awards of Board of State Auditors.....	59,574 37

Total of above items.....	\$108,755 99
For expense of Judiciary—including publication of reports.....	39,371 25
For incidental expenditures.....	2,892 68
For military expenses.....	6,595 00

The above items include all ordinary expenditures from the Treasury for the support of the State government, and amount to.....	\$152,605 02
For interest upon Bonded Debt and for premium.....	\$173,489 41
For interest upon Trust Funds.....	166,363 51

For bounties to soldiers.....	\$38,850 00
For relief of disabled soldiers.....	1,500 00

For aid to University.....	
For payment of Legislative appropriations.....	\$181,136 54
For payment of principal of Bonded Debt.....	701,550 00

Aggregate of cash expenditures as above.....	\$1,434,293 06
----------------------------------------------	----------------

The cash expenditures from the Treasury for the fiscal year were.....	\$1,779,881 94
-----------------------------------------------------------------------	----------------

The cash receipts to the Treasury for the fiscal year were.....	1,404,100 19
-----------------------------------------------------------------	--------------

The cash expenditures in excess of the cash receipts for the fiscal year were.....	\$375,781 75
------------------------------------------------------------------------------------	--------------

The balance in Treasury, November 30, 1869, was.....	\$834,069 73
------------------------------------------------------	--------------

The balance in Treasury, November 30, 1870, was.....	458,307 97
------------------------------------------------------	------------

Decrease in Treasury Balance in year.....	\$375,781 75
-------------------------------------------	--------------

The bonded State indebtedness, November 30, 1869, amounted to.....	\$3,043,578 49
--------------------------------------------------------------------	----------------

War Bounty Bonds were issued during the fiscal year for.....	44,000 00
--------------------------------------------------------------	-----------

Total amount of indebtedness during year.....	\$3,087,578 49
-----------------------------------------------	----------------

The debt, November 30, 1870, amounted to.....	2,865,083 49
-----------------------------------------------	--------------

The amount of bonds purchased and redeemed.....	\$702,550 00
-------------------------------------------------	--------------

A detailed statement of purchases and redemptions is as follows:	
------------------------------------------------------------------	--

PURCHASED.	
------------	--

Two million Loan Bonds, due January 1, 1873.....	\$10,000 00
--------------------------------------------------	-------------

Two million Loan Bonds, due January 1, 1873.....	12,000 00
--------------------------------------------------	-----------

Two million Loan Bonds, due January 1, 1883.....	24,000 00
--------------------------------------------------	-----------

Renewal Loan Bonds, due July 1, 1878.....	\$47,000 00
-------------------------------------------	-------------

War Bounty Loan Bonds, due May 1, 1890.....	32,000 00
---------------------------------------------	-----------

Canal Loan Bonds, due July 1, 1879.....	29,000 00
-----------------------------------------	-----------

Total amount purchased during fiscal year..	\$108,000 00
---------------------------------------------	--------------

REDEEMED.	
-----------	--

War Loan Bonds, due January 1, 1866 (drawn).....	\$598,550 00
--------------------------------------------------	--------------

Aggregate purchased and redeemed.....	\$702,550 00
---------------------------------------	--------------

Deduct amount of bonds issued during year.....	44,000 00
------------------------------------------------	-----------

Net reduction of Bonded Debt during year.....	\$658,550 00
-----------------------------------------------	--------------

The reduction in Treasury balance during year.....	375,781 75
----------------------------------------------------	------------

Reduction in debt in excess of reduction in Treasury balance.....	\$282,768 25
-------------------------------------------------------------------	--------------

The entire reduction of the State bonded indebtedness effected during the fiscal year was

in anticipation of the maturity of the bonds, by far the larger proportion of them having yet sixteen, and the war bounty twenty, years to run.

The now outstanding bonded indebtedness is as follows:

Two million loan bonds, 6's due Jan. 1, 1878	\$459,000 00
Two million loan bonds, 6's due Jan. 1, 1878	437,000 00
Two million loan bonds, 6's due Jan. 1, 1883	735,000 00
Renewed loan bonds, 6's due July 1, 1878	160,000 00
War bounty loan bonds, 7's due May 1, 1890	478,000 00
Canal bonds, 6's due July 1, 1879	58,000 00

Total interest-bearing Bonded Debt...	\$2,342,009 00
Matured adjusted bonds, interest stopped, payable on demand.....	3,000 00
Matured, full paid, 5,000,000 loan, interest stopped, payable on demand.....	3,000 00
War Loan Bonds, interest stopped, payable on demand.....	3,050 00
Outstanding, part paid (unrecognised) bonds, \$57,000 adjustable at.....	32,978 49

Aggregate Bonded Debt of the State.... \$2,385,028 49

The provisions for meeting the payment of the instalment of the two million loan maturing January 1, 1878, are

Balance to credit of two million loan Sinking Fund, November 30, 1870.....	\$312,867 07
Anticipated receipts thereto, during 1871.....	148,495 73
Anticipated receipts thereto, during 1872.....	148,495 73

Giving for available means prior to maturity of bonds.....	\$609,858 53
Deducting amount of instalment due January 1, 1878.....	459,000 00

Surplus of resources of Sinking Fund over requirements for coming two years..... \$150,858 53

An amount which may be invested in the purchase of bonds in anticipation of their maturity.

The amount of the reduction in bonded debt, as stated above, does not fully measure the relief to the Treasury from future demands on account of such indebtedness.

Attached to the bonds outstanding November 30, 1869, were unmatured interest coupons, amounting, at their face, to.....	\$1,735,537 93
November 30, 1870, the amount of such coupons was.....	1,539,970 00

Showing that, consequent to the reduction in the amount of the Bonded Debt, is a reduction in the future demands upon the Treasury, on account of such debt, of..... \$184,567 93

There will accrue, upon the bonded debt—computed upon the amount outstanding November 30, 1870, during the fiscal year ensuing that date, interest to the amount of \$140,880, to meet which only a nominal sum, in excess of the specific tax receipts applicable to the payment thereof, will be required.

The amount and apportionment of State tax for 1870 was for purposes and under acts as follows:

$\frac{1}{2}$ mill—two million loan Sinking Fund tax	\$38,495 73
Military tax.....	33,908 40
University aid.....	15,000 00
1 mill, general purposes.....	307,965 84

Aggregate of State taxes..... \$395,364 97

The valuation of the property of the State, as last equalized in 1866, was \$307,965,842.92. The assessed valuation in 1870 was \$266,929,278.49. The Auditor-General estimates the actual cash value at about \$800,000,000, or about three times the value as assessed.

The school statistics for the year are as follows: Number of counties reporting, 64; townships, 858; districts, 3,108. Number of children between five and twenty, 384,554. Number that attended school during the year, 278,636. Number attending under five and over twenty, 6,404. Number of volumes in districts libraries, 97,101. Volumes added during the year, 8,377. Paid for books, \$11,235.86. Stone school-houses, 78; brick, 538; frame, 3,867; log, 627. Value of school-houses and lots, \$6,234,797. Graded schools, 281. Visits by county superintendent, 6,621. Visits by directors, 12,521. Qualified teachers employed—males, 2,793; females, 8,221. Wages paid male teachers, \$548,421.52; wages paid female teachers, \$844,807.07. Average per month to male teachers, \$52.62; females, \$27.31. Number of volumes in town libraries, 58,735; added during the year, 4,247; new districts organized, 182. Number of private or select schools, 139; pupils attending the same, 9,618. School moneys at hand at beginning of year, \$300,477.81. Two-mill tax, \$405,111.64. Received from primary-school fund, \$177,313.79; from tuition of non-resident scholars, \$26,064.14; from district taxes, to pay teachers and incidental expenses, \$1,034,788.77; from other district taxes, \$707,790.10; from tax on dogs, \$25,898.81; raised from all sources, \$474,323.72: total resources for the year, \$3,154,221.28. Paid for buildings and repairs, \$852,122.62; paid teachers, \$1,391,801.61; paid for all other purposes, \$545,629.55: total expenditures for the year, \$2,783,943.22; amount on hand at end of year, \$470,289.46; total indebtedness of districts, \$861,409.94.

The students attending the State Normal School for the winter term 1869-'70, 277; for the summer term following, 248; number graduated, 17; receiving training certificates, 30; number from the normal department, acting and trained as teachers in the experimental school, 90; pupils in experimental school, spring term, 126; summer term, 138; fall term, 104.

The Superintendent of Public Instruction, in his report, complains of insufficient salaries in the Normal School, and says: "We have been compelled frequently to part with our best teachers, and that too when they had become thoroughly familiar with the duties of their special departments, simply on account of the inadequacy of their salaries." He also discusses the question of compulsory education, and, after referring to the systems prevailing in the different countries of Europe, proceeds to say:

The free schools of this State have not been in operation long enough to determine their complete power and influence in securing the attendance of all who ought to be found in school. The results have been gratifying, but as yet fall far short of reaching the desired end.

There are many of our citizens whose education is very limited, if not entirely wanting, who are utterly indifferent to the education of their own children, or of those under their care. There is no power in our school laws to require the attendance of a single child; they are present or absent, as the parents or guardians may choose. The claim is made and insisted upon,

to enable the officers of the institution to carry out the idea of manual labor in connection with the schools. It is hoped that ere long suitable provision will be made to meet this pressing want. The institution is carried on for the benefit of two classes, the deaf and dumb and the blind.

There are two distinct departments for the blind, viz., the intellectual and the musical. The studies taught to the blind are reading, spelling, writing, geography, arithmetic, grammar, history, physical geography, algebra, and geometry. In the musical department instruction is given in vocal music, on the piano, organ, violin, and on brass instruments. The deaf and dumb are first taught the names of objects, and step by step led along over the difficulties of language, until in the class of the seventh year such studies as the following are taught: geography, grammar, arithmetic, history, natural philosophy, physical geography, rhetoric, ethics, and the Bible.

The course of instruction occupies seven years, and the privileges of the institution are free to all the deaf and dumb and blind residents of the State, who are between the ages of ten and twenty, who are of sound mind, and good moral character, and who are free from contagious disease.

The building fronts toward the north, and is divided into five distinct portions, connected with each other by corridors. The front or main building is designed for the residence of the officers. It has recently been finished, and is a model of good taste and elegance. Directly back of this stands the centre building, on the first floor of which is the kitchen, on the second the dining-room, and on the third, the chapel. On the east side of the centre building is the girls' wing, and on the west side is the boys' wing. Directly behind these is the school-building. There are ninety-four acres of land, owned by the State, connected with the institution. The entire cost of the establishment will not greatly exceed \$250,000.

The present number of pupils is 150, of whom 80 are blind, and 120 deaf and dumb. Articulation is taught to all who are regarded as proper subjects.

The total expenditures for the last two years were in round numbers \$152,000, of which, about \$75,000 were for current expenses, the balance being for building and improvements.

Statistics for the Decennial Period.—The Michigan Asylum for the Insane, at Kalamazoo, was among the first erected in accordance with the series of propositions, relative to the construction and arrangement of hospitals for the insane, adopted by the "Association of Medical Superintendents of American Institutions for the Insane," at their meeting in 1857. The erection of buildings was begun in 1854, and so far completed that a few patients of one sex only were received during the autumn of 1859. In the early part of 1860 a few halls were formally opened for the reception of patients of

both sexes. The year 1870 closes the first decennial period in the history of the institution. During much of this time the work of construction has been constantly carried on; and it was not until 1869 that the asylum was completed according to the original plan. During the period mentioned, 1,122 patients received treatment, of whom 545 were males and 577 females. Of the whole number, 172 males and 174 females were discharged recovered, 59 males and 54 females were discharged improved, 84 males and 118 females were discharged unimproved, 74 males and 83 females died, and 156 males and 149 females still remain under treatment.

Heredity, etc.—Of those admitted, 30.03 per cent. were of healthy parentage; in 33.69 per cent. the history on this point was unascertained; and 36.27 per cent. had insane ancestors or dissolute parents. Of the first, 32.64 per cent. recovered; of the second, 19.30 per cent.; and of the third, 53.09 per cent. Those recorded as "unascertained" were principally the patients received from poor-houses, jails, etc.; a large proportion being incurable when received, restoration was not to be anticipated. Quite a number of those reported as of healthy parentage were from the same class, in whom, though insanity was not ascribed to their parents, there existed a more undesirable influence. The experience of the institution on this point may be thus stated: 1. That about one-third of all presented for treatment have immediate relations who have been insane. 2. That most forms of mental disease are equally curable, whether the patient has sane or insane relations; 3. That individuals of ordinarily good mental and physical condition are less likely to have a second attack; 4. While those who inherit an unhealthy organization will probably suffer from subsequent attacks.

Nativity.—Less than 18 per cent. of the whole number were natives of Michigan; nearly 30 per cent. were of foreign birth; nearly 40 per cent. were natives of the State of New York; and the remainder were mostly from the New-England States, etc. These figures show how largely the population of Michigan has been drawn from the older States, comparatively few being native to the soil.

Of 466 cases of all forms of disease, curable and incurable, and in persons of both healthy and unhealthy organization, admitted within one year of date of attack, 269, or nearly 60 per cent., were discharged recovered; while in the remaining 586 cases of the same forms of disease, and occurring in persons of similar constitution, in whom treatment was deferred beyond that period, only about 14 per cent. were restored.

At the commencement of the fiscal year 1870, 124 males and 156 females were under treatment; during the year 95 males and 49 females were admitted, and 63 males and 56 females were discharged—leaving under treatment 156 males and 149 females. Of those

discharged, 26 males and 23 females were recovered, 14 males and 8 females improved, 9 males and 14 females unimproved, 14 males and 11 females died.

The salt production of the Saginaw Valley, for the year, was 646,516 bbls.; increase over 1869, 49,643 bbls. On hand at end of the year, 93,878 bbls. The shipments in round numbers were as follows: to Chicago, 800,000; Toledo, 80,000; Cleveland, 55,000; Milwaukee, 85,000; other Lake Michigan ports, 25,000; Sandusky, 20,000; Detroit, 10,000; Buffalo, 10,000. Average price per bbl., \$1.25.

The lumber statistics of the State, except those of the Saginaw Valley and Huron shore, which were carefully compiled by Messrs. Geo. F. Lewis and C. B. Headley, of the East-Saginaw *Courier*, and those of Muskegon County and Detroit, are imperfect. The following figures are given, the estimates, except the last two items, being those of the Muskegon *News and Reporter*:

	Feet.
Saginaw Valley, proper.....	576,723,606
Shore of Lake Huron.....	127,723,555
Detroit.....	57,380,000
Muskegon County.....	269,429,673
Manistee County, estimated.....	115,000,000
Oceana County, ".....	67,000,000
Mason County, ".....	59,000,000
Grand Traverse County, estimated.....	28,500,000
Ottawa County, ".....	178,000,000
Lake Counties, South of Ottawa, estimated..	24,000,000
St. Clair County, estimated.....	38,000,000
Other parts of the State, estimated.....	200,000,000
Total.....	1,756,733,834

The following further statistics may be added: shingles manufactured in Saginaw Valley, 178,570 m.; on Huron shore, 89,800 m.; total, 268,370 m.; total value of lumber, shingles, lath, and pickets, manufactured in Saginaw Valley and on Huron shore, \$15,000,000. Shipments of lumber from valley by water, 499,127,850 ft.; by rail, 96,707,000. Total, 595,834,850.

Several mineral wells in the State have during the year become noted for their healing qualities, and been great resorts for invalids from all parts of the country. Those at St. Louis in Gratiot County and Eaton Rapids in Eaton County are most noted.

The shipment of iron from Escanaba and Marquette were as follows:

	Ore.	Pig-iron.
Escanaba, tons.....	451,385	15,208
Marquette, tons.....	423,197	30,559
Total.....	874,582	45,763

This is a considerable increase upon the preceding year. The shipments of copper from Lake Superior ports were:

	Tons.
Portage Lake, ingot.....	7,456½
" " ore.....	8,907½
Eagle River, ".....	1,224½
Eagle Harbor, ".....	1,876
Ontonagon, ".....	894
Total.....	14,188½

The production is stated by the Houghton *Gazette* to be larger than that of any previous year, but the precise figures are not given.

The number of convicts in the State-prison at the beginning of the year was 644. Received during the year, 304. Number at conclusion, 668. Average number, 845.7. Discharged by expiration of service, 288; by reversal of sentence, 1; on pardons, 18; died, 24; escaped, 4; total, 285. Disbursements for rations, \$30,486.70; for all purposes except buildings and repairs, \$84,807.01; for buildings and repairs, \$6,429.28; total, \$91,236.29. Receipts for convict-labor, \$90,682.66; from United States, \$7,307.17; from visitors, \$3,868.50; miscellaneous sources, \$2,056.69; total, \$107,457.67. Excess of receipts over expenditures, \$16,785.01. Crimes for which convicts received were sentenced: arson, 5; adultery, 4; poisoning, 1; aiding escape, 1; assault with attempt to murder, 10; assault with intent to rape, 5; other felonious assaults, 5; attempts to commit larceny in office, 4; burglary, 27; breaking jail, 1; embezzlement, 2; false pretences, 10; forgery and counterfeiting, 20; hiring and procuring arson, 2; incest, 5; killing and maiming cattle, 1; larceny, 145; malicious injury, 2; threatening letters, 1; manslaughter, 4; murders, 3; murder second degree, 5; polygamy, 5; rape, 2; receiving stolen property, 6; robbery, 14; escaped convicts recaptured, 2. Of the sentences, 7 were for life; 25 were 10 years or over; 35 were 5 years or more, and under 10; 168 were between 1 and 5 years; and 67 were 1 year and under; average sentences, 3 years. Two hundred and seventy-six were cases of first correction; 25 of second, and one of third; 58 were under 21 years of age; 140 between 20 and 30; 60 between 30 and 40; 21 between 40 and 50; 17 between 50 and 60; and 6 between 60 and 70; average age, 29.1 years. The nativity of convicts was follows: Austria, 1; Bavaria, 2; Canada, 37; Cuba, 1; Denmark, 1; England, 8; Germany, 8; Holland, 2; Ireland, 22; Isle of Man, 1; New Brunswick, 1; Norway, 1; Scotland, 6; unknown, 1; United States, 210. Capital punishment was abolished in Michigan in 1847. For the next eleven years the convictions of murder in the first degree were 2.78 per cent. of all; for the last eleven, only 1.28 per cent.

In the State Reform School the number of inmates at the beginning of the year was 285; received during the year, 85; discharged, either finally or on ticket-of-leave, subject to recall in case of bad behavior, 118; total remaining, 262.

MILLER, WILLIAM ALLEN, M. D., LL. D., F. R. S., Professor of Chemistry at King's College, London, born at Ipswich, December 17, 1817; died in London, September 30, 1870. He was educated at Merchant Taylors' School, and at a Quaker seminary in Yorkshire, where he first imbibed a taste for scientific pursuits, while attending lectures on chemistry. He studied for the medical profession at the General Hospital, Birmingham, and entered King's College, London, where he was admitted to the laboratory of the late Dr. Daniel, as his

assistant, and became his warm friend. In 1839 he carried off the Warneford (geological) medal while successfully pursuing his scientific education, passed some time in Liebig's laboratory at Giessen, and became demonstrator of chemistry in King's College in 1840. About this time he took his degree of M. D., in the University of London, and continued to assist Dr. Daniel till his death in 1845, when he was appointed to the vacant chair of chemistry. In 1851 he was one of the Government commissioners to report on the water supply of the metropolis. He held the office of Vice-President of the Chemical Society, was Treasurer and Vice-President of the Royal Society, Honorary Fellow of King's College, and of the Pharmaceutical Society, and Assayer to the Mint and Bank of England. Dr. Miller published various papers in the Philosophical Transactions and the British Association Reports. His chief work is "Elements of Chemistry, Theoretical and Practical," of which a third edition appeared in 1866.

MINNESOTA. Public affairs have been very quiet throughout the State during the year. No State officers, except members of the Legislature, were chosen, but there was a political canvass for the election of members of Congress. For this purpose conventions were held by both parties in the congressional districts, and candidates nominated. The following platform, adopted by the Democratic Convention for the First Congressional District, held at Owatonna, may be taken as representing the views of the Democracy throughout the State:

Resolved, That the power granted by the Federal Constitution to the General Government to levy impost duties is limited to a tariff for the purpose of revenue only; and that we denounce the present tariff, or any other involving the idea of protection, as unjust and oppressive to the farmer and the laboring classes, and therefore demand its immediate reduction to a strictly revenue standard; and then only so much as will be necessary under an economical administration of the Government.

Resolved, That, as taxation is a pecuniary burden, imposed by public authority on the property of the people for the maintenance of the Government, the payment of its debts, and the promotion of the general welfare, Congress ought not to tax the substance of the earnings of the citizen for any other purpose than above indicated; and that it is wrongful and oppressive to enact revenue laws for the special advantage of one branch of business at the expense of another.

Resolved, That, as the United States bonds constitute a large proportion of the wealth of the country, they ought to be taxed for Federal purposes.

Resolved, That the adoption of the present series of school-books, without protecting the people against the exorbitant charges of the publishers, created an odious monopoly, and imposed a grievous burden upon the public; and that we denounce the authors of this iniquity, and call upon the Legislature to relieve the people therefrom.

Resolved, That the Democracy of Minnesota condemn and denounce the recent attempt of the radicals in Congress to change the naturalization laws, so as to compel our foreign-born brethren to be naturalized in the United States courts only, which would greatly harass and hinder poor immigrants from be-

coming citizens of the United States, by being compelled to travel from remote sections of the State to the city of St. Paul or Winona to take out their naturalization papers, in order to avail themselves of the blessings and privileges of citizenship, and to acquire the benefits of the "homestead laws."

The position of the Republican party on the tariff question, which was the most important issue between the two opposing parties, is shown in the following resolution, adopted by the Republican Congressional Convention, held at Owatonna:

Resolved, That, in accordance with this wholesome change of financial policy, we call upon Congress for a thorough reform of our whole revenue system, and for a reduction of the tariff to a revenue standard, prohibiting duties imposed to the detriment of the people and for the benefit of private interests and monopolies, and demand that as far as possible the necessities of life and industry be placed upon the free list.

In the First Congressional District Mark H. Dunnell, Republican, was elected to Congress by a majority of 4,702 over O. F. Buck, Democrat; and, in the Second District, John T. Averill, Republican, was chosen by a majority of 2,642, over Ignatius Donnelly. The Republican majority on the congressional vote in 1870 was 7,844, and in 1868, 4,167. The political complexion of the Legislature for 1871 is as follows:

	Senators	House.	Joint Ballot
Republicans.....	13	83	45
Democrats.....	9	15	24
Rep. majority.....	4	17	21

The Legislature assembled on the 4th of January, and continued in session till the 4th of March, during which time much important business was transacted. The fifteenth amendment to the Federal Constitution was ratified. An amendment to the State constitution was proposed, changing section three of article ten, which reads: "Each stockholder in any corporation shall be liable to the amount of stock held or owned by him," so that it shall read, "Each stockholder in any corporation (railroad corporation excepted) shall be liable to the amount of stock held by him." This proposed amendment was submitted to the popular vote at the November election, when it was rejected. By "an act to promote immigration," a Board of Immigration was constituted, consisting of five members, including the Governor, Secretary of State, and State Treasurer, as *ex-officio* members.

The general liquor law of the State was so amended that towns can decide for themselves upon the question of license. It is provided that, if ten or more legal voters, at any time not less than three days before any regular election, petition therefor, the question of license shall be submitted by ballot at such election, and, if a majority of the votes cast are against license, the Board of County Commissioners shall grant no license in such township. Under the act providing for the enrolment and organization of the militia, it is made the

duty of all assessors of personal property in the year 1870, and every second year thereafter, in their respective districts, to enroll all persons liable to do military duty. The Governor, as Commander-in-Chief, appoints his staff officers, to consist in time of peace of at least one aide-de-camp, and one adjutant-general, each of the rank of brigadier-general, and one military store-keeper, to rank as non-commissioned officer. All able-bodied male persons of sound mind between the ages of eighteen and forty-five, residing in the State, except Indians not taxed, constitute the militia. An act in relation to the formation of coöperative associations was passed, the substance of which is contained in the following sections:

SECTION 1. Seven or more persons of lawful age, inhabitants of this State, may, by written articles of agreement, associate themselves together for the purpose of trade, or for carrying on any lawful mechanical, manufacturing, or agricultural business within this State, and, when such articles of association shall have been executed and recorded in the office of the clerk of the city or town in which the business is to be carried on, such persons shall be and become a corporation, and enjoy all the powers and privileges, and be subject to all the duties, restrictions, and liabilities, set forth in all general laws in relation to similar corporations, except so far as the same may be limited or enlarged by this act.

SEC. 11. There shall be such distribution of the profits or earnings of such association among the workmen, purchasers, and stockholders, as shall be prescribed by the by-laws, at such times as therein prescribed, and as often, at least, as once in twelve months; *provided*, that no distribution shall be declared and paid until a sum equal at least to ten per cent. of the net profits shall be appropriated for a contingent or sinking fund, until there shall have accumulated a sum equal to thirty per cent. in excess of such capital stock.

It is provided that the capital stock of each of these associations shall be fixed and limited in its articles of association, and may be any sum not exceeding \$50,000. An act was passed providing for the sale of the 500,000 acres of lands known as the "internal improvement lands," for the purpose of paying the State railroad bonds. The minimum price was fixed at \$8.75 per acre, and it was provided that the act should be submitted to the vote of the people for ratification. At a special election held for this purpose on the last Tuesday in May, a majority of the votes cast were in favor of the act, and, on the 7th of August, the lands were offered for sale by the State Auditor. The lands are exempted from taxation for ten years after their sale. Two amendments to the State constitution were proposed at this session, which were returned without the approval of the Governor. The first provided that the Legislature might make provision for the imprisonment or holding to bail of persons charged with fraud in contracting debts. The Governor objected to this amendment, on the ground that it would make the law on the subject of arrest too fluctuating. The second extended the privilege of voting to women. It was provided that it should be submitted to the people of the State, without regard to sex,

for ratification or rejection. The Governor states his objections to this amendment as follows:

Section one of article seven of the State constitution provides who shall be voters in this State; and section one of article fourteen provides that no amendment proposed by the Legislature shall be adopted unless a majority of "voters" present and voting shall have ratified the same. The "voters," as used in the section last cited, means a "voter" as defined in the first section referred to. This bill proposes to test the question in a manner not within the constitution.

There is yet but little or no evidence or manifestation of any public sentiment among the people at large in this State in favor of the proposed change, and it is attempted by this act to force a question upon the people, and inaugurate a campaign upon an issue which they have not made, and in which they have manifested no interest.

The receipts into the Treasury for the fiscal year ending December 1, 1870, were \$782,069.01; the disbursements for the same period were \$595,905.01, and the balance in the Treasury at the end of the year, \$186,164. This balance, which is over forty-four thousand dollars greater than that of last year, is divided among the several funds.

At the commencement of the year there was in the Treasury, belonging to the sinking fund, the sum of \$2,224.68 in money, and \$27,281.25 in interest-bearing bonds; during the year there accumulated \$24,990.98, making a total of \$64,496.86. The State debt was reduced by this amount, and at the end of the year was \$285,508.14. Taxes were levied for the fiscal year, 1870, to the amount of \$391,214.11. From these levies and the delinquent taxes of former years, the sum of \$336,460.83 was realized, while delinquent taxes amounting to \$351,166.40 still remain due the State. The revenues for 1871 from assessed and delinquent taxes, and all other sources, including the balance in the Treasury, are estimated at \$487,687.76, while the estimated current expenses for the same period are \$399,676.48. The several public institutions of the State make demands upon the Legislature of 1871 for funds for building purposes. The total valuation of all taxable property in the State, as returned for the year, was \$85,406,377, an increase of \$7,163,461 over that of the previous year, and of \$9,611,459 over the last general valuation of 1868. No State in the Union has shown a more rapid progress in agricultural pursuits than Minnesota. In 1859 there were but 345,000 acres under cultivation, while in 1869 there were 1,612,000, showing an increase of 1,277,000 acres, or nearly 390 per cent. The number of improved farms in 1864 was 28,787, and in 1869, 45,740, an increase of 92 per cent. for the five years. In 1859 there were only 124,969 acres devoted to the culture of wheat, yielding 2,374,415 bushels, and occupying only 34 per cent. of the cultivated area of the State, while, in 1869, 858,816 acres were devoted to the same grain, constituting nearly 62 per cent. of the cultivated

surface, and producing 15,881,022 bushels. The average yield for the eleven years ending 1869 was 17 bushels per acre. The oat crop of 1869 averaged 43 bushels per acre for the whole State, and there are well-authenticated instances of averages reaching 60 to 75 bushels per acre. The corn crop of 1868 showed a total of 4,849,886 bushels, and an average of 37 bushels per acre. The average yield of barley for 1869 was 37 bushels per acre, and of potatoes 120. The total value of agricultural products for 1869 was \$2,800,000. The following table exhibits the items of production and acreage for the year:

Total tilled area	1,611,594
Wheat, acres cultivated	1,018,908
Wheat, bushels produced	17,271,968
Oats, acres cultivated	285,658
Oats, bushels produced	10,762,209
Corn, acres cultivated	148,773
Corn, bushels produced	4,286,892
Barley, acres cultivated	45,818
Barley, bushels produced	1,256,686
Buckwheat, acres cultivated	2,951
Buckwheat, bushels produced	51,684
Rye, acres cultivated	4,648
Rye, bushels produced	75,866
Potatoes, acres cultivated	21,399
Potatoes, bushels produced	1,683,483
Tons of hay (cultivated)	73,694
Tons of hay (wild)	543,758
Number of apple-trees in bearing	20,800
Bushels of apples produced	9,982
Pounds of butter	6,583,528
Pounds of wool	885,766

The statistics for 1870 had not been completed at the end of the year, but the following are the official estimates for the three principal crops:

Total tilled area	1,893,671
Area in wheat	1,008,597
Area in oats	356,408
Area in corn	204,129
Wheat, bushels	18,000,000
Oats, bushels	8,553,732
Corn, bushels	7,552,773

The subject of timber-planting has recently occupied considerable attention in the State. The Governor, in his annual message to the Legislature, in January, 1871, refers to this subject in the following terms:

At the suggestion of the State Horticultural Society, I would invite your attention to this matter. It is thought that, if we should not succeed in discovering coal within the limits of the State, our extensive prairies will never be thickly peopled, unless the cultivation of trees be made successful; and even with cheap fuel the demands for timber for other purposes, and remoteness from our native forests, would render the supply of the demand very expensive, to say nothing of other inconveniences, and want of attractiveness resulting from the absence of trees.

I apprehend that not only the cultivation of timber for general purposes, but the planting of trees along our open roads for both shelter and ornament, might be encouraged, and much done to make both successful, by a system of rewards or premiums, or, it may be, by an abatement of a fixed amount of the taxes assessed on property thus improved; and this with trifling expense to the State.

At the head-waters of the tributaries of the Mississippi and St. Croix Rivers are extensive pineries, where the cutting of logs and the manufacture of lumber form an important ele-

ment of the wealth of the State. In this region, during the year, the logs scaled amounted to 313,116,416 feet, being an increase of 7,969,482 feet over the business of 1869. The extensive water-power at St. Anthony, Falls of St. Croix, and other localities in the State, greater than the whole steam and hydraulic power employed in the textile manufactures of England, has been largely used for the manufacture, not only of lumber, but also of flour, whiskey, and leather. The number of establishments in these branches in 1869 was 1,650, and the value of their products was \$14,881,043. The minerals of Minnesota, located in the northeastern section of the State, are destined to be inferior only to agriculture as an element of wealth and prosperity. Copper abounds on the northern shore of Lake Superior, and large masses of the pure metal have been taken from that locality. Iron-ore, in considerable quantity, found near Lake Pepin, has been tested, which proved to be fully equal in tenacity and malleability to the best Swedish or Russian iron. Coal has recently been discovered in the vicinity of New Ulm. Other minerals are found in the State, such as salt, lime, and white sand for glass, but the development of mineral resources may be said to be meagre in the extreme.

Education is regarded as a matter of prime importance by the people of the State, and the schools are in a flourishing condition. The whole number of persons in the State between the ages of five and twenty-one on the 30th of September, 1869, was 144,414, and on the same date of 1870, 155,767, an increase of 12,022. The whole number of pupils attending the public schools during the year was 110,590, an increase of 11,895 over the attendance of 1868. Winter schools were taught in 1,955 of the 2,626 school districts of the State, the terms averaging in length 3.43 months. Summer schools were taught in 2,155 districts, the terms averaging 8.4 months. The whole number of teachers employed and in active service during the year was 4,111, 886 more than in 1869. The average wages paid male teachers was \$37.14 per month; female, \$23.86. The whole amount paid for teachers' wages during the year was \$432,443.02. The school-houses in the State are valued at \$1,582,507.81, the increase for the year being \$242,816.93. The whole amount expended during the year for school purposes was \$357,816.80. A land endowment of two sections in each township has been set apart by the General Government for the support of common schools. It is estimated that these lands will amount to 2,900,000 acres, the interest on the sales of which, together with the annual tax of two mills on the dollar, constitutes the present common-school fund of the State. The permanent school fund on the 30th of November, 1869, had reached the sum of \$2,476,222.19. The interest on this fund, which was distributed among the schools during the year, amounted

to \$176,806.85, an increase over the previous year of \$28,276.95.

The report of the condition and workings of the Normal Schools is brought down to December 1, 1870. The whole number of students in attendance at that date was 460, an increase of 87 over the attendance of the previous year. Of this number the Winona School has 216. Since the establishment of this school, 91 students have been graduated. The number of students enrolled during the year ending December 1st, in the State University, was 801. During the year, a new or modified plan of organization, drawn up by the president of the University, and indorsed by many eminent educators, was adopted. "It is claimed," says the Governor, "and I think with justice, for this new plan of university organization, that, while offering to the literary and professional classes the old classical education in its best and highest form, it looks also to the practical education of the artisan, the engineer, the manufacturer, the merchant, and the agriculturist. Intrusted, as the Board of Regents are, with the expenditure of the funds accumulating from the congressional land grant for the benefit of colleges of agriculture and the mechanic arts, they propose to themselves nothing else than a full and cheerful obedience to the law donating those lands, which declares the object of the grant to be the 'liberal and practical education of the industrial classes.'"

The University, including the Agricultural College, has a productive fund of \$116,357.74, produced by the conversion of the lands, granted by the General Government, into money or interest-bearing bonds. The current fund consists of the income of this permanent fund, and the proceeds of the timber sold on lands belonging to the institution. The receipts for the year, together with \$11,880.74 in the treasury at its commencement, amounted to \$23,875.61, and the current expenses were \$22,500. During the year there were sold 348,127 acres of the Agricultural College lands, realizing \$17,866.35 for the University.

The Institute for the Deaf and Dumb and the Blind is suffering from lack of room, the present building being overcrowded, but otherwise the institution is in a favorable condition. During the eight years that the school has been in operation not a death has occurred among the inmates, and epidemic diseases have been successfully warded off. The whole number instructed during the year was 85, of whom 67 remained at the end of the year. The total receipts for the year were \$18,181.49, and the expenditures \$17,549.02, leaving an unexpended balance of \$1,680.47. The Reform School is reported to be in a most flourishing condition. The number of inmates received during the year was 48; whole number in the institution at the end of the year, 82. The Legislature of 1870 appropriated \$7,000 for the purchase of additional grounds and buildings for the female department. The Board purchased thirty-three

acres lying immediately east of the original purchase by the State, with a substantial frame building thereon, at a cost of \$7,000. The house has been repaired and partly furnished, and was opened early in December. The Board of Managers and the superintendent have established what is known as the "family plan," by which the inmates are distributed into families of forty each, under the immediate care of a teacher. The institution has received from all sources during the year \$25,642.66, and during the same period the disbursements amounted to \$26,759.80. The State-prison is generally well conducted, but the Governor speaks of the contract system of labor in vogue there as injurious to the best interests of the State. Notwithstanding the inadequacy of the hospital accommodations, and that nearly four hundred cases of sickness were treated during the year, but one death occurred among the inmates.

The Hospital for the Insane has labored under financial embarrassments. Expenses were incurred during the year in preparing the culinary department of the new building and furnishing the hospital. The Legislature failed to make an appropriation to meet these expenses, amounting to \$26,169.30, and the Board of Trustees issued negotiable scrip bearing interest at the rate of 12 per cent. per annum; an appropriation is asked of the Legislature of 1871 sufficient to cancel these obligations, and to meet other necessary expenses. During the year 51 patients have been discharged recovered, and 21 improved.

The Legislature of 1870 passed an act creating a Board of Immigration, with an appropriation of \$10,000 for immigration purposes. The following is a summary of the action of the Board: "Fifty thousand copies of immigration pamphlets—half of them containing maps of the State—have been distributed, but only upon verbal or written application, to parties desiring information. Of these, thirty thousand were in the English, and the rest in the Scandinavian, German, and Welsh languages. Agents have been employed in Milwaukee, Chicago, and Quebec, to guide, counsel, and assist foreign immigrants to this State, who have faithfully performed their duties to the State and to the immigrants. An office has been opened and a commissioner of immigration appointed in New-York City. The agent in Germany has been retained. Immigrant-houses were provided during the season, which afforded temporary lodging for immigrants, at La Crosse, Red Wing, and Minneapolis." The number of foreign immigrants who passed through Milwaukee and Chicago alone, *en route* for Minnesota, during the year, as estimated by the agents, was nearly 20,000. The whole number (foreign and native) that reached the State during the year is probably 35,000.

From the report of the Adjutant-General, it appears that there were organized during the year eleven militia companies, ten of which

were assigned to the First Regiment Minnesota enrolled militia. The enrolment of the unorganized militia of the State shows a force of 56,538 men liable to perform military duty; 219 applications for soldiers' claims were made during the year, through the Adjutant-General's office, and \$15,884.01 in money collected. Nearly 400 claims were still pending at the close of the year, and new applications were constantly coming in.

During the year the railway systems of the State have been rapidly extended, and 829½ miles have been added to the amount in operation at the beginning of the year. The following table shows the different lines included in this aggregate, and the number of miles of each that has been built:

RAILROADS.	Constructed in 1870.	Length in completed miles.
	Miles.	Miles.
Lake Superior and Mississippi.....	80	155
Southern Minnesota.....	78	170
St. Paul and Sioux City.....	21½	121½
Winona and St. Peter.....	26	143
First Div. St. Paul and Pacific—Main line.....	24	135
First Div. St. Paul and Pacific—To S. Rapids.....	..	81
Milwaukee, St. Paul and Minneapolis.....	..	134
Minnesota Central—Austin to State line.....	..	13
Hastings and Dakota.....	..	30
St. Paul and Chicago.....	35	55
Northern Pacific.....	50	50
Stillwater and White Bear.....	10	10
Total.....	329½	1,096½

These companies, together with the Minnesota and Northwestern, propose to complete and operate 682 miles during the year 1871, in addition to the above extent. Much importance is attached to the Lake Superior and Mississippi Railway, as affording an outlet on the navigable waters of the great lakes at a distance of 155 miles from those of the Mississippi River, and as making a saving of 285 miles of land transit over the route *via* Chicago and Lake Michigan; and it is claimed by the friends of the road that there will be a saving in time of two or three days between Minnesota and the Atlantic seaboard, while the rates between Duluth and the East will be the same by this route as between Chicago and the East. This road was formally opened in August at Duluth; and the St. Paul and Sioux City Railroad was completed during the year. The St. Paul and Pacific road was sold to the Northern Pacific Railroad Company, which contemplates the immediate construction of the former to Breckinridge, and of the branch line *via* St. Cloud to Pembina; an airline road from St. Paul to Chicago has been projected, which will reduce the distance by rail between the two cities to 393 miles, and the time to ten hours.

The subject of freight and passenger traffic on railroads has been much discussed throughout the State. The sentiments of the people are fairly expressed by the following resolu-

tions passed at a meeting held at Owatonna on the 26th of November, to consider this matter:

Whereas, The railroads of this State having adopted rates of transportation of freight, and for passage, which are exorbitant and ruinous to the welfare of the State; and,

Whereas, They having made invidious distinctions against localities not provided with competing routes or lines of transportation, and by the consolidation of competing lines, and operating their roads in the interest of "wheat rings," and other monopolies, by granting them exclusive privileges, still further operated against the interests of the people, and defeated competition in the purchase and shipment of wheat: therefore

Resolved, That the welfare and prosperity of the people demand the immediate and active exercise by the Legislature of all the powers over the matter possessed by that body, and the enactment of such laws as will protect the interests of the producers against the extortions and combinations which are ruining, not only the farming interests, but sapping the foundation of our prosperity as a State; and

Resolved, further, That, should the powers of the Legislature be found inadequate to the protection of the people against these extortions, favoritism, and unjust charges of the railroad companies, then we call for the submission of an amendment to the constitution of the State, which shall meet the exigency.

In his message to the Legislature of 1871, the Governor recommends the passage by that body of a regulating act, and refutes the position of many, that competition is the only remedy needed, by showing that only a few points could enjoy this advantage, and that roads originally built as competing lines would soon consolidate and become identified in interest. He also refers to the evils produced by the frequency of elections in the State, and recommends that the election for State officers be held on the same year as that for Congressmen. He also refers to the increasing amount of county and municipal indebtedness, and the extraordinary amount of special legislation. He accordingly recommends the calling of a constitutional convention, and states the following as some of the purposes for which its action is required:

1. To forbid local or special legislation on many subjects, including the creation of corporations and the sale or mortgaging the real estate of minors.
2. To prevent the granting to any corporation, association, or person, any special or exclusive privilege, immunity, or franchise.
3. To limit local taxation.
4. To restrict municipal indebtedness.
5. To prohibit the incurring of municipal indebtedness in aid of any railroad or private corporation.
6. To place restrictions upon and regulate railways.
7. To abolish the grand-jury system.

The large amount of special legislation, which has exhausted the time of the Legislature at the expense of the State Treasury, is shown by the fact that the general laws passed at the session of 1868 occupy 182 pages, and the special, 457, exclusive of the index; general laws of 1869, 144 pages, special, 373; 1870, general 199, and special, 515 pages.

The following is the Federal census of Minnesota for 1860, and approximate for 1870:

MISSISSIPPI. Early in the present year the reconstruction of the State was completed, and the administration of affairs passed from the United States authorities into the hands of its own citizens. The bill admitting the State into the Union was passed by Congress on the 17th of February, and on the 8th of March following the Legislature assembled, and continued in session until the 20th of July. On the 10th of March J. L. Alcorn was inaugurated as Governor. In his inaugural address he says:

The Union has brought us back, pardoned children, into its bosom. It bids us go forward this day, to the reconstruction of a government on the ruins left by our own madness. Restored to our lost place in the sisterhood of States by the grace of the nation, that grace has brought us back an equal among sovereigns! Erect and free, Mississippi goes forward now to work out her destiny in a fellowship of States, the peer of the proudest! And, in approaching the duty made incumbent on us as representatives of a sovereign authority, our first work is to carry out in good faith the principles incorporated by the revolution just closed, in the letter and spirit of the Constitution.

The Northern Democracy have overthrown the Southern Oligarchy! This is the measure of the fact accomplished by the action of the United States. Entering on our duty in acceptance of that result, we must go forward to make the overthrow of the old system that had reigned among us a practical reality, by insuring all the blessings of free government for the masses of the people.

The action of the Legislature at this session was of a very important character. The reorganization of the courts and other departments of the State government devolved upon it as well as the reestablishment of civil rule for the first time since the war. The new constitution provides for a Supreme Court, to consist of three judges, appointed by the Governor. Messrs. Payton, Simrall, and Tarbell, were appointed by the Governor, and confirmed by the Senate. "An act in relation to the Supreme Court," passed at this session of the Legislature, divides the State into three

Supreme Court districts, provides for the appointment by the court of a clerk, to hold office four years, subject to removal by a majority of the judges; a reporter, to hold office for six years, subject to removal as in the case of the clerk; and requires the judges to elect one of their number as Chief Justice. The salary of each judge is fixed at \$4,500 per annum. The second section of the act prescribes the jurisdiction of the court as follows:

SECTION 2. *Be it further enacted*, That the Supreme Court shall have such jurisdiction as properly belongs to a Supreme Court, and shall hear and determine all manner of pleas, complaints, motions, causes, and controversies, civil and criminal, which may be brought before it, from any Circuit Court, Chancery Court, or other inferior tribunal, from which by law a cause may be removed, either by appeal or writ of error, or other legal means, and which shall be cognizable in said Supreme Court according to the constitution and laws of this State, and all laws in force in this State on the 30th of November, 1863, regulating the jurisdiction and practice in the High Court of Errors and Appeals, or otherwise appertaining thereto, so far as they may be applicable, shall continue in force and be applied to the Supreme Court, established by this act.

It is further enacted that all causes pending and undetermined in the High Court of Errors and Appeals shall be transferred to the Supreme Court, and that all books, documents, and property, belonging to the former shall be removed into the latter court for preservation. Circuit Courts are established with criminal jurisdiction and with jurisdiction in civil suits at common law. For the purposes of these courts the State is divided into fifteen districts, for each of which a judge is to be appointed, who has a salary of \$3,500 a year, and is prohibited during his continuance in office from practising law in the courts of any State or of the United States. A court to be styled "the Circuit Court of the County of —" is to be held in each county of the State three times a year. A District Attorney is to be elected by the qualified voters of each district for a

term of four years, with a salary of \$2,500 per annum. All marriage licenses are to be granted and issued by the clerks of the Circuit Courts of the several counties. Provision is made against the abuse of the judicial process, by the following section of the act:

SECTION 10. *Be it further enacted,* That no clerk of the Circuit Court or of the Chancery Court, and no justice of the peace, shall be compelled to issue any original process in any civil cause until the person proposing to institute such suit shall deposit with said clerks or justices of the peace a sum of money sufficient to cover the same: *Provided,* That the provisions of this section shall not apply to any person wishing to institute any suit who shall make and file an affidavit that he or she believes the cause of action on which the suit is founded is meritorious, and that he or she is unable to pay the costs, or give the security required by this section.

For the purposes of Chancery Courts the State is divided into twenty districts, for each of which a Chancellor is appointed by the Governor, subject to the confirmation or rejection of the Senate. A court to be styled the Chancery Court is to be held in each county of the State four times a year. The jurisdiction of these courts is defined in the following sections:

SECTION 8. *Be it further enacted,* That said Chancery Courts shall have full jurisdiction in all matters of equity, and of divorce and alimony, in all matters testamentary, and of administration, in minors' business, in allotment of dower, in cases of idiocy, lunacy, and of persons *non compos mentis*, and of all matters properly cognizable in a court of equity, and pertaining to matters properly cognizable in a court of probates.

SEC. 5. *Be it further enacted,* That the said Chancellors shall have power, in term time, or in vacation, to grant writs of injunction *ne exeat*, attachments, and all other remedial writs, returnable to said courts, and properly belonging to a court of chancery or court of probates, and they shall, or may, make orders for bail, and for the appointment of receivers, before or after answer filed. Such orders may also be made by any of the Circuit Judges of the State, or the Supreme Judges of the State.

Free schools are provided for by the constitution, and the subject early occupied the attention of the Legislature. By the school law which finally passed, a liberal system of education is provided.

Every county constitutes one school district, except that any incorporated city of more than 5,000 inhabitants shall constitute a separate district. A Board of Education and a State Superintendent of Education are provided for by the constitution. The act requires the Board of Education to choose a secretary of the Board, and biennially to nominate to the Senate for confirmation the candidates for the office of County Superintendent of Public Instruction, for which office the board are to prescribe a standard of literary or educational qualification, and they are to see that all candidates conform to this standard. The Board of County Supervisors and the city council of any city that constitutes a separate school district are empowered to appoint a Board of School Directors, consisting of six in each dis-

trict, whose term of office is three years. Of this board the County Superintendent is president, and the clerk of the Circuit Court the secretary.

The Board of Education have general supervision of all lands, money, or other personal property, granted or bequeathed to the State for educational purposes, and are authorized to sell any lands which have escheated to the State for want of heirs, or which have been forfeited for non-payment of taxes. The net proceeds of such sales are to be placed to the credit of the common-school fund, which is under the management of the board.

To the Boards of School Directors are delegated the more immediate management and supervision of the schools. They are also required to prescribe a uniform series of textbooks, to be used throughout their respective counties, and are authorized to make arrangements for furnishing the books to the various schools of their districts, at the actual cost price. It is made the duty of the Board of County Supervisors to levy a tax upon the taxable property of each district, of not more than ten mills on the dollar, for school-house purposes, and of not more than five mills on the dollar, for a teachers' fund.

To relieve the State from its financial embarrassments, an act of great importance, providing for the issue of certificates of indebtedness by the State, was passed. These certificates are to be of denominations not larger than five dollars, nor less than one, and are not to exceed in the aggregate \$500,000. They are to be received by tax-collectors and all other officers in payment of taxes and other dues to the State (except the special tax provided in the act), for the full sum expressed on their face, and in payment for any thing sold by the State. For the purpose of retiring these certificates of indebtedness, bonds are to be issued to the amount of \$500,000, for which the certificates are exchangeable at their par value; said bonds to be issued in five series of \$100,000 each, redeemable at the office of the Secretary of State, between the 1st of January, 1872, and the 1st of January, 1876. These series are to be issued in respective successive years, and all the bonds of one series are to be issued before any of the following series are taken up. These bonds are to be of denominations of not less than \$50, nor more than \$1,000, and are to bear interest at eight per cent. per annum, payable semi-annually, in current money of the United States. No bonds are to be issued except in exchange for the certificates of indebtedness authorized by this act. For the payment of the interest and principal, at maturity of these bonds, "a sufficient special tax, which shall be a percentage of the ordinary State tax, and shall be collected and paid into the Treasury in United States currency," is to be levied, the whole amount of which is to be reserved and set aside for the payment of the interest and principal of these

bonds, and to be used or appropriated for no other purpose whatever.

By an act organizing the militia of the State, passed at this session, all able-bodied male citizens of the State, between the ages of eighteen and forty-five years, not disfranchised by the laws of the United States, or of the State, are made liable to military duty. The militia are organized by companies, regiments, brigades, and divisions, and the usual officers are provided for. A division consists of the regiments of the counties forming a congressional district. Under the pressure of the poverty produced by the war, the Legislature of 1865 passed a very sweeping exemption law. The Governor submitted a special message to the Legislature at this session, recommending a repeal of this law, in which he says that of 5,000,000 acres of improved lands, according to the census of 1860, the number removed from the reach of the creditor by the act of 1865 is little less than 4,000,000, of an agricultural value of \$190,000,000; he estimates the amount exempted by that law at \$150,000,000, and that, out of 87,000 owners of agricultural property, the number, from whom even a single dollar could be collected at law, was reduced, by the exemptions of the act of 1865, to about 7,000. The exemptions of horses, hogs, cattle, and sheep, made by the act, represent 10 per cent. more cattle, 30 per cent. more hogs, and 120 per cent. more sheep, than were in the State. The Legislature, acting upon the recommendation in the message, repealed the act of 1865, thus reviving the law of 1857. In the repealing act, the exemption of real estate in the country was reduced from 160 acres, as it was in the law of 1857, to 80 acres; and it was provided that exempt real estate in cities, towns, and villages, should not exceed in value the sum of \$2,000.

The subject of the plea of insanity in cases of homicide engaged the attention of the Legislature, and an act was passed designed to prevent its abuse. The act provides:

SECTION 1. That in all cases where any prisoner shall be arrested and brought before any justice of the peace, or other judicial officer, charged with the crime of murder, manslaughter, or assault with intent to kill, and, in the course of the investigation, it shall be made to appear that such person was insane at the time the offence was committed, such justice of the peace or other judicial officer shall not, for that cause, discharge such person: *Provided*, it shall be proved by the testimony, to the satisfaction of the justice of the peace or other judicial officer, that such person is guilty of such offence, unless excused for want of sane mind.

Sec. 2. *Be it further enacted*, That such officer shall, in the circumstances provided for in the first section of this act, commit such person to the jail of the county, without bail, and shall return all the proceedings into the Circuit Court of the county, and thereupon the judge of said Circuit Court or chancellor of the district shall, on the suggestion of the district attorney, or the counsel of the accused, issue a writ of *habeas corpus* to bring before him the accused; and, if, on the hearing of such *habeas corpus*, the judge or chancellor should be of the opinion that the person so accused was insane at the time of commit-

ting the offence charged, he shall adjudge and order that such person shall be immediately carried by the sheriff to the State Lunatic Asylum, and there delivered to the superintendent, for confinement as hereinafter provided: *Provided, however*, the judge or chancellor shall be satisfied, on the hearing, that, if the offence charged had been committed by the accused in a sane mind, he would be guilty.

Where the accused is charged upon an indictment, if a reasonable doubt arises as to his sanity, the court must order a jury to be impanelled to inquire into the fact, and all other proceedings upon the trial of the indictment must be suspended until the question of insanity is determined by the verdict of the jury. If the jury find the accused insane, all proceedings upon the indictment must be suspended until he become sane, and the court must order him to be confined in the insane asylum of the State, for a term of not less than ten years, under the restrictions proper to dangerous persons. He shall not be discharged at the expiration of his term of commitment unless he shall have been sane without interruption for a period of twelve months preceding the discharge. It is also provided in the act that in all such cases as are herein provided for, where the jury shall find the plea of insanity not true, then the trial shall proceed on the plea of not guilty; and shall so proceed on the evidence bearing on that issue, to the total exclusion of all consideration of the plea of insanity.

Acts were passed to prevent and punish crimes committed by persons masked or disguised, and making it penal for persons to appear or travel in masks or disguises; to authorize the Executive to commute the death-penalty to imprisonment for life, or for a term of years, in proper cases; and for the incorporation of private companies of various kinds. The revenue bill passed at this session imposes a tax on all property, both real and personal, of one-half of one per cent. on the value thereof, and also provides for a tax on privileges, which varies from \$10 for a practising physician, lawyer, and the like, \$200 for a rectifier of vinous and spirituous liquors, \$500 for a distiller of grain, and \$1,000 on express and telegraph companies. A poll-tax of two dollars a head is levied on each male adult in the State, between the ages of twenty-one and fifty-five years, which, together with certain fines and penalties imposed by the bill, is to be expended for the support of common schools. All lands are bound, not only for the taxes thereon, but also for taxes due on personal property, and for the poll-tax due from the owners of such lands. The following property, and no other, is exempt from taxation: The wearing apparel of each and every person; all cemeteries used exclusively for burial purposes; property, real and personal, belonging to the United States or to this State, or to any county or incorporated city or town within the same, or to any religious society, and church property, or incorporated institution.

for the education of youth, used exclusively for the benefit of such society or institution, or held by the trustees of schools, and school lands for the use of any school; and all dogs; one gun kept for private use; poultry and household furniture, not to exceed three hundred dollars in value; and all property of agricultural and mechanical associations and fairs, where no dividends are declared; together with all property of benevolent and charitable institutions; and the libraries of all persons; and the tools of any mechanic, necessary for the carrying on of his trade or occupation.

The report of the Auditor of Public Accounts, submitted to the Legislature in March, shows the receipts into the Treasury from October 16, 1865, to March 1, 1870, to have been \$4,351,741.43, of which the sum of \$2,267,488.66 was in uncurrent funds; the disbursements by warrant for the same period amounted to \$2,319,532.80. The amount of warrants outstanding on the 1st of March, 1870, was \$287,993.95, of which the sum of \$47,281.83 was on account of the Constitutional Convention. For the fiscal year ending May 1, 1866, the receipts into the Treasury were \$2,079,319.72, and the disbursements by warrants for the same period, \$296,285.82; for the year ending May 1, 1867, the receipts were \$916,122.50, and the disbursements by warrants, \$555,627.83; for the year ending May 1, 1868, the receipts were \$429,551.19, and the disbursements by warrants, \$576,934.72; while the receipts for the year ending May 1, 1869, amounted to \$501,975.84. The attention of the Legislature was turned to the necessity of amending the laws on the subject of the lands held by the State for taxes. These lands now amount to over two million acres, a portion of which have been held by the State since 1848, and subject the State to an annual expense of not less than \$30,000. It is thought that by judicious legislation these lands could be made a source of great revenue, and furnish homes for thousands of her citizens. Hence it was recommended that the penalty, in the form of damages, where lands are delinquent for taxes, be increased at least 100 per cent, in the belief that fewer lands will thereby be suffered to become delinquent, and that more of said lands will be purchased by the citizens of the State. In making suggestions concerning the proper financial policy to be adopted, the Auditor says: "Our State, at this time, presents the anomalous condition of having no public debt, and yet her warrants are at heavy discount, there being no funds in the Treasury to pay them. This condition of affairs should not exist. The resources of the State are ample, and her citizens should not be subjected to loss on account of any depreciation of her paper. As to the remedy for this evil, there may be great diversity of opinion. After much thought and consideration, I have come to the conclusion that, under the

existing state of affairs, the best course to be pursued would be to fund all outstanding warrants, at a fair rate of interest, thus securing a loan from our own people; then require the taxes of the State to be paid in currency, and the tax-collectors to report to the Auditor, and pay into the Treasury, quarterly, all taxes collected by them."

The condition of the State prior to its reconstruction was not favorable to the successful operation of the various charitable institutions; but, early in the year, efforts were made by the proper authorities toward such a reorganization of these important institutions as will meet the wants of all those in the community needing their assistance. The last report of the Superintendent of the Blind Asylum shows that twenty-one pupils were maintained during the year 1869, at an average cost to the State of \$474.70 per year for each pupil; this average cost is regarded as exceedingly high, and arises from the omission in the system of all training in handicrafts. A remedy for this defect is urged both with a view of reducing the cost of supporting the blind, and of enabling them to support themselves after leaving the school. Another defect in the law is the provision limiting the privileges of the institution to the whites. The removal of this restriction has been recommended by the Governor, and "that the law in this case shall be altered so as to make it conform to the principle, that no law of Mississippi shall make distinctions on the ground *ipso facto* of color." Including the colored blind who need the benefits of this charity, the whole number of blind in the State, between the ages of ten and seventeen and a half years, to be provided for, is estimated at about sixty. "I recommend," says the Governor, "that I be authorized to make the question of educating the blind the subject of investigation by a commission, with a view to a report on the existing State establishment, the transfer of our blind scholars to the institute at Baton Rouge, or the establishment of the charity on a footing commensurate with the demands of the new order of things, under a system of careful economy, by the employment of the opportunity presented to us for that purpose in the present availability of certain public buildings at Natchez."

For several years past the deaf and dumb of the State have been provided for in the asylum at Baton Rouge, La. It is estimated that there are now nearly 200 of that class in the State, and that of this number there are about forty between the ages of ten and seventeen and a half, needing instruction. The attention of the Legislature has been called to the necessity of establishing a school for these deaf-mutes, and "so reorganizing it that when the pupils shall have arrived at the limit of their term, seventeen and a half years of age, they may be given to the world not only trained in elementary knowledge, but also skilled in useful trades." Until the completion of such an in-

stitution, it is recommended that a contract be made for the education of this class in the asylum at Baton Rouge, or that of some neighboring State, at a rate per annum not exceeding two hundred dollars per pupil. The accommodations for the insane of the State are entirely inadequate to meet the wants of that class. The number of insane cared for by the State was about 150; it is now estimated that the number receiving treatment does not fall short of 400. This large estimated increase is explained by the fact that the proportion of the insane held under private care has greatly diminished within the past few years, and by the belief that the freedom of the slaves will add to the number of the insane, for the reason that while statistics show 70 lunatics in each 100,000 of white population, and 71 in each 100,000 among the free colored, the proportion of insane among the slaves was only 10 for each 100,000. The Governor recommends the separation of the white and the black in the treatment of the insane. "If a mixture of races," he says, "be made the condition of participation in our public charities, no matter how you may regard the wisdom of the objection, that condition will act among the whites, to a very great extent, as a virtual exclusion. We must deal with this fact as we find it. While unwilling to recognize it to the extent of an absolute prohibition, in law, of a mixture of the two classes of pupils in the Institution for the Blind, or in the establishment for the Deaf and Dumb, I recommend, in consideration of the acute sensitiveness of those afflicted people, and on the general ground that an enforced violation of their opinions will but serve as a denial of their rights under the State charities, that the superintendents of those charities shall receive ample authority, in law, to exercise a wise discretion in the classification and keeping of the pupils of the two races."

The subject of railroad facilities occupied considerable attention among the people of the State, and also in the Legislature. Perhaps the most important railroad line proposed was one running north and south through the State, from the Gulf to the Tennessee line. A bill was early introduced into the Legislature to incorporate a company to build a road over this route under the name of the Ship Island, Kosciusko, and Tennessee Railroad Company. On the 2d of April, while this bill was under consideration, a meeting of the citizens of Leake County was held to discuss the matter. The following resolutions passed by this meeting may be taken as expressing the sentiments of the people along the proposed route upon the subject:

Resolved, 1. That said line of railroad meets our most hearty approbation.

2. It is for the best interests of the State of Mississippi that a great seaport city shall be built at Ship Island Harbor, and the commerce of the State be thus made independent of the cities of Mobile and New Orleans.

3. The line of the railroad from Ship Island Harbor

should traverse the centre of the State, and thus become a great public State railroad.

4. The termination of said railroad at Canton, or Brandon, or Jackson, would dwarf it down to a mere local road, and deprive it of the great public State character it should possess; and such termination should be deprecated by every public-spirited citizen of the State.

5. If the said bill is passed, we do hereby pledge Leake County in the sum of \$50,000 in aid of the building of said road.

The company was finally incorporated under the name of the Ship Island, Mississippi City, and Paducah Railroad Company.

A railroad is in process of construction, from Chattanooga, Tenn., to Meridian, in this State, under the name of the Alabama and Chattanooga Railroad. This road receives aid from the State of Alabama, but is built mainly by New-England capital. The Elyton and Aberdeen Railroad Company was chartered by the Legislature this year. The Vicksburg and Meridian Railroad Company were authorized "to locate, construct, and operate a branch road, or an extension of their railroad from some suitable point on the same to the bank of the Mississippi River." The terminus has been fixed at Vicksburg. The following railroad companies were also chartered: Natchez and Jackson; Canton and Vicksburg; Mobile and Northwestern; Greenville, Deer-creek, and Rolling Fork Railroad Companies. The subject of a road from Vicksburg to Grenada *via* Yazoo City was also much discussed, and citizens of Yazoo City subscribed \$65,000 toward the project, and were ready to vote \$100,000 more, while it was believed that the planters of Yazoo County would also contribute largely.

The subject of immigration has been prominent in the minds of the people. To secure immigrants to develop the resources of the State, and supply laborers to the planters, immigration societies have been organized in various counties, and also a "Central Immigration Society," holding monthly meetings at Jackson, the capital of the State. The following sections of the constitution of this society show its object and purposes:

SECTION 6. It shall be the duty of the corresponding secretaries to correspond with all persons who may wish for information regarding the plans and purposes of this society; and to reply to all inquiries touching the climate, soils, and productions of our country, and other advantages of our community; and, as they may deem proper, to reproduce the same through the press, and to further the objects of this society to the best of their ability.

Sec. 8. It shall be the duty of directory to inspect and report on all applications made to the society for laborers or tenants, and to guard scrupulously against all that come from unreliable applicants, and to look especially after the interests of the immigrants, and see that they are protected in their rights; to provide temporary lodging and refreshments for the immigrants on arrival; the expenses of the same to be refunded by the applicant procuring the services of the immigrant, and to adopt such a form of application as to bind the applicant for all expenses caused by his failure to promptly comply with his contract.

The following is the Federal census of Mississippi, taken in 1860, and approximate for 1870:

COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.

MISSOURI. The political history of the State of Missouri, during the year 1870, is one of unusual interest. The convention which framed the present constitution was called in 1864, when the feelings engendered by civil strife were at their height, and far more intense in a border State which was the scene of outrage and devastation, and all the wrongs and horrors of such a warfare, than in any other part of the country. The Union sentiment was predominant in Missouri at that time, and those who did not sympathize with it were, for the

time being, in open hostility with the established authorities, and proscribed from all political action. As a consequence, the Constitutional Convention which did its work in the early part of 1865, just before the final surrender of the Confederate army, was animated with a feeling of bitterness against those who had in any measure contributed to the losses and suffering of which Missouri had a double portion to bear. The active supporters of the Southern cause were deprived of the elective franchise and the privilege of holding office, and searching test-oaths were prescribed for all who should lay claim to what had formerly been re-

* Lee from Itawamba and Pontotoc.

garded as the birthright of all citizens. No sooner had the conflict ended, and the bitter feeling which it had produced begun to subside, than a reaction commenced. It was felt by many that the proscriptive features of this new constitution were not in harmony with the genius of American institutions; and, so soon as the people whose sympathies and services had been given to the movement for Southern independence showed a disposition to return to their allegiance, and act the part of upright and faithful citizens, it was thought a new policy looking to a removal of political disabilities should be inaugurated. The question of doing away with the test-oaths, and to a greater or less extent revising the constitution, has been the prominent topic in all public discussions for the last four years. In the year 1867 several suits were instituted for the purpose of having the test-oaths declared unconstitutional, and the cases were steadily carried to the highest tribunal in the country. Finally, on the 2d of February last, the Supreme Court of the United States declared in favor of the validity of the provisions requiring these oaths. Meanwhile the party of proscription remained in power, and in 1868 had framed a registration law which was intended to serve the purpose of carrying out, with the utmost rigor, the disenfranchising clauses of the constitution. The energetic enforcement of this kept alive animosities which should have been allowed to pass away, and made every political campaign little less than a civil war in itself. A more liberal spirit was, however, growing up in the ranks of the Republican party, and was destined sooner or later to redeem the State.

As early as December, 1866, a movement was set on foot, of which Colonel B. Gratz Brown, a prominent Republican, and formerly a Senator in Congress, was the leader, which had for its ultimate objects universal amnesty and universal enfranchisement, together with important reforms in the revenue system and civil service of the country. The movement, which was begun at a private meeting at St. Louis, was soon felt throughout the State, and Colonel Brown was looked upon as the champion of the disenfranchised class in their endeavor to regain the rights of citizenship for the purpose of taking an honorable and patriotic part in the direction of the public affairs of their own State. He found a powerful ally in Carl Schurz, a prominent German statesman of the West, who came from Wisconsin in 1867, and, as the editor of an influential German newspaper, and a popular speaker among his countrymen, rendered efficient aid to the liberal movement.

The influence of this movement was felt in the Legislature of 1870, and an attempt was made to carry through a new registration law, to take the place of the harsh regulations instituted two years before. A joint committee of the two Houses was appointed for this pur-

pose, and a liberal bill was drafted and discussed at some length. This required that no person should be excluded from registration, unless testimony was produced against him, and registrars were prevented from excluding voters on their own knowledge or belief. The bill, after having its most important provisions trimmed out by amendments, was passed by the Lower House, but never became a law. It was felt, however, that something must be done, or the demands even of that portion of the people who still exercised the right of voting would not be satisfied. Accordingly, a committee on constitutional amendments was appointed, and in the course of the session several important changes in the organic law of the State were proposed and debated. It was finally determined to submit to a vote of the people, at the next election, six separate amendments to the constitution, three of which related to the exercise of the right of voting and holding office, and were in the following words:

CONCERNING THE RIGHT OF SUFFRAGE.

SECTION 1. Every male citizen of the United States, and every person of foreign birth who may have declared his intention to become a citizen of the United States according to law, not less than one year nor more than five years before he offers to vote, who is over the age of twenty-one years next preceding his registration as a voter, and who during the last sixty days of that period shall have resided in the county, city, or town where he seeks registration as a voter; who is not convicted of bribery, perjury, or other infamous crimes, nor directly or indirectly interested in any bet or wager, depending upon the result of the election for which said registration is made, nor serving at the time of such registration in the regular army or navy of the United States, shall be entitled to vote at such election for all officers, State, county, or municipal, made elective by the people, or any other election held in pursuance of the laws of the State; but he shall not vote elsewhere than in the election district where his name is registered, except as provided in the twenty-first section of the second article of the constitution. Any person, who shall, after the adoption of this amendment, engage in any rebellion against this State or the United States, shall forever be disqualified from voting at any election.

SEC. 2. Hereafter it shall not be required of any person, before he is registered as a voter, or offers to vote, to take the oath of loyalty prescribed in the sixth section of the second article of the constitution, but every person before he is registered as a qualified voter, shall take an oath to support the Constitution of the United States and of the State of Missouri.

SEC. 3. Sections 5, 15, 16, 17, 18, of the second article of the constitution and all provisions thereof, and all laws of the State not consistent with this amendment, shall upon its adoption be forever rescinded and of no effect.

QUALIFICATION TO HOLD OFFICE.

No person shall hereafter be disqualified from holding in this State any office of honor, trust, or profit under its authority, or of being an officer, councilman, director, trustee, or other manager of any corporation, public or private, now existing or hereafter established by its authority, or of acting as a professor or teacher in any educational institution, or in any common or other school, or of holding any real estate or other property in trust for the use of any church, religious society or congregation, on account of race or color or previous condition of servitude, nor on account of any of the provisions of the third

section of the second article of the constitution; nor shall, hereafter, any such person, before he enters upon the discharge of his said duties, be required to take the oath of loyalty prescribed in the sixth section of said article; but every person, who may be elected or appointed to any office, shall, before entering upon its duties, take and subscribe an oath or affirmation that he will support the Constitution of the United States and of the State of Missouri, and to the best of his skill and ability diligently and faithfully, without partiality or prejudice, discharge the duties of such office according to the constitution and laws of this State.

Sec. 2. Sections 7, 8, 9, 10, 13, and 14, of the second article of the constitution, and all provisions thereof, and all laws of this State not consistent with this amendment, shall, upon its adoption, be forever rescinded and of no effect.

ABOLISHING OATH OF LOYALTY FOR JURORS.

SECTION 1. The eleventh section of the second article of the constitution of this State, requiring persons to take the oath of loyalty prescribed in the sixth section, is hereby stricken out and forever rescinded.

One of the other amendments abolishes the district courts and vests all judicial power in the Supreme and Circuit Courts and such other tribunals as may be established by law. The sixth section of the eighth article is amended so as to read: "Dues from private corporations shall be secured by such means as may be prescribed by law, but in no case shall any stockholder be individually liable in any amount over or above the amount of the stock owned by him or her." The following was proposed as a new section to article nine:

SECTION 10. Neither the General Assembly, nor any county, city, town, township, school district, or other municipal corporation, shall ever make any appropriation or pay from any public fund whatever any thing in aid of any creed, church, or sectarian purpose, or to help support or sustain any school, academy, seminary, college, university, or other institution of learning, controlled by any creed, church, or sectarian denomination whatever, nor shall any grant or donation of personal property or real estate ever be made by State, county, city, town, or such public corporation, for any creed, church, or sectarian purpose whatever.

Notwithstanding these concessions, the organizers of the liberal movement did not abandon their plans, and the Republican party of the State was rapidly becoming divided into two widely-separated wings, known as the liberal and the radical. The Democrats had little or no voice in any of the public proceedings of the State, and the few members of the Legislature who represented that party had met in caucus on the 18th of March, and adopted a resolution that it was "inexpedient to call a Democratic State Convention or to nominate candidates for State offices for the ensuing November election." The Democratic State Central Committee adopted the suggestion contained in this resolution, and on the 18th day of August issued an address, setting forth their reasons for pursuing the course recommended. This address speaks of the party in the canvass of 1868 as "united, zealous, and hopeful," but declares that its efforts were futile "in the presence of the proscriptive, par-

tisan spirit and tyrannous party machinery" of its opponents. The result of the election of that year, it declares, "was produced by wholesale disfranchisements, thousands of which, in addition to violating the principles of republican liberty, violated the spirit of the Missouri constitution itself, illiberal as that instrument is in respect to suffrage * * * It was seen that the radical party had obstructed the suffrage franchise expressly to repel citizens from the polls. It had, so far as it could, made the freeman a culprit, casting upon him the suspicion of being the worst of criminals, and forcing him to prove by others his innocence of crime, where his own conscience only could be his witness. Instead of viewing the people as honest and patriotic, it had assumed them to be traitors and perjurers. It had placed in the hands of a few, and those the most unscrupulous and irresponsible of partisans, the solemn right of citizens to equal freedom. It had refused to abide by its own measures, made and manipulated by its own instruments. It had, in many instances, ruthlessly and insultingly thrown aside those whom the manacled voters had chosen for their representatives in office, and had placed in power over them those whom they, in spite of the attempt to defeat their will by an atrocious registration, had ignominiously spurned." Still the party did not despond until the Supreme Court had pronounced the test-oath valid, and the Legislature refused to amend the registration act. This "destroyed the last hope of any fair election." Hence the course which the committee had determined to follow, of calling no convention. They recommend, however, that in any localities where fair registering officers are appointed, active exertions should be made for the election of candidates upholding the principles of the Democratic party. "They would further suggest," they say, "that in no case should a Democratic vote be cast for a member of the Legislature without the previous public pledge of the candidate to vote for the immediate abolition of the test-oath and the thorough reconstruction of the registration act. However individual opinions may differ with regard to the proposed suffrage amendments or to the prospects of their adoption or rejection, the eyes of the people in the coming election will be turned most hopefully to the next General Assembly for the removal of the present suffrage restrictions. Where, owing to the causes we have recounted, the Democracy shall not have distinctive party candidates of their own, the few who may be permitted to vote will be wise and prudent if they watch the opportunity to give the weight of their influence, however slight, in behalf of a liberal policy."

The close of the address is in these words:

We are free to confess that the retirement of the Democracy from a political campaign so important and critical as that of the present year is not without its sad and even humiliating aspects. Great exertions

are demanded to rescue the country from the hands of a faction whose rule is marked by incapacity, profligacy, corruption, and a brood of kindred evils. In Missouri we see the dominant party struggling in factions, coteries, and cliques, in competition for the spoils of office, and with no better motive than the retention of power and place. Confronting them is the Democracy, strong in honest purpose, and perfect in discipline. Whatever befalls, its organization will remain intact and unbroken. But while we do not underrate the importance of action, and know how supineness may be misconstrued, there yet, on the other hand, remains the paralyzing fact that any contest under present circumstances can be no other than a mockery. The result would be wholly in the hands of our opponents, and we know how this advantage would be used. We cannot advise the Democracy to go into a single-sided trial of this character. Participation in a mere form like this can only mean acquiescence in fraud and wrong, giving to a sham election the moral character and external appearance of a real one. At the most it would be a useless protest by means of ballots against a tyranny which will not allow itself to be put down by such means until there shall be a revolution in the party that now maintains it.

Meantime the evidence of disunion in the Republican ranks grew more and more palpable every day. In several of the senatorial districts, separate conventions were held, and rival candidates put in the field. The general State Convention which met at Jefferson City, on the last day of August, was composed of delegates representing all sections of the party, but there was little hope of consolidating their forces. It was the third day of the convention before the committee on resolutions was prepared to report. General Carl Schurz was the chairman of that committee, and on the 2d of September a report signed by him and four other members was submitted, as follows:

Resolved, 1. That we congratulate the country on the great blessings developed under the auspices of the Republican party, the general prosperity, peace, and good order prevailing throughout this State, the rapid disappearance of the ravages of the civil war, the security of the rights and property of the people, and the rapid diminution of the national and State debts, under economical administration, and the extension of civil and political rights to those who but yesterday lived among us as slaves.

2. That we are strongly opposed to all schemes to repudiate any part of our State and national debt, and firmly pledge the good faith of the Republican party to a conscientious discharge of our public obligations.

3. That the Republican party stands pledged to remove all disqualifications and restrictions imposed upon the late rebels in the same measure as the spirit of disloyalty may die out, and as may be consistent with the safety of the loyal people; that we consider the time to have come, and we cordially indorse the action of the Legislature of Missouri in submitting to the qualified voters of the State the amendments removing all disqualifications from the disfranchised people of Missouri, and conferring equal political rights and privileges on all classes; and we earnestly recommend them to the people for their approval and adoption.

4. That we are opposed to the alienation of our public domain to private corporations, to the exclusion of actual settlers; and that the public lands should be held in trust for the landless and laboring-men of the country.

5. That we are in favor of as rapid a reduction of taxation as will be consistent with the conscientious

discharge of our public obligations, and such a reform in revenue service as will simplify the mode of collecting taxes and reduce the number of officials employed for that purpose; and that we are opposed to any system of taxation which will tend to the creation of monopolies, and benefit one industry or interest at the expense of another.

6. That while as Americans we feel in duty bound to preserve a just and equitable neutrality in the contest now raging in Europe, yet we cannot forget that in our late war the sympathies and material aid of the German states were freely given us, and we do not hesitate to declare our unqualified sympathy with the earnest efforts of the Germans to maintain and defend their national unity; and we condemn the course which the Democratic press of the country has been and is now pursuing in support of a despotic and imperial dynasty and a causeless war against a people desiring peace and aspiring to perfect liberty.

7. That we cordially recommend to the people of the State the adoption of the constitutional amendment providing against the diversion of the public school fund for sectarian purposes.

The following minority report, signed by three members of the committee, was then presented:

We, the undersigned, members of the committee on resolutions, concur in the majority report of said committee, except as to the third resolution therein embraced, and recommend the following as a substitute for said resolution:

Resolved, That we are in favor of reënfranchising those justly disfranchised for participation in the late rebellion as soon as it can be done with safety to the State, and that we concur in the propriety of the Legislature having submitted to the whole people of the State the question whether such time has now arrived; upon which question we recognize the right of any member of the party to vote his honest convictions.

One member of the committee offered, as a further minority report, the following addition to the third resolution presented by the majority:

And be it further resolved, That, relying upon the patriotic wisdom and enlightened judgment of the Republican voters of the State to decide upon the important questions of State policy for the best interest of the whole people and for the future peace and prosperity of the State, and respecting honest, conscientious differences of opinion among our people, we do not hold support or opposition to these amendments a test of party fealty.

On the proposition to adopt this as an amendment, a discussion arose, which was participated in with the utmost warmth by General Schurz and other prominent members of the convention, and finally resulted in the adoption of the minority report by a vote of 439 to 342.

On the announcement of this vote the utmost excitement and confusion prevailed. When comparative order was restored, General McNeill mounted a chair and gave notice "to the friends of the majority report, as reported by the committee of liberal Republicans, and to the friends of the enfranchisement of the white man, that they will withdraw from this convention to the Senate Chamber," whereupon nearly 250 delegates left the convention, headed by Carl Schurz. An attempt was afterward made in the regular con-

vention to have a committee of conference appointed, but it proved a failure. The following additional resolutions were adopted by the radicals:

Resolved, That the radicals of Missouri heartily approve and indorse the Administration of General U. S. Grant as President of the United States, the successful soldier, the devoted patriot, the faithful friend, and the incorruptible man. His statesmanship is advancing his name already as the greatest name of history, and we announce him as our candidate for the next President.

Resolved, That, while we are in favor of a revenue for the support of the General Government by duties upon imports, sound policy requires such adjustment of these imposts as to encourage the development of the industrial interests of the whole country, and we commend that policy of national exchanges which secures to the working-man liberal wages, to agriculture remunerative prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise, and the nation's commercial prosperity and independence.

The ticket nominated by this convention was as follows: for Governor, Joseph W. McClurg; Lieutenant-Governor, A. J. Harlan; Secretary of State, John H. Stover; Treasurer, Chauncey I. Filley; Auditor, G. A. Moser; Attorney-General, Horace B. Johnson; Registrar of Lands, Joseph H. McGee; Superintendent of Public Instruction, George P. Beard; Judge of Supreme Court, David Wagner.

The "bolters," or "Brownites," immediately organized a new convention, with General Schurz for its presiding officer, and proceeded to business. The following platform was prepared and unanimously adopted:

Resolved, 1. That these are vital principles of the Republican party: That no citizen shall be deprived of his just share in the government which he helps to support for the benefit of others, and that no man shall be deprived of the earnings of his labor or any part thereof for the benefit of any other man.

2. That it is a violation of vital republican principles to deprive any man, be he white or black, of a share in the government which he helps to support, unless a clear public necessity demands his exclusion; and, as the Republican party advocated negro suffrage in 1868, so it now advocates the adoption of constitutional amendments conferring upon colored men equal political privileges with other citizens and which at the same time remove all political disabilities from white men.

3. That the Republican party, as it fought against slavery, which deprived a man of the whole of his earnings for the benefit of another, so it now opposes every form of taxation which deprives a man of any share of his earnings for the benefit of others; and it is therefore unequivocally hostile to any tariff which fosters one industry or interest at the expense of another.

4. That the time has come when the requirements of public safety, upon which alone the disfranchisement of a large number of citizens could be justified, have clearly ceased to exist, and this convention therefore, true to the solemn pledges recorded in our national and State platforms, declares itself unequivocally in favor of the adoption of the constitutional amendments commonly called the suffrage and office-holding amendments, believing that under existing circumstances the removal of political disabilities, as well as the extension of equal political rights and privileges to all classes of citizens without distinction, is demanded by every consideration of good faith, patriotism, and sound policy, and essential to

the integrity of republican institutions, to the prosperity of the State, and to the honor and preservation of the Republican party.

5. That we are in favor of as rapid a reduction of taxation as will be consistent with a conscientious discharge of our public obligations, and such a reform of the revenue service as will simplify the mode of collecting taxes by the officers employed for that purpose.

6. That the safety of Republican institutions demands a thorough reform of the civil service of the Government, by which ability and moral worth shall be established as the essential qualifications for office, and the corruption and demoralizing influence of what is euphoniously called government patronage be removed from our political life.

7. That we cordially recommend to the people of this State the adoption of the constitutional amendment providing against any diversion of the public school fund for sectarian business.

8. That we are utterly opposed to all schemes to repudiate any part of our State or national debt, and firmly pledge the good faith of the Republican party to the conscientious discharge of our public obligations.

9. We are opposed to all the alienation of our public domain to private corporations, to the exclusion of actual settlers, and that the public lands should be held in trust for the landless and laboring-men of the country.

The ticket of nominations was as follows: for Governor, B. Gratz Brown; Lieutenant-Governor, J. J. Gravelly; Secretary of State, E. F. Weigel; Treasurer, Samuel F. Hayes; Auditor, Daniel M. Draper; Attorney-General, A. T. Baker; Registrar of Lands, Frederick Solomon; Superintendent of Public Instruction, Ira Divoll; Judge of Supreme Court, David Wagner.

As soon as these two platforms, and the candidates who represented them, were placed before the public, probably one of the most vigorous State campaigns ever known in this country was inaugurated. Colonel B. Gratz Brown and General Carl Schurz addressed public meetings in all parts of the State in support of the liberal movement; the *Missouri Republican*, one of the ablest Democratic journals in the West, came out in their support, carrying with it a powerful influence among the Democrats; while General Schurz's paper, the *Westliche Post*, did important service among the German voters. Arrayed on the other side was the administration of the State, with Governor McClurg at its head, and in some measure the national Administration at Washington, for President Grant wrote in September to the revenue collector at St. Louis in the following terms:

I regard the movement headed by Carl Schurz, Brown, etc., as similar to the Tennessee and Virginia movements, intended to carry a portion of the Republican party over to the Democracy, and thus give them control. * * * I hope you will all see your way clear to give the regular ticket your support.

Thereafter the known wishes of the President, and whatever influence was connected with him, were recognized as forming one of the elements in the struggle. While the canvass was going forward, it was claimed by the radicals that they too were in favor of a liberal

policy for restoring the rights of citizenship to the disfranchised men of the State. At a county convention in the latter part of September the following resolutions were adopted:

Resolved, That we are in favor of the enfranchisement of all persons who are now disfranchised on account of participation in the late rebellion; that we regard the Hon. J. W. McClurg as one of the earliest and most consistent advocates of such enfranchisement, and fully indorse the sentiments expressed by him upon this subject in his last annual message to the General Assembly of this State.

Resolved, That as soon as such enfranchisement is effected, and in view of the fact that our State constitution was framed at a time when the flames of a civil discord were raging in the land, and adopted at a time when stern necessity rendered it inexpedient for the whole people to participate in its ratification, we are in favor of the Legislature calling a constitutional convention to frame a constitution, upon the adoption of which all the people can vote.

Governor McClurg, too, wrote the following in reply to a question which is recited in the letter itself:

STATE OF MISSOURI, EXECUTIVE DEPARTMENT, }
CITY OF JEFFERSON, October 27, 1870.

DEAR FRIEND: I thank you very much for your kind and considerate letter, and expression of personal regard. You say: "I would like to know if you are in favor of removing the test-oaths and all the disabilities of what are called the rebels and rebel sympathizers?"

I have ever been in favor of their removal when "public safety" would justify. In my last message I expressed myself on the subject. I will send you a copy of that message. I then, January, 1870, was in favor of their removal by the mode already then provided in the constitution; that is, through the Legislature. It will be seen that I then made no objection to the removal of disabilities, but preferred a certain mode. To that extent I was opposed to the present amendments prior to the meeting of our State Convention to nominate a State ticket. It was reasonable for me to presume the delegates to that convention would express the prevailing feeling of the people. That convention approved the action of the Legislature in submitting the amendments, and left all voters free to vote their sentiments. I could no longer contend that my way was better than the one provided by the Legislature, and I have made no opposition, either publicly or privately, to the amendments, feeling that, if a majority of the voters favor their adoption, the time of "safety to the State" has arrived. I therefore authorized Senator Drake, Colonel Stover, and General Johnson, and others, to say for me that I was and am making no opposition.

Very truly and respectfully,

Your obedient servant,

J. W. MCCLURG.

In spite of all the opposition that could be rallied against them, and the advantages which the radicals may have derived from having the administration of the State on their side, with the execution of the registration law in their hands, the Liberal (Brown) party was triumphant at the election which occurred on the 8th of November. The official returns furnish the following figures: Total vote for Governor, 166,625; for Brown, 104,771; for McClurg, 62,854; Brown's majority, 41,917. The other candidates of the same party were chosen by large majorities.

The Congressmen chosen at the same election were as follows: First district, Erastus Wells, Democrat; second district, G. A. Finkelnburg, Liberal Republican; third district, J. R. McCormick, Democrat; fourth district, C. E. Havens, Radical; fifth district, S. A. Burdett, Radical; sixth district, Abram Comingo, Democrat; seventh district, I. C. Parker, Radical; eighth district, James G. Blair, Liberal Republican; ninth district, Andrew King, Democrat—four Democrats, two Liberal Republicans, and three Radicals.

The election effected a complete change in the composition of the State Legislature, which is now controlled by the Liberal Republicans, or "bolters." This is regarded as insuring an entire revision of the State constitution. The amendments proposed by the last Legislature were adopted by large majorities. The whole vote on the suffrage amendment was 138,984, of which 117,518, or a majority of 101,052, were in favor of its ratification; 129,522 were cast on the amendment relating to qualification for office, of which 112,795 were for its adoption, and 16,727 against it, or a majority of 106,068 in its favor.

In a speech made at St. Louis after the election, in response to a serenade, Colonel Brown acknowledges that his success was due in a great measure to the support given him by the Democrats. The following are his words:

Now, I have to say to you without any hesitation that I have to thank the Democratic party of the State of Missouri for the cordial support that they have given me in that position, and I say furthermore that no party has ever shown more perfect command of self, more perfect disregard of past traditions, more perfect devotion to the patriotic welfare of the common country than has the Democratic party in the last election in this State of Missouri. I can say to you frankly, my fellow-citizens, that I am the last man in this nation to disregard the obligations under which I stand, and that in this election I recognize that my obligations are in the largest measure due to the Democratic party of the State of Missouri. Now, my friends, let me tell you another thing. I recognize the fact that the Democratic party of the State of Missouri has done this thing—it has elevated itself upon a higher platform than it ever occupied before; it has gone for the rights of all men, and, in so doing, it has made an initiative of the future that will go through all the States of this Union. It has cut itself loose from the formulas and the obstructions of the past, and it has made a platform upon which the young men of this nation can stand, a platform where they can stand disembarrassed of all the antecedents that have gone before them—disembarrassed of all that retinue of party machinery that has kept them down heretofore, and where they can move forward in the spirit and in the light of a pure Democracy, advancing to the conquest of the future. Fellow-citizens, so far as this question concerns our own State, I desire to say to you that I recognize this as the triumph of new ideas; that I recognize this as the initiation of a reconstruction of our State from its bottom upward; that I recognize it as the initiative of a new convention to reorganize our fundamental law. And, accepting it in that light, I wish you all good cheer in the future, hoping and trusting only, in addition to that, that the lesson which has been taught by this election to the nation at large will be received and accepted, and that the national Representatives who have been sent from

the Western country, when they understand the force and significance of all your votes, will understand that it is proper for them to coalesce, and combine, and consort with anybody and everybody that will reduce to the nearer approximation of justice and truth that immense tax which is now levied upon us under the false and fraudulent guise of a revenue tariff.

Aside from this memorable political campaign, there was little in the public affairs of Missouri during the year worthy of especial notice. The Legislature which met on the last Monday of December, 1869, continued its sessions until near the end of March, and in that time passed 227 acts and adopted 18 joint resolutions.

A large share of attention was given to educational matters. A long debate occurred on the question of disposing of the lands donated by Congress for the establishment of an Agricultural College, and of locating that institution. Several members were in favor of diverting the funds, if the permission of Congress could be obtained, to the benefit of the common schools. Another question which

was warmly debated was that of excluding colored persons from the college. The subject was finally disposed of by authorizing the appointment of commissioners to select the lands and locate the institution, and the proposed discrimination against colored persons was rejected. Subsequently the work of the commission was accomplished in part, and the institution located at Columbia, in Boone County. Two Normal Schools were also established, one at Kirksville, in Adair County, and the other at Sedalia, in Pettis County, and a school of mines and metallurgy was founded at Rolla, in Phelps County. An act was also passed amending the general school law, and another authorizing cities, towns, and counties, to organize schools.

The Federal census shows that Missouri has advanced from the eighth to the fourth position among the States of the Union since 1860. The population is now 1,714,000, an increase of 582,000 in ten years. The following table gives the details by counties for the years 1860 and 1870:

St. Louis has risen to the rank of the fourth city in the country in point of population. It now numbers 812,968 inhabitants, an increase of 100,545 since 1860. The other important cities are: Kansas City, 32,862 inhabitants; St. Joseph, 14,957; and Springfield, 5,568. The assessed value of taxable property in the State is \$557,685,387. The taxable property of the city of St. Louis is: real estate, \$217,855,611; personal estate, \$57,777,720; total, \$275 133,331. The extent of the commerce of

that city may be inferred from the following arrivals of vessels of 500 tons each and upward:

From Upper Mississippi River.....	907
" Lower " "	794
" Illinois "	367
" Missouri "	272
" Ohio "	187
" Tennessee "	20
" Arkansas "	20
" Red "	94
" Osage "	1
" Cumberland "	1
" All others.....	7
Total.....	1,712

The receipts of lumber for the year were 240,760,000 feet, being an increase of 64,677,474 feet over the previous year. The receipts of cattle were 201,248 head, against 124,885 for the previous year, an increase of 56,863 head. The receipts of grain were 23,908,910 bushels, an increase of 4,704,875 bushels over 1869. The receipts of flour were 2,922,630 barrels, against 2,430,885 for 1869, an increase of 591,795 barrels; there were at the same time manufactured 1,851,783 barrels of flour, against 1,068,592 barrels in 1869, an increase of 783,141 barrels. Of lead there were received 234,903 pigs, against 223,286 pigs in 1869, an increase of 11,617 pigs. Of iron-ore there were obtained at the mines and deposits tributary to St. Louis, 316,000 tons, against 195,000 tons in 1869, an increase of 121,000 tons. The total product of pig-iron was 72,508 tons; and the total amount of coal received in the city 28,981,475 tons.

The growth of manufactures in the city is shown by the following figures:

	1864.	1870.
Capital invested.....	\$12,738,948	\$41,761,688
Hands employed.....	11,737	33,551
Wages paid.....	\$4,377,087	\$15,906,181
Material used.....	\$16,313,690	\$60,541,013
Value of products.....	\$37,610,070	\$131,193,670

The mining interests of Missouri are important and undergoing rapid development. A Bureau of Mining was established by the last Legislature, and a geological survey authorized.

Mr. Albert D. Hager was appointed State Geologist, and made considerable progress in his work during the year. The coal-measures cover about 26,000 square miles in the north-western part of the State, but have not yet been very extensively worked. The most important mineral product is iron, which is already mined to considerable extent. There are 15 blast-furnaces, producing about 138,000 tons of pig-iron annually. The lead-deposits are also valuable, and 12,000,000 pounds were smelted during the first ten months of the year. There are also rich mines of zinc, and some copper, nickel, and cobalt.

The railroad system of Missouri is undergoing rapid development. There are now 2,055 miles of complete railway, with more than 1,000 miles more in course of construction. The Missouri-Valley Railroad has been completed to the Iowa line, and consolidated with the St. Joseph and Council Bluffs road, under the name of the Kansas City, St. Joseph, and Council Bluffs Railroad. The Missouri, Kansas, and Texas road has been built during the year, from Sedalia to Fort Scott, 105 miles; 181 miles of the South Pacific were built, completing that line to near the western boundary of the State.

The finances of the State are in a sound condition. The public debt at the end of the year was \$17,866,000, showing a reduction of \$728,000 in one year. The following is a detailed statement of the bonds:

SERIES.	Outstanding Jan. 1, '70.	Retired in 1869.	Retired in 1870.	Outstanding Dec. 31, '70.
Pacific Railroad.....	\$5,570,000	\$3,000	\$148,000	\$5,419,000
St. Louis and I. M. & N. R.	2,478,000	3,000	98,000	2,378,000
Southwest Branch Pacific R. R.	1,622,000	16,000	157,000	1,456,000
North Missouri R. R.	3,090,000	5,000	123,000	2,968,000
Platte County R. R.	543,000	3,000	36,000	504,000
Calumet and Fulton R. R.	422,000	30,000	392,000
State debt proper.....	453,000	7,000	8,000	438,000
Revenue bonds.....	43,000	48,000
Southwest Branch Pacific R. R. 7 per cent.	1,589,000	1,589,000
Consols.....	2,830,000	28,000	151,000	2,777,000
Total.....	\$18,652,000	\$118,000	\$749,000	\$17,866,000

The bonds outstanding on December 31, 1870, mature as follows:

Years.	Amount maturing.	Years.	Amount maturing.
1872.....	\$423,000	1888.....	483,000
1873.....	599,000	1886.....	1,944,000
1874.....	811,000	1887.....	3,942,000
1875.....	1,412,000	1888.....	3,251,000
1876.....	3,069,000	1889.....	868,000
1877.....	1,094,000	1890.....	942,000
1878.....	589,000		
Total.....	\$17,866,000		

The receipts of the public Treasury for the two years ending December 31, 1870, were;

In 1869.....	\$2,896,377 46
In 1870.....	2,847,065 98
Total.....	\$5,683,913 44

Warrants were drawn as follows:

In 1869.....	\$3,712,517 07
In 1870.....	10,037,137 06
Total.....	\$13,749,654 13

Of this amount, \$6,608,957.00 were drawn by authority of a joint resolution of the Twen-

ty-fifth General Assembly, approved March 24, 1870, being for the amount of bonds and coupons received by the late Treasurer, William Bishop, and for the amount paid for United States bonds purchased by the Treasurer for the school funds. The estimates for 1871 and 1872 are as follows:

RECEIPTS.	
In 1871.....	\$2,700,000 00
In 1872.....	2,885,000 00
Total.....	\$5,585,000 00

EXPENDITURES.		
	1871.	1872.
Ordinary expenditures.....	\$900,000 00	\$985,000 00
Interest on the public debt.....	1,061,216 00	1,061,216 00
School moneys.....	940,000 00	253,000 00
Seminary moneys.....	12,000 00	13,280 00
Totals.....	\$3,942,516 00	\$3,361,446 00
Aggregate for the two years.....	\$7,304,032 00	\$6,722,892 00

The public school fund amounts to \$1,674,-

986.78, and affords an income of \$100,208 annually. There is also a seminary fund amounting to \$108,700.

The expenses of the State penitentiary were \$49,166.93 in excess of its earnings. The number of convicts on the 5th of December was 797.

MITRAILLEUR AND GATLING GUN, THE. During the last five months of 1870 a considerable amount of attention was given by the British War-Office authorities to weapons of the mitrailleuse class, several series of exhaustive experiments having been carried out at Shoeburyness in order to ascertain their capabilities. These experiments were comparative, and in the commencement were confined to the Fosberry mitrailleuse, which is the Montigny weapon improved by Major Fosberry, a muzzle-loading 9-pounder and a breech-loading 12-pounder field-gun. This was in the beginning of August; at the end of that month the comparison was extended to the Snider and the Martini-Henry rifles. Subsequently the Gatling battery-gun, the invention of Dr. Richard J. Gatling, of Indianapolis, Ind., was introduced and fired in competition with the mitrailleuse, the field-guns, and the rifles, and, although last on the list of entries, it stands first on the list of results. The whole series of trials form the subject of an elaborate report which has been made by the committee to the War-Office.

Pending the publication of this report, nothing is absolutely known as to which weapon the committee recommend for adoption in the service. There is, however, every reason to believe that the Gatling gun has been recommended, inasmuch as twelve of these guns have been ordered to be made and issued to the troops for trial, in order to confirm the experiments which have already been carried out at Shoeburyness. The following is a summary of the ultimate results of the practice made under the committee and detailed in their report. The expenditure of ammunition and the number of hits made by the four heavier weapons are as follows: The Gatling gun, firing 492 lb. of ammunition, scored 2,803 hits; the Fosberry mitrailleuse with 472 lb. scored 1,708 hits; the 12-pounder gun with 1,232.5 lb. scored 2,286 hits; and the 9-pounder gun with 1,013 lb. scored 2,207 hits. A comparison of the effects produced and the ammunition expended by each weapon as shown by the above figures unquestionably gives the superiority to the Gatling gun. But there are many other considerations of equal and perhaps greater importance than the results of target practice, which have to be taken into account, and it would be unwise to assume that the Gatling gun has been recommended solely because it has made the greatest number of hits. From our knowledge, however, of this weapon, and of its ability to stand the rough-and-ready tests incident to actual warfare—which it did stand during the American War—and from a com-

parison of the construction of the two machine-guns, we may reasonably expect the Gatling gun to occupy that position which at the first it appeared probable the 'mitrailleuse' would take.

The Gatling battery-gun is no new weapon, it is indeed perfectly clear that the Gatling gun is the parent of the French and other mitrailleurs. The first Gatling gun was made in 1862, and was publicly exhibited in Indianapolis, Cincinnati, and Washington, general descriptions of it being published in the American and European papers. In the following year Dr. Gatling sent a letter of particulars to the French Government through Major Maldon of the French Artillery Committee. The Emperor desired the major to obtain further details, which Dr. Gatling supplied, at the same time offering his guns for sale, which offer, however, was declined. Subsequent to this the mitrailleuse made its appearance in France, in Belgium, in Prussia, and in Austria. As the mitrailleuse is upon the same principle as the Gatling gun, in so far as that it consists of a number of barrels grouped together, and an equal number of locks, circumstances point strongly to the Gatling gun as the original weapon.

A general idea of the Gatling battery-gun will be obtained from the perspective view, engraved from a photograph of the gun. The gun consists of a set of ten barrels in combination with a grooved cartridge-carrier and a lock-cylinder, these parts being all rigidly secured to a central longitudinal shaft. The grooves in the carrier, the holes in the lock-cylinder, and the barrels, all correspond in number. Each barrel is furnished with a lock, which works in a chamber formed in the lock-cylinder on a line with the axis of the barrels. The lock-cylinder is surrounded by an outer casing, connected to a framing which is carried along both sides and across the front of the gun, the latter part carrying the fore-sight. There is a vertical transverse partition in the casing, into which the main shaft, which carries the lock-cylinder, carrier, and barrels, is journaled. At its front end this shaft is also journaled in the front part of the framing. On the rear end of the main shaft is fixed the revolving gear, which is worked by a handle on the right side of the breech-chamber. The rear of the chamber in which this gear is placed is closed in by a cascade plate, having an opening through which the locks can be withdrawn and replaced when necessary. The opening is closed by a plug of special construction, attached to the piece by a chain. In front of the breech-casing, and hinged to the frame, is a curved plate, which partially covers the grooved carrier, and which forms a hopper through which the cartridges are fed to the gun from feed-cases. The cocking apparatus is fixed to the framing of the gun on the right hand of the lock-cylinder casing. The framing, which is fitted with elevating and traversing gear, is

mounted on a gun-carriage of the general form used for field-guns, but of special construction in detail. The three guns at Shoeburyness have each ten barrels, and are of the respective calibres of .75 in., .65 in., and .42 in.

The operation of working the gun is very simple: one man places a feed-case filled with cartridges into the hopper, while another turns the handle. By means of the gearing the main shaft is revolved, carrying with it the lock-cylinder, locks, carrier, and barrels. As the gun is rotated, the cartridges, one by one, drop into the grooves of the carrier from the feed-

cases, and instantly the lock is moved forward to load the cartridges into the chambers of the barrels. By means of the cocking device acting on the lock, the cartridge is exploded, and, as soon as the charge is fired, the lock, as the gun is revolved, is drawn back, bringing with it the shell of the cartridge, which is dropped on the ground. It will thus be seen that, when the piece is rotated, the locks in rapid succession move forward to load and fire, and return to extract the cartridge-shells. In other words, the whole operation of loading, closing the breech, discharging, and expelling the

THE GATLING GUN.

empty cartridge-cases, is conducted while the barrels are kept continuously revolving. It is to be observed that, while the locks revolve with the barrels, they have also in their line of travel a spiral reciprocating movement; that is, each lock revolves once, and moves forward and back at each revolution of the piece. The gun can be discharged with great rapidity. The shots are delivered singly, in rapid succession, so that the tendency to recoil is only that produced by one shot, and this tendency is en-

tirely overcome, and the recoil absorbed, by the weight of the gun and carriage, and by a simple device attached to the trail.

The method of feeding the Gatling gun from cases of cartridges, requires five men to work the piece. No. 1 man turns the crank; No. 2 inserts the cases into the hopper; No. 3 hands the cases to No. 2; No. 4 holds the case in position in the hopper until the cartridges are fed out; and No. 5 receives the empty cases. But this method of working is greatly simplified

by Dr. Gatling's revolving drum-feed, which is mounted on one of the three guns at Shoeburyness. By this arrangement one man only is required to work the gun and adjust the feed, with an assistant who simply charges the empty drum with cartridges, while the one previously filled is being used on the gun.

Besides the Gatling gun, we have a perspective view of the Fosberry-Montigny mitrailleuse, which is likewise engraved from a photograph. This will enable a fair comparison to

THE FOSBERRY MITRAILLEUR.

be made between the two machine-guns as far as external appearances are concerned, while the relative merits of their constructive details can be readily determined by comparing the following brief description with that of the Gatling gun. The question of their relative merits in practice has already been settled by the statement of the ultimate results of the firing previously given. The Fosberry mitrailleuse consists of a compound barrel composed of 87 rifled tubes, formed hexagonally on the outside, the whole being rigidly connected together in a cluster, and encased in an outer metal cylinder. The barrels are open from muzzle to breech, and the group is closed in the rear by a breech-block, which carries 87 firing-locks. To load the piece the breech-block is drawn back by a lever, and a plate—which is seen in the hands of the gunner in our engraving—carrying 87 cartridges, is inserted vertically in the space thus formed. The breech-block is then pressed forward, by which means the cartridges ought to be, but are not always, forced forward into the chambers of the barrels. In closing the breech-block the springs of the strikers are placed in tension, and are released by means of a serrated shutter which is actuated by a firing-lever. By bringing this lever down rapidly, the whole 87 cartridges are exploded almost simultaneously, while, by operating it slowly, single shots may be fired. It is at once apparent that with the mitrailleuse it is not possible to maintain such a continuous, steady fire as with the Gatling gun, nor can any reliance be placed upon the proper insertion of every cartridge in its chamber.

The vertical feed-drum consists of a metal framing of cylindrical shape, and having 16

divisions or slots around its circumference, and radiating from the centre. Each of these slots contains 25 cartridges, placed one above the other in vertical line. A hole in the centre of the drum fits over a pin on the outer casing of the gun, in front of which is the hopper through which the cartridges are fed. The latter pass to the hopper through an aperture in the bottom of each division in the drum. On the face of the casing, to the left of the hopper, is a rib which projects beyond the edge of the feed-drum when in position, and the drum has a series of thumb-lugs formed on its lower periphery. In firing the gun, the gunner, with his left hand, brings one of the lugs on the bottom rim of the revolving feed-drum coincident with the rib on the hopper face, while with his right he turns the firing crank. The cartridges fall into the hopper from one division, and, as soon as the gunner sees that one division is empty, he revolves the drum $\frac{1}{4}$ part, bringing the next lug over the rib, and at the same time the next batch of cartridges in the drum over the hopper. The feed is thus continuous until the whole 16 divisions in the drum have been emptied, when it is removed, and replaced by a charged drum. On the right of the drum is a locking arrangement for keeping it in position when not actually being fired. There is also a highly-ingenuous automatic continuous traversing motion for giving the gun lateral play against an advancing body of troops.

MONTALEMBERT, CHARLES FORBES DE TYRON, Count de, a French statesman and publicist, a theologian and man of letters, an ultramontanist and republican, born in London, May 29, 1810; died in Paris, March 13, 1870. His father was a French nobleman, an adherent of the Bourbons, who went into exile with them, and returned to France at the Restoration. His mother was the daughter of Mr. James Forbes, F. G. S., an English author and manufacturer. Young Montalembert was carefully educated as a strict Catholic, and, though he adopted the ultramontane religious doctrines of his father, he did not incline to his absolutist politics. His studies and principles early led him into intimate relations with Guizot, and subsequently with Lacordaire and the Abbé Lamennais. Associated with the two last named he founded in 1830 a democratic journal under the title of *L'Avenir*. The doctrines of this publication were condemned a year later by Pope Gregory XVI., the arguments for the separation of Church and State giving great offence to the ecclesiastical authorities. On discontinuing their journal, the three leaders, strangely enough, adopted other and changed views. Lacordaire (*see* LACORDAIRE, J. B. H., *ANNUAL CYCLOPEDIA*, 1861), on the condemnation of his paper, at once acquiesced in the Papal decision, retired into the privacy of his order, and devoted the rest of his life to his religious duties, and the interests of the Dominican order. Lamennais,

too, expressed himself submissively on the promulgation of the Papal decrees condemning his doctrines, but soon after betrayed his rebellious spirit, and completed an irreconcilable rupture with his church by the publication of his "*Paroles d'un Oroyant*." It was condemned by the Pope, but had an immediate and unparalleled popularity in France and throughout Europe. Montalembert, on the contrary, assumed something of that character as a politician which his friends had hoped for Lacordaire. He founded with De Caux a free Catholic school in Paris, but this was soon closed by the police as an infringement of the ordinances of public instruction. He was tried and fined after defending himself in a speech still pronounced the most brilliant of his long career. The result of this trial appears to have had the singular effect of making him more conservative in politics, and the Papal censure of Lamennais's rebellion strengthened his attachment to the Church. On succeeding to his father's rank, 1831, and his rights as a member of the Chamber of Peers, Montalembert entered upon a political career, though he could not take part in the debates of the Chamber until 1835, in consequence of his youth. He occupied the interval in the preparation of his "*Life of St. Elizabeth of Hungary, Duchess of Thuringia*," which was first published in 1836, and has since passed through numerous editions, been illustrated, abridged, and partially rewritten. In this work he manifested a lively appreciation of the poetical aspect of mediæval piety and asceticism. In 1843, on the occasion of the discussion, in the Chamber of Peers, of the relations of the Church to the State, he published his "*Catholic Manifesto*," which led to his immediate recognition by the Catholics in the Chamber as their leader. In 1844, he opposed, from its introduction, M. Villemain's project of secondary instruction (see VILLEMMAIN, in this volume), and delivered his three addresses on the "*Liberty of the Church*," the "*Liberty of Instruction*," and the "*Liberty of the Monastic Orders*." In the last of these addresses he undertook openly the defence of the "*Society of Jesus*," and concluded with the words since so often quoted: "We are the sons of the Crucified; we do not retreat before the sons of Voltaire." The two diverse characters which he endeavored to unite in one, the ultramontanist, or consistent supporter of the Catholic faith and the *dicta* of the Pope, and the equally zealous Liberal, often involved him in trouble, and made him inconsistent, when he was carrying out his own deepest convictions. He was everywhere the advocate and defender of the oppressed nationalities, whatever their faith; Greece in 1831, Poland in 1832 and 1844, and the Christians in Syria in 1848, found him always ready to plead their cause with an eloquence which carried all before it; but he was not less zealous in his defence of the Hindoos, or of the real wrongs of Ireland. After the Revolution of 1848 he joined the

Democratic party, with many avowals of republican principles, and was elected, on these declarations, to the Constituent Assembly, where he acted with the monarchical or moderate party, voting against the new Constitution, and for the restriction of the press. As time and legislation advanced, he became still more conservative in his views, and found his natural rival in Victor Hugo, with whom he engaged in several memorable debates.

His liberal views were at this period, and for some time afterward, subordinated to the antagonistic principle of reverence for authority, which was at this time in the ascendant. He was the first to demand French intervention in favor of Pius IX., and to give his adhesion to the expedition to Rome. He also defended most elaborately, in the Legislative Assembly, the aggressive movements by which Louis Napoleon was already foreshadowing his *coup d'état*. After that event, he protested against the imprisonment of the members of the Assembly, and remained for some years almost alone in the opposition. At the elections of 1857, the Count de Montalembert found himself for the first time defeated, and withdrew thenceforth from public life. Twice (in 1854 and 1858) he was prosecuted by the Government of Louis Napoleon on the charge of having published articles in the journals calculated to excite hatred and contempt of the government of the Emperor. In the first instance, the Government withdrew the suit, in the second, he was condemned, but the Emperor, finding his prosecution impolitic, remitted both the fine and imprisonment. From 1857 he lived in retirement, suffering terribly from an incurable disease, and occupying all the time, which was sufficiently free from pain, in literary pursuits. He wrote frequently for *Le Correspondant*, the leading French Catholic review, published a number of brochures on religious and political questions, such as "*Catholic Interests in the Nineteenth Century*," "*The Political Future of England*" (in which he argued that the interests of Great Britain were identical with those of liberty), and "*Pius IX. and Lord Palmerston*." In a recent letter to Swiss students he made the following interesting comparison between the Republic of Switzerland and that of the United States:

You, who live in a country which the friends of liberty love to cite at the same time as the United States of America, know, better than I, how far your noble country is still from resembling our model beyond the sea. When they read the discussions in your assemblies, and see the acts which emanate from them, they are stupefied at the great part which confiscation, prohibition, and proscription still play in them, as witness what has recently occurred in Thurgovia and the Berne Jura. Nothing could less resemble the manner and customs of the sons of Washington and Franklin. These unhappy disturbances, foolish exclusions, and shameful anachronisms will, however, show you sufficiently what are the progressive measures, the urgent reforms, and the arduous conflicts, of which you should be the indomitable champions, in order that, in the country of Tell and Winkelried, that true liberty may reign which sooner

or later will become the inalienable patrimony of her sincere defenders.

Count Montalembert was one of the first among distinguished Catholics to take issue with the ultramontanists on their extreme views of infallibility, and, from a bed of sickness, wrote an earnest letter, in which he mainly advocated the ground at first taken by Bishop Dupanloup. Besides the works we have already named, the Count de Montalembert had published the following books: "On Catholicism and Vandalism in Art," 1839; the Duty of Catholics on the Question of Free Education," 1844; "Saint Anselme, a Fragment of the Introduction to the History of St.

Bernard," 1844; "Some Counsels to Catholics on the Direction to be given to the Polemics of the Day, and on some Perils to be avoided," 1849; "The Monks of the West from St. Benedict to Saint Bernard," 1860-'70—five volumes of this had been published, but he had not completed it at his death; "A Nation in Mourning, or Poland in 1861," 1861; "Father Lacordaire," 1862; "A Free Church in a Free State," 1863; "The Pope and Poland," 1864; besides numerous articles in the *Revue des Deux Mondes*, the *Encyclopédie Catholique*, and the *Correspondant*, of which he was one of the most active editors. He was elected a member of the French Academy in 1852.

N

NADAL, Rev. BERNARD H., D. D., LL. D., a Methodist clergyman, author, and Professor of Church History in Drew Theological Seminary, born in Maryland, in 1815; died at Madison, N. J., June 20, 1870. In early life his educational advantages were limited. He graduated at Dickinson College, joined the Baltimore Conference of the M. E. Church in 1835, and for a number of years preached in Maryland, Virginia, and Delaware. About 1850 he accepted a professorship in Asbury University, Indiana. While there, Dr. Nadal commenced the publication of essays upon Church history in the *Methodist Quarterly Review*, of which Rev. Dr. McClintock was then editor, and in other Church periodicals. These writings made him widely known as one of the ablest theological writers of the Methodist body. He returned East after a few years, and preached, under the direction of different conferences, in Washington, Philadelphia, Brooklyn, and New Haven. At Washington he was for one session chaplain to the House of Representatives. Upon the organization of the Drew Theological Seminary, he became Professor of Church History, and, at the death of Dr. McClintock, became acting president of that institution. Dr. Nadal was a courageous and able exponent of the antislavery views held among his denomination at the North, and during his ministry South proved himself an able debater on that subject. He was a forcible writer, and was one of the principal contributors to the *Methodist*, besides frequently writing for other periodicals. He was also an acceptable preacher.

NAVY, UNITED STATES. At the close of 1869 the navy of the United States consisted of 188 ships of all classes, calculated to carry, when in commission, 1,322 guns exclusive of howitzers. Since that time four small gunboats, the Seminole, Clinton (tug), Maumee, and Unadilla, have been condemned as unworthy and sold. The tug Rescue was sold, under an act of Congress, to the Republic of Liberia, and the tug Maria was run into and

sunk in Long Island Sound, with a loss of four men. On the afternoon of the 24th of January, 1870, the steam sloop-of-war Oneida, carrying 6 guns and a crew of 176 officers and men, steamed out of the harbor of Yokohama on her return home after a cruise of three years on the Asiatic station. At seven o'clock on the same evening, in the Bay of Yeddo, about fifteen miles from Yokohama, she was run into by the English steamer Bombay, carrying the mails and passengers for the last-named port. After cutting down the Oneida and carrying away entirely a large portion of her stern, the Bombay proceeded on her way, leaving behind her in the darkness the unfortunate Oneida, which in less than fifteen minutes from the time she was first struck had sunk, and of 24 officers and 152 men but 2 of the former and 57 of the latter escaped. Thus reduced, the navy consisted, on the 1st of December, 1870, of 181 vessels, calculated to carry 1,309 guns; of these, 52 are of the iron-clad or monitor class; of the remainder 80 are sailing-vessels without any steam-power, and the balance steamers, or sailing-vessels with auxiliary steam-power; 45 vessels, including store and hospital ships, mounting 465 guns, are attached to the several fleets, and 4 others, mounting 7 guns, are on special service, which, with 6 receiving-ships at the various stations, and the tugs and small vessels on duty at the navy-yards and stations, make the naval force then in commission. Ten other vessels, mounting 143 guns, were ready for sea, and would join the several fleets as soon as they received their complement of men. The whole available force of vessels, sail and steam combined, in commission, under repair, and laid up, is 53, calculated to mount 779 guns; 4 of these, intended to carry 92 guns, being built of unsound timber, and requiring great alterations, will never be of any use to the service. Out of the whole number, 24, mounting 862 guns, are under repair; this leaves 29 available sea-going vessels of sail and steam power, carrying 417 guns. There are six screw-steamers on the

stocks, intended to carry 122 guns, and 4 heavy monitors, which, when completed, will be formidable vessels, capable of bearing armor that will resist the heaviest enemy's shot. They can also be arranged to carry 20-inch guns, throwing a weight of shot which few ships could resist. There are in commission 3 monitor or turret vessels, mounting eight 15-inch guns, and 19 laid up in ordinary, that could be made serviceable. There are 20 light-draught monitors, which are worthless as fighting-vessels, and 12 paddle-wheel steamers, only 2 of which are fit to go into action. Of 22 old sailing-vessels of various classes, used as receiving-ships, store-ships, etc., 11 are serviceable as store and practice ships, but are not suitable for other purposes. There are 85 tug and store vessels in moderately good repair, though not suited for offensive purposes, and 5 condemned vessels, including the New Orleans, 74, which is on the stocks at Sackett's Harbor. "Together we have," says Admiral Porter, in his report to the Secretary of the Navy, "a sum-total of 181 naval vessels, of which number only 49 are at present available as ships-of-war."

"Many of the vessels on the register should be entered as 'hulks,' for at present they tend to deceive our own people with regard to the strength of our navy, while foreign powers are well aware of the value of every vessel in our service, as they have for years employed intelligent officers in this country to keep them informed in all particulars relating to our ships in commission or under construction."

The marine corps consists of about 2,500 officers and privates, under the command of a brigadier-general. The number of seamen in the navy is limited by act of Congress to 8,500, which renders many of the vessels deficient in seamen, and causes the exercises in seamanship to be incomplete. The naval pension roll on the 1st of November, 1870, was as follows:

1,268 invalids, annually receiving.....	\$123,014 50
1,648 widows and children, annually receiving.	366,033 00
3,010 persons.	Total..... \$389,046 50

The whole actual expenditure chargeable to the naval appropriations for the year ending December 1, 1870, was \$18,985,165.11, a decrease of \$1,096,119.89, from the previous year. The appropriations for the current fiscal year ending June 30, 1870, are \$19,994,637.17. The expenditure for the five months from the commencement of the fiscal year to December 1, 1870, is within the proportion of the appropriations applicable to that period, and shows a decrease of \$2,488,585.80 from the expenditure of the corresponding five months of the previous year. The estimates for the general expenses of the service for the fiscal year ending June 30, 1872, amount to \$21,636,417.77.

Upon the death of Admiral Farragut, whose exploits at New Orleans, in the Mississippi, and at Mobile, won him undying renown, Vice-Admiral David D. Porter succeeded to

the position of admiral, and Rear-Admiral Rowan, who had received the thanks of Congress for gallant services to the country, was appointed vice-admiral.

While all foreign navies, since the introduction of steam-power into vessels-of-war, have adhered to the system of full sail-power in their ships, using steam only as necessity required, the United States have gone on, year after year, discarding sails and increasing the steam-power of their vessels. This course has greatly increased the expenses of the vessels-of-war, so that it has been estimated that, during the late war, the expenditure for coal alone was at least \$18,000,000, not to mention the additional expense for engineers, firemen, and coal-heavers, and the wear and tear of engines, which last item is beyond computation. Besides the increase of expense, the disuse of sails has proved detrimental to seamanship. Since 1869 measures have been taken to remedy these defects, and 26 ships besides those already existing have been equipped with full sail-power. At present there are no other than full-rigged ships in active service, with the exception of four or five iron-clads and a few side-wheel steamers used as dispatch-boats and surveying-vessels. A system of exercises has been devised and put in operation, which has improved the discipline of the service and created a spirit of emulation, which has been very beneficial. In reference to these topics, Admiral Porter, in his report to the Secretary of the Navy, says:

From personal observation I can assure you that there is now great economy in the sailing of our vessels-of-war compared with what there was before the ships were fitted with full sail-power. Comparatively little coal is now consumed, the engines and boilers are not worn out from constant use, the hulls of the ships are not heated and the wood thereby destroyed, and there is a reduction of four-fifths in the expenses of the engine-room and coal-bunkers.

In addition to the measures already taken to restore the former standard of seamanship in the navy, I would strongly recommend the formation of a *practice squadron*, to be employed on our coast, which will serve the twofold purpose of a school for officers and men, and, at the same time, afford assistance to our mercantile marine during the inclement season. We have now eight sailing-ships that will suit admirably for this purpose, viz., The frigate-built Sabine, Savannah, Macedonian, Constellation, and Constitution, and the sloops-of-war Dale, Portsmouth, and Saratoga. All these, with the exception of the Constitution, are nearly ready for service, and she can be prepared with very little expense. She is now at the Naval Academy, but is no longer needed as a school-ship, the midshipmen having been accommodated in barracks on shore. The place of the sailing-vessels heretofore used as practice-ships for the midshipmen can be supplied by the Tennessee, which vessel is well adapted for a school-ship, having a fair combination of sail and steam.

The fitting up of the Mare Island Navy-Yard in San Francisco harbor, so that it shall be capable of fitting out and repairing all the vessels on the Pacific and Asiatic stations, is strongly recommended; this would save the expense and risk of a voyage around Cape Horn, or the Cape of Good Hope.

The navigable waters of the globe, embracing an area of over 140,000,000 square miles, are divided, for the purposes of the operations of the navy, into five cruising stations, the limits of which are given in the *CYCLOPEDIA* for 1869. The force on the North Atlantic Station is under the command of Rear-Admiral S. P. Lee, who relieved Rear-Admiral O. H. Poor on the 16th of August, 1870. It consists of the *Severn*, the *Congress*, the *Tuscarora*, the *Swatara*, the *Nantasket*, the *Yantic*, the *Kansas*, and the *Nipsic*, with the tug *Pilgrim*, and the iron-clads *Dictator*, *Terror*, *Ajax*, and *Saugus*, and the *Pawnee* as a hospital-ship, making in all 14 ships carrying 79 guns. The principal headquarters of this fleet is at Key West, selected as the most convenient within six hours' sail of Havana, and in direct telegraphic communication with Washington. Of this fleet, the four monitors with the hospital-ship and tug cannot be considered as cruisers, the latter being stationed permanently at headquarters, while the former are kept ready for emergencies. The steamers *Nipsic* and *Kansas* are engaged in special service connected with the surveys of the *Darien* and *Tehuantepec* routes. The *Yantic*, from April to July, was engaged in making soundings in the waters of the West Indies, in the interest of submarine cable communication. The vessels of this fleet have been largely engaged in cruising among the West-India Islands, especially in the neighborhood of San Domingo, to the government of which republic the United States had extended its protection under the terms of the pending treaty of annexation. The waters of Cuba also, owing to the civil war waging there, have demanded the constant presence of a portion of the fleet. The waters of these islands embrace an area of 600,000 square miles. The island of San Domingo has a coast-line of over 1,100 miles, while that of Cuba exceeds 1,600. The fleet in the South Atlantic Station is under the command of Rear-Admiral Lanman, and consists of only four ships, the *Lancaster*, the *Portsmouth*, the *Wasp*, and the *Narragansett*, mounting 41 guns. Owing to the disturbed condition of affairs in Uruguay and the Argentine Republic, the flag-ship and the commander of the fleet have most of the time remained at Montevideo.

The fleet on the Pacific Station is under the command of Rear-Admiral John A. Winslow, who relieved Rear-Admiral Turner on the 9th of September, and is divided into two squadrons, the North and the South Pacific, under the immediate command respectively of Commodore William R. Taylor and David McDougal. The first of these squadrons consists of seven ships, the *Pensacola*, *Saranac*, *St. Mary's*, *Cyane*, *Nyaack*, *Saginaw*, and *California*, carrying 88 guns. The second consists of five ships, the *Jamestown*, *Ossipee*, *Resaca*, *Onward*, and *Mohican*, carrying 40 guns. The coast-line of the United States on this station, including that of Alaska, is over 4,000 miles in

extent, and the duties and responsibilities of this fleet are of great variety and importance. Besides a genuine protectorate of the persons and property of the missionaries, citizens, and traders, scattered on the coasts, and in the seaports of South America and the Isthmus, and among the islands of the Pacific, they include a supervision of the interests of the Government and people in the whaling and seal fisheries of the North, and of the commercial relations of the country with the islands and with the East. The *Saginaw* has been engaged at the Midway Islands in the operations there carried on for the deepening of the channel at the entrance of the harbor. The *Mohican*, Commander Low, destroyed the pirate *Forward*, near Mazatlan, Mexico. This vessel, formerly a gunboat in the British Navy, sailed from San Francisco in the early part of the summer for the coast of Mexico, ostensibly to engage in the oyster and fishing trade. Soon after her arrival upon the coast, she was seized by an armed party professing to act under the order of a Mexican named Placido Vega, who was formerly Governor of Sinaloa, but at the time held no official position, nor had he issued any pronunciamiento. A raid was made by this party on Guaymas and much property was seized by forced contributions from foreign merchants, and an attempt was made to capture a conducta crossing from the interior to the coast, but it was unsuccessful. The party also had orders to attack La Paz and levy a contribution. Trade was paralyzed on the coast in consequence of these acts, and it was commonly believed that these freebooters intended to capture, if possible, one of the *Panama* steamers, and the *Continental*, belonging to the North Pacific Transportation Company, for the sake of plunder. Under these circumstances, Commander Low resolved to destroy the *Forward* as a pirate. She was accordingly surprised by boats from the *Mohican* while she was aground in the Teacapan River and burnt, and six of her crew captured and turned over to the Mexican authorities. While engaged in destroying her, Ensign Wainwright and one man were killed, and six wounded.

The fleet on the European Station is under the command of Rear-Admiral Glisson, who relieved Rear-Admiral Radford on the 10th of August, and consists of the *Franklin*, *Brooklyn*, *Richmond*, *Plymouth*, *Shenandoah*, *Juniata*, *Saco*, and *Guerriere*, carrying in all 129 guns. On the Asiatic Station the fleet is under the command of Rear-Admiral John Rodgers, who relieved Rear-Admiral Rowan on the 20th of August, and consists of the *Colorado*, *Benicia*, *Alaska*, *Ashuelot*, *Monocacy*, *Palos*, and the *Idaho* (store-ship), carrying in all 88 guns. The *Palos* is a small steamer of 806 tons, and was fitted and armed for cruising in the rivers of China. She joined the fleet during the year, and made the passage from Boston to Singapore, *via* the Suez Canal, in 73 sailing days. She passed through the canal in 17

hours, and her commander gives a very favorable report of its condition and working.

The Naval Academy at Annapolis, Maryland, is under the superintendence of Commodore John L. Worden. At the beginning of the last academic year, the number of midshipmen in the several classes was 253, as follows: first class, 68; second class, 55; third class, 88; fourth class, 32; and there were two Japanese students; 68 members of the first class graduated, and were detached for active service; 51 members of the second class, 34 of the third class, and 51 of the fourth, passed successful examinations. Those members of the second and fourth classes were embarked on board the practice-ship Savannah for the summer cruise. Fifty-one candidates for admission reported in June, of whom four were rejected by the medical board, 17 by the academic board, and one declined to take the oath of allegiance, leaving 29 who were admitted. The amount appropriated for the current fiscal year ending June 30, 1871, was \$220,340. The estimates for the fiscal year ending June 30, 1872, are \$220,340.77, a decrease of \$19,999.23.

The Secretary of the Navy, in referring to the importance of the submarine torpedo, as a weapon of naval warfare, says: "It promises to be the most efficient, as well as the least expensive, means of defense and attack known to the service. Recent events in Europe have shown its value as an important part of the system of coast defense. We are progressing in this direction as fast as the appropriation will permit, and if the suggestions of the officers in charge of this branch are carried out, we shall, I think, be as well armed in this respect as any other power in the world."

One of the most interesting naval contests that has occurred for years took place the present season, between the English yacht Cambria, owned by Mr. John Ashbury, of England, and the American yacht Dauntless, belonging to Mr. J. G. Bennett, Jr. The Cambria was built by Mr. Ratsey, of Cowes, England, in 1868. Her tonnage was 248 tons, according to the New-York Yacht Club measurement, and 188 tons by the Thames measurement. She was made of oak, with teak topsides, and measured as follows: length from stem to stern 108 feet; beam, 21 feet; tonnage for racing, 199; draught of water, 12 feet; length of main-mast (hounds to deck), 61 feet; fore-mast, 56 feet 6 inches; main-boom, 61 feet; main-gaff, 33 feet 9 inches; foregaff, 25 feet; bowsprit, 35 feet, outside of stem; main-top-mast, 35 feet 6 inches; foretop-mast, 32 feet 3 inches; maintop-sail yard, 32 feet; foretop-sail yard, 29 feet. The Dauntless was built at Mystic, Connecticut, in 1866, and was first named L'Hirondelle; but was rebuilt in 1869, and afterward known under her present name. Her tonnage is 267.96 tons, and she spreads between 6,000 and 7,000 feet of canvas. Her measurement is as follows: 116.9 feet on the water-line; 120.7 feet on deck; depth of hold,

9.7 feet; breadth of beam, 24.8 feet; length of masts, 89 and 90 feet respectively; top-masts, 42 feet; main-boom, 73 feet; gaffs, 34 and 32 feet. The two yachts started from Daunt's Rock, near the harbor of Queenstown, on the coast of Ireland, on the afternoon of the 4th of July, and reached Sandy Hook light-ship on the afternoon of July 27th. The Cambria made the passage in 22 days 5 hours 17 minutes and 15 seconds—defeating the Dauntless by 1 hour and 40 minutes. The yachts were not in sight of each other from the time of starting, the Cambria having taken a northerly and the Dauntless a more southerly course. The latter was delayed two hours on the 7th of July on account of having lost two men over-board.

The distance made by each daily, as shown by their respective logs, is as follows:

NEBRASKA. Nebraska formed a part of the Louisiana Territory, purchased of France in 1803. It was first organized as a Territory by the famous Kansas-and-Nebraska Bill in 1854, and was admitted into the Union as a State in March, 1867. The first settlement was begun in 1854, and 1860 it had 23,841 inhabitants. In 1870 its population had increased to 116,888.

The city of Omaha was first laid out in 1854, and now has 16,083 inhabitants. The present capital of the State is Lincoln, which has a central location fifty miles west of Nebraska City. It was first laid out in 1867, and has now about 2,000 inhabitants. Considerable progress has already been made in establishing public buildings and institutions there. The main portion of the capitol has been built of handsome white limestone, and the foundations of a State University, and an Insane Asylum are laid. The Legislature provided at its last session for the erection of a Penitentiary at the same place, and the Agricultural College has also been located there.

The following table gives the Federal census of Nebraska for the years 1860 and 1870:

The Legislature has taken steps to encourage immigration to the State, a bill having passed at the last session providing for a Board of three Commissioners of Immigration, whose duty it should be to publish information of the resources and advantages of the State, and secure its circulation in the English, German, and Scandinavian languages. A State agent was also provided to induce immigrants on their arrival in this country to settle in Nebraska. William Bischoff, Frederick Kruz, and C. C. Smith, were appointed as the commissioners, with C. N. Karstens as the State agent at New York. Pamphlets were prepared and disseminated, and a large influx of immigrants from Europe is expected.

* Indians. † Including 27 Indians. ‡ Including 33 Indians.

The total assessed value of property in the State is \$53,000,000, an increase of \$11,000,000 over the valuation of 1869. The State has no public debt, and the constitution forbids the creation of a debt exceeding \$50,000 in amount. The public institutions and educational interests of the Commonwealth have been built up to a large degree from the proceeds of lands donated by the Federal Government. One sixteenth of all the government lands in the State, amounting to 2,648,080 acres, was set apart for the creation of a public-school fund, while 46,080 acres were given for the endowment of a State University, and 90,000 acres for the State Agricultural College. The constitution provides that the funds arising from the sale of these lands shall be invested in public securities, and kept inviolate and undiminished, the interest only being expended for the support of the schools of the State. The minimum price at which they can be sold is \$5 per acre, and at that rate the entire fund derived from donations of public lands will be no less than \$18,895,000. The proceeds of all fines and licenses are also devoted to the support of public education, and a tax of two mills per cent. is levied for the same purpose. The entire amount derived from the school fund during the fiscal year 1869-'70 was \$77,999. The whole number of children in the public schools during the same year was 32,619. The State University and the Agricultural College have not been completed as yet, but are progressing rapidly. One normal school has been established, capable of accommodating 100 students; located at Peru.

In nothing has greater progress been made in Nebraska than in the development of the railroad system. The Union Pacific extends from Omaha to Ogden, in the Territory of Utah, a distance of 460 miles, and settlements are rapidly forming along the entire line. The Fremont and Blair Railroad, 25 miles in length, connects the Union Pacific with the Chicago and Northwestern. The Elkhorn Valley road is to extend from Fremont on the Union Pacific to Niobrara, in the northern part of the State, and open up to settlement one of the most fertile districts in that region. It is not yet completed. The Omaha and Southwestern, extending from Omaha to Lincoln, a distance of 65 miles, is under contract, and a portion of it already in running order. The Omaha and Northwestern will extend from Omaha to West Point, and thence up the Elkhorn Valley to the mouth of the Niobrara, but only a few miles are completed. The Burlington and Missouri River crosses the State of Iowa, and is already completed to Lincoln. It is to be continued until it makes a junction with the Union Pacific near Fort Kearney. The Midland Pacific, from Nebraska City to Kearney, by way of Lincoln, is in course of construction, and will make important connections with roads to the East. Among other lines already projected are the Nebraska City and South-

western, the Nebraska City and Northwestern, the Trunk, passing from Omaha down the Missouri River to Kansas, and connecting with the Atchison, Leavenworth, and St. Louis, the Brownville and Fort Kearney, the Nehama Valley Road, and the Northern Kansas and Southern Nebraska, from Hiawatha, Kansas, to Falls City, Nebraska.

The State election of Nebraska occurred on the second Tuesday of October. The Democrats had nominated the following ticket: Governor, John H. Croxton; Secretary of State, Paron England; Treasurer, Jacob Valery; Attorney-General, William H. Munger; Superintendent of Public Instruction, Richard Brown; State-prison Inspector, A. J. Conkling. The Republican ticket, which was the victorious one, was as follows: Governor, David P. Butler; Secretary of State, Wm. H.

James; Treasurer, Henry A. Koenig; Attorney-General, Geo. H. Roberts; Superintendent of Instruction, J. M. Mackenzie; Prison Inspector, Chas. H. Gould. The total vote for Governor was 3,129, of which Butler received 2,851, and Croxton 278. There were 4,700 votes cast for member of Congress, of which John Taffee, the Republican nominee, received 4,486, and George D. Lake, the Democratic candidate, 214. The Legislature is strongly Republican in both branches.

NETHERLANDS, THE, a kingdom in Europe. King, William III., born February 19, 1817; succeeded his father, March 17, 1849; heir-apparent to the throne, his son William, Prince of Orange, born September 4, 1840. The area and population of the kingdom, according to the census of December 31, 1869, were as follows:

The foreign population of the Dutch East Indies comprised 86,465 European civilians, 14,600 European soldiers, 255,959 Chinese (of whom 172,280 were in Java and Madura), and 28,176 Hindoos not born in the colonies. In Surinam there lived about 1,000 Indians, and 7,500 runaway negroes, not included in the above figures.

The budget for 1870 fixes the expenditures at 95,864,781 guilders, and the revenue at 88,526,832 guilders, showing a deficit of 7,337,949 guilders, to meet which a law was passed authorizing the emission of treasury notes to an amount not exceeding 8,000,000 guilders. The public debt, in 1870, amounted to 967,122,413 guilders, and the interest payable on the same to 28,203,144 guilders.

The budget for the colonies, in 1870, fixes receipts and expenditures as follows:

	Revenue.	Guilders.
EAST INDIES.—Estimated revenue in India.....		64,184,200
Estimated revenue in Holland (principally from sales of colonial produce).....		51,704,900
Total.....		115,889,400
	Expenditures.	Guilders.
For the colonial administration in India.....		86,367,200
For the home administration of the East Indies, including 9,500,000 guilders payable as interest on the colonial debt.....		19,478,500
Total.....		105,730,700
Estimated excess of revenue.....		10,107,700

The Army of the Netherlands, in 1870, numbered 62,982 men, of whom 1,942 were officers. The infantry consists of one regiment of grenadiers and chasseurs, and of regiments of the line—total, 1,041 officers, and 43,703 men; the cavalry comprises four regiments of hussars, consisting of 193 officers and 5,316 men; the artillery consists of one regiment of field-artillery, numbering 91 officers and 2,852 men; the regiment is made up of fourteen batteries, each of six guns, one depot company, and two army-train companies. Besides, there are three regiments of artillery for service in fortresses, each of fourteen companies, consisting of 218 officers, and 6,753 men; and one regiment of horse-artillery, with four field-batteries, of six guns each, one depot company, one army-train company, and two companies of pontoniers, total, 46 officers and 1,042 men. To these must be added two divisions of the corps de maréchaussée, with 10 officers and 862 men. The staff of the army consists of 210 officers. The colonial army, on December 31, 1869, numbered 28,786 men, including 1,258 officers. The marine was composed (July 1, 1870) of 70 steamers, with 664 guns, and of 52 sailing-vessels, with 581 guns.

The imports, in 1868, were valued at 469,-

930,000 guilders, and came from the following countries: Great Britain, 146,590,000; Prussia, 98,690,000; Belgium, 55,890,000; France, 11,360,000; North America, 6,940,000; other countries, 150,460,000. The exports, in 1868, summed up 868,910,000 guilders, namely: to Great Britain, 94,180,000; to Prussia, 136,050,000; to Belgium, 53,290,000; to France, 7,740,000; to North America, 4,780,000; to other countries, 72,920,000. The movement of shipping, in 1868, was as follows:

FLAG.	ARRIVALS.		CLEARANCES.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Dutch.....	2,190	652,954	2,343	642,722
Foreign.....	8,075	1,422,118	5,022	1,454,381
Total.....	8,274	2,065,972	8,435	2,099,123

The merchant marine, on December 31, 1868, consisted of 2,117 vessels, together of 505,757 tons. On January 1, 1870, there were 908 miles of railroad in operation, of which 507 miles were state roads, and 401 miles private roads, owned by companies. Besides, there were 98 miles in course of construction. The capital invested in the state roads, up to September 1, 1870, amounted to 107,664,000 guilders. The postal service, during 1869, showed an excess of revenue over expenditure of 1,297,896 guilders. The aggregate length of telegraph-lines, on January 1, 1870, was 1,766 miles.

The colonial debt, in 1870, amounted to 228,500,000 guilders, and the interest due on it to 9,800,000 guilders. The principal articles of export from Java and Sumatra to Europe, in 1869, were: coffee, 110,250 pounds; sugar, 329,875; rice, 88,750; tobacco, 16,000; pepper, 1,875; tin, 15,625; indigo, 577,163; nutmegs, 779,250; hides, 309,190 pieces. The exports to America consisted of 14,000,000 pounds of coffee, and of 17,125,000 pounds of sugar.

On March 2d the First Chamber of the States-General unanimously opposed the modified railroad budget. The Second Chamber passed the poor-law proposed by the ministry, and approved the increased budget of marine without a dissenting voice. An increase of 449,445 guilders in the budget of war for 1870, for the purchase of fire-arms, was also granted, and the agrarian law for the East India colonies passed by the First Chamber, as proposed by the ministry.

During the second legislative session, on May 21st, the Second Chamber passed the bill abolishing the death-penalty.

The annual visit of the King to the city of Amsterdam, in May, 1870, was marked by an important ceremony, as, accompanied by several of the ministers, as well as the municipal and provincial authorities, he laid the first stone of the new dikes at the entrance of that arm of the sea termed the Y, forming the harbor of Amsterdam, which are to prepare a fresh navigable channel from the Zuyder-Zee to the Wyk-da-Zee.

The First Chamber adopted, on September 15th, the bill for the abolition of capital punishment, by 20 votes against 18.

The States-General were opened on September 19th, by the King in person. His Majesty, in his speech from the throne, said he appreciated the good-will and patriotism which the Dutch people had displayed amid the grave events of the last months. The people had shown a unanimous will to maintain the independence of the country. The amicable relations which previously existed with foreign powers had in no way been disturbed by the war. The King said it was his decided intention to persist in his neutrality. The general situation of the country and the colonies was favorable, and the financial condition was not unsatisfactory. Negotiations were pending, during the latter part of December, for the cession and transfer of British Guiana to the Netherlands. Both Chambers of the States-General adjourned, *sine die*, on the 30th of December.

A rupture of diplomatic relations occurred between the Governments of the Netherlands and of the Republic of Venezuela. It appears that General Guzman, after his banishment from the country by President Monagas, took up his residence on the Dutch island of Curaçoa, but, at the request of President Monagas, was ordered off the island. On his return to Venezuela, Guzman headed a revolutionary movement against the government of the republic, and succeeded in making himself President. On his access to power, Guzman, in order to be revenged for his expulsion from the island of Curaçoa, took possession of the Dutch packet-steamer *Honfleur*, at Laguayra, on the plea that the vessel was in the service of the republic. He also laid an embargo on a Dutch vessel, and forcibly retained her owner under pretext of the announced blockade of the Venezuelan ports. The representatives of the European powers handed in a joint protest against these arbitrary measures, without any favorable result, and, when the Dutch ambassador threatened to have recourse to more energetic action, all diplomatic intercourse was abruptly broken off. The ambassador thereupon demanded his passport, leaving the protection of the subjects of the Netherlands in Venezuela to the representative of the North-German Confederation. Toward the end of June, the Government of the Netherlands ordered the frigate *Wasanaer* to Venezuela, to exact redress for the outrages committed on its subjects. During the session of the Second Chamber, on October 18th, the opposition demanded an explanation relative to the Venezuelan question, when the Minister of Foreign Affairs declared that he was as yet unable to give any satisfactory information, the unsettled condition of the republic precluding the possibility of an arrangement for the present.*

* For information concerning the grand-duchy of Luxembourg, see article LUXEMBURG.

NEVADA. The State of Nevada comprises an area of 83,500 square miles, or 64,184,960 acres of land, 882,000 of which are covered by water. Its population in 1870 was 42,491, having increased from 6,857 since 1860.

The following is the Federal census of Nevada, taken in the years 1860 and 1870:

COUNTIES.	1870.	1860.
Churchill.....	196
Carson.....	6,712
Douglas.....	1,215
Elko.....	8,447
Esmeralda.....	1,553
Humboldt.....	1,916	40
Lander.....	2,815
Lincoln.....	2,228
Lyon.....	1,637
Nye.....	1,087
Ormsby.....	2,668
Pah-Ute.....	762
Reop.....	133
St. Mary.....	105
Storey.....	11,359
Washoe.....	8,091
White Pine.....	7,139
Total.....	42,491	6,857

The principal city is Virginia City, which has 7,008 inhabitants, a larger number than the entire State contained ten years ago.

The growth of the State has been due to the rich silver-mines which have been discovered within its limits, and the reduction of their ores constitutes the principal industry of the people. The latest discoveries have occurred in what is known as the White Pine District. Masses of ore known as horn silver are stripped from the veins in large sheets, and yield in some cases from \$10,000 to \$14,000 per ton. Vast deposits of salts of soda and potash have been found in Churchill County, and it is said that pure potash and soda may be manufactured from them in any quantity.

The election in Nevada took place on the 8th of November, and resulted in the choice of the Democratic candidates by small majorities, that of the Governor being 1,001. The State officers elected were: Governor, L. R. Bradley; Lieutenant-Governor, Frank Denor; Treasurer, J. Schooling; Comptroller, O. K. Stapley; Secretary of State, J. D. Driesbach; Attorney-General, L. A. Buckner; Judge of the Supreme Court, John O. Jarber. O. W. Kendall was elected member of Congress over Thomas Fitch by about 300 majority. The Legislature consists of 12 Republicans and 11 Democrats in the Senate and 20 Republicans and 26 Democrats in the House of Representatives. The sessions of that body are biennial, falling on the odd years. That of 1871 began at Carson City on the 8d of January.

NEW HAMPSHIRE. From the census returns recently taken in this State, it appears that within the period of the last ten years the bulk of her population has considerably diminished. The returns received from all the towns in the State, except Franklin, show the sum total of her inhabitants in 1870, as compared with that

of 1860, to have been as follows: Census of 1870, 318,300; census of 1860, 326,073—a net loss in ten years of 8,773. Coos and Hillsborough, the two extreme counties north and south in the State, are the only ones in which the population has increased, 1,762 and 2,098, respectively, during that period, while each of the other eight counties has sustained a loss varying from a minimum of 169, for Cheshire, up to a maximum of 8,133, for Carroll. The following is the Federal census of New Hampshire, by counties, taken in 1860 and 1870:

COUNTIES.	1870.	1860.
Belknap.....	17,681	18,549
Carroll.....	17,332	26,465
Cheshire.....	37,935	37,434
Coos.....	14,923	15,161
Grafton.....	39,108	42,390
Hillsborough.....	64,398	62,140
Merrimack.....	43,151	41,408
Rockingham.....	47,996	50,122
Strafford.....	30,549	31,498
Sullivan.....	18,058	19,041
Total.....	318,300	326,073

The Republicans have preponderated in New Hampshire, though the Democrats also possessed considerable strength and influence. Besides these, there are two other parties which have lately been formed, under the relative appellations of "Temperance" and "Labor Reform" parties. Although the end which these two severally profess to pursue is not a political one, properly so called, they have entered the political arena, as separate public bodies, intending so to mould the popular ideas and the government of the State as to forward, and ultimately realize, the accomplishment of their purposes. Their members are, in fact, either Democrats or Republicans; but they have made the prohibition of intoxicating beverages and the promotion of the working-man's interests the special object of their respective organizations, as a body.

In preparation for the general State election of March 8, 1870, the members of these parties severally met in convention, and nominated their candidates.

The Democrats held their State Convention at Concord, on the 5th day of January. They nominated for Governor, John Bedell, of Bath; for Railroad Commissioner, Michel T. Donohue, of Concord. At the same time they adopted the following resolutions:

We, the Democracy of New Hampshire, in convention assembled, with unshaken faith in the justice and ultimate triumph of the principles which we have so long maintained, renewing our pledges of devotion thereto, do now resolve:

1. That we will continue to oppose the efforts of the radical party to centralize all power in Congress, and to subvert our federal-republican system of government, to the utmost extent of our power; and, that we especially denounce the late outrage upon the State of Georgia, as subverting the only safeguard in the Constitution whereby the rights of States can exist; that we will not relax our endeavors to restore the Government to its original basis, in all its essential relations, until such restoration is completely effected.

2. That the system of national taxation under the existing tariff and revenue laws, throwing, as it does, the burden upon the laboring classes—upon the industry rather than upon the wealth of the country—is unjust and oppressive, and calculated to aid in the subjection of the masses to an aristocracy of wealth and privilege; and that we, in common with the industrial classes, whose cause is our cause, demand a complete reformation thereof, upon the basis of justice and equality.

3. That a return to the principles of honesty and economy in the administration of public affairs is the only sure and proper remedy for the present and prospective financial ills of the nation.

4. That monopoly, in every form, is unjust, prejudicial to the general welfare, and can be tolerated and maintained only in direct violation of the spirit of our democratic institutions; and that we witness with alarm the tendency to consolidate and concentrate capital in gigantic corporations in this State and the United States.

5. That while all existing contracts entered into in good faith should be fully kept, in the letter and spirit of the contract, Congress should impose such just and equal taxes upon all Government bonds and United States securities as will compel their holders to bear their just share of the burdens of government.

6. That all debts, public and private, except duties on imports and the interest on the public debt, which by its terms is payable in gold, are payable in the currency of the country.

Resolved, That in the death of Franklin Pierce the country lost a true patriot and profound statesman; New Hampshire lost its most honored son, and each of us a friend. Living, we loved him; dead, we will cherish his memory.

Resolved, That the Democracy of New Hampshire hereby pledge their earnest and united efforts to insure the election of the candidates this day nominated.

The Republican State Convention was held on January 7th, and renominated Onslow Stearns for Governor, by acclamation, and nominated Charles P. Gage for Railroad Commissioner. The committee appointed to inform the Governor of his renomination having returned with a letter from him to the convention, in which he stated "that, on account of feeble health, he was compelled to decline being a candidate for reelection," a second committee was appointed and sent, urging him to withdraw his declination; whereupon he wrote a letter of acceptance. The Republican platform was unanimously adopted, and is as follows:

The Republicans of New Hampshire, in delegate convention assembled, hereby renew and reaffirm their allegiance to the principles of liberty, equality, and impartial suffrage, which underlie our republican institutions, and are the hope of the oppressed in every land.

1. *Resolved*, That the Administration of President Grant has our hearty approval and highest admiration for the vigor, integrity, and statesmanship, which have already brought the prestige of the national Government back to that of the better and purer days of the republic.

2. That the extinguishment of more than seventy-six millions of the national debt, during the first ten months of the Administration of President Grant, furnishes the surest guarantee that it will continue to administer the affairs of the Government with prudence and wisdom.

3. That the demand of the recent Democratic State Convention for the taxation of United States bonds, and their payment in depreciated currency, is only

another form of repudiation, in entire harmony with the character and conduct of the men and the party who, at the time of their issue, denounced those bonds as worthless rags.

4. That the burdens of the excise, tariff, and all other public taxes, should be so adjusted and apportioned as to bear mainly upon luxuries and accumulated wealth, and as lightly as possible upon labor and articles essential to the support and enjoyment of life.

5. That we demand and expect of the General Government the most rigid economy in the public expenditures, and firmness, integrity, and impartiality in the execution of the laws.

6. That we are in favor of the abolition of the franking privilege, and also of abolishing the enormous expenses consequent upon the publication and distribution of vast quantities of worthless documents and reports.

7. That the nominal restoration of the former relations of any State to the Union, accomplished by fraud, and followed by a predetermined violation of the fundamental conditions of restoration, accomplished by violence, bloodshed, and new acts of revolution, is null and void, and that, as in the case of Georgia, Congress is bound by appropriate legislation to enforce the conditions of reconstruction, to maintain a republican form of government, and to prevent the murder of white or black citizens for political reasons.

8. That the action of the Democratic Legislature of New York in rescinding the ratification of the fifteenth amendment to the national Constitution is a blow aimed at impartial suffrage, a step alike subversive of the peace and liberties of the country.

9. That the leaders of the Democratic party who advised the slaveholders to rebel, and promised and endeavored to aid them, even by bloodshed at the North, are moral traitors, and are equally responsible with Jefferson Davis and Robert E. Lee for the precious lives lost in defence of the Union, and for all the sufferings and sorrow caused by the rebellion. With such a record, they have no right to ask an injured and indignant people to intrust power and authority to them or the party which they lead.

10. That, in view of the wide-spread and alarming ravages of intemperance in our State, we hail the revival of the temperance reform as calculated to arrest the evil and arouse public sentiment to demand a strict enforcement of the laws.

11. That, in a republican government sustained by the affections and votes of the whole people, the interests of the laboring classes should be first considered in the legislation of the State and nation, and all measures honestly proposed and wisely designed to promote the moral and material prosperity of the industrial classes should and will receive the ready and earnest support of the Republican party.

12. That the welfare and prosperity of the community should be the controlling motive and inducement for all legislation, State or national; that neither railroad nor other wealthy and powerful corporations should ever be permitted to direct or control it to the detriment of the great body of citizens; and that corporations should only be created or sustained when they subserve the public good and are managed in the interest as well of the people as of their stockholders.

13. That we are in favor of renewed efforts to develop the resources of New Hampshire; in favor of promoting the extension of railroads in our State, and of legislation for the abolition of free passes and for the reduction of fares and freights.

14. That we commend to the people of New Hampshire, for reelection, Governor Ouslow Stearns. His administration of the State government has been able, honest, and economical. We pledge him our undivided support, and a triumphant reelection by the people he has faithfully served.

15. That we pledge to our candidate, Charles P.

Gage, this day nominated for Railroad Commissioner, our cordial support.

The Temperance party met on January 12th. At this meeting there was a disagreement, which ended in partial disruption. A considerable number opposed the nomination of party candidates for the highest offices in the State, as unnecessary and unwise, especially in that the candidates for Governor in both the Republican and Democratic tickets were temperance men, and the Republicans had inserted a resolution in their recent platform in favor of temperance reform. They recommended the appointment of a State Central Committee "to look after the matter." The largest and most influential portion of the assembly, on the contrary, urged the necessity of a separate organization and ticket, as the only hope left to the party of realizing its purpose. They averred that the resolution in the Republican platform "hailing the revival of the temperance reform" meant nothing, except to lull the temperance men into inaction; and that long experience had too plainly demonstrated that the cause of temperance had nothing to hope from either Democrats or Republicans, as parties, since the appeals repeatedly made in its behalf to both those parties in the past two years had been either utterly ignored or rejected with scorn. This sentiment having prevailed by a large majority, those who opposed it withdrew from the assembly to the number of thirty or more. The action of the convention became then harmonious.

A motion to nominate the Rev. Lorenzo D. Barrows for Governor, by acclamation, was opposed by himself. He recommended that the convention should unite upon some other person more fit for that office than he was, or proceed to the nomination of a candidate by ballot; but the motion was put and carried, nevertheless, and he so nominated, when he accepted. Henry D. Pierce was nominated for Railroad Commissioner, but he declined, or rather deferred his acceptance, by offering this resolution: "That the State Central Committee be instructed to confer with the Labor Reform Convention to be held at Concord, on January 28th, in relation to the nomination of Railroad Commissioner, and State and county officers, whenever nominations can mutually and acceptably be made," which was passed.

The resolutions and platform of the Temperance party, as unanimously adopted, were as follows:

Whereas, The evils of intemperance, coming directly through an illegal traffic in intoxicating drinks, have come to be the most wide-spread and insufferable of all evils in our State; and

Whereas, These evils are increasing among us, augmenting fearfully our taxation, robbing our State of men—her young men—compared with which gold is trash, pouring poverty, ignorance, and domestic sorrows into the laps of households; and

Whereas, Both the legislative and administrative departments of our State government have become

almost entirely oblivious to these evils; which dereliction is owing chiefly to the management of the leaders of both political parties in the State: therefore

Resolved, That parties are valuable so far as they subserve valuable principles, and, when they cease to do that, they cease to have any claim upon the name of true principle.

Resolved, That a party can peril nothing by standing by laws made to subserve the best interests of the State and the people; it perils every thing when it does not arraign the transgressors and violators of law.

Resolved, That, while we have the strongest confidence in the integrity and patriotic devotion of the masses of both these parties, the entire silence of one of their conventions concerning the evils of intemperance, and the execution of the criminal laws of the State, and the temperance reforms, and the doubtful support awarded to any decided measures of reform by the other, confirm the fact that, under their present management, the temperance cause has nothing to hope from either of them, but much to fear, and that, though they may honor us with their lips, their hearts are far from us.

Resolved, That, while we acknowledge that in other days, days of comparative purity, many of these leaders, and large portions of these parties, met well their obligations to enact wholesome laws on this subject, yet we are disheartened, under the painful proof that they are both too far fallen to respect their own legislation, as shown in the late defeat of our constabulary laws, under the combined action of their leaders and papers.

Resolved, That so long as our own chosen parties, with whom we have acted formerly, give such sorrowful demonstration of corruption, in giving place to the uncounted and unmeasured evils of intemperance, and most of all other crimes growing out of it, for the sake of holding or gaining the control of the State government, we can no longer act with them, even when they put up for office our most tried and worthy temperance men, since we see such men and their principles are slaughtered on the altar of the "whiskey-ring," when they are brought under the dictatorship of the leaders. So their power is wholly lost to our cause, and really given in the end to the opposition.

Resolved, That while we desire to pay all needful taxation to support our State and national governments, and their indebtedness, we are convinced there should be a reduction of salaries, fees, and other governmental expenses, in proportion as the price of gold and labor falls.

Resolved, That legislation in behalf of private and corporation interests often becomes in our State conducive to the general welfare, yet we protest against the superabundance of this kind of legislation, to the comparative neglect of the more general industry and producing employments of the State.

PLATFORM.

1. We hold, with the framers of the Constitution of the United States, that the purposes of government are: "To establish justice; to insure domestic tranquillity; to provide for the common defence; to promote the general welfare," and thereby secure the equality of men before God and the law.

2. We also hold that, when a government, national or State, no longer secures these ends, it is not only the right but the duty of the people to institute better laws and administration in behalf of the people, rather than in behalf of corporations, rings, cliques, office-holders, and office-seekers.

3. It is also the duty of the people, with whom is the power, to hold the legislative and administrative departments of the government to a strict faithfulness to these, their sworn duties, to enact and execute law in a sacred preservation of the rights of the people and funds of the government, an honest and prompt payment of all national debts, and observance of national treaties.

4. It is equally apparent that, when these noble purposes of government are lost sight of by political parties in their struggle to hold or gain ascendancy, as is now so much the case in this State, leaving our criminal laws comparatively a dead letter on the statute-book, it reveals a state of political corruption alarming to Christian patriots, and portending the speedy destruction of all wholesome government.

5. It is cardinal with us that in our State thousands and tens of thousands of innocent victims are suffering, unprotected by law, from an illegal rum-traffle, gambling, and licentiousness, comparatively unrebuked by the officers of the law, because these corrupt politicians prefer to have it so rather than run the risk of losing their chances of party and personal success.

6. These, and kindred considerations, leave us, as true patriots, no alternative but to separate ourselves from these corrupt party alliances, until they are thoroughly reformed; first, that we may free ourselves from all participation in their guilt, and second, that we may unite ourselves and our political strength to reform the fearful state of things under which the humanity of our State literally groans.

At subsequent meetings the same party nominated the above-mentioned Mr. Pierce for Railroad Commissioner, and other persons for almost all State and county offices.

The Labor-Reform party held its State Convention on January 28, 1870. This meeting—the first of the kind for that party—was attended by one hundred and ninety-five delegates, representing fifty-one towns and cities in the State. Their credentials were carefully examined. Besides, the Committee on Credentials allowed no delegates to take part in the proceedings unless they signed the following pledge:

We, the undersigned, pledge ourselves on our honor as men and citizens, that we take seats in this convention for the purpose of nominating candidates for the support of an independent political party, to be known as the Labor-Reform party of New Hampshire. In doing this we disconnect ourselves from all political parties with which we have heretofore acted, and pledge ourselves to support, on the second Tuesday of March, the candidates nominated by this convention.

The nature and object of the meeting were thus declared by the chairman of the Central Committee: "After reading the call, Mr. Palmer briefly stated that the delegates had come together actuated by one common purpose, and that was to form an independent political party. The object of that party would be the betterment of the condition of the laboring-men of New Hampshire."

Candidates of the party for State offices were nominated by ballot, to wit: Samuel Flint for Governor, and H. R. Roberts for Railroad Commissioner. A platform was unanimously adopted, as follows:

Whereas, Labor is the sole creator of wealth, and money produces nothing, and as every laborer is justly entitled to the full proceeds of his own labor and skill, it follows, as a simple act of justice, that the fruits of his labor shall not be taken from him without his own consent; and, whenever this is done, either by force, by custom, or under forms of law, it is a violation of right, and the laborer is justified in resisting it by all legal and peaceable means in his power;

And whereas, It is impossible to enrich one class in

any community, by operation of law, without making the working-classes correspondingly poor, we demand that all special legislation, for the benefit of capitalists at the expense of labor, shall be superseded by just laws, and that capital shall be made to bear its full share in defraying the necessary expenses of government: therefore.

Resolved, By the laboring-men of New Hampshire, represented by delegates in this State Convention, that we now become an organization to be known as the "Labor-Reform party of New Hampshire," for the protection and advancement of the interests of laboring-men, and not for the purpose of aiding in any manner the interests of any other political party or class of men in this State or nation.

Resolved, That we invite and welcome to our organization, the mechanic, the farmer, and laboring-men of all parties, and others, regardless of past political associations, who sympathize with us, and will support our candidates at the polls.

Resolved, That we make no war upon capital. We seek not to despoil the rich of their wealth. We only ask what belongs to us—the same protection for labor that capital enjoys, which will make no one poorer, but, on the contrary, add to the wealth and prosperity of our country, by placing within the reach of all a home, a fireside, and an altar to defend, cherish, and to worship.

Resolved, That, denouncing the repudiation of our national indebtedness as the "sum of all villainies," yet we demand that the burden of taxation shall be equalized, and its payment shall not be made in a manner that shall cause the "rich to grow richer, and the poor, poorer."

Resolved, That we are opposed to donating any more of our public lands to railroad monopolies and land speculators.

Resolved, That our national banks are moneyed monopolies skilfully contrived to enhance the wealth of the few at the expense of the many.

Resolved, That our United States notes, known as "greenbacks," are the best paper currency we ever had; and we demand their substitution for the national-bank notes.

Resolved, That we demand that the duties on all articles that we can neither grow nor produce in this country, such as tea, coffee, and other articles of general use, shall be taken off, and the taxes be drawn from the income of the accumulated capital of the country.

Resolved, That we denounce as unjust the law passed by the last Legislature of New Hampshire, which prohibits the poorer classes depositing in the savings-banks from receiving over five per cent. annually, while the capitalists and bankers are obtaining from eight to twelve per cent. per annum; thus discriminating in favor of the rich; and we demand the repeal of said law by the coming Legislature.

Resolved, That we favor the enactment of a law in this State prohibiting all incorporated and other manufacturing establishments from employing females and minors more than ten hours per day.

Resolved, That, in view of the services, sacrifices, and patriotic devotion of the soldiers who fought for our national unity, and suppressed the late great rebellion, we pledge ourselves to do all in our power to manifest our appreciation of their sacrifices and patriotic devotion in defence of our free institutions.

The whole number of votes cast in the State at the general election of March 8, 1870, was 67,838; necessary for a choice, 33,920. Stearns received 34,424; Bedel 24,992; Flint, 7,363; and Barrows 962. Stearns's majority over all was 1,010.

The vacant seats in the Senate, for which no candidate had received a majority, were filled by the Legislature.

The financial condition of the State is "sound

and prosperous." The aggregate amount of her receipts during the year, including \$75,084.18 cash on hand at the end of May, 1869, was \$1,123,028.19; of her payments, \$1,086,350.28; thus leaving a surplus of \$36,677.96 in the Treasury. Within the same period of time the revenue of the State was \$728,400.19, the expenditure \$869,945.62; the former exceeding the latter by \$358,454.57. In his last annual report, the Treasurer anticipated that "the revenue would probably be increased during the next year, while the expenses would be still further reduced." Almost all of the excess of revenue over expenses, namely, \$357,587.35, was employed in extinguishing as much of the principal of State debt. The liabilities, which on June 1, 1869, amounted to \$3,186,879.83, at the same date in 1870 were, accordingly, \$3,817,869.27. All of them bear six per cent. currency interest. The floating debt consisted entirely of State notes, the last of which became due on or before October 1, 1870. The funded debt is wholly composed of outstanding bonds, maturing at various dates in succeeding years, the remotest being September 1, 1889.

In consideration of the fact that the State pays six per cent. interest on her debt, while many towns and counties are severally paying a higher rate of interest, the Governor recommends a reduction of the State tax for 1870 to the amount of \$200,000, in order that towns and counties may impose on the people of their respective communities a proportionably higher tax, and thus be enabled to extinguish their local debts, without yet adding to the burden of taxes now weighing on their people.

Among the items of last year's revenue set down in the Treasurer's report is \$6,193.44, collected on claims against the United States. With the receipt of this sum, the accounts of the State with the Federal Government for such claims have been finally closed. She recovered on them above a million dollars: all claims, in fact, which she has presented, have been allowed, except only a comparatively small amount, which was not allowed, it seems, on reasonable grounds. The account now stands as follows:

Claims presented.....	\$1,407,507 45
Claims for bounty withdrawn..	\$374,960 00
Allowed.....	1,006,507 45
	<u>\$1,361,437 45</u>
Disallowed.....	\$36,090 00

Arms and other military stores not needed by the State were turned over to the United States, to the amount of \$74,862, which was accordingly credited to her; \$46,870 more were also credited for stores which had been turned over to the United States in 1864, 1865, and 1866, but not previously credited. The State indebtedness to the Federal Government on that account was hence reduced from \$142,241.18, to \$20,009.18.

In this connection it may be mentioned that

the law passed at the previous session, suspending for five years the annual parade and encampment of the militia in May, and in the fall, has saved some ten thousand dollars of the annual State expenses for military matters. The Adjutant-General avers in his report that this law is not calculated to benefit the State, whose interests are best promoted by maintaining a well-disciplined force ready for service at call on emergency. It has also met with disapprobation in the militia itself, among both men and officers. In response to a call issued by the Adjutant-General on August 19, 1870, the officers held a numerously-attended meeting on the 26th, when they unanimously adopted resolutions expressing their views in regard to the law, among others, the following:

Resolved, That it is the spirit of the measure, and not the dollars and cents involved, to which we object; but, notwithstanding the action taken by the Legislature, we will still continue to do our duty to the best of our ability, and use our utmost endeavors to sustain the organizations which we have the honor to represent, and make them a credit to the State.

The annual enrolment of the militia, as made by the clerks of the several towns and cities in the State, shows a total of 84,826 for 1870, against 87,414 for 1869; the population being set down at 826,899, as by the census of 1860.

By a law passed at the session of 1869, to take effect from September 15th that year, a State tax of one per cent. was laid on the premiums paid in New Hampshire to foreign insurance companies doing business in the State. From that date up to January 1, 1870, the amount collected on the said tax was \$2,628.90, besides \$500 of license tax. The Governor anticipated that about \$11,000 would accrue from this source to the State revenue in the course of the year. Fire, marine, and life insurance companies, incorporated in other States, and doing business in New Hampshire, are eighty-eight. The amount of their transactions in the State is quite large, the aggregate premium paid them in 1869 having exceeded one million dollars. About seven-tenths of this sum represented the premiums paid to less than a dozen life insurance companies.

The most abundant sources of revenue in New Hampshire, after the State tax, are the taxes received on railroads and savings-banks. During the year 1869 they yielded \$224,805.85, and \$121,684.15, respectively. The railway lines running throughout the State in all directions, and connecting her with the neighboring States, are twenty-one.

The number of savings-institutions in New Hampshire is forty-five, seven more than in the previous year. At the time of the Bank Commissioners' report, dated May 12, 1870, there were eight other savings-banks which had been chartered, but had not yet commenced operations. Their resources amounted in the aggregate to \$19,607,098.81, which is \$2,839,819.45

more than in the previous year. The whole sum of deposits in these banks was \$18,759,461.05, showing an increase of \$2,879,608.96 over the deposits of the preceding year. The surplus earnings, undivided, were reported to be \$880,140.59. The commissioners remarked that "the increase in the amount of deposits the past year has been below that of the two previous years (of about five per cent.); but add that "the average to each depositor was larger than that of any previous year."

Three banks of discount had been operating in the State with an aggregate capital of \$114,480; up to May 12, 1870, this capital had been reduced by \$62,508, and two of them were closing.

The charitable institutions are well cared and provided for by the State. The New Hampshire Insane Asylum on April 30, 1869, commenced the year with 287 patients, of whom 116 were men and 121 were women. The number since admitted to April 30, 1870, has been 180—74 men and 56 women—making the whole number under care during the year, 367; 91 persons—58 men and 38 women—have been discharged, and 12 men and 11 women have died. The new year commences with 253 under care—125 men and 128 women. The admissions exceeded those of the preceding year by 85; the discharges by 20; and the mortality by 1. Of those discharged, 37 had recovered—22 men and 15 women; 84 were in various degrees improved—18 men and 16 women; and 20—13 men and 7 women—had not improved. As to age, there were two patients under 15 years, one over 80; of the older class, 5 were between 70 and 80 years old, 14 between 60 and 70, and 12 between 50 and 60. The receipts of the asylum during the year, including the board paid for private, city, and county patients, and the appropriation for indigent patients, amounted to \$72,082.50; expenses in the same period of time were \$71,944.87.

For the blind and deaf-mutes of the State annual appropriations are respectively made by the Legislature.

The State Reform School also is in a most satisfactory condition with regard both to its management and the progress made by its inmates in their literary and industrial education. The superintendent and treasurer state their number and time of commitment as follows:

	Boys.	Girls.	Total.
In the school April 30, 1869.....	91	15	106
Committed since.....	44	5	49
Remaining in the school April 30, 1870.....	83	10	93

Average time of detention of children discharged in 1869-'70, 2 years 15 days. "The boys have a separate school from the girls, and both must attend. They are taught reading, from primer to fifth reader, arithmetic, geography, grammar, writing in copy-books, and progressive spelling." The usual public examination in this establishment took place last

year on April 18th, a large number of spectators being present to witness it. "The exercises were in the rudiments of education, singing, and declamation," all of which were thought to reflect great credit on both pupils and teachers. The children are made to spend most of the time in learning and executing profitable work of various kinds, which, as it is intended for their future benefit, is of some use to the State at present. Their moral education is also carefully attended to. Among the offences for which they were committed during last year, the following seem worthy of mention: "Attempt to set fire, 1; barn-burning, 1; house and shop breaking, 12; stealing, 21." Previous to May, 1869, 2 juvenile offenders had been committed for "stealing letters from the post-office," and 9 for "horse-stealing." The receipts of this establishment from May 1, 1869, to May 1, 1870, were \$18,072.99, including above \$3,000 paid for board of children, and \$8,000 appropriated by the Legislature; the expenses during the same time were \$15,257. By a law of 1868, the price of the weekly board for children was increased from one to two dollars.

The receipts from the labor of convicts in the State-prison for the year ending April 30, 1870, were: in shoe-shop, \$4,190.48; in cabinet-shop, \$21,546.28. The Governor says, in his message: "The experience of the year leads to the conclusion that, with proper management, the prison may be made not only self-supporting, but also a source of considerable revenue to the State." The number of convicts in confinement on May 1, 1870, was 118, of whom 111 were men and 7 women. The number received on warrants from courts from May 1, 1869, to April 30, 1870, was 32. Those discharged, or removed during the same time were: pardoned by the Governor and Council, 15; by the President, 8; discharged by expiration of sentence, and under the commutation law, 20; deceased, 2; executed, 1; escaped, 1; removed to asylum, 1; in all, 43.

For the purpose of ascertaining the variety and extent of the resources of her soil, a geological survey of the State was ordered and provided for by the Legislature at the session of 1868. This work having now been two years in progress, the State geologist has material sufficient on hand for the publication of a new topographical map of New Hampshire. In his second annual report he says: "Your geologist is prepared to recommend that measures be taken, immediately at the present session of the Legislature, to cause a new map of the State to be engraved on copper—the plates to be the property of the State, and thus available hereafter as well as for immediate use." Together with his last report he published a "map illustrating the distribution of granite, and the progress of triangulation in New Hampshire." The publication of the new topographical map was proposed to the Gen-

eral Court at the session of June, 1870, but they indefinitely postponed the matter.

The Legislature adjourned on July 2, 1870, having sat one month. Of the numerous laws enacted at this session, the greatest part were of small or local interest. "The most important were: acts to enable towns to bond their debt at a gold-bearing rate of interest; to establish a Board of Agriculture; to establish a Normal School; to enable towns to abolish school districts; and to prevent the 'watering' of capital stock in corporations."

NEW JERSEY. The Legislature of New Jersey assembled in Trenton, on Tuesday, January 11th, and adjourned on Thursday, March 17th, thus making the session the shortest that had been held in twenty years. The principal laws enacted were the following: An act authorizing the United Railroad Companies to consolidate with other companies; an act to allow canal and railroad companies to insure freight; an act to consolidate Jersey City, Hudson City, and other towns in Hudson County; an act to relieve the Erie Railway Company from municipal taxation; an act to enable the Erie Railway Company to build a branch road; and a joint resolution in favor of Congress making Jersey City a port of entry. Among the prominent measures which failed were an act to give to Jersey City a right to tax the property of the Erie Railway Company in that city, and an act to incorporate the National Railway, a proposed line of road between New York and Philadelphia. The question of adopting the fifteenth amendment to the Constitution of the United States was introduced and a ratification refused; the following being the wording of the joint resolution which was adopted, and which was signed by the Governor on the 15th of February:

Joint Resolution rejecting the amendment to the Constitution, known as the Fifteenth Amendment.

1. *Be it resolved by the Senate and General Assembly of the State of New Jersey,* That the Legislature of this State refuse to ratify, and do hereby reject, the amendment to the Constitution of the United States proposed at the third session of the Fortieth Congress, by a resolution of the Senate and House of Representatives of the United States of America, in Congress assembled, to the several State Legislatures; said amendment being in the following words, to wit:

ARTICLE XV. SEC. 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SEC. 2. The Congress shall have power to enforce this article by appropriate legislation.

2. *Resolved,* That the right to regulate suffrage is one of the reserved rights of the States, and the attempt to vest this power in Congress is revolutionary, and destructive of our present form of government.

The question of Chinese labor excited much attention, caused by the importation of a number of Chinamen to work in the laundry at Belleville. The opposition to their employment was very bitter, but it did not show itself in the form of deeds of violence, and the experiment has proved a success.

There was no State election, as the State officers are elected for two years, and those chosen in 1869 will serve until the election held in 1871. On the 8th of November elections were held for Congressmen and members of the Legislature, resulting in the choice of three Republicans and two Democrats as members of Congress, and in giving to the Republicans a majority in the State Legislature, which is constituted as follows:

	Senate.	House.	Joint Ballot.
Republicans.....	12	84	46
Democrats.....	9	26	35
Rep. majority.....	3	8	11

The joint use of the Bergen Tunnel by different railway companies has at different times been the cause of much trouble on account of quarrels between rival companies. On the 2d of December the disagreements of the Erie and the Delaware, Lackawanna, and Western Railway Companies culminated in what is known as the "tunnel war." The officers of the Delaware, Lackawanna, and Western Railway attempted to make a connection with the tracks through the tunnel by means of a new switch, and workmen were employed in laying down the "frog," when a construction car of the Erie Company was run upon it and left there, thus stopping the work and preventing the passage of trains. Large bodies of workmen were collected by the officers of the rival corporations. Many hours' travel was suspended on both roads, and a fight was imminent. The Governor of the State was summoned, and it was only when he proposed to take possession of the tunnel and compel a resumption of business that a compromise was effected, pending the decision of the courts.

At the last meeting of the Legislature, it was directed that all State officers, with whom it had been customary to make reports either to the Legislative or Executive departments of the government, should, thereafter, report to the Executive, annually, all business pertaining to their respective departments for the preceding year, closing on the 31st day of October. This law had the effect of confining reports for 1870 to a period of eleven months, inasmuch as the time embraced in previous reports included the month of November.

The financial condition of the State is very satisfactory.

The receipts for eleven months ending October 31, 1870, were.....	\$681,308 66
The disbursements.....	502,128 71
Leaving a surplus of.....	\$39,179 95

The principal items of receipts were:

From United Companies.....	\$298,198 06
" Dividends of Railroad Companies.....	28,370 00
" Interest on Railroad Bonds.....	37,864 10
" Morris and Essex Railway.....	48,796 81
" New Jersey Central.....	43,681 20
" Riparian sources.....	76,500 00
" All other sources.....	98,194 08

Total..... \$681,308 66

The War Fund had an unexpended balance

of \$1,426.81 on the 1st of December, 1869, and during the year it received \$365,030.42, making a total of \$366,457.23. The disbursements were \$365,379.73, leaving a balance of \$1,067.50.

The outstanding indebtedness of the State (War Fund), on the 31st of October, was.. \$2,996,200 00
From which deduct assets..... 1,115,605 43

Leaving an indebtedness beyond assets... \$1,880,594 56

The "State Fund," comprised as it is of bonds and stocks of railway companies, county bonds, etc., now amounts to \$1,587,870.44.

If to this amount be added the sum in the hands of the Commissioners of the Sinking Fund, an aggregate of \$2,702,975.86 is had, or an amount more than sufficient to cancel the entire obligations of the State of all kinds.

The "School Fund" has received during the year..... \$36,154 56
And disbursed..... 32,516 59

Leaving on hand..... \$4,637 97

There were enrolled in the public schools of the State during the year 161,683 pupils, or nearly one-fifth of the entire population of the State. The total number of children in the State between the ages of five and eighteen is 258,227. The total number of children attending private schools was 82,447, making, with those in the public schools, an aggregate of 194,180, or nearly four-fifths of all the children in the State between the ages named. The Farnum School at Beverly had 281 pupils. This institution has not only been self-sustaining, but, by its surplus earnings, has enabled the State to become possessed of buildings and grounds which are now valued at \$125,000, and are well located, and adapted to the purposes of their erection.

The Normal School has numbered 292 pupils during the year. No better attestation of the benefits flowing from this institution can be furnished, perhaps, than is contained in the fact of a constant and full demand by the school districts of the State for teachers from its well-educated and disciplined graduates.

The State Lunatic Asylum is entirely inadequate to meet the necessities of the State, and enlarged accommodations for the insane are imperatively demanded.

The management of the State-prison has been remarkably successful, but more room is required, and the construction of the new wing is being pushed as rapidly as possible.

The expense of maintaining the prisoners for the period of ten months was..... \$61,742 51
The earnings were..... 53,321 67

Showing a deficit of..... \$3,420 84

The State Reform School at Jamesburg is accomplishing good results.

The militia of New Jersey is a matter of State pride, and the entire number of company organizations authorized by law is now complete, save in certain counties that have omitted to avail themselves of the privilege of

raising at least one company. The cost of maintaining the militia for the year was \$26,126.55. Under the present law it is claimed that the State has "a compact, well-officered, drilled, and disciplined body of men, available at any time, for effectual service."

The pilot system of the State is in the hands of a Board of Commissioners. The number of pilots of all kinds licensed by the State is 57; number of pilot-boats, 6; number of vessels piloted during the year, 1,328.

The following is the census of New Jersey for the years 1860 and 1870:

COUNTIES.	1870.	1860.
Atlantic.....	14,098	11,798
Bergen.....	80,123	21,818
Burlington.....	53,638	49,739
Camden.....	46,038	34,437
Cape May.....	8,349	7,190
Cumberland.....	54,665	23,008
Essex.....	145,840	93,977
Gloucester.....	21,563	18,444
Hudson.....	129,063	63,717
Hunterdon.....	36,963	33,654
Mercer.....	46,826	37,419
Middlesex.....	44,970	34,812
Monmouth.....	46,186	39,346
Morris.....	43,187	34,977
Ocean.....	13,690	11,176
Passaic.....	46,416	39,013
Salem.....	23,940	23,438
Somerset.....	23,510	23,077
Sussex.....	23,168	23,846
Union.....	41,885	27,780
Warren.....	34,338	26,438
Total.....	905,794	673,033

NEW YORK. When the Legislature of New York assembled at Albany in January, 1870, its political complexion had entirely changed from that of the preceding year. It now consisted of 18 Democrats and 14 Republicans in the Senate, and 72 Democrats and 56 Republicans in the Assembly. One of its first acts was the adoption of a resolution withdrawing the assent of the State to the ratification of the fifteenth amendment of the Federal Constitution. The preamble recited the amendment and the action of Congress in proposing its ratification by the preceding Legislature, together with the fact that it had not yet become a part of the Constitution, and the resolution itself was as follows:

Be it resolved, That the above-recited concurrent resolution be, and it hereby is, repealed, rescinded, and annulled.

And be it further resolved, That the Legislature of the State of New York refuses to ratify the above-recited proposed fifteenth amendment to the Constitution of the United States, and withdraws absolutely any expression of consent heretofore given thereto or ratification thereof.

And be it further resolved, That the Governor be requested to transmit a copy of these resolutions and preamble to the Secretary of State of the United States, at Washington, and to every member of the Senate and House of Representatives of the United States, and the Governors of the several States.

Among the acts of the session was a new excise law which provides for the appointment of three commissioners in each city and town to grant licenses to sell intoxicating liquors. In incorporated villages these commissioners

consist of three members of the Board of Trustees; in towns, they consist of the supervisors and justices of the peace; in cities, with the exception of New York and Brooklyn, they are appointed by the mayors, and in the two cities named they are nominated by the mayors, and confirmed by the Boards of Aldermen. The restrictions upon the granting of licenses are contained in the following sections of the law:

SECTION 4. The Board of Excise in cities, towns, and villages, shall have power to grant licenses to any person or persons of good moral character, who shall be approved by them, permitting him and them to sell and dispose of, at any one named place within such city, town, or village, strong and spirituous liquors, wines, ale, and beer, in quantities less than five gallons at a time, upon receiving a license fee to be fixed in their discretion, and which shall not be less than thirty nor more than one hundred and fifty dollars. Such licenses shall only be granted on written application to the said board, signed by the applicant or applicants, specifying the place for which license is asked, and the name or names of the applicant or applicants, and of every person interested or to be interested in the business, to authorize which the license shall be used. Persons not licensed may keep, and, in quantities not less than five gallons at a time, sell and dispose of, strong and spirituous liquors, wines, ale, and beer, provided that no part thereof shall be drunk or used in the building, garden, or enclosure communicating with, or in any public street or place contiguous to, the building in which the same may be so kept, disposed of, or sold.

SEC. 5. Licenses granted as in this act provided shall not authorize any person or persons to expose for sale, or sell, give away, or dispose of, any strong or spirituous liquors, wines, ale, or beer, on any day between the hours of one and five o'clock in the morning, and all places licensed as aforesaid shall be closed and kept closed between the hours aforesaid.

SEC. 6. The act entitled "An act to regulate the sale of intoxicating liquors within the metropolitan police district of the State of New York," passed April 14, 1866, is hereby repealed, and the provisions of the act passed April 16, 1867, except where the same are inconsistent, or in conflict with the provisions of this act, shall be taken and construed as a part of this act, and be and remain in full force and effect throughout the whole of this State.

The law providing for the registration of legal voters was repealed for all parts of the State, excepting the city of New York, where it was left in force. A new election law was framed but not passed. New charters were adopted for the cities of Albany and New York.

The New-York city charter effects a complete return to self-government for that great municipality, all commissions appointed at the State capital being done away with. The mayor, common council, consisting of aldermen and assistant-aldermen, corporation counsel, and comptroller, are elected by the people of the city, the aldermen being chosen on a general ticket and not by districts. The Street and Aqueduct Departments are consolidated in a Department of Public Works, and a Department of Docks is created. There is also a Department of Public Parks, a Fire Department, Health Department, and Police Board. The heads of all the different departments are appointed by the mayor. The Department of Charities and Corrections remains substantially unchanged. While the charter

was pending in the Legislature, it received the support of nearly all classes, the Citizens' Association of New York presenting a memorial for its adoption, and a large number of the wealthiest citizens signing a petition for the same object. It finally passed the House by a vote of 116 to 5, and in the Senate received 80 votes, and only 2 were cast against it. The Board of Supervisors of the county of New York was abolished by a separate bill, and there is no longer any distinction kept up between the city and county government. The provisions of the charter were speedily carried into effect by the mayor, and seemed to meet with general approval.

The question of authorizing some plan by which rapid transit through the city of New York could be attained occupied considerable attention, and many schemes were submitted, none of which were adopted. A bill, for what was known as the Arcade Railroad beneath the surface of Broadway, passed both Houses, but was vetoed by the Governor, on account of the extraordinary power given to the corporators over the streets and adjoining property, and the general impracticability of the plan.

As usual, several bills were introduced, granting aid to railroads, and passed both Houses, only to be arrested by the veto of the Governor. The sum involved in these exceeded \$5,000,000.

Matters connected with public education received considerable attention in the Legislature, and an act was passed for the completion of the school system, putting all the educational institutions of the State under the control of a department of the government. An effort was made to secure the repeal of the clause of the New-York tax levy of 1869, for the aid of charity schools, but without success. The number of school-houses in the State is 11,705; the number of children attending public schools, 1,029,955; number of students attending normal schools, 4,734. The finances of the Department of Public Instruction, for the fiscal year ending September 30th, are exhibited in the following statement:

Total receipts from all sources, including balance on hand at the beginning of the year.....	\$10,819,466 45
Total expenditures.....	9,529,468 52
Amount paid for teachers' wages.....	6,501,173 87
Amount paid for school-houses, repairs, and furniture.....	1,980,546 70
The estimated value of school-houses and sites.....	20,417,329 00

The condition of the canals of the State occupied a good deal of attention, both in the Legislature and the general community. The Commercial Union, which was an association of merchants and others interested in the subject, was formed in October, 1869, for the avowed purpose of securing reform in the management of these great public works. A convention was held by members of this body and other delegates, at Rochester, on the 19th of January. Many speeches were made demanding reforms in the repairing and the gen-

eral management of the canals, the prevailing spirit of which was embodied in the following resolutions:

Whereas, The prosperity, wealth, and importance of the State of New York are mainly due to its canals and the wisdom that projected them; and the necessity for the great water-ways, to transport the commerce of the West and to develop the resources of our own State, was never greater than at the present time; and

Whereas, Owing to official mismanagement and dishonesty under the contract system, by which the canals have sunk almost to decay, and owing to the unwise adoption of high tolls, which has diverted the trade from the canals and State, the great public works are falling into decay and becoming inefficient, unsafe, expensive, and ruinous, instead of becoming every year more useful, convenient, flourishing, and popular; and

Whereas, This convention, called by the Commercial Union, and composed of all those persons in every section of our State engaged in commerce, directly or indirectly associated with the canals, is assembled to consider the foregoing matters and proclaim the feelings of the people regarding the misgovernment, errors, and corruptions, which threaten the existence of our canals; to suggest a remedy for existing evils, and to ask for a speedy relief thereof: therefore be it

Resolved, That this convention is of the unanimous opinion that upon the preservation of our canals and increase of their trade depends the future prosperity of our State.

Resolved, That the present system of repairing canals by contract is wholly inefficient and grossly corrupt; and that such contract system and laws creating it, and the outstanding contracts under it, must be abolished, if the canals and their trade are to be preserved.

Resolved, That the canals must be immediately put in a state of efficient repair, and power must be given to State officers for that purpose, and such a system for repairing the canals must be adopted as shall provide against the possibility of disastrous breaks and delays.

Resolved, That the canal tolls on such freight as is competed for by other routes of transportation must be reduced to such rates as will make such competition impossible, and secure all such freight to our canals.

Resolved, That the necessary improvement of the canals would lead naturally, and without great loss, to improvement in the general system of canal navigation.

Resolved, That the canals must be put and kept at all times needful in such a condition as shall insure safety, certainty, and speedy transportation, and that such official and legislative action should be had as will cheapen such transportation and increase the trade of the canals to their full capacity.

Resolved, That the State Central Committee of the Commercial Union be and are hereby requested and authorized to prepare and present to the Legislature immediately a bill framed so as to secure the benefits and improvements above enumerated; and that such committee, on behalf of this union and of this convention, and of the people, and their interests throughout the State herein represented, urge the passage of such bill or bills, and take all active measures in relation thereto, to secure preservation and improvement of the State canals.

Resolved, That inasmuch as the demands of the present constitution require the payment of the canal debt within the next six years, we believe that the true interests of the State require that the said debt be funded to an extent over a period of not less than eighteen years, in order that the toll-sheet may be redivided to a point which will retain the business, which, under the present excessive toll-sheet, is being forced into other channels.

Soon after, a bill was introduced in the Senate and carried through the Legislature, abolishing the Contracting Board and the whole system of repairing the canals by contract. Under the provisions of this act, persons already having contracts could surrender them, and the Canal Board, on the recommendation of the Canal Commissioners, could at any time "cancel and annul any contract or contracts for repairs of the canals heretofore made, by a resolution to be entered in the minutes of the said board." The duty of keeping the canals in repair, and superintending their general condition, is imposed upon this same Canal Board. Not only was the wasteful system of repairing the canals by contract done away with, but the tolls on the most important articles transported were reduced 50 per cent. Provision was also made for the settlement of claims against the State on account of the canals. A beginning was thus made for a reform in the management of these works which had been loudly called for during many years. The Commercial Union did not remain satisfied with what was thus far accomplished, but issued an address to the people in June, and in July held a second convention at Rochester, which adopted a large number of resolutions demanding still further improvements.

The canals of the State are now 900 miles long in the aggregate, and connect the great lakes, by way of Buffalo and Oswego, with the Hudson River at Albany. The tolls are pledged by the constitution for the specific purpose of paying, first, for their maintenance, supervision, and management; second, the indebtedness of the State on their account; third, to reimburse the Treasury for the taxation upon the people; and fourth, for the support of the government. The tonnage of merchandise carried through them in 1869 exceeded by over 1,000,000 tons the capacity of all the vessels entered at the ports of New York, Boston, Philadelphia, Baltimore, New Orleans, and San Francisco. The tolls the same year amounted to \$1,278,507.52. The principal rival lines of transportation are the Erie and the New York Central Railroads. The following is a comparative statement of the total tonnage movement over the New York State canals, New York Central Railroad, and Erie Railway, each from 1860 to 1869, inclusive:

YEAR.	New York State Canals.	New York Cent'l Railroad.	Erie Railway.
	Tons moved one mile.	Tons moved one mile.	Tons moved one mile.
1860.....	809,584,596	199,281,892	214,084,885
1861.....	858,052,507	237,828,974	251,950,197
1862.....	1,133,543,480	296,968,422	351,092,835
1863.....	1,084,180,080	312,186,796	406,670,861
1864.....	871,835,180	314,051,410	422,013,644
1865.....	843,915,779	264,993,626	383,557,818
1866.....	1,013,448,084	331,075,547	473,485,772
1867.....	958,322,953	362,180,606	549,888,422
1868.....	1,032,751,268	366,199,788	595,699,325
1869.....	912,153,611	474,419,720	817,892,190
	9,469,708,428	3,158,784,355	4,619,790,173

The following shows the cost of construction and equipment of the three lines:

		Miles.
New-York State Canals.....	\$80,710,822	900
New-York Central Railroad.....	37,603,637	593
Erie Railway.....	65,181,969	593
	\$183,446,428	2,316

The total number of tons moved one mile on all the canals and railroads in the State, in the ten years from 1860 to 1869, inclusive, was 19,662,593,782; of this amount the canals, with an average season of less than seven and one-half months in each year, transported 48 $\frac{1}{2}$ per cent., or very nearly one-half, and all the railroads, in operation the whole time, transported 51 $\frac{1}{2}$ per cent. In several of these years the canals transported more freight in the seven and one-half months than all the railroads in the State did in the whole twelve months.

The following is a statement showing the total amount of work done during the fiscal year ending September 30, 1870; also, the amount of work remaining to be done on all existing contracts upon the New-York State canals under supervision of the Engineer Department:

NAME OF CANAL.	Am't done dur'g fiscal year.	Am't remaining to be done.
Erie.....	\$305,195 23	\$894,649 23
Champlain.....	218,204 29	203,785 00
Black River.....	53,956 00	23,471 25
Oswego.....	70,559 69	154,747 75
Chenango.....	23,146 46	33,723 25
Chemung.....	70,846 60	33,222 90
Cayuga and Seneca.....	56,965 75	18,601 00
Baldwinsville.....	3,912 70	
Genesee Valley.....	186,834 57	65,320 00
Total for ordinary and extraordinary repairs.....	\$1,549,553 25	\$1,861,919 25

The canal debt, amounting to over \$2,000,000, will all fall due in 1878, or sooner. A bill passed the Legislature for the funding of this indebtedness, but, being submitted to the people for their approval at the election in November, it was rejected. The question of devising some means for navigating the canals by steam has attracted much attention, but has not found a solution.

Under the provisions of the new judiciary article of the constitution, an election was held on the 17th of May for a chief justice and six associate justices of the Court of Appeals, each party being allowed to put only four candidates for associate justices in the field. The Republicans met at Rochester on the 28th of April, and nominated Henry R. Selden for Chief Justice, and Charles J. Folger, Charles Andrews, Charles Mason, and Robert S. Hale, for Associates. They also adopted the following resolutions:

Resolved, That the Republican party of New York is determined to preserve the purity of the judicial office, and that we present to the people of the State our candidates for Judges of the Court of Appeals, with the confidence that they will bring to their offices the high qualifications of mind and character which those should possess who, in the court of last resort, interpret laws which affect the property, the life, and the liberty of the citizen.

Resolved, That while we recognize that this is not

the place to make a declaration of political principles, we think it a proper occasion to express our confidence in the economical Administration and our admiration for the illustrious soldier and patriot who is at its head, and we heartily pledge ourselves to sustain him in his efforts to restore economy in our affairs, to raise the credit of the Government, and to secure the administration of equal laws in all our relations and liberties.

The Democrats nominated Sanford E. Church for Chief Justice, and William F. Allen, Martin Grover, Rufus W. Peckham, and Charles A. Rapallo, for Associates, and adopted the following resolution:

Resolved, That while we deem it improper in a purely judicial convention to put forth a platform of political principles, yet we regard it as a fitting occasion to declare that the high mission of the Democratic party has been and is to maintain and uphold a fearless and incorruptible judiciary, faithful to the constitution and true to the high offices of justice, and that faithful to this mission we present to the electors of the State the candidates this day nominated, as men conforming to the severest standard of judicial integrity and purity, and fitted to sustain and elevate the character of our highest court, strengthen it as a bulwark of the constitution, and of the liberties of citizens.

The election resulted in the choice of the entire Democratic ticket, and Folger and Andrews, of the Republican nominees. The entire vote cast for Chief Justice was 391,478, of which Church received 239,685, and Selden 151,788, making the former's majority 87,897. The difference in the number of votes received by the other candidates of the two parties was nearly as great.

The regular Democratic Convention for the nomination of State officers was held at Rochester on the 21st of September. John T. Hoffman was renominated for Governor, Allen O. Beach for Lieutenant-Governor; Asher P. Nichols for Comptroller, John D. Furey and George W. Chapman for Canal Commissioners, and Solomon Scheu for State-Prison Inspector. The platform adopted was as follows:

Resolved, That the present Federal Administration has come short of the expectations of its own friends and of its obligations to the people, and fails to command public confidence. Its inability to devise an intelligent financial policy and the restoration of a sound currency; its failure to relieve the internal revenue system of oppressive and complicated features; its neglect to reform the tariff so as to avoid favoritism to the few at the expense of the many; its enormous gifts to capitalists of the public lands, wasting the common property of the people; its retention in office of unworthy men; its maintenance of taxes to an extent largely in excess of the amount necessary to pay the interest on the public debt, and the expenses of the Government; its feeble and undefined foreign policy, and the undisguised want of harmony between the Executive and Congress, are proofs of its incapacity to manage our public affairs for the public good, while its efforts to interfere improperly with the States, and to hinder immigrants from other lands from assuming the obligations of citizens, and its use of military force in many instances for the purpose of overawing voters, is an evidence of its willingness to degrade the rights of the people and to violate the sound principles of free government.

Resolved, That our tariff of duties, like all taxes, should have the one only lawful purpose of obtaining

necessary revenue, and that the present system of favoritism, mis-called protection, laying taxes for the special benefit of a few capitalists, is simple robbery of the rest of the people, and that, except in so far as the legitimate expenses of the Government may require, free trade is the true policy of the country.

Resolved, That we demand the simplification of our system of internal revenue, the abolition of useless and inquisitorial taxes, and the reduction of the whole volume of taxation now in excess of the wants of the Government and the exigencies of the public credit.

Resolved, That a well-regulated license system has been demonstrated to be in the interest of temperance and good morals, and that prohibition, whether by State or local legislation, is in violation of personal rights.

Resolved, That the past history of the radical party warrants us in denouncing the recent acts of Congress, interfering with State elections and intimidating foreigners seeking citizenship, as part of a vast scheme of usurpation and tyranny intended to suppress the right of free elections and to perpetuate the corrupt rulers at Washington against the will of the people.

Resolved, That we rejoice at the downfall of the imperial dynasty of France, and trust that on its ruins a republic will be firmly established; and we express the earnest hope that the people of Germany, having by heroic bravery and brilliant achievements of arms shown their overwhelming power and ability to resist and repel the assaults of their enemies, will establish, on an enduring basis, their own unity under one nationality, maintaining in Central Europe the cause of civilization and progress.

Resolved, That our sympathies and our hopes are with Ireland, Cuba, and with all subject dependencies everywhere which seek to be relieved from a domination alien to their soil and hostile to the interests of their people, and that we condemn the action of the Federal Government in withholding from Cuba all moral support, and actively aiding its enemies.

Resolved, That the importation into the United States of bodies of Asiatics, held in bondage by contractors accustomed to abject obedience and a low rate and scale of personal comfort, is detrimental to the dignity and happiness of the laboring classes, and dangerous to the peace and prosperity of the State.

Resolved, That in the case of those American citizens recently convicted of a violation of our neutrality laws and now suffering imprisonment therefor, the laws of justice and the important objects of the law having been attained, we believe that at this time an extension of clemency would be consistent with the dignity of our Government and its regard for international obligations.

Resolved, That as many of the issues which have divided good citizens in the past are now settled, we invite all conservative citizens, irrespective of former political differences, to unite with us in securing the ascendancy in the Government of the principle on which it was established, and which, while sustained by the majority of the American people, secured peace and prosperity for all.

The Republican Convention was held in the same city just one week later, when the following resolutions were adopted:

The Republicans of the State of New York, in convention assembled, report to the people the following resolutions:

Resolved, That the national Administration under President Grant has in all respects kept faith with the people, and fully established its title to their confidence and support by reducing the national debt by the unparalleled financial achievement of paying in eighteen months, in addition to all accruing interest, \$120,000,000 of principal; by restoring the national credit at home and abroad, and with rapid strides bringing near the restoration of specie payment; by

largely increasing the revenue of the country under diminished taxation through the honest enforcement of the laws, and at the same time greatly decreasing the expenses of the Government and of the collection of the revenue; by providing for the relief of the people from eighty millions of existing taxation and so limiting the subjects of revenues as to lighten the burdens of all classes of the people; by maintaining honorable peace with all nations, while carefully vindicating our own rights and advancing the name and honor of the American people among the nations of the earth; by so dealing with the Indian tribes as to avert the chronic wars which have hitherto drawn deeply from the blood and treasure of the country; by providing a system for funding the national debt by which its interest will be largely diminished and a just portion of the burden carried over to the fast-growing population of the future; by encouraging, and finally securing the adoption of that constitutional amendment by which the rights and liberties of all classes of citizens, without regard to past conditions, are placed by the fundamental law on a footing of equality; by completing the reconstruction of the rebel States by measures designed to secure justice to all, permanent peace to the country, and these it has done without display, but with a firm and quiet hand that gives promise, by continued progress in the same direction, of sure prosperity and happiness to the country.

Resolved, That the Republicans of the United States of America send congratulations to the United States of Germany, and heartily join with our German brethren in rejoicing at the righteous victories of the Fatherland, and fondly trust that the brave people who have given a republic to France may soon establish free institutions in their own country.

Resolved, That we have seen, with unmingled joy, a new republic of France, and the overthrow of the imperial rule and the swift destruction of a usurper's claim to dynastic power.

Resolved, That we sincerely sympathize with the people of Cuba in their struggle for liberty against a despotic government, in whose administration they have no share.

Resolved, That the Democratic State administration has not shown itself entitled to the confidence or support of the people of this State, because it has put itself into the hands of the close and irresponsible political corporation which has so long ruled the city of New York and made the wealth and power of that city subserve only to its own selfish and corrupt purposes, and is now seeking to make the State itself a wider field for the same abuses and corruptions. Because it has so mismanaged the canals of the State that, while the expenses are largely increased the revenues are nearly destroyed, and deficits have taken the place of the annual surplus of more than \$2,000,000, while the tolls have been reduced with such unjust discrimination as to confer the chief benefits upon the products of the other States, while many products of our own States are unrelieved. It has burdened the canals with a host of unnecessary officers, it has permitted the State claims for damages to be revived for the benefit of its partisans, and is seeking to transfer the debt now charged upon the revenues of the State to the shoulders of the taxpayers of the State alone, while other States will reap the chief benefits of the change; and because it has upheld with all its power the acknowledged frauds and crimes upon the ballot-box, through which it has been elevated to power and enabled to misgovern the State.

Resolved, That the common-school system of the State must be maintained, and that we condemn all appropriations for the establishment or maintenance of sectarian schools or institutions as hostile to the spirit of the constitution and the religious liberty and equality it secures to all.

Resolved, That so long as the people of towns, villages, and cities, have the right by law to license the

sale of intoxicating liquors in their several localities, they also by a majority of votes should have the right to prohibit such sales.

Resolved, That it is the duty of all honorable citizens and the firm determination of the Republican party to preserve the purity of the ballot-box in such a form that the vote of every lawful elector shall count as it is cast and not be nullified by fraud or crime; that we demand the enforcement of all laws, and especially such as have been enacted by Congress, and may be enacted in the Federal Courts, which are designed to prevent the violation of the naturalization and election laws of the country; that, laying aside all individual preferences, the Republicans of New York will with one heart and one mind strive to redeem our State from the rule of those whose power was first obtained by fraudulent votes and by a dishonest count of votes which were never polled.

Stewart L. Woodford was nominated for Governor, Sigismund Kaufmann for Lieutenant-Governor, Abel W. Palmer for Comptroller, Absalom Nelson and Alexander Barkly for Canal Commissioners, and John Parkhurst for Inspector of State Prisons.

The election took place on the 8th of November, when all the Democratic candidates were chosen by about 80,000 majority. The total vote for Governor was 769,864, of which Hoffman received 899,532, and Woodford 866,436. James S. Graham, Labor Reform candidate, received 1,907 votes, and Myron H. Clark, Temperance candidate, 1,459. The majority of Hoffman over Woodford was 83,096. Of the 31 members of Congress representing the State, 16 are Democrats and 15 Republicans. The Legislature of 1871 consists of 17 Democrats and 14 Republicans in the Senate, and 65 Democrats and 68 Republicans in the House.

On September 30, 1869, the total funded debt of the State was \$43,265,306.40, classified as follows:

General fund.....	\$4,004,536 40
Contingent.....	68,000 00
Canal.....	13,564,780 00
Bounty.....	25,688,000 00
Total.....	\$43,265,306 40

On September 30, 1870, the total funded debt was \$38,641,606.40, classified as follows:

General fund.....	\$4,040,026 40
Contingent.....	68,000 00
Canal.....	11,966,580 00
Bounty.....	22,567,000 00
Total.....	\$38,641,606 40

The following statement shows the amount of the State debt on September 30, 1870, after deducting the unapplied balances of the sinking funds at that date:

	Balance.	As provided for.
Gen'l fund..\$4,040,026 40	\$1,008,975 74	\$3,031,050 66
Contingent.. 68,000 00	17,962 21	50,037 79
Canal..... 11,966,580 00	2,149,884 61	9,816,695 39
Bounty..... 22,567,000 00	3,055,809 58	19,511,190 42
	\$38,641,606 40	\$32,408,144 26
The State debt, on September 30, 1869, after deducting the unapplied balances of the sinking funds, amounted to.....		\$34,848,035 73
On September 30, 1870, to.....		32,408,144 26
Showing a reduction of.....		\$2,439,891 47

The receipts of the public Treasury, on account of all funds except the Canal and Free-School Funds, for the fiscal year, amounted to \$13,846,258.39, and the expenditures to \$14,787,804.98.

The gross valuation of taxable property in the State for the year was \$1,967,001,180. The total State tax amounted to \$14,285,976, being something over seven mills on the dollar. The appointment of three commissioners to revise the laws for the assessment and collection of taxes was authorized by the Legislature of 1870, and David A. Wells, George W. Cuyler, and Edwin Dodge, were appointed by the Governor as such commissioners. The

report was made to the Legislature in February, 1871.

There are several new public institutions in course of construction in different parts of the State. The Hudson River Hospital for the Insane, at Poughkeepsie, will accommodate 400 patients when completed. The Willard Asylum for the Insane at Ovid is in limited operation, and has 338 patients. The Buffalo State Asylum for the Insane has been located on 200 acres of land given by the city. The prisons are still a source of expense to the State. The following table shows the expenditures and earnings of the three prisons for the past two years:

1869.	Sing Sing.	Auburn.	Clinton.	Female.	Asylum.	Total.
Expenditures.....	\$351,098 57	\$171,015 51	\$317,309 70	\$25,856 26	\$13,954 92	\$879,319 26
Earnings.....	264,099 13	123,717 21	267,256 79	4,064 01	654,137 63
Deficiencies.....	\$86,998 45	\$47,298 10	\$50,052 91	\$21,773 25	\$13,954 92	\$325,061 63
1870.						
Expenditures.....	\$361,901 78	\$166,979 10	\$305,905 08	\$23,553 65	\$19,076 37	\$878,611 57
Earnings.....	290,017 95	121,697 64	274,157 56	4,320 47	700,193 62
Deficiencies.....	\$71,883 83	\$45,281 46	\$31,747 52	\$19,233 18	\$19,076 37	\$178,417 35

The question of abolishing the contract system of prison-labor occupied much attention, both in the Legislature and out, and a commission was appointed to investigate the whole subject, whose report was to be submitted in 1871.

The number of insurance companies subject to the supervision of the State Insurance Department, on December 1, 1870, was 275, as follows:

New-York joint stock fire insurance companies.....	105
New-York mutual insurance companies.....	10
New-York marine insurance companies.....	9
New-York life insurance companies.....	43
Fire insurance companies of other States.....	67
Marine insurance companies of other States.....	3
Life insurance companies of other States.....	30
Casualty insurance companies of other States.....	3
Foreign insurance companies.....	6
Total.....	275

The total amount of stocks and mortgages held by the department for the protection of policy-holders of life and casualty insurance companies of this State, and of foreign insurance companies doing business within it, was \$7,412,567, as follows:

For protection of policy-holders generally, in life insurance companies of this State....	\$4,462,917 00
For protection of registered policy-holders, exclusively.....	1,559,650 00
For protection of casualty policy-holders, exclusively.....	96,000 00
For protection of life policy-holders in foreign insurance companies.....	1,042,000 00
For protection of life policy-holders in foreign insurance companies.....	216,000 00
Total deposit.....	\$7,412,567 00

On October 1st there were 61 banks doing business under State laws, whose outstanding circulation was \$2,253,987.50. There were, at the same time, 133 savings-banks, with assets estimated at \$220,000,000.

A State Reformatory has been established

at Elmira, for which \$75,000 were appropriated by the last Legislature.

The work on the new capitol at Albany has only proceeded as far as the completion of the foundation and basement, and the expense has reached \$1,612,784.98.

The number of immigrants arriving at the port of New York during the year was 211,190, distributed as follows: From Ireland, 64,163; England, 23,340; Scotland, 10,731; Wales, 545; total British Islands, 98,779; from Canada, 34; Nova Scotia, 23; Germany, 72,368; France, 2,310; Switzerland, 537; Holland, 525; Belgium, 83; Sweden, 11,549; Norway, 2,678; Denmark, 2,441; Italy, 2,081; Russia, 433, or, together with Poland, 1,110; West Indies, 140; East Indies, 13; Australia, 9; Africa, 11; Central America, 24; Mexico, 37; Japan, 1; Turkey, 20; South America, 34; Portugal, 5; and Greece, 14.

During the fifteen years from 1855 to January 1, 1870, the number of emigrants landed at Castle Garden was 2,340,928. Their destination, as stated by them, was as follows:

N. Y. and undecided. 972,267	NORTHWESTERN STATES.

NORTH CAROLINA. The reported disorders in this State during the year have been of so grave a character as to attract the attention of the General Government, and to form a topic of discussion throughout the country. This condition of affairs has been produced by the alleged outrages of the "Ku-klux," and the efforts on the part of the State government to suppress them. Many complaints were made to the State government by peaceful citizens who were the victims of violence, or threats of violence, and who earnestly sought the protection of the law. A difficulty was experienced by the civil officers in attempting to bring the guilty parties to justice through the ordinary process of the courts. In many instances grand juries refused to find bills against the offenders; and, when they were found and the parties arraigned, frequent-

ly the jury, either through sympathy with the accused, or fear of the consequences, failed to convict. "In fine," the Governor, in justification of his course in calling out the military, says, "there was no remedy for these evils through the civil law, and, but for the use of the military arm, to which I was compelled to resort, the whole fabric of society in the State would have been undermined and destroyed, and a reign of lawlessness and anarchy would have been established. The present State government would thus have failed in the great purpose for which it was created, to wit, the protection of life and property under equal laws; and, necessarily, the national Government would have interfered, and, in all probability, would have placed us again and for an indefinite period under military rule."

This condition of affairs led the Governor, early in March, to issue the following proclamation:

EXECUTIVE DEPARTMENT, RALEIGH, }
March 7, 1870.

By virtue of authority vested in me by the constitution of the State, and by virtue of an act passed at the present session of the General Assembly, entitled "An act to secure the better protection of life and property," ratified the 29th day of January, 1870, and for the reason that the civil authorities of the county of Alamance are not able to protect the citizens of said county in the enjoyment of life and property, I hereby proclaim and declare that the county of Alamance is in a state of insurrection.

On the 26th of November, 1869, a citizen of the United States, who was engaged in teaching a school in said county, was taken from his house by a band of men armed and disguised, and was by them cruelly beaten and scourged.

On the night of the 26th of February, 1870, a citizen of said county was taken from his house by a band of men armed and disguised, and was by them hanged by the neck until he was dead, on the public square in the town of Graham, near the court-house.

And more recently the postmaster at Company Shops, in said county, an officer of the Government of the United States, was compelled to flee the county, and while absent a band of men armed and disguised visited his house, with the purpose, doubtless, of taking his life; and this within a short distance of Federal troops stationed in said county, not to overawe or intimidate good citizens, but to preserve the peace and to protect the innocent and law-abiding.

In addition to these cases, information has been received at this department that peaceable and law-abiding citizens of the county aforesaid have been molested in their houses, have been whipped, shot, scourged, and threatened with further visitations of violence and outrage unless they would conform to some arbitrary standard of conduct set up by these disguised assassins and murderers.

I have issued proclamation after proclamation to the people of the State, warning offenders and wicked or misguided violators of the law to cease their evil deeds, and, by leading better lives, propitiate those whose duty it is to enforce the law. I have invoked public opinion to aid me in repressing these outrages, and in preserving peace and order. I have waited to see if the people of Alamance would assemble in public meeting and express their condemnation of such conduct by a portion of the citizens of the county, but I have waited in vain. No meeting of the kind has been held. No expression of disapproval even of such conduct by the great body of the citizens has yet reached this department; but,

on the contrary, it is believed that the lives of citizens who have reported these crimes to the Executive have been thereby endangered, and it is further believed that many of the citizens of the county are so terrified that they dare not complain, or attempt the arrest of criminals in their midst. The civil officers of the county are silent and powerless.

The laws must be maintained. These laws are over all. Every citizen, of whatever party or color, must be absolutely free to express his political opinions, and must be safe in his own house. These outrages and these violations of law must and shall cease. Criminals must and shall be brought to justice. The whole power of both governments, State and Federal, is pledged to this, and this power will be exerted. Criminals who may escape to counties adjoining Alamance will be pursued, and, if not delivered up by the civil authorities of said counties, or if sheltered or protected in said counties with the knowledge of the civil authorities, the said counties will also be declared to be in a state of insurrection.

I earnestly appeal to all good citizens to aid the civil authorities in maintaining peace and good order, and to support me in my purpose to protect life and property without regard to party or color.

Done at the city of Raleigh, this 7th day of March, 1870, and in the ninety-fourth year of our Independence.

W. W. HOLDEN, Governor.

On the 6th of June another proclamation was issued by the Governor, relating no less than seven murders in five different counties, most of which had been committed in the month of May, with other deeds of violence, all of which were alleged to have been perpetrated by the "Ku-klux." Among these was the murder of John W. Stephenson, a Republican Senator from Caswell County, in the daytime in the court-house at Yanceyville, where a large number of the citizens of the county were assembled, at a meeting of the Democratic party. The body was subsequently found with a cord around the neck, but no clew to the perpetrators of the crime was discovered. In this proclamation large rewards were offered for the arrest of the murderers, and all officers, civil and military, were urged to aid in bringing these and all other offenders to justice; and especially to discountenance, discourage, and repress, all organizations of men who ride or walk at night in disguise, with arms in their hands.

By a proclamation, dated July 8th, the Governor declared Caswell County in a state of insurrection, and subsequently, for the purpose of maintaining peace, a portion of the militia was organized under command of Colonel Kirk, and sent into the disturbed counties. This power was exercised by virtue of an act of the General Assembly, passed at the session of 1869-'70, which provides that the "Governor is hereby authorized and empowered, whenever in his judgment the civil authorities in any county are unable to protect its citizens in the enjoyment of life and property, to declare such county to be in a state of insurrection, and to call into active service the militia of the State to such an extent as may become necessary to suppress such insurrection; and in such case the Governor is further authorized to call upon the President for such assist-

ance, if any, as in his judgment may be necessary to enforce the law."

A large number of persons suspected of being implicated, directly or indirectly, in the commission of deeds of violence, were arrested by Colonel Kirk, and held subject to military authority. This action on the part of the State officers produced an excitement among the people. The Democrats and Conservatives denounced Governor Holden with much bitterness, asserting that the accounts of disorders were greatly exaggerated, that the civil authorities were fully competent to preserve order, and that the stringent measures adopted were unconstitutional and unjustifiable. As early as the latter part of March, the Conservatives issued an address to the people of the State, in which they said: "There is and has been no armed resistance—no uprising of the people—no outbreaks to disturb or hinder the full administration of the civil law. We assert that there is not a county in the State in which any sheriff or other peace-officer may not go unattended, and with perfect safety, and execute any process upon any citizen of the State. It is true that murders and other outrages have been committed, but they have not been confined to any particular locality or any political party; and, when Governor Holden represented to the President and to Congress that these acts are evidences of disloyalty, he is guilty of a wilful libel upon a people whose rights he has sworn to protect."

And, in another address to the people in July by the same party, it was asserted that "it is very generally believed, and there is much ground for such belief, as we have reason to know, that this armed movement has been set on foot by preconcert and arrangement just before an important general election in the State, for the purpose of controlling it by intimidation, or defeating it entirely, by provoking the people to a violent conflict with the armed men referred to, and then proclaiming the whole State in insurrection."

On the 16th of July, immediately after the arrests, which caused so much excitement, had been made, writs of *habeas corpus* were obtained from Chief-Justice Pearson of the Supreme Court and served upon Colonel Kirk, commanding him to produce four of the arrested parties in court. This writ Kirk refused to obey, on the ground that he was acting under orders from the Governor not to deliver up the prisoners to the civil authorities. Upon this refusal of Colonel Kirk to make return to the writ, Chief-Justice Pearson communicated with Governor Holden to ascertain whether the course of Colonel Kirk was in accordance with his orders, and received the following reply:

EXECUTIVE OFFICE, RALEIGH, July 19, 1870.

To the HON. RICHMOND M. PEARSON, Chief Justice of North Carolina.

SIR: Your communication of yesterday concerning the arrests made by Colonel Geo. W. Kirk, together with the enclosed, is received.

I respectfully reply: That Colonel Geo. W. Kirk made the arrests and now detains the prisoners named by my order. He was instructed firmly but respectfully to decline to deliver the prisoners. No one goes before me in respect for the civil law, or for those whose duty it is to enforce it, but the condition of Alamance County, and some other parts of the State, has been and is such that, though reluctant to use the strong powers vested in me by law, I have been forced to declare them in a state of insurrection.

For months past there has been maturing in these localities, under the guidance of bad and disloyal men, a dangerous secret insurrection. I have invoked public opinion to aid me in suppressing this treason! I have issued proclamation after proclamation to the people of the State to break up these unlawful combinations! I have brought to bear every civil power to restore peace and order, but all in vain! The Constitution and laws of the United States and of this State are set at naught; the civil courts are no longer a protection to life, liberty, and property; assassination and outrage go unpunished, and the civil magistrates are intimidated and are afraid to perform their functions.

To the majority of the people of these sections the approach of night is like the entrance into the valley of the shadow of death; the men dare not sleep beneath their roofs at night, but, abandoning their wives and little ones, wander in the woods until day.

This civil government was crumbling around me. I determined to nip this new treason in the bud.

By virtue of the power vested in me by the constitution and laws, and by that inherent right of self-preservation which belongs to all governments, I have proclaimed the county of Alamance in a state of insurrection. Colonel Geo. W. Kirk is commanding the military forces in that county, made the arrests referred to in the writ of *habeas corpus*, and now detains the prisoners by my order.

At this time I am satisfied that the public interests require that these military prisoners shall not be delivered up to the civil power.

I devoutly hope that the time may be short when a restoration of peace and order may release Alamance County from the presence of military force and the enforcement of military law. When that time shall arrive, I shall promptly restore the civil power.

W. W. HOLDEN, Governor.

A motion was now made in the Supreme Court in behalf of the prisoners "for an attachment against G. W. Kirk for failing to make return," and "for a writ to be directed to the sheriff of some county, commanding him with the power of the county, if necessary, to take the prisoners out of the hands of said Kirk, and have him before the chief justice."

While these proceedings were pending, Governor Holden addressed the following letter to President Grant asking that Federal troops be sent into the State:

EXECUTIVE DEPARTMENT OF NORTH CAROLINA, }
RALPH, July 20, 1870. }

To the President of the United States.

SIR: I have declared the counties of Alamance and Caswell, in this State, in a state of insurrection. I have power to do this under the constitution of this State, and in pursuance of laws passed by the General Assembly. I have embodied a considerable number of the militia, have occupied the counties above named, and have made a number of important arrests. Four of the persons arrested have sued out writs of *habeas corpus*, and the matter has been argued for several days before Chief-Justice Pearson of the Supreme Court. It is expected that the Chief Justice will deliver his opinion on Friday, the 22d inst.

I have no means of knowing, with certainty, what his decision will be, but I incline to the opinion that he will substantially sustain me. There are threats of resistance, whatever his opinion may be. Colonel Kirk, who commands at Yanceyville, apprehends resistance, and an attempt to rescue the prisoners. He has 860 resolute men, native white loyalists, many of whom are ex-Federal soldiers. But the Ku-klux largely outnumber them in the counties referred to, and, if they should take the field and be joined by others from other counties, the State troops would certainly be in peril.

I have in Raleigh one hundred colored troops, sixty white troops, and at Hillsborough fifty white troops, and in Gaston County one company of sixty. My whole available force is not more than six hundred.

I think it very important that a regiment of Federal troops be at once sent to this State, and that the Federal troops now here be ordered to come to my aid promptly. The defeat of the State and Federal troops in any conflict at this crisis would be exceedingly disastrous. It may be that the crisis will pass, and that I may be able to punish the guilty without encountering resistance. I have deemed it my duty in this emergency to acquaint you with the condition of things, so that you may judge of the expediency of ordering that I be further aided and supported by Federal troops.

I am satisfied that important disclosures will be made as to the Ku-klux organization during the progress of the investigation before the military. It is believed from evidence already in hand that ex-President Johnson is at the head of the order, and that General Forrest is the commander for Tennessee and North Carolina. The organization is wide-spread and numerous, is based on the most deadly hostility to the reconstruction acts, and is in all respects very unfriendly to the government of the reconstructed States and to the United States.

I have the honor to be, with great respect,

Your obedient servant,

W. W. HOLDEN, Governor.

To which the President replied as follows:

LONG BRANCH, N. J., July 22, 1870.

Hon. W. W. Holden, Governor of North Carolina.

DEAR SIR: Your favor of the 20th inst., detailing the unsettled and threatening condition of affairs in North Carolina, is just received, and I will telegraph to the Secretary of War immediately to send more troops to the State without delay. They may be used to suppress violence and maintain the laws, if other means should fail.

With great respect, your obedient servant,

U. S. GRANT

On the 22d of July, the opinion of the Court was delivered by Chief-Justice Pearson, who said: "The privilege of the writ of *habeas corpus* has not been suspended by the action of his Excellency; that the Governor has power under the constitution and laws to declare a county to be in a state of insurrection, to take military possession, to order the arrest of all suspected persons, and to do all things necessary to suppress the insurrection, but he has no power to disobey the writ of *habeas corpus*, or to order the trial of any citizen, otherwise than by jury. According to the law of the land, such action would be in excess of his power."

The motion for an attachment against Colonel Kirk was denied, on the ground that that officer, acting under orders of the Executive as commander-in-chief of the militia, had a "sufficient excuse" for refusing to deliver up the

prisoners to the civil authorities. In regard to the second branch of the question, that the power of the county be called out if necessary to aid the sheriff in taking the petitioners by force out of the hands of Kirk, the Court was of opinion that "the power of the county, or *posse comitatus*, means the men of the county in which the writ is to be executed; in this instance, Caswell and that county are declared to be in a state of insurrection. Shall *insurgente* be called out by the person who is to execute the writ, to join in conflict with the military forces of the State?" The Chief Justice, asserting that the whole physical power of the State was by the constitution under the control of the Governor, that the judiciary had "only a moral power," and that "by the theory of the constitution there can be no conflict between these two branches of the government," concluded by saying: "The writ will be directed to the marshal of the Supreme Court, with instructions to exhibit it and a copy of this opinion to his Excellency the Governor. If he orders the petitioner to be delivered to the marshal, well; if not, following the example of Chief-Justice Taney, in Merri-man's case (see ANNUAL CYCLOPEDIA for the year 1861, page 854), I have discharged my duty; the power of the judiciary is exhausted, and the responsibility must rest on the Executive."

Upon the presentation of this writ by the marshal to the Governor, the latter refused to allow the surrender of the prisoners, saying: "I do not see how I can restore the civil authority until I suppress the insurrection, which your Honor declares I have the power to do; and I do not see how I can surrender the insurgents to the civil authority until that authority is restored. It would be mockery in me to declare that the civil authority was unable to protect the citizens against the insurgents, and then turn the insurgents over to the civil authority."

As the State courts now seemed to be powerless in the matter, the friends of the petitioners sought relief in the United States Court, and obtained from Judge Brooks of the District Court a writ of *habeas corpus* commanding Kirk to produce before him the bodies of the prisoners. To avoid any conflict between the State and Federal authorities, Governor Holden telegraphed to President Grant as follows, for instructions:

STATE OF N. CAROLINA, EXECUTIVE DEPARTMENT, }
RALPHIGH, August 7, 1870.

To the President of the United States.

SIR: The Chief Justice of the Supreme Court of this State, sustained by his Associate Justices, has decided that I have a right to declare counties in a state of insurrection and to arrest and hold all suspected persons in such counties. This I have done.

But the District Judge, Brooks, relying on the fourteenth amendment and the act of Congress of 1867, page 885, chapter 28, has issued a writ of *habeas corpus*, commanding the officer, Kirk, to produce before him the bodies of certain prisoners detained by my order.

I deny his right thus to interfere with the local laws in murder cases. I hold these persons under our State laws and under the decision of our Supreme Court Judges who have jurisdiction of the whole matter, and it is not known to Judge Brooks in what manner or by what tribunal the prisoners will be examined and tried.

The officer will be directed to reply to the writ that he holds the prisoners under my order and that he refuses to obey the writ. If the marshal shall then call on the *posse comitatus* there may be a conflict; but if he should call first on the Federal troops it will be for you to say whether the troops shall be used to take the prisoners out of my hands.

It is my purpose to detain the prisoners unless the Army of the United States, under your orders, shall demand them.

An early answer is respectfully requested.

W. W. HOLDEN, Governor.

In reply to these inquiries, Attorney-General Ackerman, to whom the question was submitted by the President, held that the United States District Judge could not "refuse to issue the writ, if the petition makes out a case for it under the *habeas corpus* act of 1867, 14 Statutes, 885," and advised that the "State authorities yield to the United States Judiciary," adding, that "if the return be uncontroverted, or the facts appearing on proof to the judge, after a denial by the petitioner, show the arrests to have been made under lawful State authority, he will remand the prisoners."

In accordance with this opinion, Governor Holden ordered Colonel Kirk to obey the writs issued by Chief-Justice Pearson, in order that the cases might be tried in the State Court. The proceedings in the United States Court were therefore discontinued. Subsequently, on the 19th of August, the prisoners appeared before Chief-Justice Pearson, and, on probable cause being shown of their complicity in certain outrages charged against them, were recognized to appear at the Superior Court of their respective counties.

The disorders and excitement that had been prevalent for so many months now began to subside, and comparative tranquillity was restored among the people. Hence early in November the Governor issued the following proclamation:

EXECUTIVE DEPARTMENT, RALPHIGH, Nov. 10, 1870.

Be it known, that the proclamation issued from this department, dated March 7, 1870, declaring the county of Alamance in a state of insurrection, and the proclamation issued from this department, dated July 8, 1870, declaring the county of Caswell in a state of insurrection, are hereby revoked, and it is hereby declared that said proclamations shall not have further force or effect.

I take this occasion, as Chief Magistrate of North Carolina, to express my gratification at the peace and good order now prevailing in the counties of Alamance and Caswell, and generally throughout the State. I trust that peace and good order may continue; that partisan rancor and bitterness may abate; that our people of all classes and conditions may cultivate harmony and good-will among themselves; and that the whole people of the State, without respect to party, may unite fraternally and cordially to build up North Carolina, and to elevate her to the proud eminence which she once occupied as a member of the American Union.

Done at our city of Raleigh, this 10th day of November, one thousand eight hundred and seventy, and in the year of the Independence of the United States the ninety-fifth.

[L. s.]

W. W. HOLDEN, Governor.

On the 4th of August an election for members of Congress, Attorney-General, and members of the Legislature, was held, and resulted in the success of the Democratic party. Five Democratic and two Republican members of Congress were chosen. Wm. M. Ship, the Democratic candidate for Attorney-General, was elected by a majority of 4,088, in a total vote of 170,616. The classification of the Legislature elected is as follows: Democrats, 82; House, 75; Republicans, 18; House, 45.

This body assembled at Raleigh on the 21st of November, and was in session at the close of the year. One of the first measures was to elect a United States Senator for the full term, when Zebulon B. Vance, a Democrat, and Governor during the war, whose political disabilities had not been removed, was chosen. Early in the session the fierce opposition that had been arrayed against Governor Holden during the year appeared in the form of a movement to depose him from office, and articles of impeachment were preferred by the House to the Senate. These articles, which were adopted on the 14th of December by a vote of 60 to 43, were eight in number, and had reference to his official acts in the suppression of disorders during the year. Article first charges that William W. Holden did, on the 7th day of March, 1870, "proclaim, and declare that the county of Alamance, in said State, was in insurrection; and did, after the days and times last aforesaid, send bodies of armed, desperate, and lawless men, organized and set on foot without authority of law, into said county, and occupy the same by military force and suspend civil authority, and the constitution and laws of the State; and did, after the days and times last aforesaid, and before the time of impeachment in this behalf, through and by means of such armed, desperate, and lawless men, arrest many peaceable and law-abiding citizens of said county of Alamance, then and there about their lawful business; and did detain, hold, imprison, hang, beat, and otherwise maltreat and injure many of them, when he well knew that such and said proclamation was utterly groundless and false, and that there was no insurrection in said county, and that all civil authorities, both State and county, in said county, were peaceably and regularly in the full, free, and unrestrained exercise, in all respects, of the functions of their offices, and the courts were all open, and the due administration of the law was unimpeded by any resistance whatsoever."

The remaining articles contain charges for having declared Caswell County in a state of insurrection, and making numerous other arrests; for having prevented the "delivery of such arrested persons to the civil authorities in

obedience to writs of *habeas corpus*, issued from the Supreme Court;" for having "unlawfully recruited, armed, and equipped as soldiers, a large number of men, to wit, five hundred men and more, and organized them as an army," and for having caused to be expended, for the support of said militia, about \$80,000 from the State Treasury. More than one hundred names of persons who had been arrested by order of the Governor were set forth in the articles of impeachment. Upon these charges the trial was begun before the Senate, organized as a court of impeachment, Chief-Justice Pearson presiding, and was pending at the close of the year.

The views of the colored members of the Legislature on the subject of impeachment were published in an address "to the colored people throughout the State," denouncing, in strong terms, the proceedings against the Executive. "The only offence of Governor Holden," says the address, "and that which has brought down the wrath of the dominant party upon him, is that he thwarted the designs of a band of assassins, who had prepared to saturate this State in the blood of the poor people on the night before the last election, on account of their political sentiments, and to prevent them from voting. Because he dispersed this murderous host, organized by the so-called Conservative party, they propose to destroy him. First, they propose to suspend him, then to go through with a mock trial before the Senate, as they have already done before the House, where a true bill has been found without taking testimony."

The Legislature which was in session at the beginning of 1870 continued until the 28th of March. Very little business of general interest was transacted at this session. The question of calling a Constitutional Convention was much discussed, and reported on favorably, but no final action was taken thereon.

The bonded debt of the State is about \$30,000,000, classified as follows:

Old, or ante-war bonds.....	\$3,378,900
Renewed bonds, issued during the war.....	1,138,000
Special tax bonds, issued since the war.....	11,407,000
Bonds issued since the war, not special tax....	8,986,845
Total.....	\$29,900,045

The railroad bonds issued during the war are not marketable; but it is contended that they were not issued in aid of the war, and ought to be recognized. To pay the interest (6 per cent.) on the above debt, and to meet the necessary expenses of the State government, will require an annual tax of \$2,500,000.

The revenue from all sources for the support of public schools, for the year ended September 30, 1870, was \$152,281.82. The amount paid during the same period for teachers' wages was \$42,862.40. There have been schools during the past year in 74 of the 90 counties. There are about 800 townships in the State, and schools have been kept in 315 of these, making about 1,250 schools, which are

attended by about 45,000 children; of this number, 32,650 were white, and 12,350 colored. The number of school-houses is 709; and the average monthly pay of teachers is \$24. The Insane Asylum has been conducted with ability and success. It is now crowded to repletion, and there are hundreds of insane throughout the State who should be cared for, and who cannot be received into the institution for want of room. There are now 220 convicts in the State Penitentiary, "and there are probably 200 more," says the Governor, "in the various county prisons who should be in it." The contractors are progressing rapidly with the main building, which will be completed as soon as the resources of the State will allow.

As a large proportion of the people of North Carolina are farmers, the subject of agriculture is one of prime importance, and in no year since the war has there been more earnestness to increase the productive capacity of the land than during the last. But an obstacle exists in the lack of thorough knowledge of the principles of successful farming; and it is thought that the State would find it greatly to her advantage to afford facilities for instruction in agriculture. The Governor called the attention of the Legislature to the importance of this subject: "It

is the duty," he says, "as it is to the interest, of every State and every community, to encourage the acquisition of knowledge in farming. The simple elements of agriculture should be taught in all our schools, both public and private, as well as in the university and colleges. I respectfully and earnestly appeal to you, gentlemen, to give this subject your attention, and to devise such means as may be in your power to spread the knowledge of agriculture among the people, and to benefit the farming interests." The State fairs and the county fairs should be encouraged. An annual appropriation of \$25,000 to these fairs would repay the State fourfold in increased production, and in the excellence of production of all kinds."

The subject of a constitutional convention began to be considered at the close of the year. One of the contemplated objects was to revise the present constitutional provisions relating to public schools. The question of a convention would probably be submitted to a vote of the people, and at the same time delegates be elected, who would act if the convention should be approved.

The following is the federal census of North Carolina, taken in the years 1860 and 1870:

COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.

NORTON, DANIEL S., a United States Senator, born in Mount Vernon, Ohio, April 12, 1839; died in Washington, D. C., July 14, 1870. He was educated at Kenyon College; served one year in the war with Mexico, in the Second Ohio Regiment, and subsequently turned his attention to the study of law. In 1850 he went across the plains to California, spending a part of that and the following year in Nicaragua. Returning to Ohio, he renewed the study of law, was admitted to the bar in 1852, and, after practising his profession in that State till 1855, removed to Minnesota. In 1857 he was elected

to the State Senate, and served in both branches of the State Legislature during the years following until 1855; in that year he was chosen as United States Senator for the term ending in 1871. Senator Norton was a delegate to the Philadelphia National Union Convention in 1866, and in Congress served on the Committees on Indian Affairs, Engrossed Bills, Claims, Territories, Patents, and the Patent-Office. Though elected to the Senate as a Republican, he had ceased to act with that party in 1868, and on most questions of national policy voted with the Democrats.

OBITUARIES, AMERICAN. *Jan. 1.*—BURGESS, Rev. EBERNEZER, a Congregationalist clergyman, and for fifteen years a missionary of the American Board to the Mahrattas in Western India; died at Newton Centre, Mass., aged 64 years. He was connected with the mission to the Mahratta people, in Western India; from 1839 to 1854, stationed at Ahmednugger until 1851, and then at Satara. He returned, finally, to the United States in 1854, with his motherless children, having buried two wives in India, and was released from his connection with the Board in 1855. Since his return, he has been engaged on an elaborate work upon the antiquity of man, for which his studies had eminently qualified him, and which at the time of his death was nearly completed.

Jan. 3.—GRANDVAL, JEAN HENRY GUIGNON DE, formerly a captain in the Royal Army of France, and of late a successful teacher of young ladies in a seminary established by him in Hoboken, N. J.; died there. He was a native of La Rochelle, France, and, upon the accession of Louis Philippe, was compelled to flee to this country.

Jan. 3.—HOPKINS, BENJAMIN F., a Wisconsin politician; died at Madison, Wis., aged 40 years. He was born in Washington County, N. Y., in 1829, emigrated early to Wisconsin, and, entering into business pursuits, became notably successful. He was private secretary to the Governor one term, a member of both branches of the Legislature, elected to Congress in 1866, and reelected in 1868, serving on the Committees on Enrolled Bills and Public Lands.

Jan. 3.—LOZIER, Mrs. CHARLOTTE DENMAN, M. D., a skilful and accomplished female physician, professor, and medical writer; died in New York City, aged 26 years. At a very early age she entered upon the study of medicine, giving all her energies to the task of overcoming the obstacles in the way of her advancement in the science, and comprehending with wonderful aptitude the principles involved in the art. Her days were spent in the class-rooms and hospital, and her nights in anatomical and physiological investigations. She took an active part in the struggle to secure for female students the privilege of attending the *clinics* of Bellevue Hospital, leading them herself to the wards and operating-rooms. She was an able lecturer, a skilful practitioner, and an active and energetic worker in all movements for the elevation of woman.

Jan. 3.—WILLIAMS, Brevet-Colonel THOMAS C., U. S. A., commanding the post at Little Rock, Ark.; died there of congestion of the brain. He was a native of Philadelphia, and was appointed from the volunteers.

Jan. 4.—MCGROARTY, General STEPHEN J., a lawyer of Cincinnati, who volunteered in the late war, and for his faithful service was promoted to the rank of brigadier-general, and brevet major-general of volunteers; died in Cincinnati. He was a member of the bar of Hamilton County, and was commissioned captain of the Tenth Ohio three-months regiment, April 18, 1861. He was a gallant and efficient officer, and lost an arm in the service. Being of Irish birth, he had great influence over the Irish citizens of Cincinnati in securing their support of the war.

Jan. 5.—GOGGIN, WILLIAM L., a Virginia politician, died in Richmond, aged 63 years. He was born in Bedford County, Va.; received an academic education, was admitted to the bar at the age of twenty-one, and practised in several of the Circuit and District Courts. In 1836 he was elected to the Virginia Legislature by the Whigs, and declined a reelection the following year. In 1839 he was elected a Representative to Congress from Virginia, where he served until 1847. During his last term he was chairman of the Committee on Post-Offices and Post-Roads. He was one of the West Point visitors during Fillmore's Administration. In 1859 he was the Whig candidate for Governor of Virginia, but was defeated by John Letcher. The latter portion of his life was devoted to the practice of his profession, in conjunction with agricultural pursuits.

Jan. 6.—MOWER, JOSEPH A., Brevet Major-General, and Colonel Thirty-ninth Infantry U. S. A.; died at New Orleans, of congestion of the lungs. He was a native of Vermont, but entered the army from Connecticut, as a private soldier in the company of Engineers in the Mexican War, receiving his first commission June 18, 1855. During the civil war he was in constant service. At Corinth he bore a conspicuous part, and, having been severely wounded, was for a time in the hands of the enemy. During the Vicksburg campaign he attracted the attention of the commanding general by his personal bravery. From 1868 to the close of the war he was with General Sherman, rising through all grades to the command of the Twentieth Corps. Since the death of General Rousseau, he has been in command of the Department of Louisiana, embracing the States of Louisiana and Arkansas.

Jan. 9.—HUYLER, JOHN, a prominent citizen and political leader, of Hackensack, N. J.; died of injuries received in an encounter with a drunken man on the bridge at that place, aged sixty-one years. He was a native of New-York City, where he resided until 1846. He was president of the Board of Supervisors of Bergen County; member of the New Jersey

Legislature from 1850 to 1854; Speaker of the House, 1853-'54; Judge of the New Jersey Court of Appeals, 1854-'57; member of Congress, 1857-'59; and was an earnest advocate of the Lecompton Bill. Judge Huyler was a man of strict integrity and large wealth.

Jan. 9.—**RISLEY, General ELIJAH**, a prominent citizen of Fredonia, N. Y.; died there, aged 82 years. He was born in East Hartford, Conn., May 7, 1787; removed in early youth to Cazenovia, Madison County, N. Y., and subsequently to Fredonia, where in 1831, in connection with his brothers, he established the business of raising garden-seeds, which business they carried on for a period of a quarter of a century with great success. In 1848 he was elected, on the Whig ticket, as Representative in Congress from his district. He was particularly interested in educational matters, and held many important offices of trust in his township.

Jan. 10.—**CHASSELS, Rev. DAVID, D. D.**, a Presbyterian clergyman and teacher; died at Holland Patent, aged 83. He was born in Glasgow, Scotland, April 30, 1787; but at the age of eight years emigrated with his parents to the United States, and soon after settled in Vermont. In 1810 he graduated at Dartmouth College; was for some years principal of the academy in Peacham, Vt., and subsequently of the academy in Cambridge, N. Y.; was ordained by the Presbytery of Troy in 1820; took charge of the Fairfield Academy in the following year, and afterward of the academy at Herkimer. He was never installed pastor, but he frequently served as a stated supply. He was a fine classical scholar and a thorough teacher.

Jan. 11.—**DUNN, Rev. OLAFSON**, an Episcopal clergyman; died in Elizabeth, N. J., aged 75 years. He was born in Woodbridge, in 1795; graduated at Union College in 1818, and at the General Theological Seminary in 1820; was ordained priest in the same year, and became rector of a church at Elizabeth, which charge he held until his death.

Jan. 12.—**ROOR, P. SHELDON**, an eminent lawyer and judge, of Oneida County, N. Y.; died in New Hartford, aged 60 years. He was formerly a law-partner of Horatio Seymour, clerk of the county, and for fourteen years judge of the County Court.

Jan. 13.—**BIGELOW, LAFAYETTE J., Jr., A. M., LL. B.**, an eminent lawyer and journalist, died at Watertown, N. Y., aged 35 years. He was born in the town of Ellisburgh, Jefferson County, N. Y., May 13, 1835; entered Union College, Junior year, in the fall of 1854; left there at close of the year, and became a student in the law department of the university at Albany; graduated there in 1857, receiving the degree of LL. B.; in May, 1857, he removed to Watertown, the county seat of his native county, and commenced the practice of law; in the fall of the same year, he was chosen special Surrogate, and in the fall of

1862 was elected to the office of District Attorney of his county, a position which he had held for two years previous, by appointment of the court; in November, 1863, retiring from the law, except to serve out his term as District Attorney, he purchased an interest in the *Daily and Weekly Reformer* (published at Watertown), of which he became one of the editors and proprietors. He was an active Republican, and in 1867-'68 was a member of the Assembly, serving on the Committee on Colleges, Academies, and Common Schools.

Jan. 14.—**BARRY, JOHN S.**, died at Constantine, Mich., aged 68 years. He was a native of Vermont, but in 1832 removed to Michigan, where he entered actively into political life as a Democrat. In 1836 he became a State Senator, and again in 1840. In 1841 he was elected Governor, serving four years, and reelected in 1852, when he served two years. During his successful campaigns he sustained the "Wilmot Proviso," intended to prohibit slavery in the Territories. In 1860 he was again a Democratic candidate for Governor, but was defeated by the Republican candidate. During the late war he was in sympathy with the ultra wing of the Democratic party.

Jan. 14.—**BLANCHARD, Rev. AMOS, D. D.**, a Congregationalist clergyman; died in Lowell, Mass., aged 68 years. He was born in Andover, Mass., March 7, 1807; studied at Phillips Academy, graduated at Yale College in 1826, studied theology at Andover and at New Haven, and in 1829 was ordained pastor of the First Congregational Church in Lowell, Mass.; in 1845 he was installed pastor of the Kirk Street Congregational Church in the same city, and died in that office. He received the degree of doctor of divinity from Williams College in 1852.

Jan. 15.—**BIRNEY, Captain JAMES G., U. S. A.**, an Army officer of great bravery, died at Fort Davis, Texas, aged about 33 years. He was a son of the Hon. James G. Birney, a noted antislavery leader, once a slaveholder, who was the candidate of the Liberty party for the presidency in 1844. Captain Birney was born in Michigan, and was an early volunteer in the late war, serving for a time on the staff of his kinsman, General David D. Birney, subsequently commanding a regiment, and then a brigade. After the war he received an appointment as first-lieutenant in the regular Army, and was very soon promoted to a captaincy.

Jan. 15.—**ROBERTS, Rev. GEORGE O. M., M. D., LL. D.**, a distinguished Methodist clergyman and physician; died in Baltimore, aged 64 years.

Jan. 18.—**RADFORD, WILLIAM**, died at Yonkers, N. Y., aged 57 years. He was born in Poughkeepsie, Dutchess County, N. Y., June 24, 1814, received a good common-school education, settled in New York in 1829, and was for a long time engaged in mercantile pursuits. In 1862 he was elected a Representative from New York to the Thirty-eighth Congress, serv-

ing on the Committee on Public Buildings and Grounds, and was reelected to the Thirty-ninth Congress, serving on the Committees on Elections and the Postal Railroad to New York.

Jan. 22.—**HARDENBURGH, REV. JAMES B.**, D. D., a Reformed Dutch clergyman and author; died in New York, aged 70 years. He was born in Rochester, Ulster County, N. Y., graduated at Union College in 1821, and at the Seminary of the Reformed Dutch Church, was pastor of the First Reformed Dutch Church, New Brunswick, N. J., and subsequently at Rhinebeck, Philadelphia, and New-York City.

Jan. 22.—**JONES, REV. GEORGE**, chaplain U. S. Navy, an Episcopal clergyman and author; died at the Naval Asylum, Philadelphia, aged 70 years. He was born in York, Pa., in 1799; graduated at Yale College in 1820, was two years teacher on board the U. S. frigates *Brandywine* and *Constitution*, and the two years following was a tutor in his college. Having studied theology at Middletown, Conn., he was ordained at Hartford in 1831, and officiated for a time in the former city. In 1833 he was appointed chaplain in the U. S. Navy, and at the time of his death was stationed at the asylum in Philadelphia. He was the author of "Sketches of Naval Life" (1829); "Excursions to Cairo, Jerusalem, Damascus, and Balbec" (1836); "Life Scenes from the Four Gospels," and "Life Scenes from the Old Testament." He was also known in science by his observations on the Zodiacal Light, which fill one volume of the report of the U. S. Japan Expedition.

Jan. 23.—**PLACIDE, HENRY**, a celebrated comedian; died at Babylon, L. I., aged 70 years. He was born in Charleston, S. C., September 8, 1799. His father being manager of the Charleston Theatre at that time, he made his first appearance there, when only nine years old, as David, in "The Blind Bargain." He was a favorite actor in the Southern cities, and was at one time manager of the Old Park Theatre in New York. His delineations of character were remarkably successful, especially in "old men" parts.

Jan. 23.—**STEWART, WILLIAM F.**, Lieutenant-Commander U. S. N., a brave and able officer of the U. S. steamer *Oneida*, was lost in the collision with the *Bombay*. He was a native and resident of Pennsylvania, and had been in the service since September, 1857. He was promoted to be lieutenant-commander, July, 1866.

Jan. 23.—**WILLIAMS, EDWARD P.**, commander of the U. S. steamer *Oneida*, a gallant and faithful officer, was lost in the collision of the British steamer *Bombay* with the *Oneida* 20 miles from Yokohama. He was a native and resident of Maine, and had been in the naval service since September, 1847. He was distinguished for his bravery in the late war, and was promoted to be commander in July, 1866. In the sad disaster which caused his death, his conduct was noble and gallant in the extreme.

His own life might have been saved, but, finding that his men must perish, as the boats could hold only a small part of them, he refused to leave the ship.

Jan. 25.—**BATES, DAVID**, a Philadelphia broker and author; died in that city, aged about 60 years. He was the author of a number of fugitive poems of great merit, among the most popular of which were, "Speak Gently," and "Childhood." The only collection of his poems ever published was named the "Eolian," and published in 1849.

Jan. 27.—**FAXON, CHARLES O.**, a journalist of considerable ability, editor of Southern papers during the war; died in Clarksville, Tenn. He was formerly editor of the *Louisville Courier* and of the *Chattanooga Rebel*.

Jan. 31.—**MCLEOD, ALEXANDER**, a New-York politician; died in that city, aged 37 years. He was born in New-York City in 1832, and began his business-life as a merchant. In 1856 he entered upon a political career, and was actively engaged in the exciting events of the Fremont campaign. He was twice—in 1862 and 1868—elected member of Assembly. He was one of the organizers of the Eighty-fourth Regiment, Colonel Conkling, in 1863, and served with his command in the field in 1863-'64. He was a member of the Republican General Committee of New-York, and at the time of his death held the position of Assistant Registrar in the Croton Aqueduct Department.

Feb. 1.—**MONCRIEF, JAMES**, Judge of the Superior Court of New York; died in New-York City, aged 48 years. He was born in Harrison County, Ohio, September 16, 1822; studied law in New York, was admitted to the bar of the Supreme Court of the United States in 1847, and in 1858 was elected Judge of the Superior Court, which position he held seven years.

Feb. 3.—**BINNEY, HORACE, JR.**, a lawyer and eminent belles-lettres scholar; died in Philadelphia, Pa., aged 61 years. He was a son of the Hon. Horace Binney, LL. D., and was born in Philadelphia, January 21, 1809. He graduated at Yale College in the class of 1828, studied law with his father, and practised his profession in his native city from his admission to the bar in 1831, confining himself mostly to chamber consultations. In early life he took a deep interest in municipal politics. At the outbreak of the late war he at once came forward to devote his time and energies to the service of the Government. He was president of the Philadelphia Associates of the Sanitary Commission, one of the founders of the Union League of the city, and president of that association at the time of his death. A memoir of Mr. Binney, read before the American Philosophical Society, May 6, 1870, by Charles J. Stillé, LL. D., has been published.

Feb. 3.—**TRIMBLE, ALLEN**, formerly Governor of Ohio; died at Hillsboro, aged 87 years. He removed to that State in 1854, was acting-Governor in 1822, and in 1826 was elected Governor, serving two terms.

Feb. 5.—**ELTON**, Rev. ROMEO, D. D., LL. D., a Baptist clergyman, professor, and author; died in Boston, Mass., aged 78 years. He was a native of Connecticut, graduated at Brown University in 1818, and was professor of the Latin and Greek Languages and Literature there for about twenty years. After the death of his wife, he resigned his professorship and went to England, where he resided for some years, marrying there an authoress of considerable celebrity, Miss Prothesia Goss. Subsequently he returned to this country, and was for a time acting pastor in Newport, R. I., and Windsor, Conn., but after two or three years resumed his residence in England, where his wife died in 1867. In the summer of 1869 he returned to the United States, and in November, 1869, married a third time in Boston. Professor Elton was a man of fine taste, and wide and generous culture. His classical attainments were fully recognized abroad, and he was an honored and active corresponding member of numerous learned societies. A higher measure of intellectual force might have given him a more exalted position in the literary world, but wherever he was known he was beloved for his courteous manners, his real refinement, and his large and generous sympathies with every good cause. He will be known as a writer principally by his "Life and Remains of Jonathan Maxcy, D. D.," the first president of Brown University, a work of great care and labor, and by a small memoir of Roger Williams, published in England, which contained much new matter, and particularly the letters of Mrs. Sadlier, daughter of Sir Edward Coke, to Roger Williams. He had also published numerous occasional sermons and addresses. Dr. Elton left by will twenty thousand dollars to Brown University, and the same sum to Columbia College, Washington, D. C., to found professorships. He had previously endowed some scholarships in Brown University.

Feb. 5.—**HOAG**, TRUMAN H., a prominent citizen of Toledo, Ohio; died in Washington, D. C. In 1869 he was chosen member of Congress for the Tenth District, Ohio, having previously been the unsuccessful Democratic candidate in that district. He was a man of fair abilities, and much respected in the community where he resided.

Feb. 7.—**WASHBURN**, PETER THACHER, Governor of Vermont; died at Woodstock, aged 55 years. He was born in Lynn, Mass., September 7, 1814, but at the age of three years removed to Vermont, graduated at Dartmouth College, studied law, and after his admission to the bar obtained an extensive and profitable practice. Entering into politics, Mr. Washburne was elected at various times to both branches of the State Legislature, in which he served with credit. He also held for several years the position of reporter to the Supreme Court of Vermont. Soon after the outbreak of the rebellion he was appointed Adjutant and Inspector General of the State, and served in that capacity

until 1866. The energy displayed by Mr. Washburne in organizing and sending forward the Vermont volunteers, and the close attention he paid to their welfare while in the field, gained for him much popularity with the people. Last June he was nominated by the Republicans for the position of Governor of the State, and at the election in September following was elected by a large majority. In October he was installed into office, since which time, until stricken down by illness, he had been engaged in the administration of the affairs of the State with marked success.

Feb. 9.—**BETTELHEIM**, Rev. J. B., M. D., a missionary and clergyman, of Jewish parentage; died in Brookfield, Mo., aged 59 years. He was born in Presburg, Hungary, in 1811, educated in the Jewish faith at the Hungarian universities, and in medicine at Padua, visited Greece and Egypt, was naval surgeon in the Egyptian Navy, and afterward was a surgeon in the Turkish Army. He became a convert to Christianity in Turkey, was an Independent minister in London in 1845, and was for nine years a missionary to the Japanese inhabitants of the Loo-choo Islands. In 1854 he came to America.

Feb. 11.—**KEEP**, Rev. JOHN, an eminent Congregationalist clergyman; died at Oberlin, Ohio, aged 89 years. He was born in Long Meadow, Mass., April 20, 1781, graduated at Yale College in 1802, being the last survivor from a class of sixty, studied theology under Dr. A. Backus, and Rev. A. Hooker, was licensed by the Litchfield North Association, June 11, 1805, and was immediately settled over the Congregational church in Blandford, Mass., where he remained sixteen years. In May, 1821, he removed to Homer, N. Y., and was pastor of the Congregational Church there until 1833, when he resigned in consequence of disaffection caused by his sympathy with the "new measures" of revivalists. The following year he removed to Cleveland, Ohio, and soon after organized the First Congregational Church in Ohio City (now Cleveland West Side), and became its pastor. In 1834 "Father Keep" (as he was called) was appointed a trustee in Oberlin College, and in 1835 became an agent to raise funds for the institution, heading the subscription himself by a donation of \$1,000. Soon after his election he gave, as president of the board, the casting vote which admitted colored pupils to that institution, and has shaped its remarkable history. The reverses of 1837 caused his return to the pastoral work, as supply in Wooster, Ohio, and in Lockport, and Albion, N. Y. Subsequently, in view of the pressing needs of the college, he undertook a mission to England, to raise funds in its behalf, and devoted himself entirely to that object for a period of eighteen months, returning with the sum of \$30,000. Resuming his pastoral work, he labored in Mansfield, Hartford, and Litchfield, Ohio, and in Arcade, N. Y., until he removed to Oberlin in 1850, and aided

in raising an endowment of \$100,000 for the college. He was the last survivor of the company of ministers who, in 1810, organized the American Board of Commissioners for Foreign Missions.

Feb. 14.—**LA MOUNTAIN, JOHN**, a daring and scientific aeronaut, died at South Bend, Ind., aged 41 years. He was an enthusiastic lover of science, and hoped to make his experiments useful in the advancement of science, and especially in the development of meteorological theories. Having conceived the idea of an atmospheric current corresponding with the Gulf Stream in the ocean, and flowing steadily from east to west, he believed that he had gained the secret of successful aerial navigation, and that, by taking advantage of this current, he could cross the Atlantic. For this purpose he built the famous balloon "Atlantic," one of the largest and strongest ever made, and, undertaking a land-voyage first, started from St. Louis in company with a couple of scientific friends, and passing over Lake Erie into New-York State, the balloon was seized by a tornado while crossing Lake Ontario, and was left a wreck in the woods of Jefferson County, N. Y. The result of this voyage induced La Mountain to abandon his idea of crossing the ocean. However, a smaller balloon was built from the remnants of the "Atlantic," and again his life was imperilled. During the late war he turned his attention to military balloons, and was the first aeronaut engaged in the service. His last serious adventure probably hastened his death. An impatient crowd cast him off before he was ready, without an overcoat or instruments, and the valve-rope tied several feet above the basket. He shot like a rocket up into a heavy cloud of mist and sleet, which froze the valve-board fast. He climbed, with frost-bitten fingers, up the net-work, and tore the balloon open with his teeth. The opening extended so far that the balloon collapsed, discharged its gas, and fell with great velocity from a height of nearly two miles, his system receiving a shock from which he probably never fully recovered.

Feb. 15.—**DURANG, CHARLES**, an actor, author, and stage manager; died in Philadelphia, aged 76 years. He was born in that city, and made his first appearance at the Chestnut Street Theatre, in 1803, and since that time had performed in almost every respectable theatre in the United States. He was the author of a history of the Philadelphia stage from 1752 to 1854, published in the Philadelphia *Sunday Dispatch*.

Feb. 15.—**WILLIAMS, MARCUS**, an American traveller and explorer; died at Maranham, Brazil. He was, previous to 1844, a citizen of Newark, N. J., but since that time had devoted himself to explorations, performing some of the most perilous journeys among the mountains of South America, and amid hostile Indian tribes. A few years ago, he took a contract for supplying the city of Maranham with

gas, and had been compelled to import his machinery for it from the United States.

Feb. 16.—**FARMER, Lieutenant-Colonel GEO. EDGAR**, a brave and gallant officer of volunteers; died in New-York City, aged 80 years. He was a native of New York, and early in life entered upon mercantile pursuits, but upon the breaking out of the civil war he gave up his business, and in 1861 was commissioned Second Lieutenant of the Sixth New-York Cavalry. He was subsequently appointed a quartermaster of the regiment, but, before leaving for the seat of war, promoted to a captaincy, and led his company (C) in all the battles in which his regiment participated, including those of Pope's campaigns, of Antietam, Fredericksburg, Chancellorsville, Gettysburg, and the pursuit of Lee after the latter battle. At the battle of Trevillian Station, during Sheridan's first raid, Captain Farmer was wounded, but continued in the field, and a few days afterward, at the battle of Deep Bottom, he received a severe wound. He rejoined his regiment near Washington in the fall of 1864, after its re-enlistment, and participated in all the battles of Sheridan's campaign in the Valley of the Shenandoah. After the battle of Cedar Creek, he was promoted to the rank of major, and for some time was in command of the regiment. He was engaged in all the subsequent battles of Sheridan's cavalry corps till the surrender of Lee, when he was made a lieutenant-colonel by brevet. At the close of the war he was honorably discharged, after a continuous and faithful service of over four years, having earned the brevet of lieutenant-colonel. Since the war, Colonel Farmer has occupied a responsible position in the Bowery Savings-Bank. He was a prominent and earnest member of the Grand Army of the Republic, and at his death was commander of the oldest post in the State.

Feb. 17.—**SWEETSER, HENRY EDWARD**, a New-York journalist; died at his residence in that city, aged 83 years. He was born in New York, February 19, 1837, graduated at Yale College in 1858, and, after devoting some time to mercantile pursuits, became a reporter for the *New-York Times*. In June, 1860, he entered the office of the *World* and soon became night-editor. In November, 1863, in connection with his brother, C. H. Sweetser, he started the *Round Table*, the publication of which, suspended August, 1864, was resumed June, 1865; during this interval he returned to the office of the *World*. In May, 1866, he withdrew from the *Round Table*, and after a short visit to Europe, in September of the same year, returned to his post as city editor, and editor of the weekly and semi-weekly editions until his death, which occurred suddenly.

Feb. 17.—**WILLIS, WILLIAM, LL. D.**, an eminent lawyer and historical writer; died in Portland, Me., aged 76 years. He graduated at Yale College in the class of 1813, after

which he spent some time in travelling in Europe. Choosing the profession of the law, he made Portland his home, and during the greater part of his professional life was a partner in business with the late Hon. W. P. Fessenden. His tastes never led him toward court practice, but rather toward conveyancing and other departments of real-estate business, in which he was unusually well informed and accurate. He had the literary temperament, and wrote easily and gracefully. His contributions to the press would probably fill many volumes. As an antiquarian he was decidedly the first in Maine, with few equals in the country. Among his works were the "History of Portland," a fully-annotated edition of "Smith's and Deane's Journals," "The Lawyers of Maine," and many elaborate papers read before the Maine Historical Society. He knew intimately the history of all the old Portland families, and had few equals as a writer of local obituaries.

March 1.—ASHMEAD, ISAAC, a printer, and prominent citizen of Philadelphia; died in that city, aged 80 years. He was one of the founders of the American Sunday-School Union, and also aided in establishing the *American Presbyterian*, and the *Presbyterian Quarterly Review*. He was printer of all the publications of the American S. S. Union, and was the inventor of composition printing-rollers.

March 2.—SMARIUS, Rev. S. J., a Roman Catholic missionary, and author; died in Detroit, aged 47 years. He was born at Telburg, province of North Brabant, Holland, March 3, 1823. After a preliminary course he entered the University of North Brabant, and from the commencement of his course gave signal exhibition of his talent and industry by keeping the lead of his class, not only in mere technical excellence of acquirement, but in the more brilliant directions of poetical and oratorical effort. After finishing his university studies, he came to this country in 1841, and entered on his novitiate in the Society of Jesus on the 18th of November of that year, at Florissant, Mo. After two years spent in the Jesuit College of that place, he was sent to Cincinnati, where he pursued his ecclesiastical studies, and acted as assistant professor in Poetry and Rhetoric. While stationed at Cincinnati Father Smarius published many poems anonymously, which were widely admired for their beauty and sweetness. Here he remained till 1848, when he was sent to St. Louis to carry on further his ecclesiastical training, and to teach in the same branches as before. He was ordained priest in 1849, and went to Fordham, N. Y., for the purpose of finishing his ecclesiastical preparations. In 1853 he was appointed to the pastoral care of the Church of St. Francis Xavier, in St. Louis, and he quickly became celebrated for the remarkable eloquence and attractiveness of his pulpit discourses. His church was crowded on all occasions with the best culture of St. Louis, not

only members of his own church, but of other denominations. He gave several courses of lectures on theology, which commanded much admiration for their acuteness and scholarship, and gave the reverend orator a wide-spread reputation for controversial power. In 1861 Father Smarius was detailed to enter on the duties of a missionary, making Chicago his headquarters. Constantly travelling through the vast field over which his duties extended, he gave himself no rest in the service of the Church, with the exception of a visit to Europe in 1865, which his failing health rendered absolutely necessary. His book on dogmatic theology, entitled "The Points of Controversy," displays much ability and learning.

March 3.—CUNNINGHAM, Rev. W. M., D. D., a Presbyterian clergyman; died at La Grange, Ga. He had just been elected President of Oglethorpe College, in that State, a position for which his fine culture and remarkable executive ability eminently qualified him. His death was the result of an accidental injury.

March 7.—UJHAZY, LADISLAS, a Hungarian patriot, but for more than twenty years past a resident of the United States; died at San Antonio, Texas, aged 79 years. He was, during the Hungarian Revolution of 1848, governor of the celebrated fortress of Comorn, in Hungary, during its siege and defence by General Klapka. After the fall of the fortress he made his escape to the United States, and, having spent some time in the Northern cities, finally settled in Texas with a number of other Hungarian exiles.

March 9.—PROUDFIT, Rev. JOHN, D. D., a Presbyterian clergyman, professor, and author; died in New York, aged 67 years. He was a son of Alexander Proudfit, D. D., was born in Salem, Washington County, N. Y., graduated at Union College in 1821, was for a time pastor of a church in Newburyport, Mass., and afterward for nearly twenty years Professor of Greek at Rutgers College, New Brunswick, N. J., preaching most of the time. He had been for some years past a resident of New York City, and was widely known and greatly esteemed for his learning and piety.

March 11.—MILLER, MORRIS S., Lieutenant-Colonel and Brevet Brigadier-General, U. S. A., a gallant and faithful officer; died at New Orleans, aged 56 years. He was a son of Judge Morris S. Miller, a prominent citizen of Utica, and was born April 2, 1814. In 1830 he entered the Military Academy at West Point, graduated in 1834, and was appointed brevet second lieutenant in the Third Regiment Artillery. He participated in the Florida and Mexican Wars, and in the War for the Union. In 1835 he was besieged by the Indians at Fort King, Florida, for two months, just after Osceola had opened the war. In 1844-'45 he was stationed at Fort Moultrie, and often drilled the battalion in which were Lieutenants W. T. Sherman, George H. Thomas, and T. W. Sherman. At the outbreak of the war Gen-

eral Miller, then a major, was in the Quartermaster-General's office in Washington, and was responsible for all the arrangements for the arrival of troops to defend the capital. Upon the attack on the Massachusetts Volunteers in Baltimore, April 19, 1861, he was ordered by General Scott to go to Annapolis and attend to forwarding the New-York and Massachusetts troops expected by that route. He found no troops yet arrived, and returned. On the 22d of April he again set out for Annapolis, and, after various adventures, was successful in reaching that city in time to forward the Seventh New York, General Butler's Massachusetts, and a Pennsylvania regiment, the first troops which arrived in Washington. Throughout the entire war Major Miller remained in the Quartermaster's Department at Washington. In the course of four years there passed through his hands about \$20,000,000, and upon the examination of his accounts it was found that less than \$20 was to be disallowed.

March 12.—BLOEDE, MRS. MARIE, *née* VON SALLET, a gifted authoress and member of a noble family in Silesia; died in Brooklyn, N. Y., aged 49 years. Her brother, Friedrich von Sallet, was a poet of remarkable power and sweetness, and an intense liberal in his political views. He died in 1848, and his sister inherited not only his poetical gifts, but his liberal sympathies. She married early, and in opposition to the wishes of her family, Dr. G. Bloede, an ardent young republican, well educated but untitled; and in the revolution of 1848, her husband, foremost in the liberal ranks, was arrested, tried, and condemned to death, at Dresden. In the trying times which followed, her courage never faltered, and, when the young republican finally escaped to America, she performed her full round of household duties, yet found time for the practice of pen and voice in literary and musical work to aid her husband. Her poems and magazine articles, both in English and German, have attracted great attention from their grace and imaginative power. Her husband, as the editor of the *New-Yorker Demokrat*, a daily Republican paper, received great assistance from her literary labors.

March 12.—HOLMES, ROBERT D., a lawyer, journalist, and prominent Mason; died in New-York City, aged 58 years. He was educated in one of the public schools of the city, and subsequently was private secretary to Henry Eckford, the ship-builder, whom he accompanied to Greece. On his return he studied law under William J. Hackett, Esq., and had an extensive practice until his failing health compelled him to retire from the profession. He was for a number of years editor of the Masonic department of the *New-York Dispatch*. In 1865 and 1866 he was Grand-Master of the Grand Lodge of the State. For a number of years he was a member of the Board of Excise, and at the last election was a candidate for the office of District Judge.

March 14.—FOSTER, MRS. MARY, a venerable lady of Newark, N. J., formerly a resident in New-York City; died in Newark, aged 91 years. She was one of the sixty young girls who carried baskets of laurel-leaves in the procession at the funeral of General Washington.

March 14.—SWAIN, DR. JAMES, a wealthy citizen of Philadelphia, proprietor of Swain's Panacea, died in Paris. He removed to Philadelphia about the commencement of the late war, and gave largely of his means to the Union cause, being an active associate member of the Sanitary Commission. For the last five years he had resided in Paris.

March 15.—TOWNSEND, DR. SAMUEL P., a noted patent-medicine vender; died in Feltville, N. J., aged 56 years. He achieved a large fortune in his business in a few years, mainly the result of very thorough and persistent advertising, which he was one of the first to attempt in his department of trade. He erected a very costly, though somewhat *bizarre*, mansion in Fifth Avenue, but, tiring of it, sold it some years since for a boarding-school.

March 17.—CORNELL, WILLIAM W., a wealthy and philanthropic citizen of New York; died at Fort Washington, aged 48 years. He was born in 1822, and was the architect of his own fortune. By his enterprise he had built up an extensive and largely-profitable business as an iron-founder, and, recognizing his responsibility to God for the prosperity granted him, was a most liberal and open-handed giver to all worthy benevolent objects. He had for some years past been conspicuous for his liberality in aiding in the erection of churches for the Methodist denomination, of which he was a member, giving many thousands of dollars annually for this as well as other benevolent objects.

March 18.—DEUX, REV. ASA, D. D., an eminent Baptist clergyman, teacher, and professor; died in St. Anthony, Minn., aged 67 years. He was born July 26, 1802, graduated at Yale College in 1829, and the two succeeding years was Rector of the New-Haven Hopkins Grammar-School. He was ordained an evangelist in the Baptist ministry, September 14, 1834. In 1835-'36 he was Professor of Languages in Denison University, Granville, Ohio, and the three following years was Professor of Greek in Cincinnati College. In 1839-'40 he held a professorship in Waterville College (now Colby University). He returned again to Cincinnati College, and subsequently was principal of the classical school in connection with the Baptist Theological Institute at Covington, Ky., and was also Professor of Ecclesiastical History and Greek Literature. For some ten years later he was principal of the High School and superintendent of the public schools of Covington. During the last four years of his life he was pastor of a church in St. Anthony, Minn.

March 19.—BURNETT, JAMES G., an actor; died in Chicago, aged 57 years. He was born in Edinburgh, in 1819, came to America at the

age of fifteen, and was apprenticed to a printer in New York. Removing to Boston at a later period, he went on the stage at the Howard Athenæum. Subsequently he acted in New York—at the Bowery, at Laura Keane's Theatre, at Niblo's, and at other theatres. His career on the stage was that of a studious, conscientious, faithful actor. His professional talent lay in the direction of "old men." He had a fine, manly presence, a handsome, genial face, and pleasant voice. His appreciation of character and his sense of humor were just and quick. About two years ago he removed to Chicago and has been a stage-manager at Crosby's Opera-House in that city.

March 19.—**WAKEMAN, GEORGE**, a New-York journalist; died in Harlem, aged 29 years. He was born in Greenfield, Conn., February 4, 1841, removed to New York in 1858, and soon after engaged as a writer for the *Ledger*. Subsequently he became connected with the *World*, and was also a contributor to the *Galaxy* and other popular magazines. In 1868 he was chosen as the official stenographer of the Senate, which position he held until his last illness.

March 22.—**CAMPBELL, Judge JAMES S.**, an aged and prominent citizen of Cherry Valley, Otsego County, N. Y., died there, aged 97 years. He was born in Cherry Valley, in 1772, in the old homestead where his father was born, and standing upon the ground cleared by the axe of his grandfather, the land having never changed hands, save from father to son, since they were trodden by the sons of the forest. He had been for many years the sole survivor of the Indian massacre, by which the valley was desolated in 1778, and the only survivor of the captivity which followed that event. He was fifteen years a Judge of the Court of Common Pleas.

March 22.—**FIELD, MATTHEW DICKINSON**, a civil engineer, died at Southwick, Me., aged 59 years. He was born in Haddam, Conn., in 1811, and was a brother of David Dudley Field and Cyrus N. Field. His taste led him to engineering and mechanical pursuits, and he was at one time a railroad contractor in the South. He also built wire suspension bridges at Nashville, Tenn., and Frankfort, Ky. It was during a subsequent association with him as engineer and builder of a telegraph-line to and across Newfoundland, that Cyrus W. Field became interested in an Atlantic Ocean Cable. In 1856 he was interested in politics, and served one year as a Republican State Senator of Massachusetts.

March 26.—**HOLLINGER, CONRAD**, a German journalist; died in Newark, N. J., aged 50 years. He was a citizen of Baden, and, having participated in the revolution of 1848, was expelled from Switzerland for revolutionary writing in 1849, and came to America. After engaging in editorial work on different papers, he started the *Volkman* in 1856.

March 27.—**BIGELOW, Mrs. MARY ANN HUB-**

BARD TOWNSEND, an accomplished scholar and writer; died at her residence in Weston, Mass., aged 78 years. She was a native of Needham, Mass., and obtained a thorough and accomplished education in Boston and Newton, her favorite study being English history. Though passionately fond of poetry, she had never attempted to compose even a rhyme until in her sixtieth year. By way of gratifying the persistent entreaties of her little granddaughter, she concluded to make an attempt, and wrote from memory the lives of all the English rulers from William the Conqueror to Queen Victoria, embracing the incidents connected with the career of the chief men and women of the various reigns, which at later period she printed for private circulation in a volume including other poetical compositions. Her sympathy with the enslaved led her to connect herself with the American Colonization Society at its beginning. That organization she soon abandoned, and became a vehement, decided, yet modest adherent of the antislavery cause. Her charities were large and unostentatious. Since the death of her father, in 1810, she devoted the rent of a small store in Boston to the relief of the sufferings of the sick and needy, many of whom were strangers to her. She also sent teachers to the freedmen, and devoted freely of her means to the relief of their bodily wants.

March 27.—**KETCHAM, LEANDER SMITH**, a jurist and eminent citizen of Wayne County, N. Y.; died at Clyde, N. Y., aged 52 years. He was born in Marion, Wayne County, N. Y., August 31, 1818. His parents were respectable and in good circumstances, but by the death of his mother, and other misfortunes, he was at the age of ten years thrown entirely upon his own resources. Child as he was, he determined to qualify himself for the legal profession. Steadily continuing his studies, in order to gain a subsistence, he devoted himself at intervals to sawing wood, gardening, setting type, and teaching school, until in 1839 he was prepared to enter the Sophomore Class of Williams College. In 1842 he commenced the practice of law at Clyde, in his native county. In this profession he soon rose to distinction, so that in 1852 he was chosen Surrogate and Judge of Probate in a district politically opposed to him. To this position he was reelected in 1856. At the expiration of this term, 1860, he retired from professional life and engaged in agriculture. During the war he was an ardent patriot, and rendered efficient service in raising troops. He was a member of the Constitutional Convention of this State in 1867. While at Albany he was seized with a nervous debility, which finally caused his death. As a lawyer, he could be retained in no case unless first convinced that he was to be the advocate of strict and impartial justice. He was the friend of the poor and helpless, never making their ability to pay a condition of his undertaking their cause. As a judge, he was remark-

able for the rapidity with which he dispatched business, and, in the many civil and criminal cases disposed of during his service of eight years, not one of his decisions was reversed by a higher court. As an agriculturist, he was among the foremost in the introduction of labor-saving machines, and improved livestock, and in the formation of associations and every other movement for advancing agricultural interests.

March 80.—FOSS, Rev. ARCHIBALD C., a Methodist clergyman and scholar; died in Olarens, Switzerland, aged 40 years. He joined the New York Conference in 1852, and during the following year was stationed at Lenox. In 1854 and 1855 he was pastor of the Morrisania Mission, and in 1856 was transferred to the Thirtieth-Street Church. In 1858 he was associated with the Rev. Dr. McClintock, at St. Paul's Church. In 1860 he was sent to Tarrytown. In 1861 he was appointed a professor in the Wesleyan University, at Middletown, Conn., and after two years returned to the ministry, and was presiding elder from 1863 to 1865 in the Poughkeepsie district. In 1866 he was again pastor of the Thirtieth-Street Church, New York, and in 1868 officiated at Sing Sing, where, his health failing him, he was compelled to go to Europe.

March 80.—MILLER, Rev. TOBIAS HAM, a Universalist clergyman and journalist; died in Portsmouth, N. H., aged 68 years. He was the original "Uncle Toby" of the *Boston Carpet Bag*, was on the *Chronicle* (Portsmouth) eighteen years, and the *Portsmouth Journal* twenty years. Early in life he was settled in Maine as an Orthodox clergyman, but later became a firm Universalist. A short time before his last illness he completed a series of articles upon the Portsmouth Privateers of 1812, which will undoubtedly be given to the public.

March 80.—STEWART, Hon. DUGALD, a prominent citizen and politician of Middlebury, Vt.; died at his residence there, aged 49 years. He represented Middlebury in the State Legislature in 1861-'68. In 1864 he became State Auditor of Accounts, and retained that office, under successive re-elections, until his death.

March 81.—BOYDEN, SETH, a remarkable inventor and manufacturer; died at Middleville, N. J., in the 82d year of his age. He was born in Foxborough, Mass., in 1788. In 1815 he removed to Newark, N. J., and engaged in the manufacture of leather. In 1816 he invented a machine for cutting "brads," by which their cost was largely diminished. At about the same time he commenced to work a machine of his own invention for splitting leather. The manufacture of "patent leather" was begun by him in 1819, and the business which he then started now forms one of the most important of the business enterprises of Newark. He made the first specimens of malleable iron in 1826, and continued its manufacture until 1831; perfected the first

locomotive with a driving-rod outside the wheel; invented (simultaneously with others) the steam "cut-off;" produced the first daguerreotype in America; assisted Professor Morse in working out the theory of electric telegraphy; invented the process of making the alloy of zinc known as "spelter;" discovered the method of making Russian sheet-iron, which he manufactured, but at so great a cost that he could not compete with the imported article; and patented a "hat-body doming machine," which is now used in all hat-manufactories in this country. In his latter years Mr. Boyden gave his attention to agriculture, and many of the most celebrated descriptions of strawberries were his.

March 81.—BRADY, WILLIAM V., a prominent citizen and politician of New-York City; died there, aged 59 years. He was born at Harlem, in 1811, and received only the advantages of a common-school education. For a few years he served in offices, and subsequently learned the trade of a jeweller and silversmith, and was at one time extensively engaged in that business in John Street. He retired from business in 1835, and turned his attention to real estate, becoming one of the best judges of the value of property in the city. In 1842 he became interested in politics, and took a prominent part in the organization of the Common Council. In 1843 he was elected Alderman of his ward, and continued to serve as such with ability and fidelity until the spring of 1847, when the Whigs, having been for several years defeated, elected Mr. Brady as Mayor, he receiving nearly all the votes for that office in the Fifteenth Ward. The following year Mr. Havemeyer was chosen by the Democratic party, and Mr. Brady was appointed Postmaster, serving until 1853, when he was elected President of the Continental Insurance Company, just organizing; he faithfully discharged the duties of that position for five years, and then resigned, to travel in Europe for a year. In 1853 he was elected a trustee of the Mutual Life Insurance Company, and has since continued an active and valuable member of its Board of Trustees. After his return from Europe he was connected with various other important companies in New York. His time was mostly devoted, however, to the improvement of real estate; to the appraisement and divisions of large estates; and as a general adviser to the many who sought his counsel.

April 4.—FROTHINGHAM, NATHANIEL LANGDON, D. D., a Unitarian clergyman and author; died in Boston, Mass., aged 77 years. He was born in Boston, July, 1793, graduated at Harvard University, in 1811, a classmate of Edward Everett, and in March, 1815, was ordained pastor of the First Church, in that city, which position he held until March, 1850, when ill-health compelled him to resign. Since that period his life has been devoted to literary pursuits. He was the author of several

volumes of prose and poetry, and frequently contributed to *The Christian Examiner* and *The North American Review*. A daughter of Dr. F. has become well known for her fine translations from the German, and for her other writings.

April 6.—COLLINS, TILLINGHAST KING, a distinguished printer and publisher of Philadelphia; died there, aged 67 years. He was born in Philadelphia, October 14, 1802, was apprenticed to the printing business, during which time he became a skilful compositor and pressman, and, upon the completion of his apprenticeship, removed to Washington and was employed by some of the best establishments there. Subsequently he returned to his native city and entered into the employ of James Kay, a well-known law bookseller. In 1838 he opened a printing-office with one hand-press, and in 1835 entered into partnership with his brother, the new firm soon taking rank at the head of the printing business. For nearly thirty years he was the printer of *Godey's Lady's Book*. He was also an extensive publisher of musical works.

April 8.—LAWLIN, WALTER, an eminent citizen of Berkshire, Mass.; died in Pittsfield, aged 75 years. He was the pioneer of the paper-business in Lee, Mass., the first mill in that place having been built by himself and brother in 1825. He was president of the Lee Bank from 1841 to 1844, and represented the town in the State Legislature for a number of years. In 1845 he removed to Pittsfield, where he was for twenty-five years a prominent business-man. In 1860 he became president of the Berkshire County Mutual Fire Insurance Company, and held that position until his death.

April 10.—KUNTZE, EDWARD J., a sculptor of some note; died in New York, aged 44 years. He was born in Pomerania, Prussia, and at eighteen years of age came to America, and steadily devoted himself to his art, in which he achieved considerable distinction.

April 16.—MEADE, Commodore RICHARD W., U. S. N.; died at the New-York Hospital, aged 60 years. He was a brother of General G. G. Meade, both sons having been born in Cadix, Spain, while their father was United States minister to that country. The commodore was born in 1807. In April, 1826, he was appointed to the Naval Academy, and graduated with honor. He rose through the several grades, until, at the breaking out of the civil war, he became commander. In the fall of 1861 he took command of the receiving-ship North Carolina, and continued on that vessel for two years, being made post-captain in the mean time. While on the North Carolina, he did much to improve that vessel and its surroundings. In 1864, after repeated efforts to secure more active service, he was given command of the steam sloop-of-war San Jacinto, which was soon after wrecked on one of the Florida reefs and totally lost. The loss of the

San Jacinto resulted in placing the commodore on the retired list, with the rank of commodore, on which list he remained until his death. He was an able officer and thorough disciplinarian, but his temper and eccentricities were such, that he did not gain friends and opportunities of service that he otherwise would have had, and the latter portion of his life was rendered unhappy in consequence. His three sons are in the Navy.

April 20.—MORSE, Hon. OLIVER A., a prominent citizen of Otsego County, N. Y.; died in New York, aged 58 years. He was born at Cherry Valley, in 1816, graduated at Hamilton College, Clinton, studied law and entered upon the practice of his profession at Perrysburg, Ohio, but shortly after returned to his native town, where he resided until his death. His early political life was connected with the Democratic party, but he was an earnest and avowed enemy of slavery, and employed his pen in behalf of the cause of the enslaved. On the formation of the Republican party, he entered warmly into its ranks. He represented the Otsego District in the Thirty-fifth Congress, and proved himself an intelligent and useful member. He was always a thinker and a writer, and in Congress or elsewhere was rather the wise counsellor than the brilliant debater. His tastes were those of the scholar, and he was eminently a well-read man. He had travelled much in this country and in Europe, and was, both by observation and study, well informed in the affairs of the State and nation.

April 21.—BALDWIN, JOHN C., a wealthy and philanthropic citizen of New York; died at Orange, N. J., aged 70 years. He was long in mercantile life, and devoted largely of his means to the benevolent enterprises of the day, having given away over \$800,000.

April 22.—FAREAR, Mrs. ELIZA WARE, an eminent authoress, widow of Prof. John Farear; died in Springfield, Mass., aged 78 years. She was author of the "Young Lady's Friend," "Recollections of Seventy Years," and other works.

April 23.—JELF, Miss SALLY, a centenarian of Elizabeth, N. J.; died there, aged 105 years. She was a native of that place, and the daughter of an Englishman who died during her childhood, leaving her possessed of an income sufficient to support her comfortably through life. She was a woman of education and culture, and exceedingly benevolent.

April 25.—HEXAMER, Captain WILLIAM, commander of the famous Hexamer battery in the late war; died at Hoboken, N. J., aged 45 years. He was born at Coblenz, Prussia, April 12, 1825. In 1849 he joined the revolutionary movement in Baden, where he served as adjutant under General Franz Sigel, and in consequence became an exile from his native country. At the breaking out of the war, Captain Hexamer raised Battery A of the First New Jersey Artillery, which was mustered into service August 12, 1861. The battery, upon

reaching Fairfax Seminary, was attached to Kearny's Brigade, and the first engagement was at West Point, May 7, 1862. It was afterward engaged in nearly every important battle on the Peninsula.

April 25.—YEADON, RICHARD, a Charleston editor; died in that city, aged 68 years. He was born in Charleston, S. C., October 23, 1802, received a good academical education, graduated with honor at the South Carolina College, and entered upon the study of law in the office of a distinguished lawyer of that city. Upon his admission to the bar he gave promise of a brilliant career in his profession, but subsequently became interested in politics, and became a daily contributor to the political columns of the *City Gazette*. His essays were always vigorous, thoughtful, and closely logical. Afterward he became editor and proprietor of the *Charleston Courier*, which journal bore abundant evidence of his intellectual power. For many years previous to his death he was a constant sufferer from a chronic affection which seriously affected his spirits, causing alternate exaltation and depression, and it was his custom to bury himself in study and work in the vain attempt to forget his physical pain. His life was a ceaseless round of toil. He was called to fill various public offices in the city and State; was for several terms a member of the Legislature, acting on the most laborious committees. In the latter situation he always maintained his position as a steady, sturdy debater, vigorous always, and bringing to his argument large resources of law and learning from an ample treasure-house of memory. The great profits from his law practice annually, and the continued and increasing prosperity of the *Courier*, had accumulated wealth in his hands, which, with his charitable instincts, was an instrument of great good, and, although his losses through the late war were heavy, he applied himself to his profession with new vigor until his labors were terminated by death.

April 26.—LOCKWOOD, ROE, an eminent bookseller and publisher; died in New-York City, aged 70 years. He was born in Bridgeport, Conn., and at the age of twenty-one removed to New York, where he entered into the book business, following it for an uninterrupted period of nearly fifty years. He was a man of strict integrity and active Christianity.

April 26.—RUSSEL, ABRAHAM, a Judge in New-York City; died there, aged 58 years. He was born in South Carolina, but removed to New York when quite young. After being admitted to the bar, he practised until 1857, when he was elected to the office of City Judge, for four years. He was succeeded by Judge McCunn, who subsequently resigned his office, and Judge Russel was appointed to fill the vacancy on the 7th of January, 1863. In 1864 he was reelected, and continued in office up to the 31st of December, 1869, when he

was succeeded by Judge Bedford. He was a candidate for reelection, but failed to receive the nomination. He immediately opened a law office and resumed the practice of law with Judge John B. Reid, of Suffolk County.

April 28.—AYLETTE, PATRICK HENRY, an eminent lawyer and journalist, was killed by the Court-House accident in Richmond, Va. He was a native of the County of King William, Va., and a lineal descendant of Patrick Henry, the Revolutionary patriot. After a liberal education in the institutions of his own State, he attended the Law School of Harvard University, and, returning to Virginia, entered upon the practice of his profession in his native county. About 1850 he removed to Richmond, where he soon distinguished himself by his literary taste and ability as a writer for the press, and his power as a political orator—receiving from President Buchanan the appointment of United States District Attorney for the Eastern District of Virginia, and subsequently holding a corresponding office under the so-called Confederate government.

April 28.—BROOK, Dr. JOSEPH BALDWIN, a physician and newspaper reporter, killed by the Court-House accident in Richmond. He was born in Madison County, in 1828, entered the University of Virginia in 1843, as a student of medicine, and graduated with honor. He entered upon the practice of his profession in Spottsylvania, served in the Confederate army as surgeon, and after the war became connected with the *Richmond Examiner*, which was finally merged in *The Enquirer*. By the same sad accident the following prominent citizens of Richmond lost their lives: NATHANIEL P. HOWARD and POWHATAN ROBERTS, distinguished lawyers, JULIUS HOBSON, collector of the city, and Captain WILLIAM A. CHARTERS, chief of the Fire Department of Richmond.

April 28.—MITCHELL, Rev. JOHN, a Congregationalist clergyman, editor, and author; died at Stratford, Conn., aged 75 years. He was born in Chester, Conn., December 29, 1794, graduated at Yale College in 1821, and entered Andover Theological Seminary in the autumn of the same year, but after studying nine months was compelled to leave in consequence of impaired health. In January, 1824, he became editor of *The Christian Spectator*, published in New Haven, was licensed to preach in 1829, and in 1830 was ordained pastor of the First Congregational Church in Fair Haven, Conn. In 1836 he took charge of the Edwards Church in Northampton, Mass., but in 1842 resigned, and went abroad for the recovery of his health. Upon his return, finding himself unable to resume the cares incident to the ministry, he spent the greater portion of his remaining years at Stratford, employing himself, as far as his strength would admit, in literary work. He was the author of a manual entitled "The New-England Churches," "Notes from over the Sea" (2 vols.), "Scenes and Characters in

College," "My Mother, or Recollections of Maternal Influence," and "Rachel Kell."

April 28.—MONTGOMERY, WILLIAM, a Pennsylvania politician; died near Washington, Pa. He was born at Canton, Bradford County, 1819, educated at Washington College, studied law, and was admitted to the bar in 1882. He was a member of Congress from 1856 to 1860, and was the author of the Crittenden-Montgomery Amendment, intended as a measure of pacification on the slavery question.

April 28.—PLEASANTS, HUGH R., a veteran journalist of Richmond; died in that city. He was connected with the press forty years.

April 30.—CLAPP, WILLIAM, a Vermont politician, died at St. Albans, aged 59 years. He had been a member of the State Senate, and House of Representatives, and for some years held the office of United States Collector for his district.

May 5.—HOWARD, Rev. LELAND, a Baptist clergyman; died at Rutland, Vt., aged 77 years. He had been for more than fifty years in the ministry, and had been pastor of large and influential churches in Hartford and Meriden, Conn., Rutland, Vt., and elsewhere. He was a preacher of very considerable ability.

May 7.—WRIGHT, JENNY; died in Throg's Neck, Westchester County, N. Y., aged 101 years. Her whole life was spent in that county, and she had descendants to the fifth generation.

May 8.—PLATT, JAMES, an eminent citizen of Oswego; died there, aged 83 years. He was the first mayor of the city, and formerly a State Senator, and President of Lake Ontario National Bank.

May 8.—TILDEN, DANIEL, M. D., a distinguished physician; died in Sandusky, Ohio, aged 82 years. He was for some years President of the Ohio Medical Society.

May 9.—BRAINARD, LAWRENCE, a distinguished citizen and political leader in Vermont; died at St. Albans, aged 76 years. He had been active in forwarding the political, commercial, and railroad interests of that State; was for several years candidate for Governor, and in 1854 was elected to the United States Senate, to fill the vacancy caused by the death of Senator Upham.

May 12.—BECKWITH, Rev. GEORGE C., D. D., a Congregationalist clergyman; died in Boston, Mass., aged 70 years. He was one of the founders of the American Peace Society, and for thirty-three years its Corresponding Secretary, the editor of its magazine, *The Advocate of Peace*, and the author of its earnest appeals and petitions for international peace congresses, and the substitution of arbitration for war. But, though this had been the cause in which his best efforts were engaged for so many years, he was not a man of one idea. Every good cause met his hearty approval, and received his cordial cooperation.

May 14.—BACKUS, Hon. FRANKLIN T., an eminent lawyer of Ohio; died in Cleveland,

aged 57 years. He was born in Lee, Mass., May 6, 1813, removed to Lansing, N. Y., in his youth, graduated at Yale College in 1836, and established a classical school in Cleveland, Ohio, studying law at the same time. In 1837 he was admitted to the bar. In 1846 he was a member of the Ohio House of Representatives, and in 1848 of the State Senate. In 1861 he was a member of the Peace Convention, which met in Washington with the hope of averting the late war. The later years of his life were devoted to the duties of his profession, in which he had become eminent.

May 14.—IRVING, Hon. THOMAS, Judge of the United States District Court for Western Pennsylvania; died in Pittsburg. He was appointed to his office in 1869.

May 15.—BRYAN, THOMAS JEFFERSON, an eminent art connoisseur; died at sea, between Havre and New York. He was a native of Philadelphia, graduated at Harvard College, and studied law, but his fondness for art absorbed much of his time and attention. He donated a valuable gallery of paintings to the New-York Historical Society.

May 16.—BORDEN, ENOCH R., a journalist, died at Trenton, N. J., aged 47 years. He had edited the *Daily State Gazette*, with the exception of a few brief intervals, for twenty years; occupied a position in the Public Document Department, and afterward in the Pension Agency at Washington, under President Fillmore, and was private secretary and aide-de-camp to General Newell, and Secretary of the New-Jersey Senate in 1865 and 1866.

May 16.—FARNUM, Brevet Brigadier-General J. EGBERT, United States Volunteers; died in New York, aged 46 years. He was born in New Jersey, in 1824, and at an early age was sent to Pottsville, Pa., where he was educated. At the breaking out of the Mexican War in 1846, he entered the army as sergeant-major of the First Pennsylvania Infantry, and served faithfully through the campaign. In the succeeding years, his restless love of liberty and adventure connected him with the Lopez Expedition to Cuba from New Orleans in 1850, and made him an active sharer in the Nicaraguan expeditions under the filibuster Walker. Still later, he was captain of the famous slave-yacht *Wanderer*, and was indicted at Savannah for carrying on the slave-trade. This episode in his life he always regretted, and, when the war broke out in 1861, instead of siding with the South, as was expected, he made amends by promptly enlisting as major in the Seventieth New-York Volunteers, raised and commanded by General Sickles. He took a gallant part in all the engagements in which the Sickles Brigade distinguished itself, and rose in due time to be colonel of the Seventieth. At the battle of Williamsburg, May 5, 1862, he was very severely wounded, shot through both thighs, but after his recovery he joined his regiment again, and participated in the battles of Fredericksburg, Chancellorsville, and

Gettysburg, and was breveted brigadier-general for gallantry; but his wounds broke out afresh, and he was compelled, much against his will, to abandon active service, and take a position as colonel of the Eleventh regiment of the Veteran Reserve Corps, which he held until the close of the war, when his regiment was disbanded. He was subsequently appointed Inspector of Customs in New York City, a position which he held at the time of his death.

May 17.—LITTELL, ELIAKIM, founder of *Littell's Living Age*, and of *Littell's Museum*; died in Brookline, Mass., aged 73 years. He was born in Burlington, N. J., but removed to Philadelphia, and in January, 1819, started a weekly literary paper, entitled the *National Recorder*; subsequently he established the *Saturday Magazine*, which in 1823 he converted into the *Museum of Foreign Literature and Art*. After conducting this with great success for nearly twenty-two years, he removed to Boston, where, in April, 1844, he published *Littell's Living Age*, which from that time has borne a high character for literary merit.

May 18.—WOODWARD, CHARLES, M. D., an eminent physician of Middletown, Conn., died there. He repeatedly represented the town in the State House of Representatives and Senate, was a trustee of the Wesleyan University, and had been President of the State Medical Society.

May 22.—HAZARD, SAMUEL, archæologist, historian, and publisher; died at Germantown, Pa., aged 86 years. He was the son of Ebenezer Hazard, who was United States Postmaster from 1782 to 1787, and who published several volumes of historical collections, State papers, etc. In 1828, he commenced the publication of the "Pennsylvania Register," which was issued until 1836, forming sixteen volumes large octavo. He next published the "United States Commercial and Statistical Register," forming six large octavo volumes, issued from 1839 to 1842. The "Annals of Pennsylvania," from 1609 to 1682, an octavo volume of 800 pages, was next issued by Mr. Hazard. He also, by appointment of the Legislature, printed the "Pennsylvania Archives," from 1682 to 1790, from the original records, forming twelve volumes. Few men have continued their unremitting industry in the collection of the records of the past to so late a period of life as did Mr. Hazard. This devotion is the more remarkable, as his early life was spent in mercantile and commercial pursuits, and he had made several voyages to the Indies before commencing his antiquarian researches.

May 24.—DEMERS, GEORGE W., a prominent journalist, editor, reporter, politician, orator, and for some years a clergyman; died at Albany, after a lingering illness of several years. Mr. Demers was in every respect a remarkable man. For some years past he had been the editor of the *Albany Evening Journal*, and

had been distinguished, not only for his ability as an editor, but for his amenity and courtesy, qualities not always noticeable in the editorial fraternity. His studies ranged over a wide extent of knowledge, and both as a writer and a speaker he attained great eminence. He learned printing in the office of the *Lansingburg Democrat*. In his earlier years he served as reporter and editor on the *Troy Daily Times*. His greatest speech was in the Syracuse Convention, in 1868, on the emancipation question, in response to an argument of the late Hon. H. J. Raymond. His review of Andrew Johnson's veto of the Civil Rights Bill was a marvel of forcible writing, and its sharp sentences helped to sever the last links between that President and the Republican party. He is reputed to have accomplished the feat of reporting a lecture filled with technical phrases and eccentricities, *verbatim*, from memory alone. His political influence, although the most memorable feature in his career, in no wise unfitted him for success in the pulpit, and he entered upon the ministerial profession in later years with ardor and success, as pastor of a Baptist church at Sand Lake, N. Y. Before he retired from that profession many scores had been added to the church over which he presided, attracted by his high attainments and fervid piety. He was celebrated in private life for acts of spontaneous and hearty friendship, and for lending a helping hand to those in need of assistance.

May 25.—PLUMB, JOSEPH, a prominent citizen of Cattaraugus County, N. Y., a leading reformer in the antislavery, temperance, and other benevolent and philanthropic causes; died at Cattaraugus, N. Y., aged 79 years. He was often tendered official positions, but declined them, and won the esteem of even those who were antagonistic to his views, by his strict conscientiousness and kindness of heart. He was one of the band that organized the Liberty party of 1844.

May 26.—WILLIS, NATHANIEL, a venerable journalist and founder of newspapers, father of the late poet, N. P. Willis; died in Boston, aged 90 years. He was born in Boston, in June, 1780, and came of a race of printers and publishers. His grandfather had been a publisher in Boston, and his father was the proprietor of the *Independent Chronicle*, a leading political paper from 1776 to 1784, and afterward of the *Potomac Guardian*, and other journals. True to his inherited preferences, the son established the *Eastern Argus* at Portland, in 1803, and conducted it for some years. During the Administration of John Adams, Mr. Willis wrote some severe and caustic articles against the Administration, and, being prosecuted under the Sedition Law then in force, he was imprisoned; and his son N. P. Willis used to say that his earliest boyish reminiscence was the carrying his father's dinner to him every day at the prison in which he was confined. Having disposed of his interest

in the *Eastern Argus* some years later, Mr. Willis returned to Boston, and there projected and conducted for more than twenty years the *Boston Recorder*, one of the earliest (some say the earliest) religious paper in the world. Before disposing of this paper he had established the *Youth's Companion*, undoubtedly the first journal for children ever published. This was maintained by him for many years, and we believe is still published. Mr. Willis retained his bodily and mental vigor to the last, officiating as deacon at the Park-Street Church within two weeks of his death.

May 30.—HALL, Brevet Brigadier-General CALDWELL K., U. S. Volunteers, a brave officer of the Union army; died in Trenton, N. J., aged 81 years. He was the son of Rev. John Hall, D. D., of Trenton, and had received a collegiate and legal education, and had commenced the practice of his profession in Trenton just before the commencement of the war, but promptly volunteered in his country's cause in the summer of 1861. He entered the service as adjutant of the Fifth Regiment New-Jersey Volunteers in August, 1861; was made acting-assistant adjutant-general of the Second Brigade under Colonel Starr, and was subsequently aide-de-camp on General F. Patterson's staff. In August, 1862, he accepted the lieutenant-colonelcy of the Fourteenth New-Jersey Volunteers under Colonel W. S. Truex. He served with this famous regiment all through its battles and skirmishes, and was severely wounded in the battle of Monocacy, shortly after which he was honorably discharged from the service for disability from wounds received in that action. He was subsequently breveted colonel and brigadier-general for gallant and meritorious services at the battles of Cold Harbor and Monocacy. Upon quitting the field, he resumed the practice of law at Trenton, and in February, 1867, was appointed, by Governor Ward, Prosecutor of the Pleas for Mercer County, which position he held up to the time of his death.

June 1.—CRAMER, JOHN, a prominent politician of New-York State; died at his residence in Waterford, aged 91 years. He was born in Saratoga County, in 1779; was an elector upon the ticket of President Jefferson in 1804; served in the State Assembly and State Senate, three years each; and was a member of Congress from 1833 to 1837. He assisted in framing the State Constitution in 1821, and while member of the Senate proposed the present system of choosing presidential electors upon a general ticket. He acquired an immense fortune, principally invested in banks and railroads, and retired some years since from public life to attend to the management of his large private interests.

June 1.—KIMBERLY, CHARLES W., a journalist, died in Baltimore, Md., aged 45 years. He had been for sixteen years connected with the *Baltimore American*.

June 3.—HOLLAND, CORNELIUS, M. D., a po-

litical leader in Maine, died at Lewiston, aged 88 years. He was born July 9, 1783, educated a physician, and established himself in practice in Canton, Maine. He was a member of the Constitutional Convention of 1819; a member of the State Legislature in 1820 and 1821; State Senator in 1823-'25-'26; and Representative in Congress from 1830 to 1833, serving on the Committee on Elections, and also on the Committee on Representation under the Fifth Census.

June 8.—LARNED, JOSEPH G. E., an inventor and manufacturer, died in New-York City, aged 51 years. He was born in Thomaston, Conn., April 29, 1819; graduated at Yale College in 1839; and engaged in teaching and the study of law until 1842, when he accepted a tutorship in Yale. In 1847 he was admitted to the bar in New Haven, but after a short time became interested in the development of certain inventions, and after 1852 withdrew from practice. In 1854 he removed to New-York City, and from 1855 to 1868 was engaged in the manufacture of steam fire-engines, on plans of which the leading features were of his invention. He was then appointed, by Government, Assistant Inspector of Iron-clads, and had charge of work in Brooklyn. At the time of his death he was engaged the practice of his profession.

June 5.—THOMAS, GEORGE, a journalist, died at Omaha. He was formerly connected with the *New-York Herald*, but was city editor of the *Omaha Republican* at the time of his death.

June 6.—REED, REV. DAVID, a Unitarian clergyman, and for forty years proprietor of the *Cristian Register*; died in Boston, aged 79 years.

June 6.—WINGATE, MOSES, an aged and prominent citizen of Haverhill, Mass.; died there, aged 101 years. He served five terms in the Assembly, three terms in the State Senate, was one of the committee to revise the Massachusetts Constitution in 1820, was postmaster twenty years, justice of the peace forty-five years, and a prominent Mason sixty-seven years.

June 10.—SEERACH, Brigadier-General WILLIAM, National Guard N. Y. State; died in New York, aged 46 years. He was for many years a clerk in the Comptroller's office, and served as commissary-general on the staff of Governor Hoffman.

June 14.—SPENCER, REV. THEODORE, a prominent Presbyterian clergyman; died at Rome, N. Y., aged 71 years. He was a son of the late Chief-Justice Spencer, of Utica, and, having been destined for the army, pursued a course of study at the Military Academy at West Point. His special aptitudes, however, adapted him so much better to the bar that he prepared for admission to it, and, commencing practice at Auburn, he rose rapidly to distinction, and while yet a youth was chosen District Attorney of Cayuga County. In the

height of his legal eminence, he was hopefully converted, and soon after entered upon a course of theological study with a view to the ministry. His first pastoral charge was at Rome, N. Y., and subsequently he preached in Utica, until failing health compelled him to retire for a time from pastoral duties and cares. Somewhat recruited by his respite from the pulpit, he accepted the secretaryship of the American Home Missionary Society for Central and Northern New York, and greatly endeared himself to the feeble congregations in his field by his oversight of them, while he was very successful in collecting funds for evangelizing the land. Twelve years since he became too feeble for active service, and since that time had lived in the retirement of home. He was a man of vigorous intellect, strong argumentative powers, and deep-toned piety. Mr. S. was the author of two or three theological works.

June 15.—**MACDILL, DAVID, D. D.**, a prominent clergyman of the Presbyterian Church in Monmouth, Ill. He was born in South Carolina, studied under the Rev. Dr. John Mason, of New York, and commenced preaching in Ohio. Subsequently he became an editor and director in collegiate and theological institutions, where he made himself signally useful.

June 25.—**HEATON, DAVID**, died in Washington, D. C., aged 47 years. He was born at Hamilton, Ohio, March 10, 1838; received an academic education; read law and was admitted to practice; in 1855 was elected to the State Senate of Ohio; in the fall of 1857 moved to Minnesota, and was elected to the State Senate three times in that State; was appointed in 1863 by Secretary Chase as special agent of the Treasury Department, and as United States depository at Newbern, North Carolina; was appointed Third Auditor in the Treasury Department, but declined; was made President of the National Bank of Newbern, in the fall of 1865; was the author of the Republican platform adopted at Raleigh, March 27, 1867; contributed largely to Republican papers in defence of Republican principles for more than twelve years; was elected to the Constitutional Convention of North Carolina from Craven County in 1867; was chairman of the Committee on Bill of Rights in that convention; was elected to the Fortieth Congress, and was reelected to the Forty-first Congress as a Republican.

June 27.—**KINGSBURY, REV. CYRUS, D. D.**, a Presbyterian clergyman and missionary among the North American Indians; died in the Indian Territory. He was for a period of more than fifty years connected with the American and Southern Presbyterian Boards of Missions, mostly among the Ojibwees and Choctaws.

June 28.—**MOSES, JAMES C.**, journalist; died in Knoxville, Tenn., aged 28 years. He was a native of Exeter, N. H., was an apprentice in a newspaper office, and in 1887 became foreman in a new printing establishment in Knoxville, of which he soon became proprietor.

Subsequently he was editor of the *Knoxville Register*.

June 30.—**HEATH, LYMAN**, a noted vocalist and ballad composer, died in Nashua, N. H., aged 66. He was born in Bow, N. H., August 24, 1804, spent his minority at Lyman, Vt., subsequently lived in St. Johnsbury, Vt., Littleton, N. H., and for the last thirty years in Nashua. Mr. Heath was the author of "The Grave of Bonaparte," "Burial of Mrs. Judson," and many other popular songs. He had taught music and given concerts for a period of forty-five years.

June 30.—**TUCKER, POMEROY**, a leading politician and journalist of Western New York, aged 68 years. He was born in Palmyra, N. Y., served an apprenticeship as a printer in that village, and, after writing for the *Canandaigua Messenger*, started, in 1824, a new Democratic organ, the *Sentinel*. In 1848 that journal embraced the cause of free-soil, and Mr. Tucker was offered a nomination to Congress, but declined. In 1857 he represented his district in the Assembly, was also for several years postmaster and canal collector. On the breaking out of the late war he took an active part in sustaining the Government. In 1867 he published a work on Mormonism which had a large sale, and is a recognized authority on that subject.

June —.—**LEFTWICH, DR. JOHN W.**, a prominent citizen of Memphis, Tenn.; died at Lynchburg, Va., aged 44 years. He was born in Bedford County, Va., September 7, 1826; graduated at the Jefferson Medical College, Philadelphia, in 1850, and settled subsequently in Memphis as a cotton-factor. In 1865 he was elected a Representative from Tennessee to the Thirty-ninth Congress, taking his seat near the close of the first session of that Congress, and serving on the Committee on Indian Affairs. He was also a delegate to the Philadelphia National Union Convention of 1866.

July 3.—**CRAIG, ALEXANDER J.**, State Superintendent of Schools in Wisconsin; died at Madison, aged 47 years. He was born in Orange County, N. Y., November 11, 1823. His early life was spent in Western New York, but in 1843 he removed to Wisconsin, and settled in Palmyra, Jefferson County, where he continued to reside for fifteen or sixteen years, teaching a part of the time, and performing many of those acts of public service which in a new country fall to the lot of a highly-intelligent, active, and public-spirited citizen. Here, too, he held many important local offices. In 1849 he represented his district in the Assembly. In 1854 he became principal of one of the Milwaukee ward schools, and two years later was appointed editor of the *Wisconsin Journal of Education*, which was the organ both of the State Teachers' Association and of the State Superintendent. He was also elected president of the Association in 1860. Accepting the post of Assistant Superintendent the same year, he relinquished the *Journal*,

having conducted it for about three years with marked success. In 1868 he entered upon the duties of Superintendent-in-Chief, and was re-elected in 1869.

July 3.—**HAMBLIN**, Brevet Major-General JOSEPH E., N. Y. Volunteers; died in New-York City, aged 42 years. He was a native of Yarmouthport, Mass. For many years prior to 1861 he was a prominent and popular member of the Seventh Regiment, National Guard, and almost immediately on the outbreak of the war volunteered his services in the defence of the nation, and became adjutant, with the rank of first lieutenant, of the Fifth Regiment, New York Volunteers (First Duryea Zouaves). In November, 1861, shortly after the formation of the Sixty-fifth Regiment, New York Volunteers (the Chasseurs), he was transferred to the latter command as major. The regiment was conspicuous for its services in the field, and for distinguished and meritorious conduct. Major Hamblin rapidly rose by successive grades of promotion to the command, participating in Grant's grand campaign of 1864 from the Wilderness to Petersburg. At this time the Sixty-fifth formed part of the First Brigade, First Division, Sixth Army Corps. After the investment of Petersburg, the Sixth Corps was, in July, 1864, transferred from the Army of the Potomac to the Shenandoah Valley, to resist the demonstration of Breckinridge and Early against Washington and Maryland. In this new theatre of operations Colonel Hamblin participated in each of Sheridan's brilliant successes in the Valley, and at Cedar Creek, the action for which Sheridan made his famous ride from Winchester, the colonel was severely wounded by a rifle-ball in the leg. For conspicuous gallantry in this action he was brevetted brigadier-general, and placed in command of the brigade. Upon the return of the corps to Petersburg, he was, in the spring of 1865, promoted to full rank, and participated in all the subsequent engagements of the Army of the Potomac to the surrender at Appomattox. For distinguished bravery at Sailor's Creek, April 6, 1865, the last engagement between the Confederates and the Army of the Potomac, he was brevetted major-general, and was mustered out with that rank at Washington in July, 1865. Socially he was one of the most genial, gentlemanly, and noble-spirited of men, and was universally beloved by the rank and file of his brigade, as well as by a large and estimable circle of friends and acquaintances in private life. After the war he had entered upon civil pursuits, and at the time of his lamented death held the position of superintendent of agencies for the Commonwealth Fire Insurance Company. He was, also, up to a recent period, adjutant-general and chief of staff of the First Division, National Guards.

July 4.—**BRUSH**, CONKLIN, former Mayor of Brooklyn; died in that city, aged 76 years. He was born in Connecticut in 1794, and early

removed to New York, where he engaged in the crockery and hardware business. In 1825 he made his residence in Brooklyn, then a mere village, and in 1880 was elected one of the trustees. When the city was chartered, he was chosen an alderman from the First Ward, and held that position for some time. In 1850 he was elected Mayor of Brooklyn, serving during the years 1851 and 1852. Mr. Brush was an active, influential member of the Whig party until its disruption, when he joined the Democracy and remained in its ranks until his death. He was one of the original Water Commissioners of Brooklyn, and was also one of the Commissioners of Prospect Park, which latter position he continued to hold until advancing years prevented his performing its duties with that regularity and attention required. He aided in establishing the Mechanics' Bank, of which he was for many years president, and which, under his able management, became one of the most prosperous banking institutions on Long Island.

July 6.—**POPE**, CHARLES A., M.D., an eminent surgeon and professor of surgery; died at Paris, Mo., aged 52 years. He was born at Huntsville, Ala., March 15, 1818, educated at Green Academy, Huntsville, and thence was transferred to the University of Alabama, where he graduated. After passing through the necessary preliminary studies in his native town, he entered the Cincinnati Medical College, where he attended a course of lectures, and afterward passed through the regular course, and graduated with high honors at the University of Pennsylvania. Immediately thereafter he visited Europe, and spent two years in travelling through France and Germany, and availing himself of those advantages in surgery which the French capital alone could afford. Returning from abroad, he settled permanently in St. Louis, in 1841, where his attainments speedily gave him an extensive practice. Soon after his arrival he was elected Professor of Anatomy in the St. Louis University, and a few years later was chosen Professor of Surgery. He aided in organizing the St. Louis Medical College, and took a special interest in the cause of education, devoting much time and labor to that object. For several years past he had retired from the active practice of his profession, and resided a greater portion of the time in Paris, Mo.

July 6.—**RITCHIE**, Commodore ROBERT, U. S. Navy; died in Philadelphia, aged 70 years. He was born in Pennsylvania in 1800, appointed midshipman in 1814, commissioned lieutenant in 1825, commander 1841, captain 1855, commodore retired list 1867; he served in the West Indies, Mediterranean, and Pacific squadrons, and commanded the steam-sloop Saranac at the outbreak of the war, and continued in that position until March, 1862.

July 13.—**PIERCE**, Rev. JAMES EDWIN, Professor of the Hebrew Language and Literature in Auburn Theological Seminary; died in that

city, aged 81 years. He was born in West Townsend, Vt., August, 1839, graduated at Middlebury College, 1861, was tutor from 1863 to 1864, graduated at Auburn Theological Seminary in 1865, and was immediately elected adjunct Professor, and two years later full Professor of the Hebrew Language and Literature. He was a severe student, a thorough and able teacher, and an impressive and popular preacher.

July 16.—FLETCHER, A. J., formerly Secretary of State in Tennessee; died in Nashville, aged 51 years. He was formerly a prominent Whig politician of that State, and was elected to the State Senate in 1855. When the State seceded in 1861, he opposed the movement and removed to Kentucky, and afterward to Indiana. He canvassed the latter State in 1864 in favor of President Lincoln. He was elected Secretary of State in 1865. In 1867 he took an active part against the action of Governor Brownlow in regard to the franchise law and elections.

July 16.—PRICE, THOMAS L., a Democratic politician; died at Lexington, Mo. He was elected a Representative from Missouri to the Thirty-seventh Congress; was a delegate to the Chicago Convention of 1864, and to the Philadelphia National Union Convention of 1866.

July 18.—VANDERPOEL, AARON, a New-York politician, orator, and judge; died in that city, aged 72 years. He was born at Kinderhook, February 5, 1799, admitted to the bar in 1820, member of the New-York Legislature from 1825 to 1830, member of Congress 1838 to 1837, and from 1839 to 1840; and on his retirement from Congress settled in New-York City, where he was appointed Judge of the Superior Court, which office he held until 1850.

July 19.—BROOKE, Major-General WILLIAM F. H., a brave and skilful officer of U. S. Volunteers, died at Huntsville, Ala. He was born in Ohio, served in the Florida and Mexican Wars, was at Palo Alto and all the important battles of that campaign, was appointed brevet-captain in 1846, brevet-major in 1847; early in the recent war was made brigadier-general of volunteers, and served with the Army of the Potomac until July, 1863; was commander of the Department of the Monongahela during Lee's invasion, and until April 6, 1864, and afterward commanded a division of the Eighteenth Corps and subsequently the Tenth Corps. In July, 1864, he resigned on account of ill health.

July 19.—POWELL, LLEWELLYN, M. D., an eminent physician and medical professor of Louisville, Ky.; died there, aged 68 years. He was a native of Virginia, graduated at Yale College, studied medicine and soon rose to eminence in his profession. He removed to Louisville, Ky., nearly forty years since, and took a high stand as a professor in the medical institutions of that city.

July 19.—STODDART, JOHN T., a political leader in Maryland; died in Charles County,

aged 80 years. He was born there in 1790, educated at Princeton College, admitted to the bar, was an officer in the militia in 1812, served several years in the Maryland Legislature, and was a Representative in Congress from 1833 to 1835, serving on the Committee on Claims, and the District of Columbia.

July 20.—MARTIN, ROBERT M., an eminent jurist, died at Saratoga, N. Y., aged 72 years. He was born in Worcester County, Md., 1798; graduated at Princeton; was admitted to the bar; member of Congress from 1825 to 1827; Chief Judge of Western Circuit of Maryland, from 1845 to 1851; Judge of Superior Court of Baltimore, 1856 to 1867; and professor in the Law School University from 1867 to 1870.

July 22.—LANMAN, CHARLES JAMES, a lawyer of some eminence, died in New London, Conn., aged 75 years. He was born in Norwich, June 5, 1795, graduated with honor at Yale College in 1814, studied law and was admitted to the bar of New London in 1817. Soon afterward he was invited by Henry Clay to settle in Kentucky, but he decided to seek his fortune in the Territory of Michigan, on the invitation of his friends William Woodbridge and Lewis Cass. He made the journey to Detroit chiefly on horseback, there being at that time but one tavern between that city and Buffalo. Joining Mr. Woodbridge in his law-office, he began the practice of his profession, and while riding the circuit he visited Frenchtown, on the river Raisin (now called Monroe), where he permanently settled. In that place he held many local offices, such as Attorney for the Territory, Judge of Probate, and colonel of the militia. In 1823 President Monroe appointed him Receiver of Public Moneys for the District of Michigan, and he was reappointed by President Adams, holding the office eight years. In those early days specie was the only currency in vogue, and the receipts of silver alone, in one year, amounted to \$100,000, which had to be transmitted to Detroit, through the wilderness, on pack-horses. He was one of the founders of Tecumseh, Mich., was a commissioner to locate the county seats of many of the leading counties in the State; was the surveyor, and once the sole owner, of the land where now stands the city of Grand Rapids, as well as of several other flourishing towns in the State. Although not a practical farmer, at one period of his life he indulged his agricultural tastes by carrying on one or two farms, and he was among the very first to introduce into Michigan, from Kentucky and Virginia, the best breeds of blooded horses. In 1835, from family considerations, he returned to Norwich. During the financial revulsion of 1837 he lost the bulk of his property, all of which was located in Michigan; in 1838 he was elected Mayor of Norwich, and at the conclusion of that service he lived chiefly in retirement. In 1862 he returned to New London, the home of his youth, remaining there until his death.

July 22.—STOEVEY, MARTIN LUTHER, Ph. D., LL. D., a Lutheran clergyman, professor, and author, died at Gettysburg, Pa., aged 50 years. He was born at Germantown, Pa., February 17, 1820, graduated at Pennsylvania College, Gettysburg, in 1838, and after teaching a year in Jefferson, Md., was in 1839 appointed tutor in Pennsylvania College. From that time until his death, during a period of thirty-one years, he was connected with that institution as tutor, Principal of Preparatory Department, and Professor of Latin. For many years also he was editor of the *Evangelical Quarterly Review*, in which he published his "Reminiscences of Lutheran Ministers," which have made his name and labors of love so widely known and appreciated throughout the Lutheran Church. He published also a volume on the "Life and Times of Muhlenberg," and a memoir of Rev. Dr. Mayer, and furnished anonymously many articles and biographical sketches for his Review. For his extensive labors in this department he was appropriately called the "Plutarch of the Lutheran Church in America." For a number of years he was secretary of the General Synod, and during the greater part of his life had accumulated all accessible materials for a history of the Lutheran Church. So extended and accurate was his knowledge of details, that he was almost constantly applied to for information by persons in all parts of the country. His devotion to the interests of the college with which he was connected was unceasing to the close of his life. Dr. Stoevey was well known for his philanthropy. During the fierce battles of Gettysburg he participated in the fearful scenes of terror and blood. His labors and sacrifices to alleviate the sufferings of the wounded and dying were as efficient as they were untiring and unselfish. His interest in the national cause led him, several times during the war, "to the front" in time of battle, in order to assist, under the auspices of the Christian Commission, in ministering to the spiritual necessities of our soldiers.

July 29.—BROCKWAY, JOHN H., a Connecticut lawyer and politician; died at Ellington, in the 70th year of his age. He was born there, January 31, 1801, graduated at Yale College in 1821, and after spending a few months in teaching school at East Windsor, entered upon the study of law, was admitted to the bar of New Haven in 1823, and immediately opened an office in his native town. In a few months he became known through the county, and had his full share of the business in the courts. He possessed many of the qualities that go to make up the successful lawyer. His mind was active, his perception acute, his discrimination judicious, and his conclusions, though rapidly formed, generally correct. In the argument of questions of fact to the jury he was seldom excelled. He was an easy, pleasant speaker, and always seemed to have the power to express his ideas in pure English without apparent ef-

fort. He seldom indulged in mere declamation, but had a faculty of presenting facts in an attractive form, often interspersed with figures of rhetoric and sallies of wit, that secured the fixed attention of his hearers. He made the interests of his clients his own, and his integrity won the confidence of all associated with him. Mr. Brockway was never a political aspirant, though an active member of the old Whig party, and afterward of the Republican party. He was elected a member of the House of Representatives, in the General Assembly of his State, May session, 1832, and was again returned in May, 1838. He was elected a Senator from the twentieth senatorial district in the spring of 1834. In April, 1839, he was chosen to represent the counties of Windham and Tolland, then composing one congressional district, in the Congress of the United States, and was reelected in the spring of 1841. In August, 1849, he was appointed Attorney for the State, within and for the county of Tolland, and held the office by successive reappointments until April, 1867, when he resigned on account of his health, which had then become so much impaired that he felt unable to discharge its duties.

August 4.—NORTON, CHARLES F., a philanthropist; died at his residence near Philadelphia, Pa., aged 57 years. He was an active member of the Lutheran Church, and took a deep interest in every thing connected with its welfare. He was a large contributor toward the erection of St. Mark's Lutheran Church, Philadelphia, and also more recently founded a professorship in the Lutheran Theological Seminary there by a contribution of \$30,000.

August 6.—COBB, GEORGE T., a Republican leader in New Jersey; was killed by an accident on the Chesapeake and Ohio Railroad, aged 57 years. He was the grandson of a Revolutionary officer, and was born in Morristown, N. J., October, 1818. At the age of fifteen he became a clerk in a country store, and afterward entered the iron-works at Dover. Subsequently he established himself in the iron business, and rapidly made a fortune, which he generously shared with objects of private and public beneficence. The Evergreen Cemetery in Morristown was one of his gifts to his native town, as well as \$15,000 for a public school-house, and \$75,000 for a stone church-edifice. Mr. Cobb entered active political life in 1860, when he was nominated by the Democrats of the Fourth District of New Jersey for Congress. He was elected, and first sat, in the extra session called by President Lincoln in July, 1861, to provide means for suppressing the secession. Mr. Cobb took sides with the Union party at once, and gave the Administration his hearty support. This course offended many of his Democratic friends at home. The next nominating convention of his district passed resolutions condemning the war. Mr. Cobb refused a renomination, and Andrew J. Rogers succeeded him in Congress. Mr. Cobb finally

separated from the Democracy, and in 1865 was triumphantly elected by the Republicans of Morris County as State Senator. He was reelected in 1868. In 1869 his name was mentioned as a candidate for the office of United States Senator, to fill the vacancy caused by the death of Mr. Wright. He lost the nomination by only three votes in caucus, after an energetic canvass against Mr. Frelinghuysen. Mr. Cobb had been spending a few weeks at Greenbrier White Sulphur Springs earlier in the season, and was on his return thither when the accident occurred.

Aug. 6.—**HEADLEY, J. BOYD**, U. S. Collector of Internal Revenue; was killed by the same accident. Before the late war he was engaged in banking in Peoria, Ill., but removed to New-York City in 1861, and opened a broker's office. He was the owner of a large amount of real estate near Morristown, N. J.

Aug. 9.—**SHANAHAN, REV. JOHN**, a Roman Catholic priest; died at the parsonage of St. Peter's Church, New-York City, in his 78th year. He was born in Kilkenny, Ireland, in 1772. While yet young, he was a professor in St. Mary's Seminary, at Emmettsburg, Md.; and among his pupils were the late Archbishop Hughes, Archbishop McCloskey, Bishop Whalen, of Wheeling, and the late Bishop Fitzpatrick, of Boston. A large portion of his life was spent in missionary travelling, chiefly in the Eastern and Middle States, and California, but for the last fifteen years he was attached to St. Peter's Church. He had been blind for a period of six years.

Aug. 11.—**SEWALL, THOMAS, D. D.**, a Methodist Episcopal clergyman and author, died in Baltimore, Md., aged 55 years. He was a son of the distinguished Prof. Sewall.

Aug. 12.—**FRENCH, BENJAMIN B.**, a prominent citizen of Washington, D. C.; died there, aged 70 years. He was a native of New Hampshire, but had resided in Washington for a period of forty years. From 1845 to 1847 he was Clerk of the House of Representatives, and afterward Commissioner of Public Buildings. He was the author of several works, and a prominent member of the Masonic fraternity.

Aug. 13.—**JENKS, GREENVILLE TUDOR**, a prominent lawyer of Brooklyn; died suddenly at Saratoga, N. Y., aged about 40 years. He was a nephew of Wendell Phillips, and was born in Boston, Mass. After completing his academic course at the University of New York, he studied law in the office of Messrs. Lott, Murphy, and Vanderbilt, and, soon after his admission to the bar, attached himself to the law firm of Hyde and Pearson. In 1868 he entered into partnership with Judge O. E. Pratt, and later they added to the firm Judge Emott and Joshua Van Cott, continuing the partnership until 1867, when Mr. Jenks associated with himself another partner, with whom he continued until his death. He was a man of brilliant talents, keen and ready wit, and

well versed in the details of his profession. While he had a taste for all branches of the law, he distinguished himself more particularly in commercial law, and was very successful in criminal law. His genial nature and ardent affections rendered him popular, not only among his professional brethren, but with all with whom he was brought into contact.

Aug. 13.—**PRESSLY, REV. JOHN T., D. D.**, a Presbyterian clergyman, theological professor, and author; died at Alleghany, Pa., aged 67 years. He was born in Abbeville District, South Carolina, studied at the Theological Seminary in New York, under Dr. John Mason, and held his first pastorate in his native village. From thence he was called to the Theological Seminary and the charge of the First Associate Reformed (now United Presbyterian) Church in Alleghany, in both of which stations he labored with distinguished ability and success for nearly forty years.

Aug. 14.—**HAINES, RICHARD T.**, an eminent merchant of New York, died at his residence in Elizabeth, N. J., in his 76th year. He was one of the founders of the American Tract Society, was a member of its Executive Committee from the beginning, and for forty years the efficient chairman of its Finance Committee. As a member of its Board of Direction, he was ever devising liberal things, and, with his ample fortune, contributing largely to its funds. He was a director and liberal supporter of the American Bible Society, the American Board of Foreign Missions, and other religious and benevolent institutions.

Aug. 16.—**MARSH, LEONARD, M. D.**, Professor of Anatomy and Physiology in the University of Vermont; died at Burlington, Vt. He graduated at Dartmouth College in 1827, and in the medical department in 1832. He was for some years Professor of Latin and Greek in the university, and was connected with it for a period of fifteen years.

Aug. 16.—**VAN MEYER, REV. HENRY L.**, a Baptist clergyman and missionary for twenty-two years in Bassein, Burmah; died at Mottville, near Skaneateles Lake, N. Y., aged 46 years. He was born in Philadelphia, Pa., September 21, 1824, graduated at the University of Pennsylvania, and the Hamilton Literary and Theological Institute, was ordained September 28, 1848, was appointed missionary and sailed from Boston, October 21, 1848. His labors were almost without intermission from that period until failing health compelled him to return to this country, where he arrived but a month previous to his death.

Aug. 16.—**WRIGHT, HENRY C.**, a noted lecturer on antislavery, peace, spiritualism, etc.; died at Pawtucket, R. I. Mr. Wright's nature was impulsive, earnest, and perhaps fanatical; but he possessed strong convictions, and stated them with great force and eloquence. At one time he was conspicuous among the band of antislavery orators who assembled annually in

New York at the anniversary of the American Antislavery Society, and who, by their earnest avowals of their faith, finally fought their way to the hearts and sympathies of the people.

Aug. 17.—**BELL, JOSHUA F.**, a Kentucky politician; died in Kentucky. He was a native of that State, and educated for the law. From 1845 to 1847 he was a Representative in Congress, serving as a member of the Committee on Invalid Pensions. He was also a member of the "Peace Convention" of 1861.

Aug. 18.—**HOXIE, JOSEPH**, a politician, orator, and prominent citizen of New York; died in Westerly, R. I., aged 75 years. He was born at Charlestown, R. I., August 13, 1795. In his seventeenth year he went to New York, paying for his passage on a sloop by working for three days breaking stone in the streets. He afterward earned an humble living by working on a turnpike between Portsmouth and New York, and when twenty years old he started a public school. He subsequently opened a clothing-store in Cherry Street, and next engaged in the importing business in Maiden Lane. In 1837 Mr. Hoxie received the Whig nomination for County Clerk, and was elected by an overwhelming majority. From that time he became deeply interested in politics, and on the nomination of General Harrison to the presidency entered heartily into the canvass. In the next presidential campaign he warmly supported his life-long friend, Henry Clay. In 1852 he was nominated for Congress in the Fifth District, but was defeated by the Democratic candidate. In 1859 he was the Republican candidate for County Clerk, but was unsuccessful, though he had a very large vote. He was appointed in 1864, by Mr. Lincoln, Collector of Internal Revenue in the Fifth District, and in the last presidential campaign he delivered addresses in Staten Island and New Jersey, in which the reminiscences of political life he introduced were much appreciated. About 1852 the Commonwealth Fire Insurance Company was established by Mr. Hoxie, in conjunction with several leading citizens, and in 1868 he accepted the office of President of the Amicable Life Insurance Company, and held that position at the time of his death.

Aug. 18.—**MERRICK, SAMUEL VAUGHAN**, a leading manufacturer of marine steam-engines and other machinery; died in Philadelphia. He was the senior member of the firm of Merrick & Sons, one of the largest establishments in the United States, was first President of the Pennsylvania Central Railroad Company, and one of the projectors, and for a long time an officer, of the Franklin Institute.

Aug. 20.—**HAWLEY, GIDRON**, an eminent scholar and philosopher; died in Albany, N. Y., aged 85 years. He was born in Huntington, Conn., in 1785, removed to Saratoga County in 1794, graduated from Union College in 1809, and was admitted a member of the Albany bar in 1813. In 1814 he was appointed secretary

of the Regents of the University, the duties of which office he discharged without salary for twenty-seven years with great faithfulness and ability. On the organization of the Smithsonian Institution in 1846, he was appointed one of the four Regents at large, the other three being Richard Rush, Rufus Choate, and William C. Preston, all of whom had died before him. Mr. Hawley was a man of wide and varied learning, being thoroughly familiar with the whole range of English literature, as well as that of most of the nations of Continental Europe, and was also familiar with the various departments of science. He prepared and printed some years since, for private distribution among his friends, a series of "Essays on Truth and Knowledge," which were characterized by great metaphysical discrimination and acuteness.

Aug. 21.—**DAVIS, REV. HENRY, D. D.**, a Baptist clergyman and author; died in Danville, Ill., aged 70 years. He was born in Chariton, Saratoga County, N. Y., April 23, 1800. In 1807 his parents removed to New-York City, where he received a good English education. In 1818 his family removed to Western New York, and soon after he engaged in teaching in Ogden, and while there made a profession of religion, uniting with the Baptist Church. In 1821 he returned to New-York City and engaged in business, which he relinquished in 1823, to devote himself to the ministry, and entered Hamilton (now Madison) University the same year, and graduated in 1827, and was ordained in Bridgewater, N. Y., where a church was organized under his ministry. He planted the first church at Detroit, Mich., and was pastor successively at Palmyra, N. Y., at Brockport, Jordan, Cannon Street, in New-York City, and of the Second Church, Rochester, also at Columbus, O., New Corydon, Ind., and Rock Island, Ill. While in New York he was for a time a secretary of the Home Mission Society, and was for two or three years an agent of the Missionary Union in Ohio. At the time of his death he was pastor at Rock Island. He was seized with the illness that proved fatal, while on a visit to relatives at Danville. Dr. Davis was a ready and graceful writer, and contributed largely to the periodicals and reviews of his denomination, and also published several small religious treatises, occasional addresses, etc.

Aug. 22.—**APPLEGATE, A. J.**, Lieutenant-Governor of Alabama; died at Mobile. He was a native of Ohio, served in an Ohio regiment during the late war, afterward settled in Huntsville, Ala., and in 1868 was elected Lieutenant-Governor of the State.

Aug. 22.—**TAYLOR, JAMES B.**, a prominent and wealthy citizen of New-York City; died there, aged 64 years. Mr. Taylor was for many years an active political leader, never holding office himself, but exerting a controlling influence in his party. He was both the personal and political friend of William H. Seward, and

coöperated with him in his political projects. He had been until his retirement from active political management, four or five years ago, the leader of the conservative wing of the Republicans. He was a large stockholder in the *New-York Times*.

Aug. 26.—CHILD, LEXUS, a prominent, influential, and philanthropic citizen of Massachusetts; died in Hingham, Mass., aged 67 years. He was born in Southbridge, Mass., in 1808, and graduated from Yale College in 1824. He entered the legal profession, and, after practising for some years, accepted the agency of a manufacturing company at Lowell, where he remained for fifteen years. He then returned to the practice of his profession in Boston, and took an active part in politics, being for several years a member of one or the other branch of the Massachusetts Legislature. He was elected a corporate member of the American Board of Commissioners for Foreign Missions in 1845, and was a very faithful and active member of the prudential committee, from 1859 till his death. He was also for some years one of the Board of Trustees of Andover Theological Seminary, and Phillips Academy, and was a man of large-hearted benevolence.

Aug. 29.—ANDERSON, REV. WILLIAM C., D. D., a Presbyterian clergyman and scholar; died at Junction City, Kansas. He was a native of Philadelphia, a graduate of one of the Pennsylvania colleges, and for some years President of Miami University, Oxford, Ohio. When the churches in San Francisco began to select the ablest of the Eastern clergymen for their pulpits, Dr. Anderson was one of the first whose labors were demanded. He complied with the call, and became for some years the faithful and beloved pastor of the First Presbyterian Church in San Francisco. His arduous labors having impaired his health, he returned to the East and spent some years in retirement at Germantown. His health having become partially restored, he returned to his work, and, after preaching within the bounds of the New-Albany Presbytery for a time, set out for the Pacific coast, and died after a brief illness at Junction City.

Sept. 3.—DICKINSON, MISS MARTHA BUSH, an eminent teacher; died in Brooklyn, L. I. She was a daughter of Rev. Baxter Dickinson, D. D., of that city, and from her early youth was remarkable for her depth of piety and earnest desire for usefulness. The great labor of her life was the founding of the Young Ladies' Seminary at Lake Forest, Ill., which, under her skillful and judicious management, secured from the first the confidence and support of the public. Her failure in health was the result of her untiring devotion to the cause of education.

Sept. 4.—MAHAN, MILO, D. D., a distinguished Episcopal clergyman, professor, and author; died in Baltimore, Md. He was a man of much scholarship, and had been for some years professor in Columbia College, from

which he was called to the rectorship of St. Paul's Episcopal Church, Baltimore. A few months previous to his death he was elected Professor of Systematic Divinity in the Episcopal General Theological Seminary in New-York City, and had signified his acceptance. He was the author of an able reply to Bishop Colenso's works against the inspiration of the Scriptures, and also of a curious and elaborate work on the significance of the numbers in the Scriptures.

Sept. 5.—BEDFORD, GUNNING S., M. D., late Professor of Obstetrics in the University Medical College, N. Y.; died in New York, aged 64 years. He was from an old and distinguished Maryland family; his grand-uncle, Gunning Bedford, after whom he was named, having been one of the signers of the Declaration of Independence, and afterward Chief Justice of Delaware. Dr. Bedford was born in Baltimore in 1806; was educated at Mount St. Mary's College, Emmetsburg, Md., where he was a fellow-student with Archbishops Hughes, McCloskey, and Purcell, and the late Rev. Dr. O. Constantine Pise. He graduated in 1825 with the highest honors of his class, excelling particularly in classics and oratory. He had decided to adopt the legal profession, and was on his way to Massachusetts, to enter the office of Daniel Webster as a law-student, when he met in Philadelphia a college classmate, who induced him to go with him to hear the late Dr. John D. Godman deliver his lectures on the "Circulation of the Blood," in his medical course. He was so entranced with Dr. Godman's eloquence that he resolved to abandon the law and become a medical student. After three years of close and diligent study, he received his medical diploma from Rutgers Medical College, in 1829, and soon after married and visited Europe, where for two years he continued to prosecute his medical studies. On his return in 1833, he was appointed professor in the medical college at Charleston, S. C., and soon after was called to a professorship in the new medical college founded by Dr. Alden March, in Albany, N. Y. He lectured there for one or two years, but felt that New-York City was the appropriate place for him, and removed thither about 1836, where he soon commanded a large and lucrative practice in the special department of the profession (obstetrics) which he had chosen. In concert with the late Dr. Valentine Mott, his former preceptor, and for many years his colleague, Dr. Bedford projected the University Medical College, in 1840, and took the chair of obstetrics in the brilliant faculty with which its first course opened. He retained this professorship until 1862, with a reputation for thorough knowledge, skill in imparting instruction, and extraordinary eloquence in its communication, which was enhanced with each year. He resigned in consequence of ill health. To Dr. Bedford is due the honor of being the first to introduce into the United States the "Obstet-

rical Clinique" for the gratuitous treatment of poor women in the ills and troubles to which they are subject. As a medical writer Dr. Bedford stood deservedly high. His "Diseases of Women and Children" has passed through ten editions in this country, and his "Principles and Practice of Obstetrics" five editions, and both have been republished in England, and translated into French and German. Both works, as well as his occasional addresses and memorials, are characterized by that elegance and affluence of diction which were marked features of all his public addresses. In private life Dr. Bedford was exemplary, courteous, and genial in all his relations to his family, to his professional brethren, and to society. He was a devout and consistent Catholic, and his fine talents and large influence were freely given to the promotion of the Catholic faith.

Sept. 6.—CHILDS, ORVILLE W., an eminent practical civil engineer; died in Philadelphia. He was early in the employ of the State of New York, and was from 1840 to 1847 chief engineer of the State works; aided in the construction of the Champlain Canal, was one of the surveyors of the ship-canal across the Isthmus of Nicaragua, and a designer of the enlargement of the Erie Canal. He was highly accomplished in his profession, and sought by every means in his power to elevate its standard to the highest point, contributing by his pen to its literature and its scientific and practical treatises during the past forty years.

Sept. 7.—CLARK, DE WITT CLINTON, editor; died in Burlington, Vt. He was born in Sandy Hill, N. Y., in 1810; graduated at Union College, Schenectady; studied law, but never practised; purchased the *Burlington Free Press* in 1846, and established the *Burlington Times* in 1858. Previous to 1840 he was Quartermaster-General; was Secretary of the State Senate from 1840 to 1861; member of the Constitutional Convention of 1857, and Secretary of that body in 1857 and 1870; was a presidential elector in 1860; and Executive Clerk of the United States Senate for nine years.

Sept. 7.—MONROE, Colonel JAMES, United States Army, and late member of Congress from New York; died at Orange, N. J., aged 71 years. He was a nephew of President Monroe, and was born in Albemarle County, Va., September 10, 1799, graduated at the Military Academy at West Point, March 2, 1815, as third lieutenant in the corps of artillery, served in the war with Algiers, and was wounded while directing the guns on board the United States Frigate *Guerriere* in an action with an Algerine frigate off Cape Bagot. After his return to the United States he served as battalion-adjutant of artillery at New Orleans, December 28, 1816, to December 18, 1817; as aide-de-camp to Brevet Major-General Winfield Scott, December 18, 1817, to April 4, 1822; and on ordnance, garrison, and

commissary duty at various posts for the next ten years. After leaving the army he entered political life at the solicitation of numerous friends who appreciated his clear intellect and high character. His first service was as assistant alderman in 1832-'33, and alderman in 1833-'35, of the third ward of New-York City, being elected in 1834 to be president of the board, when it was a distinction and proof of integrity to be in the City Council. In 1836, William L. Marcy, then Governor of the State, tendered to him the position of his aide-de-camp, with the rank of colonel, but it was not accepted. From 1839 to 1841 he served in the United States House of Representatives. In 1850 and 1852 he was a leading member of the New-York Legislature, but upon the death of his wife, during the latter year, retired from public life until the outbreak of the late war, when he visited his native State for the purpose of dissuading her, by public speeches and private efforts, from severing herself from the Union. Though disappointed in the result of his efforts, he remained thoroughly loyal to the Government, and throughout his life manifested a deep interest in the welfare of his country and the progress of civil liberty.

Sept. 10.—ALDEN, Colonel BRADFORD R., U. S. A., a distinguished army officer; died at Newport, R. I., aged 60 years. He was the son of Major Roger Alden, aide-de-camp to General Washington in the Revolution, and was born at Meadville, Pa., graduated at West Point in 1831, and was an officer of the Fourth U. S. Infantry. For several years he was aide-de-camp to General Winfield Scott, and was commandant of the corps of cadets at West Point from 1845 to 1852. In 1853, while stationed at Fort Jones, California, as Captain of the Fourth Infantry, he was summoned to quell a formidable uprising of the Indians on Rogue River, Oregon. Instantly repairing thither, a distance of 200 miles, with a small detachment of regulars, he raised a battalion of volunteers, of which he was elected colonel, and met the Indians in a fierce battle near Jacksonville, Oregon, receiving a wound in the spine, from which he never fully recovered. Subsequently he resigned his position in the army, and travelled in Europe for his health. Unable to ride on horseback, from his wound, and therefore unfitted to share in the civil war, he went in 1861 to the petroleum region in Northwestern Pennsylvania, and was fortunate in initiating some of the most successful petroleum enterprises in that region. Colonel Alden was a man of polished manners and elegant tastes, while his acquaintance with literature and art, heightened by his extensive travels, rendered him a valuable companion.

Sept. 10.—DENMAN, Major WILLIAM, British Army, and an editor; died in Brooklyn, L. I., in the 76th year of his age. He was a native of Lancashire, England, held the position of major in the British Army, and participated in

the battle of Waterloo. Subsequently he came to America, and was the founder and editor of the *Truth-Teller*, the first weekly Catholic journal published in America, and which was about fifteen years ago merged in the *Irish-American*.

Sept. 12.—LYMAN, JOB, died at Burlington, Vt. He was born in Northampton, Mass., December 9, 1781; graduated at Dartmouth College in 1804, where he was a fellow-student with Daniel Webster; studied law at Windsor and Haverhill, N. H.; practised his profession at Woodstock; was cashier of the old Vermont State Bank, and president of the Woodstock Bank for many years; was Court Auditor for a long period, and a member of the Governor's Council. He removed to Burlington in 1850.

Sept. 12.—MILLER, WILLIAM H., a political leader in Pennsylvania; died at Harrisburg, aged 42 years. He was Clerk of the Supreme Court of Pennsylvania, Middle District, 1854-1863, and member of the Thirty-eighth Congress, Harrisburg District.

Sept. 13.—LUDLOW, FRIZHUGH, a magazine writer, and author; died at Geneva, Switzerland, aged 33 years. He was the son of Rev. H. G. Ludlow, a Congregationalist clergyman, and was born at Poughkeepsie, N. Y., in 1837. He commenced his literary career in 1855 by anonymous contributions to various New-York journals. In 1857 he published the "Hash-eesh Eater," which portrays the pleasures and pains attending the use of that drug, to which he had for some time been addicted. Soon afterward he wrote a series of stories for *Harper's Magazine*, which attained considerable popularity, and were collected under the title of "Little Brother." He also contributed for other magazines and published two more books—"The Heart of the Continent," a collection of the articles he had written for the *Atlantic Monthly* on a journey he had taken across the plains, and "The Opium Habit," in which he described his experience with opium. He finally gave up the use of this drug as he had previously that of hasheesh, but not until his health had been utterly shattered.

Sept. 16.—KETCHUM, HIRAM, an eminent lawyer and politician of New-York City; died at Riverdale, Westchester County, N. Y., aged 78 years. He was born in one of the northern counties of New York, and removed to the city about the year 1831. He was educated for the law and became distinguished in his profession, was a devoted Whig from the inception of the party. He was a warm personal friend of Daniel Webster, and a vigorous advocate of the public schools, which he ably defended in a sharp and well-remembered contest with Archbishop Hughes. Of late years he had sympathized with the Democracy.

Sept. 17.—PILAT, IGNATZ A., chief landscape-gardener to the Central Park; died in New York, aged 52 years. He was born at Aschach, Austria, in 1818, received a collegiate educa-

tion at Vienna, and subsequently studied at the Botanical Gardens at Vienna and Schönbrunn. His first work of magnitude was the laying out of the grounds about the palace of the famous Prince Metternich. On account of political troubles, he left Vienna in 1848, and came to this country. After remaining in New York for a short time, he settled at Dalton, Ga., where for some time his services were sought in laying out the grounds of Alexander H. Stephens and others. He returned to Vienna in 1852, and was made Director of the Botanical Gardens there. While thus engaged he wrote a work on botany that has become a text-book in schools. In 1856, or the year following, he accepted the position of chief landscape-gardener in the Central Park of New York. His personal superintendence of the entire work, which was conducted chiefly according to his own plans, continued up to the time of his death. Meantime he planned and superintended many improvements in the public squares of the city.

Sept. 18.—DAWSON, JOHN L., a Democratic politician of Pennsylvania; died in Fayette County. He was a native of that county; received a liberal education at Washington College, studied law and entered upon the practice of his profession. Entering into politics at an early age, he soon took a leading part on the Democratic side in all current controversies, and was appointed United States Attorney for the Western District of Pennsylvania in 1845, by President Polk. He was subsequently elected to the Thirty-second and Thirty-third Congresses, and again to the Thirty-eighth, during which he was a member of the Committee on Foreign Affairs. Mr. Dawson was the author of the Homestead Bill of 1854, and a delegate to the Democratic National Conventions of 1844, 1848, 1856, and 1860. During the Administration of General Pierce he was tendered the office of Governor of Kansas, but declined the position. In 1864 he was chosen to the Thirty-ninth Congress, which ended his public career.

Sept. 19.—KITTS, JOHN, centenarian of Baltimore; died there, aged 108 years. He was a teamster in the United States Army in the Revolution, and was for many years Sergeant-at-Arms of Baltimore City Council.

Sept. 19.—ROBERTSON, HEEERIAH D., an active Republican of New-York State; died in Bedford, Westchester County, aged 42 years. He was first elected to office in 1851, when he was chosen Supervisor by the people of Poundridge, and was reelected the following year. He then removed to Bedford, and represented the Ninth Senatorial District, comprising Westchester, Putnam, and Rockland Counties, in the State Senate for one term, and had also since 1854 represented Bedford in the Board of Supervisors of Westchester County.

Sept. 21.—GHOLSON, WILLIAM Y., an able jurist; died in Cincinnati, Ohio. He was formerly a resident of Mississippi, but removed

to Ohio many years ago, and entered on the successful practice of his profession. He was from 1854 to 1859 a Judge of the Superior Court, and from 1860 to 1865 a Judge of the Supreme Court of Ohio. As a lawyer and jurist he had few equals in the State. He observed public affairs with the eye of a statesman, and was an effective political speaker. Of sterling integrity, he was faithful to every trust confided to him, and, though positive and outspoken, whenever occasion required an expression of his views, his character was never tarnished by the breath of calumny.

Sept. 22.—HOUGHTON, GEORGE FREDERICK, an eminent jurist; died at St. Albans, Vt. He was born in Guilford, May 31, 1820. After completing a preparatory course of study at the Vermont Episcopal Institute in 1837, he entered the University of Vermont, and was graduated in the class of 1839. He studied law in the office of Benjamin Swift, and came to the bar in 1841. In 1848-'49 Mr. Houghton was chosen State Secretary of Civil and Military Affairs; and in 1852-'53 was State's Attorney for Franklin County. He established the *Vermont Transcript* in 1854; was subsequently connected with the *Church Journal* of New York; contributed largely historical and biographical sketches to various publications; and was one of the founders of the Vermont Historical Society. He was president of that society, and United States Commissioner, at the time of his death.

Sept. 24.—KEYES, HENRY, President of the Connecticut and Passumpsic River Railroad; died at Newbury, Vt., aged 65 years. He was born in Vershire, in that State, and was educated for mercantile pursuits. For several years he was the Democratic nominee for Governor, and frequently a delegate of his party to national conventions; was a member of the State Senate from Orange County, in 1847 and 1848, and was one of the original founders of the Vermont State Agricultural Society. He was also, at the time of his death, president of a road in Kansas.

Sept. 24.—RAY, Dr. JAMES H., a journalist; died in Chicago. He was at one time editor of the *Chicago Tribune*, and at the time of his death was editor of the *Post*, of that city.

Sept. 27.—CUMMINGS, Major WILLIAM R., U. S. Assessor of the First District of New York; died at Jamaica, in the 55th year of his age. During the late war he commanded a battery of artillery, and took part in the battles of Antietam and Gettysburg. In his last campaign he contracted disease that obliged him to resign. He had been identified with the Republican party since its organization, and was the first president of the first anti-slavery society formed in Indiana. He filled the office of assessor for a long time, and acceptably to the Government and to the residents of the district.

Sept. 27.—PACKER, WILLIAM F., formerly Governor of Pennsylvania; died at Williams-

port, in that State, aged 64 years. He was born in Centre County, in 1807, was apprenticed to the printing business before reaching the age of thirteen, and, after completing his trade, worked in the State Printing-office, at Harrisburg, then under the control of Simon Cameron. He subsequently studied law, but never applied for admission to the bar. From 1827 to 1836 he published the *Lycoming Gazette*. In 1839 he was appointed one of the three Canal Commissioners of Pennsylvania, and held that office until 1842, when he was appointed Auditor-General of the State, and held that position for three years, quitting it in 1845. He served one term of three years as State Senator. On quitting the Senate, he was chosen President of the Susquehanna Railroad Company, and continued to hold that position until the company was consolidated with others to form the present Northern Central Railroad Company, of which he was made a member of the Board of Directors, and remained a member of the Board until his election as Governor of the State in 1857. While holding that office, he labored sedulously to improve the internal resources of the State, and advance her best interests.

Sept. 28.—YATES, Brigadier-General CHAS., U. S. Volunteers; died in New York. He was educated at Union College, and was for many years a colonel in the militia. During the late war he entered the service as a volunteer, and accompanied his command in the battle of Gettysburg.

Sept. —.—SAYRE, DAVID A., a philanthropic banker, of Lexington, Ky.; died there, aged 77 years. He was a native of New Jersey, but removed to Lexington in his youth, where he became a successful merchant and banker. Though repeatedly meeting with heavy losses, he gave, during his lifetime, not less than half a million to benevolent objects. He expended upon the Sayre Institute \$100,000.

Sept. —.—SEELY, JOSEPH, a veteran teacher, of New York; died in that city, aged 97 years. He was a native of Connecticut, but removed to New York in early manhood, and taught there for nearly sixty years.

Sept. —.—WAKEFIELD, Mrs. NANCY W. PRIEST, a gifted poetess; died in Winchendon, Mass., aged 38 years. She early displayed a talent for writing, but was best known to the public as the author of the beautiful and touching poem, "Over the River they beckon to me," which has taken its place among the most exquisite lyrics in the English language.

Oct. 5.—STEINBERGER, Major JUSTUS, Paymaster U. S. A.; died at Helena, Montana Territory, aged 45 years. He was born in 1825, in Montgomery County, Penn., was educated at Dickinson College, Carlisle, Pa., and afterward graduated from a medical college in Philadelphia. In the early days of the gold excitement on the Pacific coast he became a resident and practising physician of Marys-

ville, California, and then of Portland, Oregon, where he acted as agent of the old Adams Express Company, and afterward of the Pacific Mail Steamship Company. When the war broke out in 1861, he at once proceeded to Washington, and offered his services. Under the auspices of General George Wright, he raised a regiment of Washington Territory Volunteers, of which he was made colonel, and which he commanded in a manner which won high compliments from his superiors in rank. In 1866 he was made major and paymaster in the regular army, and served for some time in New York, Washington, and in Texas, previous to his assignment to Montana. His death was the result of injuries received by being thrown from his horse.

Oct. 9.—WENDELL, CORNELIUS, a Democratic editor and politician; died at Northampton, Mass., aged 57 years. He was born in Cambridge, Washington County, educated as a printer, and became well versed in all the departments of his art. He was connected with the *Troy Free Press*, and the *Albany Atlas*, from 1840 to 1850, when he removed to Washington, D. C., and was for several years Congressional Printer.

Oct. 10.—JOURDAN, JOHN, Superintendent of the Municipal Police; died in New York, aged 43 years. He was of Irish parentage, and born in New York, January 6, 1831. After receiving an ordinary common-school education, he was thrown upon his own resources at the age of seventeen. He served in the mailing and other departments of several newspapers, finally being permanently employed in the *Tribune* office, in which, at twenty-one years of age, he was made foreman of the mailing department. He resigned this place through ill health May 11, 1853, and was on the same day appointed in the police force, as patrolman, and assigned to the Sixth Ward. He performed post duty under Captain (late Commissioner) Brennan, and detailed duty in the Tombs Police Court, and subsequently was on the reserve corps. On the organization of the Metropolitan Police Department he resigned, but returned to the force October 11, 1858. On April 24, 1860, he was made a sergeant by the Board of Commissioners, and served in the Sixth Precinct, to which he was assigned, from that time until his appointment as Superintendent. On the 31st of January, 1863, he was appointed captain of his precinct, to fill the vacancy made by the appointment of Captain Dowling to a chair in the Board of Police Magistrates. He served in that position until April 11, 1870, when, by a unanimous vote of the Board of Commissioners, he was appointed Superintendent, in place of John A. Kennedy. As a detective officer, he was distinguished for his acumen, zeal, and energy.

Oct. 11.—CHASE, REV. BENJAMIN, D. D., a Presbyterian clergyman and educator; died at Natchez, Miss., aged 82 years. He was born

in New Hampshire, in the year 1789, graduated at Middlebury College, and spent the whole of his ministerial life in the Southwest. He did a noble work many years ago in circulating the Scriptures in the Southwest, and contributed a valuable geological cabinet to Oakland College.

Oct. 12.—DEAN, GILBERT, a New-York politician and jurist; died at Poughkeepsie, N. Y., aged 51 years. Born at Pleasant Valley, Dutchess County, N. Y., August 14, 1819, and fitted for college, in part, at Amenia Seminary in that county, he entered the class of 1841 at Yale College in the beginning of the freshman year. In college he was especially prominent as a writer and debater, his scholarship, however, placing him very high in rank in his class. After his graduation he studied law, and was first admitted to the bar in Litchfield County, Conn., but, afterward (May, 1844) in New York. He was a practising lawyer in Poughkeepsie, N. Y., 1844-'55. He then removed his office to New-York City, where he was for a number of years a member of the well-known firm of Beebe, Dean & Donohue, and had a large and lucrative practice. He was chosen Representative in Congress from the districts composed of Dutchess and Putnam Counties, in November, 1850, and again in 1855. He served three years in Congress, and resigned his seat to accept the office of Justice of the Supreme Court of New York, for the same judicial district, to which he was appointed by the Governor, June, 1854, to fill the unexpired term of Justice Barculo, deceased. He served on the bench almost eighteen months, and was during the last year (1855) one of the judges of the Court of Appeals. In November, 1862, he was chosen member of Assembly from New-York City, where he resided until his death, spending his summers in Poughkeepsie.

Oct. 13.—BULFINCH, REV. STEPHEN G., D. D., a Unitarian clergyman and author; died at Cambridge, Mass., aged 61 years. He was the son of Thomas Bulfinch, the eminent architect and designer of the national Capitol at Washington, D. C., received his early education in that city, graduated from the Cambridge Divinity School in 1830, and immediately entered upon his ministerial labors, serving, during the forty years of his work, in five or six different pulpits, North and South. He was the author of several well-known works of a religious character, and a frequent contributor to the press.

Oct. 16.—OLMSTEAD, REV. JAMES MUNSON, D. D., a Presbyterian clergyman, author, and scientist; died in Philadelphia, aged 76 years. He was born in Stillwater, Saratoga County, N. Y., February 17, 1794, graduated at Union College in 1819, and at Princeton Theological Seminary in 1822, and the same year, having been licensed to preach, became an itinerant in the missionary work. In June, 1825, he was ordained and installed pastor of the churches

of Landisburg and Centre, in Pennsylvania, where he labored with great success for seven years. Subsequently he was pastor of churches in Middle Tuscarora, Flemington, N. J., and Snow Hill, Md. Dr. Olmstead was the author of some valuable works, besides occasional sermons and essays. His little volume, entitled "Thoughts and Counsels for the Superintendent," was very popular, as also "Our First Mother," and "Noah and his Times." The latter was a very elaborate and somewhat successful effort to reconcile the Scriptural account of the flood with the theories and deductions of modern geology.

Oct. 17.—GILLIAM, ROBERT B., member of Congress elect from the Fourth North Carolina District; died in Oxford, N. C.

Oct. 17.—RIDGEWAY, ROBERT, an editor; died in Amherst County, Va. He was elected to Congress, in 1869, from the Fifth District as a Conservative. He was formerly editor of the *Richmond Whig*.

Oct. 18.—PERKINS, THOMAS CLAPP, an eminent lawyer; died in Hartford, Conn., aged 72 years. He was a native of that city, graduated at Yale College in 1818, taking the salutatory; studied law with the Hon. Seth P. Staples, of New Haven, and, upon his admission to the Hartford bar, rose rapidly to distinction in his profession. Gifted with an extraordinarily retentive memory, and an equally surprising quickness of perception, he made the most of his facts and authorities; and could improvise his points, as the trial progressed, without previous knowledge or preparation of the case. He was earnest and exhaustive in argument, using his precedents and authorities in the way most effective, while in consultation his judgment was held in high estimation. Some years since he was elected to the bench of the Supreme Court, but declined the honor, preferring to adhere to his profession. Mr. Perkins married a daughter of Dr. Lyman Beecher.

Oct. 22.—PENNINGTON, Rev. J. W. C., D. D., a colored Presbyterian clergyman, formerly a slave; died in Jacksonville, Fla., aged 70 years. He escaped from slavery at the age of twenty-one years, and found his way to New York, where he was assisted in his studies for the ministry by the Presbyterian Church, then in Laight Street, under the care of Dr. Cox. He was subsequently settled in Hartford, and later, over the Shiloh Presbyterian Church, New York. For two or three years past he had been laboring with zeal and success among the freedmen in Florida. He received the degree of D. D. from the University of Heidelberg, Germany.

Oct. 28.—WILLIAMS, General WILLIAM, an eminent philanthropist; died in Norwich, Conn., aged 82 years. He was a native of Connecticut, and throughout a period of nearly half a century was identified with the most important interests of the community in which he lived. The cause of popular education received his

unceasing attention. He was one of the original founders of the "Norwich Free Academy," and a munificent donor to its endowment, serving as president of the Board of Trustees at the time of his death. For many years he made an annual visit to all, or nearly all, the public schools in New-London County. When the feeble church, which embraced a remnant of the Mohegan tribe of Indians, was deprived of its missionary pastor, General Williams assumed the agency necessary to the continued maintenance of a Sabbath service, and, in addition to pecuniary aid, gave for more than seventeen years his personal labors as a Sunday-school teacher among that people. In the various departments of missionary work, home and foreign, he was an active and liberal helper. Being connected with maritime enterprises, he was the sailor's friend, and an early and constant contributor to the Seamen's Friend Society, of which he was a vice-president, as also to the American Home Missionary, and the American Bible Societies. He was also a corporate member of the Board of Missions.

Oct. 29.—RICHARDS, Rev. GEORGE, a Congregational clergyman; died in Bridgeport, Conn. He was a native of New England, studied at Phillips Academy, Andover, graduated at Yale College in 1840, studied theology at Andover and New Haven, and from 1844 to 1845 was tutor in his college. He was a man of fine scholarly attainments and most attractive social qualities, which, with his fervent piety, and pastoral gifts, strongly endeared him not only to his people, but to all who were associated with him.

Oct. 31.—SCHAEFFER, Brigadier-General WILSON, U. S. Vols., Governor of Utah; died at Salt Lake. He was born at Jacksonville, Illinois, and spent most of his life in that State. At the outbreak of the war in 1861 he immediately offered his services to the Government, and served during the entire struggle on the staff of General Butler, achieving marked distinction during that general's several campaigns. At the close of the war he returned to his home in Illinois, where he remained until the spring of 1870, when he was sent to Utah as Territorial Governor, and during his short period of service displayed a remarkable degree of firmness in the discharge of his duty.

Oct.—BREWER, EBENEZER, a philanthropist; died in Pittsburg, Pa. Most of his life was spent in that city, where he was the leading spirit in all charitable and philanthropic movements, devoting large sums to local objects every year, and in his will making liberal bequests not only to city objects, but also to missions, and various charitable societies abroad.

Oct. —.—DAVIS, Brigadier-General HASBROUCK, U. S. Vols., a daring and skilful cavalry-officer; was lost on the Cambria. He was conspicuous for his courage and address at Martinsburg, Va., Harper's Ferry, and in Stoneman's raid.

Oct. —.—MOZIER, JOSEPH, an American sculptor; died at Faido, Switzerland, aged 58 years. He was born in New-York City, in 1812, and, after devoting many years to the mercantile trade, retired from business, and subsequently went to Rome, Italy, and adopted the profession of a sculptor. Some of his works displayed a high order of talent; among these the best known is "The Prodigal Son," exhibited in the Academy of Fine Arts, Philadelphia.

Oct. —.—WRIGHT, REV. LUTHER, a Congregationalist clergyman, and educator; died in East Hampton, Mass., aged about 73 years. He graduated at Yale College in 1822, with distinguished honors, was two years principal of an academy in Maryland, subsequently for several years tutor in Yale College, and afterward filled prominent positions at the head of important educational institutions in New England. The last situation of this kind, which he held till his resignation, was that of Principal of the Williston Seminary, in his native town, East Hampton, Mass., an institution projected and organized by himself, and endowed by the liberality of his friend Samuel Williston. To the work of founding the seminary, and giving to it the high standing and character it early acquired, for the term of forty years he devoted the best energies of his earnest nature, as well as the ample resources of his long experience and ripe scholarship.

Nov. 1.—WOLFF, REV. BERNARD C., D. D., a clergyman of the Reformed Church (German); died at Lancaster, Pa., aged 75 years. He was a professor in the Mercersburg Theological Seminary from 1854 to 1864.

Nov. 9.—ALLEN, REV. D. HOWE, D. D., a Presbyterian clergyman and theological professor; died at Granville, Ohio, aged about 65 years. He was formerly connected with Marietta College, but in 1830 was called to Lane Seminary to fill the chair of Sacred Rhetoric and Pastoral Theology, and subsequently was assigned to that of Systematic Theology. In 1867, on account of declining health, he was appointed Professor Emeritus.

Nov. 9.—WICKES, THOMAS, D. D., a Presbyterian clergyman and author; died at Orange, N. J., aged 55 years. He was born at Jamaica, L. I., in 1814; graduated at Yale College, studied theology in Princeton and New Haven, and, after preaching a few months in Troy, removed to Marietta, Ohio, and was pastor of the First Presbyterian Church there from 1839 to 1869. He was an indefatigable student, and the author of several valuable works. His last production, "The Economy of the Ages," was a profound and vigorous treatise on the history of Redemption, and the final triumph of Christ's kingdom.

Nov. 11.—PELL, REV. W. E., a clergyman of the Methodist Episcopal Church; died at Raleigh, N. C. He was for many years a member of the North Carolina Conference, but the failure of his health demanded that he should

relinquish travelling, whereupon he turned his attention to journalism, and subsequently became one of the editors of the Raleigh *Sentinel*. He was a strong advocate of Southern rights.

Nov. 15.—ROOT, EDWARD W., Professor of Chemistry in Hamilton College, N. Y.; died there, aged 29 years.

Nov. 15.—STARBUCK, CALVIN W., an enterprising and successful newspaper publisher; died at Cincinnati, Ohio. He was a practical printer, and by his industry and perseverance acquired a large fortune, with which he accomplished much good. In 1841 he commenced the publication of the *Cincinnati Times* on a borrowed capital of \$200, and soon became its sole proprietor. Later he was also associated with the *Weekly Times*. During the late war he carried a musket in the ninety days' service; did efficient duty in the Covington trenches in 1862, when Cincinnati was threatened, and aided to support all the men in his office who enlisted in the cause of the country.

Nov. 16.—ENSON, MAJOR THEODORE, U. S. A.; died at Rock Island, Ill., aged about 36 years. He graduated at the Military Academy at West Point, July 1, 1861, and was immediately made brevet second-lieutenant of ordnance. During the late war he served with honor, being advanced to brevet-captaincy, December 31, 1862, for gallant and meritorious services at the battle of Stone River, Tenn., where he served as chief of ordnance to Major-General Rosecrans. He was promoted captain, March 3, 1863; brevet-major, March 13, 1865, "for faithful and meritorious services in the Ordnance Department;" and major, December 15, 1867. He served in command of the Watertown, Fort Monroe, Rock Island, and Columbus Arsenal, and the Cincinnati ordnance depot, as post commander of Louisville in 1862, and as chief of ordnance to Rosecrans, and chief of ordnance of the Departments of the Ohio, and of Virginia, and North Carolina.

Nov. 16.—KELLOGG, MORTIMER, Civil Engineer, U. S. N.; was killed at Key West, Fla., in a rencontre with Surgeon Wm. M. King. He entered the naval service in 1852, from New York, as third assistant engineer; was with Captain Perry in the Japan Expedition, and on the Niagara when she assisted in laying the Atlantic cable in 1858. During the late war he was employed in the Gulf Squadron. In December, 1869, he was ordered to the monitor Terror, at the Charlestown Navy-Yard, and was attached to that vessel when he met with his untimely death.

Nov. 17.—DE WINT, JOHN PETER, an eminent and wealthy citizen of Fishkill; died there, aged 83 years. He was of Dutch and West-Indian descent, born in the city of New York, and at a very early age removed with his parents to Fishkill, where his father had purchased an extensive estate. Here he resided till his death. In 1814 he married the grand-daughter of John Adams, the marriage taking place at the old President's family mansion in Quincy,

Mass. He was a man of strong, clear intelligence, keenly alive to every thing of public interest—a man of social, and, in the true sense of the word, democratic instincts. In politics, he was a stanch and uncompromising Republican.

Nov. 21.—FOLSOM, ARTHUR, Haytian Consul; died at Orange, N. J., aged 75 years. He was a native of Maine, but resided for nearly fifty years in the Island of Hayti, during the greater part of which time he was engaged in mercantile pursuits, first at Jeremie, and afterward at Cape Haytien. At the latter place he filled for many years the office of American consul; and on the overthrow of Salnave's Government and the accession of President Saget to power, in the early part of 1870, he was offered the post of Haytian consul in New-York City, which he accepted. He was highly esteemed by the Haytians of all classes for his many virtues, and for the deep interest he ever manifested in the welfare of their country.

Nov. 24.—CAETER, Commodore JOHN C., U. S. N.; died in Brooklyn, L. I., aged 65 years. He was born in Virginia, in 1805; was appointed to the naval service from Kentucky, March 1, 1825; served on the sloop Lexington in 1827, the frigate Delaware, of the Mediterranean squadron, in 1829-'30; June 4, 1831, was promoted to post midshipman, and commissioned as lieutenant February 9, 1837. He served on the frigate Macedonian in the West Indies, in 1840; the receiving-ship at New York, 1845; the steamer Mississippi, of the home squadron, 1846; the frigate Raritan, and the Massachusetts, both of the Pacific squadron, besides performing land duty in New York and elsewhere. On the 7th of February, 1837, he was commissioned a lieutenant, and September 14, 1855, was made commander. In 1862 with the commission of commodore, he commanded the steamer Michigan on the lakes. After the war, he was placed in command of the receiving-ship Vermont, and more recently had been stationed at the naval rendezvous at San Francisco, from which he had just returned.

Nov. 24.—JACOBSON, Rev. JOHN CHRISTIAN, bishop of the Moravian Church, died at Bethlehem, Pa., aged 75 years. He had been in active service as minister and bishop for more than fifty years, and was greatly esteemed and beloved.

Nov. 26.—BASSINI, CARLO, a music-teacher, composer, and writer; died in Irvington, N. J., aged 58 years. He was a native of Cuneo, Piedmont, and was born in 1812. His parents being musicians, he was placed at an early age under the best masters in training for a violinist, devoting himself so wholly to his studies, that in his twentieth year he had already attained to some distinction as an instrumentalist. Soon after he accepted an invitation to proceed with a Genoese operatic company to South America, and so much musical knowledge did he evince, that he was elected to the post of director of the troupe shortly after their arrival

abroad. While here he made the acquaintance of his wife, a Cuban lady of Matanzas, by whom he had one son, who survives him. With the money gained in South America, he came to New-York City, where he undertook to give a concert, which proved a failure and exhausted his resources. In this dilemma, he recorded a vow to wield the baton no longer, and courageously set about giving lessons in vocal music, thereby relinquishing his prospects as a brilliant orchestral leader. For years he worked in an untiring manner, commencing his labors frequently at seven in the morning, and working until ten at night. Although not gifted with a rich voice, he was an admirable trainer. Among his works may be mentioned as the best known: "Abridged Art of Singing," 1857; "Method for the Baritone," 1858; "Method for the Tenor," 1866; "Melodic Exercises," 1865; "New Method," 1869. As a composer, the love-song he dedicated to his wife shortly before his marriage is considered very brilliant. It is entitled *À te Accanto*, and is a melody in the cantabile style. His *O Salutaris* prayer, for a soprano voice, also contains much merit. Feeling his end approaching, he composed, in an inspired moment, "There is Light in the Sky," an exquisite and touching piece of music.

Nov. 26.—STONE, Rev. BENJAMIN PERKINS, D.D., a Congregationalist clergyman, editor, and author; died at Concord, N. H., aged 70 years. He was born in Reading, Vt.; graduated at Middlebury College; studied theology in Andover, in the class of 1831; was a pastor for six years, and from 1837 to 1859 was Secretary, and also a portion of the time Treasurer, of the New-Hampshire Missionary Society. During these years he travelled 65,000 miles. Since 1862 he had been a director of the American Home Missionary Society. He sustained a high rank as a theologian and writer.

Nov. 27.—GOWANS, WILLIAM, an antiquarian bookseller and author; died in New York, aged 66 years. He was born in the parish of Lismahagow, County of Lanark, Southwest division of Scotland, on the 29th of March, 1805. His parents were farmers of the genuine Scotch type; strong in their integrity and sense of right and wrong. The son was educated at the parish school at Greenhill, near the falls of the Clyde, to which region his father removed soon after his birth. At fourteen he was called from his books and placed upon the farm, but the work proved unfavorable to his health. In June, 1821, the family left Scotland for Philadelphia, where they arrived in July following. During the same month Mr. Gowans removed with his parents to Crawford County, Ind., where he remained until September, 1830, when he commenced business as a bookseller in Chatham Street, New York. His capital was limited, but he supplied in energy, patience, and economy, what he lacked in funds, and little by little advanced to the position of one of the most celebrated

and extensive bibliopolists in this country. His first publications were "Plato's Phædon; or, Dialogue on the Immortality of the Soul," which appeared in 1833, and "The Phoenix," a collection of ancient and rare fragments of the greatest philosophers, etc., published in 1835. Mr. Gowans' bibliographical knowledge was as thorough as it was extensive, and his judgment upon all matters involving research into antique histories was sound. He knew something about every book sold, and the knowledge which he had once acquired he never suffered to escape him. His literary store-room was filled with a vast mass of rare and curious literature, amounting to over 200,000 volumes.

Nov. 29.—BLOOD, ISAIAH, a New-York State Senator; died at Ballston Spa, Saratoga County, aged 63 years. In 1852 he was elected to the Assembly, and in 1861 to the State Senate. In 1869 he was again elected to the Senate. He had accumulated a large fortune, and is said to have been generous in its use, both in dispensing hospitality and in contributing to benevolent and religious objects. He was the proprietor of extensive manufacturing works in Ballston Spa.

Nov. 29.—GOSS, MRS. LUELLA, a centenarian; died in Orland, Me., aged 107 years. The immediate cause of her death was a fall which broke her leg.

Dec. 2.—WASHINGTON, Colonel W. D., the painter of the "Burial of Latanae," and Professor of Fine Arts in the Virginia Military Institute; died at Lexington, Va.

Dec. 4.—OWEN, Rev. JOSEPH, D. D., a missionary in India; died in Edinburgh, Scotland. He was born at Bedford, Westchester County, N. Y.; graduated at Princeton College and Seminary, where he took a high stand for scholarship, and soon after went to India, under the auspices of the Presbyterian Board. He was stationed at Allahabad, where he spent the greater part of his life, and where he was eminently useful, especially in the translation of the Bible, and in the preparation of commentaries and other books adapted to the wants of the people. His health having been impaired by nearly thirty years' continuous residence in India, he had taken a respite to visit the Holy Land, Germany, and Great Britain, but was attacked with sickness in Scotland, which proved fatal.

Dec. 5.—BURGESS, EBENEZER, D. D., a Congregationalist clergyman and author; died in Dedham, Mass., aged 81 years. He was born in Wareham, Mass., April 1, 1790, of Puritan stock; graduated at Brown University, R. I., in 1809, with distinguished honor; became a tutor in that college, and subsequently was a professor in Vermont University. On November 16, 1817, in connection with Samuel J. Mills, he sailed for Africa under the auspices of the American Colonization Society; became one of the founders of the colony of Liberia, and was invited to the position of superin-

tendent. He visited England, both going and returning, and was cordially received by Wilberforce, Lord Bathurst, Secretary of State for the Colonies, and other prominent men, who expressed a deep interest in the African enterprise. On the homeward voyage he buried his associate, Mr. Mills, in the sea, and arrived in his native land October 22, 1818. He pursued his theological studies at Andover and Princeton, and in March, 1821, was ordained pastor of the church at Dedham, with which he remained for fifty years; retiring, however, from the active labors of the pastoral office in 1861. Dr. Burgess published, in 1840, "The Dedham Pulpit," being sermons by the pastors of the first church in Dedham, in the seventeenth and eighteenth centuries, with a centennial by himself; also in 1865 an octavo volume, "The Burgess Genealogy." Dr. Burgess was a man of decided opinions, and an example of wide Christian charity, liberality, and benevolence.

Dec. 6.—SULLIVAN, JEREMIAH, an American lawyer and judge, born in Harrisonburg, Va., July 21, 1794; died at Madison, Ind., aged 76 years. He received a good academical and legal education, and was admitted to the bar at Winchester, Va., in 1814. He served for some time as major of volunteers in the War of 1812. In 1816 he moved to Indiana, and settled in Madison, then a small hamlet, in the practice of his profession. In 1820 he was elected to the State Legislature, which then sat at Corydon. While he was a member of the Legislature, a commission, appointed to locate the capital, reported in favor of the township where it is now established, and, on the confirmation of their report, Mr. Sullivan proposed the name of Indianapolis, and it was adopted. From 1831 to 1837 he was one of the Fund Commissioners for the State. In 1837 he was appointed one of the judges of the Supreme bench of the State. He was a compeer of Blackford and Dewey, a Supreme Court chosen at a period when the jurisprudence of Indiana was in a formative state, and of equal distinction with his two colleagues in a court which, during their incumbency, and since, has been regarded as a model of learning and integrity. As a judge, he was sound, conservative, and cautious; his decisions were marked by a force of logic, a clearness and elegance of diction, and a mastery of the principles and history of the law, which made them conspicuous among the many able judgments emanating from our highest courts. In 1869 the State Legislature established a criminal court in Jefferson County, and Judge Sullivan was appointed by Governor Baker its judge, which position he held at the time of his death.

Dec. 6.—WALBRIDGE, HIRAM, an enterprising merchant and politician, of New-York City; died there, aged 50 years. He was born in Ithaca, N. Y., February 2, 1821; removed to Ohio with his parents in early life, received a good education at the Ohio University, and during the Harrison campaign became deeply

interested in political matters—being himself a warm personal friend of General Harrison. After the election he entered upon the study of law in Toledo, was admitted to practice in the State courts at the age of twenty-one, and the following year appeared before the Supreme Court. The natural bias of his mind, however, led him to abandon his law-office for a larger experience and busier life among merchants and speculators. His personal popularity was so great that he was elected colonel of the State militia at the age of twenty-one, and in the following year he was appointed brigadier-general. It was at this time that his restless mind was betrayed into a most visionary scheme. Excitement with reference to the admission of Texas into the Union ran very high, and young Walbridge and a few of his intimate friends formed a plan of establishing four newspapers, at Houston, Galveston, Austin, and another point, to advocate the independence of Texas, and to create an anti-annexation sentiment throughout the State. The scheme was a wild one, but the young confederates engaged in it with great spirit, and canvassed the State with reference to the establishment of their journals. The annexation of Texas rendered their enterprise futile, and Walbridge returned to Toledo, whence he removed to New York in 1847, to engage in extensive commercial transactions. In 1848 he was nominated by the Democratic party as an Assemblyman from one of the lower wards, and was elected by a large majority. In 1852 he was elected by the Democrats to represent the Fourth Congressional District at Washington. His short career during a single session of Congress was marked by the advocacy of a Pacific Railroad bill, and the introduction of a bill to regulate the militia of the seas, which attracted a great share of public attention at the time. At the close of his term of office he retired from public life. At the opening of the war he was an outspoken Union man. He was a warm personal friend of President Lincoln, and was offered a seat in his Cabinet. He was also tendered the rank of brigadier-general in the army, but declined on the ground that men of military education should occupy posts of trust and responsibility. During the war he frequently addressed the Boards of Trade in Western cities, advocating a powerful support of the Government. He was Vice-President of the National Commercial Convention at Chicago, and subsequently presided at similar conventions in Detroit and Louisville. At these meetings he advocated free banking, a reduction of taxation, and the development of the resources of the West. He was also prominently identified with the Chamber of Commerce of New York.

Dec. 7.—**BUTLER**, Captain JOHN B., a retired officer of the United States Army; died at Mount Auburn, Cincinnati, aged 78 years. He served as a private in the war of 1812, after which he went to Pittsburgh, Pa., and

engaged in the printing business, and subsequently was for many years editor and publisher of the *Pittsburg Statesman*. At this period of life he was actively engaged in politics, and in 1838 was appointed recorder of deeds, and afterward canal commissioner. At the commencement of the war with Mexico, he was commissioned paymaster in the army, and accompanied General Taylor's command to the seat of war, after which he was made military storekeeper at the Alleghany Arsenal, where he remained until about 1863, when he was retired on the usual pay and allowances. Major Butler was a political writer of fine ability, and possessed rare capacity for business.

Dec. 8.—**BEALS**, WILLIAM, a newspaper publisher, and prominent citizen of Boston; died there, aged 85 years. When a young lad he entered the counting-room of the *Boston Gazette*, continuing there until he became one of the proprietors of that journal. Subsequently disposing of his interest in the *Gazette*, he purchased a share in the *Boston Post*, which he held for nearly thirty-five years.

Dec. 9.—**PECOUR**, ANTHONY, an old resident of Troy, N. Y.; died there, aged 109 years.

Dec. 10.—**BURNET**, DAVID G., an eminent citizen of Texas; died in Galveston, aged 80 years. He was born in Essex County, N. J., in 1790, and was the son of Surgeon-General Burnet, a Revolutionary hero. When very young he repaired to the South American colonies and sought service in their conflict with Spain for independence. Later he went to Texas, then a Mexican State, and entered zealously into the contest to wrest the State from Mexico and establish a republic. Burnet and Houston were candidates for the presidency, the former succeeding by a large majority. He remained in the South during the war, and at its close was elected in 1866 to the United States Senate from Texas, but Congress refused to admit him.

Dec. 12.—**LAUNITZ**, ROBERT E., an eminent American sculptor; died in New-York City, aged 64 years. He was born in Russia, but had resided in the United States since 1830. He was formerly quartermaster and captain of engineers in the Seventh Regiment, N. G. S. N. Y. Among his productions were the *Pulaski Monument*, at Savannah, Ga., and the statue of General Thomas, now in Troy; also many handsome monuments in Greenwood Cemetery.

Dec. 13.—**HOOPER**, EDWARD, an engraver; died in Brooklyn, L. I. He was a native of England, and since 1850 had devoted himself to his profession in Brooklyn, as one of the firm of Bobbett & Hooper. As an artist in water-colors, Mr. Hooper's productions, which his modesty would only occasionally allow to be seen on the walls of the Academy of Design, were admirable for accuracy of drawing and harmony of coloring. He was one of the few originators of the Brooklyn Society of Painters

in Water-Colors, and the friend of the profession, both in that city and in New York.

Dec. 14.—**WEED**, Rev. HENRY R., D. D., a Presbyterian clergyman; died at West Philadelphia, aged 88 years. He took his theological course at Princeton, graduated in 1814, and soon after became pastor of the First Presbyterian Church of Albany, N. Y. He was also for more than thirty years pastor of the First Presbyterian Church of Wheeling, Va. Although for several years, owing to the infirmities of age, he had ceased from the active ministry, he continued to hold the relation of pastor emeritus until he died. He was a man of commanding ability, who in other days exerted a profound and wholesome influence in the church of that region.

Dec. 17.—**BRESEE**, Rear-Admiral SAMUEL L., U. S. N.; died at Mount Airy, Philadelphia, aged 76 years. He was born in 1794, and received his naval appointment December 10, 1810. He took an active part in the War of 1812, served as a midshipman in the battle of Lake Champlain, and, passing through the grades of lieutenant and commander, was commissioned captain in 1841, and was assigned to the command of the Cumberland in 1846. In the Mexican War he did good service at Tuspan, Tobasco, and the siege of Vera Cruz. Subsequently he served on the lakes, at Norfolk Navy-Yard, and as commander of the European squadron, 1856-'58. At the breaking out of the war he commanded the Brooklyn Navy-Yard; was made rear-admiral in 1865, and port-admiral at Philadelphia, in 1869. After sixty years of public service he went on the retired list in accordance with the order of the Department restricting the position of port-admiral to the port of New York.

Dec. 17.—**CASWELL**, Rev. HENRY, D. D.; Vicar of Figheldean and Prebend of Salisbury, England; died at his residence in Franklin, Pa. He was the first ordained graduate of Kenyon College, having come to this country in 1828. In 1842 he returned to England, and procured a living in the Established Church by special act of Parliament. After holding several church offices there, he came here again about two years ago to resume his old duties.

Dec. 18.—**GARDNER**, Commodore WILLIAM H., U. S. N., an officer of great merit; died in Philadelphia, aged 70 years. He was born in 1800, entered the service in 1814, was made lieutenant in 1825, commander in 1841, and was appointed to the *Vandalia* in 1850. In 1855 he was promoted to the rank of captain, and in that capacity commanded the frigate *Colorado*. In 1861 he was in command of the *Mare Island* station, and the following year was commissioned commodore.

Dec. 19.—**HOLLAND**, GEORGE, a veteran actor; died in New-York City, aged 80 years. He was born in London, in 1790, had good educational advantages in boyhood, but was more fond of sport than books. Between his eighteenth and twenty-sixth year he was suc-

cessively clerk, bill-broker, editor, printer, singer of comic songs, in the prize-ring, circus-rider, commercial traveller, peddler, and tradesman. In 1817 he settled up his affairs and betook himself to the stage. After numerous successes in England, he came to the United States in 1827, and from that time to January, 1870, he had been an actor almost constantly in comic parts, winning golden opinions from audiences in almost every considerable town in the United States. He was one of the best of the humorous actors of the old school, and was honorable and exemplary in all the relations of life.

Dec. 19.—**TALBOT**, Lieutenant JOHN G., U. S. N., a gallant young officer; was lost on the breakers of the Island of Kauai, Sandwich Islands. He was an officer of the *Saginaw*, which vessel was wrecked on Ocean Island, in the Pacific Ocean, and volunteered to go in an open boat to Honolulu, a distance of 1,500 miles, to seek assistance for the relief of his shipwrecked comrades. After experiencing with the utmost fortitude every privation and hardship, even to the last stages of starvation, he, with two of his men, was lost just at the completion of his fearful voyage. He was a young man of the most upright character, and of great moral worth, conscientious and exact in the performance of all his duties.

Dec. 25.—**KNOWLTON**, Captain MINER, U. S. A.; died in Burlington, N. J., aged 66 years. He graduated at West Point in 1829, and was commissioned brevet second lieutenant in the First Artillery. With this regiment he continued until 1861, rising through the grades of second and first lieutenant to that of captain in 1846. He was for a period of nearly fourteen years instructor in mathematics, French, and artillery, at West Point. With a view of studying foreign military science, he went to Algeria in 1845, and served on the staff of the celebrated Marshal Bugeaud. Subsequently he participated in the war with Mexico in 1846, and later was in the recruiting service and on engineer duty. In 1861 he was retired from active service for disability resulting from long and faithful service, and from disease and exposure in the line of duty. Captain Knowlton was the author of "Notes on Gunpowder, Cannon, and Projectiles," 1840; and the compiler of "Instructions and Regulations for the Militia and Volunteers of the United States," 1861.

Dec. 27.—**CUTLER**, ELBRIDGE JEFFERSON, Professor of Modern Languages in Harvard College; died at Cambridge, Mass. He was a brilliant writer, and an able, though generous, critic. A volume of poems published by him some years since awakened the desire in all who read them that he should write more. His criticisms in the *North American Review* and other periodicals gave evidence of remarkable critical ability. In private life Prof. Cutler was modest and diffident, but genial when among those who knew and appreciated his

worth. He was greatly esteemed and beloved throughout the circle of his acquaintance.

Dec. 28.—CLAGGETT, WILLIAM, formerly a prominent Democratic politician of New Hampshire; died in Portsmouth, aged 80 years. He was born in Litchfield, N. H., in 1790; served as a Representative and Senator, and from 1830 to 1838 was a naval officer of Portsmouth. He wrote freely for the press for many years, on agriculture, antislavery, and other matters. The latter portion of his life was passed in obscurity.

Dec. 29.—WELLFORD, B. R., M. D., a prominent physician, and for many years a Professor of *Materia Medica* in the Virginia Medical College; died in Richmond, Va., aged 74 years.

Dec. 31.—HAMMOND, EDWIN; died in Middlebury, Vt., aged 70 years. He was the most famous sheep-breeder in the State, some of his sheep having been sold at fabulous prices. He was the founder of the State Agricultural Society, and was prominently identified with the agricultural interests of the State.

Dec. —.—CLARKE, Judge GAYLORD J., a jurist and journalist; was murdered in El Paso, Texas, aged 34 years. He graduated at Union College, Schenectady, in 1859, and entered upon his career as a journalist on the *West Troy Democrat*. Subsequently he entered the Albany Law School, and was admitted to the bar. In 1880 he returned to journalism, taking the editorial direction of the *Lockport Advertiser*, which he conducted successfully until 1862, when he was allured into politics, and was elected Inspector of State Prisons at the age of twenty-six. He held this office for three years, discharging its duties with honor to himself and fidelity to the State. In 1866 he removed to Nebraska, and there practised law for two years. In 1868 he settled in El Paso, Texas, where he had since resided, practising his profession, and also holding the position of Inspector of Customs. In July, 1870, he was appointed by Governor Davis Judge of the Twenty-fifth Judicial District of Texas, which position he occupied at the time of his death. Judge Clarke was known as a man of great integrity and unflinching patriotism. He filled the places he was called to occupy with uniform ability, and in all cases gained the high respect of the people with whom he was thrown in contact. He had contributed several poems to our war-lyric literature, which attained more than passing notice, and in his new sphere, among the turbulent elements of Southern society, he had exerted marked influence for good.

Dec. —.—LEEON, Mrs. ELIZA, a centenarian; died in the almshouse at Hartford, Conn., in her 111th year. She was a native of Canada. Her father at his death had completed his 112th year.

OBITUARIES, FOREIGN. *Jan. 1.*—CRESWICK, THOMAS, R. A., an eminent English landscape and *genre* painter; died in London, aged 58 years. He was born in Sheffield, in 1811,

and, having early exhibited a taste for drawing, studied his art in Birmingham, and in his seventeenth year removed to London for the further prosecution of his studies. But already he was so far advanced that two of his pictures were the same year admitted to the exhibition of the Royal Academy. Among his greatest works are "England," "London Road a Hundred Years ago," "The Weald of Kent," "Home by the Sands," and "Wind on Shore." He also painted an extensive series of pictures from the scenery of North Wales. He was elected an Associate of the Royal Academy in 1842 and a Royal Academician in 1851.

Jan. 8.—HASTINGS, Admiral Sir THOMAS, K. C. B.; died in London, aged 79 years. He was born in 1790, entered the navy at an early age, and saw much active service in the Walcheren expedition and in the Mediterranean. He was first lieutenant of the *Undaunted*; was in command of the gunnery establishment on H. M. S. *Excellent* from 1834 to 1845, and for six years was at the head of the Royal Naval College at Portsmouth. He was principal storekeeper and a member of the Board of Ordnance from 1845 to 1855, when that office was abolished, was made a C. B. for his improvements in naval gunnery, K. C. B. for his services at the Board of Ordnance during the Crimean War, and was a Deputy-Lieutenant for the County of Hereford.

Jan. 10.—PRATT, JOHN TIDD, an English philanthropist and author; died in London, aged 72 years. He was born 1797, was admitted to the bar at the Inner Temple in Michaelmas Term, 1824, held the office of consulting barrister to the Commissioners for the Reduction of the National Debt since 1828, was Registrar of Friendly Societies, and barrister for savings-banks. He was the author of numerous valuable legal treatises, among which are, "Summary of the History of Savings-Banks" (1846), "Law relating to Friendly Societies" (1855), "Laws of Highways," and an "Analysis of the Property Tax Act." He was a Deputy-Lieutenant for the County of Middlesex.

Jan. 14.—LEVASSOR, PIERRE, a French comedian and singer; died in Paris, aged 62 years. He was born at Fontainebleau, in 1808, educated in Paris, and engaged in the mercantile business, but in 1830 commenced his career as a singer in the Grand Theatre of Marseilles, and subsequently made an engagement at the *Novelties* of that city, but this was soon terminated by the closing of that theatre. He returned to business again, but only for a short time, when Mlle. Dejazet procured him an engagement as a comedian in the theatre of the *Palace Royal*. He retained his connection there from 1832-1856, with the exception of the years 1840-1843, when he played at the *Varieties*. In 1857 he made another short engagement at the *Varieties*. As an actor he was original, and in caricature had no superior on the French stage. He was best known abroad, however, as a singer, and

his humorous songs, delivered with an inimitable felicity, were very popular, and the copyright on them, together with his salary as an actor, enabled him to amass a fine fortune.

Jan. 15.—**BROKE, Baron FRANZ VON**, Austrian Minister of Finance; died at Vienna. He was Minister of Commerce and Agriculture for Cis-leithan Austria, from April 24 to December 29, 1867, and nominated Minister of Finance for the whole Empire, December 29, 1867.

Jan. 15.—**MADDOCK, Sir THOMAS HERBERT**, formerly Deputy-Governor of Bengal, and President of the Council of India; died in London, aged 77 years. He was born in 1792, entered the East India service in the Bengal presidency, in 1811, was appointed assistant to the magistrate of Moorshedabad, in 1815, and having held some other political and financial appointments, including the secretaryship of the Government of India in the Legislative, Judicial, Revenue, and Foreign Departments, was knighted by patent, in 1844. He was Deputy-Governor of Bengal, and President of the Council of India, from 1845-1849, and was one of the members of Parliament in the conservative interest for Rochester from July, 1852, till March, 1857.

Jan. 16.—**WESTERMANN, ANTOINE, Ph. D.**, a German philologist; died at Leipsic, Saxony, aged 64 years. He was educated at the University of Leipsic. In 1880 he was appointed lecturer, in 1882 adjunct professor, and in 1884 Professor of History and Ancient Literature. He was one of the founders of the Society of Sciences at Leipsic, in 1846, and author of a "History of Eloquence in Greece and Rome," in two vols., 1833-1835, and also of several other works on classic philology and literature.

Jan. 17.—**MURRAY, LEIGH**, a successful comedian of London; died there, aged 49 years. His first appearance was at the Princess's Theatre, in 1845, and attended with great success. He maintained a high position for a period of twenty years, after which he retired from the stage.

Jan. 24.—**BAILEY, SAMUEL**, a philosophical and politico-economical writer; died in London, aged 78 years. He was the author of "Essays on the Formation of Opinions," and also of works on metaphysics, political economy, finance, government, and abstract science. He established the Banking Company in Sheffield, in 1831, of which he was made chairman.

Jan. 25.—**DARLING, Sir CHARLES HENRY, K. C. B.**; died in London, aged 60 years. He was for many years in the British colonial service, having been Lieutenant-Governor of St. Lucia, Cape of Good Hope, Newfoundland, Jamaica, and New South Wales.

Jan. 31.—**CASTANON, GONZALEZ**, a Spanish journalist; was killed in a rencontre at Key West. He was editor of a Havana newspaper, the *Voz de Cuba*, and had repaired to Key

West in accordance with a challenge from the editor of the *Republican*, published in that place. Upon meeting, a violent altercation ensued, and a party of Cubans, threatening vengeance, stirred up a fight, during which Castanon was killed and several Cubans wounded. His death was made a pretext for a terrible massacre of Cubans in Havana, in which about three hundred and fifty were killed.

Feb. 2.—**WYNDHAM, Sir CHARLES ASHE, K. O. B.**, a Lieutenant-General in the British Army; died at Jacksonville, Fla., aged 60 years. He was born in 1810, entered the Coldstream Guards in 1826, and became colonel in June, 1854. On the breaking out of the Russian War he was appointed Assistant Quartermaster-General to the Fourth Division, and was soon after placed in command of a brigade of the Second Division. He distinguished himself at the battle of Inkerman, as well as at the taking of the Redan. For gallantry on that occasion he was promoted major-general, and made chief-of-staff. In 1857 he was elected member of Parliament from East Norfolk, in the Liberal interest, and in the same year was sent to India to aid in the suppression of the mutiny, where he took an active part in the campaign under Lord Clyde. He was made a K. O. B. in 1865, and at the time of his death was a lieutenant-general in the army, and colonel of the Fortysixth Regiment.

Feb. 7.—**OVEDO, DON ESTEBAN SANTA CRUZ DE**, a wealthy Cuban; died in Havana. He was known to the public as the bridegroom of the famous Diamond Wedding. In 1859 he married the young daughter of a merchant in New York, and the bridal *trousseau*, as well as all the wedding outfit and ceremonial, was on a scale of extravagant expenditure previously unknown in this country. He was many years older than his bride, and his estate, notwithstanding heavy losses in the revolution, was very large.

Feb. 12.—**SOUBLETT, CARLOS**, a Venezuelan statesman and diplomatist; died at Caracas, Venezuela, aged about 70 years. He distinguished himself in the war for independence in the South-American provinces against Spain, and had been Secretary of War, Secretary of State, Secretary of Foreign Affairs, Secretary of Finance, and President of the Republic of Venezuela from 1842 to 1846. He had also been ambassador to England, France, and Spain.

Feb. 19.—**ROTHSCHILD, NATHANIEL, Baron**; died in Paris, aged 58 years. He was the third son of Baron Nathan Mayer Rothschild; was born in 1812, and in 1842 married his cousin Charlotte, daughter of Baron James Rothschild. For many years he was blind, and recently paralyzed.

March 8.—**MOSCHELES, IGNAZ**, a German pianist, professor, and composer, died at Leipsic, aged 76 years. He was born at Prague,

May 30, 1794, of Jewish parentage, and commenced his musical studies in his native city under Denis Weber, the director of the Musical Conservatory of Prague. He possessed a remarkable facility for the acquisition of the most difficult pieces of instrumentation, and made his appearance in public concerts while yet a child, where he was warmly applauded for his skill as a player. He continued his studies under Albrechtsberger and De Salieri, and, when but little more than twenty years of age, gave a series of concerts in the cities of Germany and Holland. In 1820 he visited Paris, and the next year took up his residence in London, where he was appointed a professor in the Academy of Music. He remained there attracting numerous pupils, till 1846, when the directorship of the Leipzig Royal Conservatory of Music, the great prize of the musical world, was offered him and accepted. He remained there till his death, rendering great services to the cause of musical education. Among his pupils were Thalberg and Mendelssohn. Herr Moscheles is reckoned as one of the founders of the modern school of the piano. His style of playing was very brilliant, but free from the fantastical manner of some modern players. He had a very high reputation as a composer as well as an author of excellent books of method and instruction. His concertos, sonatas, fantasias, variations, and piano studies, are highly prized by the best musical artists. His "Method of Methods for the Piano" is regarded as the best German work of instruction.

March 13.—BROUGH, WILLIAM, a comedian and writer of burlesque comedy; died in England, aged 44 years. He wrote numerous extravaganzas, comedies, and farces, many of which achieved a wide popularity, and was also a contributor to English periodical literature. He was the founder of the comic paper *Diogenes*.

March 16.—BARBADOES, Right Rev. THOMAS PARRY, D. D., Bishop of; died in England, aged 75 years. He was born in Denbighshire in 1795, educated at Oriel College, Oxford, where he graduated with high honors, and thence was elected to a Fellowship at Balliol College. He held the incumbency of St. Leonard's, Colchester, previous to 1824, when he was appointed Archdeacon of Antigua, West Indies, whence he was transferred as archdeacon to Barbadoes in 1840. In 1842 he was consecrated second Bishop of Barbadoes. Dr. Parry was the author of some able and learned expositions of the Epistles of St. Paul to the Romans, Hebrews, etc., "Christian Stewardship," "Christ and His Adversaries," and some other works.

March 19.—LOUSADA, FRANCIS, British Consul for Massachusetts and Rhode Island since 1859; died in Boston, aged 54 years.

March 31.—GREY, General CHARLES, private secretary to Queen Victoria, and formerly to Prince Albert; died in London, aged 66 years.

He was the second son of Earl Grey, Premier under William IV., and was born in 1804, entered the army in 1820, and in 1831 was returned to Parliament in the Liberal interest for High Wycombe. On the accession of the Queen to the throne, he was made one of her equerries, and from 1849 to 1861 acted as private secretary to Prince Albert. On the death of the Prince-Consort he was made private secretary to the Queen, and in 1866 was appointed one of keepers of the privy purse.

April 6.—KESLER, HENRI DE, a French republican and exile; died at Hauteville House, Guernsey. He was a bosom friend of Victor Hugo, and one of the heroes of the barricade in 1851, and had been an exile from that period. He was educated a royalist and a Catholic, but threw off the principles of his youth, and was thenceforth firm in his adherence to his adopted opinions.

April 7.—BONER, CHARLES, an English author, journalist, and translator; died at Munich. He was of English birth, and went to Germany as tutor to the family of the Prince of Thurn and Taxis, and finally settled in Munich. He was the author of "Christmas Hunting in the Mountains of Bavaria," and translator of Hans Christian Andersen's stories. He also contributed to various English and American journals, having been at one time a Vienna correspondent.

April 8.—MORRISON, DANIEL, a journalist; died in Toronto, Canada, aged 48 years. He was born in Scotland, emigrated to America in 1850, and was engaged on Canadian periodicals from that time until 1861, when he removed to New-York City, and was for a short time a contributor to the "New American Cyclopædia." Afterward he obtained a situation upon the *New-York Times*, with which he was connected till 1867, when he went to Toronto as editor of the *Daily Telegraph*.

April 12.—BERIOT, CHARLES AUGUSTE DE, a celebrated Belgian violinist; died at Brussels, aged 68 years. He was born at Louvain, Belgium, February 20, 1802; studied music there until 1821, when he went to Paris in order to receive instruction under Viotti, Baillot, and other celebrated masters. He made his first appearance before a Parisian audience at the same time with Paganini, and subsequently won a high reputation in London, receiving the appointment of first violin in the Royal Orchestra with a pension of two thousand florins. In March, 1836, he married the celebrated Madame Malibran, one of the most eminent of modern prima donnas in Italian opera. In 1842 he was appointed professor to the Conservatoire at Brussels, where he trained Leonard, Vieuxtemps, Ghys, Prume, and others who have since become famous. During the latter part of his life he was afflicted with blindness.

April 12.—CHALMEERS, Rev. PETER, D. D., a Presbyterian clergyman, antiquarian, and author; died at Dunfermline, Scotland. He was

born in Scotland, ordained to the second charge of the abbey in 1817, and, upon the death of the Rev. Alexander McLean, was appointed to the first charge. Dr. Chalmers was a fine classical scholar. He was the author of a "History of Dunfermline," and for an article in the "Statistical Account of Scotland" received a silver jug from the Highland Society.

April 18.—**TENTERDEN, JOHN HENRY ABBOTT**, second Baron, an English peer; died in London, aged 74 years. He was the son of Chief-Justice Abbott, afterward the first Lord Tenterden, of the Court of King's Bench, and was born in London in 1796. He was educated at Oxford, and took a prominent part in politics in the Conservative interest. In 1882, on the death of his father, he succeeded to the peerage, and in the House of Lords was known for almost forty years for his rigid adherence to the Conservative party. He was unmarried, and his title and estate descend to his nephew, Charles Stuart Aubrey Abbott.

April 20.—**MOORE, GEORGE HENRY, M. P.**, an eminent Irish patriot and orator; died of apoplexy, in the British House of Commons, aged 59 years. He was born at Moore Hall, County Mayo, Ireland, educated at Oscott College and Christ's College, Cambridge, and entered Parliament for the county of Mayo in 1847, in the Conservative interest. He took a prominent part in the tenant-right agitation, and was one of the leaders in the Independent Opposition party, which was formed to wrest liberal measures from the Government by opposing all political parties in the British Parliament who refused to make tenant right a Cabinet measure. He continued to represent Mayo until 1857, when he was unseated on petition, since which time he had retired from public life, until in 1868 he was again elected to Parliament. His many and strong pleas in behalf of Ireland and her impoverished patriots rendered him exceedingly popular among his countrymen. At heart he was an intense nationalist, firmly convinced that Ireland could derive no good from the English Parliament, and disposed to tolerate British power only until it could be overthrown. The coercion act recently passed met with a vigorous opposition from him, and roused the feeling that defiance alone remained for the Irish people.

April 24.—**COSTELLO, Miss LOUISA STUART**, an artist and author; died in Boulogne, France, aged 55 years. She was born in Ireland, in 1815, but about the year 1835 settled in London, and for a time supported herself by miniature-painting, but, her pen proving more remunerative than her pencil, she abandoned her art and devoted herself thenceforth to writing. The first work by which she became known to the public was a volume of poems published in 1835. This was followed by several books of travels descriptive of various sections of the Continent. In 1841 she published the historical romance called "The Queen's

Prisoner, or the Queen Mother," the most prominent character being the well-known Catharine de Medici. Toward the close of 1844 the "Memoirs of Celebrated English Women," commencing with the Countess of Shrewsbury, and closing with Lady Mary Wortley Montagu, was issued. The following year, the "Rose Garden of Persia," a work consisting of translated specimens and biographical notices of the most remarkable among the Persian poets, appeared. Among her biographical works are "Memoirs of Mary, the Young Duchess of Burgundy," 1853; and "Anne of Brittany," 1855. Miss Costello was well known as a song-writer, and of late years contributed to periodical literature.

April 28.—**BLAAUW, WILLIAM HENRY, F. S. A.**, an eminent English antiquarian; died in Sussex, aged 76 years. He was born in 1798, and was educated at Eton, and Christ Church, Oxford, where he graduated in 1818. He was a magistrate and Deputy-Lieutenant for Sussex, served as High-Sheriff for that county, was an accomplished antiquary, and one of the founders of the Sussex Archaeological Society. Mr. Blaauw was the author of an interesting historical treatise, entitled "The Barons' War," including the "Battles of Evesham," published in 1844, and of smaller papers of an antiquarian character, published anonymously.

April 30.—**COOX, Monseigneur THOMAS**, Roman Catholic Bishop of Three Rivers, Canada, since 1852; died in Montreal, aged 78 years.

April 30.—**DEMIDOFF DE SAN DONATO, Prince ANATOLE**, a Russian nobleman and author; died in Paris, aged 58 years. He was born in Florence, in 1812, and was the son of the famous Prince and General Nicolas Demidoff, from whom he inherited an enormous fortune. He devoted himself to literary and scientific pursuits, and in 1839 wrote a work describing his travels in Southern Russia, in which he was assisted by several French scholars and artists who accompanied him. In 1841 he married the Princess Mathilde, daughter of Jerome Bonaparte, a marriage displeasing to the Emperor Nicholas, at first, on religious grounds, as the princess was a Roman Catholic, and the prince a member of the Greek Church, but, after hearing the prince's explanations, he gave it his sanction. The union, however, proved infelicitous, and four years later they separated by mutual consent, the princess receiving the annual sum of \$150,000. Prince Demidoff made liberal use of his immense wealth, constructed works of public utility, and contributed largely to benevolent institutions. He owned the celebrated Sanci diamond, which he purchased in 1835 for \$400,000.

April —.—**NIEPCE DE ST. VICTOR, CLAUDE MARIE FRANÇOIS**, a chemist and photographer; died in Paris. He was born at St. Cyr, July 26, 1805, and educated in the military school of Saumur, from which he graduated in 1827. In 1842, while a lieutenant of dragoons, he was led to make researches relative to the restora-

tion of colors. His first experiments resulted in a proposal to the Minister of War, who was about to change the color of a part of the uniform of thirteen cavalry regiments, and the adoption of which actually effected a saving of four thousand pounds, for which the discoverer received twenty pounds! Subsequently he obtained a military appointment, which left him leisure for pursuing scientific investigations, and he was advanced to the grade of *chef d'escadron* in 1844. In 1849 he was decorated with the cross of the Legion of Honor, and received the prize of eighty pounds from the Society for the Encouragement of the Arts. In 1847 he made the first attempt at photography on glass. He was the author of a series of papers addressed to the Academy of Science, on "Considerations of Color," the "Action of Vapors," "Photography on Glass," "Heliocromy," and "Heliographic Engraving on Steel and Glass." In 1855 his principal works were collected, under the title "*Recherches Photographiques*." To his uncle, M. Nicéphore Niepce, and to M. Daguerre, the public are indebted for obtaining pictorial representations by means of solar light. M. Niepce-de-Saint-Victor obtained the Tremont prize from the Academy of Sciences in 1861-'62-'63.

May 11.—DILL, Rev. SAMUEL MARCUS, D.D., a Presbyterian clergyman, and Professor of Theology in Magee College, Londonderry; died there suddenly. He was appointed a delegate from the Irish Presbyterian Church to the General Assembly about to convene here, but died just previous to the sailing of the steamship in which his passage was engaged. He had visited this country in 1859.

May 15.—HARRO-HARRING, PAUL, a Danish political exile, painter, poet, and novelist; committed suicide in the Isle of Jersey, aged 71 years. He had been concerned in revolutionary movements in Greece, in Poland, in Germany, and in Switzerland, had been banished from several countries, and repeatedly imprisoned. Once he made his escape from captivity by leaping from a vessel into the sea. The intervals of his revolutionary career had been filled up by assiduous devotion to painting, by the composition of numerous volumes of poetry, dramas, and novels, by editorial experiences of a revolutionary character, and by historical, biographical, and descriptive works. In 1854 he was released from prison in Hamburg at the intercession of the United States consul. He maintained himself for some time in Brazil as an artist, and afterward for two or three years resided in the United States, where he attracted some attention both from his persecutions as a revolutionist and his impassioned denunciations of the European governments. Of late years he labored under the delusion that he was the special object of the hatred of the Russian Government, whose spies he fancied to be perpetually about him, and he gave great trouble to the English police by his con-

stant applications for protection from imaginary foes. For a long time he had been supported on the charity of Mazzini and other private friends.

May 19.—HILL, DAVID OCTAVIUS, R. S. A., an eminent Scotch painter of landscapes; died in London, aged 68 years. He was born in 1802, at Perth, Scotland. Having early manifested a taste for art, his father sent him to Edinburgh for instruction, where, in 1823, he exhibited three pictures of Scotch scenery which gave proofs of fine artistic skill. He executed a series of sixty pictures illustrative of "The Land of Burns," a work which he projected. Among his chief English subjects are "Windsor Castle—Summer Evening," "Kenilworth," "Warwick," "Durham," and "Fotheringay." Among his Scottish pictures, "Old and New Edinburgh—from the Castle," "Valley of the Nith," "The Ballachmyle Viaduct," "The River Tay—from the Bridge at Perth," and of Irish scenery, "Kenmare Bridge," in the collection of the Marquis of Lansdowne, is a favorable specimen. In 1830, Mr. Hill was appointed secretary of the new Royal Scottish Academy of Painting. He was the first to suggest the formation and to aid in devising the constitution of the Royal Association for the promotion of the Fine Arts in Scotland, the parent of numerous other art-unions in London, Dublin, Glasgow, and elsewhere. Under Mr. Hill's directions, photography was greatly benefited, and its artistic capabilities more fully developed soon after the discovery of the process in 1843. In 1850 he was appointed by her Majesty one of the commissioners of the Board of Manufacturers in Scotland, a body which has under its direction the Government School of Art and the National Gallery of Scotland.

May —.—CABARRAS, EDWARD DE, M.D., a celebrated homœopathic physician; died in Paris. He was the son of the well-known Madame Tallien. He was one of the most celebrated advocates of Hahnemann's system, and made a specialty of the treatment of diseases of the throat and larynx. He was the physician and friend of all the distinguished singers and actors, from whom he never accepted fees. Of Paris, thoroughly Parisian, he was known and loved in that characteristically Parisian clique represented by Roqueplan and Gambetta. Emile de Girardin, in announcing his death, bestowed upon him the tenderest and most eloquent eulogies.

May —.—MACKINNON, WILLIAM ALEXANDER, a member of Parliament and author; died in Scotland, aged 81 years. He was born in 1789, and was the head of the clan Mackinnon in the western part of Scotland. He had been forty years a member of the House of Commons, and had published a work on "Public Opinion," also "Thoughts on the Currency Question," and the "History of Civilization."

May —.—PARKER, JOHN HENRY, F. A. S., an eminent English publisher, antiquary, and au-

thor; died in England, aged 64 years. He was born in 1806, entered into business as a bookseller, at Oxford, in 1832, and in 1868 retired in favor of his son. A large portion of his time was devoted to archaeological studies, in which he obtained great distinction, and his "Glossary of Architecture," which was first published in 1836, and passed through many editions since that time, is considered the best text-book on the subject in existence. He was for many years the publisher of, and a large contributor to, the *Gentleman's Magazine*. His articles on antiquarian subjects were among the most valuable contributions to archaeological science in the magazine. He also published, for several years, the *London Saturday Review*.

May.—URQUIZA, DON JUSTE JOSÉ DE, an Argentine general, dictator, and acting President of the Confederation, born in 1800, in the province of Entre Rios; died in Entre Rios, in May, 1870. He was of the Gaucho stock, and came to the surface as a commander of troops under Rosas, in his protracted war against the cities of the Confederation. In 1842 he was appointed Governor of Entre Rios, and soon after, under the orders of General Oribe, invaded Uruguay, and, though at first defeated by the Unitarian General Ribera, he finally overcame him and put his army to rout in 1845, at India Muerte. He remained faithful to Rosas until 1851, when, the tyrant having renewed his oft-repeated farce of abdicating, Urquiza took him at his word, and, having contracted a treaty with Brazil and Uruguay, against Rosas and Oribe, he compelled the latter to capitulate on the 8th of October, 1851, and, crossing the Parana, attacked Rosas on the 3d of February, 1852, at Santos Lugares, and defeated him so signally as to put an end to his bloody dictatorship. It was now his turn to rule, and, amid the anarchy and confusion which followed, he found it no easy task. He refused to accept the title of President, though he was the actual ruler; but, having appointed Don Vincent de Lopez provisory president of the Republic of Buenos Ayres, and convoked a Congress of all the Governors of the provinces to form a definitive Constitution for the Argentine Republic, he contented himself with being General-in-Chief and Minister of Foreign Affairs. The Congress elected him provisory governor of the republic, but Buenos Ayres, disliking his federalist opinions and his devotion to the other provinces, revolted, and, proclaiming itself independent, chose Alsina Captain-General. Urquiza attempted the reduction of the city with a strong force in the winter of 1852-'53; but the treachery of his chief of staff compelled him to raise the siege just as it was on the point of succeeding. For the next six years he was Director of the other thirteen States of the Confederation, having been elected to that office by the Congress of Santa Fé in 1853. His measures were generally judicious, and seem to have been prompted

by a desire for the promotion of the interests of the nation. After retiring from the directorship he was again appointed General-in-Chief of the Confederation, and again attempted the reduction of Buenos Ayres. Defeated by General Mitre, he entered into a treaty of peace, and, resigning his office, became in 1862 Governor of the province of Entre Rios. In 1868 he was a candidate for the presidency of the Confederation, but was defeated by the election of Don D. F. Sarmiento. From that time he took but little part in public affairs.

June 27.—BARBES, ARMAND, a French revolutionist; died in Paris. He was born in the Island of Guadeloupe, and when young was left by his father's death possessed of a large fortune. Having arrived in France in 1830, all the circumstances of the period favored the development of his revolutionary disposition. He became an active member of the secret republican associations, and underwent a year's imprisonment for privately manufacturing gunpowder. In 1839 he made, in company with other daring associates, an audacious attempt at insurrection. They first attacked and carried a police-station. During the conflict, Lieutenant Drouineau, who commanded the post, fell mortally wounded; Barbes, who was also wounded, was arrested, tried, convicted of murder, and sentenced to death. At the last moment, when he had already taken leave of his friends, his sentence was commuted by the king. Liberated by the Revolution of 1848, he again engaged in revolutionary projects, and under the Provisional Government was condemned to banishment for life. When the Russian War commenced, he considered that he was called upon to sustain his own country by giving his adhesion to the Imperial Government. This secured his pardon from Napoleon III., and his subsequent life was unimportant.

June 28.—HALE, Venerable WILLIAM, Archdeacon of London; died in that city, aged 75 years. He was born about 1795, was educated at the Charterhouse and at Oriel College, Oxford; became preacher of the Charterhouse in 1823; chaplain to the Bishop of London and Master of the Charterhouse in 1842; Rector of Cripplegate in 1847; Archdeacon of St. Albans in 1839; of Middlesex in 1840, and of London in 1842. In 1857 he resigned his living of Cripplegate. Archdeacon Hale was the author of a number of pamphlets, tracts, sermons, etc., mostly on ecclesiastical subjects; of "Some Account of the Hospital of King Edward VI., called Christ's Hospital," "Some Account of the Past History and Present Condition of the Charterhouse;" edited, in connection with Dr. Lonsdale, the Four Gospels, with annotations, and several devotional works. He also contributed to the *Encyclopædia Metropolitana*, and prepared for the Camden Society two works of great antiquarian interest, "The Doomsdays of St. Paul" in 1853, and "Registrum Privatus S. Marie Wigoniensis."

June 28.—**LEMUS, C. JOSÉ MORALES**, a Cuban patriot and diplomatist; died at his residence in Brooklyn, L. I. He was born at Gibara, Cuba, on the 2d of May, 1808, was admitted to the practice of law in 1835, and subsequently was appointed, by the Crown, Counsellor of the Colonial Administration. For a period of eight years he was Mayor of Havana. In 1869 Mr. Lemus left Havana, accredited by President Cespedes as a diplomatic representative of the new Republic of Cuba, but Mr. Fish refused to receive him at the State Department, though he was always welcome at the private residence of the Secretary. The misfortunes of his country prostrated the already enfeebled frame of Mr. Lemus, and he died of grief and disappointment.

July 11.—**KINGLAKE, JOHN ALEXANDER**, sergeant-at-law; died in London, aged 59 years. He was born at Taunton, in 1805, educated at Eton and Cambridge, was called to the bar in 1830, appointed Recorder of Exeter in 1844, Recorder of Bristol in 1850, and, since 1857, had been member of Parliament for Rochester.

July 15.—**COPLAND, JAMES, M. D.**, Fellow of the Royal College of Physicians in London; died in that city, aged 77 years. He was a native of the Orkney Islands, and was born in 1793. Having studied seven years at the University of Edinburgh, where he graduated M. D., in 1815, he went to London, and afterward travelled on the Continent of Europe, and in Africa. Returning to England, he commenced the practice of his profession in 1821. After writing several papers and reviews, on scientific and medical subjects, he was, from 1822 to 1828, editor of the London *Medical Repository*, a monthly journal; was successively a lecturer on pathology and the practice of medicine at the Windmill Street School of Medicine, and at the Medical School of the Middlesex Hospital, from 1824 to 1842. During that period he was physician to two medical institutions, and published several medical works. His "Dictionary of Practical Medicine and Pathology," a most copious and laborious work in four volumes, is an established book of reference with the profession not only in England, but on the Continent and in the United States. Dr. Copland was an honorary member of several foreign academies and societies, and was for some time President of the Royal Medical and Chirurgical Society and of the Pathological Society of London.

July 21.—**DE LOOSEY, KARL F.**, Austro-Hungarian Consul-General to New-York City; died there, aged 45 years. He was a man of well-known benevolence, and a member of several charitable institutions. During the late war, he was thoroughly in sympathy with the United States Government. He was appointed consul at the instigation of Baron Holstein, and had held that position for nearly eighteen years.

July 23.—**MCTAVISH, —**, Governor of Rupert's Land; died at Liverpool, Eng., three

days after his return from a long residence in that distant and desolate region.

July 23.—**THORPE, BENJAMIN**, an English philologist, author, and translator; died in London, aged 63 years. He was born in 1808, and early devoted himself to researches into the history and literature of the early Anglo-Saxon period. Beginning with a translation of "Raak's Anglo-Saxon Grammar," he soon followed with a paraphrase in verse of the "Bible of Caedmon," with translation and commentaries; the Anglo-Saxon version of the History of Apollonius, 1834; the Book of Psalms in ancient Latin, with an Anglo-Saxon paraphrase, 1835; an *Analecæ Angloaxonien* in 1844; the Ancient Laws and Institutes of England, 11 vols., 1848; *Codeæ Oxoniensis*, 1842; and "Northern Mythology," 1852. Mr. Thorpe received from the Government a pension of £150 per annum for his literary services.

July 24.—**LYNE, JAMES B.**, an English landscape painter; died near London, aged 70 years. He was born at Bristol, December 5, 1800, and was placed in an attorney's office, but, at the age of twenty-one, adopted painting as a profession. He spent several years in studying his art, and, in 1835, removed to London. In 1839 he joined the Society of British Artists. In 1846 he made a tour through Italy, Switzerland, and Germany, which countries afforded him the subjects for many of his future paintings. In 1834 he published a series under the title "Lake Scenery of England." Subsequently he again visited Italy, and, after sojourning there for three or four years, returned with an abundant store of sketches, drawings, and pictures. He was for many years Vice-President of the Society of British Artists, and has written on the technical part of his art in the *Art Journal*.

July 27.—**RATAZZI, MADAME MARIE STU-DOLMINE DE SOLMS**, a member of the Bonaparte family, and a woman of letters; died at Florence, aged 40 years. She was the daughter of the Hon. Thomas Wyse, a noted statesman, and Letitia Bonaparte, and was born in London in 1830. At an early age she was placed in the royal school of the Legion of Honor at St. Denis, as the separation of her parents, whose union had proved infelicitous, deprived her of her fortune. She evinced intellectual qualities in youth, and made rapid progress in her education. In 1850 she married Frederic de Solms, a wealthy Alsatian, who, however, separated from her two years later, on the occasion of her being ordered to leave Paris, as she was objectionable to the Imperial Government. She then retired to Savoy, where she resided under the title of the Princess Marie de Solms, and in intimate acquaintance with eminent men, including Eugene Sue and Ponsard, while she maintained correspondence with Beranger and Lamennais, who retained to their death a warm attachment for her. She passed her time at this retreat in conducting a small literary journal, to which she contributed

poetry and romantic stories, while she amused herself by taking the principal part in dramatic pieces which she had performed at the theatre of her chalet. About this time she had published at Geneva some minor poems called *La Dupinade* and *Les Chants de l'Exilée*, which were dedicated to Victor Hugo. On the annexation of Savoy to France, Princess Marie de Solms returned to Paris, where she became eminent in literary and artistic circles, and contributed to the newspapers. She travelled considerably in Italy, and was warmly received at the court, where she met M. Urbain Ratazzi, the eminent Italian minister, whom she married in 1862. This event did not divert her from literary pursuits, for, while writing some large volumes, she conducted two journals—*The Courrier de Florence* first, and then *Les Matinées Italiennes*, in which, under various assumed names, she treated of music, the drama, and general literature. The works of fiction of Madame Ratazzi are numerous, and have gone through several editions. Her dramatic pieces are eight in number, and deal with the frivolities of French life.

Aug. 14.—HATCHELL, Rt. Hon. JOHN, an Irish advocate; died in Dublin, aged 87 years. He was born in County Wexford, in 1783, educated at Trinity College, Dublin, where he obtained university honors and a scholarship, and was called to the Irish bar in 1809, and was appointed Solicitor-General for Ireland in 1847. In 1850 he became Attorney-General, was twice returned to the House of Commons for Windsor, in 1853 was appointed a Commissioner of National Education, and of Charitable Donations and Bequests, and was for a short time Commissioner of the Insolvent Court in Ireland previous to its amalgamation with the Court of Bankruptcy.

Aug. 16.—BRAKLEMAN, JULIUS, Ph. D., a young German *littérateur*; was killed in battle at Mars-la-Tour, aged 26 years. He was formerly a student at Berlin, and was a valued writer on French literature and art, in the columns of the *Augsburger Allgemeine Zeitung*. He went through the Bohemian campaign of 1866, and since then had resided in Paris. He had planned an elaborate collection of the early lyric poets of France, and had already three volumes of matter in shape for publication, when the declaration of war forced him out of Paris and into the German ranks. The publisher whom he had selected was a German bookseller in Paris, whose property has been destroyed since his expulsion from that place; and it is probable that the prepared volumes have shared in the general destruction.

Aug. 16.—PABST, HERMANN, Ph. D., a young German historian; was killed in the battle of Mars-la-Tour. While he was yet a student in the universities of Bonn, Berlin, and Göttingen, he wrote a "History of the Longobardian Kingdom," which met with the most decided approval of the critics. After completing his university studies he devoted his principal

labors to the "Monumenta Germaniæ Historica," and much was expected from him for this work. He had a keen historical penetration, and a thorough philological education. He gained his degree as Doctor of Philosophy at Berlin, having written the treatise "De Ariberto II. Mediolanens primisque mediis de motibus popularibus." While there he undertook at the same time the editing of Hirsch's "Jahrbücher Heinrich's IV.," essentially supplementing the work by his own labors. Some time ago he had undertaken the editing of Italian historical sources, and was in Italy collecting material for lives of the popes, when the war was declared by France. He had already visited the Vatican, the principal libraries of Naples and Florence, and the cloister and city libraries of many other cities in Italy. Leaving Naples, he repaired to Germany, and, joining his regiment, the Second Grenadier of Brandenburg, proceeded to the field of battle. Fortunately, a record of most of his labors with reference to Italian history is preserved in his manuscript in the Berlin library, and thus the explorations and collections he made are not totally lost.

Aug. 18.—SALM-SALM, Prince FELIX, an Austrian nobleman and member of the Prussian House of Lords, a brigadier-general in our late war; was killed at the battle of Gravelotte, aged 42 years. He belonged to the Austrian house of Salm-Salm, the head of which is Prince Alfred, who holds many titles. He was born December 28, 1828. The prince served in our army during part of the late war, having been at one time in command of a regiment of the Twentieth Corps, and post commander at Atlanta toward the end of the war. On the occasion of Maximilian's accession to the throne he appointed him his aide-de-camp and chief of his household. During the checkered career of the Emperor, Prince Felix remained devoted to his interests, and was captured with him at Querétaro. The princess was indefatigable in her exertions, on the downfall of the Emperor, to mitigate his fate, and arranged the interview at Querétaro on the 21st of May, 1867, in which Maximilian and Prince Felix conferred with Escobedo. The offer to abdicate and leave the country made at that conference was rejected, and Prince Felix seemed destined for the same fate as the Emperor. He was, however, released soon after the Emperor's execution, and returned to Europe, where he entered the Prussian service as major of the Fourth Regiment of Grenadiers of the Prussian Royal Guard.

Aug. 20.—CRAIK, Rev. JAMES, D. D., a clergyman of the Scottish Kirk, an able scholar; died at Glasgow, aged 68 years. He was a son of the Rev. Wm. Craik, and was born at Kennoway, Fifeshire; studied at St. Andrews, and after being licensed spent some time in Edinburgh. He was ordained in 1832, his first charge being at Scone, where he remained till 1843, when he became successor to Dr. Smith,

of St. George's, Glasgow. Though a highly-accomplished scholar, his great modesty and attention to his ministerial duties prevented him from occupying the same place in the public eye as others less qualified. He took a deep interest in ecclesiastical affairs, and was the head for many years of the India Mission Scheme of the Established Church, and was one of the principal supporters of the most successful Normal School which she maintains in Glasgow for the training of teachers. He filled the moderator's chair of the Established Assembly in 1863. A son of Dr. Craik married Miss Mulock, the distinguished novelist.

Aug. 29.—**HERTFORD, RICHARD SEYMOUR CONWAY**, Marquis of, K. G., a wealthy and liberal nobleman; died in London, aged 70 years. He was the fourth inheritor of the title, and was born in 1800. On the death of his father he inherited an immense fortune, which he largely devoted to the maintenance of a magnificent establishment in Paris, and the purchase of costly works of art. At the famous sale of the gallery of King William I, of Holland, he purchased one picture, the Assumption, by Murillo, for the enormous sum of \$120,000. The marquis was an early and constant friend of Napoleon III., and encouraged him in his candidature for the office of President. The vast estates and immense wealth of the marquis descend, with the title, to his young kinsman, Captain Hugh de Grey Seymour, his cousin's grandson.

Aug. 30.—**STRUVE, GUSTAVE**, a German revolutionist and author; died in Vienna, aged 65 years. He was born in Livonia, October 11, 1805, and was educated for the law. He entered the diplomatic service of the Duke of Oldenburg, and acted as secretary to the embassy, during several sessions. About 1840 he settled at Mannheim to pursue his profession, and there married, in 1845, a lady who shared his opinions and participated in the persecutions he subsequently endured. He devoted himself very much to science, particularly to phrenology, on which he wrote some treatises. He became editor of the *Mannheim Journal*, and commenced in 1843 a vigorous opposition in it to the Baden Government, by which he many times incurred fine and imprisonment. That journal was suppressed in 1846, and he then established the *German Spectator*. In 1848 he caused, in concert with M. Hecker, a revolutionary rising, which proved unsuccessful, and he had to fly to France. A second attempt in September, made with the support of Karl Blind, had no better success. The Government troops dispersed his party at Staufen, and arrested himself. He was sentenced to five years' imprisonment, but the insurrection of May 24, 1849, set him free. The leader of the new movement, Herr Brentano, however, had him arrested on the charge of inspiring extreme socialistic principles. He afterward took part in the revolution in Baden, and upon the defeat of the movement fled to Switzerland, whence he was expelled two months later.

He then resided successively in France, England, the United States, and Austria. In addition to several works on phrenology, Herr Struve was the author of "A System of Political Science," "The Common Law of the German Confederation," besides other treatises of a political and legal character. His residence in this country furnished him with materials for a volume entitled "Both Sides of the Ocean."

Aug. —.—**MARMOL, DONATO DEL**, a Cuban revolutionary general; fell in battle, aged 32 years. He was born in the city of Bayonne, about the year 1838. His father, Raimundo Marmol, was a native of Venezuela, and a captain in the Spanish Army. Donato went with his parents to Santiago de Cuba, and there completed his education. For a while he engaged in farming, but in 1860 returned to his native city, where he resided in private life until the first news of the revolt, when he rushed into the conflict, and engaged in many desperate battles.

Sept. 17.—**READ, JOHN EDMUND**, an English poet; died at Salterton, England, aged 70 years. He was born at Broadwell, Gloucestershire, in 1800. His first work, "Cain the Wanderer," which appeared in 1830, anonymously, secured for its author an introduction to Coleridge the poet, and a recorded testimony from Goethe. It was followed by "Italy," published in 1838; "Catiline," and "The Deluge," 1839; "The Vision of the Ancient Kings," and "Life's Episode," 1843; "Memnon," 1844; "The Revelations of Life," 1849; and "Man in Paradise," in 1858, designed to form the first portion of the drama of "Cain the Wanderer." Subsequently he produced several lyric poems of great merit.

Sept. 18.—**SAXONY, AMELIA**, Duchess of, sister of the reigning King of Saxony; died at Dresden, aged 76 years. She was born in 1794, and, after an extensive tour in Europe, applied herself to literary pursuits. She wrote, under the assumed name of Amelia Heiter, two comedies in verse, which were performed at Dresden in 1829 and 1830, and were favorably received. Encouraged by the success of these pieces, she prepared numerous others, which were performed at the theatres of Germany, and enjoyed great popularity. The leading feature in her dramatic writing was the skill and taste with which the virtues of the middle classes were placed in contrast with the vices of persons in higher rank. The liberal sentiments thus expressed secured her many friends, and rendered her generally popular. Besides the writings referred to, the duchess composed some pieces of sacred music.

Sept. —.—**COENEY, BOLTON**, an English author and editor; died in London, aged 87 years. He was born in 1783. He early manifested a literary taste, and was first generally known by his "New Curiosities of Literature," a severe attack on the well-known work of the elder Disraeli. He edited Thomson's "Seasons," Goldsmith's poems, and wrote a Life of Par-

nell for Pickering's Aldine edition of the British Poets. He was also a contributor to some journals.

Oct. 4.—**DUCHESSNE**, Captain ALPHONSE, an eminent French naval commander; died at Bouillon, Belgium, whither he had repaired for benefit to his health, aged 47 years. He was born in 1823, at Grandville, a small port in Normandy. Among the incidents in his numerous voyages across the Atlantic, were the collision of his vessel, the *Vesta*, with the American steamship *Arctic*, and the perilous position of the *Pereira* in the storm of January 21, 1869, when his coolness largely contributed to her safety. He also commanded the steamships *Danube*, *Louisiana*, *Washington*, and *Europe*. Captain Duchesne attained the rank of Legion of Honor.

Oct. 6.—**MATTHIESSEN**, AUGUSTUS, Ph. D., an eminent chemist; died by suicide, aged 39 years. His earliest chemical successes were in the preparation of metals from the alkaline earths by new processes, and in quantities that enabled him to determine a number of valuations of their various properties, previously known only indefinitely. In the fixing of different elements entering into calculations of the conducting power of metals, Prof. Matthiessen's researches became of great practical as well as scientific value. The laws thus deduced are now in constant use by practical electricians in telegraphic estimates and processes. His most recent researches into the characteristics of pure iron and its alloys have led already to great metallurgic successes. The circumstances of his death were peculiarly distressing—an absurd charge had been brought against him, though he was a man of unquestionable purity of character, and the shock to his sensitive nature was so great that in a state of sudden frenzy he took poison.

Oct. 8.—**MATTEI**, MARIUS, Cardinal of the Roman Catholic Church, and President of the College of Cardinals, ranking next to the Pope; died at Rome, aged 78 years. He was born at Pergola, Italy, September 6, 1792, was educated at Rome, entered the priesthood in 1814, was created cardinal in July, 1832; he was consecrated Bishop of Frascati, June 17, 1844; Bishop of Perto, June 23, 1854; and Bishop of Ostia and Velletri, in 1860. He was a great favorite with Pope Pío Nono, and was by him made dean of the College of Cardinals, arch-priest of the basilica of the Vatican, prefect of the congregation formed for the preservation of the Church of St. Peter, and private secretary to his Holiness.

Oct. 11.—**VAUGERON**, KARL ADOLPH VON, J. U. D., a German jurisconsult, professor, and author; died at Heidelberg, Germany, aged 62 years. He was born at Schiffelbach, near Marburg, in Electoral Hesse, June 5, 1808, was educated at the University of Marburg, and in 1830 received his doctor's diploma, and immediately took a position as a tutor or *privat-docent* in the faculty of law; in 1833 he was

appointed adjunct professor, and in 1837 full or titular professor of law in the University of Marburg. In 1840 he was chosen professor of Roman Law in the University of Heidelberg, and continued in that professorship till his death. In 1842 he was appointed a councillor of the court, and in 1849 privy councillor. Herr von Vaugeron's greatest work is his "Treatise on the Pandects," in three volumes, which has passed through many editions. He had also prepared a "Text-book," in three volumes, on the Pandects, and several commentaries on particular codes of Roman law, and numerous learned articles in the legal reviews, of one of which, *The Archives of Civil Procedure*, he was one of the editors.

Oct. 12.—**GRANIER DE CASSAGNAC**, PAUL DE, a French journalist, editor of the *Pays*, a violent and brutal Imperialist journal, but a great favorite of Napoleon III., and in his suite during the early part of the War of 1870; was taken prisoner at Sedan, and died in a German prison, aged 29 years. He was a son of the veteran publicist, Adolphe de Granier de Cassagnac, and entered upon his journalistic career in 1866, first as assistant-editor, but soon as editor-in-chief of the *Pays*, which soon became noted for its unscrupulous and often scurrilous personal attacks on the editors of all journals which presumed to oppose the Imperial Government. So violent were these attacks that, from June 1867 to 1870, he was almost constantly engaged in duels or libel-suits growing out of them. Some of these duels were notorious for their ferocity, that with Gustave Flourens especially. It was in the midst of these bloody strifes that the Emperor saw fit, August 15, 1868, to single him out among the Parisian journalists as worthy of the decoration of the Legion of Honor, and make him one of the chamberlains of the Empress. A year later he made a violent attack in his journal on the Prince Napoleon Jerome, which even the official journal was compelled to rebuke. He was elected in July, 1869, a member of the Council-General of Gens. After the declaration of war, in July, 1870, his journal became even more furious and blood-thirsty against the opposition than before.

Oct. 18.—**YOUNG**, Sir HENRY EDWARD FOX KNIGHT, C. B.; died in London, aged 60 years. He was born in 1810, and held the posts of Lieutenant-Governor of South Australia, Lieutenant-Governor of the Cape of Good Hope, New Zealand, and a judgeship at St. Lucia. He was Governor of Tasmania from 1854 till 1861.

Oct. 19.—**ROLPHE**, JOHN, M. D., a Canadian physician of great ability; died in Toronto, aged 84 years. He was born in England, in 1786, and emigrated to Canada at an early age. He took an active part in the Canadian insurrection of 1837, and, being obliged to fly, lived in Russia many years. After his return he practised law and medicine, and was a member of the Canadian Parliament. He spent

some years in the United States, but, under the proclamation of amnesty, returned to Canada. Dr. Rolphe was the founder of the People's School of Medicine, which is now the Medical Department of Victoria College.

Oct. 22.—*MORA*, Prof. D. M., a Scottish poet and professor of considerable ability; died in Edinburgh. He was the author of numerous lyrical pieces of great merit, mostly of a serious character. Some of these were collected a few years ago in a little volume. He was professor of Rhetoric and Belles-lettres in the University of Edinburgh.

Oct. 29.—*BAROCHE*, *PIERRE JULES*, a French advocate and politician; died at St. Helens, Isle of Jersey, aged 68 years. He was born in Paris, November 18, 1802, received a collegiate education, studied law, was admitted advocate in 1823, and in 1847 entered the Chamber of Deputies. He took an active part in promoting the reform banquet of February 22, 1848, and signed the act of accusation against MM. Guizot and Duchâtel. After the 24th of February he was elected to the Constituent Assembly for Charente-Inférieure, serving in behalf of gratuitous education, the equitable remuneration of labor, protection for agriculture, etc. As a prominent member of the Republican party, he was made a Procureur-General of the Republic in the Court of Appeal of Paris, and in 1850 became Minister of the Interior. After the *coup d'état*, M. Baroche was made President of the Council of State, with the rank of minister; Minister of Foreign Affairs in January, 1860; Minister of Justice, January, 1863; and Senator, October, 1864.

Nov. 15.—*BLAKE*, *HON. WILLIAM HUME*, LL. D., an eminent Canadian jurist; died in Toronto. He was for several years Chancellor of Canada, and professor of Law in the University of Toronto.

Nov. 20.—*PLUMPTRE*, *FREDERICK C.*, D. D., an eminent English clergyman and scholar; died at Oxford, Eng., aged about 70 years. He was, like his brother, Edward Hayes, a graduate of the University of Oxford, and, rising by degrees in consequence of his superior scholarship, became, in 1836, master of University College, which position he held until his death.

Nov. 28.—*BYRON*, *GEORGE ANSON*, eighth Lord, the second successor of the poet; died in England, aged 52 years. He was born in Cheltenham, in 1818, served till 1843 in the infantry, was deputy-lieutenant in Nottinghamshire, and became a member of the House of Lords upon the death of his father, in 1868.

Dec. 10.—*BRASSEY*, *THOMAS*, an English railway contractor, celebrated for the magnitude and success of his enterprises; died in London, aged 65 years. Most of the great railroads constructed during the past fifteen years, both in Great Britain and on the Continent, were either wholly or in part built under his supervision; and so thorough was his knowledge of the cost of such undertakings that he was

very generally consulted, even if he did not take an interest in the contracts. He was also a large stockholder and zealous promoter of the Atlantic Telegraph Company, and, to his earnest mode of encouragement in a time of great depression, its final success was largely due.

Dec. 30.—*ANSCHUTZ*, *KARL*, a German musical director and composer; died in New-York City, aged 57 years. He was the son of a Prussian musical composer, was born in Coblenz, Germany, in February, 1813, educated in his father's school, and in that of Frederick Schneider, of Dessau, and on his return to Coblenz was appointed Royal Musical Director. In 1842 his orchestra was increased to eighty musicians. In 1848 he resigned, and was successively director of the orchestra of Nuremberg, conductor of German Opera at Amsterdam, chapel-master to Drury Lane Theatre, London, conductor of the Exeter Hall concerts, of the Italian Opera at Dublin, Edinburgh, and Glasgow, and conductor of the orchestra at Drury Lane. In 1857 he came to the United States with Ullmann's Italian opera troupe. In 1862 he founded the German Opera of New-York City, and subsequently was conductor of orchestras and Philharmonics; established a conservatory of music, and was one of the directors of the Sängerbund in 1869.

Dec. 30.—*MORING*, Marshal, an officer of the Austrian Army; died at Vienna. He served in the Sardinian War in 1848, acquired distinction in the hostilities against France, in 1859, commanded a brigade of the Fifth Army Corps in the Austro-Italian War of 1866, and took part in the victory of Custoza. After the battle of Königgrätz and surrender of Venetia, he was transferred with his corps to the Danube.

OHIO. The total population of the State, as given in the Federal census of 1870, is 2,662,330, being an increase of 322,819, or about 14 per cent. The following table shows the increase in the population of Ohio since 1810:

	Population.	Increase.
Population of Ohio in 1810..	290,760
" " 1820..	561,434	153 per cent.
" " 1830..	937,908	63 "
" " 1840..	1,159,467	63 "
" " 1850..	1,980,389	30 "
" " 1860..	2,339,511	18.3 "
" " 1870..	2,662,330	14 "

This gain is in the cities and larger towns, the agricultural districts generally showing a decrease. Of the five largest cities in Ohio, Toledo shows an increase of 136 per cent.; Cleveland, 112; Columbus, 66; Dayton, 51; and Cincinnati, 35. The five cities of the State having a population exceeding 15,000 are: Cincinnati, 218,900; Cleveland, 93,018; Toledo, 81,592; Columbus, 81,290; Dayton, 80,487. The following is the Federal census as taken in the years 1860 and 1870:

COUNTIES.	1870.	1880.	COUNTIES.	1880.	COUNTIES.	1870.	1880.
Adams	20,750	20,809	Hamilton	214,410	Noble		20,752
Allen	22,623	19,135	Hancock	22,886	Ottawa		7,016

The following statement shows the receipts (including balances from previous year) into, and disbursements from, the State Treasury, for the year ending November 15, 1870, and balance on hand, of each fund, at that date:

FUND.	Receipts.	Disbursements.	Bal. on hand.
General Revenue	\$2,020,714	\$1,645,122	\$345,578
Slating Fund	1,215,917	945,622	270,294
Common School	1,502,122	1,421,502	22,620
National Road	20,212	19,212	200
Bank Redemption	2,022	2	2,020
Soldiers' Allotment	2,114	100	\$2,014
Soldiers' Claims	44	44	
Total	\$4,222,222	\$4,071,222	\$722,222

During the year the funded debt of the State was reduced \$264,445.14, leaving the amount outstanding \$9,752,122.72. The commissioners have still invested in Ohio State stocks \$20,022.22, which, deducted from the debt outstanding, leaves the amount yet to be paid \$9,732,077.91. The debt would have been still further reduced but for the fact that holders of Ohio State bonds refuse to part with them, even at a handsome premium.

The annual statistical report of the Secretary of State shows the following summaries:

	Acres sown.	Product in bushels.	Bushels to acre.
Wheat	1,722,722	22,422,722	12.97
Corn	2,201,227	22,422,222	22.22
Oats	222,222	24,417,722	22.12
Barley	72,247	1,222,412	22.19
Rye	72,422	222,722	11.22
Buckwheat	22,242	222,722	7.72
Potatoes	112,222	10,274,222	22.44

The five years ending with 1869 give an average in grain of 4,222.222, while the number of acres sown in 1869 exceeded this average by the sum of 402,772. The year 1869 shows the largest aggregate of breadstuffs since 1861.

The other agricultural statistics are as follows:

Hay.—Acreage, 1,422,221; tons produced, 1,724,247; average per acre, 1.19.

Flax.—Acreage, 22,072; bushels seed produced, 211,042; pounds of fibre, 12,722,277.

Clover.—Acreage, 401,222; tons hay produced, 220,222; bushels seed produced, 22,270; acres ploughed under for manure, 22,242.

Tobacco.—Acreage, 20,221; pounds produced, 12,242,112; average pounds per acre, 727.

Butter and Cheese.—Butter produced, 22,722,207 pounds; cheese produced, 20,220,122. There were 2,220,222 pounds more butter made in the State in 1869 than the average for the last ten years, and 420,122 pounds more cheese.

Sorghum.—Acreage, 24,141; pounds of sugar produced, 20,222; gallons molasses, 1,777,100; average gallons molasses to the acre, 22.

Maple Sugar.—Maple sugar, 2,202,714 pounds; molasses, 222,222 gallons.

Sweet Potatoes.—Acreage, 1,714; bushels produced, 112,742; average per acre, 22.

Grapes and Wine.—Acres planted, 1,272; acres in vineyard, 10,477; pounds of grapes gathered, 2,724,222; gallons of wine pressed, 122,222.

Orchards.—Acreage, 242,222; bushels apples produced, 12,212,222; peaches, 1,444,222; pears, 147,022.

The number of acres in pasture for 1869 was 2,222,217, being an increase of 22,220 acres over the number reported in 1868. The acres of uncultivated lands amounted to 2,221,172, being a decrease in the year of 240,000.

The animal statistics are as follows:

	No.	Value.	Average Value.
Horses	704,224	\$42,722,127	\$22.22
Cattle	1,221,221	22,402,222	21.22
Mules	22,227	1,211,222	72.22
Sheep	2,222,222	2,412,222	1.22
Hogs	1,722,112	2,222,227	4.22

The returns of the assessors show that the wool clip of 1869 was 19,292,858 pounds; which is a decrease of 3,647,621 pounds, as compared with the clip of the previous year.

The following table shows the damage done to sheep by dogs during the year.

No. of sheep killed by dogs.....	59,411
Value of same.....	\$111,780
No. of sheep injured by dogs.....	24,870
Estimate of injury done.....	\$36,367
Aggregate amount of injury to sheep by dogs...	\$148,747
No. of dogs in the State.....	186,777

The statistics of iron manufacture for the year 1869, are: Pig-iron manufactured, 211,074 tons. Of this 74,221 tons were smelted with charcoal, and 136,853 tons with stone coal. Bar and nail iron, 27,585 tons; nails, 8,271 tons; hoop-iron, 498 tons; sheet iron, 648 tons; stoves, 8,631 tons; car-wheels, 8,507 tons; other castings, 10,711 tons; spikes and railroad-chairs, 706 tons; railroad-iron, 9,167 tons.

The following counties are reported as engaged in the manufacture of pig-iron; Columbiana, 18,377 tons; Cuyahoga, 8,150 tons; Gallia, 2,105 tons; Hamilton, 100 tons; Jackson, 11,024 tons; Jefferson, 12,261 tons; Lawrence, 6,250 tons; Mahoning, 41,721 tons; Muskingum, 1,624 tons; Ross, 2,028 tons; Scioto, 6,225 tons; Stark, 8,900 tons; Trumbull, 23,968 tons; and Vinton, 12,505 tons.

The department of social statistics was more fully reported on in 1870 than for any previous year, though still imperfect in many particulars. For the year ending July 1, 1870, marriages by license, 25,053; by banns, 406; total, 25,459. During the three years immediately following the war, there were 87,940 marriages, making an average of 29,303; showing a greater average than any three consecutive years within the last decade. The number of suits for divorce pending July 1, 1870, was 2,100; the number decided, 1,392; the number still pending, 708. In the 1,392 cases decided, decrees of divorce were granted in 807 cases, when brought by husband, and 701 when brought by wife; making a total, in which decrees were granted, of 1,008; 62 in which decrees were refused, and 322 were dismissed. The number of cases in which decrees of divorce were granted in 1869 was 103, showing the number in 1870 to be five greater than last year.

For the year ending April 1, 1870, the returns of births were as follows: Legitimate—white males, 81,020; white females, 28,746; black males, 500; black females, 486; sex not given, 53; total legitimate, 60,805. Illegitimate—white males, 184; white females, 158; black males, 25; black females, 19; sex not given, 13; total illegitimate, 393; total births, 61,198. Deaths reported—white males, 12,422; white females, 10,578; sex not reported, 128; black males, 815; black females, 238; sex not reported, 2; total deaths, 23,683.

Number of wills admitted to probate, 2,232; number of letters of administration issued, 8,-

696; number of letters of guardianship issued, 8,309; number of children included in these letters is 6,598; of insane persons, 253; of idiots, 43; and of aged persons, 59.

Number of persons naturalized in Ohio for the year ending July 1, 1870, 2,019, distributed as follows: England, Scotland, and Wales, 401; Ireland, 710; Germany, 740; other countries, 178; total, 2,019.

The criminal statistics for the year are as follows: Number of persons prosecuted during the year, 2,550; number executed, 8; number imprisoned in penitentiary, 877; number imprisoned in county jail, 184; number fined, 1,523; number acquitted, 333; *nolle prosequi*, 1,614; failure of arrest, 269; escaped, 83; died before termination of prosecution, 14; indictments still pending, 1,981; number of crimes committed under the influence of liquor, 267; number of indictments pending at commencement of year, 1,836; number of indictments found during the year, 4,289.

The number of prisoners confined in the county jails, and the cost of keeping them, are as follows: whole number of prisoners during the year, 5,603; total cost, \$63,903; average cost, \$14.27. Most of the prisoners confined in county jails are kept for a period of from ten to thirty days, and but few remain for a period of months.

The nativity of the prisoners so far as reported is as follows: United States, 2,818; England, Scotland and Wales, 121; Ireland, 619; Germany, 437; France, 25; other foreign countries, 31; not reported, 2,037.

The number of colored persons confined in jails is 52.

The number of paupers returned is 5,651, of whom 4,512 are supported in county infirmaries, and 1,139 otherwise provided for.

Number of deeds recorded, 76,457; number of leases, 2,464; number of mortgages, 40,080; amount of money secured by mortgages, \$52,677,474; number of mortgages cancelled, 19,072; amount of money released by same, \$24,399,867.

Number of new structures, 15,115; value, \$11,401,995; average value, \$760.96.

Number of turnpikes, 443; length in miles, 3,532. Number of plank-roads, 35; length in miles, 196. There are 75 more turnpikes reported than last year, and the length has been increased by 610 miles. There are 24 more plank-roads reported than last year, and the length has been increased by 120 miles.

Number of county buildings, 400; value of the same, \$6,093,181; average value of county buildings, \$15,232.

There are in the State 139 national banks, with a capital of \$22,573,881, and 147 private and other banks, with a capital of \$6,351,883, making a total of 286 banks, and total capital of \$28,925,069. This shows an increase of nine in the number of national banks, and their capital has been decreased \$36,919. The number of private banks shows an increase of

six during the year, and the capital of these banks has been increased \$235,947.

The amount of legal-tender notes or other moneys exempt from taxation, as returned for the year, is \$11,809,041, being a decrease on last year of \$3,518,299.

The total valuation of property, as returned to the Auditor of State for 1870, is as follows: Acres of land returned for taxation, 25,395,060; value of lands, \$508,851,297; value of real estate in cities and villages, \$204,495,539; value of personal property, \$459,884,861; total valuation of taxable property, \$1,167,731,697.

A comparison of these figures with the footings of the duplicate for 1869 shows a decrease of 26,112 acres in lands assessed for taxation, but an increase of \$100,372 in value. There is an increase of \$122,609 in chattel property. The increase in real estate in cities, towns, and villages is \$10,328,261, making a net increase of \$10,555,242 in the valuation of the taxable property of the State.

The amount of the tax levies for 1870 was: for State purposes, \$4,666,242.28; for county purposes, \$6,501,930.02; township, special, and city taxes, \$12,295,459.57; total taxes, \$23,463,631.82. The increase in the amount of levies for State purposes is \$620,765.65, and for local purposes \$609,988.67; total increase, \$1,230,754.32.

The principal objects for which money was raised by taxation, and the amounts raised, are as follows:

School purposes of all kinds.....	\$4,360,771 87
City and township taxes (exclusive of school, but including the poor).....	6,899,469 08
County tax (including bridges and roads)....	4,640,004 15
State debt.....	1,399,465 15
For the support of the State Government (which includes all departments and objects of State action).....	1,749,359 90

The decennial valuation of the real property in the State, as finally revised by the State Board of Equalization, showed the value of real property to be \$1,013,586,459. This is a very large increase on the valuation of 1860, and more than half the increase is in the cities and towns. The five leading cities show a valuation as follows:

Cincinnati.....	\$111,568,029
Cleveland.....	39,325,369
Columbus.....	18,961,161
Toledo.....	10,519,622
Dayton.....	10,731,896

At the close of the year there were in the insane asylums of the State 433 male and 441 female patients. In the county infirmaries and jails there were 1,176 insane persons. The infirmary statistics show the whole number of inmates during the year, excluding fifteen counties, from which returns were not received, to have been 6,476. Insane, 931; epileptic, 337; idiotic, 505; children under fifteen years of age, 1,003; boys, 584; girls, 419. Births during the year, 197; deaths, 532. Whole number of prisoners in jail during the year, 5,680—4,791 men, 421 women, 287 boys, and 27 girls. The number of insane, 245; epileptics, 13. Sentenced by municipal authority, 1,676.

In jail, 264—220 men, 36 women, 7 boys, and 1 girl. Number of insane, 19; epileptic, 6.

In the Asylum for Idiots there are 170 patients.

In the Deaf and Dumb Asylum are 312 inmates—184 boys and 128 girls. The average cost of each pupil during the year was \$246.03. In the Institution for the Education of the Blind there have been during the year 119 pupils. At the State Reform Farm there were at the close of the year 335 boys. At the Reformatory for Girls there are 48 inmates.

In the Soldiers' and Sailors' Orphans' Homes there were 140 boys and 79 girls.

The school statistics of the State show that during the year ending August 31, 1870, there were built 645 school-houses, valued at \$1,391,597. There are in the State 10,550 primary-school houses and 16 high-schools in the townships, and 729 primary and 106 high-school houses in separate districts, making a total of 11,401 school-houses in the State. The value of the primary-school houses in the townships is \$6,107,298; of high-school houses, \$7,000; of primary-school houses in separate districts, \$6,317,254; of high-school property in the same, \$1,295,500. Total value of school property in the State, \$18,727,052. There are in Ohio 517,127 white boys, and 498,446 white girls, between the ages of five and twenty-one; total white children, 1,015,575. There are 13,382 colored boys, and 12,725 colored girls; total colored, 26,107. The total number of school-children in Ohio is therefore 1,041,682, being an increase over last year of nearly 13,000. The number of pupils actually enrolled in the public schools is 719,902. The total number of pupils enrolled in private schools is 10,500, and in class schools (German and colored, drawing public funds) 11,413.

The Fifty-ninth General Assembly began its session January 3d, and adjourned April 18th. During the session seventy-two general laws were passed; among those of general interest were the following acts:

To so amend the marriage laws as to permit women eighteen years of age and upward to be married without the consent of parent or guardian.

To authorize the granting of alimony during the pendency of appeals of divorce and alimony causes to the District Court.

Naming the 1st day of January, 4th day of July, and 25th day of December as legal holidays in the presentment and protest of commercial paper.

To authorize county commissioners to pay bounties for killing wolves.

To establish and maintain an Agricultural and Mechanical College in Ohio.

Authorizing the removal to reform institutions of minors under sentences for felonies.

To encourage the study of anatomy by prescribing the manner of procuring and furnishing bodies for dissection.

To authorize the consolidation of two or more religious bodies heretofore incorporated under the laws of this State.

Authorizing cemetery associations to hold five hundred acres of land, of which three hundred acres may be exempt from taxation.

To provide for the enlargement of the Lunatic

Asylums at Newburg, Columbus, and Athens, to accommodate four hundred and fifty additional patients, and so make provision for the chronic insane.

To so amend the act authorizing railroad companies to increase their capital stock as to permit holders of mortgage bonds issued in pursuance of that act to vote at all meetings of share-holders.

Providing for minority representation on election boards.

To repeal the act prescribing penalties against persons "not white male citizens of the United States" convicted of voting, and judges of elections for receiving, and all persons who procure such votes.

To repeal the act to prohibit persons having a visible admixture of African blood from voting.

To create a lien on premises where intoxicating liquors are sold in violation of law.

To repeal the act to prevent inmates of the Soldiers' Home from voting.

To provide for the organization and maintenance of an independent militia.

To require county commissioners to provide night watchmen for county treasuries.

To prohibit the expulsion of children from the public schools, except after notice to parents, and a hearing by the Board of Education, and a vote of a majority of the Board.

The Supreme Court of the State, in the case of John F. Sinks *vs.* David W. Reese, made an important decision adverse to the right of inmates of the National Asylum for Disabled Volunteer Soldiers, at Dayton, to vote. The parties to the suit were rival candidates, in October, 1869, for the office of clerk of the Court of Common Pleas of Montgomery County, and the point turned upon the legality of counting the votes of the inmates of the National Asylum for Disabled Volunteer Soldiers. In the act of the Legislature of Ohio, passed April 13, 1867, consenting to the establishment of the Asylum, and ceding lands to the General Government, it was stipulated that nothing in the act should be "construed to prevent the officers, employes, and inmates of the Asylum, who are qualified voters of this State, from exercising the right of suffrage at all township, county, and State elections in the township in which the said National Asylum shall be located." Chief-Justice Brinkerhoff, delivering the unanimous opinion of the Court, said this act "fixes the exclusive jurisdiction of the General Government over this institution, its lands and its inmates, in all cases whatsoever, except as to the execution of processes issued under State authority," an exception which was also made one of the conditions of the cession of the land to the United States. The Court then holds that—

By becoming a resident-inmate of the asylum, a person, though up to that time he may have been a citizen and resident of Ohio, ceases to be such; he is relieved from any obligation to contribute to her revenues, and is subject to none of the burdens which she imposes upon her citizens. He becomes subject to the exclusive jurisdiction of another power, as foreign to Ohio as is the State of Indiana, or Kentucky, or the District of Columbia. The constitution of Ohio requires that electors shall be residents of the State; but, under the provisions of the Constitution of the United States, and by the consent and act of cession of the Legislature of this State, the grounds and buildings of this asylum have been detached and set off from the State of Ohio, and ceded to another

government, and placed under its exclusive jurisdiction for an indefinite period.

The act under which this case came before the court was repealed by the Democratic majority in the Assembly, following that which passed it, and the repealing act was in time repealed by the Assembly of 1870. Under this decision of the court the inmates of the asylum were not allowed to vote in the election of October, 1870.

The Republican State Convention was held at Columbus, August 10th, and put in nomination the following ticket: For Secretary of State, Isaac S. Sherwood, of Williams County; for Supreme Judge, George W. McIlvaine, of Tuscarawas County; for Comptroller of the Treasury, William T. Wilson, of Portage County; for member of the Board of Public Works, Philip V. Herzing, of Auglaize County. The following platform was adopted:

Resolved, That we adhere with undiminished confidence and pride to the party that, by its wisdom and courage, preserved the Union, and by a change in the organic law of the republic established liberty and equality. We believe that, by the continued ascendancy of the Republican party, will be secured the success of free government; that it is the safeguard of the Constitution, the promoter of education, order, industry, thrift, universal freedom, and equal rights.

Resolved, That we congratulate the country on the success of the present Administration, which has, without increase of taxation, reduced the national debt over \$156,000,000 by an honest and economic collection of the revenue and a large reduction of the expenses of the Government, and we especially congratulate the country on the fact that this policy has made it possible to reduce the internal revenue and tariff duties \$80,000,000, thus relieving the people of their burdens to that extent without imperilling the national faith and honor.

Resolved, That a tariff for revenue is indispensable, and should be so adjusted as to be the least prejudicial to the industrial and producing interests of every class or section, while securing to the home producer a fair competition against the foreign producer.

Resolved, That a change of our navigation laws, so as to admit of the registration of vessels purchased abroad, is demanded by the best interests of the country, and that such action would largely contribute toward the restoration of our plundered commerce and the supremacy of the seas.

Resolved, That the policy of granting subsidies of public lands to corporations and monopolies is unqualifiedly condemned.

Resolved, That, adhering to our traditional policy of neutrality, the American people look with profound indifference upon any European controversy regarding dynastic interests merely, and are concerned in the present struggle between Germany and France only so far as the same involves the great principles of liberty; and while we remember that the great uprising of 1848 failed of success, mainly for want of Germanic union, that during our recent national trial the people of Germany supported our cause with their sympathy and material aid, while the armies of France were endeavoring to subvert a republic on this continent, and establish in its stead an imperial throne, we cannot refrain from declaring our sympathy with the present heroic effort of the Germans to establish, maintain, and defend their national unity.

The Democratic State Convention was held at Columbus, June 1st, and put in nomination

the following ticket: For Secretary of State, William Heisley, of Cuyahoga County; for Supreme Judge, Richard A. Harrison, of Madison County; for Comptroller of the Treasury, John H. Heaton, of Belmont County; for member of the Board of Public Works, William Spencer, of Licking County. The following platform was adopted:

The Democracy of Ohio, coming together in the spirit of devotion to the doctrine and faith of free representative government, and relying for success upon discussion and the intelligence of the people, deem the present convention a fitting occasion to reassert the following time-honored principles of the Democratic party:

That the Federal Government is one of limited power, derived solely from the Constitution; that the grants of power made therein ought to be strictly construed by all the dependants and agents of the Government, and that it is inexpedient and dangerous to exercise doubtful powers; that the Constitution of the United States is founded on the fundamental principle of entire and absolute equality of all the States of the Union, and it is not competent for Congress to impose upon them any conditions or restrictions in respect to internal concerns which the Federal Constitution has not imposed. That the liberal principles embodied by Jefferson in the Declaration of Independence, and sanctioned in the Constitution, which make ours the land of liberty and the asylum of the oppressed of every nation, have ever been cardinal principles to the Democratic faith, and every attempt to abridge the privileges of becoming citizens and the owners of soil among us ought to be resisted with the same spirit which swept the alien and sedition laws from our statute-books; and, in order that we may more distinctly declare our views of the measures and policy of the present Administration,

Resolved, That we denounce the present tariff, as well as the substitute lately introduced in the House of Representatives from the Committee on Ways and Means, as a gigantic robbery of the labor and industry of the country; that they are solely designed to advance the interest of the few thousand monopolies; that this should no longer be submitted to; that no candidate for Congress, or for any other office, is worthy of support who is not in favor of a low tariff, which closely approximates to free trade; and that in the arrangement of any revenue tariff all the necessities of life should be absolutely free of duty.

Resolved, That the internal revenue system of the United States is unbearable in its oppressive exaction; that it should be immediately remedied; that its annoyances of stamps and licenses, and taxes upon sales and incomes, should be abolished; that taxes should be collected by the State and county officers; that the multiplication of officers is unnecessary, except to eat out the resources of the tax-payer; and that we pledge ourselves to effect a thorough reform in this particular.

Resolved, That we denounce the profligacy in the present Administration of the Federal Government, the corruption which has entered all its official stations, the favoritism which, overlooking fitness for office, has appointed to positions of public trust the friends or tools of those who control the public patronage, and the imbecility which directs the destinies of the republic without apparent purpose, and manages its affairs with such embarrassment and disaster to the national interest of its people at home, and with such disregard of the rights of its citizens abroad.

Resolved, That land monopolies are one of the great evils of our country, and against the spirit of our institutions, and that the whole of our public lands ought to be held as a sacred trust to secure homes for actual settlers. We therefore denounce the recent action of Congress making grants to mammoth rail-

road corporations, which are already too powerful, and may become dangerous to a free people.

Resolved, That we regard the act recently passed by Congress, to enforce the fifteenth amendment, as unconstitutional, unjust, and oppressive, an invasion of the rights of the States, subversive of the best interests of the people, and therefore demand its unconditional repeal.

Resolved, That the power of the Federal Government to assess and collect taxes on the bonds of the United States is clear and unquestioned, and we demand of Congress that a rate of taxation equal to the fair average amount levied in each State on money loaned shall be assessed and collected from all investments in bonds.

Resolved, That we are opposed to the system of national banks, and demand the repeal of the law creating them, and that, in place of the notes of such banks, Treasury notes of the United States shall be substituted.

Resolved, That the Democrats of Ohio sympathize with the efforts of all people struggling for self-government, and we denounce the truckling of the Federal Administration to Great Britain and Spain, and the efforts of the party in power to reduce the whole of the States in our Union to a condition of vassalage to the General Government.

Resolved, That the thanks of the Democracy of Ohio are extended to our Senator, Allen G. Thurman, and Democratic Representatives in Congress, who, though in a small minority, have bravely contended for the principles of Democracy and the interests of the people.

Resolved, That upon the foregoing platform we cordially invite all the electors of Ohio, without regard to past differences, to vote for the ticket this day nominated.

The Prohibition State Convention was held at Columbus, June 1st, and nominated a ticket as follows: For Secretary of State, Jay Odell, of Cuyahoga County; for Supreme Judge, G. T. Stewart, of Huron County; for Comptroller of the Treasury, Thomas Edmondson, of Clarke County; for member of the Board of Public Works, Enoch G. Collins, of Hocking County. Resolutions were adopted declaring independence as a party; their right to the position taken by them; the right and duty of the people to abolish and forever prohibit the manufacture or importation of liquors for use as a beverage; that it is the duty of the government to repress such traffic; that total prohibition is the only satisfactory way of disposing of the liquor question, and that laws to license or sanction it are insane and infamous; that the policy of the government in attempting to suppress crime in detail, instead of striking at its most prolific source, the liquor traffic, is absurd in the extreme, and should be corrected at once.

The platform adopted by the National Temperance Convention held at Chicago in September, 1889, was approved and adopted. A resolution favoring female suffrage was discussed, but not agreed to.

The election was held Tuesday, October 11th, and resulted in the success of all the Republican candidates. The total vote was as follows: Secretary of State—Sherwood, 221,709; Heisley, 205,015; Odell, 2,863; Supreme Judge—McIlvaine, 221,629; Harrison, 204,771; Stewart, 2,810; Comptroller—Wilson, 221,712;

Heaton, 204,287; Edmondson, 2,780; member of the Board of Public Works—Herzing, 220,-804; Spencer, 205,081; Collins, 2,965.

Prohibition candidates were run in the fourth, sixth, eighth, ninth, tenth, fourteenth, fifteenth, and eighteenth districts. The result of the election was the return of 14 Republicans and 5 Democrats, leaving the Ohio delegation in the House of Representatives numerically the same as before.

The geological survey of the State, ordered by the General Assembly in 1869, was commenced in the summer of that year under the superintendence of the Chief Geologist, Prof. J. S. Newberry. The State was divided into four districts, all convening at Columbus. The immediate supervision of the work in the northeastern section was assumed by Prof. Newberry; that of the southeastern quarter by Prof. Andrews; of the southwestern by Prof. Orton; and of the northwestern by Messrs. Hertzner and Gilbert. The first summer's work was devoted to a general survey, and the construction of a geological map of the State. The result of the survey showed that the rocks of Ohio lie in sheets, resting one upon another, but not horizontal; as a great arch traverses the State from Cincinnati to the lake-shore between Sandusky and Toledo. Along this line (which extends southward to Nashville, Tenn.) all the rocks are raised in a ridge or fold which was once a low mountain-chain. In the lapse of ages it has, however, been extensively worn away, and now, along a large part of its course, the strata which once arched over it are removed from its summit and are found resting in regular order on either side, dipping away from its axis. Where the ridge was highest, the erosion has been greatest, and that is why the old Silurian rocks are exposed in the region about Cincinnati.

Following the line of this great arch from Cincinnati northward, the Helderberg limestones, midway of the State, are still unbroken and stretch across from side to side, while the Oriskany, the Corniferous, the Hamilton and the Huron formations, though generally removed from the crown of the arch, still remain over a limited area near Bellefontaine, where they form an island which proves conclusively the former continuity of the strata which compose it.

On the east side of the great anticlinal axis, the rocks dip down into a basin which occupies the interval between the Nashville and Cincinnati ridge and the first fold of the Alleghany Mountains for a distance of several hundred miles. In this basin all the strata form trough-like layers, their edges outcropping eastward on the flanks of the Alleghanies, and westward along the anticlinal axis. As they dip from the margins toward the centre on all sides, along the middle of the trough the older rocks are deeply buried and the surface is here occupied by the highest and most recent of the

rock formations, viz., the coal-measures. In the northwest corner of the State, the strata dip northwest from the anticlinal and pass under the Michigan coal-basin precisely as the same formations east of the anticlinal dip beneath the coal-fields.

The oldest rocks which come to the surface in the State are the "blue limestones" of Cincinnati, named by the survey the "Cincinnati Group." These are the equivalents of the Hudson River and Utica shales of New York, with some representation, at the base, of the Trenton limestone. Below the limestone group lie the calciferous sandrock and Potsdam sandstone, as has been discovered by deep borings, but they nowhere reach the surface. The Cincinnati Group has a thickness of from 800 to 1,000 feet. The next above is the Clinton Group of the New York geologists. Here it is mostly limestone, from 20 to 50 feet in thickness. In Highland and Adams Counties, Prof. Orton has discovered that the lower portion of the Clinton is a conglomerate formed of rolled pebbles and fossils of the underlying blue limestone. This shows that, before the deposition of the Clinton Group, the Cincinnati Group has consolidated to rock and that portions of it had been raised above the sea-level and formed shore-cliffs, the rolled fragments of which helped to make up the next succeeding deposit. From this fact we learn that the Cincinnati and Nashville ridge was first elevated between the Upper and Lower Silurian ages, though it continued to be a line along which disturbing forces acted to a much later period. In the Eastern and Northern States, the Clinton Group contains a remarkable deposit of iron called the "fossil ore," which forms an almost continuous line of outcrop from Dodge County, Wis., through Canada, New York, Pennsylvania, etc., to Georgia. In Adams County a thin sheet of this peculiar ore is found, and this, with various characteristic fossils, has served to identify this formation. On the Clinton rest the Niagara limestones, which in some places attain a thickness of nearly 200 feet. The surface area which they occupy forms a broad margin around the Clinton outcrop. It is also exposed for nearly 100 miles along the crown of the arch at its northern extremity. The Niagara limestone takes its name from the cascade of Niagara, which pours over a sheet of this rock. It is generally a magnesian limestone, furnishing excellent lime, and also beautiful building-stone. The Water-lime Group, which lies next above, is generally composed of impure limestones, attaining a thickness of 150 feet. In many localities some layers of these limestones have hydraulic qualities, and can be manufactured into cement. On the lake-shore the water-lime is underlaid by 80 to 50 feet of the Salina or Salt Group, and it is this that contains the gypsum of Sandusky. The Water-lime composes all the islands in Lake Erie belonging to the United States, except Kelly's Island, which is Cor-

niferous limestone. The beautiful crystals of celestine, found on Strontion Island, occur in the water-lime.

Passing from the Silurian to the Devonian system, it is found that upon the Water-lime, sometimes directly, sometimes separated by a few feet of limestone, rests a thin sheet—three to five feet thick—of sandstone. This holds the place of the Oriskany sandstone of New York, and probably represents that formation. In West Virginia the Oriskany is a massive and important group of rocks, but it rapidly thins out westward, and in Ohio is the least important of the series, and it is even doubtful whether it should be enumerated as one of its formations.

The Corniferous limestone is a limestone group, like the Water-lime and Niagara, highly magnesian, often adolomite, and supplies a large part of the quicklime and some of the finest building-stones of the State. The Corniferous limestone forms two lines of outcrop, one east and the other west of the anticlinal, also an island, twenty-five miles in length, near Bellefontaine. An interesting circumstance connected with this formation is, that in Marion and Delaware Counties it is partially composed of rolled fragments of the Water-lime, showing a break between the Upper Silurian and Devonian, just as has been indicated between the Lower and Upper Silurian. The Hamilton formation, so important in New York, in Ohio consists of a thin sheet of marl and marly limestone, never more than thirty feet in thickness, resting on the Corniferous. It is, however, clearly identified by the numerous Hamilton fossils which it contains.

The Huron shale is a name used to designate the great mass of black bituminous shale, called by the older geologists the "Black Slate." This formation is from 200 to 350 feet in thickness, and its outcrop forms a broad belt, running from the lake through the centre of the State to the Ohio. It also underlies several counties in the northwestern corner. Though not absolutely homogeneous, the Huron shale is generally black, and contains ten to twenty per cent. of combustible matter. This carbonaceous mass, slowly decomposing, as all organic matter will, gives rise to the gas and petroleum which form such constant associates in the water which flows from it. The fossils of the Black shale indicate that it represents the Genesee and a portion of the Portage of New York. Aside from such of its fossils as are found elsewhere, the Huron shale contains some things which are very remarkable, and such as have been met with only in Ohio. These are jaws and bones of great ganoid fishes, larger and more formidable than any of those obtained from the Old Red sandstones of Europe. Here, also, as in the Corniferous below, we find floated fragments of trees, often of large size, the first evidence which we meet with of a terrestrial vegetation. Several of the formations last enumerated, viz., the

Water-lime, Oriskany, Corniferous, and Hamilton, thin out and disappear toward the south, and in Highland and Adams Counties the Huron shale is found resting directly upon the Niagara limestone. The explanation of this is, that the higher portion of the old ridge that has been described, at Cincinnati and southward, formed an island raised above the sea, in which were deposited the later Silurian and earlier Devonian formations. Hence the shores of this island limited the reach of these deposits. In the epoch of the Huron shale, however, the submergence of this island was more complete, and hence this stratum is found stretching far beyond the edges of the underlying rocks.

The Erie shales, which come next, are the western prolongation of the Chemung, and, in part, of the Portage rocks of New York. Like all other strata composed of mechanical materials, sand, clay, etc., these shales thin out westward, so that, while having a thickness of several hundred feet on the Pennsylvania line, they cease to be recognizable in the central portion of the State of Ohio.

Passing to the Carboniferous system, we come to the Waverly group, called by the former geological survey the Waverly sandstone. It consists of a series of shales and sandstones, from 350 to 600 feet in thickness, of which the outcrop forms a broad belt, extending from the Pennsylvania line, near the lake-shore, around to the Ohio, at the mouth of the Scioto. The relations of this formation to the rocks above and below have been actively discussed for many years by geologists. By some, the Waverly group was considered a representative of the Portage and Chemung rocks of New York, and part of the Devonian system, while others have been led, by paleontological evidence, to consider the formations carboniferous. This mooted question the chief geologist claims to have been definitely settled by the recent explorations, and that there is no longer room for doubt that this is a portion of the Carboniferous system, and the equivalent of the "Vespertine" of Rogers in Pennsylvania, and of the "Subcarboniferous sandstones" of Owen in Kentucky. The fossils of the Waverly are very numerous and interesting; they are almost exclusively marine, and include many genera and species of fishes, mollusks, and crinoids. The Waverly sandstone is the repository of some of the oil which emanates from the Huron shale below, and the wells of Mecca, Grafton, Liverpool, etc., are sunk in this formation. For the want of a proper reservoir to receive, and an impervious cover to retain this oil, the quantity that has accumulated in any locality is not large. The lower carboniferous limestone is another of the several new elements which the present survey has contributed to the geological column in Ohio. It is the thin edge of the great carboniferous limestone of Kentucky, discovered by Prof. Andrews to extend much farther north than was formerly supposed. It represents only the

upper or Chester portion of the carboniferous limestone series. The carboniferous conglomerate is the sheet of sandstone and pebble-rock, known in the Old World as the "Millstone Grit," and which underlies, there as here, so much of the coal-measures. In the northern part of the State it has a maximum thickness of 160 feet. Toward the Ohio it is much thinner and frequently wanting. It consists of beds of coarse sandstone, with strata, many feet in thickness, of conglomerate in which the pebbles are generally quartz. Its fossils are usually land-plants, similar to those found in the coal-rocks above. In several localities many of the pebbles of the conglomerate are balls of chert (flint), and contain fossils which seem to prove that they were derived from corniferous limestone, in which such concretions are so common as to have suggested the name given to the formation. Prof. Newberry is of opinion that all the materials composing the conglomerate have been brought from the north, and distributed much in the same way as the gravels of the drift were, through the agency of ice. Along the margins of the carboniferous conglomerate, gold has been found in various localities of the State. This gold, the chief geologist is inclined to believe, is derived from auriferous quartz, of which the conglomerate is in part composed. In other localities it is possible that the gold has been derived from the more modern gravels, transported by drift agencies from the Canadian highlands. No considerable quantity of gold will ever be found in these or any other of our Ohio rocks, and all anticipations of successful gold-mining here are sure to end in disappointment.

The portion of the great Alleghany coal-field lying within Ohio covers nearly one-third of the State, or from 10,000 to 12,000 square miles. As in this area the rocks all dip toward the east, it is evident that the coal-measures are thickest on the eastern border. There they reach in places a thickness of 1,200 feet, and include ten or twelve workable seams of coal. These are divided into the upper and lower coal-measures, separated by the "barren measures." The lower group of coals consists of six to eight workable seams—their thickness and number varying somewhat in different localities—and these constitute the mineral wealth of, by far, the larger part of our coal-basin. The barren measures consist of heavy beds of highly-colored (often red) shales, with little or no workable coal. These red shales form a conspicuous horizon, running through the highlands from Marietta to Yellow Creek. The first of the upper group of coals is the Pittsburg seam, and this, with several which overlie it, are found in the hills bordering the Ohio, between Steubenville and Marietta. All the coals of Ohio are classed as "bituminous coals," but they include all known varieties of this class, as the open burning or furnace coals, such as the Briar Hill and Hocking Valley coal,

the coking or "gas" coals, and the cannel coals. Iron-ores of three varieties are found associated with the beds of coal, viz.: the argillaceous carbonate of iron (kidney or nodular ore), "black band"—a bituminous shale impregnated with iron, and "block ore," usually a limestone highly charged with iron. Also limited supplies of brown-hematite formed from the decomposition of the carbonates. Of all these ores Ohio has rich deposits in various localities. The fossils of the coal-measures include great numbers of both animals and plants; the plants being the most characteristic, and so well known as "coal-plants" as not to require description. The animal remains consist of amphibians, fishes, crustacea, mollusks, crinoids, and corals, of which many species in each group are found in Ohio.

The drift deposits exhibit several interesting features. In common with a large part of the Northern hemisphere, all portions of Ohio, except the summits of the hills bordering the Ohio River, exhibit marks of glacial action in the planing, polishing, and grooving of the surface-rocks. Upon this glaciated surface, in a few localities, are beds of unstratified gravel and boulders, evidently transported and deposited by glacial action, just as moraines are formed by the glaciers of the present day. Much more generally the glacial surface is covered with a considerable thickness of fine stratified clays, called the "Erie Clays," by Sir William Logan. These clays contain numerous small fragments of adjacent rocks, and are evidently the flour ground by glaciers, in their movement, deposited in water-basins which occupied the places of the glaciers, as these latter retreated northward. Above the "Erie Clays," we have, in many places, a sheet of carbonaceous material—a black soil—trunks and stumps of trees, peat-beds, etc., which indicate a forest-growth in a cold climate, over much of Ohio and adjacent States. Above the forest-bed are sands, clays, gravel, and boulders—the latter generally of Canadian origin—none of which could have reached their present resting-places except by a second submergence of the Drift area, and the floating power of icebergs. Upon the uppermost Drift sheet are terraces and beaches, which mark intervals of stability in the gradual recession of the water-surface to its present level.

During the season of 1870 the detail work of the survey was proceeded with. In the course of a very careful study of the coal-strata in the northeastern section, Prof. Newberry found that, instead of forming one symmetrical basin, with a tolerably uniform dip toward the southeast, the Ohio coal-measures form several troughs, more or less parallel with the axis of the great one of which they form part. On the east side of each of these subordinate basins, the strata rise, thus neutralizing the general easterly dip, so that, on the east line of Columbiana County and within forty miles of Pittsburg, the section

of the hills is nearly the same as that found on the banks of the Mohican, one hundred miles west; the average dip in this interval being not more than three feet to the mile.

In the southeastern district, Prof. Andrews reports his explorations to have determined the extent and richness of the coal-fields to far surpass the highest estimate previously formed; that there are iron-ores sufficient to last for many generations to come; that the amount of brine is practically limitless, and could supply the nation with salt for an indefinite period; that the yield of petroleum for the year has been from 85,000 to 90,000 barrels, nearly all of light oil for refining; that the supply of excellent building-stone is unlimited, and that limestone, fire-clay, and potter's clay, are in great abundance.

OLINDA, PEDRO DE ARANJO LIMA, Marquis de, a Brazilian statesman, born in Pernambuco, Brazil, in 1790; died in Rio Janeiro, June 7, 1870. His education was carried on in the city of Pernambuco until of age to go to the Portuguese University of Coimbra, where he graduated in law. In 1821 he was elected a member, from Brazil, of the Constituent Assembly of Portugal, and upon the separation of Brazil from the mother-country was elected by his native province to the Constituent Assembly of Brazil, in 1823, from which time until his death he represented the province as Deputy or Senator. He took at once a high rank among political men, and was President of the Chamber of Deputies in 1825 and 1827, and from 1831 to 1837, excepting the year 1834. In the last of those years he was chosen as Senator for Pernambuco, and was appointed Regent of the Empire twice during the minority of Dom Pedro II., the second time by election. In 1823, 1827, 1832, and 1837, he was Minister of State, and, after the liberals had obtained the declaration in 1840 of the Emperor's majority at the age of fourteen years, Sr. Arango Lima, made Visconde de Olinda in 1841, organized the cabinets of September, 1848, May, 1857, May, 1862, and May, 1865. In 1854 he was elevated to the rank of marquis. He was officer of the Cruzeiro and Grand Cross of the Order of Christ in Brazil, in addition to which he belonged to the Legion of Honor in France, the St. Stephen, of Hungary, the St. Maurice, and St. Lazarus, of Italy, and the Medjidie, of Turkey. The Marquis de Olinda, as a statesman, was noted for his tolerance in politics, and from this cause, and from his great experience, he had for many years been looked upon by public men as the Nestor of politicians, to whose opinions and advice all were willing to pay deference and respect. As a member of the Council of State, to which he was nominated in 1842, he was hardworking, calm, and logical, and his spirit will long continue to pervade almost every branch of public administration, so numerous have been the decisions of doubtful points, and the other questions of importance which under the

Brazilian system are referred to the Council of State. Notwithstanding his advanced age, the old statesman never laid aside his harness, and even on the evening before his death he took his usual seat within the Senate. As a party man he was essentially a moderate liberal; but in one respect he diverged from the general views of the liberal party—in regard to slavery, he was opposed to any direct legislation to emancipate the slaves; yet, two or three years ago, he liberated a considerable number of slaves whom he had inherited by his sister's death.

OREGON. The State of Oregon contains 95,274 square miles of territory, extending 350 miles in length from east to west, and 275 miles in width from north to south. The population in 1870 was 90,878, while in 1860 it was 52,465, and in 1850 only 13,294.

The following is the Federal census of Oregon, taken in the years 1860 and 1870:

COUNTIES.	1870.	1860.
Baker	2,804
Benton	4,584	3,071
Clackamas	5,998	3,466
Clatsop	1,254	493
Columbia	863	532
Coos	1,644	445
Curry	504	393
Douglas	6,066	3,203
Grant	2,251
Jackson	4,778	3,736
Josephine	1,304	1,623
Lane	6,426	4,780
Linn	8,717	6,772
Marion	9,966	7,088
Multnomah	11,510	4,150
Polk	4,700	3,625
Tillamook	408	95
Umatilla	2,916	1,360
Union	2,552
Wasco	2,509	1,669
Washington	4,261	2,801
Yam Hill	5,012	3,245
Total	90,922	52,465

Portland, the principal city, has 8,293 inhabitants.

The State is known to have considerable mineral wealth, though it has thus far not been developed except in a few localities. Gold-mining operations have been carried on to some extent for several years, and valuable deposits of coal have been discovered at Coos Bay. The soil and climate are well adapted to agricultural industry, and salmon and other fisheries are of considerable value. The following figures, indicating the agricultural capacity of the State with its present working power, are taken from the latest authentic reports, those of 1869:

PRODUCTS.	Acres.	Bushels.	Value.
Wheat.....	92,105	1,750,000	\$1,500,000
Rye.....	173	8,200	5,200
Oats.....	11,904	500,000	270,000
Buckwheat.....	444	8,000	6,000
Corn.....	5,714	300,000	160,000
Barley.....	5,714	300,000	120,000
Potatoes.....	3,846	500,000	300,000

There were also 75,000 tons of hay raised, valued at \$637,500. The entire value of do-

mestic animals was \$7,946,255. Their numbers were as follows: horses, 49,800; mules and asses, 1,560; milch-cows, 79,312; sheep, 101,980; swine, 112,700; young cattle, 140,500. Cheese was produced to the amount of 105,379 pounds, and butter 1,000,159 pounds.

A railroad has been constructed from Salem, the capital of the State, to Portland, which is its principal commercial emporium, a work which will be of great importance to the development of the interior.

The Democrats of Oregon held their convention on the 25th of March, and nominated L. F. Grover for Governor, and Joseph H. Slater for member of Congress. In their resolutions they declared that the amount of the national debt has been increased more than twofold by the illegal manner in which it was created; that there is neither justice nor wisdom in the repeated payment of the principal by the continued payment of interest; and that there should be an equitable adjustment of the debt. The other resolutions embody protests against the tyranny of the military and the importation of Chinamen, and declare that the fourteenth and fifteenth amendments ought to be rescinded.

The Republican Convention was held at Portland, on the 7th of April. Joel Palmer was nominated for Governor, and J. S. Wilson for member of Congress. The platform adopted approves of the policy of the Administration, and declares that no repudiation of the public debt can be tolerated in public places; denounces all forms of repudiation, opposes any changes in the naturalization laws so as to include Chinese suffrage, and recommends universal amnesty.

The election occurred on the 6th of June,

and resulted in the choice of the Democratic candidates. The total vote cast for Governor was 22,821, of which Grover received 11,726, and Palmer 11,095, making the majority of the former 631. Slater's majority for Congress was 848. The other State officers elected were—Secretary of State, S. F. Chadwick; Treasurer, L. Fleischner; Public Printer, T. Patterson—all Democrats. The Legislature has a majority of Democrats in both branches. The Legislature, which holds its sessions biennially, met at Salem on the second Wednesday in September. In his inaugural address the Governor favored immigration from European countries, deprecated the influx of laborers from China, on the ground that their language, manners, and habits of life, are so diverse from those of the native population, and incapable of becoming assimilated to them. He also characterized the fifteenth amendment to the Federal Constitution as an unwarrantable invasion upon the fundamental principles of that instrument, and suggested the propriety of calling a convention of the States to restore it to its former condition.

The Legislature rejected the fifteenth amendment, with the declaration that the United States has no authority to interfere with the conditions of suffrage within the boundaries of Oregon, without her consent, and that the national Legislature had sought "by means of an arbitrary majority of votes, acquired by the power of the bayonet, to force upon the several States the so-called fifteenth amendment in direct violation of the terms under which the State of Oregon was admitted into their sisterhood of States." A resolution was also adopted protesting against the treaty with China, and requesting its abrogation.

P

PANSLAVISM. Panslavism is the name given to a movement which contemplates bringing into a peculiar, compact, social, and political organization all the people of the Slavic stock who live in that part of Eastern Europe which is bounded by the North Sea, the Caucasus, and the Caspian Sea, the Oder and the Elbe, and along the valley of the Danube. These peoples are now existing under various political rules, dwelling in some districts as compact masses, in others scattered among people of other nationalities. The ultimate object of the movement is to establish a great Slavic empire, or confederation, of all the Slavic tribes in Europe and Asia. Panslavism originated as a national consequence of the erection of the Russian Empire, and its growth in the West of Europe, by which its people were mainly active participants in historical events where they had before been only passive spectators. It manifested itself first in literature. Russian writers studied to speak

of the Slavic world as a collective nation. In 1848 the movement for Slavic nationality began to make itself felt to the extreme borders of Southeastern and Eastern Europe. It obtained expression in the Slavic Congress which met in June of that year, and established, as objective points, community of trade between the Slavic peoples, a constant and close assimilation of the Slavic stocks in art and literature, the removal of the rule of foreign nations over Slavic peoples, the establishment of the federative principle in Austria, the erection of an offensive and defensive league among all the Slaves, and held particularly in view the reconciliation of Russia and Poland. Similar aspirations were expressed at the Slavic Congress in Moscow in 1867. The Panslavistic idealists overlook the fact that it is only in Russia that the Slavic people live united in a compact mass, while three-eighths of the race dwell in districts which have no territorial connection with that empire, or form part of

populations made up largely of other peoples. The Poles, Little-Russians, Czechs, Vindees, Croats, Sloventzi, Serbs, and Bulgarians, are thus situated. The establishment of a Slavic state or union involves the disruption or destruction, by a war of conquest, of all the States of Southern and Eastern Europe. In case the attempt should be made, Northern Europe, united and aided by its immense superiority in culture, would not fail to overcome the rude and unassimilated Slavic masses. Notwithstanding certain traits of resemblance, the several Slavic stocks differ very materially in language, sympathies, customs, and traditions. Harmony in religion is also wanting among them; not quite two-thirds of them are of the Greek religion, the other third being attached to Catholicism, to Protestantism, and even to Mohammedanism. The strongest and predominant Slavic stock are the Great-Russians, or Muscovites, numbering about 40,000,000. Some recent historians and ethnographers (Drschinski and Henry Martin) deny that these are to be reckoned among the Slavi, or are of the Aryan race at all, and maintain that they are in part of Finnish, in part of Turanian descent. They are distinguished from the Slavi, as these writers hold, by marked differences in popular spirit, in sympathy, and in social organization, particularly in the want of individuality, and these differences have not diminished in the course of the century. If this view is correct, the idea of Pan Slavism must prove totally fallacious. It would practically denote nothing less than the demand that the Muscovite should not only exercise a primacy and supremacy over the other Slavic stocks, but that they should suffer themselves to be absorbed in it as the most numerous and most homogeneous branch of the race, receiving from it language, religion, and social and political systems.

The Russian Government has never publicly recognized the idea of Pan Slavism. On the other hand, it has shown, in its enterprises against the Poles, the Little-Russians, and the White-Russians, that it does not intend to accord to these nationalities parity of consideration with the Great-Russians, or Muscovites, but that its only thought is to Russianize them, and that not by means of a superior intelligence, but by a very rude and despotic constraint. It uses Pan Slavism to advance its political plans and views, and to render the other Slavonic stocks convenient instruments for keeping the neighboring states in a disturbed condition, and for weakening them.

Pan Slavism deserves to be regarded as more than a threat: it is a reality. It is more of a defensive, negative, than of a positive, constructive nature. In Russia it is the expression of the thirst for aggrandizement, which is innate in the Great and Little Russians as well as in the White-Russians in Lithuania and Volhynia, and it instinctively strives after the extension of the Russian Empire to the heart

of Europe, and the acquisition of a large maritime tract, in order to come in close contact with the more highly-civilized peoples of Western Europe, whose influence the Russians perceive they need, to aid them in liberalizing and making more active their half-Asiatic institutions. Except as to the functions of the Czar, there is nothing specifically national in the social or political system of the Russians. The idea of Pan Slavism was started by the Russians for the purpose of conciliating the Poles. They regard them as their most hated enemies, and would not consent to the restoration of an independent Polish kingdom, because it would cut them off from the mouths of the rivers, and from the seaports, and reduce Russia to an Asiatic inland power. The Russians succeeded, indeed, in outwardly subjecting the Poles, but they possess only a feeble talent for national reconstruction, and on this account would not be able to Russianize them, unless Russia could exhibit a spiritual superiority, a higher degree of culture, than Poland. There would remain then nothing but the outward domination over the Poles, which, notwithstanding the Polish nation has probably forever outlived its existence as a state, involves the consequence of frequent convulsive efforts of reaction against political and religious oppression. Europe has no longer any interest in the resurrection of the Polish kingdom. It would bring with it too many difficult political complications, not only for Russia, but also for Prussia (on account of the Polish province of Posen, and the only half-Germanized province of West Prussia) and Austria, while the Poles would not be able to give assurance that they would form an effective barrier against Russia.

While the Poles reject the idea of Pan Slavism as that of the political lordship of their oppressors, the doctrine has found more recognition among the Slavi under Austrian and Turkish rule. With the Austrian Southern Slavi and Czechs this was a consequence of the absolute character of the bureaucratic administration which used the nationalities principally as the instrument of its levelling policy. By its oppression it has awakened in them an inclination partly natural, and partly sustained by artful means toward peoples of the same race, although religious differences, the want of an independent economic existence of their own, and the bonds of habitual intercourse with these peoples, were great obstacles. While the Czech, whose enlightenment is all the result of German culture, dreams of the restoration of a Czech kingdom, and of the crown of Wenceslaus, his vision is opposed by the presence of a numerous German population, which prevents the victory of the Slavi element, and by the military and political interests of Germany, which does not permit the erection of a Slavi outpost in its own interior. It remains to be observed what influence the introduction of the constitutional principle in Austria, and the development of liberal elements in

connection with the extension of the autonomy of the several departments and systems, will exercise upon the Austrian Slavi, and whether, on the other hand, the Magyars will know how to so do justice as to conciliate and win under their banner the different nationalities which live with them. Of themselves, the Magyars—who between 1528 and 1681 were almost overcome by the Turks, and were delivered only by the aid of the Germans and Poles—are too weak to form an effective protection for Europe against the East. It is the office of Austria to form and maintain such a protection, and present a nucleus around which the scattered populations of the Lower Danube may rally. For this reason, on the other hand, the preservation of the Austrian Empire is often regarded as a European question.

The Panslavic idea has made much progress in the south-Slavic lands belonging to Turkey. The people in these regions are of the Christian religion. As trade relations with Western Europe are more developed, and European culture is more impressed upon them, the desire increases to be freed from the Turkish yoke. The conception entertained by European diplomacy, that the Turks may become civilized, or may be induced to govern their possessions after the models of Western civilization, is a chimera. Their possession of those lands was never lawful; the desire of the inhabitants of the countries to be free from their domination and enjoy independence is a just one. It is the right of the hardly oppressed against the oppressor. The interest which the European powers have taken, since Greece was freed, in the preservation of Turkey, has its foundation in rival jealousies, in consequence of which no power will permit another to have exclusive possession of the country, and in disagreements about the division of the Ottoman empire, each power bespeaking the best part for itself. They have, therefore, exerted themselves for the upholding of the *status quo*, and have thereby placed themselves in opposition to the aspirations of the Christian Slavi for freedom, which have found sympathy and support only in Russia. This attitude of Russia has, therefore, caused these people to gravitate more toward Russia, and to show themselves more accessible to Panslavistic tendencies, while the other powers, especially Austria, their nearest neighbor, have manifested more friendship for Turkey than for the natural heirs of Turkey. But the South Slavi lack the specific national momentum, the similarity of social institutions, and the material economical interests, which should attract them to Russia. The religious principle by far outweighs the national, and it is religious pressure which gives them the elasticity they need for national and political regeneration. Whether Russia, if it should extend its dominion over the Danubian countries, would not be weakened rather than strengthened, is a thought which Cobden suggested several years

ago ("Russia," 1886). Forcible seizures, as a rule, harm the aggressor more than they benefit him. The annexation of non-homogeneous elements having dissevered interests is likely to result in an increase of the centrifugal with a corresponding lessening of the concentrative force.

PARAGUAY, a republic in South America. The last President of the republic, General Francisco Solano Lopez, fell in a battle against the Brazilians, on the Aquidaban, on March 1, 1870. The Vice-President, Sanchez, was made prisoner during the engagement. The remnant of the army of Paraguay was either annihilated or dispersed, and the country fell virtually into the hands of the allies. The provisional government, established by the allies at Asuncion, on August 15, 1869, was composed of O. Laizaga, C. A. Rivarola, and J. D. de Bedoya. This government has not, however, been recognized by any of the foreign powers. The representatives of the allies at Asuncion were therefore anxious to order a general election throughout the country, and to let the people decide on their future form of government and a new administration. It is thought that the statistical reports of the area and population of Paraguay have been considerably changed by the recent destructive war. The territory of the republic has been to a large extent devastated, and its boundaries may be essentially modified. The population, which was estimated at 1,300,000 in 1857, is said to have been largely reduced.

During the month of January, several engagements of minor importance took place between the remnant of the forces of Lopez and detachments of the allied armies. Lopez retreated to Panadero, where he encamped with about 1,500 men, the only remainder of his once powerful army. When compelled to leave the latter place in consequence of the total exhaustion of supplies, he abandoned all his sick and the majority of the women, hid away the heavy cannon which he could not remove, and marched northward along the east side of the mountains of Maracayun. As soon as a report of this movement reached General Camara, he at once surmised that Lopez's aim was to reach the abandoned Brazilian village and fort of Dourados, in Matto Grosso, where some cattle could be obtained.

Dourados lay about 150 miles to the north of Panadero, and about 250 from Concepcion. General Camara, with some 1,500 cavalry, infantry, and artillery, determined to set out with forced marches along the diagonal route to Dourados, while a similar force, to set out later, was to strike the bush-road, which Lopez was moving along, and to keep close behind him, harassing his rear, but avoiding an engagement, so that, when Lopez would reach Dourados, both the Brazilian corps would be close to him, and could strike a decisive blow with superior numbers. Accordingly, General Camara marched northward toward the Para-

guayan fort of Bella Vista, on the frontier, occupied by a Brazilian brigade, placed there to guard the Apa country, which he purposed to unite with his, and take on to Dourados. However, when not far from Bella Vista, he got word from the commander there that Lopez had not continued on the road to Dourados, but had left it and turned to the west to occupy an excellent camping-ground in the middle of the mountains, on the south side of the Aquidaban, just within Paraguayan territory. Only two roads from it existed, one running west and north to Dourados, which, for a long distance, was out through the bush, impenetrable, like all South American bush. After fifty or sixty miles, the bush-road divided, one fork going to Dourados and the other to Panadero. The other outlet led in the opposite direction. Camara then changed his plans; he ordered the brigade at Bella Vista to march with all speed to Dourados, get into the track there, and hurry down to occupy the fork of the road and shut the outlet at that side, while he himself hastened by forced marches to shut up the outlet at the other side, to the northwest of the Aquidaban, north of which river Camara then was. On this march Camara learned from a deserter that his march from Concepcion was totally unknown to Lopez, and that he believed himself free from attack for some time. Camara then determined to push on with a small body, in the hope of surprising Lopez before he anticipated any danger. Three days' march brought him to the mouth of the outlet, and Lopez was shut up at that side. In front of Lopez was the Aquidaban, and about three miles before it was the Taquara. At the first river four cannon were planted to defend the crossing at the ford leading to the camp; at the Taquara ford were two cannon and about twelve men, as an outpost. Some Brazilian cavalry succeeded in crossing the Taquara during the night, and, at daybreak, charged on the outpost, securing the cannon before they could be fired. An ambush, placed in the bush-road between Lopez's camp and the captured outpost, secured an officer, who gave valuable information. One or two men of the party escaped the ambush and hurried back to Lopez. Camara hastened to attack; his infantry deployed upon the bank of the Aquidaban, and opened on the artillery on the other side; the cavalry and infantry charged across the river, captured the cannon, routed a force arriving too late to reinforce the defence, and, with the lancers in front, debouched upon the open ground where Lopez's tents were pitched, and a force of about four hundred men drawn up in column, himself at the head. According to instructions, the lancers divided and swept round past the column to occupy the mouth of the bush-road and close the trap, and, while the Brazilian carbineers (Spencer carbines) formed as they emerged from the road from the ford to the camp, the commander of the

attacking troops, with his staff and a few cavalry, charged to engage the column and prevent Lopez escaping. It was a bold and a dangerous act, but the carbineers came on in line, enveloped the column, pouring their terrible fire into it, and especially on the part where Lopez was. The starved and poorly-armed Paraguayans could do nothing against such a fire. The slaughter was frightful, and in a few minutes it was a *saute qui peut*. Lopez, with his staff and a few of his body-guard, made for the bush, followed by the party of Brazilian officers and cavalry who had devoted themselves to his pursuit. In his flight he was wounded by a corporal of cavalry, and his protectors were cut down almost to a man. When he reached the stream beyond which was the thicket, he threw himself from his horse, waded it, but was so exhausted that he fell half-fainting on the opposite bank. There the Brazilian general summoned him to surrender, and, on his striking with his sword, ordered him to be disarmed, which was scarcely done when Lopez died.

A provisional treaty was concluded between the allies and the temporary government of Paraguay, at Asuncion, under date of June 20th. It declared peace restored between the allies and Paraguay, and opened the Upper Parana and the Paraguay within the limits of the republic to the merchant and war vessels of the allies, free of all burdens and obstacles. The allies promised to abstain from all interference in the elections and in the organization of a permanent government. The provisional government promised that the election should take place within three months from the date of the treaty. If this was not done, the allied governments would come to an understanding as to what to do in regard to the making of a definite treaty of peace. If allied troops were left in Paraguay, they were not to be subject in any way to the Paraguayan Government, but measures should be taken to avoid their presence having any influence on the election.

On the 30th of June the provisional government obtained the aid of Brazilian forces to guard Asuncion, as trouble was anticipated from the party in opposition. A fearful riot broke out at the capital, but was finally suppressed by the Government. The latter, with the aid of the Chamber of Deputies, was hastening the framing of a new national charter, and the election of a new government. The Assembly passed, after considerable debate, a bill granting religious freedom. The country was fast settling into order and comparative prosperity, although the exodus of foreigners and foreign capital continued. As these were the main sources of wealth for the country, the Government was anxious to stay their flight by allaying their fears of a revolutionary outbreak previous to the election. Although the excitement was very great, the election, which took place on December 10th, passed off quietly, and resulted in the choice of C. A..

Rivarola for President, and Ouyo Miltos as Vice-President. The Cabinet appointed consisted of: Miguel Palacio, Foreign Affairs and State; Rufino Fahodda, Interior; J. B. Gil, Treasury; Salvador Jovellano, War and Navy; José M. Collar, Public Instruction and Worship.

A new constitution was also adopted, which provides for freedom of worship, the encouragement of immigration, and the protection of immigrants, and for the summary punishment of any one who may attempt in the future to make himself dictator.

The Indians on the river Paraguay were committing all sorts of depredations. They attacked several river-craft, among which was an Italian sloop, containing ten persons, slaughtering the men and burning the vessel.

PAUL, José Jesus, a Venezuelan statesman, born at Caracas, Venezuela, in 1825; died at Washington, D. C., March 7, 1870. He was the son of an eminent lawyer, who was for many years Chief Justice of the Supreme Court; was himself educated for that profession, and held the position of judge when he was chosen Secretary to the House of Representatives. He was soon after elected to a seat in the House, which, however, he did not take, as he was appointed Minister of the Interior in President Tovar's Cabinet. When the revolution drove Tovar out of power, and placed Falcon at the head of the Government, Señor Paul retired for a time to agricultural pursuits, but his active mind would not allow him to rest, and, believing the people to be ready for a change, he visited the different States, conferring with the leading men, and advised them to rise and overthrow President Falcon. Those who dissented he succeeded in winning to his views, and the seed thus sown by him soon reached fruition in the revolution which resulted in the downfall of Falcon. Monagas, the present President, then came into power, and Señor Paul was appointed to a judgeship, in which position he acquitted himself ably, until his appointment as minister to the United States. Señor Paul was a man of great firmness and extraordinary ability.

PENNSYLVANIA. The session of the Legislature of Pennsylvania opened on the 18th of January. That body was engaged in considering many subjects not of general importance, but nevertheless passed some valuable bills; among the principal of which were the following: one providing "that whensoever any husband, from drunkenness, profligacy, or other cause whatsoever, shall for two successive years desert his wife, or neglect or refuse to live with her and provide for her, she shall, as to every species and description of property, whether real, personal, or mixed, owned by, or belonging to her, have all the rights and privileges of femme sole, to purchase or sell and convey the same, as if she were sole and unmarried;" and "that it shall be lawful for any married woman, as aforesaid, to sue and

be sued in her own name upon all such contracts as aforesaid, heretofore made or to be made, and to sue in her own name her husband, to recover the possession of her real estate, or the value thereof, as if she were sole and unmarried."

Another, which passed without debate, provides "that all proceedings in partition of the real estate of intestates, heretofore had in any court of the Commonwealth having jurisdiction of such proceedings, shall be valid to all intents and purposes, if the writs, rules, and notices required by law shall have been duly issued and served upon, or service shall have been accepted by, such person or persons as the court shall have directed notice of the inquest to be served upon; and if any person entitled, having elected to take land at the valuation fixed by the inquest, shall have entered into a recognizance in the name of the person or persons, so as aforesaid designated by the court, to secure to the other owners their distributive shares, his title to the said land shall be as good and indefeasible as if the recognizance and all the proceedings had been legal and regular, and all writs, rules, and notices had been personally served upon all parties in interest, and their legal representatives."

Another act allowed husband and wife to be witnesses on their own behalf in divorce cases where personal service of the subpoena is made on the opposite party, or said party appears or defends.

The Avondale disaster (see vol. 1862, pp. 566) led to the passage of an act providing for the safety and health of persons employed in coal-mines; and also to one incorporating "The Avondale Relief Association," which provides that the Corporation shall be represented by 18 trustees, who were empowered to invest the money contributed for the sufferers, which fund, on March 28th, including contributions and interest on investments, had amounted to \$140,794.61. The trustees receive no compensation, and all property held by this board is exempt from State or county tax.

An important measure was passed, entitled "An act to allow writs of error in cases of murder and involuntary manslaughter." The first section provides that a writ of error "shall be of right, and may be sued out upon the oath of the defendant or defendants, *as in civil case*." The second section makes it the duty of the judges of the Supreme Court, in all such cases, to review both the law and the evidence. This law was vetoed by Governor Geary, and disapproved by the Supreme Court of the State, as its effect would be to change the whole doctrine of the criminal law, and give too wide a legal license to the guilty. It was intended to apply to the case of Dr. Paul Schœppe and similar cases, and, notwithstanding the objections to it, was again debated at length, and finally passed.

Another act also became a law, which by its provisions will stimulate investments and skill

and industry in almost every branch of trade and manufactures, by exempting capital from liabilities which heretofore have acted as a restraint on investments.

It provides "that from and after the passage of the act it shall be lawful for any person or persons to loan money to any individual, firm, association, or corporation, doing business in the State, upon agreement to receive a share of the profits of such business as compensation for the money so loaned in lieu of interest; and such agreement or the reception of profits under such agreement shall not render the person or persons making such loans liable as a co-partner in such business to other creditors of such individual, firm, association, or corporation, except as to the money so loaned."

The civil code of this State was this year revised by commissioners, and systematically arranged in a volume of less than 800 pages. It adheres in the main to the text of existing laws, with occasional changes to meet present demands, and additional provisions required by the changes of the day.

The Supreme Court, during its session in Philadelphia, announced some important opinions. One, exciting the most interest, was the case of the Credit Mobilier of America vs. The Commonwealth.

The Credit Mobilier is said to have been incorporated a few years ago under the name of the Pennsylvania Fiscal Agency. The Pennsylvania Fiscal Agency in reality was another corporation which sold out its charter to the Credit Mobilier, and the name was soon after changed to that by which the Credit Mobilier of America corporation is known. By the law of Pennsylvania they were bound to pay to the Commonwealth one-half a mill on every dollar of capital stock for each one per cent. of dividends; which they did to within about two years. Then they failed to make returns, and the Commonwealth, as a last resort, was compelled to make a settlement from the most reliable data it could obtain. After this was done, it was ascertained the Credit Mobilier had made the enormous profit in one year of over \$9,600,000. The settlement was made out on the information obtained, and the corporation clerk in the Auditor-General's office found that the great corporation, which had failed to make returns, was indebted to the Commonwealth, on account of taxes and for violation of law in not making returns in the sum of \$529,546. Suit was brought for its recovery, when the Credit Mobilier claimed that the profits were not received by the corporation as a corporation. By a queer transposition, however, they received them as stockholders. The Commonwealth held in the trial that, if corporations were allowed to thus change the method of receiving their profits at pleasure, all corporations could thus act, and the result would be that after a while the income of the State from this source would be comparatively nothing. The defendants, on the other hand, alleged that the

course pursued by the corporation was made necessary, not because they wanted to defraud the Commonwealth, but on account of various other matters, driving them to take the course they did in order to save what the stockholders of the Credit Mobilier had already invested. The cause was argued with decided ability on both sides, and judgment was entered in the court below (Dauphin County) in favor of the Commonwealth, the sum due, however, being reduced a little over a hundred thousand dollars. The Supreme Court reversed the decision.

After an investigation of fifteen months the Supreme Court also decided that the Republican candidates for county officers and District Attorney for Philadelphia were legally elected in 1868, by which decision these officials were installed in their respective positions.

It was announced in July that the opposition to the legal-tender decision of the Supreme Court was at an end. All the railroad companies, whose offices are in Philadelphia, paid the half-year's interest, then maturing, on all their debts created before the passage of the Legal-tender Act in 1862, in coin or its equivalent. This proper acquiescence in the decision of the court, at this time, upon the maturity of the large July interest of strong corporations, well able to prolong a contest, indicated an abandonment of the threatened attempt to procure a reversal.

An important convention of delegates, from the "minority Republican counties of Pennsylvania," met at Reading in September. A large number of counties were represented, and the following resolutions relative to minority representation in legislative bodies were adopted:

Resolved, That the practice which has grown up in the Legislature of Pennsylvania, of submitting all matters of local legislation to the exclusive control of local representatives, has practically placed the local political and business interests of minority constituencies, requiring legislation, at the mercy of majority local representatives, and has offered such a continued series of wrongs and petty oppressions as loudly calls for reform.

Resolved, That we can conceive of no other remedy for such wrong and oppression except a system which will secure to each local minority, as near as can be, its proportional share of local representation.

Resolved, That such minority representation will not only remedy the wrongs of which we more especially complain, but will also tend to lessen unjust and illiberal partisanship, and to promote greater purity in legislation.

Resolved, That a fair and proportionate representation of minorities by districts is not only just, but is in accord with the spirit of all our State political systems, which provide for the election of legislators by districts, in order to protect the minority at large from the unjust domination of the majority, as well as to guard the interests of localities, and which we propose to supplement by placing the local minority beyond the reach of the unjust domination of the local majority.

Resolved, That in view of the taking of the census, and the approaching legislative reapportionment of the State, we recommend the passage of acts of Assembly by the next Legislature, embodying the principles of minority representation in reference to boards of county commissioners, directors of the

increase the capital stock to one million; the subscriptions, with the \$400,000 guaranteed by the railroad company, reaching that amount. All that now remains to complete this valuable enterprise is, to obtain a charter from the Legislature.

To the military of the State 158 volunteer companies were added during the year, and 30 disbanded, which leaves 811 organized and active, and which are now recognized by act of legislation as the National Guard of Pennsylvania. From these companies 14 regiments and 5 battalions have been formed. The quota of arms due the State was drawn from the General Government, and distributed: they consisted of 4,500 breech-loading rifle-muskets and accoutrements, with a proportionate supply of ammunition. All the State military departments created by the war have been merged in that of the Adjutant-General; the military records of Pennsylvania are deposited in that department, which is also the responsible custodian of all military property belonging to the Commonwealth. Four volumes of the military history of Pennsylvania, prepared by authority of an act of the Legislature in 1864, have been produced. The fifth and last volume will be completed before next June.

Upon application of the First Troop Philadelphia City Cavalry to be relieved from payment of collateral-inheritance tax, on a bequest of John W. Grigg, of \$10,000, a consenting act was passed, which also removed such tax on all similar bequests made to advance the efficiency, drill, and discipline of this arm of the militia of the Commonwealth. On the 18th of April about 200 survivors of the five Pennsylvania volunteer companies, who were the first citizen troops from the States who reached the national capital in 1861, publicly observed the ninth anniversary of that event, in Pottsville.

The report of the Superintendent of Common Schools shows that there are now within the State 2,002 school districts; 14,212 schools; 2,892 graded schools; 18,100 directors; 79 county and other superintendents; 17,612 teachers; and 828,891 pupils. This is an increase over the preceding year of 81 districts; 276 schools; 447 graded schools; 200 directors; 3 superintendents; 470 teachers; and 18,188 pupils.

The cost of tuition for the past year was \$3,745,475.81; building, purchasing, and renting school-houses, \$2,765,644.34; contingencies, \$1,165,226.05; other expenditures, \$95,475; making a total of \$7,771,761.20. Estimated value of school property, \$15,837,188. Average salary of male teachers, \$40.65 per month; length of school term, 6.06 months; and the cost per month of each pupil, 98 cents.

In addition to the above, five normal schools are recognized by the State. These are intended especially to instruct in the art of teaching, and to furnish suitable teachers for the common schools. Since their recognition,

12,390 students have been received into them, and 2,675 are now enrolled. There are 66 professors and tutors. The libraries contain 8,135 volumes. The buildings and grounds are valued at \$364,667, and the furniture and apparatus at \$75,000.

Besides the schools that receive legislative support, there are in the State 601 private schools, seminaries, and academies, employing 848 teachers, and having 24,815 students. The estimated value of their property is \$600,000, and the annual amount received for tuition \$380,000. There are also 13 colleges, with 157 professors and tutors, and 2,805 students enrolled. They own much valuable property, and their libraries number 95,000 volumes.

Great care is bestowed upon the Soldiers' Orphan Schools. In the report of the superintendent of these schools for the year terminating May 31, 1870, it is stated that, since their first organization, the whole number of children admitted is 5,058. And, during the same period, the discharges, including deaths, amount to 1,524, leaving 3,529 in the schools at the close of the year, of whom 2,137 are in "graded" and 793 in "primary schools," and 599 in "Homes." During the year terminating May 31, 1871, 493 of these will be discharged on age.

In these schools there was a balance of yearly expenses, over the appropriations, of \$19,426.42; as, owing to the extreme pressure of suffering and indigent applicants, a larger number of children was admitted than was anticipated.

The Agricultural College is gradually succeeding in its objects, and the experimental farms, established under the supervision of the officers, have thus far answered expectations. The publication of careful observations and experiments, made in different parts of the State, with various climates and soils, will be beneficial to practical farmers. The Blind Asylum gives cheerful account of the prosperity of the institution, which ministers to the comfort of 183 persons, who are instructed in various departments of useful knowledge. The Pennsylvania Training School for Feeble-minded Children, located 20 miles from Philadelphia, on the Philadelphia and Westchester Railroad, has 171 children and patients, from 5 to 45 years of age. The report of the State Lunatic Asylum, made in September, calls attention to the deficiency of its resources to enable it to extend its usefulness and increase its efficiency. The number of patients admitted during nine months up to date was 168; during the same period, 144 were discharged, and 89 died, leaving still in the hospital, on September 30th, 434. Appropriations were made to many charitable institutions by the Legislature. Of these, \$20,000 was for the support of the Pennsylvania Lunatic Asylum; \$150,000 for a new Insane Hospital at Danville; \$2,000 for the Home of the Friendless at Harrisburg;

\$5,000 for a like institution at Wilkesbarre; \$23,000 for the Pennsylvania Training School for Feeble-minded Children at Media; \$23,000 for the House of Refuge in Philadelphia; and, for the same establishment in Western Pennsylvania, \$25,000.

The number of applications for pardons of criminals during the year was 1,240, of which 62 were granted; the commutation of sentences for good behavior in prison, in accordance with the law of 1869, has effected favorable results in the conduct of prisoners, and in maintaining wholesome prison discipline, as has this year been exemplified.

Considerable discontent has been manifested by the employment of United States troops at elections without the consent of the local and State governments; this was done at the October election in Philadelphia.

An election was held for the choice of Congressmen and members of the State Legislature, when thirteen Republican and eleven Democratic members of Congress were chosen. The classification of the Legislature for 1871 is as follows:

	Senate.	House.	Joint Ballot.
Republicans.....	18	56	73
Democrats.....	17	41	61
Dem. Majority..	1	—	—
Rep. Majority...	—	12	11

After the taking of a general census this year, a revision of the census of Philadelphia, ordered by the department, to test alleged errors in the previous enumeration, gives a total of 674,022, an increase of over sixteen thousand.

Pennsylvania gains in population more largely than any State except Illinois, which has an increase of 828,265, since 1860. Pennsylvania comes next, 605,328, followed by Missouri, 521,000, Iowa, 502,602, and New York, 496,119.

Of the increase in the population of 480,918 in the western district of Pennsylvania, in the last decade, the greater part is in the mining and manufacturing regions, and at the chief trading centres.

The western district of Pennsylvania, which comprises about two-thirds of the area of the State, and has always suffered in its interests on account of the lack of railways, has made much greater progress in that form of development than at any former period, and, great as is the net-work of railways in the densely populous eastern district, it may be doubted whether, in the end, it will not be surpassed in mileage. This whole western district is really in the condition of some of the new States of the West.

Astonishing as has been the general growth of this district, the progress of some of its towns is still more remarkable. Scranton, the centre of the Luzerne coal-field, had only 9,223 inhabitants in the year 1860, but has now 85,762, and takes rank above Reading as the third city in the State, considering Pittsburgh and its suburbs together as the second city. Williamsport has risen from 4,253 in

1860, to 16,066 in 1870; and Wilkesbarre, which had 4,200 in 1860, has now 10,180. The railroads leading to these places have carried immigration thither from the great centres of Philadelphia and New York. The general result of the present census will show Pennsylvania to have made greater progress in her minor cities and towns than at any former period.

The following is the Federal census of Pennsylvania, taken in the years 1860 and 1870:

COUNTIES.	1870.	1860.
Adams.....	80,315	28,006
Allegheny.....	263,373	178,731

Total.....	3,519,601	2,906,115

PERSIA, a country in Asia. Shah (properly Shah yn Shah, which means king of kings). Nasser-ed-Din, born in 1830; succeeded his father, Mohammed Shah, September 10, 1848.

The ministry was composed as follows: Prince Naibos Saltenet, Minister of War; Mirza Yussuf, Minister of Finance; Prince Ali Kuli-Mirza, Minister of Commerce and Public Instruction; Mirza-Said-Khan, Minister of Foreign Affairs; Gholam Hossein-Khan, Minister of Justice.

Mr. Ronald Thompson, secretary of the British legation at Teheran (in a report on the population, area, revenue, and trade of Persia, 1868), estimates the area of the country at 648,000 square miles, and the population at about 5,000,000, which would be somewhat less than eight inhabitants per square mile. Thompson makes the following division of the population:

Inhabitants of cities.....	1,000,000
Turkish, Koordish, and Arabian nomads.....	1,700,000
Agricultural population mostly residing in vil-lages.....	1,700,000
Total.....	4,400,000

The largest cities are Tabreez, 110,000 inhabitants; Teheran, 85,000; Merchhed, 70,000; Isphahan, 60,000; Yezd, 40,000; Hamadan, 30,000; Kerman, 30,000; Kermansha, 30,000; Ummia, 30,000; Shiraz, 25,000; Cazvin, 25,000. The Journal of the Geographical Society at Berlin (1869) contains the following division of the population, according to nationality: Persians, 3,000,000; Turkish Tartars, 1,000,000; Koords, about 400,000; Arabs, 300,000; Toorkomanians, 125,000; Armenians, 26,000; Nestorian Chaldees, 25,000; Jews, 16,000. Besides there are Gipsies, Abyssinians, negroes from Zanzibar, Afghans, Hindoos, Americans, Europeans, and a few mulattoes.*

The budget for 1868 contains the following statement:

REVENUE.

(a) In money: 1. Contributions by the various provinces of the empire levied by taxation....	\$7,650,000
2. Duties.....	1,073,330
Total cash.....	\$8,723,330
(b) In produce (barley, wheat, rice, and silk), valued at.....	1,101,680
Total.....	\$9,825,000

EXPENDITURES.

Army budget.....	\$3,500,000
Salaries of functionaries.....	1,500,000
Pensions of the priesthood.....	500,000
Private exchequer of the Shah.....	1,000,000
Extraordinary expenses.....	1,000,000
Surplus to be transferred to the Treasury of the crown.....	1,000,000
Total.....	\$8,500,000

A considerable amount of the taxes never reaches the Treasury of the state. The provincial governors levy taxes on all agricultural produce (in some cases to the extent of 25 per cent.); they also levy taxes on all domestic animals, and collect a poll-tax and an income-tax. Taking into consideration the large personal revenue of these governors, it is evident that the contributions of the people must reach a much higher figure than is represented in the above budget. To the crown revenue must be added the voluntary presents

and donations of the governors and other functionaries, as well as the proceeds of sale of all confiscated property. The contributions in kind are used for the support of the army and the household of the Shah.

No public debt has been contracted so far. The Treasury is said to contain \$7,500,000 in tomans, ducats, and imperials; besides gold vessels to the value of \$2,500,000, and crown-jewels estimated at \$9,000,000. The army consisted (in 1870) of 90 regiments of regular infantry at 800 men each, or a total of 72,000; 500 regular cavalry, the body-guard of the Shah; 5,000 artillerymen; and 200 light artillerymen on camels; making a total regular army of 77,700. Besides, there are about 30,000 irregular cavalry, which can be drawn into the service in case of emergency. The Persian soldier has to serve all his lifetime, but he is frequently furloughed for long terms. The regiments correspond with the provincial districts from which they are recruited.

The total imports of Persia are estimated at about \$12,000,000; the exports at \$7,000,000. The principal article of export is silk, while importation consists mostly of manufactured cotton goods from Great Britain. The governor of Astrabad made the following report to the Shah of Persia concerning the Toorkomanian nomad tribes on the eastern shore of the Caspian Sea: 1. Jamut tribe, 8,900 tents; 2. Goklan tribe, 2,550 tents; 3. Teke tribe, 11,960 tents. The governments of Afghanistan and Bokhara, which were on the point of hostilities in consequence of a dispute about the boundary-line between the two countries, finally came to a settlement of the question at issue, by agreeing to accept the river Oxus as the natural boundary.

A difficulty arose between the Cabinet of Teheran and the Sublime Porte, owing to the violation of the Persian frontier by Turkish troops, and the occupation of a disputed tract of land in the province of Bagdad. The matter was submitted to the arbitration of the boundary commission at Bagdad, which succeeded in bringing about an amicable settlement.

The visit of the Shah of Persia to the Mohammedan shrines of Kerbela was an event in Eastern history. Nasser-ed-Din travelled with a suite of 15,000 servants and 8,000 horses. The Sultan was determined not to remain in the background, and gave orders that as great a display of magnificence as possible should be made. A grand review of some 30,000 men was held at Bagdad in honor of the Shah's visit to that city, whither he had sent an embroidered shawl, tent, and a silver carriage, while the Sultan sent gold dinner-services and diamond-mounted cups and decanters.

PERU, a republic in South America. President, elected in 1868, Colonel José Balta; minister of the United States, General Alvin P. Hovey (appointed in May, 1866); Peruvian minister at Washington, G. M. Freyre (accredited

* For ecclesiastical statistics of Persia, see AMERICAN ANNUAL CYCLOPEDIA for 1863.

ed June 9, 1869). Area, 510,107 square miles. The population, according to a recent statistical report published in Lima, comprised 8,374,000 inhabitants, exclusive of the bands of Indians living in the Montana region. Population of the capital, Lima, 121,362. The budget for 1870 fixes the revenue at \$55,908,875, as follows:

Gnano.....	\$40,490,625
Duties.....	2,960,000
Direct taxes.....	588,750
Stamp tax.....	500,000
Montepio*.....	225,000
Diverse receipts.....	534,500
Loan of 1868.....	3,300,000
Postal revenue.....	320,000

The expenditures consisted of \$17,280,000 for the ministry of the Interior; \$511,279 for the ministry of Foreign Affairs; \$5,790,416 for the ministry of Justice and of Public Instruction; \$31,516,055 for the ministry of Finance and Commerce; \$8,750,000 for amortization of the debt of 1865; \$13,338,453 for the ministry of War and Marine; altogether \$77,186,209, showing a deficit of \$21,282,834. The public debt, on January 1, 1869, amounted to 62,225,550 soles, or \$77,781,938. The army, in 1869, consisted of 8 battalions of infantry; 3 regiments of cavalry; 1 brigade of mountain-artillery, and 1 squadron of field-artillery—total about 8,000 men, under command of 4 generals of division and 26 brigadier-generals. These figures do not include the numerous companies of the local militia. The navy comprised 1 iron-clad frigate; 5 monitors; 1 turret-ship; 1 frigate; 1 corvette; 2 steamers; 4 transports, and 6 gunboats, with 2 battalions of marine infantry and 8 battalions of marine militia. The value of the foreign commerce was estimated as follows:

	Imports.	Exports.
At Callao, 1869.....	\$30,000,000	\$60,000,000
At Pisco.....	5,000,000	5,000,000
At Iquique, ".....	5,625,000	7,500,000
Total.....	\$35,625,000	\$72,500,000

The principal article for export is guano; the shipment of guano from the port of Callao alone, in 1869, amounted to 512,557 tons, valued at 20,195,146 silver piasters. According to a statistical report, published in Lima, in 1868, the quantity of guano exported from February 19, 1842, until December 31, 1867, consisted of 7,175,194 tons, of an aggregate value of \$218,693,625. According to a correspondence from Lima, published in the official journal of the French Empire (February 23, 1870), the former littoral provinces of Loreto and Ica are now departments of the republic; the name of the littoral province of Callao has been changed into that of constitutional province, and a new littoral province (now the only one) has been constituted under the name of Tarapaca. A new department, called Hua-

naco (with a capital of the same name), was also organized, the territorial divisions of Peru now consisting of 16 departments, 1 littoral province, and 1 constitutional province. The area of the republic is estimated in this report at 506,578 square miles, or 3,529 square miles less than previously recorded.

The movement of shipping in Peruvian ports in 1869 was as follows:

Ports.	Vessels entered.	Tons.	Vessels cleared.	Tons.
Callao.....	2,073	1,359,002	2,140	1,389,646
Arica.....	213	206,517	218	202,275
Payta.....	223	181,190

The merchant navy consisted, in 1861, of 110 sailing-vessels, of an aggregate of 24,234 tons. The following railroads were in operation in 1870: from Callao to Lima; from Lima to Chorillos; from Tacua to Arica; from Lima to Chancay, and from Mejia to Arequipa—total, 147 miles. The railroads in course of construction were: from Ica to Pisco; from Iquique to La Noria, and from Cerro de Pasco to the mines which furnish the material for the founderies at Pasco. Concessions had also been made for the construction of the following roads: from Callao to Bellavista; from Chancay to Huacho; from Eten to Herenafe; from Malabrigo to Ascope; from Callao to La Oroya; from Arequipa to Puno; from Chorillos to Pisco, and from Payta to Pierra. The Government had also entered into contracts with European capitalists for the construction of railroads from Lima to Pasco; from Pasco to Golo, and from Ica to Arequipa; the whole to be constructed under the chief superintendence of the Dutch engineer De Quartel. The ports of Callao, Pisco, Arica, Iquique, and Truxillo, have been recently surveyed, and all necessary improvements will be made so as to afford increased facilities to navigation.

During the month of March, intelligence reached Lima of extensive freshets in the province of Sambeyeque. The capital of the province was overflowed, and over one million dollars' worth of property destroyed, while the productive rice-fields had been rendered useless for the year 1870. Altogether, the damage in the province was not less than five million dollars.

The republic was steadily advancing to wealth and prosperity, and the general attention was earnestly directed to public works. Throughout the interior, the people were engrossed in agriculture, in improving the vast haciendas, and in making ready for the time when improved communications will render their occupation at once more profitable and secure. Although unpopular at the outset, especially in the unruly and dangerous sections of the south, the administration of Colonel Balta has succeeded in gaining the general approbation of the people, more so than any preceding government of the republic. The Arequipa railway was completed during the summer, facilitating the transportation of material

* Montepio means the percentage retained from the salary of each functionary, for the creation of a pension fund.

for the road from Arequipa through the great Indian district of Rino to Lake Titicaca.

The dangerous season for fevers and epidemics, by which the population of Lima was formerly decimated almost every year, passed off without any appearance of sickness. This was mainly attributed to the great improvements in all matters pertaining to hygiene, and hopes were entertained that the plague might thus be averted in future.

The rich silver-mines throughout the interior of the republic were attracting very general attention. At Cerro de Pasco, which was always considered as second to the deposits of Potosi, great improvements had been effected, by means of which it was confidently expected that the yield of the mines, which had recently been all but abandoned, would increase in an unprecedented degree. A railway, 14,000 feet above the level of the sea, was completed, connecting the mines with the haciendas or washing-places. Some of the old shafts, which had formerly yielded enormous percentages of ore, but for the last thirty years had been choked up with water, were pumped dry, and would soon be in working order, when it was expected the Cerro de Pasco would become the most important silver district in South America.

The new session of Congress opened in the earlier part of August, when some very important bills were presented and carried. The bill granting amnesty and pardon to all political offenders, whether in confinement or in foreign countries, passed both Chambers, and was immediately put into effect by the President. This measure went far to prove the confidence of the Government in the continuance of public tranquillity, and the futility of further attempts at revolution.

The introduction of Chinese labor is becoming a question of much importance. For many years past, the great estates had been worked almost exclusively by coolies, but the price paid for them by the planters was so exorbitant, and the monopoly enjoyed by the company, formed to import the Chinese, so onerous, that a different system was determined upon. A large number of the wealthiest planters organized an association with a capital of \$1,000,000, to import this labor on their own account, and guaranteed to supply all that may be required at a rate much more reasonable than that hitherto demanded. No doubt can be entertained of the wisdom of this measure, and the numerous fertile plantations now idle for want of laborers will contribute their share to the wealth of Peru. During the last fourteen years more than forty-five thousand coolies were introduced into Peru, generally of the worst possible class, working under contract for a certain length of time. On many occasions risings of these Chinese had taken place, but, although in some instances followed by fatal results, these insurrectionary movements had generally been suppressed without great difficulty. But a rising of a more dangerous character, and of

far greater proportions, took place in September on the extensive cotton estates of Pativilca and Galpon, about 150 miles north of Lima. On these plantations nearly twelve hundred Chinese were employed, and in the immediate vicinity in the neighboring estates more than four thousand of the coolies were collected. For several months symptoms of dissatisfaction had been noted among these laborers, but the overseers and owners, trusting to their authority and power, paid but little attention to these manifestations. Unfortunately, no precautions were taken against surprise. The Chinese, left in tranquillity, were able to mature their plans, and concert their programme of action. A favorable opportunity soon presented itself. An agent of the estate of Pativilca had arrived from Lima with a large sum of money destined for the payment of the laborers, and the purchase of cotton from the surrounding planters. While this person, together with the overseer, the physician, and several other employés, were at supper on the night of the 4th of September, the dining-room doors were suddenly broken open, and a crowd of nearly two hundred coolies, armed with stakes, pick-axes, shovels, scythes, and every imaginable weapon, burst in upon the astonished whites. In less time than is required to narrate it the Chinese had murdered all of their victims save one, who, being wounded, fell under the table, and was thought to be dead. Sacking the house, and securing the revolvers and rifles on hand, the insurgents proceeded to the adjacent hacienda of Galpon, and there repeated the same barbarities. Not satisfied with killing the whites they encountered, the most revolting atrocities were practised on their dead bodies, and delicate women and children subjected to shameful and cruel torture. The number of the Chinese now amounted to 1,100; their movements appeared to be directed with some degree of intelligence by one who seemed to be hailed as chief, and, having secured all the money and valuables to be found in the estates, a larger game was attempted in the sacking of the little village of Barranca, about three miles distant. In the mean time the owner of an estate that lay on the road to that village was notified by a friendly coolie of the approach and designs of the marauders. Hastily placing his wife and family in the chapel belonging to the plantation, he, with another friend, strongly barred the doors, and received the advancing column with the fire of their rifles. The Chinese were vigorous in the attack, but, unaccustomed to the use of firearms, they fell easily before the defenders of the church. In less than two hours these two brave men had killed and wounded more than sixty of the assailants. So desperate, indeed, had become the attempts of the latter that a retreat was determined upon. The inhabitants had had time to make some slight preparations for defence. An impromptu breastwork was erected at the entrance to the village, and forty men,

well armed, were posted behind it to resist the assault. In a short time the Chinese, reinforced to the number of two thousand, appeared in front, and actually sent their leader to parley with the defenders regarding surrender. Hardly had he opened his mouth when he was killed by a well-directed rifle-ball. The Chinese, goaded to madness by this loss, threw themselves upon the barricade. The fight for a few moments was hand to hand, and the whites suffered severely under the knives and weapons of their assailants. Soon, however, the power of gunpowder began to assert itself, the coolies retired to a distance, and appeared to be deliberating upon their future movements. At this juncture the brave defender of the church, having put his family in a place of safety and found several companions, appeared in their rear, and commenced such a vigorous fire upon them that in a short time all order was forgotten, and the insurgents were in a headlong flight. Telegrams had been sent to Lima asking for help, and on the morning of the 6th the prefect, with a couple of hundred soldiers, arrived at the scene of conflict. The Chinese by this time had dispersed to the mountains. The soldiers, after securing the few who could be found, started in pursuit. The results of this terrible tragedy were forty murdered among the whites, and nearly three hundred Chinese killed. The crops were destroyed, and the coolies, seeking refuge in the hills, and devastating the unprotected hamlets, were not only lost to their owners, but formed a dangerous element to peace and security.

In the midst of these disturbances the public works already initiated were progressing with the most satisfactory activity; planters were increasing their estates, and property in the towns and villages along the lines of the roads to be built, before of no value, became an object of speculation, and commanded comparatively exorbitant prices. The public lands were portioned out and eagerly sought for. With the facilities afforded by the different railways a radical change was sure to take place throughout the wonderfully fertile interior, and, from being a consuming country, it was hoped that Peru in a few years would become productive.

At Lima a perfect system of common and free schools had been adopted, by which more than 5,000 children, before without the means of education, are now instructed by competent teachers.

The Government issued a decree prohibiting its representatives abroad from granting the Peruvian flag to the vessels of any nation. The Government accepted an offer made by Brazil, extending the service of her arsenals and dockyards gratis to Peruvian ships-of-war, on the understanding that Peru would extend a like courtesy in return, when occasion presents itself.

POLLOCK, Rt. Hon. Sir FREDERICK, Bart., M. P., born in London, September 23, 1783;

died in London, August 28, 1870. He was of Scottish extraction, studied in St. Paul's School, and graduated at Trinity College, Cambridge, where he was Senior Wrangler in 1806. Having been called to the bar at the Middle Temple in 1807, he won great success in his profession, but did not attain the rank of King's Counsel till 1827. For many years he led the Northern Circuit, and had an extensive business in London and Westminster, having been retained in very many important cases. In 1831 he was returned a member for Huntingdon, which he continued to represent till his elevation to the Bench in April, 1844. He was appointed Attorney-General under the first administration of Sir Robert Peel in 1834, and again under his second administration in 1841, succeeded Lord Abinger as Chief Baron of the Court of Exchequer, and was sworn a member of her Majesty's Privy Council in April, 1844. He retired from the Bench in June, and was created a baronet, July 22, 1866. Sir Frederick was the younger brother of the late Sir David Pollock, Chief Justice of Bombay, and elder brother of Gen. Sir George Pollock, G. C. B. and K. C. S. I.

PORTUGAL,* a kingdom in Europe. King, Luiz I., born October 31, 1838; succeeded his brother, King Pedro V., November 11, 1861. Heir-apparent, his son, Carlos, born September 28, 1868. A new ministry, formed August 31, 1870, was soon superseded, on November 1st, by the following: Marquis Avila, Minister of Public Works and President of the Council; Marquis Gouveia, Minister of Marine; Bento, Minister of Finance; Rego, Minister of War; Carvalho, Minister of Justice; the Bishop of Bizen, Minister of the Interior. W. Cumback is United States minister at Lisbon. The former reports of the area are somewhat altered by the new survey, completed in 1869, by the Topographical Bureau at Lisbon, as follows:

PROVINCES.	Square Miles.	POPULATION, JAN. 1, 1864.		Proportion of males to 1,000 males.

The two largest cities in Portugal are Lisbon, with 224,063, and Oporto, with 89,194 inhabitants. The largest cities in the colonies are: Funchal, 18,161; Ponta Delgada, 15,885; Angra, 11,839; and Horta, 8,549 inhabitants. The revenue in the budget for 1869-'70 was estimated at 15,616,096 milreis (one milreis = \$1.12), and the expenditures at 21,109,960 milreis. Public debt, in June, 1868, 251,690,466 milreis. The colonial budget for 1867-'68 estimated the revenue and expenditures as follows:

	Revenue. Milreis.	Expenditure. Milreis.	Difference. Milreis.

The army in the colonies had a numerical strength of 21,411 men.

The length of telegraph-lines in operation in

1869 amounted to 1,941 miles; length of wire, 3,070 miles; number of offices, 119; number of dispatches in 1868, 175,596. A concession for the construction of telegraphic lines between England, Portugal, and Gibraltar, was, on April 4, 1870, definitely given to M. Jules Despecher, the representative of the Falmouth, Gibraltar, and Malta Telegraph Company.

A revolutionary movement took place in the province of Beira, in May, 1870. In Castrodairo the troops had to be called out to suppress the insurrection by force of arms. During the same month a political *coup d'état* was inaugurated by Marshal Saldanha against the Prime Minister, the Duke de Loule, in consequence of the latter's refusal to sign the decree appointing Marshal Saldanha President of the Council of Ministers and Minister of War. The movement was confined to the army, and its object was simply to compel a change in the ministry. The Duke de Saldanha, having great influence over the troops, secured the support of the garrison of Lisbon, and, after storming the castle of St. George, marched to the royal palace. The governor of the palace had taken measures of defence, and the duke found troops posted and artillery in position to oppose him. An attack was ordered, and some shots were fired, but the soldiers on both sides were evidently ill disposed to fight against each other, and, after desultory firing, they broke ranks and fraternized. The palace was left unguarded, and soldiers, volunteers, and some peasants who accompanied them, entered, displaying the popular flag, and shouting "Long live the King!" "Long live the army and Saldanha!" "Down with the ministry!" Though greatly excited, they committed no violence, and contented themselves with marching through the corridors and grounds, singing the national songs and uttering patriotic cries. The Prime Minister, the Duke de Loule, against whom the movement was directed, seeing the day was lost, tendered his resignation, which was accepted by the King. The victorious Saldanha was admitted to an audience, and was requested by the King to form a new Cabinet, which task he consented to undertake.

The sessions of the Cortes were closed by order of Marshal Saldanha. One of the last acts of the session was the taking of an oath by all the deputies to defend the independence of Portugal. This action was taken because of the report in the public journals that Marshal Saldanha was in favor of a union with Spain. The Prime Minister at length officially stated that he would use all efforts to maintain Portuguese independence.

In June, the Government decreed an amnesty for all political crimes and offences committed since the 1st of March, 1870; it also issued a decree abolishing the death-penalty, granted the right of holding political meetings, and the right of petition.

A new session of the Cortes was opened by the King on October 15th, with a speech from

the throne, which announced the renewal of diplomatic relations with Italy, temporarily suspended in consequence of a misunderstanding between Marshal Saldanha and Marquis P. Oldoini, the Italian minister at the court of Lisbon.

PRENTICE, GEORGE DENISON, an American journalist, born in Preston, Conn., December 18, 1802; died in Louisville, Ky., January 22, 1870. At the age of seventeen he entered Brown University, whence he graduated in 1823. Immediately after leaving college he entered upon the study of law, supporting himself in the mean time by teaching school in Hartford, but never engaged in the practice of his profession. In 1828, having already attracted notice by the grace and piquancy of his style as a writer in various periodicals, among which was the *Connecticut Mirror*, of which he was the editor in 1825, he associated himself with John G. Whittier in the publication of the *New-England Weekly Review*, a journal then widely popular, and remained as one of the editors for about two years; at the end of which time, he removed to Louisville, Ky., and engaged as a writer for the *Louisville Journal*. In 1831 he became chief editor of that paper, which under his charge rose to be the leading journal of the West. Its gracefully-written editorials, its spicy paragraphs, in which the topics of the day were epigrammatized, its keen, cutting sarcasm, its wit and satire which cropped out in every line, made it peculiarly popular among all classes of people. For many years the *Journal* was the principal advocate, in that region, of the policy of the Whig party, and, during the stormy period of our political history preceding the late war, it maintained with unflinching courage and untiring zeal the cause of the Union against the secessionists. When South Carolina seceded, Prentice boldly and manfully opposed the efforts of the Kentucky disruptionists to drag their State into secession; and it is largely owing to the unswerving fidelity of that journal that their success was not consummated. Though one of the proprietors, Mr. Prentice was never the entire owner of the *Louisville Journal*, and during the war he became embarrassed in his finances, in part owing to his unfortunate habits, and the controlling interest in the paper passed into the hands of those who were less vigorous for the Union, but who insisted on still having his name and services on it. For a short time he withdrew from the editorial charge of the paper, but afterward returned to it as a regular writer for its columns, though not the responsible editor. He never was as prominent in its pages after its consolidation with the *Courier* under the name of the *Louisville Courier-Journal*. The change in the control of the paper, the loss of one of his sons who fell in battle, in the ranks of the Southern army, and other afflictions and trials, rendered his declining years sad and sorrowful. In ad-

dition to his editorial labors on the *Journal*, Mr. Prentice wrote much for other periodicals. He contributed several brilliant papers to *Harper's Monthly*, and for some time supplied a column of "Wit and Humor" for Bonner's *Ledger*. His poems, of which he wrote many, were nearly all first printed in the *Journal*, thence extensively copied, but never collected in a volume. That which he always looked upon as his best, and which, indeed, in depth of pathos, beauty of rhythm, and wealth of imagery, has but few equals in any language, is his "Closing Year," written for the *Journal* in 1849. Mr. Prentice was a bitter opponent, whether wielding the pen or the sword; and as a consequence was drawn into frequent sharp conflicts with his editorial brethren differing from his views. But with all his severity and sarcasm he was a man of kindly feelings and warm attachments. A collection of his witticisms, entitled *Prenticiana*, was published in 1860.

PRESBYTERIANS. I. PRESBYTERIAN CHURCH IN THE UNITED STATES (NORTH).—The reunion between the Old School and New School branches of the Presbyterian Church was consummated at the General Assembly—the first regular one of the reunited Church—which met in Philadelphia, Thursday, May 19th. The predominance of the reunion thought appeared in all the proceedings, from the formal preliminaries of the organization of the assembly to the close. A "New School" man (the Rev. Dr. Adams) nominated an "Old School" man (the Rev. Dr. Backus) for moderator, who was chosen by acclamation. An "Old School" man nominated the former stated clerk of the New School General Assembly (the Rev. Dr. Hatfield) for stated clerk, who was also accepted with unanimity. The spirit of the body was described as that of a sort of pleasant strife observable between the representatives of the two late branches, to see which should outdo the other in courtesy. During the opening proceedings, a telegram, sending greeting and good wishes, was received from the Rev. David Elliott, D. D., "Moderator of the last General Assembly (1837) immediately preceding the separation." The numerous difficult points in reorganizing the synods and boards of the two assemblies were satisfactorily adjusted. A rearrangement of the synods was made by the General Assembly itself. The rearrangement of the presbyteries was left to be decided upon by the synods in which they are situated. While the Old School branch had supported a Board of Missions of its own, the New School branch had not maintained a separate missionary society, but had cooperated with other denominations in the support of the American Board of Commissioners for Foreign Missions. The reunion made it necessary to give the support of the united Church to a single board, involving the withdrawal of Presbyterian support from the American Board. The General Assembly decided also to assume

the charge and responsibility of a part of the missions of the American Board, and the following plan was adopted:

1. That, in the judgment of this committee, it is desirable as well as important that a fair proportion of the American Board of Commissioners for Foreign Missions cause be transferred to the United Presbyterian Church. 2. That, in order to a harmonious and satisfactory transfer of any portion of these missions to the Board of the Presbyterian Church, it will be necessary to leave the missionaries now connected with such missions at liberty to sustain their present ecclesiastical relations in case they should prefer to do so. This liberty shall be conceded to the Congregational missionaries who may be and continue in such missions, and also, in case of the formation of presbyteries in the foreign field, to such Presbyterian missionaries as may prefer to remain members of the presbyteries in this country to which they now belong. 3. That it should be fully understood by all parties that the same liberty, thus provided for in the case of Congregational missionaries to be transferred to the Assembly's Board, would be granted by the American Board of Commissioners for Foreign Missions to such Presbyterian missionaries as may still continue with the missions to that Board.

The matter was satisfactorily arranged with the American Board. The theological seminaries were differently organized in the two branches. The Old School seminaries were under the care of the General Assembly; the New School seminaries were in the hands of

trustees, or of synods, and independent of the General Assembly. The two systems were harmonized upon a plan by which the former New School seminaries, while they retain their governing boards, are to submit their proceedings in the election of professors to the approval of the General Assembly. The Board of Freedmen's Missions was reconstructed by the appointment of a board of thirteen members, so classified that the terms of one-third the members shall expire each year. Five members are to constitute a quorum. This board has charge of the work of the Presbyterian Church in behalf of the colored population of the South, and will keep its offices at Philadelphia. A new Synod of China was established; it includes all the churches in China, Siam, and Japan.

The first meeting of the new Synod of China was held October 20th. Twenty-four members were present, including nine foreign missionaries, seven native pastors, seven native elders, and one foreign elder, representing the three presbyteries of Canton. Two other presbyteries were constituted. The churches number eleven, the communicants more than six hundred. The proceedings were conducted in four dialects or languages. The reports from this synod do not appear on the statistical table.

STATISTICS OF THE PRESBYTERIAN CHURCH, FOR THE YEAR ENDING MAY, 1870.

The number of candidates for the ministry is 541; of licentiates, 388; the total number of baptisms was 26,598; Sunday-school memberships, 448,857.

The contributions to the Boards, etc., so far as reported, were as follows: Home missions, \$860,274; foreign missions, \$328,847; education, \$246,898; publication, \$42,040; church erection, \$210,939; ministerial relief, \$53,832; freedmen, \$51,845; General Assembly, \$32,645; Congregational, \$6,416,165; Miscellaneous, \$690,686. Total, \$3,440,121.

The following resolutions were offered respecting a union between the Northern and Southern Presbyterians:

Whereas, This General Assembly believing that the interests of the kingdom of our Lord throughout our entire country will be gradually promoted by healing all unnecessary divisions; and

Whereas, The General Assembly desires the speedy establishment of cordial fraternal relations with the body known as the "Southern Presbyterian Church," upon terms of mutual confidence, respect, and Christian honor and love; and

Whereas, We believe that the terms of reunion be-

tween the two branches of the Presbyterian Church at the North, now so happily consummated, present an auspicious opportunity for the adjustment of such relations; therefore, be it

Resolved, That a committee of five ministers and four elders be appointed by this Assembly to confer with a similar committee, if it shall be appointed by the Assembly now in session in the city of Louisville, in respect to opening a friendly correspondence between the Northern and Southern Presbyterian Churches, and that the result of such conference be reported to the General Assembly of 1871.

Resolved, That, with a view to the furtherance of the object contemplated in the appointment of said committee, this Assembly hereby reaffirms the "Concurrent Declaration" of the two Assemblies which met in the city of New York last year, namely: "That no rule or precedent which does not stand approved by both bodies shall be of any authority in the reunited body, except in so far as such rule or precedent may affect the rights of property founded thereon."

Resolved, That one minister and one elder of this committee, appointed by this Assembly, be designated as delegates to convey to the Assembly now in session at Louisville a copy of these resolutions, with our Christian salutation.

The committee appointed to raise the memorial contribution of \$5,000,000 among the members of this Church proposed a subscription for \$1,000,000 free-will offerings of ten cents each week for fifty weeks. The institutions designated by the General Assembly to receive aid are, theological seminaries, colleges, and chartered schools; literary institutions for the raising of a native Gospel ministry in heathen lands; church buildings and parsonages; hospitals and orphan asylums; institutions for the education and evangelization of the freedmen; the establishment of a Permanent Sustentation Fund.

II. PRESBYTERIAN CHURCH IN THE UNITED STATES (SOUTH).—The General Assembly of the Southern Presbyterian Church met in Louisville, Ky., May 18th. The Rev. Drs. Backus and Van Dyke, and Mr. William E. Dodge, delegates from the Northern Presbyterian Church, presented the fraternal resolutions adopted by the General Assembly of that body, and addressed the assembly, stating that they came not to ask for reunion, not to ask for immediate correspondence, but to ask the appointment of a committee to meet a similar committee appointed by the Northern Assembly, and confer respecting various matters and questions of jurisdiction and property-rights between the two assemblies, and secure, if possible, the adjustment of all differences between the two bodies on a basis that shall be just and honorable to all parties, and worthy of Christian men. An answer was given, saying that the Southern Church does not approve of union with the Northern Church, because it is a total surrender of all fundamental doctrines, and embraces all shades of belief. The Southern Church is the only surviving heir of true, unfailing testimonies, and there are impassable barriers to official intercourse between the two Churches. The pastoral letter sent out to the churches by the General Assembly claimed that, whatever obstructions may be in

the way of fellowship, they were not created by the Southern Church, and that they could not allow themselves to be placed in a false position before the world.

The rival synods in Kentucky—that which adheres to the Northern General Assembly, and that which belongs to the Southern Church—appointed committees to consult and endeavor to agree upon some plan by which the disputed questions in reference to Centre College could be adjusted satisfactorily. The committees have had several friendly conferences, but have not been able to unite upon any basis of settlement.

The statistics of the Southern Presbyterian Church for the year ending April 1, 1870, were as follows: Synods, 11; presbyteries, 55; ministers, 840; churches, 1,469; candidates, 161; licentiates, 53; communicants, 82,014; baptisms, 5,084; Sunday-school scholars, 47,817; contributions: sustentation, \$49,002; foreign missions, \$23,269; education, \$34,209; publication, \$10,279; presbyterial purposes, \$12,247; congregational purposes, \$676,432; miscellaneous purposes, \$66,917. Total, \$872,855. Two hundred and six churches failed to report the number of their members.

III. UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The "narrative of the State of the Church" adopted by the General Assembly of this body, while it reports the Church flourishing in many respects, notes a decrease in the number of ministers. The net decrease of the year preceding the meeting of the General Assembly was ten. Fifteen died, and twelve were dismissed to other denominations. The subject of union with the Presbyterian Church has been under advisement, and favorably considered. Committees of conference upon the subject, representing the two bodies, were to meet at Pittsburg early in 1871.

The statistics for the year ending May, 1870, were as follows:

SYNODS.	Minist- ers.	Congre- gations.	Mission Stations	Communi- cants.
New York.....	96	96	6	12,967
First Synod of the West.....	83	182	6	14,333
Pittsburg.....	77	117	4	12,621
Second Synod of the West.....	69	96	1	7,769
Ohio.....	48	68	..	6,940
Illinois.....	88	88	9	6,530
Kansas.....	80	32	10	1,225
Iowa.....	51	76	12	4,667
Presbyteries not in Synods..	17	9	13	755
Total.....	553	739	58	60,807

The number of licentiates is 86; students, 55; baptisms, 4,498; officers and teachers in Sunday-schools, 6,820; scholars, 48,227; contributions for home missions, \$25,999; foreign missions, \$40,079; freedmen's missions, \$10,066; education, \$6,080; publications, \$2,089; church extension, \$14,806; Assembly's fund, \$1,605; aged ministers' fund, \$1,805; salary by congregations, \$884,816; congregational purposes, \$264,155; salary by Assembly, \$23,731; general contributions, \$76,176. Total, \$812,558.

Missions to Freedmen.—Stations, 4; missionaries and teachers, 21; pupils in Sunday and other schools, 2,420; communicants, 122; appropriations for 1870-'71, \$13,500. *Foreign Missions.*—General missions, 5; mission stations, 19; missionaries and helpers in active service, 26; in this country, 26; churches, 12; communicants, 281; mission-schools, 19; pupils, 1,619; native teachers and catechists, 63; native ordained ministers, 2; native licentiates, 2; preparing for the ministry, 13; appropriations for the year, \$63,500. *Theological Seminaries,* 5; students, 85; colleges, 2; students, 625; value of theological seminaries and colleges, \$420,000; presbyterial schools or academies, 2.

IV. SYNOD OF THE REFORMED PRESBYTERIAN CHURCH.—The annual meeting of this body was held at New York, and closed on the 4th of June. The Synod appointed a committee to attend the Anti-sect Society Convention at Cincinnati. The following are the statistics of the Synod:

PRESBYTERIES.	Congregations.	Ministers.	Communicants.	Sunday-School Scholars.
New York.....	17	8	2,299	1,722
Philadelphia.....	5	4	716	No report.
Rochester.....	6	6	529	No report.
Pittsburg.....	18	22	1,933	349
Lakes.....	11	9	728	265
Ohio.....	8	5	500	No report.
Illinois.....	9	10	930	No report.
Iowa.....	18	12	942	No report.
Total.....	87	86	8,577	2,306

The number of baptisms was 479. The contributions were: for foreign missions, \$7,965.10; home missions, \$4,146.09; freedmen's mission, \$2,359.21; theological seminary, \$3,062.80; church buildings, \$28,355.09; pastors' salaries, \$59,442.66; all other purposes, \$40,311.61.

V. GENERAL SYNOD OF THE REFORMED PRESBYTERIAN CHURCH.—This body met at Cincinnati in May. On the 25th of that month it resolved that union with the United Presbyterian Church is not desirable, and rejected the terms agreed upon by the committees appointed to confer on the subject. The vote was 27 for rejection, 10 for the report. The list of ministers and licentiates of this Church numbers 41.

VI. ASSOCIATE REFORMED SYNOD OF THE SOUTH.—The organ of this body (the *Associate Reformed Presbyterian*, Due West, South Carolina) reports, for 1870, 57 ministers, 7 probationers, and 6 theological students. It shows by comparative tables that the period of greatest and most regular increase in the number of ministers was from 1842 to 1852. Since 1863 (when there were 67 ministers, 6 probationers, and 4 students) there has been a decided falling off. Since 1842, 17 of the ministers have died, and 26 have left this church to join other churches, of whom 22 became connected with the Old School (probably Southern) Presbyterians, and 4 joined the Uni-

ted Presbyterians, North. Except the members of the Kentucky Presbytery, only one of the 26 ministers who left this church took his congregation with him.

VII. CUMBERLAND PRESBYTERIAN CHURCH.—The 100 presbyteries of this Church report 1,116 ministers, 195 licentiates, and 222 candidates are reported from about two-thirds of the presbyteries. Fifty-five presbyteries report 43,414 communicants, 21 presbyteries report 451 congregations. It is believed that full returns from all the presbyteries would show the number of communicants to be about 80,000. There are 25 synods. The number of churches is about 2,000. The year ending with the meeting of the General Assembly of 1870 was one of great prosperity with this denomination. It is estimated that about 10,000 communicants were added.

VIII. PRESBYTERIANS IN CANADA.—A committee of conference of the Presbyterian Churches of British America met at Montreal, Canada, September 28th, to consider the expediency and practicability of union. The Synod of the Church of Scotland in Ontario and Quebec, the Synod of the same church in Nova Scotia, New Brunswick, Prince Edward's Island, and Newfoundland, the General Assembly of the Canada Presbyterian Church, and the Synod of the Presbyterian Church of the lower Provinces, were represented by delegates. The committees of the various churches first conferred separately, and each came to the conclusion that there is no obstacle to union in principle, and that union is expedient and practicable. The discussions afterward in joint committee were cordial and pleasant. A paper recommending union, with a proposed basis, was adopted for circulation among the churches. The two most important articles of the basis were: 1. That the Holy Scriptures of the Old and New Testaments, being the infallible word of God, are the supreme standard of faith and manners. 2. That the Westminster Confession of Faith shall be the subordinate standard of this Church, it being understood—1. That full liberty of opinion in regard to the power and duty of the civil magistrate in matters of religion, as set forth in said Confession, be allowed; and 2. That the use of the Shorter Catechism be enjoined as an authoritative exposition of doctrine for the instruction of the people.

IX. SCOTCH PRESBYTERIANS.—The Presbyterian Churches of Scotland have been agitated on the subject of union. A proposition by Dr. Candlish, that the union of unestablished bodies should be effected on the basis of the standard, leaving the dogma about the relation of the civil magistrate to religion an open question, excited alarm on the part of the free church opposed to union, and led to the organization of a defensive association. The opposition to the union was active and energetic, and has succeeded in interposing obstacles which as yet prove effectual. The various

presbyteries which have voted on the subject have, however, returned favorable responses. The churches concerned in the movement are the Free Church, with nine hundred congregations; the United Presbyterian Church, with six hundred congregations; and the smaller body of the Reformed Presbyterians. The leaders of the Established Church have been interested observers of these proceedings, and have labored to win the Free Church to effect a union with them, or, if this failed, to make their own church a party in a union of all the Presbyterian Churches.

X. IRISH PRESBYTERIANS.—The Irish Presbyterians have been arranging the financial measures which became necessary for the support of their church after the withdrawal of the *Regium Donum*, under the provisions of the church-disestablishment act. The General Assembly were agreed upon a plan of commutation, which by the terms of the Government would secure every minister in the church forty pounds sterling during each year of his life. A sustentation fund was also established, and the liberality of the church was appealed to, to place it upon a secure foundation. This church has 126,000 members, with an annual income from the British Government of £94,000. It reports 1,094 Sunday-schools, 8,050 teachers, and 16,850 scholars.

PRÉVOST-PARADOL, LUCIEN ANATOLE, a French Republican publicist and diplomatist, born at Paris, August 8, 1829; died by his own hand during an attack of temporary insanity, in Washington, D. C., July 20, 1870. His father was an officer in the French Army, and his mother, Mlle. Paradol, an actress of distinction in the Classical Theatre of the Rue Richelieu.

The son studied at the Bourbon College, gaining many prizes, and entered the *École Normale*, where he remained until 1851, obtaining the prize for eloquence given by the Académie Française for his "Éloge de Bernardine St.-Pierre." In August, 1855, he took the degree of Doctor in Letters, was appointed to the chair of French Literature by the Faculty of Aix, and in 1856 became one of the editors of the *Journal des Débats*. In 1860 he was attached for some months to the *Presse*, but very soon returned to the *Débats*. In the capacity of a journalist he had the peculiar art of suggestiveness, of carefully wording his views so that, while implying a good deal, the censors of the press, ever watchful for any thing like treason against the ruling power, were unable to find tangible evidence warranting conviction. He managed to keep just within the prescribed bounds, though never losing sight of the great needs of France—free speech and free institutions. Unable to find specific occasion for overt act, the journal finally received a private intimation from the Government that the *premier-Paris* of that paper must no longer be contributed by M. Prévost-Paradol. In June, 1860, he was fined

1,000 francs and suffered a month's imprisonment for the publication of a political pamphlet entitled "Les Anciens Partis." Subsequently he attached himself to the *Courrier du Dimanche*, and here again developed his talent for smooth, keen sarcasm, and delighted its readers while exasperating the Government officials, who found themselves wounded by a weapon whose delicate edge and rapid play rendered it perceptible only by its effects. The paper for many years vibrated between warnings, suspensions, and fitful issues, and finally, in August, 1866, was suppressed. Twice during his editorial career, in 1863 and 1869, M. Prévost-Paradol became a candidate for the suffrages of the electors of Paris and its vicinity, to a seat in the Corps Législatif, but both times he was signally unsuccessful, the whole power of the Government being arrayed against him, while the Republicans regarded him as not sufficiently advanced to suit their views. Disheartened by these failures, he declared in his journal that he should never again attempt the defence of universal suffrage. When, in January, 1870, Louis Napoleon, driven to stake all upon his last card, gave to France the shadow instead of the substance of a liberal and constitutional government, and called the whilom Republican, Ollivier, to the premiership, he sought to placate still further the Liberals by drawing away others of their able men in the toils of official station. He made overtures, through Ollivier, to his old enemy Prévost-Paradol, to represent his Government in a diplomatic capacity, and so adroitly was the bait offered by the Premier, that the Liberal journalist, at first surprised, at length listened with but faint disapproval to the urgent entreaties of his old friend, who insisted that he might by taking office further the cause of liberal government, and at last consented somewhat reluctantly to become French ambassador to the United States. When his nomination was announced, his Liberal friends did not at first believe that he would accept the appointment at the hands of a government which he had for years lashed so unsparringly, and, when at last they were convinced that he had consented, they denounced him with great and undeserved bitterness. That the step was an unwise one there is no doubt, and none subsequently was more conscious of it than himself; but that he entered upon it from any unworthy motives, there is not a particle of evidence. His nature was an intensely sensitive one, and he, no doubt, honestly believed that he might be of service to France by representing her at the capital of a nation for whom he had manifested the strongest and heartiest sympathy during its recent gigantic struggle for a national existence. Yet he was seriously depressed by the attacks of his old friends. He left Brest, France, on the 2d of July, and at that time there were no intimations of the coming storm of war, which was so soon to

end in the overthrow of the imperial dynasty. But, two days after his arrival in New York, war was declared with Germany. From this moment a gloom which he could not shake off settled upon his spirit, he reproached himself that he had accepted office, felt that he was unfitted for the great responsibilities which the war would throw upon him, and at length in the early morning of the 20th of July, in a fit of temporary insanity, put an end to his existence.

M. Prévost-Paradol was elected in April, 1865, a member of the French Academy as a successor of M. Ampère, and was publicly received by M. Guizot in March, 1866. Besides the books to which we have already referred, his published works were: "Review of Universal History," 1854, and many editions since; "The Place of the Family in Education," 1857, a work crowned by the Academy of Moral Sciences; "On Liberty of Worship in France," 1858; "Essays on Politics and Literature," three series, 1859, 1862, and 1863; "On Parliamentary Government; the Decree of the 24th of November," 1860; "Two Letters on the Reform of the Penal Code," 1862; "Elisabeth and Henry IV.," 1862; "Some Pages of Contemporaneous History," four series, 1862, 1864, and 1866; "Studies on the French Moralists," 1864; "New France," 1868, a work which attracted great attention. He was also one of the Committee of Five, appointed by the French Academy in 1867, to superintend a new edition of the "Historical Dictionary of the French Language."

PRIM, DON JUAN, Count de Reus, Marquis de los Castillejos, a Spanish general, statesman, diplomatist, and revolutionist, Marshal and Grandee of Spain, Captain-General of the Armies of Spain, Minister of War, and President of the Council, born at Reus (Catalonia), December 6, 1814; assassinated in Madrid, December 31, 1870. He entered the army at an early age, and made his first campaign as an officer in the civil war which followed the accession of Isabella II. to the throne of Spain in 1833. He supported the cause of the Queen-mother, Maria Christina, at that time Regent, and was in 1837 promoted to the rank of colonel. When she fled from Spain he associated himself with the party of *Progresistas* in their opposition to the government of Espartero, and, having been accused of complicity in the insurrection of Saragossa in 1842, he took refuge in France, where he assisted the Queen-mother in her intrigues to bring about a restoration. In 1843 he was elected to the Cortes from Barcelona, and in May of the same year headed an insurrection in his native city of Reus, whence he was speedily driven by one of Espartero's officers, and took refuge in Barcelona. The revolution of 1843 resulting in the overthrow of Espartero, placed the Queen-mother in power, and Prim was rewarded with the rank of general, the title of Count de Reus, and the post of Governor of

Madrid. This good fortune was, however, of short duration. Having undertaken to suppress an insurrection in Barcelona, he employed his troops in such a manner as to keep Catalonia in revolt for an entire year. This rendered him unpopular, and he was disgraced by the Queen, who was adverse to him on account of his liberal sentiments. In October of the same year he was tried for high-treason, and complicity in an attempt to assassinate Narvaez. He vindicated himself successfully from the latter accusation, but was found guilty of treason, and was sentenced to six years' imprisonment. In six months, however, he was released through the influence of his mother, and, for the nine years following, remained aloof from public life. In 1853, on the outbreak of the Russo-Turkish War, he availed himself of it to regain his former notoriety. He joined the Ottoman army, on the Danube, and rendered valuable service at Ottenizta, and at the vigorous defence of Silistria. He returned the following year to Spain, and published an account of his military experience in the East, together with an historical essay on the Turkish Empire.

Prim now returned to political life, and served in the Cortes until the hostilities against Morocco, in 1859, called him to the field. In this war he was at first in command of a division of reserved troops, but subsequently performed a brilliant part in various battles, and notably at Marabout. He received for his services the title of Marquis de los Castillejos, and was made Grandee of Spain in January, 1861. His next important act was to join, in 1862, the French and English in Mexico, at the head of a division of Spanish troops. However, on discovering Napoleon's designs, he refused, on his own responsibility, to cooperate in the invasion, reëmbarked his troops at Vera Cruz, and transferred them to Cuba. Thence he came to this country, visited the Army of the Potomac, and sailed from New York in July for Spain, where his conduct in Mexico was approved by the Government and Cortes. Prim was soon again involved in revolutionary movements, and toward the close of 1865 had organized a formidable conspiracy, having as one of its objects the union of Spain and Portugal, under the Portuguese king. He gave the signal for revolt on January 8, 1866, and was sustained by many regiments in Aragon and Catalonia. The Government, on its part, took active measures against the insurgents, and Prim, accompanied by about fifty officers, with some hundred soldiers, was forced to fly into Portugal. He addressed from Lisbon an appeal to the Spaniards, and was, in consequence, compelled to leave the country. He went to London, but the following year he returned to Spain to take part in another revolt. This movement proved abortive, and Prim, with the principal leaders of the conspiracy, had to return to England. Fortune soon turned in favor of the veteran conspirator. The discon-

tent with Queen Isabella's Government culminated in the revolution of September 17, 1868, and two days later Prim and Serrano were at Cadiz, ready to sustain the insurgents. The scenes of this memorable uprising followed in rapid succession; the defection of the royal troops became general, and Serrano entered Madrid on the 8d of October, and was received with enthusiasm. Another ovation awaited Prim. On the 7th he entered the city escorted by deputations from all parts, together with the troops, sailors, and civic bodies. The crowds in the streets were immense, and it took upward of four hours for the procession to pass through the streets. General Prim made a speech from the balcony of the office of the ministry, and laid stress upon the intimate unity existing between him and Serrano, and urged the necessity of union and tranquillity. At the conclusion of the speech, General Prim embraced Serrano, exclaiming aloud, "Down with the Bourbons!" This was received by all the people with unanimous applause. In the evening Madrid was magnificently illuminated.

Immediately after the success of the revolution a Central Junta was elected, which called upon Marshal Serrano to organize a ministry. General Prim was made Minister of War, and was the leading character in the negotiations for recognition abroad, and the arduous duties attending the establishment of order at home. Every important occurrence in the political history of Spain since the triumph of the revolution might be recited as part of General Prim's career. His authority was virtually absolute in all the important affairs which devolved upon the new Government. Revolts took place in December, 1868, in Cadiz and Malaga, but were speedily suppressed by the Government troops. On the 18th of that month Spain elected members of the Cortes by universal suffrage, and soon all claimants to the Spanish crown were earnestly assuring the Spaniards of their readiness to accept it. The revolt in Cuba, which immediately followed the triumph of the revolution at home, proved also a source of embarrassment to the Minister of War and his associates. The restoration of order at home, however, proceeded successfully, and on February 18, 1869, the Constituent Cortes assembled. It adopted the Constitution now in force, by which, with Prim's earnest acquiescence, an hereditary monarchy was declared to be the permanent form of government. This was followed by Republican demonstrations, and a plot for the assassination of Prim and Serrano. The suppression of the domestic disturbances and negotiations for a king occupied the Council of Ministers the greater part of 1869. In September, General Prim had an interview with Napoleon III. The claims of various candidates for the throne continued to be the leading subject of interest at the commencement of the past year. General Prim, who was regarded as dictator in

the matter, at length gave encouragement to the candidature of Prince Leopold of Hohenzollern. This step, which precipitated the Franco-German War, failed by the withdrawal of the prince, and Spain became tranquil and passive in presence of the remarkable events occurring around her. Prim continued to display great energy in sending reinforcements to Cuba, and steadily opposed all propositions involving the surrender of that island. In the autumn of 1870 he succeeded in securing the acceptance by the Duke of Aosta of the crown of Spain, and procured the approval of the Cortes for that measure. But the good fortune which had attended him through so many dangers failed him. While proceeding from the Cortes to his residence, some individuals in the Calle Alcalá (subsequently ascertained to have been bravos or assassins hired by the Carlist leaders) fired into his carriage, wounding both the general and his adjutant. Seven of the eight balls embedded in his shoulder were extracted, and he suffered the loss of two fingers. But his nervous system proved unequal to the shock, and his death speedily ensued.

PRUSSIA,* a kingdom in Europe. King, William I., born March 22, 1797; succeeded his brother Frederick William IV., on February 2, 1861. Heir-apparent, Frederick William, born October 18, 1881. The ministry, in 1870, was composed as follows: Count Otto von Bismarck-Schönhausen, Presidency and Foreign Affairs (appointed in 1862); Camphausen, Finance (1869); General von Roon, War (1859) and Navy (1861); Von Itzenplitz, Commerce and Public Works (1862); Dr. von Mithler, Worship, Instruction, and Medical Affairs (1862); Dr. Leonhardt, Justice (1867); Von Selchow, Agriculture (1862); F. Count zu Eulenburg, Interior (1862). Ambassador of the United States at Berlin, George Bancroft (1867); Prussian ambassador in Washington, Baron von Gerolt. Area, 185,806 square miles; population, in 1867, 24,039,668.

According to the budget for the year 1870, the revenue consisted of:

	Thaler.
Receipts from State domains.....	9,590,639
" " forests.....	13,905,400
Direct taxes.....	42,882,000
Indirect taxes.....	18,905,040
Lottery.....	1,329,500
Institute of Maritime Commerce.....	700,000
Bank of Prussia.....	1,400,000

Surplus revenue.....	1,863,009
From which must be deducted for extraordi- nary expenditures not otherwise provided for.....	1,718,009
Net surplus revenue.....	150,000

The gross proceeds of taxes collected by the North-German Confederation, the net propor-

tion of which for Prussia figures in the budget of revenue under the head of indirect taxes, amounted to 43,347,328 thalers, as follows: Import duties, 17,680,840 thalers; tax on beet-sugar, 7,228,660 thalers; salt-tax, 5,722,510 thalers; liquor-tax, 10,134,040 thalers; malt-tax, 1,929,500 thalers; tobacco-tax, 104,578 thalers; stamp-duty, 547,200 thalers. The amount expended for interest on the railroad debt, and for amortization of the same, consisted of 10,228,511 thalers; expenditure for administration of railroads, 21,891,900 thalers; total, 32,115,411 thalers. The contribution to the expenditures of the North-German Confederation amounted to 18,851,463 thalers; payment of pensions, 4,348,657 thalers, and amount of postage on official documents, 719,565 thalers. The interest-bearing public debt amounted to 431,568,292 thalers; the non-interest-bearing debt to 20,953,932 thalers; making a total of 452,517,224 thalers. The amount required for interest and commission was estimated at 17,422,821 thalers; for amortization, 8,666,141 thalers; for rents, 435,721 thalers; for expenditure on the non-interest-bearing debt, 6,000 thalers; for administration, 117,916 thalers; for interest and amortization of the Hohenzollern debt, 11,439 thalers; total amount required, 26,660,089 thalers.

(For the statistics of the army and navy, merchant-navy, and commerce, see GERMANY.)

The movement of shipping in the various Prussian ports was, 1869, as follows:

	ENTERED.		CLEARED.	
	Vessels with cargo.	Vessels in ballast.	Vessels with cargo.	Vessels in ballast.
Number of vessels....	34,974 of 1,858,857 lasts.	12,806 of 341,250 lasts.	23,792 of 1,162,920 lasts.	17,829 of 535,941 lasts.
Under Prussian flag....	25,868 of 695,687 "	10,223 of 165,535 "	24,422 of 603,168 "	12,866 of 265,945 "
Steamers.....	3,893 of 394,847 "	628 of 98,324 "	3,495 of 426,961 "	458 of 55,678 "

Total number of vessels entered, 48,782, together of 1,700,107 lasts; total number of vessels cleared, 50,121, together of 1,698,861 lasts. One last = 4,000 pounds.

During the Peace Conference at Vienna, on October 30, 1864, the grand-duchy of Lauenburg was ceded by Denmark to Austria and Prussia. By the Treaty of Gastein, in 1865, the grand-duchy was transferred to Prussia, in consideration of a sum of indemnification paid to Austria. The King of Prussia took possession of the country on September 15, 1865, assuming the title of Duke of Lauenburg. Area, 453 square miles; population, in 1867, 49,978. Revenue, according to the budget for 1870, 875,000 thalers; expenditures, 384,000 thalers.

During the regular session of the Diet, in January and February, the financial question formed the principal point for discussion and deliberation. Considerable animosity was excited by the fact that the late Minister of Finance had charged the budget with an item of 720,000 thalers for interest on a loan which the Diet had authorized to be contracted in

five successive years in equal instalments, the annual interest on which would have amounted to 120,000 thalers. The minister, in order to meet pressing demands on the exchequer, had contracted the entire loan at once, thus creating a claim against the financial department of 600,000 thalers above the sum which had been authorized by the Diet. After a very excited debate on the question at issue, the Diet demanded an explanation of the unwarrantable act, when M. Camphausen, Minister of Finance and successor to M. Von der Heydt, was forced to admit that the regular course had been abandoned in this instance in order to meet the most pressing exigencies. When pressed to a final decision of the matter, the Diet rejected the proposition of the Government by an overwhelming majority. Meeting with similar proofs of a decided spirit of opposition, the Government at last submitted a proposition to adjourn. This was objected to by the upper branch of the Legislature, when the Government resorted to the extreme measure of closing the Diet, on the 12th of February. The closing speech from the throne contained

the remark that it had been the desire of the Government, at the opening of the session, to give additional security to the rather precarious condition of financial affairs, and to come to an understanding with the representatives of the nation concerning various important legislative reforms. The King thankfully acknowledged the readiness shown by both branches of the Diet to assist the Government in its aims by the sanction of the proposed law of consolidation, which, he felt assured, would offer increased facilities for a more rapid amortization of the public debt. The Government had succeeded in establishing an equilibrium between the revenue and expenditure in the budget for 1870, without being compelled to resort to onerous taxation. The King felt surprised and aggrieved, that the comprehensive administrative reforms which had been submitted to the Diet for consideration and approval, in the earlier part of the session, had not been brought to a satisfactory conclusion—the more so, as the wants of the country imperatively demanded those reforms, especially that of a change of the mortgage system. He said, in conclusion, that it was the intention of the Government to convene the Diet for an extraordinary session at an early day.

The opinion of the Government with regard to a summons of the Diet for an extra session appears to have undergone a material change, for it was finally decided to dissolve the Chambers and to order new elections, which were held on the 9th and 16th of November. Their result was as follows: 129 Conservatives, 86 Free Conservatives, 20 Old Liberals, 104 National Liberals, 18 Left Centre, 41 Fortschritt (party of progress), 19 Poles, 6 Particularists, 43 Catholics, and 22 undefined. This showed a trifling loss to the Fortschritt party and the Left Centre, while the Particularists had been completely defeated by their antagonists the National Liberals; a fact mainly attributable to the brighter prospects for a complete union of the German nation.

The first session of the new Diet was opened on December 14th, by Count Itzenplitz, Minister of Commerce, who, in the absence of the King and Count Bismarck, read a speech from the throne, acknowledging that the success of the war against France was principally due to the patriotism of the people, whose representatives he had the honor to welcome in the name of his august master. He promised that the Budget of 1871 should be submitted at the earliest moment possible, adding that the deliberations on legislative and administrative reforms, which had already been the subject for discussion in the last Diet, must of necessity be adjourned until more important subjects should have been dealt with. During a later session, the Minister of Finance showed a very favorable condition of the financial affairs of the state, which he attributed partly to the fact that it had been unnecessary to draw on the Treasury for the amortization of

the public debt; partly to the circumstance that the war had not created as serious disturbances in his particular branch of the government, as had been anticipated. The amount demanded for general political purposes was granted on the spot, together with several other items of the budget. In the course of the deliberations, it was shown that the Budget for 1870 would be highly satisfactory in its results, and that an equilibrium between the expenditure and revenue for 1871 could be safely anticipated.

Arrangements for the issue of a new loan of 100,000,000 thalers having been completed during the latter part of November, the plan was submitted to the consideration and approval of the Diet, which gave its unanimous consent. It was decided that of the loan of 100,000,000 thalers, 50,000,000 were to be at once issued at 5 per cent. The Prussian Government is bound to redeem the notes in five years; but it reserves to itself the right of gradually paying off the debt at an earlier date. Besides the ordinary thaler notes, some are issued at a pound sterling to suit the English market. The loan, instead of being taken up entirely by one banker, was divided among several houses, including the Seehandlung—a semi-official institution, which dates its origin from Frederick the Great. Thirty-four million thalers were allotted before December 21st, and 17,000,000 reserved for the same purchasers. The loan is issued to the public at 95, the subscribing bankers paying 92½. Before the end of December, four times the amount of the entire loan had been subscribed for, the greater portion in thaler bonds, and the remainder in sterling bonds.

Considerable excitement was caused by the arrest of Dr. Jacoby and several other prominent leaders of the Democratic party in Prussia, for their violent opposition against the continuance of the war, and the annexation of Alsace and Lorraine, to which they gave expression at a public meeting at Königsberg, on September 26th. They were arrested by order of General Vogel von Falkenstein, military governor of the Prussian provinces on the Baltic Sea, and brought to the fortress of Loetzeln for incarceration. Dr. Jacoby immediately protested against his arrest, and demanded his release in a letter addressed to Count Bismarck. But the latter not only refused to interfere in behalf of the prisoners, but wrote a letter of approval to General von Falkenstein with regard to his action. Subsequently, however, the Government took a different view of the wide-spread agitation and bad feeling created by these arrests, and King William personally communicated to General von Falkenstein his desire for the removal of all obstacles for the holding of public meetings, and for the non-enforcement of all penalties attached thereto by the provisos of martial law. He also ordered the immediate release of the prisoners already arrested for violating these laws.

PUBLIC DOCUMENTS. *Message of President GRANT at the commencement of the third session of the Forty-first Congress, December 5, 1870.*

To the Senate and House of Representatives :

A year of peace and general prosperity to this nation has passed since the last assembling of Congress. We have, through a kind Providence, been blessed with abundant crops, and have been spared from complications and war with foreign nations. In our midst, comparative harmony has been restored. It is to be regretted, however, that a free exercise of the elective franchise has, by violence and intimidation, been denied to citizens in exceptional cases in several of the States lately in rebellion, and the verdict of the people has thereby been reversed. The States of Virginia, Mississippi, and Texas, have been restored to representation in our national councils. Georgia, the only State now without representation, may confidently be expected to take her place there also at the beginning of the new year, and then, let us hope, will be completed the work of reconstruction. With an acquiescence on the part of the whole people in the national obligation to pay the public debt, created as the price of our union; the pensions to our disabled soldiers and sailors, and their widows and orphans; and in the changes to the Constitution which have been made necessary by a great rebellion, there is no reason why we should not advance in material prosperity and happiness as no other nation ever did, after so protracted and devastating a war.

Soon after the existing war broke out in Europe, the protection of the United States minister in Paris was invoked in favor of North Germans domiciled in French territory. Instructions were issued to grant the protection. This has been followed by an extension of American protection to citizens of Saxony, Hesse, and Saxe-Coburg-Gotha, Colombia, Portugal, Uruguay, the Dominican Republic, Ecuador, Chili, Paraguay, and Venezuela, in Paris. The charge was an onerous one, requiring constant and severe labor, as well as the exercise of patience, prudence, and good judgment. It has been performed to the entire satisfaction of this Government, and, as I am officially informed, equally so to the satisfaction of the Government of North Germany.

As soon as I learned that a republic had been proclaimed at Paris, and that the people of France had acquiesced in the change, the minister of the United States was directed by telegraph to recognize it, and to tender my congratulations and those of the people of the United States. The reestablishment, in France, of a system of government disconnected with the dynastic traditions of Europe, appeared to be a proper subject for the felicitations of Americans. Should the present struggle result in attaching the hearts of the French to our simpler forms of representative government, it will be a subject of still further satisfaction to our people. While we make no effort to impose our institutions upon the inhabitants of other countries, and while we adhere to our traditional neutrality in civil contests elsewhere, we cannot be indifferent to the spread of American political ideas in a great and highly-civilized country like France.

We were asked by the new government to use our good offices, jointly with those of European powers, in the interests of peace. Answer was made that the established policy and the true interests of the United States forbade them to interfere in European questions jointly with European powers. I ascertained informally and unofficially that the Government of North Germany was not then disposed to listen to such representations from any powers; and, though earnestly wishing to see the blessings of peace restored to the belligerents, with all of whom the United States are on terms of friendship, I declined on the part of this Government to take a step which

could only result in injury to our true interests, without advancing the object for which our intervention was invoked. Should the time come when the action of the United States can hasten the return of peace, by a single hour, that action will be heartily taken. I deemed it prudent, in view of the number of persons of German and French birth living in the United States, to issue, soon after official notice of a state of war had been received from both belligerents, a proclamation defining the duties of the United States as a neutral, and the obligations of persons residing within their territory to observe their laws and the laws of nations. This proclamation was followed by others, as circumstances seemed to call for them. The people, thus acquainted in advance with their duties and obligations, have assisted in preventing violations of the neutrality of the United States.

It is not understood that the condition of the insurrection in Cuba has materially changed since the close of the last session of Congress.

In an early stage of the contest the authorities of Spain inaugurated a system of arbitrary arrests, of close confinement, and of military trial and execution of persons suspected of complicity with the insurgents, and of summary embargo of their properties, and sequestration of their revenues by executive warrant. Such proceedings, so far as they affected the persons or property of citizens of the United States, were in violation of the provisions of the treaty of 1795, between the United States and Spain. Representations of injuries resulting to several persons claiming to be citizens of the United States, by reason of such violations, were made to the Spanish Government. From April, 1869, to June last, the Spanish minister at Washington had been clothed with limited power to aid in redressing such wrongs. That power was found to be withdrawn "in view," as it was said, "of the favorable situation in which the island of Cuba" then "was;" which, however, did not lead to a revocation or suspension of the extraordinary and arbitrary functions exercised by the executive power in Cuba, and we were obliged to make our complaints at Madrid.

In the negotiations thus opened and still pending there, the United States only claimed that, for the future, the rights secured to their citizens by treaty should be respected in Cuba, and that, as to the past, a joint tribunal should be established in the United States with full jurisdiction over all such claims. Before such an impartial tribunal each claimant would be required to prove his case. On the other hand, Spain would be at liberty to traverse every material fact, and thus complete equity would be done. A case which at one time threatened seriously to affect the relations between the United States and Spain has already been disposed of in this way. The claim of the owners of the Colonel Lloyd Aspinwall for the illegal seizure and detention of that vessel was referred to arbitration, by mutual consent, and has resulted in an award to the United States, for the owners, of the sum of \$19,702.50 in gold. Another and long-pending claim of like nature, that of the whale-ship Canada, has been disposed of by friendly arbitration during the present year. It was referred, by the joint consent of Brazil and the United States, to the decision of Sir Edward Thornton, her Britannic Majesty's minister at Washington, who kindly undertook the laborious task of examining the voluminous mass of correspondence and testimony submitted by the two governments; and awarded to the United States the sum of \$100,740.09 cents, in gold, which has since been paid by the Imperial Government.

These recent examples show that the mode which the United States have proposed to Spain for adjusting the pending claims is just and feasible, and that it may be agreed to by either nation without dishonor. It is to be hoped that this moderate demand may be acceded to by Spain without further delay.

Should the pending negotiations, unfortunately and unexpectedly, be without result, it will then become my duty to communicate that fact to Congress and invite its action on the subject.

The long-deferred peace conference between Spain and the allied South American republics has been inaugurated in Washington, under the auspices of the United States. Pursuant to the recommendation contained in the resolution of the House of Representatives of the 17th of December, 1866, the Executive department of the Government offered its friendly offices for the promotion of peace and harmony between Spain and the allied republics. Hesitations and obstacles occurred to the acceptance of the offer. Ultimately, however, a conference was arranged, and was opened in this city on the 29th of October last, at which I authorized the Secretary of State to preside. It was attended by the ministers of Spain, Peru, Chili, and Ecuador. In consequence of the absence of a representative from Bolivia, the conference was adjourned until a plenipotentiary from that republic could be secured, or other measures could be adopted toward compassing the objects.

The allied and other republics of Spanish origin on this continent may see in this fact a new proof of our sincere interest in their welfare; of our desire to see them blessed with good governments, capable of maintaining order, and of preserving their respective territorial integrity; and of our sincere wish to extend our own commercial and social relations with them. The time is not probably far distant when, in the natural course of events, the European political connection with this continent will cease. Our policy should be shaped, in view of this probability, so as to ally the commercial interests of the Spanish-American States more closely to our own, and thus give the United States all the preeminence and all the advantage which Mr. Monroe, Mr. Adams, and Mr. Clay contemplated when they proposed to join in the Congress of Panama.

During the last session of Congress a treaty for the annexation of the Republic of San Domingo to the United States failed to receive the requisite two-thirds vote of the Senate. I was thoroughly convinced then that the best interests of this country, commercially and materially, demanded its ratification. Time has only confirmed me in this view. I now firmly believe that, the moment that it is known that the United States have entirely abandoned the project of accepting as a part of its territory the Island of San Domingo, a free port will be negotiated for, by European nations, in the Bay of Samana. A large commercial city will spring up, to which we will be tributary without receiving corresponding benefits, and then will be seen the folly of our rejecting so great a prize. The Government of San Domingo has voluntarily sought this annexation. It is a weak power, numbering probably less than one hundred and twenty thousand souls, and yet possessing one of the richest territories under the sun, capable of supporting a population of ten millions of people in luxury. The people of San Domingo are not capable of maintaining themselves in their present condition, and must look for outside support. They yearn for the protection of our free institutions and laws, our progress and civilization. Shall we refuse them?

The acquisition of San Domingo is desirable because of its geographical position. It commands the entrance to the Caribbean Sea and the Isthmus transit of commerce. It possesses the richest soil, best and most capacious harbors, most salubrious climate, and the most valuable products of the forest, mine, and soil, of any of the West India islands. Its possession by us will in a few years build up a coastwise commerce of immense magnitude, which will go far toward restoring to us our lost merchant marine. It will give to us those articles which we consume so largely and do not produce, thus equalizing our exports and imports. In case of foreign war, it will give us command of all the islands referred to, and

thus prevent an enemy from ever again possessing himself of rendezvous upon our very coast. At present our coast-trade between the States bordering on the Atlantic and those bordering on the Gulf of Mexico is cut in two by the Bahamas and the Antilles. Twice we must, as it were, pass through foreign country to get by sea from Georgia to the west coast of Florida.

San Domingo, with a stable government, under which her immense resources can be developed, will give remunerative wages to tens of thousands of laborers not now upon the island. This labor will take advantage of every available means of transportation to abandon the adjacent islands and seek the blessings of freedom and its sequence—each inhabitant receiving the reward of his own labor. Porto Rico and Cuba will have to abolish slavery as a measure of self-preservation, to retain their laborers.

San Domingo will become a large consumer of the products of Northern farms and manufactories. The cheap rate at which her citizens can be furnished with food, tools, and machinery, will make it necessary that contiguous islands should have the same advantages in order to compete in the production of sugar, coffee, tobacco, tropical fruits, etc. This will open to us a still wider market for our products. The production of our own supply of these articles will cut off more than one hundred millions of our annual imports, besides largely increasing our exports. With such a picture, it is easy to see how our large debt abroad is ultimately to be extinguished. With a balance of trade against us (including interest on bonds held by foreigners, and money spent by our citizens travelling in foreign lands), equal to the entire yield of the precious metals in this country, it is not so easy to see how this result is to be otherwise accomplished. The acquisition of San Domingo is an adherence to the "Monroe doctrine," it is a measure of national protection; it is asserting our just claim to a controlling influence over the great commercial traffic soon to flow from west to east by way of the Isthmus of Darien; it is to build up our merchant marine; it is to furnish new markets for the products of our farms, shops, and manufactories; it is to make slavery insupportable in Cuba and Porto Rico at once, and ultimately so in Brazil; it is to settle the unhappy condition of Cuba, and end an exterminating conflict; it is to provide honest means of paying our honest debts without overtaxing the people; it is to furnish our citizens with the necessities of every-day life at cheaper rates than ever before; and it is, in fine, a rapid stride toward that greatness which the intelligence, industry, and enterprise of the citizens of the United States entitle this country to assume among nations.

In view of the importance of this question, I earnestly urge upon Congress early action, expressive of its views as to the best means of acquiring San Domingo. My suggestion is that, by joint resolution of the two Houses of Congress, the Executive be authorized to appoint a commission to negotiate a treaty with the authorities of San Domingo for the acquisition of that island, and that an appropriation be made to defray the expenses of such commission. The question may then be determined either by the action of the Senate upon the treaty or the joint action of the two Houses of Congress upon a resolution of annexation, as in the case of the acquisition of Texas. So convinced am I of the advantages to flow from the acquisition of San Domingo, and of the great disadvantages, I might almost say calamities, to flow from non-acquisition, that I believe the subject has only to be investigated to be approved.

It is to be regretted that our representations, in regard to the injurious effects, especially upon the revenue of the United States, of the policy of the Mexican Government in exempting from import duties a large tract of its territory on our borders, have not only been fruitless, but that it is even proposed in that country to extend the limits within which

the privilege adverted to has hitherto been enjoyed. The expediency of taking into your serious consideration proper measures for countervailing the policy referred to will, it is presumed, engage your earnest attention.

It is the obvious interest, especially of neighboring nations, to provide against impunity to those who may have committed high crimes within their borders, and who may have sought refuge abroad. For this purpose extradition treaties have been concluded with several of the Central American republics, and others are in progress.

The sense of Congress is desired, as early as may be convenient, upon the proceedings of the commission on claims against Venezuela, as communicated in my messages of March 16, 1869, March 1, 1870, and March 31, 1870. It has not been deemed advisable to distribute any of the money which has been received from that Government until Congress shall have acted on the subject.

The massacres of French and Russian residents at Tien-tsin, under circumstances of great barbarity, were supposed by some to have been premeditated, and to indicate a purpose among the populace to exterminate foreigners in the Chinese Empire. The evidence fails to establish such a supposition, but shows a complicity between the local authorities and the mob. The Government at Peking, however, seems to have been disposed to fulfil its treaty obligations so far as it was able to do so. Unfortunately, the news of the war between the German States and France reached China soon after the massacre. It would appear that the popular mind became possessed with the idea that this contest, extended to Chinese waters, would neutralize the Christian influence and power, and that the time was coming when the superstitious masses might expel all foreigners and restore Mandarin influence. Anticipating trouble from this cause, I invited France and North Germany to make an authorized suspension of hostilities in the East (where they were temporarily suspended by act of the commanders), and to act together for the future protection, in China, of the lives and properties of Americans and Europeans.

Since the adjournment of Congress, the ratifications of the treaty with Great Britain, for abolishing the mixed courts for the suppression of the slave-trade, have been exchanged. It is believed that the slave-trade is now confined to the eastern coast of Africa, whence the slaves are taken to Arabian markets.

The ratifications of the naturalization convention between Great Britain and the United States have also been exchanged during the recess; and thus a long-standing dispute between the two Governments has been settled, in accordance with the principles always contended for by the United States.

In April last, while engaged in locating a military reservation near Pembina, a corps of engineers discovered that the commonly-received boundary-line between the United States and the British possessions, at that place, is about forty-seven hundred feet south of the true position of the 49th parallel, and that the line, when run on what is now supposed to be the true position of that parallel, would leave the fort of the Hudson's Bay Company, at Pembina, within the territory of the United States. This information being communicated to the British Government, I was requested to consent, and did consent that the British occupation of the fort of the Hudson's Bay Company should continue for the present. I deem it important, however, that this part of the boundary-line should be definitely fixed by a joint commission of the two Governments, and I submit herewith estimates of the expense of such a commission on the part of the United States, and recommend that an appropriation be made for that purpose. The land boundary has already been fixed and marked from the summit of the Rocky Mountains to the Georgian Bay. It should now be, in like manner, marked from the Lake of the Woods to the summit of the Rocky Mountains.

I regret to say that no conclusion has been reached for the adjustment of the claims against Great Britain growing out of the course adopted by that Government during the rebellion. The Cabinet of London, so far as its views have been expressed, does not appear to be willing to concede that her Majesty's Government was guilty of any negligence, or did, or permitted any act, during the war, by which the United States has just cause of complaint. Our firm and unalterable convictions are directly the reverse. I, therefore, recommend to Congress to authorize the appointment of a commission to take proof of the amounts and the ownership of these several claims, on notice to the representative of her Majesty at Washington, and that authority be given for the settlement of claims by the United States, so that the Government shall have the ownership of the private claims, as well as the responsible control of all the demands against Great Britain.

It cannot be necessary to add that, whenever her Majesty's Government shall entertain a desire for a full and friendly adjustment of these claims, the United States will enter upon their consideration with an earnest desire for a conclusion consistent with the honor and dignity of both nations.

The course pursued by the Canadian authorities toward the fishermen of the United States during the past season has not been marked by a friendly feeling. By the first article of the Convention of 1818 between Great Britain and the United States, it was agreed that the inhabitants of the United States should have forever in common with British subjects the right of taking fish in certain waters therein defined. In the waters not included in the limits named in the convention (within three miles of parts of the British coast) it has been the custom for many years to give to intruding fishermen of the United States a reasonable warning of their violation of the technical rights of Great Britain. The Imperial Government is understood to have delegated the whole, or a share of its jurisdiction or control of these inshore fishing-grounds, to the colonial authorities, known as the Dominion of Canada, and this semi-independent but irresponsible agent has exercised its delegated powers in an unfriendly way. Vessels have been seized without notice or warning, in violation of the custom previously prevailing, and have been taken into the colonial ports, their voyages broken up, and the vessels condemned. There is reason to believe that this unfriendly and vexatious treatment was designed to bear harshly upon the hardy fishermen of the United States, with a view to political effect upon this Government. The statutes of the Dominion of Canada assume a still broader and more untenable jurisdiction over the vessels of the United States. They authorize officers or persons to bring vessels, hovering within three marine miles of any of the coasts, bays, creeks, or harbors of Canada, into port, to search the cargo, to examine the master, on oath, touching the cargo and voyage, and to inflict upon him a heavy pecuniary penalty if true answers are not given; and if such a vessel is found "preparing to fish," within three marine miles of any of such coasts, bays, creeks, or harbors, without a license, or after the expiration of the period named in the last license granted to it, they provide that the vessel, with her tackle, etc., etc., shall be forfeited. It is not known that any condemnations have been made under this statute. Should the authorities of Canada attempt to enforce it, it will become my duty to take such steps as may be necessary to protect the rights of the citizens of the United States.

It has been claimed by her Majesty's officers that the fishing-vessels of the United States have no right to enter the open ports of the British possessions in North America, except for the purposes of shelter and repairing damages, of purchasing wood, and obtaining water; that they have no right to enter at the British custom-houses, or to trade there except in the purchase of wood and water; and that they must depart within twenty-four hours after notice to leave.

It is not known that any seizure of a fishing-vessel carrying the flag of the United States has been made under this claim. So far as the claim is founded on an alleged construction of the Convention of 1818, it cannot be acquiesced in by the United States. It is hoped that it will not be insisted on by her Majesty's Government.

During the conferences which preceded the negotiation of the Convention of 1818 the British commissioners proposed to expressly exclude the fishermen of the United States from "the privilege of carrying on trade with any of his Britannic Majesty's subjects residing within the limits assigned for their use," and also that it should not be "lawful for the vessels of the United States engaged in said fishery to have on board any goods, wares, or merchandise whatever, except such as may be necessary for the prosecution of their voyages to and from the said fishing-grounds. And any vessel of the United States which shall contravene this regulation may be seized, condemned, and confiscated, with her cargo."

This proposition, which is identical with the construction now put upon the language of the convention, was emphatically rejected by the American commissioners, and thereupon was abandoned by the British plenipotentiaries, and Article I., as it stands in the convention, was substituted.

If, however, it be said that this claim is founded on provincial or colonial statutes and not upon the convention, this Government cannot but regard them as unfriendly and in contravention of the spirit, if not of the letter of the treaty, for the faithful execution of which the Imperial Government is alone responsible.

Anticipating that an attempt may possibly be made by the Canadian authorities in the coming season to repeat their unneighborly acts toward our fishermen, I recommend you to confer upon the Executive the power to suspend by proclamation the operation of the laws authorizing the transit of goods, wares, and merchandise in bond, across the territory of the United States to Canada; and further, should such an extreme measure become necessary, to suspend the operation of any laws whereby the vessels of the Dominion of Canada are permitted to enter the waters of the United States.

A like unfriendly disposition has been manifested on the part of Canada in the maintenance of a claim of right to exclude the citizens of the United States from the navigation of the St. Lawrence. This river constitutes a natural outlet to the ocean for eight States, with an aggregate population of about 17,600,000 inhabitants, and with an aggregate tonnage of 681,867 tons upon the waters which discharge into it. The foreign commerce of our ports on these waters is open to British competition, and the major part of it is done on British bottoms.

If the American seamen be excluded from this natural avenue to the ocean, the monopoly of the direct commerce of the lake ports with the Atlantic would be in foreign hands, their vessels on transatlantic voyages having an access to our lake ports, which would be denied to American vessels on similar voyages. To state such a proposition is to refute its justice.

During the Administration of John Quincy Adams, Mr. Clay unanswerably demonstrated the natural right of the citizens of the United States to the navigation of this river, claiming that the act of the Congress of Vienna, in opening the Rhine and other rivers to all nations, showed the judgment of European jurists and statesmen, that the inhabitants of a country, through which a navigable river passes, have a natural right to enjoy the navigation of that river to and into the sea, even though passing through the territories of another power. This right does not exclude the coequal right of the sovereign, possessing the territory through which the river debouches into the sea, to make such regulations relative to the police of the navigation as may be reasonably necessary,

but those regulations should be framed in a liberal spirit of comity, and should not impose needless burdens upon the commerce which has the right of transit. It has been found, in practice, more advantageous to arrange these regulations by mutual agreement. The United States are ready to make any reasonable arrangements as to the police of the St. Lawrence which may be suggested by Great Britain.

If the claim made by Mr. Clay was just when the population of the States bordering on the shores of the lakes was only 3,400,000, it now derives greater force and equity from the increased population, wealth, production, and tonnage of the States on the Canadian frontier. Since Mr. Clay advanced his argument in behalf of our right, the principle for which he contended has been frequently, and by various nations, recognized by law or by treaty, and has been extended to several other great rivers. By the treaty concluded at Mayence, in 1811, the Rhine was declared free from the point where it is first navigable into the sea. By the convention between Spain and Portugal, concluded in 1835, the navigation of the Douro, throughout its whole extent, was made free for the subjects of both crowns. In 1853 the Argentine Confederation, by treaty, threw open the free navigation of the Parana and the Uruguay to the merchant-vessels of all nations. In 1856 the Crimean War was closed by a treaty which provided for the free navigation of the Danube. In 1858 Bolivia, by treaty, declared that it regarded the rivers Amazons and La Plata, in accordance with fixed principles of national law, as highways or channels, opened by Nature, for the commerce of all nations. In 1859 the Paraguay was made free by treaty, and in December, 1866, the Emperor of Brazil, by imperial decree, declared the Amazons to be open to the frontier of Brazil to the merchant-ships of all nations. The greatest living British authority on this subject, while asserting the abstract right of the British claim, says: "It seems difficult to deny that Great Britain may ground her refusal upon strict law, but it is equally difficult to deny, first, that in so doing she exercises harshly an extreme and hard law; secondly, that her conduct with respect to the navigation of the St. Lawrence is in glaring and discreditable inconsistency with her conduct with respect to the navigation of the Mississippi. On the ground that she possessed a small domain, in which the Mississippi took its rise, she insisted on the right to navigate the entire volume of its waters. On the ground that she possesses both banks of the St. Lawrence, where it disembogues itself into the sea, she denies to the United States the right of navigation, though about one-half of the waters of Lakes Ontario, Erie, Huron, and Superior, and the whole of Lake Michigan, through which the river flows, are the property of the United States."

The whole nation is interested in securing cheap transportation from the agricultural States of the West to the Atlantic seaboard. To the citizens of those States it secures a greater return for their labor; to the inhabitants of the seaboard it affords cheaper food; to the nation an increase in the annual surplus of wealth. It is hoped that the Government of Great Britain will see the justice of abandoning the narrow and inconsistent claim to which the Canadian provinces have urged her adherence.

Our depressed commerce is a subject to which I called your special attention at the last session, and suggested that we will in the future have to look more to the countries south of us, and to China and Japan, for its revival. Our representatives to all these Governments have exerted their influence to encourage trade between the United States and the countries to which they are accredited. But the fact exists that the carrying is done almost entirely on foreign bottoms, and while this state of affairs exists we cannot control our due share of the commerce of the world. That between the Pacific States and

China and Japan is about all the carrying-trade now conducted in American vessels. I would recommend a liberal policy toward that line of American steamers, one that will insure its success and even increased usefulness.

The cost of building iron vessels, the only ones that can compete with foreign ships in the carrying-trade, is so much greater in the United States than in foreign countries that, without some assistance from the Government, they cannot be successfully built here. There will be several propositions laid before Congress, in the course of the present session, looking to a remedy for this evil. Even if it should be at some cost to the national Treasury, I hope such encouragement will be given as will secure American shipping on the high-seas and American ship-building at home.

The condition of the archives at the Department of State calls for the early action of Congress. The building now rented by that Department is a frail structure, at an inconvenient distance from the Executive Mansion, and from the other Departments, is ill-adapted to the purpose for which it is used, has not capacity to accommodate the archives, and is not fire-proof. Its remote situation, its slender construction, and the absence of a supply of water in the neighborhood, leave but little hope of safety for either the building or its contents in case of the accident of a fire. Its destruction would involve the loss of the rolls containing the original acts and resolutions of Congress, of the historic records of the Revolution and of the Confederation, of the whole series of diplomatic and consular archives since the adoption of the Constitution, and of the many other valuable records and papers left with that Department when it was the principal depository of the governmental archives. I recommend an appropriation for the construction of a building for the Department of State.

I recommend to your consideration the propriety of transferring to the Department of the Interior, to which they seem more appropriately to belong, all powers and duties in relation to the Territories with which the Department of State is now charged by law or usage, and from the Interior Department to the War Department the Pension Bureau, so far as it regulates the payment of soldiers' pensions. I would further recommend that the payment of naval pensions be transferred to one of the bureaus of the Navy Department.

The estimates for the expenses of the Government for the next fiscal year are \$18,244,346.01 less than for the current one, but exceed the appropriations for the present year, for the same items, \$8,972,127.56. In this estimate, however, is included \$22,888,578.87 for public works heretofore begun under congressional provision, and of which only so much is asked as Congress may choose to give. The appropriations for the same works for the present fiscal year was \$11,984,518.08.

The average value of gold, as compared with national currency for the whole of the year 1869, was about 184, and for eleven months of 1870 the same relative value has been about 115. The approach to a specie basis is very gratifying, but the fact cannot be denied that the instability of the value of our currency is prejudicial to our prosperity, and tends to keep up prices, to the detriment of trade. The evils of a depreciated and fluctuating currency are so great, that now, when the premium on gold has fallen so much, it would seem that the time has arrived when, by wise and prudent legislation, Congress should look to a policy which would place our currency at par with gold at no distant day.

The tax collected from the people has been reduced more than \$80,000,000 per annum. By steadiness in our present course, there is no reason why, in a few short years, the national tax-gatherer may not disappear from the door of the citizen almost entirely. With the revenue stamp dispensed by postmasters in every community, a tax upon liquors

of all sorts and tobacco in all its forms, and by a wise adjustment of the tariff, which will put a duty only upon those articles which we could dispense with, known as luxuries, and on those which we use more of than we produce, revenue enough may be raised, after a few years of peace and consequent reduction of indebtedness, to fulfill all our obligations.

A further reduction of expenses, in addition to a reduction of interest account, may be relied on to make this practicable. Revenue reform, if it means this, has my hearty support. If it implies a collection of all the revenue for the support of Government, for the payment of principal and interest of the public debt, pensions, etc., by directly taxing the people, then I am against revenue reform, and confidently believe the people are with me.

If it means failure to provide the necessary means to defray all the expenses of Government, and thereby repudiation of the public debt and pensions, then I am still more opposed to such kind of revenue reform. Revenue reform has not been defined by any of its advocates, to my knowledge, but seems to be accepted as something which is to supply every man's want without any cost or effort on his part.

A true revenue reform cannot be made in a day, but must be the work of national legislation and of time. As soon as the revenue can be dispensed with, all duty should be removed from coffee, tea, and other articles of universal use not produced by ourselves. The necessities of the country compel us to collect revenue from our imports. An army of assessors and collectors is not a pleasant sight to the citizen, but that or a tariff for revenue is necessary. Such a tariff, so far as it acts as an encouragement to home production, affords employment to labor at living wages, in contrast to the pauper labor of the Old World, and also in the development of home resources.

Under the act of Congress of the 15th day of July, 1870, the army has gradually been reduced, so that, on the 1st day of January, 1871, the number of commissioned officers and men will not exceed the number contemplated by that law.

The War Department building is an old structure, not fireproof, and entirely inadequate in dimensions to our present wants. Many thousands of dollars are now paid annually for rent of private buildings to accommodate the various bureaus of the Department. I recommend an appropriation for a new War Department building, suited to the present and growing wants of the nation.

The report of the Secretary of War shows a very satisfactory reduction in the expenses of the army for the last fiscal year. For details you are referred to his accompanying report.

The expenses of the navy for the whole of the last year, i. e., from December 1, 1869, the date of the last report, are less than \$19,000,000, or about \$1,000,000 less than they were the previous year. The expenses since the commencement of this fiscal year, i. e., since July 1st, show for five months a decrease of over \$3,400,000 from those of the corresponding months of last year. The estimates for the current year were \$28,305,671.37. Those for next year are \$20,688,817, with \$955,100 additional for necessary permanent improvements. These estimates are made closely, for the mere maintenance of the naval establishment as it now is, without much in the nature of permanent improvement. The appropriations made for the last and current years were evidently intended by Congress, and are sufficient only, to keep the navy on its present footing by the repairing and refitting of our old ships.

This policy must, of course, gradually but surely destroy the navy, and it is in itself far from economical, as each year that it is pursued the necessity for mere repairs in ships and navy-yards becomes more imperative and more costly; and our current expenses are annually increased for the mere repair of ships, many of which must soon become unsafe and useless. I hope, during the present session of Congress, to be

able to submit to it a plan by which naval vessels can be built and repairs made with great saving upon the present cost.

It can hardly be wise statesmanship in a Government which represents a country with over 5,000 miles of coast-line, on both oceans, exclusive of Alaska, and containing 40,000,000 of progressive people, with relations of every nature with almost every foreign country, to rest with such inadequate means of enforcing any foreign policy, either of protection or redress. Separated by the ocean from the nations of the Eastern Continent, our navy is our only means of direct protection to our citizens abroad, or for the enforcement of any foreign policy.

The accompanying report of the Postmaster-General shows a most satisfactory working of that Department. With the adoption of the recommendations contained therein, particularly those relating to a reform in the franking privilege and the adoption of the "correspondence cards," a self-sustaining postal system may speedily be looked for; and at no distant day a further reduction of the rate of postage be attained.

I recommend authorization by Congress, to the Postmaster-General and Attorney-General, to issue all commissions to officials appointed through their respective Departments. At present these commissions, where appointments are presidential, are issued by the State Department. The law in all the Departments of Government, except those of the Post-Office and of Justice, authorizes each to issue its own commissions.

Always favoring practical reforms, I respectfully call your attention to one abuse of long standing, which I would like to see remedied by this Congress. It is a reform in the civil service of the country. I would have it go beyond the mere fixing of the tenure of office of clerks and employés who do not require "the advice and consent of the Senate" to make their appointments complete. I would have it govern, not the tenure, but the manner of making all appointments. There is no duty which so much embarrasses the Executive and heads of Departments as that of appointments; nor is there any such arduous and thankless labor imposed on Senators and Representatives as that of finding places for constituents. The present system does not secure the best men, and often not even fit men, for public place. The elevation and purification of the civil service of the Government will be hailed with approval by the whole people of the United States.

Reform in the management of Indian affairs has received the special attention of the Administration from its inauguration to the present day. The experiment of making it a missionary work was tried with a few agencies, given to the denomination of Friends, and has been found to work most advantageously. All agencies and superintendencies not so disposed of were given to officers of the army. The act of Congress reducing the army renders army officers ineligible for civil positions. Indian agencies being civil offices, I determined to give all the agencies to such religious denominations as had heretofore established missionaries among the Indians, and perhaps to some other denominations who would undertake the work on the same terms, i. e., as a missionary work. The societies selected are allowed to name their own agents, subject to the approval of the Executive, and are expected to watch over them and aid them as missionaries, to Christianize and civilize the Indian, and to train him in the arts of peace. The Government watches over the official acts of these agents, and requires of them as strict an accountability as if they were appointed in any other manner. I entertain the confident hope that the policy now pursued will, in a few years, bring all the Indians upon reservations, where they will live in houses, have school-houses and churches, and will be pursuing peaceful and self-sustaining avocations, and where they may be visited by the law-abiding white

man with the same impunity that he now visits the civilized white settlements. I call your special attention to the report of the Commissioner of Indian Affairs for full information on this subject.

During the last fiscal year, 8,098,418 acres of public land were disposed of. Of this quantity, 8,698,910.05 acres were taken under the homestead law, and 2,169,518.81 acres sold for cash. The remainder was located with military warrants, college, or Indian scrip, or applied in satisfaction of grants to railroads, or for other public uses. The entries under the homestead law, during the last year, covered 961,545 acres more than those during the preceding year. Surveys have been vigorously prosecuted to the full extent of the means applicable to the purpose. The quantity of land in market will amply supply the present demand. The claim of the settler, under the homestead or the preemption laws, is not, however, limited to lands subject to sale at private entry. Any unappropriated surveyed public land may, to a limited amount, be acquired under the former laws, if the party entitled to enter under them will comply with the requirements they prescribe in regard to the residence and cultivation. The actual settler's preference right of purchase is even broader, and extends to lands which were unsurveyed at the time of his settlement. His right was formerly confined within much narrower limits, and at one period of our history was conferred only by special statutes. They were enacted from time to time to legalize what was then regarded as an unauthorized intrusion upon the national domain. The opinion that the public lands should be regarded chiefly as a source of revenue is no longer maintained. The rapid settlement and successful cultivation of them are now justly considered of more importance to our well-being than is the fund which the sale of them would produce. The remarkable growth and prosperity of our new States and Territories attest the wisdom of the legislation which invites the tiller of the soil to secure a permanent home on terms within the reach of all. The pioneer, who incurs the dangers and privations of a frontier life, and thus aids in laying the foundation of new commonwealths, renders a signal service to his country, and is entitled to its special favor and protection. These laws secure that object, and largely promote the general welfare. They should, therefore, be cherished as a permanent feature of our land system.

Good faith requires us to give full effect to existing grants. The time-honored and beneficent policy of setting apart certain sections of public land for educational purposes in the new States should be continued. When ample provision shall have been made for these objects, I submit, as a question worthy of serious consideration, whether the residue of our national domain should not be wholly disposed of under the provisions of the homestead and preemption laws.

In addition to the swamp and overflowed lands granted to the States in which they are situated, the lands taken under the agricultural college acts, and for internal improvement purposes, under the act of September, 1841, and the acts supplemental thereto, there had been conveyed, up to the close of the last fiscal year, by patent or other equivalent evidence of title, to States and corporations, twenty-seven million eight hundred and thirty-six thousand two hundred and fifty-seven and sixty-three hundredths acres, for railways, canals, and wagon-roads. It is estimated that an additional quantity of 174,735,523 acres is still due under grants for like uses. The policy of thus aiding the States in building works of internal improvement was inaugurated more than forty years since in the grants to Indiana and Illinois, to aid those States in opening canals to connect the waters of the Wabash with those of Lake Erie, and the waters of the Illinois with those of Lake Michigan.

It was followed with some modifications in the grant to Illinois of alternate sections of public land within certain limits of the Illinois Central Railway. Fourteen States and sundry corporations have re-

ceived similar subsidies in connection with railways completed or in process of construction. As the reserved sections are rated at the double minimum, the sale of them at the enhanced price has thus, in many instances, indemnified the Treasury for the granted lands. The construction of some of these thoroughfares has undoubtedly given a vigorous impulse to the development of our resources, and the settlement of the more distant portions of the country. It may, however, be well insisted that much of our legislation in this regard has been characterized by indiscriminate and profuse liberality. The United States should not loan their credit in aid of any enterprise undertaken by States or corporations, nor grant lands in any instance, unless the projected work is of acknowledged national importance. I am strongly inclined to the opinion that it is inexpedient and unnecessary to bestow subsidies of either description; but, should Congress determine otherwise, I earnestly recommend that the rights of settlers and of the public be more effectually secured and protected by appropriate legislation.

During the year ending September 30, 1870, there were filed in the Patent-Office 19,411 applications for patents, 3,874 caveats, and 160 applications for the extension of patents; 18,622 patents, including reissues and designs, were issued; 110 extended, and 1,083 allowed, but not issued, by reason of the non-payment of the final fees. The receipts of the office during the fiscal year were \$186,304.29 in excess of its expenditure.

The work of the Census Bureau has been energetically prosecuted. The preliminary report, containing much information of special value and interest, will be ready for delivery during the present session. The remaining volumes will be completed with all the dispatch consistent with perfect accuracy in arranging and classifying the returns. We shall thus, at no distant day, be furnished with an authentic record of our condition and resources. It will, I doubt not, attest the growing prosperity of the country, although during the decade which has just closed it was so severely tried by the great war waged to maintain its integrity and to secure and perpetuate our free institutions.

During the last fiscal year the sum paid to pensioners, including the cost of disbursement, was \$27,780,811.11; 1,758 bounty land-warrants were issued. At its close 198,686 names were on the pension rolls.

The labors of the Pension-Office have been directed to the severe scrutiny of the evidence submitted in favor of new claims, and to the discovery of fictitious claims which have been heretofore allowed. The appropriation for the employment of special agents for the investigation of frauds has been judiciously used, and the results obtained have been of unquestionable benefit to the service.

The subjects of education and agriculture are of great interest to the success of our republican institutions, happiness, and grandeur as a nation. In the interest of one a bureau has been established in the Interior Department—the Bureau of Education; and in the interest of the other a separate department, that of Agriculture. I believe great general good is to flow from the operations of both these bureaus if properly fostered. I cannot recommend to your careful consideration too highly the reports of the Commissioners of Education and of Agriculture, nor urge too strongly such liberal legislation as to secure their efficacy.

In conclusion, I would sum up the policy of the Administration to be a thorough enforcement of every law; a faithful collection of every tax provided for; economy in the disbursement of the same; a prompt payment of every debt of the nation; a reduction of taxes as rapidly as the requirements of the country will admit; reductions of taxation and tariff to be so arranged as to afford the greatest relief to the greatest number; honest and fair dealings with all other peo-

ples, to the end that war, with all its blighting consequences, may be avoided, but without surrendering any right or obligation due to us; a reform in the treatment of Indians and in the whole civil service of the country; and, finally, in securing a pure, untrammelled ballot, where every man entitled to cast a vote may do so just once at each election without fear of molestation or proscription on account of his political faith, nativity, or color.

U. S. GRANT.

Message of the President recommending Measures for the Increase of the Commerce of the United States.

To the Senate and House of Representatives:

EXECUTIVE MANSION,

WASHINGTON, D. C., March 23, 1870. }

In the Executive message of December 6, 1869, to Congress, the importance of taking steps to revive our drooping merchant marine was urged, and a special message promised at a future day during the present session, recommending more specifically plans to accomplish this result. Now that the committee of the House of Representatives intrusted with the labor of ascertaining "the cause of the decline of American commerce" has completed its work and submitted its report to the legislative branch of the Government, I deem this a fitting time to execute that promise.

The very able, calm, and exhaustive report of the committee points out the grave wrongs which have produced the decline in our commerce. It is a national humiliation that we are now compelled to pay from twenty to thirty million dollars annually (exclusive of passage-money which we should share with vessels of other nations) to foreigners for doing the work which should be done by American vessels. American built, American owned, and American manned. This is a direct drain upon the resources of the country of just so much money; equal to casting it into the sea, so far as this nation is concerned.

A nation of the vast and ever-increasing interior resources of the United States, extending, as it does, from one to the other of the great oceans of the world, with an industrious, intelligent, energetic population, must one day possess its full share of the commerce of these oceans, no matter what the cost. Delay will only increase this cost, and enhance the difficulty of attaining the result.

I therefore put in an earnest plea for early action on this matter, in a way to secure the desired increase of American commerce. The advanced period of the year and the fact that no contracts for ship-building will probably be entered into until this question is settled by Congress, and the further fact that, if there should be much delay, all large vessels contracted for this year will fail of completion before winter sets in, and will therefore be carried over for another year, induce me to request your early consideration of this subject.

I regard it of such grave importance, affecting every interest of the country to so great an extent, that any method which will gain the end will secure a rich national blessing. Building ships and navigating them utilizes vast capital at home; it employs thousands of workmen in their construction and manning; it creates a home market for the products of the farm and the shop; it diminishes the balance of trade against us precisely to the extent of freights and passage-money paid to American vessels, and gives us a supremacy upon the seas of inestimable value in case of foreign war.

Our Navy at the commencement of the late war consisted of less than one hundred vessels of about one hundred and fifty thousand tons, and a force of about eight thousand men. We drew from the merchant marine, which had cost the Government nothing, but which had been a source of national wealth, six hundred vessels, exceeding one million

tons and about seventy thousand men, to aid in the suppression of the rebellion.

This statement demonstrates the value of the merchant marine as a means of national defence in time of need.

The Committee on the Causes of the Reduction of American Tonnage, after tracing the causes of its decline, submit two bills, which, if adopted, they believe will restore to the nation its maritime power. Their report shows with great minuteness the actual and comparative American tonnage at the time of its greatest prosperity; the actual and comparative decline since, together with the causes; and exhibits all other statistics of material interest in reference to the subject. As the report is before Congress, I will not recapitulate any of its statistics, but refer only to the methods recommended by the committee to give back to us our lost commerce.

As a general rule, when it can be adopted, I believe a direct money subsidy is less liable to abuse than an indirect aid given to the same enterprise. In this case, however, my opinion is that subsidies, while they may be given to specified lines of steamers or other vessels, should not be exclusively adopted; but, in addition to subsidizing very desirable lines of ocean traffic, a general assistance should be given in an effective way. I therefore commend to your favorable consideration the two bills proposed by the committee, and referred to in this message.

U. S. GRANT.

Message urging the Ratification of the Treaty with San Domingo.

EXECUTIVE MANSION, May 31, 1870.

To the Senate of the United States:

I transmit to the Senate for consideration, with a view to its ratification, an additional article to the treaty of the 29th of November last for the annexation of the Dominican Republic to the United States, stipulating for an extension of the time for exchanging the ratifications thereof, signed in this city on the 14th instant, by the plenipotentiaries of the parties. It was my intention to have also negotiated, with the plenipotentiary of San Domingo, amendments to the treaty of annexation, to obviate objections which may be urged against the treaty as it is now worded; but, on reflection, I deem it better to submit to the Senate, the propriety of their amending the treaty as follows: First, to specify that the obligations of this Government shall not exceed the \$1,500,000 stipulated in the treaty; secondly, to determine the manner of appointing the agents to receive and disburse the same; thirdly, to determine the class of creditors who shall take precedence in the settlement of their claims; and, finally, to insert such amendments as may suggest themselves to the minds of Senators to carry out in good faith the conditions of the treaty submitted to the Senate of the United States in January last, according to the spirit and intent of that treaty. From the most reliable information I can obtain, the sum specified in the treaty will pay every just claim against the republic of San Domingo, and leave a balance sufficient to carry on a territorial government until such time as new laws for providing a territorial revenue can be enacted and put in force.

I feel an unusual anxiety for the ratification of this treaty, because I believe it will redound greatly to the glory of the two countries interested, to civilization, and to the extirpation of the institution of slavery. The doctrine promulgated by President Monroe has been adhered to by all political parties, and I now deem it proper to assert the equally important principle, that hereafter no territory on this continent shall be regarded as subject to transfer to a European power. The government of San Domingo has voluntarily sought this annexation. It is a weak power, numbering probably less than one hundred and twenty thousand souls, and yet possessing one of the richest territories under the sun, capable

of supporting a population of ten million of people in luxury. The people of San Domingo are not capable of maintaining themselves in their present condition, and must look for outside support. They yearn for the protection of our free institutions and laws, our progress, and civilization. Shall we refuse them? I have information, which I believe reliable, that a European power stands ready now to offer \$2,000,000 for the possession of Samana Bay alone if refused by us. With what grace can we prevent a foreign power from attempting to secure the prize?

The acquisition of San Domingo is desirable because of its geographical position. It commands the entrance to the Caribbean Sea and the isthmus transit of commerce. It possesses the richest soil, best and most capacious harbors, most salubrious climate, and the most valuable products of the forest, mine, and soil, of any of the West India islands. Its possession by us will, in a few years, build up a coastwise commerce of immense magnitude, which will go far toward restoring to us our lost merchant marine. It will give to us those articles which we consume so largely and do not produce, thus equalizing our exports and imports. In case of foreign war it will give us command of all the islands referred to, and thus prevent an enemy from ever again possessing himself of a rendezvous upon our very coast. At present our coast-trade between the States bordering on the Atlantic and those bordering on the Gulf of Mexico is cut in two by the Bahamas and the Antilles. Since we must, as it were, pass through foreign countries to get by sea from Georgia to the west coast of Florida, San Domingo, with a stable government, under which her immense resources can be developed, will give remunerative wages to tens of thousands of laborers not now upon the island. This labor will take advantage of every available means of transportation to abandon the adjacent islands and seek the blessings of freedom and its sequence, each inhabitant receiving the reward of his own labor. Porto Rico and Cuba will have to abolish slavery as a measure of self-preservation to retain their laborers. San Domingo will become a large consumer of the products of northern farms and manufactories. The cheap rate at which her citizens can be furnished with food, tools, and machinery, will make it necessary that the contiguous islands should have the same advantages in order to compete in the production of sugar, coffee, tobacco, tropical fruits, etc. This will open to us a still wider market for our products. The production of our own supply of these articles will cut off more than \$100,000,000 of our annual imports, besides largely increasing our exports. With such a picture it is easy to see how our large debt abroad is ultimately to be extinguished. With a balance of trade against us, including interest on bonds held by foreigners, and money spent by our citizens travelling in foreign lands equal to the entire yield of the precious metals in this country, it is not so easy to see how this result is to be otherwise accomplished.

The acquisition of San Domingo is an adherence to the Monroe doctrine. It is a measure of national protection; it is asserting our just claim to a controlling influence over the great commercial traffic soon to flow from east to west by way of the Isthmus of Darien; it is to build up our merchant marine; it is to furnish new markets for the products of our farms, shops, and manufactories; it is to make slavery insupportable in Cuba and Porto Rico at once, and ultimately so in Brazil; it is to settle the unhappy condition of Cuba and end an exterminating conflict; it is to provide honest means of paying our honest debts without overtaxing the people; it is to furnish our citizens with the necessities of every-day life at cheaper rates than ever before, and it is, in fine, a rapid stride toward that greatness which the intelligence, industry, and enterprise of the citizens of the United States entitle this country to assume among nations.

U. S. GRANT.

Message on Cuban Affairs.

EXECUTIVE MANSION, June 18, 1870.

To the Senate and House of Representatives:

In my annual message to Congress, at the beginning of its present session, I referred to the contest which had then for more than a year existed in the island of Cuba, between a portion of its inhabitants and the Government of Spain, and to the feelings and sympathies of the people and Government of the United States for the people of Cuba, as for all peoples struggling for liberty and self-government, and said that "the contest has at no time assumed the conditions which amount to war, in the sense of international law, or which would show the existence of a *de facto* political organization of the insurgents sufficient to justify a recognition of belligerency."

During the six months which have passed since the date of that message, the condition of the insurgents has not improved; and the insurrection itself, although not subdued, exhibits no signs of advance, but seems to be confined to an irregular system of hostilities carried on by small and ill-armed bands of men, roaming without concentration through the woods and the sparsely-populated regions of the island, attacking, from ambush, convoys and small bands of troops, burning plantations and the estates of those not sympathizing with their cause.

But, if the insurrection has not gained ground, it is equally true that Spain has not suppressed it. Climate, disease, and the occasional bullet, have worked destruction among the soldiers of Spain, and although the Spanish authorities have possession of every seaport and every town on the island, they have not been able to subdue the hostile feeling which has driven a considerable number of the native inhabitants of the island to armed resistance against Spain, and still leads them to endure the dangers and the privations of a roaming life of guerrilla warfare.

On either side the contest has been conducted, and is still carried on, with a lamentable disregard of human life, and of the rules and practices which modern civilization has prescribed in mitigation of the necessary horrors of war. The torch of Spaniard and of Cuban is alike busy in carrying devastation over fertile regions. Murderous and revengeful decrees are issued and executed by both parties. Count Valmaseda and Colonel Boet, on the part of Spain, have each startled humanity and aroused the indignation of the civilized world by the execution, each, of a score of prisoners at a time; while General Quesada, the Cuban chief, coolly, and with apparent unconsciousness of aught else than a proper act, has admitted the slaughter, by his own deliberate order, in one day, of upward of six hundred and fifty prisoners of war.

A summary trial, with few if any escapes from conviction, followed by immediate execution, is the fate of those arrested on either side, on suspicion of infidelity to the cause of the party making the arrest.

Whatever may be the sympathies of the people or of the Government of the United States for the cause or objects for which a part of the people of Cuba are understood to have put themselves in armed resistance to the Government of Spain, there can be no just sympathy in a conflict carried on by both parties alike in such barbarous violation of the rules of civilized nations, and with such continued outrage upon the plainest principles of humanity.

We cannot discriminate in our censure of their mode of conducting their contest between the Spaniards and the Cubans. Each commit the same atrocities, and outrage alike the established rules of war.

The properties of many of our citizens have been destroyed or embargoed, the lives of several have been sacrificed, and the liberty of others has been restrained. In every case that has come to the knowledge of the Government, an early and earnest demand for reparation and indemnity has been made, and most emphatic remonstrance has been presented

against the manner in which the strife is conducted, and against the reckless disregard of human life, the wanton destruction of material wealth, and the cruel disregard of the established rules of civilized warfare.

I have, since the beginning of the present session of Congress, communicated to the House of Representatives, upon their request, an account of the steps which I had taken, in the hope of bringing this sad conflict to an end, and of securing to the people of Cuba the blessings and the right of independent self-government. The efforts thus made failed, but not without an assurance from Spain that the good offices of this Government might still avail for the objects to which they had been addressed.

During the whole contest the remarkable exhibition has been made of large numbers of Cubans, escaping from the island and avoiding the risks of war, congregating in this country at a safe distance from the scene of danger and endeavoring to make war from our shores, to urge our people into the fight which they avoid, and to embroil this Government in complications and possible hostilities with Spain. It can scarce be doubted that this last result is the real object of these parties, although carefully covered under the deceptive and apparently plausible demand for a mere recognition of belligerency.

It is stated, on what I have reason to regard as good authority, that Cuban bonds have been prepared to a large amount, whose payment is made dependent upon the recognition by the United States of either Cuban belligerency or independence. The object of making their value thus contingent upon the action of this Government is a subject for serious reflection.

In determining the course to be adopted on the demand thus made for a recognition of belligerency, the liberal and peaceful principles adopted by the Father of his Country and the eminent statesmen of his day, and followed by succeeding Chief Magistrates and the men of their day, may furnish a safe guide to those of us now charged with the direction and control of the public safety.

From 1789 to 1815 the dominant thought of our statesmen was to keep the United States out of the wars which were devastating Europe. The discussion of measures of neutrality begins with the State papers of Mr. Jefferson, when Secretary of State. He shows that they are measures of national right as well as of national duty; that misguided individual citizens cannot be tolerated in making war according to their own caprice, passions, interests, or foreign sympathies; that the agents of foreign governments, recognized or unrecognized, cannot be permitted to abuse our hospitality by usurping the functions of enlisting or equipping military or naval forces within our territory.

Washington inaugurated the policy of neutrality and of absolute abstinence from all foreign entangling alliances, which resulted in 1794 in the first municipal enactment for the observance of neutrality.

The duty of opposition to filibustering has been admitted by every President. Washington encountered the efforts of Genet and the French revolutionists; John Adams, the projects of Miranda; Jefferson, the schemes of Aaron Burr; Madison and subsequent Presidents had to deal with the question of foreign enlistment or equipment in the United States; and since the days of John Quincy Adams it has been one of the constant cares of Government in the United States to prevent piratical expeditions against the feeble Spanish-American republics from leaving our shores. In no country are men wanting for any enterprise that holds out promise of adventure or of gain.

In the early days of our national existence the whole Continent of America (outside of the limits of the United States) and all its islands were in colonial dependence upon European powers.

The revolutions which from 1810 spread almost

simultaneously through all the Spanish-American continental colonies resulted in the establishment of new States, like ourselves of European origin, and interested in excluding European politics and the questions of dynasty and of balance of power from further influence in the New World.

The American policy of neutrality, important before, became doubly so from the fact that it became applicable to the new republics as well as to the mother country.

It then devolved upon us to determine the great international question at what time and under what circumstances to recognize a new power as entitled to a place among the family of nations, as well as the preliminary question of the attitude to be observed by this Government toward the insurrectionary party pending the contest.

Mr. Monroe concisely expressed the rule which has controlled the action of this Government with reference to revolting colonies, pending their struggle, by saying:

As soon as the movement assumed such a steady and consistent form as to make the success of the provinces probable, the rights to which they were entitled by the laws of nations as equal parties to a civil war were extended to them.

The strict adherence to this rule of public policy has been one of the highest honors of American statesmanship, and has secured to this Government the confidence of the feeble powers on this continent, which induces them to rely upon its friendship and absence of designs of conquest, and to look to the United States for example and moral protection. It has given to this Government a position of prominence and of influence which it should not abdicate, but which imposes upon it the most delicate duties of right and of honor regarding American questions, whether those questions affect emancipated colonies or colonies still subject to European dominion.

The question of belligerency is one of fact, not to be decided by sympathies for or prejudices against either party. The relations between the parent State and the insurgents must amount, in fact, to war in the sense of international law. Fighting, though fierce and protracted, does not alone constitute war. There must be military forces acting in accordance with the rules and customs of war, flags of truce, cartels, exchange of prisoners, etc.; and to justify a recognition of belligerency there must be, above all, a *de facto* political organization of the insurgents sufficient in character and resources to constitute it, if left to itself, a State among nations capable of discharging the duties of a State, and of meeting the just responsibilities it may incur as such toward other powers in the discharge of its national duties.

Applying the best information which I have been able to gather, whether from official or unofficial sources, including the very exaggerated statements which each party gives to all that may prejudice the opposite or give credit to its own side of the question, I am unable to see in the present condition of the contest in Cuba those elements which are requisite to constitute war in the sense of international law.

The insurgents hold no town or city, have no established seat of government; they have no prize courts, no organization for the receiving and collecting of revenue, no seaport to which a prize may be carried, or through which access can be had by a foreign power to the limited interior territory and mountain fastnesses which they occupy. The existence of a Legislature representing any popular constituency is more than doubtful.

In the uncertainty that hangs around the entire insurrection there is no palpable evidence of an election of any delegated authority, or of any government outside the limits of the camps occupied from day to day by the roving companies of insurgent

troops; there is no commerce, no trade, either internal or foreign; no manufactures.

The late commander-in-chief of the insurgents, having recently come to the United States, publicly declared that "all commercial intercourse or trade with the exterior world has been utterly cut off;" and he further added, "to-day we have not ten thousand arms in Cuba."

It is a well-established principle of public law that a recognition by a foreign State of belligerent rights to insurgents under circumstances such as now exist in Cuba, if not justified by necessity, is a gratuitous demonstration of moral support to the rebellion. Such necessity may yet hereafter arrive; but it has not yet arrived, nor is its probability clearly to be seen.

If it be war between Spain and Cuba, and be so recognized, it is our duty to provide for the consequences which may ensue in the embarrassment to our commerce and the interference with our revenue.

If belligerency be recognized, the commercial marine of the United States becomes liable to search and to seizure by the commissioned cruisers of both parties; they become subject to the adjudication of prize courts. Our large coastwise trade between the Atlantic and the Gulf States, and between both and the Isthmus of Panama, and the States of South America engaging the larger part of our commercial marine, passes, of necessity, almost in sight of the island of Cuba. Under the treaty with Spain of 1795, as well as by the law of nations, our vessels will be liable to visit on the high-seas. In case of belligerency the carrying of contraband, which now is lawful, becomes liable to the risks of seizure and condemnation. The parent Government becomes relieved from responsibility for acts done in the insurgent territory, and acquires the right to exercise against neutral commerce all the powers of a party to a maritime war. To what consequences the exercise of those powers may lead is a question which I desire to commend to the serious consideration of Congress.

In view of the gravity of this question, I have deemed it my duty to invite the attention of the war-making power of the country to all the relations and bearings of the question in connection with the declaration of neutrality and granting of belligerent rights.

There is not a *de facto* government on the island of Cuba sufficient to execute law and to maintain just relations with other nations. Spain has not been able to suppress the opposition to Spanish rule on the island, nor to award speedy justice to other nations or citizens of other nations when their rights have been invaded.

There are serious complications growing out of the seizure of American vessels upon the high-seas, executing American citizens without proper trial, and confiscating or embargoing the property of American citizens.

Solemn protests have been made against every infraction of the rights either of individual citizens of the United States or the rights of our flag upon the high seas, and all proper steps have been taken, and are being pressed, for the proper reparation of every indignity complained of.

The question of belligerency, however, which is to be decided upon definite principles and according to ascertained facts, is entirely different from and unconnected with the other questions of the manner in which the strife is carried on on both sides, and the treatment of our citizens entitled to our protection. These questions concern our dignity and responsibility, and they have been made, as I have said, the subjects of repeated communications with Spain, and of protests and demands for redress on our part. It is hoped that these will not be disregarded; but, should they be, these questions will be made the subject of a further communication to Congress.

U. S. GRANT.

Proclamation of Neutrality.

By the President of the United States of America:

Whereas, a state of war unhappily exists between France on the one side and the North-German Confederation and its allies on the other side;

And whereas, the United States are on terms of friendship and amity with all the contending powers, and with the persons inhabiting their several dominions;

And whereas, great numbers of the citizens of the United States reside within the territories or dominions of each of the said belligerents, and carry on commerce, trade, or other business or pursuits therein, protected by the faith of treaties;

And whereas, great numbers of the subjects or citizens of the said belligerents reside within the territory or jurisdiction of the United States, and carry on commerce, trade, or other business therein;

And whereas, the laws of the United States, without interfering with the free expression of opinion and sympathy, or with the open manufacture or sale of arms or munitions of war, nevertheless impose upon all persons who may be within their territory and jurisdiction the duty of an impartial neutrality during the existence of the contest:

Now, therefore, I, Ulysses S. Grant, President of the United States, in order to preserve the neutrality of the United States and of their citizens, and of persons within their territory and jurisdiction, and to enforce their laws, and in order that all persons, being warned of the general tenor of the laws and treaties of the United States in this behalf, and of the law of nations, may thus be prevented from an unintentional violation of the same, do hereby declare and proclaim that by the act passed on the 20th day of April, A. D. 1817, commonly known as the Neutrality law, the following acts are forbidden to be done, under severe penalties, within the territory and jurisdiction of the United States, to wit:

1. Accepting and exercising a commission to serve either of the said belligerents by land or by sea against the other belligerent.

2. Enlisting or entering into the service of either of the said belligerents as a soldier, or as a marine or seaman on board of any vessel-of-war, letter of marque, or privateer.

3. Hiring or retaining another person to enlist or enter himself in the service of either of the said belligerents as a soldier, or as a marine or seaman on board of any vessel-of-war, letter of marque, or privateer.

4. Hiring another person to go beyond the limits or jurisdiction of the United States with intent to be enlisted as aforesaid.

5. Hiring another person to go beyond the limits of the United States with intent to be entered into service as aforesaid.

6. Retaining another person to go beyond the limits of the United States with intent to be enlisted as aforesaid.

7. Retaining another person to go beyond the limits of the United States with intent to be entered into service as aforesaid. (But the said act is not to be construed to extend to a citizen or subject of either belligerent who, being transiently within the United States, shall, on board of any vessel-of-war which, at the time of its arrival within the United States, was fitted and equipped as such vessel-of-war, enlist or enter himself, or hire or retain another subject or citizen of the same belligerent, who is transiently within the United States, to enlist or enter himself to serve such belligerent on board such vessel-of-war, if the United States shall then be at peace with such belligerent.)

8. Fitting out and arming, or attempting to fit out and arm, or procuring to be fitted out and armed, or knowingly being concerned in the furnishing, fitting out, or arming of any ship or vessel, with intent that such ship or vessel shall be employed in the service of either of the said belligerents.

9. Issuing or delivering a commission within the territory or jurisdiction of the United States for any ship or vessel to the intent that she may be employed as aforesaid.

10. Increasing or augmenting, or procuring to be increased or augmented, or knowingly being concerned in increasing or augmenting, the force of any ship-of-war, cruiser, or other armed vessel, which, at the time of her arrival within the United States, was a ship-of-war, cruiser, or armed vessel in the service of either of the said belligerents, or belonging to the subjects or citizens of either, by adding to the number of guns of such vessel, or by changing those on board of her for guns of a larger calibre, or by the addition thereto of any equipment solely applicable to war.

11. Beginning or setting on foot, or providing or preparing the means for any military expedition or enterprise to be carried on from the territory or jurisdiction of the United States against the territory or dominions of either of the said belligerents.

And I do further declare and proclaim that by the nineteenth article of the treaty of amity and commerce which was concluded between his Majesty the King of Prussia and the United States of America on the 11th day of July, 1799, which article was revived by the treaty of May 1, 1828, between the same parties, and is still in force, it was agreed that "the vessels-of-war, public and private, of both parties, shall carry freely wheresoever they please the vessels and effects taken from their enemies, without being obliged to pay any duties, charges, or fees, to officers of admiralty, of the customs, or any others; nor shall such prizes be arrested, searched, or put under legal process, when they come to and enter the ports of the other party, but may freely be carried out again at any time by their captors to the places expressed in their commissions, which the commanding officer of such vessel shall be obliged to show."

And I do further declare and proclaim that it has been officially communicated to the Government of the United States, by the envoy extraordinary and minister plenipotentiary of the North-German Confederation at Washington, that private property on the high-seas will be exempted from seizure by the ships of his Majesty the King of Prussia, without regard to reciprocity.

And I do further declare and proclaim that it has been officially communicated to the Government of the United States, by the envoy extraordinary and minister plenipotentiary of his Majesty the Emperor of the French at Washington, that orders have been given that in the conduct of the war the commanders of the French forces on land and on the seas shall scrupulously observe toward neutral powers the rules of international law, and that they shall strictly adhere to the principles set forth in the declaration of the Congress of Paris of the 16th of April, 1856—that is to say:

1. That privateering is and remains abolished.

2. That the neutral flag covers enemy's goods, with the exception of contraband of war.

3. That neutral goods, with the exception of contraband of war, are not liable to capture under the enemy's flag.

4. That blockades, in order to be binding, must be effective; that is to say, maintained by a force sufficient really to prevent access to the coast of the enemy; and that, although the United States have not adhered to the declaration of 1856, the vessels of his Majesty will not seize enemy's property found on board of a vessel of the United States, provided that property is not contraband of war.

And I do further declare and proclaim that the statutes of the United States, and the law of nations, alike require that no person within the territory and jurisdiction of the United States shall take part, directly or indirectly, in the said war, but shall remain at peace with each of the said belligerents, and shall maintain a strict and impartial neutrality; and that

whatever privileges shall be accorded to one belligerent within the ports of the United States shall be in like manner accorded to the other.

And I do hereby enjoin all the good citizens of the United States, and all persons residing or being within the territory or jurisdiction of the United States, to observe the laws thereof, and to commit no act contrary to the provisions of the said statutes, or in violation of the law of nations in that behalf. And I do hereby warn all citizens of the United States, and all persons residing or being within their territory or jurisdiction, that, while the free and full expression of sympathies, in public and private, is not restricted by the laws of the United States, military forces in aid of either belligerent cannot lawfully be originated or organized within their jurisdiction; and that, while all persons may lawfully and without restriction, by reason of the aforesaid state of war, manufacture and sell within the United States arms and munitions of war, and other articles ordinarily known as "contraband of war," yet they cannot carry such articles upon the high-seas for the use or

service of either belligerent; nor can they transport soldiers and officers of either, or attempt to break any blockade which may be lawfully established and maintained during the war without incurring the risk of hostile capture and the penalties denounced by the law of nations in that behalf.

And I do hereby give notice that all citizens of the United States, and others who may claim the protection of this Government, who may misconduct themselves in the premises, do so at their peril, and that they can in no wise obtain any protection from the Government of the United States against the consequences of their misconduct.

In witness whereof I hereunto set my hand, and cause the seal of the United States to be affixed.

Done at the city of Washington, this twenty-second day of August, in the year of our Lord one thousand eight hundred and seventy, and of the independence of the United States of America the ninety-fifth. U. S. GRANT.

By the President:

HAMILTON FISH, Secretary of State.

THE VATICAN COUNCIL.

CONSTITUTIO DOGMATICA DE FIDE CATHOLICA.

PIUS EPISCOPUS, SERVUS SERVORUM DEI, SACRO APPROBANTE CONCILIO, AD PERPETUAM REI MEMORIAM.

Dei Filius et generis humani redemptor Dominus Noster Jesus Christus, ad Patrem coelestem reditus, cum Ecclesia sua in terris militante, omnibus diebus usque ad consummationem sæculi futurum se esse promisit. Quare dilectæ Sponsæ presto esse, adistere docenti, operanti benedicere, periclitanti opem ferre nullo unquam tempore destitit. Hæc vero salutaris ejus providentia, cum ex aliis beneficiis innumeris continenter apparuit, tum iis manifestissime comperta est fructibus, qui orbi christiano e Conciliis œcumenicis ac nominatim e Tridentino, iniquis licet temporibus celebrato, amplissimi provenerunt. Hinc enim sanctissima religionis dogmata pressius definita, uberiusque exposita, errores damnati atque cohibiti; hinc ecclesiastica disciplina restituta firmitusque sancta; promotum in Clero scientiæ et pietatis studium, parata adolescentibus ad sacram militiam educandis collegia, christiani denique populi mores et accuratior fidelium eruditione et frequentior sacramentorum usu instaurati. Hinc præterea arctior membrorum cum visibili capite communio, universoque corpori Christi mystico additus vigor; hinc religiose multiplicatæ familiæ, aliaque christianæ pietatis instituta; hinc ille etiam assiduus et usque ad sanguinis effusionem constans ardor in Christi regno late per orbem propagando.

Verumtamen hæc aliaque insignia emolumenta, quæ per ultimam maxime œcumenicam Synodum divina clementia Ecclesiæ largita est, dum grato, quo par est, animo recolimus, acerbum percipere haud possumus dolorem ob mala gravissima, inde potissimum orta, quod ejusdem sacrosanctæ Synodi apud permultos vel auctoritas contempta, vel sapientissima neglecta fuisse decreta.

Nemo enim ignorat hæreses quas Tridentini Patres proscriperunt, dum, rejecto divino Ecclesiæ magisterio, res ad religionem spectantes privati cujusvis iudicio permittuntur, in sectas paulatim dissolutas esse multiplices, quibus inter se dissentientibus et concertantibus, omnis tandem in Christum fides apud non paucos labefacta est. Itaque ipsa sacra Biblia, quæ antea christianæ doctrine unicus fons et iudex

A DOGMATIC DECREE ON CATHOLIC FAITH.

(Confirmed and Promulgated in the Third Public Session of the Vatican Council, held in St. Peter's, Rome, on Low Sunday, April 24, 1870.)

PIUS, BISHOP, SERVANT OF THE SERVANTS OF GOD, WITH THE APPROBATION OF THE HOLY COUNCIL, FOR A PERPETUAL REMEMBRANCE HEREOF.

Our Lord Jesus Christ, the Son of God and the Redeemer of mankind, when about to return to His Heavenly Father, promised that He would be with His Church militant on earth, all days, even to the consummation of the world. Wherefore, He has never at any time failed to be with His beloved spouse, to assist her in her teaching, to bless her in her labors, to aid her in danger. And this His providence, unceasingly displayed in countless other blessings, is most clearly made manifest by those very abundant fruits which have come to the Christian world from œcumenical councils, and especially from that of Trent, although it was held in evil days. For thereby the holy doctrines of religion were more distinctly defined and more fully set forth; errors were condemned and restrained; thereby ecclesiastical discipline was restored and more firmly established; zeal for learning and piety was promoted among the clergy; and colleges were provided for the training of young men for the sacred ministry; and finally the practice of Christian morality was restored among the people by more careful instruction and a more frequent use of the sacraments. Hence arose, likewise, a closer union of the members with the visible head, and renewed strength to the entire mystical body of Christ; hence the increased number of religious communities, and of other institutions of Christian piety; hence, also, that unceasing zeal, constant even to martyrdom, to spread the kingdom of Christ throughout the world.

Nevertheless, while with becoming gratitude we call to mind these and the many other remarkable benefits which the goodness of God has bestowed on the Church chiefly through the œcumenical council, we cannot suppress our bitter sorrow for the grievous evils which have chiefly sprung from many having despised the authority of the aforesaid sacred council, or having neglected to observe its most wise decrees.

For it is known to all that the heresies which the Fathers of Trent condemned, and which rejected the divine authority of the Church to teach, and, instead, subjected all things belonging to religion to the judgment of each individual, were, in course of time, broken up into many sects; and that, as these differed and disputed with each other, it came to pass, at length, that all belief in Christ was overthrown in

assererantur, jam non pro divinis haberi, imo mythicis commentis accenseri cœperunt.

Tum nata est et late nimis per orbem vagata illa rationalismi seu naturalismi doctrina, quæ religioni christianæ utpote supernaturali instituto per omnia adversana, summo studio molitur, ut Christo, qui solus Dominus et Salvator noster est, a mentibus humanis, a vita et moribus populorum excluso, meræ quod vocant rationis vel naturæ regnum stabiliat. Relicta autem projectaque christiana religione, negato vero Deo et Christo ejus, prolapsa tandem est multorum mens in pantheismi, materialismi, atheismi barathrum, ut jam ipsam rationalem naturam omnemque justæ rectique normam negantes, imæ humanæ societatis fundamenta diruere conantur.

Hæc porro impietate circumquaque grassante, infelicitèr, contigit, ut plures etiam ac catholice Ecclesiæ filius et via veræ pietatis aberrarent, in hisque diminutis palatim veritatis sensus catholicis attenuaretur. Variis enim ac peregrinis doctrinis abducti, naturam et gratiam, scientiam humanam et fidem divinam perperam commiscentes, genuinum sensum dogmatum, quem tenet ac docet S. M. Ecclesiæ depravare, integritatemque et sinceritatem fidei in periculum adducere comperiuntur.

Quibus omnibus perspectis, fieri qui potest ut non commoveantur intima Ecclesiæ viscera? Quemadmodum enim Deus vult omnes homines salvos fieri, et ad agnitionem veritatis venire; quemadmodum Christus venit, ut salvum faceret, quod perierat, et filios Dei, qui erant dispersi, congregaret in unum; ita Ecclesiæ, a Deo populorum mater et magistra constituta, omnibus debitorum se novit, ac lapsos erigere, labantes sustinere, reverentes amplecti, confirmare bonos et ad meliora pervohere parata semper et intanta est. Quapropter nullo tempore a Dei veritate, quæ sanat omnia, testanda et prædicanda quiescere potest, sibi dictum esse non ignorans: Spiritus meus qui est in te, et verba mea, quæ posui in ore tuo, non recedent de ore tuo amodo et usque in sempiternum.*

Nos itaque, inherentes Prædecessorum Nostrorum vestigiis, pro supremo Nostro Apostolico munero veritatem catholicam docere ac tueri, perversasque doctrinas reprobare numquam intermissimus. Nunc autem sedentibus Nobiscum et judicantibus universi orbis Episcopis, in hanc œcumenicam Synodum auctoritate Nostra in Spiritu Sancto congregatis, innixi Dei verbo scripto et tradito, prout ab ecclesiæ catholice sancte custoditum et genuine expositum accepimus, ex hac Petri Cathedra in conspectu omnium salutarem Christi doctrinam profiteri et declarare constituimus, adversis, erroribus potestate nobis a Deo tradita proscriptis atque damnatis.

CAPUT I.

DE DEO REBUM OMNIUM CREATORE.

Sancta Catholica Apostolica Romana Ecclesiæ credit et confitetur, unum esse Deum verum et vivum, Creatorem ac Dominum cœli et terræ, omnipotentem, æternum, immensum, incomprehensibilem, intellectum ac voluntate omnique perfectione infinitum; qui cum sit una singularis, simplex omnino et incommutabilis substantia spiritualis, prædicandus, est re et essentia a mundo distinctus, in se et ex se beatissimus, et su-

the minds of not a few. And so, the sacred Scriptures themselves, which they had at first held up as the only source and judge of Christian doctrine, were no longer held as divine, but, on the contrary, began to be counted among myths and fables.

Then arose and spread too widely through the world that doctrine of rationalism or naturalism, which, attacking Christianity at every point as being a supernatural institution, labors with all its might to exclude Christ, who is our only Lord and Saviour, from the minds of men and from the life and the morals of nations; and so to establish, instead, the reign of mere reason, as they call it, or of Nature. And thus, having forsaken and cast away the Christian religion, having denied the true God and His Christ, the minds of many have at last fallen into the abyss of pantheism, materialism, and atheism; so that now, repudiating the reasoning nature of man, and every rule of right and wrong, they are laboring to overthrow the very foundations of human society.

Moreover, as this impious doctrine is spreading everywhere, it has unfortunately come to pass that not a few even of the children of the Catholic Church have wandered from the way of true piety; and, as the truth gradually decayed in their minds, the Catholic sentiment grew fainter in them. For, being led away by various and strange doctrines, and wrongly confounding nature and grace, human science and divine faith, they have perverted the true sense of the doctrines which our holy mother the Church holds and teaches, and have endangered the integrity and the purity of faith.

Now, looking at all these things, how can the Church fail to be moved in her innermost heart? For inasmuch as God wills all men to be saved and to come to the knowledge of the truth, inasmuch as Christ came to save that which was lost, and to gather together in one the children of God that were dispersed; so the Church, established by God as the mother and mistress of nations, feels that she is a debtor unto all, and is ever ready and earnest to raise up the fallen, to strengthen the weak, to take to her bosom those that return, and to confirm the good, and carry them on to better things. Wherefore, at no time can she abstain from bearing witness to and preaching the all-healing truth of God; knowing that it has been said to her: "My spirit that is in thee, and my words that I have put in thy mouth, shall not depart out of thy mouth, from henceforth and forever."*

Wherefore, following in the footsteps of our predecessors, and in fulfilment of our supreme apostolic duty, we have never omitted to teach and to protect the Catholic truth, and to reprove perverse teachings. And now, the bishops of the whole world being gathered together in this œcumenical council by our authority, and in the Holy Ghost, and sitting therein and judging with us, we, guided by the word of God, both written and handed down by tradition, as we have received it, sacredly preserved and truly set forth by the Catholic Church, have determined to profess and declare from this chair of Peter, and in the sight of all, the saving doctrine of Christ and in the power given to us from God to proscribe and condemn the opposing errors.

CHAPTER I.

OF GOD THE CREATOR OF ALL THINGS.

The holy, Catholic, Apostolic, Roman Church believes and confesses that there is one true and living God, Creator and Lord of heaven and earth, almighty, eternal, immense, incomprehensible, infinite in understanding and will, and in all perfection; who, being a spiritual substance, one, single, absolutely simple and unchangeable, must be held to be, in reality and in essence, distinct from the world, in

* Isa. lix. 21.

* Isa. lix. 21.

per omnia; quæ præter ipsum sunt et concipi possunt, ineffabiliter excelsus.

Hic solus verus Deus bonitate sua et omnipotenti virtute non ad augendam suam beatitudinem, nec ad acquirendam, sed ad manifestandam perfectionem suam per bona, quæ creaturis impertitur, liberrimo, concilio simul ab initio temporis utramque de nihilo condidit creaturam, spiritualem et corporalem, angelicam videlicet et mundanam, ac deinde humanam quasi communem ex spiritu et corpore constitutam.*

Universa vero, quæ condidit, Deus providentia sua tuetur atque gubernat, attingens a fine usque ad finem fortiter, et disponens omnia suaviter. † Omnia enim nuda et aperta sunt oculis ejus; ‡ ea etiam, quæ libera creaturarum actione futura sunt.

CAPUT II.

DE REVELATIONE.

Eadem Sancta Mater Ecclesia tenet et docet, Deum rerum omnium principium et finem, naturali humanæ rationis lumine et rebus creatis certo cognosci posse; invisibilia enim ipsius, a creatura mundi, per ea quæ facta sunt, intellecta, conspiciuntur: § attamen placuisse ejus sapientiæ et bonitati, alia, easque supernaturali via se ipsum ac æterna voluntatis suæ decreta humano generi revelare, dicente Apostolo: Multifariam, multisque modis olim Deus loquens patribus in Prophetis: || novissime, diebus istis locutus nobis in Filio. |

Huic divinæ revelationi tribuendum quidem est, ut ea, quæ in rebus divinis humanæ rationi per se impervia non sunt, in præsentii quoque generis humani conditione ab omnibus expedite, firma certitudine et nullo admixto errore cognosci possint. Non hac tamen de causa revelatio absolute necessaria dicenda est, sed quia Deus ex infinita bonitate sua ordinavit hominem ad finem supernaturalem, ad participandam scilicet bona divina, quæ humanæ mentis intelligentiam omnino superant; aliquid oculis non vidit, nec auris audivit, nec in cor hominis ascendit, quæ preparavit Deus iis, qui diligunt illum. ¶

Hac porro supernaturalis revelatio, secundum universalis Ecclesiæ fidem, a sancta Tridentina Synodo declaratum, continetur in libris scriptis et sine scripto traditionibus, quæ ipsius Christe ore ab Apostolis acceptæ, aut ab ipsis Apostolis Spiritu Sancto dicantur quasi per manus traditæ, ad nos usque pervenerunt.** Qui quidem veteris et novi Testamenti libri integri cum omnibus suis partibus, prout in ejusdem Concilii decreto re censentur, et in veteri vulgata latina editione habentur, pro sacris et canonicis habet, non ideo quod sola humana industria concinnati, sua deinde auctoritate sint approbati; nec ideo dumtaxat, quod revelationem sine errore contineant, sed propter ea quod Spiritu Sancto inspirante conscripti Deum habent auctorem, atque ut tales ipsi Ecclesiæ traditi sunt.

Quoniam vero, quæ sancta Tridentina Synodus de interpretatione divinæ Scripture ad coercenda petulantia ingenia salubriter decrevit, a quibusdam hominibus prave exponuntur, Nos, idem decretum reno-

Himself and of Himself perfectly happy, and unspeakably exalted above all things that are or can be conceived besides Himself.

This one only true God, of His own goodness and almighty power, not to increase His own happiness, nor to acquire for Himself perfection, but in order to manifest the same by means of the good things which He imparts to creatures, did, of His own most free counsel, "from the beginning of time make alike out of nothing two created natures, a spiritual one and a corporeal one, the angelic, to wit, and the earthly; and afterward He made the human nature, as partaking of both, being composed of spirit and body."*

Moreover, God, by His providence, protects and governs all things which He has made, reaching from end to end mightily, and ordering all things sweetly. † For all things are naked and open to His eyes; even those which are to come to pass by the free action of creatures.

CHAPTER II.

OF REVELATION.

The same holy Mother Church holds and teaches that God, the beginning and end of all things, can be known with certainty through created things, by the natural light of human reason; "for the invisible things of him, from the creation of the world, are clearly seen, being understood by the things that are made," § but that nevertheless it has pleased His wisdom and goodness to reveal to mankind, by another and that a supernatural way, Himself and the eternal decrees of His will; even as the apostle says, "God, who at sundry times and in divers manners spoke, in times past, to the fathers by the prophets, last of all, in these days, hath spoken to us by his Son." |

To this divine revelation it is to be ascribed that things regarding God, which are not of themselves beyond the grasp of human reason, may, even in the present condition of the human race, be known by all, readily, with full certainty and without any admixture of error. Yet not on this account is revelation absolutely necessary, but because God, of His infinite goodness, has ordained man for a supernatural end, for the participation, that is, of divine goods, which altogether surpass the understanding of the human mind; for "eye hath not seen nor ear heard, neither hath it entered into the heart of man, what things God hath prepared for them that love him." ¶

Now, this supernatural revelation, according to the belief of the universal Church, as declared by the holy Council of Trent, is contained in the written books and in the unwritten traditions which have come to us as received orally from Christ Himself by the apostles, or handed down from the apostles taught by the Holy Ghost.** And these books of the Old and New Testament are to be received as sacred and canonical, in their integrity and with all their parts, as they are enumerated in the decrees of the same council, and are had in the old Vulgate Latin edition. But the Church does hold them as sacred and canonical, not for the reason that they have been compiled by human industry alone, and afterward approved by her authority; nor only because they contain revelation without error, but because, having been written under the inspiration of the Holy Ghost, they have God for their author, and as such have been delivered to the Church herself.

And since those things which the Council of Trent has declared by wholesome decrees concerning the interpretation of divine Scripture, in order to restrain

vantes, hanc illius mentem esse declaramus, ut in rebus fidei et morum, ad ædificationem doctrinæ christianæ pertinentium, is pro vero sensu Sacra Scripturæ habendus sit, quem tenuit ac tenet Sancta Mater Ecclesia, cujus est judicare de vero sensu et interpretatione Scripturarum sanctorum; atque ideo nemini licere contra hunc sensum, aut etiam contra unanimum consensum Patrum ipsum Scripturam Sacram interpretari.

CAPUT III.

DE FIDE.

Quum homo a Deo tanquam Creatore et Domino suo totus dependeat, et ratio creata increatae veritati penitus subiecta sit, plenum revelanti Deo intellectus et voluntatis obsequium fide prestare tenemur. Hanc vero fidem, quæ humanæ salutis initium est, Ecclesia catholica profitetur, virtutem esse supernaturalem, quæ, Dei aspirante et adjuvante gratia, ab eo revelata vera esse credimus, non propter intrinsecam rerum veritatem naturali rationis lumine perspectam sed propter auctoritatem ipsius Dei revelantis, qui nec falli nec fallere potest. Est enim fides, testante Apostolo, sperandarum substantia rerum, argumentum non apparentium.*

Ut nihilominus fidei nostræ obsequium rationi consentaneum esset, voluit Deus cum internis Spiritus Sancti auxillis externa jungi revelationis suæ argumenta, facta scilicet divina atque imprimis miracula et prophetias, quæ cum Dei omnipotentiam et infinitam scientiam luculenter commonstrant, divinæ revelationis signa sunt certissima et omnium intelligentiis accommodata. Quare tum Moyses et propheta tum ipse maxime Christus Dominus multa et manifestissima miracula et prophetias ediderunt; et de Apostolis legimus: Illi autem profecti prædicaverunt ubique Domino cooperante, et sermonem confirmante, sequentibus signis.† Et rursum scriptum est: Habemus firmiorem propheticum sermonem, cui bene facitis attendentes quasi lucenti in caliginoso loco.‡

Licet autem fidei assensus nequaquam sit motus animi cœcus: nemo tamen evangelicæ prædicationi consentire potest, siout oportet ad salutem consequendam, absque illuminatione et inspiratione Spiritus Sancti, qui dat omnibus suavitatem in consentiendo et credendo veritati.§ Quare fides ipsa in se, etiamsi per charitatem non operetur, donum Dei est, et actus ejus est opus ad salutem pertinens, quo homo liberam præstat ipsi Deo obedientiam, gratiæ ejus, cui resistere posset, consentiendo et cooperando.

Porro fide divina et catholica ea omnia credenda sunt, quæ in verbo Dei scripto vel traditio continentur, et ab Ecclesia sive solemnè iudicio, sive ordinario et universali magisterio tanquam divinitus revelata credenda proponuntur.

Quoniam vero sine fide impossibile est placere Deo, et ad filiorum ejus consortium pervenire; ideo nemini unquam sine illa contigit justificatio, nec ullus, nisi in ea perseveraverit usque in finem, vitam æternam assequitur. Ut autem officio veram fidem amplectendi, in easque constanter perseverandi satisfacere possemus, Deus per Filium suum unigenitum Ecclesiam instituit suæque institutionis manifestis notis instruxit, ut ea tamquam custos et magistra verbi revelati ab omnibus posset agnoscì. Ad solam enim catholicam Ecclesiam ea pertinent omnia, quæ ad evidentem fidei christianæ credibilitatem tam multa et tam mira divinitus sunt disposita. Quin

restless spirits, are explained by some in a wrong sense; we, renewing the same decree, declare this to be the mind of the synod, that, in matters of faith and morals which pertain to the edification of Christian doctrine, that is to be held as the true sense of the sacred Scripture which holy Mother Church, to whom it belongs to judge of the true sense and interpretation of the sacred Scriptures, has held and holds; and therefore that no one may interpret the sacred Scripture contrary to this sense, or contrary to the unanimous consent of the fathers.

CHAPTER III.

OF FAITH.

Forasmuch as man totally depends on God as his Creator and Lord, and created reason is wholly subject to the uncreated truth, therefore we are bound, when God makes a revelation, to render to Him the full obedience of our understanding and will, by faith. And this faith, which is the beginning of man's salvation, the Church declares to be a supernatural virtue, whereby, under the inspiration and aid of God's grace, we believe to be true the things revealed by Him, not for their intrinsic truth seen by the natural light of reason, but for the authority of God revealing them, who can neither deceive nor be deceived. For faith, as the apostle witnesseth, is the substance of things to be hoped for, the evidence of things that appear not.*

To the end, nevertheless, that the obedience of our faith might be agreeable to reason, God willed to join unto the interior grace of the Holy Spirit, external proofs of His revelation, to wit, divine works and chiefly miracles and prophecies, which, as they manifestly show forth the omnipotence and the infinite knowledge of God, are proofs most certain of divine revelation, and suited to the understanding of all. Wherefore both Moses and the prophets, and, above all, Christ our Lord Himself, wrought many and most evident miracles, and uttered prophecies; and of the apostles we read: "But they going forth preached everywhere: the Lord working withal, and confirming the word with signs that followed."† And again it is written: "We have the more firm prophetic word; whereunto you do well to attend, as to a light that shineth in a dark place."‡

Yet, although the assent of faith is not by any means a blind movement of the mind; nevertheless no one can believe the preaching of the Gospel in such wise as behooveth to salvation without the light and inspiration of the Holy Ghost, who giveth unto all sweetness in yielding to the truth and believing it.§ Wherefore faith in itself, even though it be not working by charity, is a gift of God; and an act of faith is a work tending to salvation, whereby man renders free obedience to God Himself, consenting to and coöperating with His grace, which He hath power to resist.

Now, all those things are to be believed of divine and Catholic faith which are contained in the word of God, whether written or handed down by tradition; and which the Church, either by solemn decree or by her ordinary and universal teaching, proposes for belief as revealed by God.

And whereas without faith it is impossible to please God, and to come to the fellowship of His children, therefore hath no one at any time been justified without faith; nor shall any one, unless he persevere therein unto the end, attain everlasting life. And in order that we might be able to fulfil our duty of embracing the true faith, and of steadfastly persevering therein, God, through His only-begotten Son, did establish the Church and place upon her manifest marks of His institution, that all men might be able to recognize her as the guardian and teacher of His revealed word. For only to the Catholic Church do all those signs belong, which

* Hebr. xi. 1.

§ Syn. Arus. ii. can. 7.

* Heb. xi. 1.
† Mark xvi. 20.

‡ 2 Pet. i. 19.
§ 2 Council of Orange, Can. 7.

etiam Ecclesie per se ipsa, ob suam nempe admirabilem propagationem, eximiam sanctitatem et inexhaustam in omnibus bonis fecunditatem, ob catholicam unitatem, invictamque stabilitatem, magnum quoddam et perpetuum est motivum credibilitatis et divins sue legationis testimonium irrefragabile.

Quo fit, ut ipsa veluti signum levatum in nationes,* et ad se invitet qui nondum crediderunt, et filios suos certiores faciat, firmissimo niti fundamenta fidem, quam profitentur. Cui quidem testimonio efficac subsidium accedit ex superna virtute. Etenim benignissimus Dominus et errantes gratia sua excitat atque adjuvat, ut ad agnitionem veritatis venire possint; et eos, quos de tenebris transtulit in admirabile lumen suum, in hoc eodem lumine ut perseverent, gratia sua confirmat, non deserens, nisi deseratur. Quo circa minime par est conditio eorum, qui per celeste fidei donum catholicas veritati adhæserunt, atque eorum qui ducti opinionibus humanis, falsam religionem sectantur; illi enim, qui fidem sub Ecclesie magisterio susceperunt; nullam unquam habere possunt justam causam mutandi, aut in dubiam fidem eandem revocandi. Quæ cum ita sint, gratias agentes Deo Patri, qui dignos nos fecit in partem sortis sanctorum in lumine, tantam ne negligamus salutem, sed aspicientes in auctorem fidei et consummatorem Jesum, teneamus spei nostræ confessionem indeclinabilem.

CAPUT IV.

DE FIDE ET RATIONE.

Hoc quoque perpetuus Ecclesiæ catholicæ consensus tenuit et tenet, duplicem esse ordinem cognitionis, non solum principio, sed objecto etiam distinctum; principio quidem, quia in altero naturali ratione, in altero fide divina cognoscimus, objecto autem, quia præter ea, ad quæ naturalis ratio pertingere potest, credenda nobis proponuntur mysteria in Deo abscondita, qui, nisi revelata divinitus, innoscere non possunt. Quocirca Apostolus, qui a gentibus Deum per ea, quæ facta sunt, cognitum esse testatur, disserens tamen de gratia et veritate, quæ per Jesum Christum facta est † pronuntiat: Loquimur Dei sapientiam in mysterio, quæ abscondita est, quam prædestinavit Deus ante sæcula in gloriam nostram, quam nemo principum hujus sæculi cognovit: nobis autem revelavit Deus per Spiritum suum: Spiritus enim omnia scrutatur, etiam profunda Dei. † Et ipse Unigenitus confitetur Patri, quia abscondit hæc a sapientibus, et prudentibus, et revelavit ea parvulis. §

Ac ratio quidem, fide illustrata, cum sedulo, pie et sobrie querit, aliquam, Deo dante, mysteriorum intelligentiam eamque fructuosissimam assequitur, tum ex eorum, quæ naturaliter cognoscit, analogia, tum e mysteriorum ipsorum nexu inter se et cum fine hominis ultimo; nunquam tamen idonea redditur ad ea perspicendum instar veritatem, quæ proprium ipsius objectum constituunt. Divina enim mysteria suapte natura intellectum creatum sic excedunt, ut etiam revelatione tradita et fide suscepta, ipsius tamen fidei velamine contacta et quadam quasi caligine obvoluta maneant, quamdiu in hac mortali vita peregrinamur a Domino; per fidem enim ambulamus, et non per speciem. †

Vorum etsi fides sit supra rationem, nulla tamen

* Is. xl. 12. † 1 Cor. ii. 7, 9. ‡ 2 Cor. v. 7.
† Joan i. 17. § Matth. xi. 25.

have been divinely disposed, so many in number and so wonderful in character, for the purpose of making evident the credibility of Christian faith; nay more, the very Church herself, in view of her wonderful propagation, her eminent holiness, and her exhaustless fruitfulness in all that is good, her Catholic unity, her unshaken stability, offers a great and evident claim to belief, and an undeniable proof of her divine commission.

Whence it is that she, as a standard set up unto the nations,* at the same time calls to herself those who have not yet believed, and shows to her children that the faith which they hold rests on a most solid foundation. And to this, her testimony, effectual aid is supplied by power from above. For the Lord, infinitely merciful, on the one hand, stirs up by His grace and helps those who are in error, that they may be able to come to the knowledge of the truth; and, on the other hand, those whom He hath transferred from darkness into His marvellous light He confirms by His grace, that they may persevere in that same light, never abandoning them unless He be first by them abandoned. Wherefore, totally unlike is the condition of those who, by the heavenly gift of faith, have embraced the Catholic truth, and of those who, led by human opinions, are following a false religion; for they who have received the faith under the teaching of the Church can never have a just reason to change that faith or call it into doubt. Wherefore, giving thanks to God the Father, who hath made us worthy to be partakers of the lot of the saints in light, let us not neglect so great salvation, but looking on Jesus, the author and finisher of our faith, let us hold fast the confession of our hope without wavering.

CHAPTER IV.

OF FAITH AND REASON.

Moreover, the Catholic Church has ever held, as she now holds, that there exists a twofold order of knowledge, each of which is distinct from the other both as to its principle and as to its object. As to its principle, because in the one we know by natural reason, in the other by divine faith; as to the object, because, besides those things to which natural reason can attain, there are proposed to our belief mysteries hidden in God which, unless by Him revealed, cannot come to our knowledge. Wherefore the same apostle, who beareth witness that God was known to the Gentiles by the things that are made, yet, when speaking of the grace and truth that came by Jesus Christ, † says: "We speak the wisdom of God in a mystery, a wisdom which is hidden; which God ordained before the world unto our glory; which none of the princes of this world knew; but which God hath revealed to us by His Spirit. For the Spirit searcheth all things, yea the deep things of God." ‡ And the only-begotten Son thanks the Father that He has hid these things from the wise and prudent, and has revealed them to little ones. §

Reason, indeed, enlightened by faith and seeking with diligence and godly sobriety, may, by God's gift, come to some understanding, limited in degree, but most wholesome in its effects, of mysteries, both from the analogy of things which are naturally known, and from the connection of the mysteries themselves with one another and with man's last end. But never can reason be rendered capable of thoroughly understanding mysteries, as it does those truths which form its proper object. For God's mysteries, of their very nature, so far surpass the reach of created intellect, that even when taught by revelation, and received by faith, they remain covered by faith itself as by a veil, and shrouded as it were in darkness as long as in this mortal life "we are absent from the Lord; for we walk by faith, and not by sight." †

But although faith be above reason, there never

* Is. xl. 12. † 1 Cor. ii. 7, 8, 10. ‡ 2 Cor. v. 7.
† John i. 17. § Matt. xi. 25.

unquam inter fidem et rationem vera dissensio esse potest: cum idem Deus, qui mysteria revelat et fidem infundit, animo humano nationis lumen indiderit; Deus autem negare seipsum non possit, nec verum vero unquam contradicere. Inanis autem hujus contradictionis species inde potissimum oritur, quod vel fidei dogmata ad mentem Ecclesiæ intellecta et exposita non fuerint, vel opinionum commenta pro rationis effatis habeantur. Omnem igitur assertionem veritati illuminatæ fidei contrariam omnino falsam esse definimus.* Porro Ecclesia, quæ una cum apostolico munere docendi, mandatam accepit, fidei depositum custodiendi, jus etiam et officium divinitus habet falsi nominis scientiam,† proscribendi, ne quis decipiatur per philosophiam, et inanem fallaciam. ‡ Quapropter omnes christiani fideles hujusmodi opiniones, quæ fidei doctrinæ contrariæ esse cognoscuntur, maxime si ab Ecclesia reprobata fuerint, non solum prohibentur tanquam legitimæ scientiæ conclusiones defendere, sed pro erroribus potius, qui fallacem veritatis speciem præ se ferant, habere tenentur omnino.

Neque solum fides et ratio inter se dissidere nunquam possunt, sed opem quoque sibi mutuam ferunt, cum recta ratio fidei fundamenta demonstrat, ejusque lumine illustrata rerum divinarum scientiam excolat; fides vero rationem ab erroribus liberet ac tueatur, eamque multiplici cognitione instruat. Quapropter tantum abest, ut Ecclesia humanarum artium et disciplinarum culturæ obsistat, ut hanc multis modis juvet atque promoveat. Non enim commoda ab iis ad hominum vitam divinitus aut ignorat aut despiciat; fatetur imo, eas, quemadmodum a Deo, scientiarum Domino, profectas sunt, ita si rite pertractentur, ad Deum, juvante ejus gratia perducere. Nec sane ipsa vetat, ne hujusmodi disciplinæ in suo quasque ambitu propriis utantur principiis et propria methodo; sed justam hanc libertatem agnoscens, id sedulo cavet, ne divinæ doctrinæ repugnando errores in se suscipiant, aut fines proprios transgressæ, ea, quæ sunt fidei, occupent et perturbent.

Neque enim fidei doctrina, quam Deus revelavit, velut philosophicum inventum proposita est humanis ingenis perficienda, sed tamquam divinum depositum Christi Sponsæ tradita, fideliter custodienda et infalibiliter declaranda. Hinc sacerorum quoque dogmatum in sensus perpetuo est retinendus quem semel declaravit Sancta Mater Ecclesia, nec unquam ab eo sensu, altioris intelligentiæ specie et nomine, recedendum. Crescat igitur et multum vehementerque proficiat, tam singulorum, quam omnium, tam unius hominis, quam totius Ecclesiæ, ætatum ac sæculorum gradibus, intelligentia, scientia, sapientia; sed in suo dumtaxat genere, in eodem scilicet dogmate, eodem sensu, eademque sententia.§

CANONES.

I.

DE DEO REBUS OMNIUM CREATORE.

1. Si quis unum verum Deum visibilibus et invisibilibus Creatorem et Dominum negaverit; anathema sit.
2. Si quis præter materiam nihil esse affirmare non erubuerit; anathema sit.
3. Si quis dixerit, unam eademque esse Dei et rerum omnium substantiam vel essentiam; anathema sit.
4. Si quis dixerit, res finitas, tum corporeas tum

* Conc. Lat., V., Bulla *Apostolici Regimini*.

† 1 Tim. vi. 20. ‡ Coloss. ii. 8.

§ Vinc. Lit. Common., N. 28.

can be a real disagreement between them, since the same God who reveals mysteries and infuses faith has given man's soul the light of reason; and God cannot deny Himself, nor can one truth ever contradict another. Wherefore the empty shadow of such contradiction arises chiefly from this, that either the doctrines of faith are not understood and set forth as the Church really holds them, or that the vain devices and opinions of men are mistaken for the dictates of reason. We therefore definitely pronounce false every assertion which is contrary to the enlightened truth of faith.* Moreover, the Church, which, together with her apostolic office of teaching, is charged also with the guardianship of the deposit of faith, holds likewise from God the right and the duty to condemn "knowledge falsely so called," † "lest any man be cheated by philosophy and vain deceit." ‡ Hence all the Christian faithful are not only forbidden to defend as legitimate conclusions of science those opinions which are known to be contrary to the doctrine of faith, especially when condemned by the Church, but are rather absolutely bound to hold them for errors wearing a deceitful appearance of truth.

Not only is it impossible for faith and reason ever to contradict each other, but they rather afford each other mutual assistance. For right reason establishes the foundations of faith, and by the aid of its light cultivates the science of divine things; and faith, on the other hand, frees and preserves reason from errors, and enriches it with knowledge of many kinds. So far, then, is the Church from opposing the culture of human arts and sciences, that she rather aids and promotes it in many ways. For she is not ignorant of, nor does she despise, the advantages which flow from them to the life of men; on the contrary, she acknowledges that, as they sprang from God the Lord of knowledge, so, if they be rightly pursued, they will, through the aid of His grace, lead to God. Nor does she forbid any of those sciences the use of its own principles and its own method within its own proper sphere; but recognizing this reasonable freedom, she only takes care that they may not, by contradicting God's teaching, fall into errors, or, overstepping their due limits, invade and throw into confusion the domain of faith.

For the doctrine of faith revealed by God has not been proposed, like some philosophical discovery, to be made perfect by human ingenuity; but it has been delivered to the spouse of Christ as a divine deposit to be faithfully guarded and unerringly set forth. Hence all tenets of holy faith are to be explained always according to the sense and meaning of the Church, nor is it ever lawful to depart therefrom, under pretence or color of more enlightened explanation. Therefore as generations and centuries roll on, let the understanding, knowledge, and wisdom of each and every one, of individuals and of the whole Church, grow apace and increase exceedingly, yet only in its kind; that is to say, retaining pure and inviolate the sense and meaning and belief of the same doctrine. §

CANONS.

I.

OF GOD THE CREATOR OF ALL THINGS.

1. If any one shall deny the one true God, Creator and Lord of things visible and invisible; let him be anathema.
2. If any one shall unblushingly affirm that besides matter nothing else exists; let him be anathema.
3. If any one shall say that the substance or essence of God, and of all things, is one and the same; let him be anathema.
4. If any one shall say that finite things, both cor-

spirituales, aut saltem spirituales, e divina substantia emanasse;

Aut divinam essentiam sui manifestatione vel evolutione fieri omnia;

Aut denique Deum esse ens universale seu indefinitum, quod sese determinando constituat rerum universitatem in genera, species et individua distinctam; anathema sit.

6. Si quis non confiteatur, mundum, resque omnes, quæ in eo continentur, et spirituales et materiales, secundum totam suam substantiam a Deo ex nihilo esse productas;

Aut Deum dixerit non voluntate ab omni necessitate libera, sed tam necessario creasse, quam necessario amat seipsum;

Aut mundum ad Dei gloriam conditum esse negaverit; anathema sit.

II.

DE REVELATIONE.

1. Si quis dixerit, Deum unum et verum, Creatorem et Dominum nostrum, per ea, quæ facta sunt, naturali rationis humanæ lumine certo cognosci non posse; anathema sit.

2. Si quis dixerit, fieri non posse, aut non expedire, ut per revelationem divinam homo de Deo, cultuque ei exhibendo edoceatur; anathema sit.

3. Si quis dixerit, hominem ad cognitionem et perfectionem, quæ naturalem superet, divinitus evehi non posse, sed ex seipso ad omnia tandem veri et boni possessionem jugi profectu pertingere posse et debere; anathema sit.

4. Si quis Sacra Scripturæ libros integros cum omnibus suis partibus, prout illos sancta Tridentina Synodus recensuit, pro sacris et canonicis non susceperit, aut eos divinitus inspiratos esse negaverit; anathema sit.

III.

DE FIDE.

1. Si quis dixerit, rationem humanam ita independentem esse ut fides ei a Deo imperari non possit; anathema sit.

2. Si quis dixerit, fidem divinam a naturali de Deo et rebus moralibus scientia non distingui, ac propterea ad fidem divinam non requiri, ut revelata veritas propter auctoritatem Dei revelantis credatur; anathema sit.

3. Si quis dixerit, revelationem divinam externis signis credibilem fieri non posse, ideoque sola interna cuiusque experientia aut inspiratione privata homines ad fidem moveri debere; anathema sit.

4. Si quis dixerit, miracula nulla fieri posse, proindeque omnes de iis narrationes etiam in Sacra Scriptura contentas, inter fabulos vel mythos ablegandas esse, aut miracula certo cognosci nunquam posse, nec iis divinam religionis christianæ originem rite probari; anathema sit.

5. Si quis dixerit, assensum fidei christianæ non esse liberum, sed argumentis humanæ rationis necessario produci; aut ad solam fidem vivam, quæ per charitatem operatur gratiam Dei necessariam esse; anathema sit.

6. Si quis dixerit, parem esse conditionem fidelium atque eorum, qui ad fidem unice veram nondum pervenerunt, ita ut catholici justam causam habere possint, fidem, quam sub Ecclesiæ magisterio jam susceperunt, assensu suspensio in dubium vocandi, donec demonstrationem scientificam credibilitatis et veritatis fidei suæ absolverint; anathema sit.

poreal and spiritual, or at least spiritual things, are emanations of the divine substance;

Or that the divine essence by manifestation or development of itself becomes all things;

Or finally, that God is universal or indefinite Being, which, in determining itself, constitutes all things, divided into general species and individuals; let him be anathema.

5. If any one do not acknowledge that the world, and all things which it contains, both spiritual and material, were produced, in all their substance, by God, out of nothing;

Or shall say that God created them, not of His own will, free from all necessity, but through a necessity such as that whereby He loves Himself;

Or shall deny that the world was created for the glory of God; let him be anathema.

II.

OF REVELATION.

1. If any one shall say that certain knowledge of the one true God, our Creator and Lord, cannot be attained by the natural light of human reason through the things that are made; let him be anathema.

2. If any one shall say that it is impossible or inexpedient for man to be instructed by means of divine revelation, in those things that concern God and the worship to be rendered to Him; let him be anathema.

3. If any one shall say that man cannot, by the power of God, be raised to a knowledge and perfection which is above that of Nature; but that he can and ought of his own efforts, by means of constant progress, to arrive at last to the possession of all truth and goodness; let him be anathema.

4. If any one shall refuse to receive for sacred and canonical the books of holy Scripture in their integrity, with all their parts, according as they were enumerated by the holy Council of Trent; or shall deny that they are inspired by God; let him be anathema.

III.

OF FAITH.

1. If any one shall say that human reason is in such wise independent, that faith cannot be demanded of it by God; let him be anathema.

2. If any one shall say that divine faith does not differ from a natural knowledge of God, and of moral truths; and therefore that, for divine faith, it is not necessary to believe revealed truth, on the authority of God who reveals it; let him be anathema.

3. If any one shall say that divine revelation cannot be rendered credible by external evidences; and therefore that men should be moved to faith only by each one's interior experience or private inspiration; let him be anathema.

4. If any one shall say that no miracles can be wrought; and therefore that all accounts of such, even those contained in the sacred Scripture, are to be set aside as fables or myths; or that miracles can never be known with certainty, and that the divine origin of Christianity cannot be truly proved by them; let him be anathema.

5. If any one shall say that the assent of Christian faith is not free, but is produced necessarily by arguments of human reason; or that the grace of God is necessary only for living faith which worketh by charity; let him be anathema.

6. If any one shall say that the condition of the faithful, and of those who have not yet come to the only true faith, is equal, in such wise that Catholics can have just reason for withholding their assent, and calling into doubt the faith which they have received from the teaching of the Church, until they shall have completed a scientific demonstration of the credibility and truth of their faith; let him be anathema.

IV.

DE FIDE ET RATIONE.

1. Si quis dixerit, in revelatione divina nulla vera et proprie dicta mysteria contineri, sed universa fidei dogmata posse per rationem rite excultam e naturalibus principiis intelligi et demonstrari; anathema sit.

2. Si quis dixerit, disciplinas humanas ea cum libertate tractandas esse, ut earum assertiones, et si doctrinæ revelatæ adversentur, tanquam veræ retineri, neque ab Ecclesia proscribi possint; anathema sit.

3. Si quis dixerit, fieri posse, ut dogmatibus ab Ecclesia propositis, aliquando, secundum progressum scientiæ census tribuendus sit alios ab eo quam intellexit et intelligit Ecclesia; anathema sit.

Itaque supremi pastoralis Nostri officii debitum exequentes, omnes Christi fideles, maxime veros eo, qui præsent vel docendi munere funguntur, per viscera Jesu Christi obtestamur, nec non ejusdem Dei et Salvatoris Nostri auctoritate jubemus, ut ad hos errores a Sancta Ecclesia arcendos et eliminandos, atque purissimæ fidei lucem pandendam studium et operam conferant.

Quoniam vero satis non est hæreticam pravitatem devitare, nisi ii quoque errores diligenter fugiantur, qui ad illam plus minusve accedunt; omnes officii monemus servandi etiam Constitutiones et Decreta, quibus pravæ ejusmodi opiniones, quas isthic diserte non enumerantur, ab hac Sancta Sede proscriptæ et prohibitiæ sunt.

IV.

OF FAITH AND REASON.

1. If any one shall say that divine revelation includes no mysteries, truly and properly so called; but that all the dogmas of faith may, with the aid of natural principles, be understood and demonstrated by reason duly cultivated; let him be anathema.

2. If any one shall say that human sciences ought to be pursued in such a spirit of freedom that one may be allowed to hold, as true, their assertions, even when opposed to revealed doctrine; and that such assertions may not be condemned by the Church; let him be anathema.

3. If any one shall say that it may at any time come to pass, in the progress of science, that the doctrines set forth by the Church must be taken in another sense than that in which the Church has ever received and yet receives them; let him be anathema.

Wherefore, fulfilling our supreme pastoral duty, we beseech, through the bowels of mercy of Jesus Christ, all the Christian faithful, and those especially who are set over others, or have the office of teachers, and furthermore we command them by authority of the same our God and Saviour, to use all zeal and industry to drive out and keep away from holy Church those errors, and to spread abroad the pure light of faith.

And whereas, it is not enough to avoid heretical pravity, unless at the same time we carefully shun those errors which more or less approach to it; we admonish all, that it is their duty to observe likewise the constitutions and decrees of this holy see, by which wrong opinions of the same kind, not expressly herein mentioned, are condemned and forbidden.

FIRST DOGMATIC DECREE ON THE CHURCH, PUBLISHED IN THE FOURTH SESSION OF THE VATICAN COUNCIL, ON JULY 18, 1870.

PIVS EPISCOPVS SERVVS SERVORVM DEI SACRO APPROBANTE CONCILIO AD PERPETVAM REI MEMORIAM.

Pastor æternus et episcopus animarum nostrarum, ut salutariter redemptionis opus perenne redderet, sanctam ædificare Ecclesiam decrevit, in qua veluti in domo Dei viventis fideles omnes unius fidei et charitatis vinculo continerentur. Quapropter, primum clarificaretur, rogavit Patrem non pro Apostollis tantum, sed et pro eis, qui credituri erant per verbum eorum in ipsum, ut omnes unum essent, sicut ipse Filius et Pater unum sunt.* Quemadmodum igitur Apostolos, quos sibi de mundo elegerat, misit, sicut ipse missus erat a Patre; ita in Ecclesia sua Pastores et Doctores usque ad consummationem sæculi esse voluit. Ut vero episcopatus ipse unus et indivisus esset, et per coherentes sibi invicem sacerdotes credentium multo universa in fidei et communionis unitate conservaretur, beatum Petrum cæteris Apostollis præponens in ipso instituit perpetuum utriusque unitatis principium ac visibile fundamentum, super cuius fortitudinem æternum extrueretur templum, et Ecclesiæ coelo* inferenda sublimitas in huius fidei firmitate consurgeret.† Et quoniam portæ inferi ad evertendam, si fieri posset, Ecclesiam contra eius fundamentum divinitus positum maiori in dies odio undique insurgunt; Nos ad catholici gregis custodiam, incolumitatem, augmentum, necessarium esse indicamus, sacro approbante Concilio, doctrinam de institutione, perpetuitate, ac natura sacri Apostolici primatus, in quo totius Ecclesiæ vis ac soliditas consistit, cunctis fidelibus credendam et tenendam, secundum antiquam atque constantem universali Ecclesiæ fidem, proponere, atque contrarios, dominico gregi adeo perniciosos errores proscribere et condemnare.

* Joan. xvii. 1-20.

† St. Leo M. serm. iv. (al. iii.) cap. 2, in diem Natalis sui.

PIVS, BISHOP, SERVANT OF THE SERVANTS OF GOD, WITH THE APPROBATION OF THE HOLY COUNCIL, FOR A PERPETUAL REMEMBRANCE HEREOF.

The eternal Shepherd and Bishop of our souls, in order to render perpetual the saving work of His redemption, resolved to build the holy Church, in which, as in the house of the living God, all the faithful should be united by the bond of the same faith and charity. For which reason, before He was glorified, He prayed the Father, not for the apostles alone, but also for those who, through their word, would believe in Him, that they all might be one, as the Son Himself and the Father are one.* Wherefore, even as He sent the apostles, whom He had chosen to Himself from the world as He had been sent by the Father, so He willed that there should be pastors and teachers in His Church even to the consummation of the world. Moreover, to the end that the episcopal body itself might be one and undivided, and that the entire multitude of believers might be preserved in oneness of faith and of communion, through priests cleaving mutually together, He placed the blessed Peter before the other apostles and established in him a perpetual principle of this twofold unity, and a visible foundation on whose strength "the eternal temple might be built, and in whose firm faith the Church might rise upward until her summit reach the heavens."† Now, seeing that in order to overthrow, if possible, the Church, the powers of hell on every side, and with a hatred which increases day by day, are assailing her foundation which was placed by God, we therefore, for the preservation, the safety, and the increase of the Catholic flock, and with the approbation of the sacred council, have judged it necessary to set forth the doctrine which, according to the ancient and con-

* John xvii. 1-20.

CAPUT I.

DE APOSTOLICI PRIMATUS IN BEATO PETRO INSTITUTIONE.

Docemus itaque et declaramus, iuxta Evangelii testimonia primatum iurisdictionis in universam Dei Ecclesiam immediate et directe beato Petro Apostolo promissum atque collatum a Christo Domino fuisse. Unum enim Simonem, cui iam pridem dixerat: Tu vocaberis Cephas,* postquam ille suam edidit confessionem inquit: Tu es Christus, Filius Dei vivi, solemnibus hic verbis locutus est Dominus: Beatus es Simon Bar-Iona, quia caro et sanguis non revelavit tibi, sed Pater meus, qui in coelis est: et ego dico tibi, quia tu es Petrus, et super hanc petram aedificabo Ecclesiam meam; et portae inferi non praevalent adversus eam: et tibi dabo claves regni coelorum: et quodcumque ligaveris super terram, erit ligatum et in coelis: et quodcumque solveris super terram, erit solutum et in coelis.† Atque uni Simoni Petro contulit Iesus post suam resurrectionem summum pastoris et rectoris iurisdictionem in totum suum ovile, dicens: Paece agnos meos: Paece oves meas.‡ Huic tam manifestae sacrarum Scripturarum doctrinae, ut ab Ecclesia catholica semper intellecta est, aperte opponuntur pravae eorum sententiae, qui constitutum a Christo Domino in sua Ecclesia regiminis formam pervertentes negant, solum Petrum prae caeteris Apostolis, sive seorsum singulis sive omnibus simul, vero proprioque iurisdictionis primatum fuisse a Christo instructum: aut qui affirmant eundem primatum non immediate, directeque ipsi beato Petro, sed Ecclesiae, et per hanc illi, ut ipsius Ecclesiae ministro, delatum fuisse.

Si quis igitur dixerit, beatum Petrum Apostolum non esse a Christo Domino constitutum Apostolorum omnium principem et totius Ecclesiae militantis visibile caput; vel eundem honoris tantum, non autem verae propriaeque iurisdictionis primatum ab eodem Domino nostro Iesu Christo directe et immediate accipere; anathema sit.

CAPUT II.

DE PERPETUITATE PRIMATUS BEATI PETRI IN ROMANIS PONTIFICIBUS.

Quod autem in beato Apostolo Petro princeps pastorum et pastor magnus ovium Dominus Christus Iesus in perpetuum salutem ac perenne bonum Ecclesiae instituit, id eodem auctore in Ecclesia, quae fundata super petram ad finem saeculorum usque firma stabit, iugiter durare necesse est. Nulli sane dubium, imo saeculis omnibus notum est, quod sanctus beatissimusque Petrus, Apostolorum princeps et caput, fidei columna et Ecclesiae catholicae fundamentum, a Domino nostro Iesu Christo, Salvatore humani generis ac Redemptore, claves regni accepit: qui ad hoc usque tempus et semper in suis successoribus, episcopis sanctae Romanae Sedis, ab ipso fundatae, eiusque consecratae sanguine, vivit et praesidet et iudicium exercet.§ Unde quicumque in hac Cathedra Petro succedit, in secundum Christi ipsius institutionem primatum Petri in universam Ecclesiam obtinet. Manet ergo dispositio veritatis, et beatus Petrus in accepta fortitudine petrae perseverans suscepta Ecclesiae gubernacula non reliquit. |

† Matth. xvi. 16-19.

‡ Joan. xxi. 15-17.

§ Cf. Ephesini Concilii Act. iii.

| S. Leo. M. Sermon. iii. (al. ii.) cap. 8.

stant faith of the universal Church, all the faithful must believe and hold, touching the institution, the perpetuity, and the nature of the sacred apostolic primacy, in which stands the power and strength of the entire Church; and to proscribe and condemn the contrary errors so hurtful to the flock of the Lord.

CHAPTER I.

OF THE INSTITUTION OF THE APOSTOLIC PRIMACY IN THE BLESSED PETER.

We teach, therefore, and declare that, according to the testimonies of the Gospel, the primacy of jurisdiction over the whole Church of God was promised and given immediately and directly to blessed Peter, the apostle, by Christ our Lord. For it was to Simon alone, to whom He had already said, "Thou shalt be called Cephas,"* that, after he had professed his faith, "Thou art Christ, the Son of the living God," our Lord said, "Blessed art thou, Simon Bar-Iona: because flesh and blood hath not revealed it to thee, but my Father who is in heaven; and I say to thee, that thou art Peter, and upon this rock I will build my church, and the gates of hell shall not prevail against it; and I will give to thee the keys of the kingdom of heaven; and whatsoever thou shalt bind upon earth, it shall be bound also in heaven; and whatsoever thou shalt loose upon earth, it shall be loosed also in heaven."† And it was to Simon Peter alone that Jesus, after His resurrection, gave the jurisdiction of supreme shepherd and ruler over the whole of His fold, saying, "Feed my lambs;" "Feed my sheep."‡ To this doctrine so clearly set forth in the sacred Scriptures, as the Catholic Church has always understood it, are plainly opposed the perverse opinions of those who, distorting the form of government established in His Church by Christ our Lord, deny that Peter alone above the other apostles, whether taken separately one by one or all together, was endowed by Christ with a true and real primacy of jurisdiction; or who assert that this primacy was not given immediately and directly to blessed Peter, but to the Church, and through her to him, as to the agent of the Church.

If, therefore, any one shall say, that blessed Peter the Apostle was not appointed by Christ our Lord, the prince of all the apostles, and the visible head of the whole Church militant; or, that he received directly and immediately from our Lord Jesus Christ only the primacy of honor, and not that of true and real jurisdiction; let him be anathema.

CHAPTER II.

OF THE PERPETUITY OF THE PRIMACY OF PETER IN THE ROMAN PONTIFFS.

What the prince of pastors and the great shepherd of the sheep, our Lord Jesus Christ, established in the person of the blessed apostle Peter for the perpetual welfare and lasting good of the Church, the same through his power must needs last forever in that Church, which is founded upon the rock, and will stand firm till the end of time. And indeed it is well known, as it has been in all ages, that the holy and most blessed Peter, prince and head of the apostles, pillar of the faith and foundation of the Catholic Church, who received from our Lord Jesus Christ, the Saviour and Redeemer of mankind, the keys of the kingdom of heaven, to this present time and at all times lives and presides and pronounces judgment in the person of his successors, the bishops of the holy Roman see, which was founded by him, and consecrated by his blood.§ So that whoever succeeds Peter in his chair, holds, according to Christ's own institution, the primacy of Peter over the whole church. What, therefore, was once established by him who is the truth, still remains, and blessed Peter, retaining the strength of the rock, which has

‡ Council of Eph. sess. iii.

§ John xxi. 15-17.

Hac de causa ad Romanam Ecclesiam propter potentiore principatitatem necesse semper fuit omnem convenire Ecclesiam, hoc est, eos, qui sunt undique fideles, ut in ea Sede, e qua veneranda communio iura in omnes dimanant, tamquam membra in capite consociata, in unam corporis compagem coalescerent.*

Si quis ergo dixerit, non esse ex ipsius Christi Domini institutione seu iure divino, ut beatus Petrus in primatu super universam Ecclesiam habeat perpetuos successores; aut Romanum Pontificem non esse beati Petri in eodem primatu successorem; anathema sit.

CAPUT III.

DE VI ET RATIONE PRIMATUS ROMANI PONTIFICIS.

Quapropter apertis innixi sacrarum litterarum testimoniis et inherentes tum Prædecessorum Nostorum Romanorum Pontificum, tum Conciliorum generalium disertis, perspicuisque decretis, innovamus oecumenici Concilii Florentini definitionem, qua credendum ab omnibus Christi fidelibus est, sanctam Apostolicam Sedem, et Romanum Pontificem in universum orbem tenere primatum, et ipsum Pontificem Romanum successorem esse beati Petri principis Apostolorum, et verum Christi Vicarium, totiusque Ecclesiae caput, et omnium Christianorum patrem ac doctorem existere; et ipsi in beato Petro pascendi, regendi et gubernandi universalem Ecclesiam a Domino nostro Iesu Christo plenam potestatem traditam esse; quemadmodum etiam in gestis oecumenicorum Conciliorum et sacris canonibus continetur.

Docemus proinde et declaramus, Ecclesiam Romanam disponente Domino super omnes alias ordinariæ potestatis obtinere principatum, et hanc Romani Pontificis iurisdictionis potestatem, quæ vere episcopalis est, immediatam esse; erga quam cuiuscumque ritus et dignitatis, pastores atque fideles, tam seorsum singuli quam simul omnes, officio hierarchicæ subordinationis, veraque obedientiæ obstringuntur, non solum in rebus, quæ ad fidem et mores, sed etiam in iis, quæ ad disciplinam et regimen Ecclesiae, per totum orbem diffusæ pertinent; ita, ut custodita cum Romano Pontifice tam communio, quam eiusdem fidei professionalis unitate, Ecclesia Christi sit unus grex sub uno summo pastore. Hæc est catholice veritatis doctrina, a qua deviare salva fide atque salute nemo potest.

Tantum autem abest, ut hæc Summi Pontificis potestas officiat ordinariæ ac immediatæ illi episcopali iurisdictionis potestati, qua Episcopi, qui positi a Spiritu Sancto in Apostolorum locum successerunt, tamquam veri Pastores assignatos sibi greges, singuli singulos, pascunt et regunt, ut eadem a supremo et universali Pastore asseratur, roboretur ac vindicetur, secundum illud sancti Gregorii Magni: Meus honor est honor universalis Ecclesiae. Meus honor est fratrum meorum solidus vigor. Tum ego vero honoratus sum, cum singulis quibusque honor debitus non negatur.†

Porro ex suprema illa Romani Pontificis potestate gubernandi universam Ecclesiam ius eidem esse consequitur, in huius sui muneris exercitio libere communicandi cum pastoribus et gregibus totius Ecclesiae, ut iidem ab ipso in via salutis doceri ac regi possint. Quare damnamus ac reprobamus illorum sententias, qui hanc supremi capitis cum pastoribus et gregibus communicationem licite impediri posse dicunt, aut eandem reddunt æculari potestati obnoxiam, ita ut contendant, quæ ab Apostolica Sede vel eius auctori-

been given to him, has never left the helm of the Church originally intrusted to him.*

For this reason it was always necessary for every other church, that is, the faithful of all countries, to have recourse to the Roman Church on account of its superior headship, in order that being joined, as members to their head, with this see, from which the rights of religious communion flow unto all, they might be knitted into the unity of one body.†

If, therefore, any one shall say that it is not by the institution of Christ our Lord Himself, or by divine right, that blessed Peter has perpetual successors in the primacy over the whole Church; or, that the Roman pontiff is not the successor of blessed Peter in this primacy; let him be anathema.

CHAPTER III.

OF THE POWER AND NATURE OF THE PRIMACY OF THE ROMAN PONTIFF.

Wherefore, resting upon the clear testimonies of holy writ, and following the full and explicit decrees of our predecessors the Roman pontiffs, and of general councils, we renew the definition of the Oecumenical Council of Florence, according to which all the faithful of Christ must believe that the holy apostolic see and the Roman pontiff hold the primacy over the whole world, and that the Roman pontiff is the successor of blessed Peter the prince of the apostles, and the true vicar of Christ, and is the head of the whole church, and the father and teacher of all Christians; and that to him, in the blessed Peter, was given by our Lord Jesus Christ full power of feeding, ruling, and governing the universal Church; as is also set forth in the acts of the oecumenical councils, and in the sacred canons.

Wherefore, we teach and declare that the Roman Church, under divine providence, possesses a headship of ordinary power over all other churches, and that this power of jurisdiction of the Roman pontiff, which is truly episcopal, is immediate, toward which the pastors and faithful of whatever rite and dignity, whether singly or all together, are bound by the duty of hierarchical subordination and of true obedience, not only in things which appertain to faith and morals, but likewise in those things which concern the discipline and government of the church spread throughout the world, so that being united with the Roman pontiff, both in communion and in profession of the same faith, the Church of Christ may be one fold under one chief shepherd. This is the doctrine of Catholic truth, from which no one can depart without loss of faith and salvation.

So far, nevertheless, is this power of the supreme pontiff from trenching on that ordinary power of episcopal jurisdiction by which the bishops, who have been instituted by the Holy Ghost, and have succeeded in the place of the apostles, like true shepherds, feed and rule the flocks assigned to them, each one his own; that, on the contrary, this their power is asserted, strengthened, and vindicated, by the supreme and universal pastor; as St. Gregory the Great saith: "My honor is the honor of the universal Church; my honor is the solid strength of my brethren; then am I truly honored when to each one of them the honor due is not denied."‡

Moreover, from that supreme authority of the Roman pontiff to govern the universal Church, there follows to him the right, in the exercise of this his office, of freely communicating with the pastors and flocks of the whole Church, that they may be taught and guided by him in the way of salvation.

Wherefore, we condemn and reprobate the opinions of those who say that this communication of the supreme head with the pastors and flocks can be lawfully hindered, or who make it subject to the secular

toritate ad regimen Ecclesiae constituuntur, vim ac valorem non habere, nisi potestatis saecularis placito confirmetur.

Et quoniam divino Apostolico primatus iure Romanus Pontifex universae Ecclesiae praees docemus etiam et declaramus, eum esse iudicem supremum fidelium,* et in omnibus causis ad examen ecclesiasticum spectantibus ad ipsius posse iudicium recurri;† Sedis vero Apostolicae, cuius auctoritate maior non est, iudicium a nemine fore retractandum, neque cuiquam de eius licere iudicare iudicio.‡ Quare a recto veritatis tramite aberrant, qui affirmant, licere ab iudiciis Romanorum Pontificum ad oecumenicum Concilium tamquam ad auctoritatem Romano Pontifice superiorem appellare.

Si quis itaque dixerit, Romanum Pontificem habere tantummodo officium inspectionis vel directionis, non autem plenam et supremam potestatem iurisdictionis in universam Ecclesiam, nec solum in rebus, quae ad fidem et mores, sed etiam in iis, quae ad disciplinam et regimen Ecclesiae per totum orbem diffusae pertinent; aut eum habere tantum potiores partes, non vero totam plenitudinem huius supremae potestatis; aut hanc eius potestatem non esse ordinariam et immediatam sive in omnes ac singulas ecclesias sive in omnes et singulos pastores et fideles; anathema sit.

CAPUT IV.

DE ROMANI PONTIFICIS INFALLIBILI MAGISTERIO.

Ipsa autem Apostolico primatu, quem Romanus Pontifex tamquam Petri principis Apostolorum successor in universam Ecclesiam obtinet, supremam quoque magisterii potestatem comprehendit, haec Sancta Sedes semper tenuit, perpetuus Ecclesiae usus comprobatur, ipsaque oecumenica Concilia, ea imprimis, in quibus Oriens cum occidente in fidei charitatisque unionem conveniebat, declaraverunt. Patres enim Concilii Constantinopolitani quarti, maiorum vestigiis inhaerentes, hanc solemnem ediderunt professionem: Prima salus est, rectae fidei regulam custodire. Et quia non potest Domini nostri Iesu Christi praetermitti sententia dicentis: Tu es Petrus, et super hanc petram aedificabo Ecclesiam meam, haec, quae dicta sunt, rerum probantur effectibus, quia in Sede Apostolica immaculata est semper catholica reservata religio, et sancta celebrata doctrina. Ab huius ergo fide et doctrina separari minime cupientes, speramus, ut in una communione, quam Sede Apostolica praedicat, esse mereamur, in qua est integra et vera Christianae religionis soliditas.§ Approbante vero Lugdunensi Concilio secundo, Graeci professi sunt: Sanctam Romanam Ecclesiam summum et plenum primum et principatum super universam Ecclesiam catholicam obtinere, quem se ab ipso Domino in beato Petro Apostolorum principe sive vertice, cuius Romanus Pontifex est successor, cum potestatis plenitudine recipere veraciter et humiliter recognoscit; et sicut praeter ceteris tenetur fidei veritatem defendere, sic et, si quae de fide subortae fuerint quaestiones, suo debent iudicio definire. Florentinum denique Concilium definitivum: Pontificem Romanum, verum Christi Vicarium, totiusque Ecclesiae caput et omnium Christianorum patrem ac doctorem existere; et ipsi in beato Petro pascendi, regendi ac gubernandi universalem Ecclesiam a Domino nostro Iesu Christo plenam potestatem traditam esse.

power, maintaining that the things which are decreed by the apostolic see or under its authority for the government of the Church, have no force or value unless they are confirmed by the approval of the secular power. And since, by the divine right of apostolic primacy, the Roman pontiff presides over the universal churches, we also teach and declare that he is the supreme judge of the faithful,* and that in all causes calling for ecclesiastical trial, recourse may be had to his judgment,† but the decision of the apostolic see, above which there is no higher authority, cannot be reconsidered by any one, nor is it lawful to any one to sit in judgment on his judgment.‡

Wherefore, they wander away from the right path of truth who assert that it is lawful to appeal from the judgments of the Roman pontiffs to an oecumenical council, as if to an authority superior to the Roman pontiff.

Therefore, if any one shall say that the Roman pontiff holds only the charge of inspection or direction, and not full and supreme power of jurisdiction over the entire Church, not only in things which pertain to faith and morals, but also in those which pertain to the discipline and government of the Church spread throughout the whole world; or, that he possesses only the chief part and not the entire plenitude of this supreme power; or, that this his power is not ordinary and immediate, both as regards all and each of the churches, and all and each of the pastors and faithful; let him be anathema.

CHAPTER IV.

OF THE INFALLIBLE AUTHORITY OF THE ROMAN PONTIFF IN TEACHING.

This holy see has ever held—the unbroken custom of the Church doth prove—and the oecumenical councils, those especially in which the East joined with the West, in union of faith and of charity, have declared that in this apostolic primacy, which the Roman pontiff holds over the universal Church, as successor of Peter the prince of the apostles, there is also contained the supreme power of authoritative teaching. Thus the fathers of the fourth Council of Constantinople, following in the footsteps of their predecessors, put forth this solemn profession:

"The first law of salvation is to keep the rule of true faith. And whereas the words of our Lord Jesus Christ cannot be passed by, who said: Thou art Peter, and upon this rock I will build my church (Matt. xvi. 18), these words, which He spake, are proved true by facts; for in the apostolic see, the Catholic religion has ever been preserved unspotted, and the holy doctrine has been announced. Therefore, wishing never to be separated from the faith and teaching of this see, we hope to be worthy to abide in that one communion which the apostolic see preaches, in which is the full and true firmness of the Christian religion."§

So, too, the Greeks, with the approval of the second council of Lyons, professed, that the holy Roman Church holds over the universal Catholic Church a supreme and full primacy and headship, which she truthfully and humbly acknowledges that she received with fulness of power, from the Lord Himself in blessed Peter, the prince or head of the apostles, of whom the Roman pontiff is the successor; and as she, beyond the others, is bound to defend the truth of the faith, so if any questions arise concerning faith, they should be decided by her judgment. And finally, the Council of Florence defined that the Roman pontiff is true vicar of Christ, and the head of the whole Church,

§ Formula of St. Hormisdas Pope, as proposed by Hadrian II. to the fathers of the eighth general Council, (Constantinople IV.,) and subscribed by them.

Hinc pastorali muneri ut satisfacerent, Praedecessores Nostri indefessam semper operam dederunt, ut salutaris Christi doctrina apud omnes terrae populos propagaretur, parique cura vigilarunt, ut, ubi recepta esset, sincera et pura conservaretur. Quocirca totius orbis Antistites, nunc singuli, nunc in Synodis congregati, longam ecclesiarum consuetudinem et antiquae regulae formam sequentes, ea praesertim pericula, quae in negotiis fidei emergebant, ad hanc Sedem Apostolicam retulerunt, ut ibi potissimum rescerirent damna fidei, ubi fides non potest sentire defectum.* Romani autem Pontifices, prout temporum et rerum conditio suadebat, nunc convocatis oecumenicis Conciliis aut explorata Ecclesiae per orbem dispersae sententia, nunc per Synodos particulares, nunc aliis, quae divina suppedibat providentia, adhibitis auxiliis, ea tenenda definiuerunt, quae sacris Scripturis et apostolicis Traditionibus consentanea. Deo adiutore, cognoverant. Neque enim Petri successoribus Spiritus Sanctus promissus est, ut eo revelante novam doctrinam patefacerent, sed ut eo assistente traditam per Apostolos revelationem seu fidei depositum sancte custodirent et fideliter exponerent. Quorum quidem apostolicam doctrinam omnes venerabiles Patres ampliori et sancti Doctores orthodoxi venerati atque secuti sunt; plenissime scientes, hanc sancti Petri Sedem ab omni semper errore illibatam permanere, secundum Domini Salvatoris nostri divinam pollicitationem discipulorum suorum principi factam: Ego rogaui pro te, ut non deficiat fides tua, et tu aliquando conversus confirma fratres tuos.

Hoc igitur veritatis et fidei numquam deficientis charisma Petro eiusque in hac Cathedra successoribus divinitus collatum est, ut excoelo suo munere in omnium salutem fungerentur, ut universus Christi grex per eos ab erroris venenosa esca aversus, coelestis doctrinae pabulo nutrireretur, ut sublati schismatis occasione Ecclesia tota una conservaretur atque suo fundamento innixa firma adversus inferi portas consistere.

At vero cum hac ipsa aetate, qua salutifera Apostolici muneris efficacia vel maxime requiritur, non pauci inveniantur, qui illius auctoritati obtreant; necessarium omnino esse censemus, praerogativam, quam unigenitus Dei Filius cum summo pastoralis officio coniungere dignatus est, solemniter asserere.

Itaque Nos traditioni a fidei Christianae exordio perceptae fideliter inhaerendo, ad Dei Salvatoris nostri gloriam religionis Catholicae exaltationem et Christianorum populorum salutem, sacro approbante Concilio, docemus et divinitus revelatum dogma esse definimus: Romanum Pontificem, cum ex Cathedra loquitur, id est, cum omnium Christianorum Pastoris et Doctoris munere fungens, pro suprema sua Apostolica auctoritate doctrinam de fide vel moribus ab universa Ecclesia tenendam definit, per assistantiam divinam, ipsi in beato Petro promissam, ea infallibilitate pollere, qua divinus Redemptor Ecclesiam suam in definienda doctrina de fide vel moribus instructam esse voluit; ideoque eiusmodi Romani Pontificis definitiones ex sese, non autem ex consensu Ecclesiae, irreformabiles esse.

and the father and teacher of all Christians, and that to him, in the blessed Peter, was given by our Lord Jesus Christ full power of feeding and ruling and governing the universal Church. (John xxi. 16-17.)

In order to fulfil this pastoral charge, our predecessors have ever labored unweariedly to spread the saving doctrine of Christ among all the nations of the earth, and with equal care have watched to preserve it pure and unchanged where it had been received. Wherefore the bishops of the whole world, sometimes singly, sometimes assembled in synods, following the long-established custom of the churches (St. Cyril, Alex. ad S. Coelest. Pap.), and the form of ancient rule (St. Innocent I. to councils of Carthage and Milevi), referred to this apostolic see those dangers especially which arose in matters of faith, in order that injuries to faith might best be healed there where the faith could never fail.* And the Roman pontiffs, weighing the condition of times and circumstances, sometimes calling together general councils, or asking the judgment of the Church scattered through the world, sometimes consulting particular synods, sometimes using such other aids as Divine Providence supplied, defined that those doctrines should be held, which, by the aid of God, they knew to be conformable to the holy Scriptures, and the apostolic traditions. For the Holy Ghost is not promised to the successors of Peter, that they may make known a new doctrine revealed by him, but that, through his assistance, they may sacredly guard and faithfully set forth the revelation delivered by the apostles, that is, the deposit of faith. And this their apostolic teaching, all the venerable fathers have embraced, and the holy orthodox doctors have revered and followed, knowing most certainly that this see of St. Peter ever remains free from all error, according to the divine promise of our Lord and Saviour made to the prince of the apostles: I have prayed for thee, that thy faith fail not, and thou, being once converted, confirm thy brethren. (Conf. St. Agatho, Ep. ad Imp. a Conc. Oecum. VI. approbat.)

Therefore, this gift of truth, and of faith which fails not, was divinely bestowed on Peter and his successors in this chair, that they should exercise their high office for the salvation of all, that through them the universal flock of Christ should be turned away from the poisonous food of error, and should be nourished with the food of heavenly doctrine, and that, the occasion of schism being removed, the entire Church should be preserved one, and, planted on her foundation, should stand firm against the gates of hell.

Nevertheless, since in this present age, when the saving efficacy of the apostolic office is exceedingly needed, there are not a few who carp at its authority; we judge it altogether necessary to solemnly declare the prerogative, which the only-begotten Son of God has deigned to unite to the supreme pastoral office.

Wherefore, faithfully adhering to the tradition handed down from the commencement of the Christian faith, for the glory of God our Saviour, the exaltation of the Catholic religion, and the salvation of Christian peoples, with the approbation of the sacred council, we teach and define it to be a doctrine divinely revealed: that when the Roman pontiff speaks *ex cathedra*, that is, when in the exercise of his office of pastor and teacher of all Christians, and in virtue of his supreme apostolical authority, he defines that a doctrine of faith or morals is to be held by the universal Church, he possesses, through the divine assistance promised to him in the blessed Peter, that infallibility with which the divine Redeemer willed His Church to be endowed, in defining a doctrine of faith or morals; and therefore that such definitions of the Roman pontiff are irreformable of themselves, and not by force of the consent of the Church thereto.

* St. Bernard, Ep. 190.

Si quis autem huic Nostrae definitioni contradicere, quod Deus avertat, praesumpserit; anathema sit.

Datum Romae, in publica Sessione in Vaticana Basilica solemniter celebrata, anno Incarnationis Dominicae millesimo octingentesimo septuagesimo, die decima octava Iulii.

Pontificatus Nostri anno vigesimo quinto.

Ita est.

IOSEPHUS,

Episcopus S. Hippoliti, Secretarius Concilii Vaticani.

And if any one shall presume, which God forbid, to contradict this our definition; let him be anathema.

Given in Rome, in the Public Session, solemnly celebrated in the Vatican Basilica, in the year of the Incarnation of our Lord one thousand eight hundred and seventy, on the eighteenth day of July, in the twenty-fifth year of our Pontificate.

Ita est.

JOSEPH, BISHOP OF ST. POLTAN,

Secretary of the Council of the Vatican.

R

REDDING, CYRUS, an English journalist and author, born at Penrhyn, Cornwall, in 1785; died in London, May 28, 1870. In 1806 he went to London and joined the editorial corps of the *Pilot*, and subsequently became editor and proprietor of the *Plymouth Chronicle*. From 1815 to 1818 he resided in France, and edited *Galignani's Messenger* and the *Dramatic Review*. He also published various literary and political pamphlets during that period. In 1820 he joined Thomas Campbell, the poet, in editing Colburn's *New Monthly Magazine*, and was directly and indirectly associated with him for upward of ten years. In 1830 they assumed the management of *The Metropolitan*, which soon proved a financial failure. Mr. Redding afterward edited two provincial papers, but his chief services to literature were outside of the editorial sanctum. Among his works are a collection of Poems entitled "Gabrielle," published in 1829, "History of Wines," 1833; "Velasco," a novel, 1846; "Abstract of Evidence on the Wine Duties," 1852; "Fifty Years' Recollections, Literary and Personal," 1858; "Memoirs of Thomas Campbell, and Keeping up Appearances, a Novel of English Life," 1860; "All's Well that Ends Well," 1862; "Memoirs of Remarkable Misers," and "Yesterday and To-day," 1863; and "Past Celebrities whom I have Known," 1865. He published a translation of Thiers's "History of the Consulate," with notes; and "Illustrated Itineraries of Cornwall and of Lancashire;" wrote from notes "The Travels of Captain Andrews in South America," and "Pandurang Hari," an Eastern story. He was also the author of a "Departmental and Statistical Account of the Wine Products of France."

REFORMED CHURCH. This is the collective name of a number of churches descending from the reformatory movement which was begun by Calvin. The largest branches, besides the two American, are those of Holland (where there are two branches, one state church and one independent), of Hungary, of Switzerland (where this church has, however, in every canton an independent organization), and France. In Germany, a large portion of the Reformed Church has been absorbed by the UNITED EVANGELICAL CHURCH.

I. REFORMED CHURCH IN AMERICA (LATE DUTCH). The following statistics show the number of churches, ministers, and commu-

nants, of the different classes of the Church in North America, for the year ending June, 1870:

CLASSES.	Churches.	Ministers.	Communicants.
Albany	17	16	2,755
Arcot	15	11	563
Bergen	13	13	305
Bergen, South	17	21	2,735
Cayuga	12	12	302
Geneva	19	12	1,855
Grand River	8	6	979
Greene	11	10	1,177
Holland	16	12	1,576
Hudson	9	13	1,515
Illinois	14	18	1,300
Kingston	13	10	1,974
Long Island, North	10	4	3,220
Long Island, South	14	16	3,214
Michigan	9	7	564
Monmouth	8	10	1,019
Montgomery	23	15	1,243
New Brunswick	10	20	2,019
New York	17	33	4,263
New York, South	6	7	1,465
Orange	22	25	2,780
Paramus	18	18	2,490
Passaic	12	16	1,573
Philadelphia	14	16	2,734
Poughkeepsie	11	17	2,081
Raritan	16	20	2,860
Rensselaer	13	14	1,854
Saratoga	16	13	1,546
Schenectady	13	15	2,017
Schoharie	12	7	951
Ulster	12	17	1,570
Westchester	15	15	1,710
Wisconsin	20	14	1,567
Total	464	498	61,444

The number of families reported is 38,552; baptisms (infants and adults), 4,395; catechumens, 22,476; "in Biblical instruction," 28,836; Sunday-school scholars, 48,411. The contributions for religious and benevolent purposes were \$281,647.86; for congregational purposes, \$306,034.27.

II. REFORMED CHURCH IN THE UNITED STATES (LATE GERMAN REFORMED). The *Almanac of the Reformed Church in the United States*, for 1871, gives the following as the scheme of the church organization: Over the Congregation is the Consistory. Over the Consistories is the Classis. Over the Classes is the District Synod. Over the District Synods is the General Synod, the highest body. There are four District Synods. The oldest, the Mother Synod, commonly called the Eastern Synod, is officially called "The Synod of the Reformed Church in the United States," organized in 1747, and divided into districts or Classes in 1819. In 1820 the Ohio Classis was organized. In 1824 this body became a Synod,

now known as "The Synod of Ohio and Adjacent States." The third Synod was organized in 1867, and is called "The Synod of the Reformed Church in the Northwest." The fourth and last Synod was organized in February, 1870, and called "The Pittsburg Synod of the Reformed Church in the United States." Its territory is the western parts of Pennsylvania and New York. The General Synod meets only every three years. It met the first time in Pittsburg, Pa., in 1863; in Dayton, O., in 1866; in Philadelphia, Pa., in 1869; and will meet in Cincinnati, O., in 1872. The Eastern Synod and Pittsburg Synod always meet in October or November of every year; while their Classes meet in the spring. The Synod of Ohio and the Synod of the Northwest meet annually in the spring, and their Classes in the fall.

The publications of this Church are two weekly, three monthly, and one quarterly—in all, six—periodicals, in English, two weekly, one semi-monthly, two monthly, and one quarterly, in German. Its literary, theological, and other institutes, consist of seven colleges, three collegiate institutes, one female college, one mission-house, one select school, two theological seminaries, and two orphan-houses—the last taking care of one hundred and thirty-eight orphans. One hundred and eighty ministers preach in German, and two hundred and twenty-five preach in English.

The following table gives the number of ministers, congregations, and members in the Church in the United States for the year ending June, 1870:

CLASSES.	Ministers.	Congregations.	Members.
East Pennsylvania.....	24	73	14,922
Lebanon.....	29	64	12,173
Zion.....	26	76	8,654
Maryland.....	23	50	6,807
North Carolina.....	9	22	2,036
Virginia.....	8	25	1,711
Philadelphia.....	32	29	6,791
Mercersburg.....	28	66	6,084
Goshenhoppen.....	18	53	8,443
New York.....	11	7	906
Lancaster.....	19	34	3,108
East Susquehanna.....	22	38	7,133
West Susquehanna.....	14	51	8,557
Clarion.....	8	29	2,213
St. Paul's.....	16	30	2,594
West New York.....	7	9	1,419
Miami.....	28	62	5,291
Lancaster.....	15	23	7,137
Westmoreland.....	19	54	3,236
Tuscarawas.....	14	26	2,363
Tiffin.....	11	42	1,347
St. John's.....	24	30	4,433
Illinois.....	12	25	807
Iowa.....	12	15	661
St. Joseph.....	23	53	3,053
Sheboygan.....	12	16	1,303
Indiana.....	14	24	1,246
Heidelberg.....	9	29	1,695
Erie.....	12	20	1,407
Milwaukee.....	13	18	812
Minnesota.....	5	7	416
Total.....	536	1,179	217,910

The number reported under the head of "communicants" is 96,728; the number reported under the head of "unconfirmed members" is

68,862; baptisms reported, 12,776, confirmations, 7,068; Sunday-schools, 1,019; scholars, 49,960; benevolent contributions, \$76,453.15.

III. The following statement gives the number of members of the Reformed Church in Europe, exclusive of those in England, and of the Reformed congregations which have been absorbed in the United Church of Germany:

In Switzerland.....	1,418,000
In Germany.....	800,000
In France.....	400,000
In Holland.....	1,860,000
In Russia.....	200,000
In Hungary.....	1,453,000
In Siebenbürgen (Transylvania).....	297,400
In Austria.....	119,000
Total.....	6,247,400

RHODE ISLAND. The people of Rhode Island manifest an active solicitude for their State interests. At both sessions of the General Assembly the debates upon important measures were full and animated; the fifteenth amendment was adopted by a vote of 57 to 9, during the discussion of which there arose the question of a necessity for an amendment to the State constitution to place it in accordance with the fourteenth amendment of the Constitution of the United States; as in the present form it discriminates against naturalized citizens in their qualifications as voters, and it was also held to be a grievance that there should be a distinction made between native-born citizens in the matter of property.

An amendment of the constitution was presented in the General Assembly. It was discussed whether the adoption of such alteration in the State constitution should be referred to a convention, or to the votes of the people; but no conclusion was reached, and the amendment was foiled.

The vexed question of the Cove Lands received much attention before final adjustment. These are water-lands valued at about \$2,000,000, which the colony ceded to the towns, May 28, 1707. By common law, however, the title to such soil covered by tide-water vests in the State, where it still remained for want of explicit terms of conveyance. There had therefore been a considerable contest as to the particular ownership between the State and the city of Providence, and, as in their present condition they are of value to neither, and in order to rescue them from their unimproved state, the matter was at last settled by the following resolution:

Resolved, That the General Treasurer of the State be, and hereby is, instructed to execute a conveyance to the city of Providence of all the right, title, and interest that the State has in and to the Cove Lands (so called) in said city, being the lands now or heretofore flowed by tide-water above Weybosset Bridge in said city; said conveyance to be made and executed under the direction and to the satisfaction of the Attorney-General of this State, whenever the city of Providence shall pay to the State the sum of two hundred thousand dollars in a satisfactory bond to be approved by the Governor, payable in five years without interest, provided that said bond be executed within six months from the passage of this resolution.

Another very important measure passed by the General Assembly was the abolition of imprisonment for debt, by a vote of 56 yeas to 2 nays; this reform has been discussed and pressed for years, but opinion in the State has been so conservative that the Legislature of this year has been the first to take the responsibility of the measure.

The Judiciary Committee deliberated upon a petition for the extension of the elective franchise to women, and the prominent female advocates of the movement had a hearing in the House; they urged the State Legislature, which had been the first to grant religious toleration and to abolish capital punishment, not to be behind in going one step farther, and granting the ballot to women. The petition was reported back, with the recommendation of the majority of the committee that the petitioners be granted leave to withdraw their memorial from the files of the House, as it was considered that to comply with it would be wrong, because the privilege was claimed as a natural right; in this opinion the committee were unable to coincide, franchise being considered a social trust which society confers upon its citizens; and in the present case there was not sufficient general demand to show that it was important.

There were two State Conventions held during the year, at both of which the attendance was unusually large. At the Democratic Convention, Lyman Pierce was nominated for Governor, and the following resolutions were unanimously adopted:

Resolved, That the Democracy of Rhode Island now, as heretofore, adhere to the principles of the Constitution of the United States, and demand, and will maintain for others, as far as in them lies, the rights and privileges guaranteed the several States and the people thereof, by the fundamental law.

Resolved, That the naturalized citizens ought, by the constitutional law of the State, to be permitted and allowed the exercise of the right of suffrage on the same terms as native-born citizens.

Resolved, That the present tariff is a gross outrage upon the people of the United States; giving no satisfaction to the manufacturer, and robbing the people by compelling them to pay unnecessarily exorbitant prices for the necessities of life.

Resolved, That the internal revenue system is blunderingly continued; annoying and expensive, and not nearly so advantageous to the Treasury as would be one less inquisitorial, and giving excuse for a less number of officials.

Resolved, That the Republican party, and the present Administration, preach economy so frequently, that they deem themselves excused from practising it; and Mr. Dawes, of Massachusetts, was honest and truthful when he said that neither the Senate nor the President would do any thing in the way of retrenchment and reform.

Resolved, That the Democratic party of the State of Rhode Island holds now, as ever, that the national debt should be paid exactly according to the contract.

Resolved, That the fact, that after five years of peace the Union still remains unrestored and military rule is still maintained in a large portion of the republic, is in itself proof that the party in power has not the disposition to reestablish the Union in its ancient symmetry, and to restore real peace, with its attendant blessings, to all the people, and that such a party

is unfit to be longer intrusted with the control of the Government.

The Republican Convention also assembled in Providence, and renominated Seth Padelford for Governor, Pardon W. Stevens for Lieutenant-Governor, John R. Bartlett for Secretary of State, Willard Sayles for Attorney-General, and Samuel A. Parker for General Treasurer. No platform was adopted.

At the election, Padelford (Republican) received 10,498 votes for Governor, and Pierce 6,296. Republican majority, 4,198. The Legislature was divided as follows: Senate, Republicans, 25; House, 54; Democrats, Senate, 9; House, 18.

The funded debt of the State at the close of the war was \$4,000,000, of which sum, \$1,072,500 had been paid principally from collections made from the General Government for State dues, accruing from military services rendered and supplies furnished, leaving an outstanding balance of \$2,927,500 due in State bonds, bearing interest at six per cent. per annum, payable semi-annually. None of these bonds are payable previous to the year 1882, and some of them not until 1893 and 1894. The Treasurer has redeemed of this amount \$152,000, thereby reducing the State debt to \$2,775,500.

There are twenty-five institutions for savings in the State. The number of depositors in the aggregate is 67,288, and the amount deposited is \$27,067,072.18. The Providence Institution for Savings has the largest amount, upward of five million dollars standing to the credit of 16,551 depositors.

Providence contains almost one-third of the inhabitants of the State. The assessed value of its wealth is as follows: Real estate, \$52,588,700; personal estate, \$40,565,100; total, \$93,103,800. The amount of tax is \$1,256,901.80, and the ratio of taxation \$1.35 on each \$100. The number of industrial establishments in the State of all kinds is 1,180, against 1,459 in 1865, and 1,191 in 1860.

The cause of education is in a prosperous condition. The town appropriations for the year are \$16,000 more than in 1869; more and better school-buildings have been erected than in any previous year, and the number of weeks of school have been increased; the State Board of Education has been organized, and has entered upon its work with earnestness, fidelity, and zeal. The Governor recommends the establishment of a Normal and Training School for teachers, and an Industrial School for the benefit of the more than 8,000 children between the ages of five and fifteen who are growing up in ignorance, without any school instruction. The Superintendent of Schools makes some statements concerning the evening schools, which show them to have been eminently successful. They were attended by nearly two thousand persons from the ages of ten years to that of forty.

An appointment of a Board of Female Visitors, to the penal and correctional institutions

of the State where females are imprisoned, met with great favor; the ladies entered upon and fulfilled their duties with zeal, and an earnest desire to benefit the unfortunate class. Committees were appointed to visit once a fortnight the State Prison, State Farm, and Reform School. In the prison the number of women is small, rarely above fifteen, and sentenced for very short periods, and every comfort their condition admits is afforded them; but on the State Farm defective arrangements render the institution the reverse of reformatory, and improvements are recommended calculated to produce better results. High praise is given to the managers of the Reform School, but, as the system is a somewhat severe one, slight changes in details might be made to render the inmates more hopeful and happy, without interfering with the needful discipline. Among the appropriations for State beneficiaries was, for the indigent insane, the sum of \$2,000.

The Federal census of the State is as follows:

COUNTIES.	1870.	1880.
Bristol.....	9,421	8,907
Kent.....	18,595	17,308
Newport.....	20,050	21,896
Providence.....	142,198	107,799
Washington.....	20,079	18,715
Total.....	217,338	174,630

The different railroad companies have effected some improvements; work was commenced on the Wickford Railroad; petitions were presented to the General Assembly for leave to construct a railroad from East Attleboro' to Woonsocket, to connect with the road under construction from Taunton, through Norton, to Attleboro'; and for the passage of an act to incorporate the Taunton and Providence Railroad Company. The new Mansfield and Framingham Road is in complete running order. It is 21 miles in length, and extends through a very fertile and pleasant portion of Massachusetts; by its aid, a direct route is opened between Providence and Fitchburg, as well as between Fitchburg and Newport; it is really the connecting link between the northern and southern portions of New England, connecting also with Saratoga, Rutland, Burlington, and Montreal. Contracts have also been awarded for dredging the Providence and Pawtucket Rivers.

RIPLEY, JAMES W., Brevet Major-General U. S. A., born in Windham, Conn., December 10, 1794; died in Hartford, Conn., March 5, 1870. He commenced his military career as a cadet at the Military Academy, May 8, 1813, and was graduated and promoted second lieutenant of the Corps of Artillery, June 1, 1814. He was advanced through the grades of first lieutenant and captain. Having been retained in the reorganization of the army, in 1821, he was transferred, upon its formation in 1832, to the Ordnance Department, and promoted as major and lieutenant-colonel. He was appointed Act-

ing Chief of Ordnance, April 23, 1861, and brigadier-general and chief, August 3, 1861, in which capacity he continued until September 15, 1868, when he was honorably retired from active service, having been borne on the army register more than forty-five years. He served in the war with Great Britain in 1814 and 1815; against the Seminole Indians, in 1817 and 1818, and for meritorious conduct, particularly in the performance of his duty in the prosecution of the war with Mexico, he was, May 30, 1848, breveted lieutenant-colonel. July 2, 1861, he was breveted brigadier-general. In 1860 and 1861 he was sent on special duty to Japan. He served during the war with the seceding States, as Chief of Ordnance, U. S. A., and was in charge of the Ordnance Bureau at Washington, D. C., until 1863, and afterward as inspector of the armament of fortifications on the New-England coast. March 13, 1865, he was breveted Major-General U. S. A., for long and faithful services in the army.

RITCHIE, Mrs. ANNA CORA MOWATT, an American actress and authoress, born in Bordeaux, France, about 1821; died in England, July 26, 1870. She was the daughter of Samuel G. Ogden, a New-York merchant, who was established in business in France, being herself the tenth of a family of seventeen children. When six years of age her family returned to New York, where in the intervals of study she devoted much time to reading and private dramatic entertainments. At the age of fifteen she was married to James Mowatt, a young lawyer of New York. During the first two years of her married life she continued her studies with great diligence, and published also two poems, "Pelayo, or the Cavern of Covadonga," an epic in five cantos; and the "Reviewers Reviewed," a satire directed against the critics of the former poem. About this time her health began to fail, and she spent a year and a half in Europe, during which she wrote, for private performance, a play entitled "Gulzora, or the Persian Slave," afterward published. Soon after her return to this country her husband became involved in financial difficulties, and, with the brave determination to provide for her own support, she began a series of public dramatic readings in Boston, Providence, New York, and other cities, and, though successful in winning the favor of her audiences, her health was so much affected by her exertions that for the two following years she was a confirmed invalid. Nevertheless her pen was not idle, and during this interval she contributed to several magazines, under the pseudonyme of Helen Berkley, and also wrote a five-act comedy entitled "Fashion," produced at the Park Theatre, New York, in March, 1845, with considerable success. Having been strongly urged by her friends to appear upon the stage, she made her *début* at the Park theatre, June 13, 1845, in the character of *Pauline* in the "Lady of Lyons." The pres-

tige of her family connection, added to decided talent, assured her immediate success in her new career. In 1847 she made an extensive professional tour in England, where, in 1851, her husband died. Returning to this country soon after, she renewed her stage triumphs until in 1854, upon her marriage with William F. Ritchie, Esq., she bade farewell forever to the stage, and since that time has resided mostly abroad, devoting her rare talents entirely to literature. Mrs. Ritchie was a woman of remarkable purity of character. Nobly struggling from earliest womanhood against the frowns of unexpected adversity, conquering well-earned fame from the world as an artist and an author, she gained as well the admiration of all those more intimately acquainted with her, by her private virtues and freely-extended benevolence.

ROBINSON, MRS. THÉRÈSE ALBERTINE LOUISE, an eminent authoress and translator, born in Halle, Germany, January 26, 1797; died at Hamburg, Germany, April 13, 1870. She was the daughter of Prof. Von Jacob, and early commenced writing over the signature of Talvi, a name composed of her initials. In 1807, her father having received an appointment as professor in the University of Kharkov, she accompanied him to Russia, where she began the study of the Slavic languages and literature, and wrote her first poems. In 1810 her father was transferred to St. Petersburg, and here she devoted herself to the acquisition of modern languages and the study of history. In 1816 they returned to Halle, and she applied herself to the study of Latin, and, yielding to the entreaties of her friends, published, in 1825, a volume of tales under the title of "Psyche;" also, the same year, under the signature of Ernest Berthold, translations of Sir Walter Scott's "Black Dwarf" and "Old Mortality," and two volumes of Servian popular songs, "Volkslieder der Serben." In 1828 she was married to Prof. Edward Robinson, an American philologist and Biblical scholar, and two years later accompanied him to America. Here she turned her attention to the study of the aboriginal languages, and translated into German Pickering's work on the Indian tongues of North America (Leipsic, 1834). She also contributed an "Historical View of the Languages and Literature of the Slavic Nations" to the *Biblical Repository*. In 1837 she returned with her husband to Germany, where she remained until 1840, during which time she published a treatise, entitled "An Essay on the Historical Characteristics of the Popular Songs of the Germanic Nations, with a Review

of the Songs of the Non-European Races" (Leipsic, 1840); "The Poems of Ossian not Genuine," a "History of Captain John Smith," in German, and "The Colonization of New England" (Leipsic, 1847), translated into English by the younger Hazlitt. Returning to New York, she wrote in English, "Heloise; or, the Unrevealed Secret;" "Life's Discipline, a Tale of the Annals of Hungary;" "The Exiles;" and numerous contributions to German and American periodicals. Her last work, "Fifteen Years, a Picture from the Last Century," has been published in this country since her death.

ROMAN CATHOLIC CHURCH. The Pope, Pius IX. (before his elevation to the Papal See, Giovanni Maria di Mastai Ferretti), was born at Sinigaglia, on the 13th day of May, 1792; elected Pope on the death of Gregory XVI. in 1846, and crowned on the 21st of June of that year. The college of Cardinals, at the close of the year 1870, consisted of 5 cardinal bishops, 38 cardinal priests, and 7 cardinal deacons; total, 50 members, against 55 in 1869.

The *Annuario Pontificio* of 1870 gives the following table of patriarchs, archbishops, and bishops:

Patriarchates of Latin and Oriental rite, 12.

ARCHBISHOPS: *Latin Rite*—immediately subject to the Holy See, 12; with ecclesiastical provinces, 120.

Oriental Rite—with ecclesiastical provinces: Armenian, 6; Greco-Melchite, 4; Greco-Romanian, 1; Greco-Ruthenian, 1; Syriac, 4; Syro-Chaldaic, 5; Syro-Maronite, 5. Total of archbishops, 158.

BISHOPS: *Latin Rite*—suburban, 6; immediately subject to the Holy See, 84; suffragan, in ecclesiastical provinces, 571.

Oriental Rite—Armenian, 11; Greco-Bulgarian, 1; Greco-Melchite, 9; Greco-Romanian, 3; Greco-Ruthenian, 5; Syriac, 18; Syro-Chaldaic, 8; Syro-Maronite, 3. Total of bishops, 709.

Sees conferred "in partibus infidelium": archbishops, 41; bishops, 190; total, 231.

Total of patriarchates, archbishops, and bishops, 1,110.

There are vacant, 1 patriarchate, 26 archbishops in ordinary, and 180 bishops in ordinary; in all, 157 sees, leaving 953 sees actually filled. To this number add 18 prelates without a title, and we have 971 as the total number of actual patriarchs, archbishops, and bishops.

The ecclesiastical statistics of Great Britain in 1870, as compared with 1869, were as follows:

COUNTRIES.	Clergy.		Churches, Chapels, and Stations.		Communities of Men.		Communities of Women.	
	1870	1869	1870	1869	1870	1869	1870	1869
England.....	1,551	1,528	947	1,151	55	69	218	216
Scotland.....	207	199	223	203	4	5	18	17
Total in Great Britain.....	1,758	1,727	1,169	1,354	59	69	236	233

Of 19 bishops in England and Scotland, 4 are retired. The number, 207, given for the clergy of Scotland, does not include priests who are retired, or who are at present unattached. The numbers given for the churches, chapels, and stations, for 1870, do not include *private* chapels; in former years private chapels were included.

The number of Roman Catholic peers is 35, against 38 in 1869; the number of Roman Catholic baronets is 49, against 48 in 1869. The number of Roman Catholic members of the House of Commons is 37, against 36 in 1869.

According to the London *Catholic Directory*, the number of archbishoprics in the British dominions in 1870 was 10 (against 9 in 1869); the number of bishoprics was 69 (against 70 in 1869); and the number of vicariates was 82 (against 81 in 1869). There are seven vacancies in the dioceses and vicariates. The total number of archbishops and bishops in the British Empire, including coadjutors, and including also four (living in Great Britain) who are retired, is 114.

The most important event in the modern history of the Roman Catholic Church is the Vatican Council, which met on December 8, 1869, and continued its sessions until July, 1870. An accurate history of the Council cannot yet be given, because there is not only wanting an official report of the proceedings, but all who took part in the proceedings were bound by a solemn oath to observe the strictest silence. Nevertheless, a number of detailed accounts of the full proceedings of the Council have been published, the most famous of which is the series of letters addressed to the *Allgemeine Zeitung* of Augsburg, and subsequently published under the title, "*Römische Briefe*," von Quirinus ("Roman Letters by Quirinus"). The accuracy of all these reports is liable to the gravest suspicion, and as regards the Roman letters of Quirinus, in a French pamphlet entitled, "*Ce qui se passe au Concile*," and several other pamphlets, we have the official declaration of the Council itself, or a number of bishops, that they are gross misstatements of the real facts. On the other hand, it is generally admitted that, by the same channels through which the accounts contained in the above books were obtained, several important documents were made public before the official permission to publish them was given.

The fifth General Congregation of the council, on the 30th of December, 1869, was the final meeting of the year. The first General Congregation of 1871—the sixth of the council—was held on the third of January. At this meeting the publication was made of the names of the special congregation, or deputation de *Ordinibus Regularibus*, consisting of twenty-four members. At this, and the session of the next day, numerous speeches were delivered in opposition to the *schemata*. The attention which had been drawn to the strength

of the opposition was thought to be the cause of a papal order prohibiting the publication of the names of the speakers in the official journal. The second public session of the council was celebrated on January 6th, with a solemn profession of faith by the sovereign Pontiff and all the fathers. No decree was promulgated at this session. All representatives of reigning royal families, except a prince of Hohenzollern, were absent. The discussion of the first schema *de Fide Catholica* was ended at the ninth General Congregation, on January 10th, and the schema, with the amendments proposed, was sent to the deputation de *Fide* for their consideration. At the next General Congregation, January 14th, the discussion on Ecclesiastical Discipline was opened. At the twelfth General Congregation, January 19th, the names of the 24 members of the Congregation or Deputation de *Missionibus et Ritibus Orientalibus* were published. On the 26th of January a petition, bearing the names of three cardinals and 124 archbishops and bishops, against the promulgation of the dogma of infallibility, was taken to the Vatican. It was drawn up by Cardinal Rauscher, Archbishop of Vienna, and entreated the Pope not to submit the dogma to the discussion of the council. The reason urged was, "that the Church has to sustain a struggle just now unknown in former times, against men who oppose religion itself as an institution baneful to human nature, so that it seems inopportune to impose upon the Catholic nations, led into temptation by so many machinations on every side, more dogmas than the Council of Trent proclaimed." In conclusion, the address says that "the definition which is demanded would furnish fresh arms to the enemies of religion to excite against the Catholic Church the resentment even of men avowedly the best," and give to the European governments "a motive or a pretext for encroaching upon the rights the Church still possesses." The Pope returned it, saying it related to a question in which he could not interfere, and suggested that it should be sent to the commission de *Postulato*. At the twenty-third General Congregation, February 8th, the discussion on the three *schemata* of Ecclesiastical Discipline was closed, and they were referred to the Deputation de *Disciplina*. At the next General Congregation, February 10th, a fourth schema on discipline, *de Parvo Catechismo* (on the Little Catechism), was taken up. The discussion on this point was closed at the twenty-ninth General Congregation, February 29th. The decree *Apostolicis Litteris*, the object of which was to expedite the proceedings of the council, was published on this day. After this session an interval was given to allow time for the deputations de *Fide* and de *Disciplina* to consider the amendments offered by the fathers. On the 7th of March, a formula respecting the infallibility of the Pontiff was distributed for the examination of the fathers,

as an additional chapter to the schema of the constitution *de Ecclesia Christi*.

On the 14th of March a *Monitum*, making known the mode of discussion of the schema *de Fide Catholica*, as amended by the deputation *de Fide*, was published. The first session after the recess (the thirtieth General Congregation) was held on the 18th of March. The subsequent sessions of the council, to April 24th, were devoted to debates and votes upon this schema. On the 21st of March the Pope held a secret consistory, but delivered no allocution. On the 22d ten bishops spoke in the council, most of whom opposed the schema. The vote was taken on the whole of the schema *de Fide Catholica* collectively at the forty-fifth General Congregation of the council, which was held on the 12th of April. The whole number of votes was 595; of these 515 answered *placet*; 80 answered *placet juxta modum*, handing in at the same time the modifications which they wished adopted. At the next General Congregation, April 19th, the vote was taken on the proposed modifications. The third public session of the council was held Sunday, April 24th. The schema *de Fide Catholica*, now made a Dogmatic Constitution, was voted unanimously, 664 fathers being present, and was proclaimed. It is given among the PUBLIC DOCUMENTS in this volume.

The discussion of the *schema de Parvo Catechismo* was taken up at the forty-seventh General Congregation, on the 29th of April. The object of this schema was to give a common catechism to the whole Church, adopting that of Bellarmine. It was chiefly opposed by the German and Hungarian bishops. The vote was taken at the forty-ninth General Congregation, on the 4th of May, and resulted: 500 *placet*, 56 *non-placet*, 44 *placet juxta modum*, or conditional votes. At the fiftieth General Congregation, on the 18th of May, the Bishop of Lausanne presented the report of the committee *de Disciplina*, on the conditional votes upon the *schema de Parvo Catechismo*. It favored the amendment proposed by the Hungarian bishops. The Bishop of Poitiers, as official reporter, presented the first report of the deputation *de Fide* upon the schema entitled "First Dogmatic Constitution on the Church of Christ." This was the schema which embraced the dogma of infallibility. It consisted of a preamble and four chapters. The debate was opened the next day, at the fifty-first General Congregation. The speakers were Cardinal Patrizi, the Archbishops of San Francisco, Messina, and Catania, and the Bishops of Dijon, Veszprim, Zamora, and Patti. At the fifty-second General Congregation, May 17th, the Archbishop of Malines zealously advocated the proposition, the Bishops of St. Gall and Brièue, and Dr. Olifford, the English Bishop of Clifton, followed. Bishop Hefele, of Rotenburg, author of the "History of the Councils," maintained the points that pontifical infallibility had never been countenanced by

the Church, and that the intention of establishing the dogma by force of numbers was contrary to the practice of the councils. The following day (fifty-third General Congregation) Bishop Hefele read an oration of Cardinal Rauscher, which presented views similar to his own. He was followed by Cardinal Donnet and the Archbishop of Saragossa. The speakers at the fifty-fourth General Congregation (May 19th) were Cardinals Cullen and Moreno, and the Patriarch of Antioch; at the fifty-fifth (May 20th), the Primate of Hungary and the Archbishops of Corfu, Tuam, and Paris; at the fifty-sixth (May 21st) the Archbishop of Cashel and the Bishops of Strasbourg, Forti, and Castellamare; at the fifty-seventh (May 23d), the Armenian Patriarch of Cilicia, and the Bishops of Mayence, Angoulême, and Grenoble; at the fifty-eighth (May 24th), the Bishops of Sion (Switzerland), Urgel, La Cœpœion, and Guastalla. At the fifty-ninth General Congregation (May 25th), Dr. Manning, Archbishop of Westminster, delivered an elaborate address in favor of the new dogma, and was replied to by Bishop Clifford, of Clifton, with much earnestness. At the sixtieth General Congregation (May 28th), Bishop Verot, of Savannah, Georgia, spoke in opposition to the dogma. He was followed by Bishop Senestrar, of Ratisbon. Other speakers at this session were the Bishops of Czanad and Temesvar, of Coutances, and of Groeswarden (United Greek). At the sixty-first General Congregation (May 30th), Archbishop Spalding, of Baltimore, spoke in favor of the dogma. He was followed by the Bishops of Puy, Basle, Nepi and Sutri, Saluzzo, Constantine, and Nemesia (*in part*). At the sixty-second General Congregation (May 31st), Archbishop Purcell, of Cincinnati, and Archbishop Conolly, of Halifax, spoke against the dogma. The other speakers of this day were the Archbishop of Utrecht, the Latin Patriarch of Jerusalem, and the Archbishop of Trajanopolis. At the sixty-third General Congregation (June 2d), Bishop Dreux-Brézé, of Moulins, spoke in support of, and Bishop Strossmeyer, of Bosnia, against the dogma. Other speakers this day were the Archbishop of Diarbekir or Amida (Chaldean), and the Bishops of Chartres and Tanea. At the sixty-fourth General Congregation (June 3d), the Bishops of Elphin, Pittsburg, and Sura, spoke. A motion was made to close the discussion on the schema, in general, and immediately carried, against the protest of the minority. Up to this time sixty-three speeches had been delivered on the schema in general, of which thirty-six were for and twenty-seven against it. There remained forty-nine members of the council, who had inscribed their names as intending to speak, and who had not been heard. Among them was Bishop Dupanloup, of Orleans, who afterward published at Naples an outline of what he had intended to say.

A protest was drawn up by Cardinal Rauscher

against the action of the council in closing the debate, as a violation of the rights of the minority. It received the signatures of 81 bishops. The discussion of the schema in parts was commenced at the sixty-fifth General Congregation (June 6th). The Bishops of Monterey, Savannah, Gurk, Rochelle, Havana, Wheeling, and Bolina (*in part*) spoke on the preamble, or *proœmium*, and the discussion was closed on that subject. At the next General Congregation (the sixty-sixth, June 7th), Cardinal Schwarzenberg, the Bishop of Ivrea, the Archbishop of Malines, and the Bishops of Casale and Bolina, spoke on the first chapter; the Archbishop of Granada, and the Bishops of Aquila and Monterey, spoke on the second chapter. At the sixty-seventh General Congregation (June 9th), the discussion of the third chapter *de vi et ratione Primatus Romani Pontificis* was begun. Cardinal Rauscher, the Archbishops of Malines, Toulouse, Mosul (Syria), and Rheims, and the Bishop of Monterey, spoke. On the 10th of June (sixty-eighth General Congregation), the revised *proœmium*, or preface to the schema, was distributed. The amendments were advocated by the Archbishop of Malines, on the part of the deputation for dogma. Bishop Dupanloup, of Orleans, and the Bishops of Concepcion, Nice, St. Brienc, Savannah, and Barcelona, also spoke. June 11th (sixty-ninth General Congregation), the discussion of the third chapter was continued by the Bishops of Marseilles, Grosswardein, Saluzzo, Oran, Bolina, and Gap, and by the Abbot of St. Paul's. June 18th (seventieth General Congregation), Archbishop Leahy, of Cashel, reported upon the modifications proposed in the *proœmium* of the schema. The council then proceeded to vote the preface of the dogmatic constitution, which was adopted in its integrity, the majority having rejected all the amendments. Cardinal Pitra advocated this course in a very learned and able speech, which, by its studied moderation, and the persuasive tone in which it was delivered, produced a deep impression. He insisted on the primacy of the Roman Pontiff, and on the authority of the Fathers of the Greek and Oriental Church. Bishop Ramirez y Vasquez, of Badajoz, followed with a speech full of devotion to the Pope. The discussion of the third chapter of the schema was continued; the speakers, besides those already named, were the Bishops of Chartres, Luçon, Moulins, and Urgel. The discussion of the third chapter was continued at the next General Congregation (seventy-first, June 14th), by the Archbishop of Colocsa, the Patriarch of Antioch (Melchite), the Bishops of Coutances, Galletti-Nuovo, and Warmia, the Archbishop of Fogaras, and the Bishop of Angers. At the seventy-second General Congregation (June 15th), the report of the deputation *de Fide* upon the first and second chapters of the schema was presented by the Bishops of Calvi and Teano, and the votes were taken.

The discussion of the fourth chapter on Papal

Infallibility (*de Romani Pontificis Infallibili Magisterio*) was opened by Cardinals Mathieu and Rauscher. The seventy-third General Congregation (June 18th) was distinguished by the speech of Cardinal Guidi, Archbishop of Bologna, against the dogma. He was replied to by Cardinals Bonnehose and Cullen. Cardinal Pitra also spoke on this day. At the succeeding session, on the 20th of June, the Bishops of Calvi and Teano replied in the name of the deputation *de Fide* to the propositions of Cardinal Guidi. The discussion of the fourth chapter of the schema was continued by the Latin Patriarchs of Alexandria and Jerusalem, Archbishop McHale, of Tuam, and the Archbishop of San Francisco. At the next session, Archbishop Connolly, of Halifax, criticised the dogma and the evidence alleged for it. Other speakers were the Archbishops of Sorrento, Smyrna, Trebizond, Osimo and Tripoli, Bourges, and Granada. The discussion was continued in the seventy-sixth General Congregation (June 23d) by the Archbishops of Zara, Rheims, Burgos, and Toronto, and the Bishop of Biella. The Bishops of Wheeling, Trieste, Parma, Cloyne, and Mayence, and the ex-Bishop of Guadalupe, spoke at the session of June 25th. June 26th (seventy-eighth General Congregation), the Archbishop of Lyons, and the Bishops of Ferentino, Urgel, Monterey, and Kerry, spoke. At the seventy-ninth General Congregation (June 30th) seventy-two amendments on the third chapter were referred to the deputation *de Fide*. The speakers on the fourth chapters were the Bishops of Quimper, Aveira, Paderborn, Casale, Réunion, and Savannah. July 1st (eightieth General Congregation), the Bishops of Ouenca, Luçon, Sura, St. Brienc, Luxemburg, and St. Gall, spoke on the fourth chapter. The next day the discussion was continued by the Bishops of Meath, Hebron, Chalons, Perpignan, Havana, Guamanga, Saluzzo, and Angers. Twenty-two fathers, whose names were inscribed to speak, are recorded as having renounced their intention of speaking. The Bishops of Oran and Civita Vecchia spoke at the eighty-second General Congregation (July 2d), and the discussion was closed, the names of the remaining applicants to be heard being without exception withdrawn. On the 5th of July the Bishop of Treviso, on the part of the deputation *de Fide*, presented the report on the amendments proposed in the third chapter. The votes were taken at this and the ensuing session (July 11th), and the amendments were lost. On the 11th (eighty-fourth General Congregation) the vote on the amendments to the fourth chapter was taken. Among the amendments that had been proposed were one by Archbishop Connolly, of Halifax, for a formula asserting the Pope to be infallible when the Church teaches with him, *tantum caput secum docentis Ecclesia*, and one proposed by Bishop Dupanloup and Cardinal Rauscher declaring the Pope to be infallible

when supported by the judgment of the whole Church, *utens consilio*, or *accipiens consilia universalis Ecclesie*. On the 18th of July, at the eighty-fifth General Congregation, the vote was taken on the third and fourth chapters in general. It resulted: 460 *placet*, 53 *placet juxta modum*, 88 *non-placet*; total, 601. The following is an analysis of the vote of the 18th: The *non-placets* were Germans, 83; French, 24; Italian, 10; Orientals, 8; American, 8; English, 2; Irish, 2; Dr. Errington, 1; total, 88. Among the archbishops who voted *placet juxta modum* are those of Salzburg, Granada, Manila, Burgos, Cologne, Rheims, New York, and several more; fifteen archbishops, not reckoning cardinals, abstained from voting, among whom are the Italian primates of Palermo and Malta. As regards English and Irish votes, among the *non-placets* are the names of McHale and Moriarty, and Bishops Vaughan, of Plymouth, and Clifford, of Clifton; Bishops Ullathorne and Chadwick (of Newcastle) voted *juxta modum*; Bishop Turner, of Salford, and the Irish Bishops Furlong and Leahy, were absent. At the eighty-sixth General Congregation (July 16th), the votes were taken on the modifications proposed by those who had voted *placet juxta modum* on the 18th.

The public session, the fourth in number, took place on the 18th of July, the Pope presiding in person. The final vote resulted: *placet*, 533; *non-placet*, 2; total, 535. Of the Fathers, who had left Rome, 120 had announced their intention to vote for the definition, making the total number in its favor 655. (The text of the dogma is given among the PUBLIC DOCUMENTS in this volume.) At the end of this session leave of absence was given the fathers whose duty or health required they should leave Rome, till November 11th. On July 26th a schema of a Constitution for Apostolic Missions was distributed. Another General Congregation was held in August. The adjourned session of the Council, appointed for November 11th, was prevented from meeting by the occupation of Rome by the Italian Government, and the Council was suspended October 20th.

The following is a summary of the fathers who actually took part in the Council:

Cardinals (including 1 patriarch, 14 archbishops, and 10 bishops)	50
Patriarchs, archbishops, and bishops (not including cardinals), patriarchs 11, archbishops 105, bishops 444; total	560
Archbishops and bishops in <i>partibus infidelium</i> : exercising the office of administrator, coadjutor, vicar-apostolic, or prefect apostolic	75
Not exercising such office	83
Retired bishops	6
Administrator apostolic, not a bishop	1
Abbots and superiors general of religious orders and congregations	53
General total	783
Deduct as not of the episcopal order	79

Total of patriarchs, archbishops, and bishops, who took part in the Council at any time between December 7, 1869, and June 18, 1870

After the Council, many of the bishops and priests of the opposition took the ground that

the dogma of infallibility was not of binding force until additional formal action had been taken in the publication of it. To meet this view, Cardinal Antonelli addressed the following circular to the Papal nuncio at Brussels:

Most Illustrious and Right Rev. Lord: It has come to the knowledge of the Holy See that some Catholics, and perhaps even one or two bishops, imagine that the Apostolic Constitution proclaimed at the Ecumenical Council of the Vatican, in its session of July 18th last, is not binding so long as it is not solemnly published by an additional act of the Holy See. No one can surely fail to understand how strange such a proposition as this is. The Constitution in question was promulgated in the most solemn manner in which it could be, when the Holy Father solemnly confirmed it and promulgated it, in the Vatican Basilica, in the presence of more than five hundred bishops. Besides this, it was posted up with the usual formalities in the places where such publications are usually made at Rome, although that proceeding was not needed in a case like the present. Consequently, and in accordance with a well-known rule, this Constitution has become obligatory upon the entire Catholic world, and there is no need of its being notified by any other promulgation whatsoever.

I have thought it my duty to address these brief observations to your lordship, in order that they may serve for your guidance in case of any doubt arising in any quarter upon this subject.

(Signed) J. CARDINAL ANTONELLI.

Rome, August 11, 1870.

Though no state government was officially represented at the Council, its proceedings were watched with a deep interest by many of the European governments, which were of opinion that the adoption of the *Schema de Ecclesia* would have an important bearing upon the relations between the Papal power and that of the secular governments. In reply to the submission of the canons, Count von Beust, the Austrian prime-minister, addressed a protest to the Papal Government, in which he warned it against taking any steps which might be in opposition to the Austrian Constitution, or lead to encroachments on the rights of the Austrian state. He declared the determination of the Austrian Government not to suffer any such encroachments, at the same time expressing its wish to avoid conflicts between the state and the Church. This note was understood to be entirely independent of any agreement which might be entered into between the powers in the event of any step being actually taken by the council against their interests or of their supposed peace and civilization, with the view of a common course of action in the matter.

Count Daru, on the part of the French Government, also addressed a note to the Papal Government, declaring that the French Government felt itself obliged to depart from the position of complete abstention and rigorous neutrality which it had at first adopted with regard to the Council; that determination had originally been reached under the supposition that the Assembly of the Fathers would confine itself to the circle of questions purely religious and theological, a domain in which the Cabinet of the Tuileries considered it had no right to interfere, and in which it admitted

the question of infallibility. The publication by the *Augsburg Gazette* of the twenty-one canons "*de Ecclesia*" appeared to the Emperor Napoleon's Government to modify in a singular manner the ground on which it had hitherto taken its stand. Those resolutions touched mixed matters, with regard to which the French ministry thought it would not be justified in maintaining the neutral and expectant attitude it had purposed to sustain. The French Government would be satisfied with a French bishop explaining in the council the condition and the rights of the country. The note concluded by proposing a modification of the programme of the council so as to admit such a representative, even if it should be found necessary to prorogue the council. Count Darn's dispatch did not make any threat in the event of a refusal being received from the Vatican. Cardinal Antonelli, in his reply, represented that a bishop could not reconcile the double duties of an ambassador and a father of the council. Nevertheless, he would not decline to receive observations from France before the discussion on any particular question, but he could not undertake that the recommendation which might be given would be adopted.

Subsequently, M. Emile Ollivier, having become Minister of Foreign Affairs of the French Empire, dispatched the following note to the Marquis de Banneville, French minister at Rome:

PARIS, May 12, 1870.

MONSIEUR L'AMBASSADEUR: The Emperor's Government has not had itself represented at the council, although the right of doing so belongs to it in its quality of mandatary of the laics in the Church. To prevent ultra opinions from becoming dogmas it reckoned on the moderation of the bishops and on the prudence of the Holy Father, and to defend our civil and political laws against the encroachments of the theocracy it counted on public reason, on the patriotism of the French Catholics, and on the ordinary means of sanction which it can dispose of. In consequence it only paid attention to the august character of a meeting of prelates assembled to decide on great interests of the faith and of salvation, and merely imposed on itself one mission—to assure and protect the entire liberty of the Council. Warned by the rumors current in Europe of the dangers which certain imprudent propositions would entail on the Church, desirous of not finding the aggressive forces organized against religious belief receiving any additional strength, it departed for an instant from its attitude of reserve to offer suggestions and give advice.

The Sovereign Pontiff did not think fit to listen to the former or to act on the latter. We do not insist upon them, and resume our previous position of abstention. You will not call forth nor enter into any conversation henceforward either with the Pope or with Cardinal Antonelli relative to the affairs of the Council. You will confine yourself to learning and noting down all the facts, all the feelings which prepared them, and all the impressions which succeed each event. Have the goodness to inform the French prelates that our holding aloof does not betoken indifference, but is for them a sign of respect, and, above all, of confidence. Their defeat would be exceedingly bitter if the civil power, by its intervention, had not prevented it; and their triumph will be all

the more precious if they owe it only to their own efforts and the force of truth. Accept, sir, etc.
EMILE OLLIVIER.

The following confidential dispatch was addressed by Count von Arnim, the representative of the North-German Bund, to Cardinal Antonelli:

ROME, May 23, 1870.

MONSIEUR: The Imperial French Government has acquainted us with the memoir relating to the Council which your Holiness has been pleased to receive from the hands of the French ambassador. Having been called upon by the Cabinet of the Tuileries to support the observations made by it to the Holy Father, as President of the Council, the Government of the North-German Confederation has not hesitated to join in steps which are considered timely and even urgent by many Catholics, who wish the deliberations of the Council to result in a work of religious and social peace.

Indeed, the Government of the Confederation would neglect its duty if, in the face of the deep emotion prevailing in the Church in Germany, it did not confirm the identity of the views as developed in the French memoir with the serious apprehensions which have taken hold of the minds in Germany, who are startled at the thought that resolutions of the Council, arrived at in spite of the almost unanimous opinion of the German episcopacy, might create painful positions by imposing an everlasting conflict upon the dictates of conscience. This is not all. It is notorious that neither the German bishops, who, in our eyes as well as in those of the Holy See, are the legitimate representatives of the German Catholics, nor the episcopacy of the Austro-Hungarian Empire, have been able to adopt the views which appear to sway the Council. Our bishops have attended to the duty, by documents published in the press, the authenticity of which has never been disputed, of pointing out in advance the deplorable results to be apprehended if, without heeding the opposing voice of a considerable minority, the supreme authority of the Church and the majority of the Council would proceed to ordain certain decrees which, by introducing in the form of dogmatic definitions serious changes in the limits of authority appertaining to each degree of the hierarchy, could not fail at the same time to impair the mutual position of civil and religious power. Such decrees, far from being only vague threats for the future, seem rather calculated to revive old and sufficiently known Papal constitutions which people of all times and nations have constantly opposed, and to surround them with a new dogmatic sanction. The proclamation of such principles to-day from the lofty position of the Papal chair, and their maintenance by all the means of persuasion at the disposal of the Church, would, we apprehend, cause confusion in all the relations between Church and State, and bring on crises which, in spite of its traditional wisdom, the Papal Government may perhaps not have contemplated, because of its being less able than ourselves to judge of the public mind in our country. There is one point of especial importance to which we would direct the attention of the Papal Government.

In Germany, Catholics and non-Catholics must dwell together peaceably. There exists a current which, under the influence of daily relations and constant intercourse, without doing away with the distinction of creed, has at last brought together the different persuasions in such a manner as to justify hopes that at some future day all the living powers of Christianity might be united for jointly combating errors from which the world is suffering already to the great injury of the religious element. Now, it is to be apprehended that this approximate movement would be forcibly checked, if events should prove that the tendencies contested by our bishops, and

against which public opinion has employed all the arguments derived from the necessity to defend the basis of our national aims against whatsoever attack, should prove so far victorious in the deliberations of the Council as to be dictated to the world as the standard of religious faith, and hence of political action. Our population would—we say it without the possibility of a mistake—look upon this as a revival of old struggles, for it could never be quieted by an argumentative process purporting to render the political bearing entirely independent of what it would be taught to consider its religious duty.

It is not impossible that the government of the Confederation—which has not been spared reproach for not having timely opposed the justly or unjustly so-called projects of Rome—may lack that freedom of action in religious affairs which it has heretofore employed for the interest of the Catholic Church.

While making these observations to the Papal chair we are by no means imbued with the ideas of those whom the Roman court probably considers its opponents. We have no interest in weakening the authority of the Pope. As a friendly power, and to render a new service to the Papal chair, we would willingly assist, by the candor with which we dwell upon our own difficulties and upon the danger of a religious crisis, in removing from the discussions of the Council whatever might compromise the altogether satisfactory position of the Catholic Church in Germany.

If we could flatter ourselves on having coöperated in such result we would not only be obliged for it to the wisdom of the holy chair, but would regard it as an additional motive to persevere in that position which we have always maintained toward the Roman court. Accept the assurances, etc.

VON ARNIM.

The expectation that some of the bishops would persist in their opposition to the doctrine of papal infallibility, even after its promulgation by the Council, was not fulfilled. The two bishops who in the public session of July 18th, in which the final vote on the dogmatization of the doctrine was taken, voted in the negative (Bishop Rizzio, of Cujazzo in Naples, and Bishop Fitzgerald, of Little Rock, Arkansas), declared immediately after the adoption and promulgation of the doctrine their unconditional submission. In Germany, the bishops held in August a meeting at Fulda, and issued a pastoral letter, in which they say: "We declare that the present Vatican Council is a genuine Œcumenical Council; that this Council has as little as any other Œcumenical Council set up or created a new doctrine differing from the old, but that it has merely developed, defined, and expressly enjoined to believe the faith which is contained in the tradition of faith, and which has been faithfully guarded; in fine, that its decrees have received a power obligatory for all the faithful in virtue of their solemn publication by the head of the Church in a public session of the Council." Among the signatures appended to this pastoral letter, the names of some of the most prominent former opponents of the doctrine did not appear. None of them refused, however, to submit to this decree of the Council; one of them, the Bishop of Breslau, offered his resignation to the Pope, but when it was rejected, he, like all the other bishops, not only submitted him-

self, but also insisted on the submission of the priests and laity of his diocese. The most noteworthy opposition to the new doctrine proceeded from the Catholic scholars and theologians of Germany. A considerable number of them, especially of the professors of the universities, had fully committed themselves to the views expressed in the book of Janus on "The Pope and the Council" (see *AMERICAN ANNUAL CYCLOPEDIA* for 1869), and nearly all of them at first refused to change their opinion after the promulgation of the doctrine. Forty-four professors of the University of Munich issued toward the end of July a joint protest against the doctrinal decree of the Council. This protest was concurred in by 15 professors of Freiburg, 9 of Breslau, and many of other universities. On August 26th and 27th a meeting was held at Nuremberg of the theological professors of several universities, to agree upon a common course of action. The meeting took the ground that the Vatican Council could not be regarded as an Œcumenical Council; that the doctrine of papal infallibility was null and void; and that a new Council should be called, outside of Rome. One of the participants in this meeting, Prof. Michelia, of Braunsberg, called the Pope a destroyer of the Church, whom the Church ought to depose. At Cologne, a central committee was formed to collect the signatures of the Catholic Germans to a monster protest against the validity of the Council, and the doctrine of papal infallibility; but all these movements utterly failed to produce the effect which their originators had expected. At the close of the year, a few of the theological professors were still refusing to sign the declaration which the bishops demanded from them; a few Catholic papers, although the bishops had warned them, were continuing their attacks, and the joint protest had received a few thousand signatures; but, on the whole, the movement against the validity of the Council and the doctrine of papal infallibility had proved a decided failure. Outside of Germany, hardly any opposition was shown to the decree of the Council. The voice of Father Hyacinth was heard once more, but it was soon drowned by the din of war. In England, Lord Acton published a pamphlet, in which he expressed a hope for the continuance of the opposition; but he met with no support. In Hungary, a few enthusiasts thought of the establishment of a national Catholic Church, but no sympathy with their scheme showed itself among the people. At the close of the year, the Catholic world, with few individual exceptions, had fully acquiesced in the decree of the Vatican Council.

The anticipation of the occupation of Rome by the Italian Government, and the suppression of the temporal power of the Pope, caused the latter to request of the King of Prussia aid to resist the Italian expedition. On September 8th, the King replied as follows:

HEADQUARTERS OF THE GERMAN ARMIES, }
NEAR RHEIMS, September 8, 1870.

Most Holy Father: Monsignor the Bishop of Paterborn has presented to me the letter in which your Holiness informs me that you have reason to believe his Majesty the King of Italy may, perhaps, send an army into the Pontifical States and into Rome itself. Your Holiness requests me to hinder the King of Italy in the execution of the project and also asks for an armed intervention of my troops in case your Holiness should have need of protection. I regret that the policy always adopted by myself and my government prevents me absolutely from intervention in any such question. I am, besides, on the best of terms with my brother the King of Italy, and I could not imperil the relations that exist between Germany and Italy for a political interest which does not, in any way, as your Holiness seems to think, touch upon the interest of Prussia. I have no doubt, besides, that his Majesty the King of Italy and his Government, if they should be forced to enter the states of your Holiness, in order to avert the excesses of the revolutionary party in Europe, would give to your Holiness every guarantee which can assure the free exercise of that spiritual authority which your Holiness ought to exert in the interest of the Church, of which you are the acknowledged head. With the most earnest desire that peace and order may be shortly reestablished in all parts of Europe, I beg your Holiness to believe me your sincere friend,

WILLIAM.

Still later, on October 7th, after the occupation (*see ITALY*) by the Italians, the Pope sent, by the hand of Count von Arnim, to Versailles, to know if the government of the King, in case he (the Pope) wished to abandon Rome, would take the necessary measures with the Government of Florence, in order that this might be done with all convenience. The replies from the Prussian Government sent by telegraph were as follows:

VERSAILLES, October 8, 1870.

The Federal Chancellor to the Envoy Count von Arnim, at Rome:

To the first part of the telegram of yesterday, I reply affirmatively, after having taken the orders of his Majesty the King. The intercession demanded will soon be sent by telegraph to Florence.

(Signed) VON BISMARCK.

VERSAILLES, October 8, 1870.

The Federal Chancellor to the Envoy Count Brasser, at Florence:

Cardinal Antonelli has asked of the royal envoy to the Pope, if the Pope, in case he wished to abandon Rome, should count upon the support of his Majesty so that he might leave in a proper manner and without hindrance. His Majesty the King has ordered me to reply in the affirmative to this demand. His Majesty is convinced that the Italian Government will respect in every circumstance the liberty and the dignity of the Pope, even when the Pope, against every expectation, should have the intention to transfer his residence elsewhere.

The King charges your Excellency to manifest this hope. His Majesty the King does not maintain that the Confederation of the North has the obligation of meddling with the political affairs of other countries without being asked; he considers himself, however, to be under obligation toward the Germans of Northern Germany, to make sure that the dignity and independence of the supreme head of the Catholic Church be maintained.

(Signed) VON BISMARCK.

On the 29th of September the Pope issued the following protest, addressed to each of the cardinals:

Plus Papa IX. to our well-beloved Son, health and Apostolic Benediction:

Our Lord Jesus Christ, who humbles and exalts, inflicts death and restores life, chastises and saves, has permitted, for the present, that the city of Rome, seat of the supreme Pontificate, should fall into the hands of enemies, together with the remainder of the states of the Church, which those enemies themselves judged prudent to leave for some time longer free from usurpation. Moved by a feeling of paternal charity toward our beloved sons, the cardinals of the Holy Roman Church, and regarding them as coöperators in this our Supreme Apostolate, we have determined this day, afflicted and in tears, to declare to them, as is our duty, and as the voice of conscience commands us, the inmost sentiments of our soul, with which we publicly and openly detest and reprobate the present state of affairs.

For whereas we, although unworthily and above our merit, exercise upon earth the power of Vicar of Christ our Lord, and are the pastor of the entire Church, we now feel that we are deprived of that liberty which is above all things necessary to us to govern the same Church of God, and to sustain its reasons; and we feel it to be our duty to make this protest, having the intention, also, of printing it, that it may become known, as is proper, to the entire Catholic world.

Nor, when we declare that our liberty has been wrested and torn from us (*ereptam ademptamque*), can our enemies reply that this declaration and complaint are without foundation? For surely there is no person of same mind who cannot understand, and must confess, that, being deprived of that supreme and free authority over the postal department, and consequently over the public transmission of letters, which we enjoyed by virtue of our civil principality, and not daring to trust that Government which has robbed us of this power, we find ourselves deprived of that necessary and expeditious means and the unrestricted facility of treating those affairs which the Vicar of Jesus Christ and common Father of the Faithful must necessarily treat about and expedite to all and every one of his children who may have recourse to him from any portion of the globe. This observation is still more forcibly verified by a recent fact which has occurred during the past few days, when, forsooth, those who passed out across the threshold of our residence in the Vatican were subjected to bodily search, the soldiers of the new government narrowly examining them, lest they might have any thing concealed under their garments. A complaint was made of this, and an apology came in reply, stating that it was done through mistake. But who is ignorant that these mistakes may be renewed and many similar ones perpetrated?

Moreover, a terrible visitation is overhanging this beloved city in the matter of public instruction, for in a few days the course of studies will be resumed in the Roman University, and this seat of learning, illustrious for the immense number of nearly one thousand two hundred young men who attend it, hitherto examples of tranquility and order, and the only refuge to so many honest Christian parents, who sent their sons to be educated there, without danger of their being corrupted—this hallowed spot, what with the false and erroneous doctrines that will be henceforward taught there, and the utter incapacity of those who shall be selected to teach, will rapidly fall into a condition, as we may well imagine, very different from that of old.

Moreover, it was asserted that the laws actually in force in Rome, even after the occupation, would remain unaltered and inviolate; and yet, falsifying these assertions, the parochial registries are seized by force and searched through and through, clearly for the purpose of compiling thence what may, perhaps, serve later on for making out the lists for the conscription, or for other ends that we can easily guess. We may add that the outrages and injuries

arising from party spirit and the voluptuousness of revenge are left unpunished; and the same impunity is extended to the base and unworthy contumely launched, to the sorrow of all honest men, against the faithful battalions of our soldiers, so highly deserving of religion and society.

Finally, the orders and decrees recently published in regard of the property of the Church, show with sufficient clearness the ultimate designs of the usurpers. Against which things which have been already accomplished, and the worse deeds that may yet be perpetrated, we mean to protest in the fulness of our supreme authority, as we now protest in these our letters, in which we make known to you, our beloved son, and to each one in particular of the cardinals of the Holy Roman Church, this exposition of events briefly alluded to, reserving to some other time a more detailed statement.

Meanwhile let us pray to the Almighty God, with fervent and incessant supplications, that He may deign to illumine the minds of our enemies; that they may cease to find their souls, more and more, day after day, in the bonds of ecclesiastical censures, and drawn down upon themselves the terrible anger of the living God, who sees every thing, and from whom no one can escape.

For our part, then, with a firm mind, and in all humility, we implore the Divine Majesty, invoking the intercession of the Immaculate Mother of God, and of the Blessed Apostles Peter and Paul, and we do so founded upon a firm confidence of obtaining what we ask; for "God is near to those who suffer tribulation, and close beside those who invoke Him in truth."

Again wishing you, our beloved son, the joy and peace of our Lord Jesus Christ, from the recesses of our heart, we impart to you most lovingly the apostolic benediction.

Given at Rome, near St. Peter's, on the 29th of September, sacred to the Archangel St. Michael, the 25th year of our Pontificate. PIUS P. P. IX.

On November 1st, the Pope issued the following encyclical, which was followed by public protests against the occupation by Catholics in all countries:

PIUS IX., BY DIVINE PROVIDENCE POPE, TO ALL PATRIARCHS, PRIMATEs, ARCHBISHOPS, AND BISHOPS, AND TO OTHER LOCAL ORDINARIES HAVING FAVOR AND COMMUNION WITH THE APOSTOLICAL SEE.

Venerable Brethren, Health and Apostolic Benediction: Having regard to all the proceedings taken for many years past by the Piedmontese Government, with incessant plots aiming at the overthrow of the civil principality granted by the singular providence of God to the Apostolic See, in order that the successors of blessed Peter might enjoy full liberty and security in the exercise of their spiritual jurisdiction, it is impossible, venerable brethren, but that our inmost heart should be grieved at such a conspiracy against the Church of God and this Holy See; and at this calamitous period, when the said Government, following the counsels of sects of perdition, has for a long time meditated a sacrilegious invasion of our beloved city, and of the remaining states, of which the dominion was left to us from the former usurpation, and has now carried that design into effect, by force of arms, against all law and right; while we, prostrate before Almighty God, adore His mysterious designs, and say with the Prophet: *Ego plorans et oculus meus deducens aquas, quia longe factus est a me consolator, convertens animam meam, facti sunt filii mei peridili quoniam praevaluit inimicus.* (Jer., Thren., 1, 16).

Venerable brethren, the history of this nefarious war has been sufficiently explained and published long ago to the whole Catholic world. We have done it in our encyclical allocutions and briefs delivered or dated at different times; namely, on the 1st of November, 1850; on the 22d of January and

26th of June, 1855; on the 18th and 28th of June, and 26th of September, 1859; on the 19th of January, 1860, and in the letters apostolic, March 26, 1860. Also in allocutions of 28th of September, 1860; 18th of March and 30th of September, 1861; 20th of September, 17th of October, and 14th of November, 1867. In this series of documents are viewed and explained the very grievous injuries inflicted by the Piedmontese Government on the sovereign authority of us, and of this Apostolic See, in the years prior to the commencement of the occupation of the ecclesiastical dominion; laws being enacted against natural, against divine, and against ecclesiastical right; the ministers of religion, the religious communities, and even the bishops themselves being subjected to unworthy vexations; the faith pledged to this Holy See in solemn treaties being forfeited, and the sacred obligation of those treaties being outrightly repudiated at the very time when the said Government was signifying its desire to conclude new treaties with us. In those documents, venerable brethren, it is evidenced, and posterity will see, with what arts and by what cunning and unworthy plots the said Government has gone the length of overbearing justice and the sacredness of the rights of this Apostolic See; and at the same time it will be known what exertion we have made to restrain, so far as in us lay, such lawless conduct, that daily grew worse, and to defend the cause of the Church. You are well aware how, in the year 1859, the chief cities of the Emilia were stirred up to rebellion by the Piedmontese authorities, who sent in writings, conspirators, arms, and money; and how, not long afterward, assemblies of the people having been convened, and suffrages having been taken, a pretended plebiscite was got up, and by that trickery and pretence our provinces situate in that region were wrested from our paternal government, all good men in vain protesting against the act. You are also well acquainted with the fact that, during the year following, the said Government made prey of other provinces situate in Pistoia, in Umbria, and in the Patrimony, and turned them to its own profit, alleging crafty pretexts, and with a large army attacked by surprise our troops and the volunteer band of Catholic youths, who, induced by the spirit of religion and piety toward their common father, had hastened from all parts of the world to our defence, and routed them in a murderous battle, they being taken at unawares, yet fighting bravely for their religion to the last.

Neither is any man ignorant of the extraordinary insolence and hypocrisy of this Government, which, in order to extenuate the odium of their sacrilegious usurpation, has not hesitated to give out that it had invaded those provinces to restore in them the principles of moral order, while in reality it everywhere promoted the diffusion and cultivation of every false doctrine, and everywhere relaxed the restraints of lust and impiety; likewise inflicting undeserved penalties on Catholic bishops and on ecclesiastics of every grade, whom it threw into prison and allowed to be harassed with public insults, while at the same time it granted impunity to those persecutors, and even to the assailants of the supreme pontifical dignity in the person of our humility. It is, moreover, true that we, in the due discharge of our office, have not only all along resisted reiterated counsels and demands offered to us, to the effect that we should basely betray our duty, throwing overboard and surrendering the rights and possessions of the Church, or entering into a sinful compromise with the usurpers. Also, it is true that we have opposed to these wicked attempts and crimes so perpetrated contrary to all law, human and divine, our solemn protests before God and man; and that we have declared their authors and abettors to be involved in ecclesiastical censures, and, as far as the case required, we inflicted anew those censures upon them; lastly, it is a well-known fact that the aforesaid

Government has persisted, nevertheless, in its contumacy and its plots, and endeavored to stir up rebellion in our remaining provinces by sending in without intermission its emissaries to stir up trouble, and by artifices of every kind. But these attempts not succeeding as was expected, on account of the unshaken fidelity of our soldiers, and the love and affection of our people, was remarkably and unwaveringly manifested toward us; at last that fierce tempest broke out against us in the year 1867, when, during the autumn, bands of desperate men, burning with wickedness and rage, and aided by subsidies from the said Government, invaded our territories and this city, where many persons belonging to the same bands had already found entrance and had concealed themselves; and from their violence and cruelty and arms, all fierce and bloody outrages were to be feared by us and by our beloved subjects, as was clearly evident unless the merciful God had frustrated their attacks by the energy of our troops, and by the effective aid of a force sent to us by the renowned French nation.

In so many conflicts, in succession of perils, anxieties, and sorrows, Divine Providence conferred on us meanwhile the greatest consolation. Venerable brethren, from the noble piety and zeal of yourselves and of your faithful flocks toward us and toward this Apostolic See, of which piety and zeal you continually gave signal proofs, by works of Catholic charity; and although the very grave dangers in which we were involved left us scarcely any respite, yet, with the help of God, we never relaxed our efforts to secure the temporal prosperity of our subjects, and the state of public tranquillity and security under our rule, the condition of all the best arts and sciences, and the loyalty and affection of our populations toward us were matters of notoriety to all nations, from whom strangers continually came in crowds to this city; and especially on the occasions of the numerous solemnities which we celebrate, and at the times of the solemn festivals in their succession.

And now, when things were in this posture, and our people enjoying peace and quietness, the Piedmontese King and his Government, seizing the opportunity when two of the most powerful nations of Europe were engaged in a great war, with one of which the said Government had entered into a treaty to preserve inviolate the present state of the Church's dominion, and not to allow it to be invaded by the revolutionists, all at once determined to invade the remaining territories of our dominion, and even our see itself, and reduce them under their power. But why this hostile invasion, and what pretenses were alleged for it? It is matter of notoriety what kind of representations were made in the letters of the King to us, dated the 8th of September last, and delivered to us by his envoy commissioned for the purpose. In that letter, with lengthy and insincere circuitousness of words and sentences, under the assumed character of a loving son and a Catholic, and under the pretext of the preservation of public order and of the security of the papacy itself and of our person, the demand was made that we would be pleased not to take as a hostile act the overthrow of our temporal power, and would surrender that power of our own accord in reliance on the futile promises made by himself, which, as he said, would reconcile the aspirations of the peoples of Italy with the sovereign rights and free exercise of the spiritual authority of the Roman Pontiff. We in truth could not but greatly marvel at seeing in what manner the violence intended to be used shortly against us was attempted to be veiled and disguised, nor could we help deploring from our inmost soul the sad case of the said King, who, impelled by evil counsels, inflicts daily new wounds on the Church; and, having respect to men rather than to God, does not reflect that there is in the heavens a King of kings and Lord of lords, who doth not regard the person of any man, nor fear the greatness

of any man, for He hath made both great and small; and that for the stronger there is but the stronger punishment (*Wisdom*, vi. 8, 9). But as to the propositions made to us, we thought that we ought not to entertain them, but that we should obey the laws of duty and conscience, and imitate the example of our predecessors, and especially of Pius VII., of happy memory, the sentiments of whose unconquered soul, uttered by him in a cause completely similar to our own, we have pleasure in quoting:

"Let us remember, with St. Ambrose (*De Basil*, *trad.* n. 17), that Nabuth, a holy man, and the possessor of a vineyard of his own, was called upon by a royal demand that he should make over his vineyard that the king might cut down the vines and plant common potherbs therein, and that he answered, 'God forbid that I should sell the inheritance of my fathers.' Much more do we judge that it would be unlawful for us to surrender so ancient and sacred an inheritance, namely, the temporal dominion of this Holy See, which not without the evident design of Divine Providence has been held in possession by the Roman pontiffs, our predecessors, through a long series of ages, or even to give a tacit assent that any man should take possession of the chief city of the Catholic world, when the unsettlement and abolition of the holiest form of government which has been left by Jesus Christ to His Holy Church, and has been ordained by the Sacred Canons authorized by the Spirit of God, would introduce in its place that code, which is contrary and repugnant not only to the Sacred Canons, but even to the precepts of the Gospel, and would bring in, as is usually the case, that new order of things which tends most manifestly to mingle and confound all sects and superstitions with the Catholic Church. Nabuth defended his vines with his blood (*St. Ambrose, ibid.*) Can we do otherwise, happen what may to us, than defend those rights and possessions of the Holy Roman Church, as we are in duty bound to do by the solemn obligation of our oath? Can we do otherwise than vindicate the liberty of the Apostolic See which is so intimately connected with the liberty and welfare of the Universal Church? And how great in reality is the congruity and necessity of this temporal principality to the assertion of that safe and free exercise of the spiritual power granted by God to them over the whole world, too many facts that are now taking place (should other arguments be wanting) clearly demonstrate." (*Letters Apostolic*, June 10, 1869.)

Therefore, adhering to the sentiments which in many of our allocutions we have constantly professed, we reproved in our answer to the King his unjust demands, and yet so as to show that, with our bitter sorrow, there was conjoined that fatherly affection which cannot wholly repel from its solicitude even sons who imitate the rebellious Absalom. But this our letter had not yet been conveyed to the King when the cities of our pontifical dominion, which were as yet untouched and at peace, were invaded by his army, the garrisons whenever they attempted to make any resistance being easily routed; and then in a short time that unhappy day dawned, the 20th of last September, on which we beheld this city, the see of the Prince of the Apostles, the centre of the Catholic religion, and the refuge of all nations, beset with thousands of armed men, its walls battered down, and itself terror-stricken by the cannon-shots fired upon it. And we had to mourn over its capture *et armis* by order of the man who just before had professed so strongly his filial affection toward us, and his fidelity to religion! What could be to us and to all good men more afflicting than that day? On it, when the troops entered the city, the city was filled with a large and promiscuous crowd of disorderly persons, and we immediately beheld public order overturned; we saw the dignity and sacredness of the Sovereign Pontificate in the humility of our person insulted with impious language; we beheld

our very faithful troops treated with every kind of insult and license, and impudence let loose without restraint far and near, where but just before the filial affection was conspicuous of those who were endeavoring to alleviate the grief of a common father.

And ever since that day there have ensued before our own eyes things which cannot be mentioned without exciting the just indignation of all good men; wicked books stuffed with lies, obscenity, and blasphemy, have begun to be exposed for ready sale, and to be disseminated everywhere: a multiplicity of newspapers intended to corrupt minds and morals are published, tending to insult and calumniate religion, and to influence public opinion against us, and against this Apostolic See: foul and improper pictures are displayed openly, and other contrivances of the same kind, by which sacred persons and things are held up to ridicule and exposed to public derision, are exhibited: honors and monuments are decreed to those who have suffered by legal trial and sentence the just punishment of most heinous crimes; many ministers of the Church, against whom every species of odium is stirred up, are harassed with all kinds of insult, and some of them are stricken and wounded by the blows of treacherous assassins; some religious houses have been subjected to illegal search; our Quirinal Palaces have been broken into; and from his residence in one of them a Roman cardinal has been roughly thrust out by violent orders; and other ecclesiastics of our household have been shut out of their use, and subjected to molestation: laws and decrees have been put forth which avowedly injure and destroy the liberty, immunity, property, and lawful rights of the Church of God; and all these most terrible evils, unless God avert it, we grieve to see are likely to progress; and we meanwhile are hindered by reason of our present position from applying any remedy; and are every day more rudely reminded of the captivity in which we are held, and of the absence of that full liberty which is pretended in lying words to be left us for the exercise of our Apostolic ministry over the world, and is professed to be meant to be secured to us with safeguards (as they are called) by the intruding Government.

We cannot here, venerable brethren, pass under silence the commission of an atrocious crime, which, without doubt, is known to you. As though the possessions and rights of the Apostolic See, sacred and inviolable by so many titles, and respected during so many centuries, could be to-day controverted and disputed, and as though the grave censures, which are incurred *ipso facto*, and without fresh declaration by the violators of these rights and possessions, could lose their force by rebellion and popular audacity, they have had recourse to cover the sacrilegious spoliation we have suffered in spite of the common law of Nature and of nations, they have had recourse (we say) to the show and comedy of a plébiscite, already employed, when the other provinces were robbed from us. And those who are in the habit of rejoicing in the worst actions did not blush to parade, as in triumph, through the towns of Italy, rebellion and contempt of ecclesiastical censures, thus insulting the true sentiments of the great majority of Italians, whose religion and fidelity toward us and toward Holy Church, forcibly repressed in all sorts of ways, cannot have free course.

As to ourselves, charged by God to rule and govern the whole house of Israel, and made the supreme defender of religion, of justice, and of the rights of the Church, in order that we be not reproached before God and before the Church for having been silent, and for having by our silence consented to this unjust revolution, renewing and confirming that which we have already declared in the allocutions, encyclicals, and briefs above mentioned, and recently in the protestation which, by our order and in our name, the Cardinal-Secretary of State communicated on the 20th of September to the ambassadors, ministers, chargés d'affaires of foreign nations accredited to us and to

this Holy See, we declare anew before you, venerable brethren, with all possible solemnity, that it is our intention, resolution, and will, to retain in their integrity, intact and inviolable, all the dominions and rights of this Holy See, and so to transmit them to our successors: that all usurpation of these rights, whether of a recent or of an earlier date, is unjust, violent, null, and void: and that all the acts of the rebels and invaders, already accomplished or still to be accomplished, with the view of confirming in whatever manner this usurpation, are by us from this moment condemned, annulled, quashed, and abrogated. We moreover declare and we protest before God and before the Catholic world, that we are in such captivity as to render it altogether impossible for us to exercise our pastoral authority with security, ease, and freedom. Finally, following the advice of St. Paul: "*Quae participatio iniquitatis cum iniquitate? aut quae societas luci ad tenebras? quae autem conventio Christi ad Belial?*" (2 Cor. vi. 14, 15) we announce and publicly and openly declare that, faithful to our office and to the solemn oath which binds us, we neither consent nor will consent to any project of conciliation which may in any manner whatever destroy or lessen our rights, which are the rights of God and of the Holy See; and we likewise profess that we are ready, thanks to the Divine assistance, and in spite of our great age, to drink to the dregs for the Church of Jesus Christ the chalice which He first deigned to drink for her, and that we will never commit the fault of yielding to, or acquiescing in, the unjust demands which are addressed to us. For, as our predecessor Pius VII. said: "*To do violence to this sovereign empire of the Apostolic See, to separate the temporal power from the spiritual, to disjoin, to tear asunder, and to cut up by the roots the offices of pastor and of prince, is nothing else but to desire to ruin and destroy the work of God; nothing else but to labor for the greatest injury to religion; is nothing else but to deprive it of a most efficacious bulwark, so that the supreme ruler, pastor, and vicar of God may not have it in his power to give to Catholics who, scattered all over the world, ask of him aid and succor, that help which they claim from his spiritual power, and which no one may hinder.*"

But since our admonitions, expostulations, and protests, have been without effect, by the authority of Almighty God, of the Holy Apostles Peter and Paul, and by our own, we declare to you, venerable brethren, and by you to the whole Church, that all those who have perpetrated the invasion, usurpation, and occupation of any of the provinces of our dominion and of this our beloved city, or have done any of these things, of whatever dignity they may be, and even though they should be worthy of most special mention, and in like manner all their agents, abettors, assistants, counsellors, adherents, and all others, either obtaining the execution of those things, under whatever pretext or in whatever manner, or executing them themselves, have incurred, according to the form and tenor of our letters apostolic, recited the 26th of March, 1860, the greater excommunication, and the other censures and ecclesiastical penalties published by the Holy Canons, apostolical constitutions, and the decrees of general councils, and particularly of the Council of Trent. (Sess. 22, C. 11 de Reform.)

But, calling to mind that we hold on earth the place of Him who came to seek and to save that which was lost, we desire nothing more ardently than to embrace with paternal love the wandering sons who may return to us; and, therefore, raising our hands to heaven in the humility of our heart, remitting and recommending to God the most just of causes, which is His still more than our own, we conjure and supplicate Him, by the bowels of His mercy, to aid us by His succor, to aid His Church, and to bring about through His mercy and compassion that the enemies of the Church, thinking upon

the eternal damnation which they are preparing for themselves, may hasten to appease His terrible justice before the day of vengeance, and to console by their conversion the affections of their Holy Mother the Church, and our own grief.

In order to obtain from the Divine mercy such special favors, we earnestly exhort you, venerable brethren, to join with our supplications your fervent prayers, and those of the faithful committed to your care; and going altogether to the foot of the throne of grace and mercy, let us engage the intercession of the Immaculate Virgin Mary, Mother of God, and that of the blessed Apostles, Peter and Paul. "The Church of God from her beginning until our day has often been in tribulation, and has as often been delivered. It is she who cries out, 'Sæpe expugnaverunt me a juventute mea, etenim non potuerunt mihi. Supra dorsum meum fabricaverunt, peccatores, prolongaverunt iniquitatem meam.' Neither to-day will the Lord allow the sceptre of sinners to determine the lot of the just; the arm of the Lord is not shortened, nor unable to save. Without doubt He will deliver His Spouse once again; His Spouse whom He has purchased with His blood, endowed with His Spirit, adorned with His heavenly gifts, and has also enriched with earthly gifts." (St. Bern., Ep. Conrad Reg. 244.)

And now, we ask of God from the bottom of our heart the abundant treasures of heavenly graces for you, venerable brethren, and for all the clergy and laity confided to the care of each of you; and, as a pledge of our special love for you, we affectionately grant to you from our inmost heart the apostolical benediction, to you and to all the faithful, our well-loved sons.

Given at Rome, at St. Peter's, the 1st day of November of the year 1870, being the twenty-fifth year of our Pontificate.

PIUS P. P. IX.

ROUMANIA, a dependency of Turkey. Prince, Charles (Prince of Hohenzollern-Sigmaringen), elected reigning and hereditary prince by the *plébiscite* of April 20, 1866, and recognized by the Sublime Porte on October 24, 1866. Area, 47,869 square miles; population, in 1867, 4,607,510; revenue, according to the budget for 1870, \$13,446,000; expenditure, \$15,800,400; deficit, \$2,354,400; public debt, on July 1, 1870, \$23,315,593. The strength of the regular army is 22,700 men; besides, there are 30 squadrons of irregular cavalry, numbering 12,000 men; 10 battalions frontier guards, of 15,000 men, and a militia force of 38,000 men. The value of imports, in 1869, was officially reported at \$17,552,000; of exports, at \$30,844,000. The Prussian consul at Bucharest reports to his government, in 1870, that by far the most important articles of export are wheat and corn, the total shipments of which, from all Danubian ports, in 1869, were:

From Braila direct.....	1,364,000 quarters.
From Braila, by way of Sulina.....	1,370,000 "
From Galatz direct.....	679,000 "
From Galatz, by way of Sulina.....	442,000 "
From the smaller Danubian ports.....	268,000 "

Total..... 4,683,000 quarters, representing an aggregate value of \$26,920,000. In 1868, 1,201 vessels entered Galatz, having an aggregate of 264,037 tons; 1,264 vessels cleared, having an aggregate of 293,885 tons. At Braila, 2,699 vessels were entered (471,435 tons); 2,550 vessels cleared (443,812 tons). Length of railroads in operation, July, 1870,

154 miles; in course of construction, 588 miles.

During the summer of 1869, Prince Charles paid a visit to the Emperor of Russia, at Livadia, and was persuaded to enter into an agreement for the reestablishment of the former relations between the Roumanian Church and the Patriarch of Constantinople. He accordingly sent the programme of a concordat to the latter for acceptance. The Patriarch Gregory, in a letter dated Constantinople, January 25, 1870, while lauding Prince Charles for his endeavors to bring about the long-desired reconciliation of the Roumanian Church with the head of the Greek faith, insisted upon the acceptance and insertion of the following three indispensable conditions:

ARTICLE 1. The metropolitans elected in Roumania must be confirmed by the Patriarch of Constantinople, which confirmation must be applied for in a letter by the Prince of Roumania.

ART. 2. The Roumanian metropolitans are held to mention the holy oecumenical patriarch in their prayers.

ART. 3. The holy anointment must be demanded from the holy Patriarch in a special supplication.

The presence of a minister or ambassador is considered unnecessary by the Patriarch, inasmuch as a minister is a layman, who cannot participate in, or be admitted to, the actions of the holy synod. As regards the confirmation or sanction of the decrees of the holy synod by the Prince of Roumania, the Patriarch considers it inadmissible, as the decrees of the holy synod are infallible, and do not need any confirmation by a secular prince or monarch. The Patriarch declares his willingness to pardon the priests and bishops appointed by Prince Couza, and to receive them back into the pale of the holy Church, on condition that Prince Charles formally intercedes in their favor, and adduces documentary proof that the people and the clergy of Roumania have no objection to them.

This letter of the Patriarch, as well as the unconstitutional and arbitrary action of the Government, made the worst possible impression, especially among the liberals, and went far to imperil the popularity so far enjoyed by Prince Charles. Violent addresses on the part of the Legislative Assembly took place, and caused the resignation of the ministry and the dissolution of the Diet, on the 8th of April. In dismissing the deputies, Prince Charles acknowledged that he had not been able to form a new Cabinet, but that he would make use of the prerogative of the crown by convening the Legislature for an extra session on the 24th of May. At the expiration of the legislative period, new elections were ordered, which resulted largely in favor of the opposition party and the red republicans, and gave the signal for an insurrectionary movement and a conspiracy against the life of Prince Charles and all the foreigners in the country. The movement was suppressed while yet in its incipency, owing to the prompt and energetic

action of the Government, although the insurrection was found to have ramifications all over the country.

The regular session of the Legislature was opened by Prince Charles on the 27th of November. In a speech from the throne, the Prince congratulated the representatives of the people that Roumania, in the midst of a European war of stupendous magnitude, had been in a position to remain true to her international treaties, and had continued in the most friendly relations with the Sublime Porte and the other European powers. As a proof of these good relations, he pointed to the willingness of the Austro-Hungarian Government to enter into a special convention for the regulation of consular jurisdiction, and for a complete reform of the juridical and administrative relations between the two countries. He alluded to the necessity of a law for the

consolidation of the floating debt of \$7,560,000, and said that the anticipated deficit in the budget for 1870 (\$2,854,400) would be greatly diminished, if not covered altogether, by extraordinary sources of revenue, although the budget provided for the payment of the annuities on the railroad debt. As regards the latter, the Prince remarked that the line from Roman to Luceava and Jassy had just been thrown open to the public, while the one from Roman to Galatz and Bucharest would soon be opened.

RUSSIA, an empire in Europe and Asia. Emperor, Alexander II., born April 17 (new style, April 29), 1818; succeeded his father, Nicholas, February 18 (March 2), 1855. Heir-apparent, Grand-duke Alexander, born February 26 (March 10), 1845. According to the census of 1864, the area and population of the various provinces were estimated as follows:

PROVINCES.	Square Miles.	Total Population.	Males.	Females.	No. of Females to 1,000 Males.
I. RUSSIA IN EUROPE.					
Great Russia.....	837,685	22,854,660	11,162,269	11,692,391	1,047
Little Russia.....	80,101	7,001,535	3,466,536	3,535,309	1,020

The total area and population of the Russian Empire, inclusive of Poland and Finland, are as follows:

PROVINCES.	Square Miles.	Inhabitants.
In Europe, Russia Proper	1,869,234	61,222,208
Poland.....	49,197	5,330,000
Finland.....	145,217	1,840,000
In Asia, Caucasus.....	166,611	4,507,546
Siberia and Central Asia	5,829,611	5,441,178
Total.....	8,059,970	78,821,093

The majority of the inhabitants belong to the Orthodox Oriental (Greek) Church. A number

of sects have branched off from this church, and are designated by the collective name of Raskolniki. According to the official publications, the population connected with them does not number more than 800,000 souls; but foreign writers on Russia claim for them a population of five or even of fifteen millions. (For full information on these sects, see AMERICAN ANNUAL CYCLOPEDIA for 1869, article GREEK CHURCH.) The following table exhibits the ecclesiastical statistics of all the divisions of the Russian Empire in Europe.

PROVINCES.	Russia in Europe.	Per cent.	Poland.	Per cent.	Finland.	Per cent.
Orthodox Greek Church.....	51,117,971	84.1	260,000	4.9	42,000	2.3
Raskoyniks.....	801,745	1.3
Roman Catholics.....	2,840,708	4.7	3,915,000	76.8
Armenians.....	34,688
Protestants.....	2,063,153	3.4	285,000	5.6	1,800,000	97.7
Jews.....	1,631,766	2.7	645,000	12.6
Mohammedans.....	2,091,361	3.4	2,000
Heathens.....	200,384	0.3
Total.....	60,800,000	100	5,097,000	100	1,842,000	100

The figures for Russia proper in Europe are taken from the statistical year-book of the Russian Empire; those for Poland from the *Aperçu statistique des forces productives de la Russie*, Paris, 1867. The following table comprises all the government districts in which the Catholics, Protestants, and Israelites, make up more than one per cent. of the entire population:

DISTRICTS.	CATHOLICS.		PROTESTANTS.		ISRAELITES.	
	Number.	Per cent. of popula'n.	Number.	Per cent. of popula'n.	Number.	Per cent. of popula'n.
Bessarabia.....	5,514	0.5	29,737	2.9	93,590	9.1

Heathens.....	10,374	4,390	14,764	0.3	280,000	6.0
Total.....	100	100

The population of the Russian Empire is composed of the following nationalities:

NATIONALITIES.	Inhabitants.	Per cent.
Russians	53,470,000	69.4
Poles	4,860,000	6.3
Tatars	4,780,000	6.3
Fins	4,680,000	6.0
Lithuanians	2,480,000	3.1
Jews	2,390,000	3.0
Germans	880,000	1.1
Georgians	800,000	1.0
Circassians	800,000	1.0
Romanians	780,000	1.0
Armenians	540,000	0.7
Mongolians	500,000	0.6
Swedes	150,000	0.2
Greeks	50,000	0.2
Bulgarians	41,000	
Servians	30,000	

The imperial Russian Geographical Society made, in 1869, the following report concerning the nationality of the inhabitants of the Caucasus:

NATIONALITIES.	Ciscaucasia.	Transcaucasia.	Total.
Russians	857,681	67,539	925,210
Georgians		868,819	868,819
Armenians	30,808	540,981	561,794
Greeks	2,970	837	3,807
Germans	3,114	6,535	9,649
Jews	2,354	19,339	21,676
Tatars		977,191	977,191
Mountainneers	411,061	486,914	897,945
Calmaucks, Nogai-ans, and other nomads	90,188	21,496	111,673
Others	4,547	142,080	146,597
Total	1,892,883	3,115,174	4,507,556

The 857,681 Russians in Ciscaucasia do not include the regular military force in the districts of Kuban and Ter, while the 67,539 Russians in Transcaucasia are exclusive of the army in Daghestan and of the inhabitants of Petrovsk. The largest cities of Russia, in 1866, were: St. Petersburg, 667,036 inhabitants; Moscow, 368,103; Warsaw, 180,657; Odessa, 119,876; Riga (1867), 102,043; Kishinev, 94,768; Saratov, 85,670; Vilna, 78,903; Kazan, 71,886; Kiev, 70,820; Nikolaiev, 64,406; Kharkov, 59,978; Tula, 56,496; Berditschev, 54,655.

The Russian possessions in Toorkistan are now divided into two provinces and twelve districts, as follows:

	Square miles.	Inhabitants.
I. PROVINCE OF SYR DARYA.		
District of Kasaly	34,017	90,000
" Petrovsky	39,970	135,000
" Toorkistan and Tchinkend	51,668	85,000
" Aulista	25,954	55,000
" Tashkend	18,294	165,000
" Khojend	2,323	80,000
" Disach	5,593	70,000
Total	186,668	675,000
II. PROVINCE OF SEMIRETCHINSK.		
District of Tokmak	28,377	80,000
" Jasyk-kul	18,073	45,000
" Viernoys	44,010	125,000
" Kopal	13,188	40,000
" Sergolopol	26,708	25,000
Total	129,343	295,000

According to an official publication of January 25, 1870, the revenue of the empire, for the year 1870, was estimated as follows:

	Rubles.
Direct taxes	108,546,080
Indirect taxes	212,356,511
Revenue from the mines, mint, postal service, and the telegraph lines	12,084,978
State domains	44,251,282
Divers receipts	51,123,327
Revenue from Poland not included in the budget of the Ministry of State	168,353
Revenue from Transcaucasia	5,061,534
Total ordinary revenue	440,578,478
Balances of credit according to the Budget of 1868	2,068,522
Special Budget	16,187,005
Extraordinary revenue to be applied to railroad and harbor constructions	11,110,243
Total extraordinary revenue	26,355,949
Total ordinary and extraordinary	476,738,519
Less above sum for railroads and harbors	11,110,243
Net	465,618,075

The expenditures for 1870 were fixed at 476,728,318 rubles, as follows: Ordinary expenditures, 446,461,070 rubles; discount on budget of revenue, 3,000,000 rubles; special budget, 27,267,248 rubles. Deficit for 1870, 11,110,243 rubles. The public debt, on January 1, 1869, summed up:

	Rubles.
Russian State debt proper	2,008,484,160
Debt of the Kingdom of Poland, assumed by Russia	44,301,668
Total	2,047,685,522
From which must be deducted for advances made to railroad companies	80,148,867
For advances made to various corporations, cities, etc.	22,722,451
Actual debt	1,943,814,504

The Bank of Russia is exclusively a state institution, and its assets and liabilities ought to figure in the budget of the empire. The assets of the bank are known to be very small, while its liabilities are in a highly-complicated condition, its floating debt having been estimated at 1,179,000,000 rubles, while the assets did not exceed 289,000,000. Thus, in assuming the settlement of the affairs of the bank, the state would increase its debt by 890,000,000, which would make a grand total of indebtedness of 2,833,814,504 rubles. Besides, there is a third class of debts, resulting from the emancipation of the serfs, and from the transfer of land to them. From October 27, 1861, till January 1, 1869, the total advances made to the Government for that purpose, by moneyed institutions, amounted to 477,096,972 rubles, of which 225,271,260 rubles were retained by these institutions for commissions and for payment of mortgage on the land. For the remaining 251,825,712 rubles, the state emitted the following securities:

	Rubles.
Certificates of release	91,335,070
Five and a half per cent. rents, for a capital of 106,764,815	
Notes of the Bank bearing five per cent. interest	53,427,350
Paid in cash	1,397,977
Total	251,825,712

For these securities the state is likewise responsible, although the emancipated serfs are held to pay the interest and amortization rates.

The army of Russia has undergone a thorough transformation during the last ten years, and its new organization may now be considered complete. The entire male population is liable to military service, the privileged classes excepted. It would be erroneous to suppose, however, that every able-bodied young man, after reaching the age prescribed, is drawn into the army. Each military district has to place at the disposal of the government a yearly quota of young men (4 in every 1,000 inhabitants belonging to the classes liable to military service), so that a district containing 25,000 inhabitants of these classes, has to furnish 100 recruits every year, and 50 men for the reserve. If, however, the district is rich, the community has the option of paying in money for the whole or part of the contingent, while every one of those designated for or already enlisted in the army can obtain his release, by either paying a stipulated sum of money, or by furnishing a substitute. The consequence of these exemptions is, that not more than about 100,000 men are annually drawn into the army. The time of service is nominally 15 years, but, with the exception of the volunteers and substitutes, there is now hardly one soldier in the army who has served over seven years. The army consists of regular troops, troops of the reserve, local, and irregular troops. The regular field army is composed of 12 regiments of infantry of the Guards, 16 regiments of grenadiers, and 160 regiments of infantry of the line. The cavalry has 10 divisions, of which 2 divisions, of 5 regiments each, belong to the Guards; the cavalry of the line has 8 divisions, with 46 regiments. The artillery consists of 47 brigades of foot-artillery, and of 7 brigades of horse-artillery. Of the foot-artillery, each division of infantry has 1 brigade annexed to it. The corps of engineers has 5 brigades of sappers and miners, composed of 11 battalions of sappers and miners and 4 half-battalions of pontoniers. The infantry of the irregular army is doing service exclusively in Asia, and could hardly ever become available in a European war, on account of the want of proper means of transportation. The same may be said of the cavalry of the irregular army, with the exception of 64 regiments of Cossacks of the Don, which are therefore counted with the regular field army. The latter, when on the war footing, comprises:

610 battalions of infantry and riflemen.....	604,000
224 squadrons of cavalry.....	34,000
168 batteries of artillery.....	39,000
Corps of engineers.....	15,000
Total.....	692,000
To these must be added the army of First Reserve, comprising:	
Troops of the line.....	191,231
Garrison regiments.....	23,470
Garrison battalions.....	29,563
	244,263
The army of the Second Reserve, comprising troops of all arms.....	199,380
Total.....	1,135,643

The above-mentioned batteries of artillery consist of 1,804 guns.

Among the irregular troops of Russia the most important are the Cossacks. The country of the Don Cossacks contains from 600,000 to 700,000 inhabitants. In case of necessity, every Cossack, from 15 to 60 years, is bound to render military service. The usual regular military force, however, consists of 54 cavalry regiments, each numbering 1,044 men, making a total of 56,876. The Cossacks are reckoned, in round numbers, as follows:

	Heads.	In military service
On the Black Sea.....	125,000	18,000
Great Russian Cossacks on the Caucasian Line.....	150,000	18,000
Don Cossacks.....	440,080	66,000
Ural Cossacks.....	50,000	8,000
Orenburg Cossacks.....	80,000	10,000
Siberian Cossacks.....	50,000	9,000
Total.....	875,000	129,000

The Cossacks are a race of free men, neither serfage nor any other dependence upon the land exists among them. The entire territory belongs to the Cossack commune, and every individual has an equal right to the use of the land, together with the pastures, hunting-grounds, and fisheries. The Cossacks pay no taxes to the Government, but in lieu of this they are bound to perform military service.

The Russian fleet consists of two great divisions—the fleet of the Baltic and that of the Black Sea. Each of these two fleets is again subdivided into sections, of which three are in or near the Baltic, and three in or near the Black Sea, to which must be added the small squadrons of galleys, gunboats, and similar vessels.

According to an official report, the Russian fleet consisted, in 1869, of 290 steamers, having 88,000 horse-power, with 2,205 guns, besides 29 sailing-vessels, with 65 guns. The greater and more formidable part of this navy was stationed in the Baltic. The Black Sea fleet numbered 48; the Caspian, 39; the Siberian or Pacific, 80; and the Lake Aral or Toorkistan squadron, 11 vessels. The rest of the ships were either stationed at Kronstadt or engaged in cruising in European waters. All these ships are of iron. At the beginning of 1868, the Imperial Navy was manned by 60,230 sailors and marines, under the command of 3,791 officers, among whom are 119 admirals and generals.

The army budget estimates the expenditures for the maintenance of the army, in 1870, at \$102,810,000.*

The length of railroads in operation, on March 1, 1870, amounted to 5,378 miles. Up to October 1, 1870, 808 miles additional had been completed and thrown open to the public, making the total length of railroads in operation 5,676 miles. The experience gained by the

* For statistics of the commerce, movement of shipping, etc., see *AMERICAN ANNUAL CYCLOPEDIA* for 1869.

Russian Government during the Crimean War, when it was unable to transport the military forces of the empire to the seat of war, for want of railway communication, has not failed to impress the present Emperor with the paramount importance of such means of transportation, in time of peace as well as in time of war. When he ascended the throne, in 1855, Russia possessed a length of only 2,145 versts or 1,437 miles of railroad, the chief lines being the short road from St. Petersburg to the imperial residence, Tsarskoe-Selo, opened in 1838; the road between Warsaw and Gramoa, opened in 1848; and the Nicolai road between St. Petersburg and Moscow. Since then, considerable activity has been displayed, and a plan for an extensive net-work of railroads has been prepared by imperial command. A recent decree of the Czar orders that "every year 500 versts of strategical roads shall be built." The railroad connection between St. Petersburg, Moscow, and Odessa, has been recently completed by two different routes, while an important military road is soon to connect Moscow and Sevastopol. The northern seaports and fortifications have also been connected by railroads with the inland provinces.

The budget of the postal administration, for 1868, reports the total revenue at 7,958,214 rubles; expenditure, 4,239,894 rubles; showing a surplus of revenue of 3,718,320 rubles. Number of post-offices, 2,451. On January 1, 1869, the telegraph-lines in operation had an aggregate length of 25,158 miles; length of wire, 48,977 miles.

The revenue derived from the distillation of spirituous liquors, which may be considered one of the surest indications of the quantity consumed, has greatly increased during the last few years. In 1749, the total revenue from that source amounted to \$1,072,173; in 1849 it had increased to \$23,149,766, while in the budget of 1866 it figures with the enormous sum of \$69,600,000. This increase of consumption is entirely disproportionate to the slow increase of the population. The revenue derived from distillation comprised 46 per cent., or nearly one-half of the entire income of the state; while in Austria, in 1869, it barely reached 10 per cent., and in Prussia somewhat less than 6 per cent. of the aggregate revenue. As the above figures refer to Russia in Europe only, it will be seen that the taxes on alcoholic liquors amount to 1 $\frac{1}{16}$ for each inhabitant, women and children included. The consumption of brandy is much larger in the cities than among the rural population. The consumption in St. Petersburg, in 1869, was 26 gallons for each inhabitant; in Moscow, 15 gallons; and in Orenburg, the inhabitants of which city are considered the soberest people in the whole Russian Empire, 4 gallons. The number of liquor-stores, where brandy is sold by the glass, is enormous, 1 to every 293 inhabitants, not counting the beer and wine sa-

loons, where brandy is also sold at retail. The consequences of this immoderate use of alcoholic liquors are seen in various forms of disease, but above all in the dreadful increase of *delirium tremens*. The Government was well aware of the injurious influence exercised by this steady increase of intemperance, and various measures were proposed for the abatement of the evil; but the only one which found favor with the Minister of Finance was the increase of the license-fee for retail liquor-stores by 50 per cent.

M. Skalkowski, of St. Petersburg, published a highly-interesting statistical pamphlet on the mining industry of Russia, and on the production of the mines, in 1868. He states that the aggregate quantity of gold obtained from the Russian mines was 68,440 pounds; of raw platina, 4,880 pounds; of argentiferous ore, 114,297,440 pounds; of copper-ore, 821,886,120 pounds; of iron-ore, 1,615,600,000 pounds; of rock-salt, 1,101,286,000 pounds; of naphtha, 70,159,360 pounds; of salt, 1,473,707,840 pounds. The iron-ore produced 72,501,760 pounds of cast-iron and manufactured articles of cast-iron; 420,554,400 pounds of iron bars and rails; 125,480,000 pounds of flat iron bars; and 18,443,400 pounds of various iron manufactured articles. The total value of the products of the mines, during the year, was estimated at \$39,000,000; exclusive of the value of zinc and other ores of which no reliable information could be obtained. M. Skalkowski states that the production of gold is increasing from year to year, while silver becomes more scarce, as the principal mines in the Altai Mountains have been exhausted. The copper-mines are worked with great energy in the Caucasus and in the Kirghee mountains, while those in the Ural are comparatively neglected in consequence of foreign competition. The production of iron and cast-iron was stationary, while zinc was obtained in greater abundance in Poland.

During the year 1869 the port of St. Petersburg was open to navigation from April 18th to December 12th—2,912 vessels entered, and 2,815 cleared. The arrivals were under the following flags: British, 1,206; North German, 539; Dutch, 379; Norwegian, 186; Danish, 183; Russian, 181; Swedish, 141; French, 69; Belgian, 10; Italian, 9; American, 8; Austrian, 1. There were 872 arrivals of steamers, 339 of which were from England. The value of imports, according to official report, amounted to 116,444,587 rubles, an increase over 1868 of 21,615,371 rubles. The principal articles of import and their relative values were: Cotton, 20,540,144 rubles; iron, 14,423,288 rubles; dye-stuffs, 4,816,834; olive-oil, 3,708,405; indigo, 3,215,827; coffee, 2,737,042; wine in barrels, 2,202,202 rubles; wool, 2,162,539; tea, 1,963,137; cast-iron, 1,908,512; tobacco, 1,859,512; woollen manufactures, 1,584,657; kerosene-oil, 1,182,883 rubles. The value of the articles of export amounted to 47,327,711

rubles, the principal articles being corn, hemp, tallow, flax, and potash. At Riga, the value of exports, during 1869, amounted to 80,577,011 rubles; of imports, 18,393,839 rubles. At Pernau, the value of exports amounted to 2,610,289 rubles; of imports, 149,234 rubles. Of the smaller ports on the Baltic and of those on the Black Sea, no reliable reports were furnished.

In February, Mr. Burlingame and the other Chinese ambassadors had their first audience with the Czar, to whom they were presented by Prince Gortschakoff. Mr. Burlingame, introducing his fellow-ambassadors, addressed the Emperor as follows:

SIRE: In the name of myself and my colleagues I have the honor to present the letter of the Emperor of China accrediting us to you, and expressing wishes for the happiness and health of your Majesty and of the imperial family, and for the prosperity of your subjects. Permit me to recall to mind the services of your able representative at Peking, General Vluogoli, whose policy of equity and conciliation contributed to inspire China with the wish to enter into the family of nations, and leads her now, through us, to declare her desire that the friendly relations between Russia and China which have existed for three centuries may be perpetual.

To this the Emperor replied:

It is agreeable to see you here, for you present fresh proofs of the pacific relations which unite Russia and China, and which the negotiations you are about to enter upon will draw closer. It is particularly agreeable to see the interests of China intrusted to the citizen of a state especially sympathetic with Russia.

The embassy was received with all the honors accorded to diplomats of the highest rank. Mr. Burlingame died at St. Petersburg on the 22d of February. The Russo-Chinese boundary question was practically settled, and a new commercial treaty between the two empires concluded for five years. The new treaty is intended to regulate trade on the borders of the two empires, and its chief stipulation enacts that in future no duties shall be levied for a distance of seven miles on each side of the Russo-Chinese frontiers. On passing this distance merchants will of course have to pay the legal duties. All the ports of each of the contracting parties are also opened to the vessels of the other.

An address from the Livonian nobility was presented to the Emperor in April, supplicating his Majesty to allow the reintegration of the German language and the fundamental autonomy of the Lutheran Church in that province. A deputation of three members proceeded to the capital to present the petition to the Minister of the Interior; but the next day received the document back, with an intimation, written on the margin by the hand of his Majesty, that he was inflexible in his resolution to apply to Livonia the laws and institutions prevailing in the rest of the empire. The deputation also received an order to quit St. Petersburg at once.

It soon became apparent that the Russian Government was more than ever intent upon the complete extirpation of the German element

in the Baltic provinces; for, after disregarding the rights and privileges granted to these provinces by their constitutions, it had at last resolved to carry through the complete Russification of the German schools in those provinces. A correspondent of the Augsburg *Allgemeine Zeitung* writes from Livonia, under date of February 28th, that Governor Galkin had at last succeeded in causing the removal of Count Alexander Keyserlingk, for many years "curator" of the university of Dorpat, and one of the warmest friends and advocates of the German element throughout the Baltic provinces. Under his administration, the number of German schools in Livonia had increased to 94, of which 4 were gymnasia; 8 district schools; 21 elementary schools for boys, and 5 district schools; 20 grammar-schools; and 86 elementary schools for girls; while there were only 4 schools exclusively Russian. The successor of Count Keyserlingk, M. Gervais, a descendant of French immigrants, is represented as a pliant tool in the interest of the Moscowite element. He arrived in the province in February, and immediately set out on a tour of inspection, enforcing arbitrary rules and regulations which must ere long result in the resignation or removal of all the German teachers.

In April, the Esthonian Diet, following the example of the Livonian nobility, sent a petition to the Emperor, invoking the imperial protection for the provincial and national rights of the Baltic provinces, endangered and disregarded on all sides by Russian governors and officials. The petition was laid aside, not being considered worthy of any notice in St. Petersburg.

Serious trouble took place in the Polish provinces, as an imperial ukase had commanded the introduction of the Russian language into the Catholic churches, and the translation of the Catholic ritual into Russian. At Vilna, the deacon Piotrovitch burned the imperial ukase in the presence of his congregation; he then made an allocution to his parishioners, warning them of the approaching danger, and urging them to oppose any infringement upon their sacred rights. After divine service, he was conducted home by an immense concourse of people, who had not proceeded far when they were attacked by a battalion of infantry and a squadron of Cossacks. About 60 of the crowd were more or less seriously wounded, when the rest fled, and the soldiers, taking charge of the deacon, conducted him to prison.

In May rebellion broke out in the Kirgheeze steppe between the Caspian Sea and Lake Aral, and a body of 5,000 Russian troops was sent from Orenburg to the river Emba, and other positions in the Western Steppe. After several sanguinary engagements with the insurgents, order was at last restored.

In order to give a new impulse to the development of the natural and industrial wealth

of the country, a grand industrial exhibition was inaugurated by the Ozar at St. Petersburg during the month of June. One of the important results of the exhibition was a conference of manufacturers and merchants from all parts of Russia, who held daily sessions during the time of the exhibition, at which many vital questions of Russian trade, commerce, etc., were discussed by men of practical information.

The relative positions of Russia and Great Britain in Central Asia have of late attracted more than ordinary attention, the steady advance of the former, and the consolidation of her power within the territory already acquired or made tributary, causing no little uneasiness at the court of St. James. A report made to the home government by the Earl of Mayo, with regard to the mission of Mr. Forsyth to Yarkhand, contains the following significant passage:

However willing we may be to accept the assurances made to Mr. Forsyth by the Government of St. Petersburg that no intention or desire existed on the part of Russia to extend her influence beyond the Oxus—at least for the present—it would be the height of political folly to close our eyes to the fact that she is making powerful and persistent efforts to strengthen her position within the limits she has, for the moment, set to her ambition. Some time in November last an expedition, supported by four guns, and variously estimated at from 1,500 to 2,000 men, was dispatched from Petrovsky, a port on the Caspian, ninety or a hundred miles to the north of Derbend, to Balkan Bay, on the southeastern shore of that sea. The little force landed without any opposition from the Toorkoman tribes in the neighborhood, and immediately set about the construction of a fort, as if in an enemy's country. As a matter of fact, Kizilsuar, or Kizisoo, as the place is variously called, appears to be situated in a debatable land. The Persian Government, while admitting that its sway over the Toorkomans dwelling to the north of the Attrack is rather nominal than real, nevertheless insists that the entire tract of land lying between that river and the Balkan range is subject to its sovereignty, and that, consequently, the Russian fort is an encroachment upon Persian territory. This position is denied by the Russian Government. In the first place, it is stoutly denied that the establishment at Kizilsuar is any thing more than a commercial settlement—something, in short, after the manner of the factories established in olden times by the East India Company on the coasts and rivers of Hindostan. In order, however, to protect the peaceful traders against the attacks of Toorkoman marauders, it has been found necessary to throw up some banks of earth and mount a gun at each angle.

The Russian Government intimated that the sole object of the expedition was simply to develop the trade with Central Asia, and afford security to caravans travelling to and from the Caspian Sea and the Oxus. This new route, it was said, had become indispensable, as the frequent revolts of the Kirgheez tribes had made the old lines of communication across the steppes from Orenburg to Khokan and from Mingishiak to Khiva, impracticable. The only means of opening up this new country was by securing a safe basis on the shores of the Caspian Sea, and by encouraging traders to venture across in firm reliance on the protection they would receive from the Russian factory.

Great fears were entertained at Teheran that

the Caspian provinces of the Persian kingdom were in no little danger of being annexed to the Russian Empire, from which they were recovered by Nadir Shah, in the middle of the last century. Prof. Hermann Vámbéry, who is generally regarded in the literary world as one of the best authorities on all questions on Central Asia, published an interesting article on the subject in the periodical *Unsere Zeit* (Leipsic, November 15, 1870), in which he maintains that in such a case the Caspian Sea would become politically as well as naturally a *mare clausum*, and Russian domination would extend in a direct, unbroken line from the Black Sea to the Hindoo-Koosh, from Anapa to Merve, which latter place is only five days' march from Herat. The true purport of the expedition, he says, is obvious enough. Under the pretext of opening a new route from the Caspian to the Oxus, a line of fortified posts or caravanserais, as they will probably be called, will be established across the desert, with the result of curbing the Toorkoman population and bringing it under the control of Russia. The Russians already possess a naval station in the Bay of Astrabad, in the southeast corner of the Caspian, at the mouth of the Goorgaun.

The advances made by the Russians toward Kashgar were suspiciously watched by Jacob-Bek, the present ruler of that country, who did not appear to be anxious to enter into friendly relations with the approaching invader, although he was aware that he must eventually share the fate of the Ameer of Bokhara. The latter, after applying to Russia for assistance against Sheer Ali of Afghanistan, was so intimidated by the unexpected success of the arms of his protectors, and, on the other hand, so dreaded a revolt of his own subjects, that he deemed it the best policy to surrender unconditionally. The Russians did not hesitate to take hold of the administration of the country, and to make their vassal feel that he must in every respect obey the will of the Czar of Russia. The power of Russia in Toorkistan was more and more consolidated, and the condition of the country had materially improved. Trade and commerce being in a flourishing condition. The revenue of the government amounted, in 1869, to 2,302,748 rubles; expenditure, 1,148,787 rubles. A great many substantial buildings had been erected by the Russians at Tashkend, the capital of the country, new streets were laid out according to the most approved plan, and many other improvements had been quietly introduced. As the Russians were tolerant toward the Mohammedans, the inhabitants of the city and country showed no aversion to their rule, which may be called an easy one, as the taxes have been much reduced, and are not levied arbitrarily. The Russians also opened at Tashkend a library comprising a great many manuscripts of importance for the history of Central Asia. Commerce was increasing rapidly, and the culture of cotton was extending more and more. The

quantity of cotton exported from Central Asia in 1869 was eleven times as large as in 1858; nearly all the cotton raised in Toorkistan, Khokand, Khiva, and Bokhara, is sold to Russian traders, who pay partly in cash, and the balance in cotton or woollen goods. The quantity of cotton produced in 1869 reached 120,000,000 pounds. The cotton raised in Toorkistan and Bokhara was generally of excellent quality and staple, but lost much of its intrinsic value by the want of proper cleaning, in the absence of the machinery used in other countries for that purpose. These machines were now being imported by the Russians.

A central Asiatic commercial and steamship company was formed in June, with a capital of 2,400,000 rubles. The company was chartered on condition that they would furnish, within

three years, a sufficient number of steamers and barks to establish a regular weekly communication between the falls of the river Bigawat, near Khokand, and Kasalinsk, their steamers to be built in such a manner as to fit them for carrying armament, like the steamers on the Aral.

In the German-French War, the Emperor Alexander strongly sympathized with Germany. The Russian Government also availed itself of the crippled condition of France, to demand, in a note, addressed to the other great powers of Europe, a modification of the Treaty of Paris of 1856. The demand brought on a new complication, but the danger of another Eastern war was for the present averted by the convocation of a conference at London. (See EASTERN QUESTION.)

S

SALNAVE, SYLVAIN, late President of Hayti, born at Cape Haytien in 1832; executed, by order of court-martial, at Port-au-Prince, January 15, 1870. He entered the army as a common soldier, and gradually rose to the position of captain of Cavalry of the North, which position he retained after the establishment of the empire under Soulouque, although he held republican principles. When on the morning of December 22, 1858, Geffrard raised, in the name of the people, the standard of revolt, and declared for a republic, the Imperial Guard were at once mustered to quell what was deemed a mad enterprise. Owing to the influence of Salnave the whole north rallied to the cause of Geffrard, and finally the empire was overthrown and a republic established. Geffrard, being a vain, ambitious man, used little discretion in rewarding those who espoused his cause, and, among others, conferred the position and title of major in the army upon Salnave, to whose bravery, energy, and persistency, he actually owed his high position. Soon there came another call for his services. Spain, having taken advantage of the civil war in this country, sent a strong force, and declared the annexation of the Dominican portion of the island, and reestablished it once more as a colony. Salnave entered warmly into the conflict against the invaders, and to his efforts, more than any one person, was due the credit of their expulsion. Feeling aggrieved by the action of President Geffrard in regard to General Oge Longuefosse, he commenced a revolutionary movement, which resulted in Geffrard flying from the country in March, 1867, and Salnave being proclaimed President. The republic continued in a disturbed condition, and in November, 1869, insurgents in the south proclaimed General Domingue President, and those in the north General Saget. These movements resulted in the flight of Salnave, who, at the instigation of Provisional

President Saget, was closely followed by combined forces under General Benjamin, Secretary of War, General Cabral, and General Zamor, and after a vigorous pursuit was captured, brought to Port-au-Prince on the 15th of December, and on the same day tried, condemned, and executed. He was a man of decided courage, and met his fate bravely.

SAN DOMINGO, or the Dominican Republic, a state of the West Indies, comprising the eastern portion of the Island of Hayti. Area, 17,826 square miles; population, 136,500 (mostly mulattoes and whites). President, in 1870, Buenaventura Baez. The revenue and expenditure amount to about 2,000,000 piastres. The value of imports, in 1867, was estimated at \$520,000; exports, \$690,000. The principal articles of export were tobacco, guano, coffee, leather, wax, gold, silver, sugar, and logwood. During 1869, 91 vessels, of 14,199 tons, were cleared at Porto Plata. A national bank was chartered by the Baez government. The stockholders are New-York capitalists, who bought up the bonds of the Dominican Republic at twenty cents on the dollar, and deposited them in the Treasury as security for the notes issued.

The negotiations between the President of the United States and San Domingo, relative to the annexation of San Domingo to the United States, which were begun in 1869, were continued in 1870. The Hon. Hamilton Fish, Secretary of State, in a letter to President Grant, dated January 16, 1871, gives the following details of these negotiations: On June 2, 1869, President Grant appointed Mr. Benjamin S. Hunt, of Philadelphia, a special agent to obtain trustworthy information concerning the Dominican Republic. Mr. Hunt accepted the appointment, and was making preparations for his departure, when a serious illness compelled him to resign his appointment. On July 13th, General Babcock, who was employed in the executive office,

was in the place of Mr. Hunt instructed to proceed to San Domingo on the same mission, and sailed from New York about four days after receiving his instructions. Upon his return to Washington, General Babcock made a verbal report favorable to the project of annexation. He was, therefore, directed to return to San Domingo, in order to aid Mr. Raymond H. Perry, the commercial agent of the United States, to negotiate for the annexation of the whole territory of the republic to the United States, and, as an alternative proposition, for a lease of the Peninsula and Bay of Samana to the United States. A treaty for the annexation of the territories of the republic and a convention for the lease of the Bay and Peninsula of Samana were accordingly concluded on November 29, 1869. The terms of the treaty required that a popular vote should be taken upon the question of annexation. The vote was almost unanimously affirmative. On May 31, 1870, President Grant transmitted to the Senate an additional article to the treaty of November 29th. The message was as follows:

EXECUTIVE MANSION, May 31, 1870.

To the Senate of the United States:

I transmit to the Senate for consideration, with a view to its ratification, an additional article to the treaty of the 29th of November last for the annexation of the Dominican Republic to the United States, stipulating for an extension of the time for exchanging the ratifications thereof, signed in this city on the 14th inst. by the plenipotentiaries of the parties. It was my intention to have also negotiated with the plenipotentiary of San Domingo amendments to the treaty of annexation to obviate objections which may be urged against the treaty as it is now worded; but, on reflection, I deem it better to submit to the Senate the propriety of their amending the treaty as follows: First, to specify that the obligations of this Government shall not exceed the \$1,500,000 stipulated in the treaty; secondly, to determine the manner of appointing the agents to receive and disburse the same; thirdly, to determine the class of creditors who shall take precedence in the settlement of their claims; and finally, to insert such amendments as may suggest themselves to the minds of Senators to carry out in good faith the conditions of the treaty submitted to the Senate of the United States in January last, according to the spirit and intent of that treaty. From the most reliable information I can obtain, the sum specified in the treaty will pay every just claim against the republic of San Domingo, and leave a balance sufficient to carry on a territorial government until such time as new laws for providing a territorial revenue can be enacted and put in force.

I feel an unusual anxiety for the ratification of this treaty, because I believe it will redound greatly to the glory of the two countries' interest, to civilization, and to the extirpation of the institution of slavery. The doctrine promulgated by President Monroe has been adhered to by all political parties, and I now deem it proper to assert the equally important principle that hereafter no territory on this continent shall be regarded as subject to transfer to a European power. The government of San Domingo has voluntarily sought this annexation. It is a weak power, numbering probably less than 120,000 souls, and yet possessing one of the richest territories under the sun, capable of supporting a population of 10,000,000 of people in luxury. The people of San Domingo are not capable of maintaining themselves in their present condition, and must look for outside support. They yearn for the protection of our free institutions and laws, our progress and civilization.

Shall we refuse them? I have information, which I believe reliable, that a European power stands ready now to offer \$2,000,000 for the possession of Samana Bay alone, if refused by us. With what grace can we prevent a foreign power from attempting to secure the prize?

The acquisition of San Domingo is desirable because of its geographical position. It commands the entrance to the Caribbean Sea and the Isthmus transit of commerce. It possesses the richest soil, best and most spacious harbors, most salubrious climate, and the most valuable products of the forest, mine, and soil, of any of the West-India Islands. Its possession by us will, in a few years, build up a coastwise commerce of immense magnitude, which will go far toward restoring to us our lost merchant marine. It will give to us those articles which we consume so largely and do not produce, thus equalizing our exports and imports. In case of foreign war it will give us command of all the islands referred to, and thus prevent an enemy from ever again possessing himself of a rendezvous upon our very coast. At present our coast-trade between the States bordering on the Atlantic and those bordering on the Gulf of Mexico is cut in two by the Bahamas and the Antilles. Since we must, as it were, pass through foreign countries to get by sea from Georgia to the west coast of Florida, San Domingo, with a stable government under which her immense resources can be developed, will give remunerative wages to tens of thousands of laborers not now upon the island. This labor will take advantage of every available means of transportation to abandon the adjacent islands and seek the blessings of freedom and its sequence, each inhabitant receiving the reward of his own labor. Porto Rico and Cuba will have to abolish slavery as a measure of self-preservation, to retain their laborers. San Domingo will become a large consumer of the products of Northern farms and manufactures. The cheap rate at which her citizens can be furnished with food, tools, and machinery, will make it necessary that the contiguous islands should have the same advantages in order to compete in the production of sugar, coffee, tobacco, tropical fruits, etc. This will open to us a still wider market for our products. The production of our own supply of these articles will cut off more than \$100,000,000 of our annual imports, besides largely increasing our exports. With such a picture it is easy to see how our large debt abroad is ultimately to be extinguished. With a balance of trade against us, including interest on bonds held by foreigners and money spent by our citizens travelling in foreign lands, equal to the entire yield of the precious metals in this country, it is not so easy to see how this result is to be otherwise accomplished.

The acquisition of San Domingo is an adherence to the Monroe doctrine. It is a measure of national protection; it is asserting our just claim to a controlling influence over the great commercial traffic soon to flow from East to West by way of the Isthmus of Darien; it is to build up our merchant marine; it is to furnish new markets for the products of our farms, shops, and manufactures; it is to make slavery insupportable in Cuba and Porto Rico at once, and ultimately so in Brazil; it is to settle the unhappy condition of Cuba and end an exterminating conflict; it is to provide honest means of paying our honest debts without overtaxing the people; it is to furnish our citizens with the necessities of every-day life at cheaper rates than ever before, and it is, in fine, a rapid stride toward that greatness which the intelligence, industry, and enterprise, of the citizens of the United States entitle this country to assume among nations.

U. S. GRANT.

The Senate of the United States did not agree with the views of General Grant on the annexation of San Domingo, and the treaty was rejected on June 30th. Colonel Fabens was sent as bearer of the news, arrived at San Domingo

City on July 18th, and communicated it to President Baez, who immediately sent in a message to Congress, concluding with these words: "The measure will, nevertheless, succeed in the end, for it is a necessity in the progress of humanity, whose unseen agent is Providence itself." Colonel Fabens returned to the United States, and, as Dominican minister to Washington, was clothed with ample power to renew negotiations with the American Government for a treaty of annexation, and to propose such modifications of the old treaty as circumstances might demand, in order to meet within reasonable limits the objections of the opponents of the measure. Although the treaty, in its actual shape, had been rejected at Washington, the protectorate of the country by the United States was extended for one year from July, 1870.

The condition of the island, during the year 1870, was any thing but satisfactory. In January, General Cabral, the leader of the revolutionists, issued a protest against the occupation of Samana by the United States. Forty-five of the inhabitants of the capital, who supported the protest, were banished from the country. In April, President Baez issued a decree outlawing Cabral, stating as the reason that Cabral was at Polo, at the head of insurgents; that he did interfere with Salnave and his ministers and women and children, taking them in the Dominican territory, inhumanly butchering some of them, and, finally, selling Salnave to his enemies to be shot, for the sum of \$5,000; that this was a crime against the laws of the country and the constitution, and an act of war against a nation with which the country was at peace. The decree was as follows:

ARTICLE 1. Señor José María Cabral, formerly general of the armies of the Dominican Republic, and now acting as an officer or agent for carrying out the projects of Hayti against this republic, is by this manifesto declared an outlaw, and any person is authorized to seize and slay him.

[The second article commands the executives of the different districts to publish and carry out article first.] Given at San Domingo, April 9, 1870, in the twentieth year of the independence, seventh of the restoration, and third of the regeneration.

B. BAEZ, President.

Cabral marched from San Juan, on his way to Azua, with 1,200 men, and General Oganda, with 600 more, had left Neyba to join him in this movement. An engagement took place with the government troops at Bijama, in which Cabral was successful, and took a number of prisoners. He pursued the routed troops of Baez until they reached Llaya, a village three miles from Azua, where they were reinforced and made a stand; but Cabral again defeated them with great slaughter, putting them to complete rout.

During the month of November, the province of Cibao rose in arms against the government. A junction having been effected with the other revolutionists, both armies were concentrating their forces toward the southwest,

the insurgents having a force of 2,000 men, well armed and drilled.

SEWAGE, FILTRATION OF TOWN.—The new Royal British Commission, appointed in 1868 to inquire into the best means of preventing the pollution of rivers, took up the subject where the former commission had left it, that is, after the Thames, the Lea, and the Aire and Calder basins had been reported upon, and have now issued their report on the Mersey and Ripple basins. They come to the same conclusions as the former commission did in respect of the irrigation of land with town sewage being the best means of preventing the pollution of rivers with it, as well as being the most profitable in application; but they state the case in a different way to that in which the former commission put it. They say that sewage may be sufficiently purified to be allowed to flow into any river or other water-course, from which it is not intended to take water for domestic use, by filtration through sand or porous soil, as distinguished from the view that some persons take of irrigation, which is, that the sewage is purified by running over the surface of the land in a thin sheet, parting with some of its manurial elements to the plants, and storing the remainder in the top soil for the use of the next crop, or rather for the use of the crop first sown after reploughing the land; whereas the present commissioners say that it is the filtration through a sufficient thickness of sand or porous soil that constitutes the efficiency of this method of utilizing sewage; and that, therefore, its purification is insured by passing it through constructed filter-beds equally well as by passing it through the natural soil of the land. This they have ascertained by experiments with several kinds of soil, with sand, and with sand mixed with coarsely-powdered chalk. The difference between filtration through constructed filter-beds and through the soil of the land is one not of efficiency of purification, but of the profitable application of the sewage, the former method being unremunerative, while the latter is remunerative. But it is consolatory to know that, in places where land cannot be had for irrigation, the sewage may yet be sufficiently purified to be allowed to flow into rivers, although the value of the solid part of the sewage which is retained may not be of much value. The value of it will evidently depend on the quickness with which it can be extracted in respect of the length of the time elapsing from its entry into the sewers to its extraction at the outfall. Where the gradients are considerable, and the mean distance of the outfall from the town is not very great, it may be arrested in a fresh state; and, mixed with street sweepings and other town refuse, may become of considerable value; while, where the gradients are slight, and the outfall at a greater mean distance from the town, it may become so far decomposed in its transit as to be of no value as a manure.

The commissioners estimate that, for a town where water-closets are in general use (therefore requiring a larger area than would be required where they are not so numerous), five acres of filtering surface, and a depth of material of six feet, are sufficient for a population of 10,000. According to their experiments, something of this depends upon the nature of the soil or other material used for the filter-bed, the qualities of various soils for this purpose differing; for while soil procured from Dursley, in Gloucestershire, purified sewage at the rate of 9.9 gallons per cubic yard per day, soil from Hambrook, near Bristol, did not satisfactorily purify more than 4.4 gallons per day per cubic yard. Again, soil from Beddington purified sewage of the same strength at the rate of 7.6 gallons per day, while that from Barking did not purify it at a greater rate than 3.8 gallons, or peat from Leyland Moss, near Preston, at a greater rate than 4 gallons per day per cubic yard of material.

Considering that "filtration" has already often been employed to purify sewage, and has always hitherto failed, it is rather startling to see it so confidently recommended, until we remember that both the methods of filtration that have failed for sewage also failed for water many years ago; that is to say, the horizontal method and the upward method, while, as soon as the late Mr. James Simpson rearranged the filter-beds of the Chelsea Water-works at Thames Bank many years ago, and made the water to descend instead of ascend through the filtering medium, the question was then and thereafter settled as to whether water should be filtered upward or downward. And so the commissioners condemn the system of upward filtration now in practice at Ealing, and give the reason why downward filtration is so effective in purifying sewage. The system at Ealing is to force the sewage upward through a filtering medium constantly, thereby effecting no proper purification at all; but by making the sewage to descend for six or twelve hours through one bed, then shutting it off from that bed, or compartment, and turning it on to another for a like space of time, and so alternately, the descent of the sewage through the interstices of the material on either bed is followed by atmospheric air; the air, that is to say, that occupied these interstices before the sewage began to descend, and has been used up in oxidizing and transforming, and therefore purifying, the former quantum of sewage, is replenished after the descent of each quantum of sewage through each bed, and so by continual periodical renewals of the proper aëration of the filtering medium it becomes a constant purifier of the sewage; for, although this method of filtration in the case of water has mostly been called a mechanical one only, yet, in the case of sewage filtration, the same method is said by the commissioners to be both mechanical and chemical.

In order that there should be no ambiguity

about what they recommend, and its attainment, they give a standard of impurity beyond which they think the water of sewage ought not be admitted into rivers or other water-courses. They suggest that the following liquids be deemed polluting and inadmissible into any stream:

Any liquid containing, in suspension, more than 3 parts by weight of dry mineral matter, or 1 part by weight of dry organic matter in 100,000 parts by weight of the liquid.

Any liquid containing, in solution, more than 2 parts by weight of organic carbon, or .3 part by weight of organic nitrogen, in 100,000 parts by weight.

Any liquid which shall exhibit by daylight a distinct color when a stratum of it, 1 inch deep, is placed in a white porcelain or earthen-ware vessel.

So far the standard is applicable to any town. But the commissioners having before them the question primarily of the pollution of the rivers Mersey and Ribble, which traverse the manufacturing part of the county of Lancaster, found it necessary for that district to prohibit—suggest, rather, that they should be prohibited—many kinds of pollution peculiar to the manufactures of those parts, e. g.:

Any liquid which contains, in solution, in 100,000 parts by weight, more than 2 parts by weight of any metal except calcium, magnesium, potassium, and sodium.

Any liquid which contains, whether in solution or suspension, in chemical combination or otherwise, more than .5 part by weight of arsenic.

Any liquid which, after acidification with sulphuric acid, contains, in 100,000 parts by weight, more than 1 part by weight of free chlorine.

Any liquid which contains, in 100,000 parts by weight, more than 1 part by weight of sulphur, in the condition either of sulphuretted hydrogen or of a soluble sulphuret.

Any liquid possessing an acidity greater than that which is produced by adding 2 parts by weight of real muriatic acid to 1,000 parts by weight of distilled water.

Any liquid possessing an alkalinity greater than that produced by adding 1 part by weight of dry caustic soda to 1,000 parts by weight of distilled water.

Manchester being within the water-shed of the river-basin inquired into by the commission, it became necessary for them to institute an inquiry into the merits of the privy and ash-pit system, as against the water-closet system, especially as that city is the great stronghold of this first-named system.

Agreeing with every other impartial inquiry into this subject, the present commission condemn it. They illustrate the case in a remarkable way. They suppose all dwelling-houses, warehouses, etc., to be removed, and only the privies left—nearly 60,000 of them in Manchester and Salford—rows and streets, and crowds of them—scattered about almost as thickly in places as the heaps of manure upon a field that has just received a dressing from the dung-cart—each heap here, however, no mere barrow-load once a year, but a constant collection and continual soakage of filth, which has for years been polluting every corner to which air or water could have access. Is this the site on which to build a healthy town?

Would it not be the first desire of every sensible man to sweep this filth away, to drain and aérate, and, if possible, to sweeten this land before a single dwelling-house should be built?

On the great question of establishing a River Conservancy Board, the present commissioners agree with the recommendations of the former commission, to the effect that it is highly desirable that such a Board should be established for every river-basin; as there exist at present no local bodies competent to deal with questions connected with efficient river conservancy, capable of detecting pollutions and enforcing remedies, it will be necessary to call into action an authority possessing greater capacities and powers than those of the existing corporate bodies or local boards. The duties of this authority would be of two distinct kinds; the one would be those of a river police, employed in the detection of offences, and in obtaining the conviction of offenders; the other would include the investigation of, and decision upon, various works connected with rivers, proposed by either towns or individuals, such as schemes for water-supply, and for the defecation, filtration, or utilization of sewage and other polluting matters, while local boards could obtain information on these points only from persons capable of investigating them.

SEYMOUR, Admiral Sir GEORGE FRANCIS, G. O. B., G. O. H., the oldest but one of the admirals of the fleet in the British Navy, born in 1787; died in London, January 21, 1870. He was the eldest son of the late Admiral Lord Hugh Seymour, and grandson of the late Marquis of Hertford. He entered the navy early, and was severely wounded on board the *Northumberland*, in the battle of St. Domingo, before he had reached the age of twenty. In 1809 he commanded the *Pallas* frigate, which took part in the Walcheren expedition, serving on that and other ships until the conclusion of the war in 1814; was Sergeant-at-Arms of the House of Lords in 1820, and Master of the Robes to William IV. in 1830. Subsequently he was a Lord of the Admiralty, commander-in-chief in the Pacific, on the North-American and West-Indian stations, and at Portsmouth, and Vice-Admiral of the United Kingdom. He was made Admiral of the Fleet, November 20, 1866.

SIMMS, WILLIAM GILMORE, an American poet and novelist, born in Charleston, S. C., April 17, 1806; died there, June 11, 1870. Owing to the limited circumstances of his family, his early education was meagre, but his great fondness for reading made up in some measure for this deficiency, and before reaching his tenth year he commenced writing poetry. For several years he was employed as clerk in a drug and chemical house in Charleston, and his first aspirations were for the medical profession; but, abandoning this idea, he left his position at the age of eighteen, and entered on the study of law. His literary tastes, however, soon drew him from his profession, and

in 1828 he became editor and part proprietor of the *Charleston City Gazette*, a political paper in favor of the Union during the period of the nullification excitement. The *Gazette* failed, involving the proprietors in heavy pecuniary losses, and Simms, becoming disheartened, forsook journalism, and devoted himself to more direct literary pursuits. Previous to this time he had published two volumes of poems, and also several fugitive pieces of much merit. In 1833 appeared his "*Atalantis, a Story of the Sea*," and his first prose tale, "*Martin Faber, the Story of the Criminal*;" the latter, by its success, paving his way to fame and fortune. His writings embraced a wide range, and he seemed equally at home in the several departments of poetry, romance, history, biography, and miscellaneous literature. Among his poetical works not mentioned above are, "*Southern Passages and Pictures*" (1839); "*Donna Anna*" (1843); "*Grouped Thoughts and Scattered Fancies*" (1845); "*Lays of the Palmetto*" (1848); two volumes comprising a series of ballads (1854); and "*Areytos, or Songs and Ballads of the South*" (1860). In dramas, "*Norman Maurice, or the Man of the People*," and "*Michael Bonham, or the Fall of Alarous*." As a writer of prose romances, however, he was most widely known, and many of his best productions were drawn from either general or local American history. He was the author of over thirty novels, most of them very popular. As a novelist he excelled in depicting the scenes of real life, and especially life in the South. No American novelist has excelled him in thus holding the mirror up to Nature. To the departments of history and biography he contributed a "*History of South Carolina*;" "*South Carolina in the Revolution*" (1854); various articles on the "*Civil Warfare of the South*;" *Lives of Bayard, Captain John Smith, General Marion, General Greene, and others*—also the biographies of statesmen, soldiers, and authors of South Carolina, in the *NEW AMERICAN CYCLOPEDIA*. His contributions to magazines and periodicals were numerous. He also took part in politics, and served one term in the Legislature of his native State. During the late war he wrote many humorous stories, and a novel, entitled "*Paddy McGann, or the Demon of the Stump*." Mr. Simms was a man of genial nature, and refined and courteous in his manners.

SOULÉ, PIERRE, a political leader and diplomatist, born about 1800, at Castillon, in the Pyrenees, Southern France; died at New Orleans, La., March 16, 1870. He was the son of a lieutenant-general in the republican army of France, and, being destined for the Church, was sent in 1816 to the Jesuits' College at Toulouse, but subsequently abandoning his theological studies he went to Bordeaux, to complete his education. Here he took part in a conspiracy against the Bourbons, and, the plot being discovered, he was compelled to fly for refuge to

* a little village of Navarre, where he remained for more than a year, following the occupation of a shepherd. Finally, he was permitted to return, and, in conjunction with Bartholémy and Méry, he established a paper in Paris, entitled *Le Nain*, advocating liberal republican sentiments. This soon brought him under the eye of the authorities, and he was put on his trial. His advocate appealed to the clemency of the court in behalf of the prisoner on the score of his youth, but this line of defence did not suit the prisoner, who rose from his seat and addressed the court, defending his opinions and conduct. His eloquence, however, did not save him; he was sentenced to pay a fine of 10,000 francs and be imprisoned in St. Pélagie, whence he succeeded in making his escape to England. Disappointed in his expectations, he returned to France. At Havre he met a friend, a captain in the French Navy, who advised him to seek an asylum in America, and offered him a passage to Santo Domingo. He accepted the proposition, and arrived at Port-au-Prince in September, 1825. From this place he took passage to Baltimore, and finally reached New Orleans in the fall of 1825. Having determined to make the law his profession, he first applied himself assiduously to the study of English, and passed his examination for the bar in that language, and was admitted. In 1847 he was elected a Senator in Congress, and was reelected in 1849 for the term of six years. He took a prominent part in the debate on the Compromise measures of 1850, and offered an important amendment to the report of the Committee of Thirteen, which, however, was not adopted. Upon the accession of Mr. Pierce to the presidency in 1853, he was appointed minister to Spain. Soon after his arrival in that country, he became involved in a quarrel with M. Turgot, the French ambassador, and severely wounded him in a duel. Mr. Soulé, while minister to Spain, met Mr. Buchanan, then minister to England, and Mr. Mason, minister to France, at Ostend, in October, 1854, to deliberate on the subject of the acquisition of Cuba by the United States. The result of this meeting was the famous "Ostend Manifesto." In 1855 he returned to the United States, and took but little part in public affairs until the secession of Louisiana, when he earnestly opposed the ordinance. After its passage, however, he sympathized with the people of Louisiana, but did not take up arms. In the summer of 1861 he visited Europe, and acted as the diplomatic agent of the Confederates, at the time of the capture of Mason and Slidell. He returned soon after to New Orleans, where he remained. When it was captured by Farragut, and when General Butler found it necessary, in 1862, to imprison Mayor Monroe in order to place the city fully under the control of the Union authorities, and at the same time Soulé, who had been Monroe's adviser, was arrested for disloyalty to the Government, but finally released on con-

dition that he would leave the country and not return until the suppression of the hostilities, he went abroad, and remained in England and France until a few months previous to his death, when he returned to New Orleans. In person Mr. Soulé was of medium height, good figure, and dark complexion. He was highly accomplished, being one of the best educated men in the South, and was a man of the most polished manners. His French accent was plainly apparent in his conversation, although he had a perfect command of the English language.

SOUTH CAROLINA. The Legislature, which was in session at the beginning of the year, continued its sittings until the 1st of March, during which time much important legislation was accomplished. General acts were passed regulating the formation of corporations, and providing for the organization of religious, charitable, and educational associations; also acts to prevent bribery and corruption; to carry into effect the provisions of the constitution in relation to the rights of married women; to establish and maintain a system of free common schools; to provide for a sinking fund, and the management of the same; and an act to incorporate the Wilmington and South Carolina Railroad Company. The Legislature, at a former session, had divided the various counties (formerly districts) of the State into townships, and provided for their organization and government in imitation of the system in New England. This measure in practice was found to be inconvenient and expensive, owing to the sparseness of the population, without any countervailing advantages. The township system was, accordingly, abolished at this session of the Legislature. In accordance with the recommendation of the commission appointed to arrange and simplify the practice and procedure in the courts of the State, the Legislature adopted the New-York code of procedure without any material change. A very stringent law was passed against discrimination on account of color, the scope of which is indicated in the first section, as follows:

It shall not be lawful for common carriers, or any party engaged in any business, calling, or pursuit, for the carrying on of which a license or charter is required by any law, municipal, State, or Federal, or by any public rule or regulation, to discriminate between persons on account of race, color, or previous condition, who shall make lawful application for the benefit of such business, calling, or pursuit.

Any common carrier under any public license, or any conductor or manager of a theatre or other licensed place of amusement, who shall offend against this act, is liable, on conviction, to a fine of \$1,000, and also to confinement at hard labor in the penitentiary. Any one, not being a principal offender, who may aid and abet another in committing an offence against this act, shall be punished with imprisonment at hard labor for five years in the penitentiary. For the purpose of rendering more certain the conviction of any person

charged with an offence under this act, it is provided that

In every trial for violating any provision of this act, when it shall be charged that any person has been refused or denied admission to, or due accommodation in, any of the places in this act mentioned, on account of the race, color, or previous condition of the applicant, and such applicant is a colored or black person, the burden shall be on the defendant or party or parties so having refused or denied such admission or accommodation, to show that the same was not done in violation of this act.

An important act passed at this session, regulating the holding of elections, provides for general elections biennially, to be held on the third Wednesday in October. The commissioners of election for each county are appointed by the Governor, who appoints three managers of election for each precinct of the county. The polls are to be kept open from six A. M. to six P. M. on the day of election; "and all bar-rooms, saloons, and other places for the sale of liquors by retail," are to be closed on that day, and remain closed until six o'clock the following morning. On the Tuesday following the election, the commissioners meet at the county-seat, and proceed to make a canvass of the votes cast, which they must complete within ten days. They then transmit a statement of the result to the Board of State Canvassers, which consists of the Secretary of State, Comptroller-General, Attorney-General, State Auditor and Treasurer, and Adjutant and Inspector General. This body is required to meet on or before the 15th day of December following, to ascertain the results of the election. A vacancy having occurred in the office of Associate Justice of the Supreme Court of the State, by the resignation of Judge Hoge, who had been elected to Congress, an exciting canvass ensued, in which the chief contestants were J. J. Wright, Senator from Beaufort County, and W. J. Whipper, representative from Beaufort, both colored, and both originally from the North. The election took place on the 1st of February, in joint assembly of the two Houses of the Legislature, when Mr. Wright was elected by a vote of 72 to 57 for Whipper. The term for which Mr. Wright was elected expired on the 31st of July, 1870.

The new Legislature chosen at the October election convened on the 22d of November, and was in session at the close of the year. Thomas J. Robertson, Republican, was re-elected United States Senator. No other very important business had been transacted at the close of the year, except the impeachment of T. O. P. Vernon, Judge of the Seventh Judicial Circuit. He was charged with drunkenness, and the issuing of writs purporting to be writs of *habeas corpus* in blank, and not addressed to any officer, or containing the name of any person, without any petition having been presented to him praying for the same, which writs were afterward used by other parties to serve their own purposes.

Prior to the time of his trial before the Senate, Judge Vernon resigned.

The political campaign of this year was one of the most exciting that has occurred in the State since the close of the war, and was made noteworthy by the formation of a new party, or rather the reorganization of the Democratic party. This new party, called the Union Reform party, and composed chiefly of Democrats with very few Republicans, held its first convention at Charleston, on the 16th of June, for the adoption of a platform of principles and the nomination of candidates. Twenty-two of the thirty-one counties of the State were represented by delegates, among whom were a few colored citizens. The nominations of the convention were: for Governor, Judge R. B. Carpenter, and for Lieutenant-Governor, General M. C. Butler, the former having been an officer in the Federal army, the latter an officer in the Confederate army, and still subject to political disabilities. The platform adopted was as follows:

This convention, representing citizens of South Carolina irrespective of party, assembled to organize the good people of the State in an effort to reform the present incompetent, extravagant, prejudiced, and corrupt administration of the State government, and to establish instead thereof just and equal laws, order, and harmony, economy in public expenditures, a strict accountability of office-holders, and the election to office only of men of known honesty and integrity, doth declare and announce the following principles upon which men of all parties may unite for the purposes aforesaid:

1. The fifteenth amendment of the Constitution of the United States having been by the proper authorities proclaimed ratified by the requisite number of States, and having been received and acquiesced in as law in all the States of the Union, ought to be fairly administered and faithfully obeyed as fundamental law.

2. The vast changes in our system of government, wrought by the international war between the two sections of the States, and following in its train, are so far incorporated into the constitutions and laws of the States, and of the United States, as to require that they be regarded as accomplished facts, having the force and obligation of law.

3. This solemn and complete recognition of the existing laws brings the people of South Carolina into entire harmony upon all questions of civil and political right, and should unite all honest men in an earnest and determined effort to establish a just, equal, and faithful administration of the government, in the interest of no class or clique, but for the benefit of a united people.

Subsequently, on the 6th of July, an address was issued to the people of the State by the "State Executive Committee of the Reform party," deprecating any hostility between labor and capital, arraiging the party in power in the State for their extravagant expenditures, and announcing that "the absolute and sharp antagonism between the races must be so far overcome as to enable the good people of both to combine for the purposes of both."

"The platform of this party," continues the address—

"while it is historically true, buries the issues of the past, and deals fairly, faithfully and wisely with

the vital, practical questions of the living present. It presents the only possible basis of union to the people of South Carolina, and holds out to them, for the first time, the olive-branch of peace. It proposes a fair trial, and in the only form in which a fair trial may be had, of the experiment of universal suffrage, under the most difficult of all circumstances. If accepted by the people, the experiment will have proved the triumphant success of a great principle, and we will have demonstrated our capacity to emancipate ourselves from the thralldom of prejudice, ignorance and corruption, and to exercise wisely and well that great privilege of the freeman—self-government. But, if rejected, ours is a sure progress of ruin and decay, of vice and corruption, and in the end almost inevitably a violent and bloody solution of the great problem, which we had not the wisdom and the virtue to determine upon just, liberal and enlightened principles. May Almighty God, who rules and governs the affairs of nations as of men, guide you to right conclusions on these momentous issues!"

On the 26th of July the Convention of the Republican party assembled at Columbia, and nominated R. K. Scott for Governor, and A. J. Ransier (colored) for Lieutenant-Governor. The following resolutions were adopted:

Resolved, That the Republicans of South Carolina in convention assembled, in a spirit of amity and peace toward their opponents, and of justice to themselves, make the following declaration of principle and policy:

1. That, as citizens of the nation representing the Republican sentiment of a proud and honored Commonwealth, we regard with sincere satisfaction the fidelity evinced by President Grant to the Republican party, and we pledge our cordial support to the measures inaugurated by him to insure conciliation, economy, and justice at home, and command consideration and respect abroad.

2. That we cordially indorse the administration of Governor Scott, as wise, economical, and honest, and that it deserves, as it has received, the hearty approval of the loyal people of South Carolina.

3. That we insist on a continuance of strict and close economy in all departments of our government, in order to maintain the happy financial condition which our State has attained under Republican rule.

4. That we hail with gratitude the adoption of the fifteenth amendment to the Constitution of the United States, as the crowning act of American civil emancipation, and that, in the exercise of the sacred right of the elective franchise which it proclaims and perpetuates, we will elevate to public office only capable and honest Republicans, irrespective of race, color, or previous condition.

5. That we hereby pledge the Republican party of South Carolina to a firm, fearless, and unfaltering support of the Civil Rights Bill, and shall demand the strict enforcement of the principles that it enunciates, as just and practical assertions of the civil equality of all American citizens.

6. That we appeal to the national Congress to open to settlement and preemption the forty-eight millions of acres of public lands in the Southern States, and to provide by a suitable law for the purchase, through the General Land-Office or otherwise, of lands in this State, to be sold to the landless, under the provisions of the homestead law of the United States.

7. Congratulating ourselves upon the return of peace, the representation of our beloved State in the national councils, and the comparative quiet that prevails in our midst, relying upon Divine Providence for wisdom in council and efficiency in our actions, with malice toward none and charity to all, we pledge our earnest and best efforts to the success of the Republican party in South Carolina, and enter upon the campaign of 1870, confident of victory, with

the noble words, "Equality before the law, free speech, a free press, a free ballot, and free schools," emblazoned upon our banners.

After an exciting political contest, the election was held on the 19th of October, and resulted in the success of the Republican candidates. Governor Scott was elected by a majority of 23,584 in a total vote of 126,608; and A. J. Ransier was chosen Lieutenant-Governor by a majority of 31,637.

The Legislature chosen is largely Republican in both branches. Referring to this election, and the heated political contest that preceded it, Governor Scott, in his annual message to the Legislature, says:

I am conscious that I have been reflected by a large majority of the citizens of this State, a majority so large as to secure my administration against any opposition of practical consequence, and I trust that my conduct in the future, as in the past, will show how thoroughly I recognize the confidence which has been vouchsafed to me; but I cannot refuse to recognize the fact that a large body of those in whose hands the wealth, the influence, and the education of the State, have in former times been entirely placed, and in whose hands to a very considerable extent they are still placed, have been opposed to the party of which I am the chosen representative, and are to-day apprehensive of the results of my administration.

The funded debt of the State on the 31st of October, 1870, was \$7,665,908.98, while the assets held by the State on that date amounted to \$2,290,700.

The report of the Commissioners of the Penitentiary represents the affairs of that institution to be in a favorable condition. The whole number of inmates during the year was 575, of whom 28 were discharged by expiration of sentence, 205 pardoned, 24 died, 6 escaped, and one became insane, leaving in confinement, at the close of the year, 316—309 males and 7 females. The large number pardoned consisted chiefly of those whose terms were about to expire, and who were recommended for their good behavior by the superintendent. The superintendent reports the effect of this leniency to be most salutary in promoting good behavior among the convicts, and enabling him from day to day to designate larger numbers of the convicts for work as laborers, teamsters, and mechanics, without the presence of a guard outside the enclosure of the prison; "and not one has betrayed the confidence thus reposed in him."

The number of patients in the Lunatic Asylum at the beginning of the year was 232, to which were added 90, making a total of 322 under treatment during the year. Of this number 80 were discharged cured, 16 removed, 81 died, and 4 escaped, leaving in the institution at the close of the year 244—112 males and 132 females. The Board of Regents of this institution recommend that "the beneficiaries should be maintained by the State instead of the several counties," and "the extension of the present new building, so as to enable us to abandon the inferior quarters used for patients." For the latter purpose an appropriation of \$40,000 is asked.

The vast amount of railroad property in the State, that has claimed exemption from taxation, has attracted the attention of the administration, and has been brought to the notice of the Legislature. The value of the property in the hands of these corporations claiming entire exemption from taxation, either State or municipal, is estimated in round numbers at ten million dollars; and it is stated that at the present rate of State taxation, if these corporations paid their share of taxes, those who now pay taxes to the State would be relieved of the burden of taxation to the extent of \$50,000 annually, and that the tax-payers in the various counties through which these roads pass would be relieved of a proportionate burden. In his report to the General Assembly of 1869, the Auditor, in reference to this question, said, "Unless the General Assembly decides otherwise, I will feel compelled to insist upon the assessment of the property of such corporations and the collection of the taxes levied thereon in accordance with what I believe to be the plain law of the case." Upon notification, the Cheraw & Darlington and Northeastern Railroad Companies made the return as required by law, but under protest as to their liability to taxation. The South Carolina Railroad Company, having neglected to make any return, the value of the road and its appurtenances was fixed by the State Railroad Board of Equalization, and the treasurers of the counties through which the roads pass were instructed to proceed with the collection of the taxes levied. These corporations, with a view to avoid the taxes thus levied, procured suits to be brought against themselves in the Circuit Court of the United States, in order to obtain the injunction of that court against the tax-officers of the State. The Attorney-General has appeared for the State in all these suits, and has filed answers, setting forth the right of the State to impose the taxes in question. The cases were pending at the close of the year.

The subject of immigration has attracted much attention throughout the State during the year. In response to a call issued by the South Carolina Institute for "delegations from the various County Agricultural and Mechanical and Immigration Societies throughout the State, to assemble in Charleston on the first Tuesday in May next (3d), to take into consideration the questions of labor and immigration, and means for further development of the agricultural interests of the State," delegations from the South Carolina Institute, the South Carolina Railroad Company, the various county societies of the State, the Chamber of Commerce, Board of Trade, and German Society of Charleston, and from various North Carolina and Georgia societies, assembled at the time and place indicated in the call. The convention thus composed remained in session during three days. The president of the South Carolina Institute, in calling the convention to

order, referred to the necessity of immigration to develop the resources and build up the wealth and prosperity of the State, and to the decrease in the colored population of the State, as shown by the State census of 1869. In concluding his remarks, he stated the purposes of the convention, and the practical problem demanding solution from them.

The Committee on Immigration, in their report presented on the second day, recommended the following practical measures:

1. The establishment of direct steam communication with Europe.
2. The establishment of rates of railway transportation for immigrants from Charleston to the extreme Northwest.
3. The formation in this city, and at principal points along this proposed route of immigration travel, of societies on the plan of the German Society of South Carolina, now in existence here.
4. The formation, in all the healthy counties of this and other Southern States, of "County Land and Immigration Societies," having for their object the settlement of immigrants upon free farms, embodying the joint-stock principle of Dr. E. B. Turnipseed.
5. The establishment in Charleston, upon the broadest and most liberal basis, of a Board of Immigration.
6. The encouragement of publications and of the widest discussions upon immigrants and immigration, to the end that our people, of all classes and occupations, may be fully informed as to the immense gain to the whole country and to all private interests of a large, increasing, industrious, and respectable population.
7. The encouragement of immigration from Northern States to this State.

The report of the delegates from the German Society recommended the establishment of direct communication, "by means of good steamers commanded by officers speaking the German language," between some German port with which there is at present no such communication and some Southern port. "The present condition of our country," continues the report, "renders it absolutely impossible for immigrants to be induced to come to this or any other Southern State as laborers. The price of labor is much too low. We cannot contend in this respect with the Northern and Western States, where farm laborers of the best class are paid as high as from fifteen to thirty dollars per month, besides being found. Moreover, it would be impossible for them to exist on the fare and in the manner in which our plantation laborers are sustained." The subject of Chinese labor occupied a considerable share of the attention of the convention, and was referred to a special committee, who reported that "the introduction of Chinese labor would be of great benefit to a large portion of South Carolina. In the lower part of the State and on the islands, where rice and long cotton are cultivated, and where it is supposed white labor cannot be permanently or profitably employed, it would seem to be a great acquisition. The Chinaman is reported to enjoy almost perfect health on the low river lands in the most unhealthy regions of the South and Southwest." The cheapness of

Chinese labor was another point that recommended itself to the committee. According to their report, Chinamen can be imported at an expense of not more than \$125 per head, the whole or a greater part of which will be refunded by the laborer. Their labor can be contracted for, for five years, at the rate of fifty cents per day.

At this convention the subject of direct trade with Europe was discussed, and the committee, to whom this topic had been referred, recommended "the establishment of a permanent line of freight and immigrant steamers to a port in Europe, in shares of \$25 each." As a further means of improving the resources and increasing the wealth of the State, the development of manufactures was recommended to the convention. It was contended that the staple production, cotton, should be utilized at home, and not be transported abroad at great cost to be manufactured.

In the following table is given the Federal census, by counties, of the State for the years 1870 and 1890:

COUNTIES.	1870.	1890.
Abbeville.....	31,129	32,385
Anderson.....	34,049	22,873
Barnwell.....	35,734	30,743

SPAIN. During the year 1870 the country continued under the provisional administration of the Regent, Marshal F. Serrano y Dominguez, Duke de la Torre, appointed on June 18, 1869. The Government of the United States was represented at Madrid by Major-General D. E. Sickles. Spanish ambassador and minister at Washington, Don M. L. Roberto, accredited March 19, 1869. The area of Spain, inclusive of the Balearic and Canary Islands, is 195,607 square miles. According to a memorial published by the "Direccion General de Estadística" at Madrid, in 1870, the population of Spain, exclusive of Tetuan, was:

Decemb'r, 1860...	15,653,586	Decemb'r, 1865...	16,408,721
" 1861...	15,864,896	" 1866...	16,545,322
" 1862...	16,050,132	" 1867...	16,701,173
" 1863...	16,195,391	" 1868...	16,732,032
" 1864...	16,223,351		

The population of the colonies, according to the latest official reports, was estimated at 6,378,541. The population of the city of Madrid is reported in the census of 1866 at 317,217. The budget for 1870-'71 estimates the revenue as follows:

	Pesos.*
Direct taxes.....	190,335,605
Taxes on rents and pensions.....	32,360,000
Indirect taxes.....	60,250,000
State monopolies (tobacco, lottery, and stamp-tax).....	161,186,250
Revenue from state domains.....	71,870,800
Revenue from the colonies.....	5,000,000
War indemnity from Morocco and Cochín-china.....	3,500,000
Revenue from crown-lands.....	2,215,000
Total.....	535,702,055
The expenditure was estimated at.....	716,667,443
Showing a deficit of.....	180,965,388

The public debt, on the 31st of March, 1870 amounted to 2,639,351,703 escudos; interest 69,133,299 escudos (1 escudo equals 48 cents). The annual contingent for the army has been fixed by law at 30,000 men. The active standing army in Spain is composed of 60,000 infantry; 9,000 cavalry; 8,500 artillery; 2,500 sappers and miners; 13,000 civil guard; and 13,000 carabinieri: total, 106,000 men. The army reserve of the first class numbers 30,000 men; second class, 80,000 men. Grand total of the army in Spain, 216,000 men. The colonial army is composed as follows:

	Cuba.	Porto Rico.	Philippine Isles.
Infantry.....	10,000	3,000	6,400
Cavalry.....	2,000	40	200
Artillery.....	2,000	500	1,000
Corps of Engineers.....	1,000	100	300
Civil Guard.....	1,500	560	1,100
Sanitary Corps.....	500
Total.....	23,000	4,300	9,000

The militia, which forms the reserve of the colonial army, numbers 8,000 infantry; 1,800 cavalry; and an expeditionary corps of 33,000 men. Total military strength in Spain and the colonies, 295,000 men. The marine, on January 1, 1870, consisted of 120 steamers, carrying 787 guns, and 3 sailing-vessels, carrying 82 guns; in course of construction, 4 steamers, counting 27 guns. The navy was under command of 1 admiral, 6 vice-admirals, and 14 rear-admirals.

The movement of shipping, during 1867, was as follows:

	Vessels.	Tons.
Spanish vessels entered....	4,349	505,000
Foreign vessels entered....	5,298	1,087,000
Spanish vessels cleared....	4,000	533,000
Foreign vessels cleared....	4,170	827,000

The merchant navy consisted of—
 3,051 sailing-vessels, of 68,026 tons, in the coasting-trade.
 103 steamers, of 20,375 tons, "
 1,313 sailing-vessels, of 247,160 tons, coasting.
 49 steamers, of 26,339 tons, "

* One peseta is equal to 19½ cents.

The value of the imports and exports, in 1867, was estimated as follows:

COUNTRIES.	Imports.	Exports.
	Escudos.	Escudos.
France	70,100,000	33,300,000
Great Britain	54,400,000	33,800,000
Gibraltar	2,400,000	900,000
Italy	2,800,000	1,400,000
Portugal	1,000,000	3,800,000
Belgium	700,000	700,000
Netherlands	100,000	700,000
Germany	30,000	2,700,000
Sweden	4,700,000	390,000
Denmark	400,000	800,000
Russia	500,000	2,400,000
Austria	60,000	70,000
Turkey	1,400,000
Total Europe	128,080,000	80,270,000
Algers	500,000	1,100,000
Other parts of Africa	600,000	400,000
Total Africa	1,100,000	1,500,000
Cuba	18,000,000	20,700,000
Porto Rico	800,000	1,800,000
Other West Indies	8,200,000	3,400,000
United States	1,300,000	50,000
Mexico and Guatemala	30,000	500,000
Venezuela, New Granada	2,400,000	800,000
Brazil	1,000,000	1,500,000
La Plata States	1,500,000	5,400,000
West coast of America	5,700,000	10,000
Total America	37,930,000	33,060,000
Philippine Isles	1,600,000	700,000
Grand Total	178,710,000	115,530,000

The value of imports during the years 1864, 1865, and 1866, was as follows:

Imports in 1864	198,000,000 escudos.
" 1865	162,600,000 "
" 1866	129,900,000 "

Thomas, Duke of Genoa, a nephew of King Victor Emmanuel, having refused to be a candidate for the vacant throne, in consequence of the opposition of his mother, the Duchess of Genoa, the Spanish ambassador at Florence communicated this refusal to the Provisional Government, on December 29, 1869. In consequence of the failure of this candidate, whom they had warmly advocated, the ministers tendered their resignation on January 10th, and a new Cabinet was formed, in which Rivero was Minister of the Interior, and Montero-Rios, Minister of Justice. Topete re-entered the Cabinet as Minister of Marine. General Prim introduced the new Cabinet to the Cortes on January 11th, saying that the only cause of the late crisis had been the failure of the candidate, and denying the existence of any dissension of consequence among the late ministers on any other point. Señor Rivero, in addressing the Cortes, said:

Law, as the foundation of order and public liberties perfectly exercised, is the best title of the authorities to respect. The severe castigation of those who, in the sphere of authority or in the sphere of the governed, are wanting to this high deposit, this element of power and command in society, will be the inflexible and invariable rule of the Minister of the Government. The establishment of public order upon these bases by means of organic laws is a point the Government propose to effect. They also propose to

resolve the question of finance, to raise our fallen credit. They believe, if the Cortes will lend their acquiescence, that the situation of Spanish finance is not so bad as is generally believed. What has occurred to it are common and constant accidents of a radical revolution.

On January 23d the proposition for the exclusion of the house of Bourbon from the Spanish throne came before the Cortes for final action, and was the occasion of an exciting debate. General Prim participated and made a personal statement. In the course of his remarks he declared that the proposition was unjust to exclude all the Bourbons. He desired to explain that his words were not designed particularly to favor the Duke de Montpensier. He would go with the majority, whoever might be chosen. At length a vote was reached, and the proposal was rejected by a large majority—yeas 88, nays 151.

On January 29th an exciting discussion occurred in the Cortes between Señor Figueras, one of the leaders of the Republicans, and General Prim. The former defended the recent Republican insurrection and asserted that it was a deliberate act of the people to defend their individual rights, which had been violated by the Government. He further asserted that those so-called insurgents who had been killed by the Government troops were simply assassinated. General Prim rose and demanded a retraction of the offensive words. Señor Figueras refused to retract.

The Duke de Montpensier arrived at Madrid on February 14th, and had long interviews with General Prim and Admiral Topete. During the sessions of the Cortes, on the same day, the Government was interrogated as to the urgency of the revision of the treaty with England on the slave-trade, slavery being now rejected by the national conscience, and the right of search which that treaty gave to England leading to vexatious interference with the Spanish share of the rich commerce with Africa. Señor Silvela, the Minister of State, replied that by the treaty England paid \$2,000,000 for the right of search, so it was a fair bargain; but the Government would invite England to reverse the treaty, as Spain would no longer countenance or allow the importation of negroes.

On the 7th of March the Infante Don Enrique de Bourbon published a violent and highly-insulting pamphlet against the Duke de Montpensier. A challenge from the latter was the immediate consequence, and a duel took place on the 12th, in which Don Enrique was killed. On April 12th a court-martial assembled for the trial of the Duke de Montpensier, who was sentenced to be exiled from Madrid for one month, and to pay an indemnity of 30,000 francs to the family of Don Enrique. The latter, however, indignantly refused the indemnity.

Serious disturbances took place in Barcelona. The insurrection soon spread over the whole of Catalonia, and it was with the ut-

most difficulty that the Government troops finally suppressed the rebellion.

During the session of the Cortes, on June 8th, a motion was made that the King be elected by a direct vote of the people of the nation. After a debate, this was rejected. At length the proposition, requiring the candidate to receive a majority equal to one-half of the whole number of deputies, was carried by a vote of 138 to 124.

On June 24th the Cortes adjourned to October 31st. They adopted no decree of amnesty before adjourning, but authorized the Government to declare a general amnesty whenever they might deem it expedient.

On June 25th ex-Queen Isabella signed the following manifesto of abdication:

SPANIARDS! My long reign has seen many sad and troubled periods—sad above all for me, because the glory of certain facts and the progress realized while I ruled the destiny of our dear country cannot make me forget that, loving peace and the increase of the public good, I ever saw my deepest and most cherished feelings, my noblest aspirations, and my most earnest wishes for the prosperity of Spain, thwarted by acts independent of my will. As a child, thousands of heroes proclaimed my name, but the horrors of war surrounded my cradle. As a girl, I had no thought but to second proposals which appeared good and calculated to secure your happiness, but the heated strife of parties allowed no time for the law and for the love of prudent reforms to take root. At an age when reason is fortified by experience, the ungovernable passions of men whom I would not oppose at the cost of your blood, more precious to me than my own, have driven me to a foreign country, far from the throne of my ancestors, to this friendly, hospitable, and illustrious land, but which is not my own country, nor that of my children. Such, in brief, is the political history of thirty-five years, in which I have exercised the supreme representative power of the people committed to my charge by God's law, by personal right, and by national right. Reflecting upon this period, I cannot accuse myself of contributing with deliberate intention either to the evils laid to my charge, or to misfortunes which I was powerless to avert. A constitutional queen, I have sincerely respected the laws. A Spanish woman before all, and a loving mother, Spain's sons are all equally dear to me. The misfortunes which I could not prevent were mitigated by me as far as possible. Nothing was more grateful to my heart than to pardon and reward, and I omitted nothing to prevent my subjects' tears from flowing for my cause. With desires and feelings that have nevertheless been vain to spare me, in my country or away from it, the bitter trials afflicting my life, resigned to suffer them, and accepting the designs of Divine Providence, I believe I can yet freely and spontaneously perform this last of my acts, all of which, without exception, have sought to promote your prosperity and to secure your tranquillity. Twenty months have passed since I set foot upon foreign soil, apprehensive of ills which, in their blindness, tenacious supporters of illegitimate aspirations, who have been condemned by the laws of the kingdom, by the vote of many assemblies, by the right of victory, and by the declarations of the Government of civilized Europe, do not hesitate to endeavor to reproduce. In these twenty months my afflicted soul has never ceased to hear the suffering cry which arises from my never-forgotten Spain. Full of faith in its future, solicitous for its greatness, integrity, and independence, grateful for the support of those who were and are attached to me, forgetting the affronts of those who do not know me or insult me, for myself I ask nothing,

but I would obey the impulse of my heart and the loyal sentiment of the Spaniards by confiding to their honor and noble feeling the destiny of a traditional dynasty and the heir of a hundred kings.

Here follows the act of abdication, transferring the crown to the prince, under the title of Alfonso XII., Isabella preserving all civil rights, and the custody of Alfonso while living abroad and until proclaimed King by the Cortes.

A council of the ministry took place at La Granja, on July 6th, when it was decided to send a special ambassador to Germany, to make an offer of the Spanish crown to Prince Leopold of Hohenzollern-Sigmaringen. The prince at first accepted the offer conditionally, but afterward refused upon the advice of King William of Prussia, the head of the house of Hohenzollern. The Provisional Government then concluded to tender the crown to the Duke of Aosta, second son of King Victor Emmanuel. The duke accepted the offer, on condition that he was elected by the Cortes and recognized by the foreign powers. The diplomatic body at Madrid received confidential notice of the candidacy, and favorable replies, announcing the formal approval of the proposed candidate, reached Madrid from Prussia, England, Italy, Austria, and Russia, previous to the reassembling of the Cortes. On November 4th General Prim formally presented the name of the Duke of Aosta as a candidate for the throne. The election took place on November 16th, when, of the 347 deputies entitled to vote, 311 voted as follows: 191 for the Duke of Aosta, 27 for the Duke de Montpensier, 1 for the Duchess de Montpensier, 8 for Espartero, 2 for Alfonso XII., 62 for the republic, while 19 votes were blanks, given by the Carlists and Moderados. A deputation of crown-bearers was immediately elected and ordered to proceed to Florence, where they arrived on the 8d of December. When the crown was presented to the duke, he said: "I have before me a smooth, and, I hope, happy course to pursue. You present to my view a more extended horizon, and invite me to duties always elevated, but now of the utmost moment. I accept the noble mission, conscious of its difficulties." The Duke of Aosta left Italy for Spain on December 23d, landed at Carthagena on December 30th, and was expected to arrive in Madrid on January 2d, 1871.

On December 29th, while General Prim was proceeding from the Cortes to his residence, some persons in the Calle Alcalá fired into his carriage, wounding both the general and his adjutant. Great popular indignation was manifested at this atrocious act. The general died of his wounds in the evening of the following day.

Carlist insurrectionary movements broke out in February, at Murcia, Calatayud, and other places, in the northern provinces, and were soon increasing both in intensity and activity.

Don Carlos, himself, while travelling through France with an Austrian passport, under the name of the Marquis of Alcantara, was arrested at Lyons by the civil authorities. He was reminded that he could reside only in the north of France, and if he violated that condition he must leave the country. The prince then proceeded to Switzerland, accompanied by an escort as far as the frontier. Previous to his arrest he met the Duke of Modena at Lyons, and completed all his arrangements for going to Spain and raising another insurrection. Various engagements took place between the insurrectionists and the Government troops during the summer, without any definite result. On September 5th, the Carlist chief Carrega, and 500 men, offered to lay down their arms, and were pardoned. On the following day a band of 600 Carlists was attacked and beaten near Navarre. Several of them were captured, among whom were some priests, with arms in their hands. Another band of 800 or 400 was encountered in the province of Biscay. The insurgents were attempting to destroy the railroad, but were attacked by the Government troops and routed. These defeats put an end to the Carlist movement for the remainder of the year.

The colonial possessions of Spain consist of:

	Square Miles.	Population.
I. Island of Cuba.....	45,834	1,414,508
Island of Porto Rico.....	8,596	615,574
Total, America.....	49,480	2,080,082
II. Philippine Islands.....	65,908	4,319,269
Caroline Islands and Palao.	878	23,580
Marianne Islands.....	417	5,610
Total, Asia and Oceania..	67,203	4,348,459
III. Africa, Guinea Islands.....	489	5,590
Total.....	117,172	6,878,541

By far the most important of these colonies, as regards natural resources and their development, commerce, and wealth, is the Island of Cuba. The government is vested in a Captain-General, who is the military commander of the whole island, and the civil governor of one of the three provinces. Its population, according to the census of 1867, was classed as follows:

White Inhabitants.....	780,612
Free Colored.....	259,943
Slaves.....	870,558
Total.....	1,414,508

The free colored population consisted of 50,000 Chifese; 1,500 Yucatese; 225,843 free negroes; and 6,000 emancipated slaves, or such negroes as had been taken from on board of captured slave-traders. Havana, the seat of government, and the chief town of the island, had a population (in 1863) of 205,676 inhabitants, of whom 188,895 were whites.

The island being still in a state of insurrection against the Government of the mother-country, the construction of railroads and

other public works projected has not been resumed during the year. On September 19, 1870, the Panama and West India submarine cable, which connects Cuba with Jamaica, was opened to the public; the submerging of the cable to Aspinwall was to be completed at an early day. At the end of the year 1868 about 403 miles of railroad were in operation. The most important port is Havana; the clearances at the custom-house there comprise from 45 to 50 per cent. of the entire exports of the island, while the entries amount to nearly 75 per cent. of the aggregate imports in Cuba. Matanzas is next in importance as regards exportation. The entire exports of sugar during 1869 summed up 1,701,871 boxes of 400 pounds each, and 511,822 casks or hogsheads, of which 1,308,381 boxes, and 85,649 hogsheads were exported from Havana to the following countries: 58 per cent. to the United States; 26.5 per cent. to Great Britain; 6.8 per cent. to Spain and the south of Europe; 6 per cent. to France; 1.6 per cent. to the North of Europe; and 1.14 per cent. to other countries. There were also exported from Havana, in 1869, 380,078 barrels molasses, at from 110 to 120 gallons; 2,115 tierces honey, at 80 gallons; 13,605 barrels rum, at 125 gallons; 28,049 arrobas wax (one arroba equals 24 lbs.); 22,269,876 pounds tobacco, and 179,962,000 cigars. The export of coffee is not of any importance. The official statements of imports and exports of Cuba do not state the value of the different articles; on an average, the imports and exports of Havana are calculated at \$40,000,000 annually. The movements of shipping at the port of Havana, during 1869, comprised the following arrivals: 721 American vessels, of 378,645 tons; 574 Spanish vessels, of 142,820 tons; 124 English vessels, of 124,522 tons; 58 French vessels, of 50,661 tons; 49 German vessels, of 39,750 tons; 68 Norwegian vessels, of 26,061 tons; 75 vessels from other countries, of 35,836 tons; total, 1,852 vessels, of 797,345 tons. The customs revenue at Havana, in 1870, showed an increase of \$6,000,000 over that of 1869.

The insurrection on the island of Cuba against the Government of Spain was continued throughout the year 1870 with unabated vigor, and, although it did not gain ground nor obtain any signal advantage, the Spanish authorities were unable to suppress it, and the war was waged on both sides with a degree of ferocity and a disregard of human life unknown in modern warfare. The destruction of property was immense, the torch of the Spaniard and Cuban alike was busy in carrying devastation over fertile regions. The decrees issued and executed by both parties were bloody and revengeful. The Spaniards, besides having to fight a desperate enemy, perfectly familiar with all the mountain recesses in the interior of the island, saw their number decimated by the climate and by disease; and, although they had a numerous army in the field at the beginning of the year, the Captain-Gen-

eral had to ask for considerable reinforcements from the mother-country. And, although they were in possession of every seaport on the island, they did not succeed in preventing the landing of fire-arms and ammunition for the insurgents. The hostile feeling which drove so great a number of the native inhabitants of the island to armed resistance against Spain still continues unabated. Although some of the insurgent leaders surrendered with their commands, new recruits filled their ranks, consisting either of the young natives of the island, or of filibusters from abroad. On the 29th of March, 1870, the number of regular Spanish troops on the island of Cuba amounted to 23,000 men, according to the budget of war, exclusive of an expeditionary corps of 33,000 men (also regular troops), and 4,000 militia, making a total of 60,000 men. These figures were, however, considerably reduced by sickness, losses in battle, desertions, and other causes. The strength of the insurgent forces it has been impossible to determine, but the fact that Spain has, for more than two years, vainly endeavored to suppress the rebellion, seems to indicate that it must have been considerable. General Quesada, late commander-in-chief of the insurgents, while on a visit to the United States, in March, 1870, declared that they had not then ten thousand arms in Cuba.

The winter campaign of the Spanish army came to an end on the 28th of January, after a severe battle at Najasa, when the Spaniards were forced to retreat. The most sanguinary engagement of the entire campaign took place near Guaimaro, where the insurgents, under command of General Jordan, obtained a decided victory, killing 86 officers and 400 men of the army of General Puello.

On the 24th of February, Captain-General de Rodas issued a decree emancipating over 2,000 colored prisoners of war. The decree read as follows:

SUPERIOR POLITICAL GOVERNMENT OF THE PROVINCE OF CUBA.

Decree.—By virtue of the faculties with which I am invested, and in keeping with the royal decree of the 27th of October, 1866, I think fit to extend my decree (resolution) of the 21st of September ult., declaring exemption from dependency on the Government the expeditions entitled Puerto Escondido, Cabanas 10, Cabanas 86, Cabanas San Diego de Nunez, and Trinidad.

In consequence thereof the employers (*los patronos*) who have in their service emancipated (*emancipados*) of the referred-to expeditions, will present them in the secretary's office of this superior government within the period of one month, in order that, after the usual formalities, they may receive their letters of exemption.

At the same time the governors and lieutenant-governors will publish this direction in the periodicals of their respective jurisdictions, so that it may come to the notice of the holders of these emancipados, and they cannot allege ignorance of it.

CABALLERO DE RODAS.

HAVANA, February 24, 1870.

Another campaign was opened by the Spaniards at the beginning of April against the

rebels in the central department. Count Valmaseda commanded in person and advanced to Cauto, in the vicinity of which several battles were fought, with alternate success. During this campaign, the son of President Cespedes was captured, and was executed on the 29th of May, near Puerto Principe.

On the 20th of May, Captain-General de Rodas published an order, that all slaves belonging to insurgents in the field, or in foreign countries, who had taken up arms, and all who had served as guides to the Spanish troops or performed any other service for the national cause, were henceforth free.

At the approach of the sickly season, active operations against the insurgents had to be abandoned, and no fighting of any consequence occurred during the entire summer.

The Spanish Cortes having passed an emancipation law for the colonies on June 23d, which was promulgated by the Regent Serrano on July 4th, it was made operative in Cuba on the 28th of September. The following is the text of the law, its promulgation by the Regent, and the proclamation of the Captain-General:

SUPERIOR POLITICAL GOVERNMENT OF THE PROVINCE OF CUBA.

His Excellency the Regent of the kingdom communicates to me, under date of July 4th ult., the following law, which has been promulgated and sanctioned by the Congressional Cortes:

DON FRANCISCO SERRANO Y DOMINGUEZ, Regent of the kingdom, by the will of the sovereign Cortes; to all to whom these presents shall come, greeting: Know ye that the Congressional Cortes of the Spanish nation does hereby decree and sanction the following:

ARTICLE 1. * * * All children of slave mothers, born after the publication of this law, are declared free.

ART. 2. All slaves born between the 18th of September, 1868, and the time of the publication of this law, are acquired by the state by the payment to their owners of the sum of twenty-five dollars.

ART. 3. All slaves who have served under the Spanish flag, or who have in any way aided the troops during the present insurrection in Cuba, are declared free. All those are equally recognized as free as shall have been so declared by the superior government of Cuba, by virtue of its jurisdiction. The state shall pay their value to their masters, if the latter have remained faithful to the Spanish cause; if belonging to the insurgents, they shall receive no indemnity.

ART. 4. Slaves who, at the time of the publication of this law, shall have attained the age of sixty years, are declared free, without any indemnification to their owners. The same benefit shall be enjoyed by those who shall hereafter reach this age.

ART. 5. All slaves belonging to the state, either as emancipated, or who for any other cause are at present under the control of the state, shall at once enter upon the full exercise of their civil rights.

ART. 6. Those persons freed by this law who are mentioned in articles one and two, shall remain under the control of the owners of the mother, after the payment of the indemnity prescribed in article eleventh.

ART. 7. The control referred to in the foregoing article imposes upon the person exercising it the obligation to maintain his wards, to clothe them, care for them in sickness, giving them primary instruction, and the education necessary to carry on an art or trade. The person exercising the aforesaid control acquires all the rights of a guardian, and may, moreover, enjoy the benefit of the labor of the freedman, without making any compensation, until said freedman has reached the age of eighteen years.

ART. 8. When the freedman has reached the age of eighteen years, he shall receive half the wages of a freedman. Of these wages one-half shall be paid to him at once, and the other half shall be reserved in order to form a capital for him, in the manner to be determined by subsequent regulations.

ART. 9. On attaining the age of twenty-two years, the

freedman shall acquire the full enjoyment of his civil rights, and his capital shall be paid to him.

ART. 10. The control will also be annulled: first, by the marriage of the freedman, when the same is entered into by females over fourteen years and males over eighteen years old; second, by a proved bad treatment on the part of the guardian, or his non-compliance with his duty, as stipulated in Article seventh; third, should the guardian prostitute or favor the prostitution of the freedwoman.

ART. 11. The above-mentioned control is transmissible by all means known in law, and is also resignable when just motives exist. Legitimate or illegitimate parents who are free shall be permitted to assume the control of their children by the payment to the guardian of the same of any expense he may have incurred for account of the freedman. Subsequent regulations will settle the basis of this indemnification.

ART. 12. The superior civil governor shall form, in the space of one month from the publication of this law, lists of the slaves comprised in articles three and five.

ART. 13. The freed persons mentioned in the foregoing article remain under the control of the state. This control is confined to protecting them, defending them, and furnishing them the means of gaining a livelihood, without limiting their liberty in the slightest degree. Those who prefer to return to Africa shall be conveyed thither.

ART. 14. The slaves referred to in article four may remain with their owners, who shall thus acquire control over them. When they shall have preferred to continue with their former masters, it shall be optional with the latter to give them compensation or not, but, in all cases, as well as in that of the freed persons being unable to maintain themselves by reason of physical disability, it shall be the duty of the said former masters to feed them, clothe them, and care for them in sickness. This duty shall be a concomitant of the right to employ them in labors suitable to their condition. Should the freedman object to the compliance with his obligation to labor, or should he create disturbances at the house of his guardian, the authorities will decide the question arising therefrom, after having first heard the freedman.

ART. 15. If the freedman, of his own free will, shall leave the control of his former master, the latter shall no longer be under the obligations mentioned in the foregoing article.

ART. 16. The Government shall provide the means necessary for the indemnifications made necessary by the present law, by means of a tax upon those who still remained in slavery, ranging from eleven to sixty years of age.

ART. 17. Any act of cruelty, duly justified as having been inflicted by the tribunals of justice, will bring with it as a consequence the freedom of the slave suffering such excess of chastisement.

ART. 18. Any concealment impeding the application of the benefits of this law shall be punished according to title thirteen of the penal code.

ART. 19. All those shall be considered free who do not appear enrolled in the census drawn up in the Island of Porto Rico the 31st of December, 1860, and in that which will have been drawn up in the Island of Cuba on the 31st of December of the present year 1870.

ART. 20. The Government shall make a special regulation for the execution of this law.

ART. 21. The Government will report to the Cortes, when the Cuban deputies shall have been admitted, a bill for the compensated emancipation of those who remain in slavery after the establishment of this law.

Meantime this emancipation is carried into effect; the penalty of the whip, authorized by chapter thirteen of the regulations for Porto Rico and Cuba, shall be abolished; neither can there be sold separately from their mothers children younger than fourteen years, nor slaves who are united in matrimony.

By a resolution of the Congressional Cortes the foregoing is reported to the Regent of the kingdom for its promulgation as a law.

MANUEL RUIZ ZORILLA, President.

MANUEL DE LIANOS Y PERSI, Deputy Sec'y.

JULIAN SANCHEZ RUANO, Deputy Sec'y.

FRANCISCO JAVIER CARRATALA, Dep. Sec.

MARIANO RUIZ, Deputy Secretary.

PALACE OF THE CORTES, June 28, 1870.

Therefore, I order all tribunals, justices, officers, governors, and other authorities, of whatsoever class or position, to obey the same and cause it to be obeyed, complied with, and executed in all its parts.

FRANCISCO SERRANO, Minister of Ultramar.
SIGISMUNDO MORET Y PRENDERGAST.

SAN ILDEFONSO, July 4, 1870.

And, having opportunely omitted the publication

VOL. X.—44 A

of the same for the want of the regulation referred to in article twenty, and having received the sense in which said document is to be drawn up, I have ordered the exact compliance of said law, in virtue of which it is inserted in the *Official Gazette* for future guidance.

CABALLERO DE RODAS.

HAVANA, September 28, 1870.

Toward the middle of October, a steamer with 3,000 troops for the reinforcement of the army arrived at Havana, and was followed, in about a fortnight, by two other steamers, with 1,500 each.

On the 15th of October, Captain-General de Rodas issued an order liberating 2,000 apprenticed negroes, captured from slavers in the years 1855, 1856, and 1857. On the 2d of December, news reached Havana, by telegraph, that the home Government had accepted the resignation of Captain-General de Rodas, which had been repeatedly tendered. Count Valmaseda, having been appointed his temporary successor, arrived at Havana from the interior, on December 7th, to relieve General de Rodas.

An official correspondence took place with regard to the offer, on the part of the Government of the United States, of its good offices for the purpose of bringing to a close the civil war ravaging the Island of Cuba. (*See DIPLOMATIC CORRESPONDENCE.*)

A deep impression seems, however, to have been made in Spain by the overtures on the part of the United States, and, as the expectations of an early subduing of the insurrection were not realized, overtures were made at Washington in December, 1870, to a prominent public man, known to be friendly to the Cubans, for the purpose of obtaining his influence in ascertaining what terms of peace, if any, could be made between the combatants. The gentleman submitted, as the least he would consent to bear to the Cubans, the following points:

1. Emancipation, unconditional and immediate.
2. A complete restoration of civil and property rights, including a reversal of all confiscations.
3. A guarantee of religious freedom, the liberty of the press, of meeting, and of speech.
4. Equal representation for Cuba in the Cortes, as that accorded to other provinces of Spain.
5. A colonial autonomy similar to that existing between Great Britain and the British North-American provinces.
6. The removal by the home Government of all offensive officials.
7. That Spain and Cuba should consent that the United States should see that these guarantees were enforced and complied with by both parties.

The last condition appears to have been the stumbling-block on the Spanish side, but even that was consented to. The Cubans, however, felt compelled to refuse approval, upon the distinct ground that nothing short of independence could be sought by them. The atrocities perpetrated against them rendered it impossible that the two parties could live peaceably together.

STEWART, Rev. CHARLES SAMUEL, D. D., a Presbyterian clergyman, Senior Chaplain in the United States Navy, born in Flemington, N. J., about 1795; died in Cooperstown, N. Y.,

December 14, 1870. He was educated at Princeton College, whence he graduated in 1815; studied law and theology, and subsequently went to the Sandwich Islands as a missionary, returning in 1825. In 1828 he published a journal of his residence there, which passed through six editions in America, and was republished in England. He received the appointment of chaplain in the Navy in 1828, and made his first cruise to Brazil, Peru, and other South American countries, on board the Vincennes, in 1829-'30. Subsequently he published an account of the cruise, which was received with great favor, and went through several editions both in this country and in Great Britain. He also wrote a book on English and Irish society, which was published in 1834. He became editor of the *Naval Magazine* in 1837, and subsequently acted as chaplain of several Navy-Yards. His last cruise ended in 1862, after which he retired from the service. He was a man of fine intellectual culture, broad, generous spirit, and ardent in his zeal and devotion to the cause of humanity.

STONE, Rev. COLLINS, a Congregationalist clergyman, and educator of the deaf and dumb, born in Canton, Conn., in 1812; was killed by a railroad accident in Hartford, Conn., December 23, 1870. He graduated at Yale College in 1832, and in 1833 became teacher in the American Asylum at Hartford. After a period of nineteen years of faithful and efficient service, he accepted in 1852 the position of principal of the Ohio State Asylum for the Deaf and Dumb, at Columbus. In 1863 he was offered the position of principal of the American Asylum at Hartford, the parent institution for deaf-mute instruction in this country, and accepted it. He studied theology with the Rev. Dr. Hawes, of that city, and was ordained to the ministry in 1853, while principal of the Ohio institution. For a period of nearly forty years he was untiring in his zeal and devotion to that interesting department of education, and was greatly beloved and respected, not only by his pupils, but by his associates, and all with whom he was brought in contact.

STORM-SIGNALS. Until 1870 this country had no system of forecasting or signalling storms. In England, France, and other parts of Europe, this important branch of science and useful knowledge had received the most careful attention and the liberal patronage of governments. In England, the art of foretelling the weather is brought to such perfection, that as high a proportion as seventy-three per cent. of storm-warnings has proved correct; and in France, in one year, no less than ninety-four out of one hundred storms were correctly signalled. At Hamburg, according to the report of the *North-German Seewaste*, twenty-eight out of thirty storm-signals were verified. It is strange that in the United States, where the commerce of the lakes and the sea-coast is exposed to sudden and very disastrous tempests, this life and

property saving system had not been before adopted. The extent of the country is so vast, that the severe and most destructive storms which originate in the South and Southwest can be signalled for many hours before they burst upon remote parts of the land, and thus lake and ocean vessels may be warned against leaving port till the danger is over. The movement to establish a Government Bureau for this purpose originated in the West, and was suggested by the enormous losses sustained by the commerce of the Great Lakes in 1869, when 1,914 vessels were wrecked or otherwise injured by storms, to the extent in damages of over \$4,000,000. General H. E. Paine, Representative from Wisconsin, responding to the Western demand for greater security to lake commerce, offered the following resolution in Congress, early in 1870:

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of War be, and he hereby is, authorized and required to provide for taking meteorological observations at the military stations in the interior of the continent, and at other points in the States and Territories of the United States, and for giving notice on the Northern lakes and on the sea-coast, by magnetic telegraph and marine signals, of the approach and force of storms.

This was promptly passed, and approved by the President, February 9, 1870. Brevet Brigadier-General Albert J. Myer, the chief signal-officer of the Army, was intrusted with the novel and difficult work of executing the objects of the resolution. The enactment and the appointment were received with great favor throughout the United States, the Chambers of Commerce in the Atlantic and Western cities taking especial pride and interest in the matter. General Myer asked for only small appropriations—\$15,000 for the fiscal year ending June 30, 1870, and \$20,000 for the next fiscal year, ending June 30, 1871. Such economy as he contemplated was rendered possible only by the fact that the observations were all (or nearly all) to be conducted by army officers. The principal expense to be met was for the purchase of instruments, such as thermometers, barometers, hygrometers, rain-gauges, and anemometers or wind-gauges. These were speedily procured, the army correspondents selected and installed, and the work of reporting commenced.

The army stations from which reports are daily received at Washington number about thirty-six. Besides these, a return comes in every day, when the lines are working through, from Mount Washington, the highest point of the White Mountains, the meteorological service at the latter place being performed by a volunteer corps of two persons and assistants from Dartmouth College, and one United States observer-sergeant. They passed the entire winter of 1870-'71 at that lofty, cold, and windy elevation, in a substantial wooden hut, living upon provisions supplied to them by the liberality of the friends of science in New

England. It remains to be seen whether their observations there are so important to the country and the cause of science as to make it advisable to continue their watch and ward at that lofty outpost of the Northeastern States. Several days during the winter, the wind at Mount Washington blew over one hundred miles an hour, and the mercury marked many degrees below zero. The superintendent of the reports at the capital, on receiving them, makes comparisons, and puts them into a tabulated form, which is telegraphed to the principal cities of the United States for the morning and evening newspapers. The following is a specimen of the tables as they daily appear—the latest reaching the offices of the morning journals toward midnight:

METEOROLOGICAL RECORD, MARCH 2, 11.47 P. M.

Accompanying these tables is a synopsis of the same in plain language, and a statement of "Probabilities" regarding the weather that may be reasonably looked for in different sections of the country, within the following twenty-four hours. In these, the air of predictions is carefully avoided. They are but probabilities at the best, but experience has shown that in most cases they may be depended on. It is hoped that the science of meteorology will, some day, be so far perfected that prophecies of unfailing accuracy may be made; but, should nothing more than a wise estimate of probabili-

ties be attainable, that of itself will be productive of incalculable good to ship-owners, merchants, and travellers, by giving them due monition of approaching storms.

Subjoined are the synopsis and estimate belonging to the preceding Meteorological Record. The probabilities were realized fully on the succeeding days; fresh winds and heavy rain prevailing in the parts of the country indicated, although but a few hours previously the weather at the same places was reported "fair" or "clear."

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
WASHINGTON, March 2, 1871.

Synopsis of Weather Reports for the past Twenty-four Hours.—There has been a general and decided fall of the barometer, the lowest pressure being now on Lake Erie. Rain has fallen very generally from the Lakes to the Gulf, with cloudy and threatening weather on the east and south Atlantic. It still remains clear from Maryland to Long Island. The weather is now fair, and clearing west and north of Illinois. Fresh winds have prevailed on the Gulf and Lakes, and with diminished force on the Atlantic.

Probabilities.—Threatening and rainy weather will probably be experienced on Friday on the Atlantic and Lower Lakes, with fresh winds. Brisk winds on the Gulf and Upper Lakes, with clear weather in the Northwest.

During the past fall and winter months the public had repeated verifications of the "probabilities," and the press of the United States bore testimony to their great trustworthiness and utility. The following extract from a report of the Government observer at Chicago shows, as Prof. T. B. Maury has pointed out, how clearly the Signal Service is now enabled to trace some of our great storms and anticipate their arrival on the Lakes:

Dec. 11th.—The severest storm we have yet had, and one of the highest significance to meteorologists, because of the clearness with which its course can be traced, from the time it left the Gulf till it reached Chicago. Its previous course would seem also to be indicated from the newspaper report that a violent storm was raging at Aspinwall about the 6th, causing many disasters to shipping. On the 9th, at 4 P. M. there is rain at New Orleans; at 11 P. M. at Mobile and Montgomery; at 4 P. M. on the 10th, heavy rain at Augusta; at 11 P. M., snow at St. Louis. On the 11th, at 7 A. M. the storm had reached Chicago, and at 4 P. M., Milwaukee. The storm would seem to have travelled up the valley of the Mississippi in a northerly direction, and then, attracted by the moist atmosphere of the Lakes, to have turned eastward. The Alleghany Mountains would seem to have intercepted a portion of the air-wave, and carried it up in the direction of Washington and New York. The two branches of the storm would then appear to have combined and remained almost stationary, covering the whole North for some days with heavy cloud.

Captain Howgate, General Myer's assistant, writes in the same vein:

The storm of December 19th, of the year just expired, was announced along our sea-coast some hours in advance by Prof. Lapham, of the Signal Service, telegraphing it from Chicago. General Paine, M. C. from Wisconsin, informed the chief signal-officer a few days ago that he knew one instance where vessels with cargoes valued at over a million dollars were held in the harbor of Milwaukee on the strength of the storm threatened and forecast by the Signal-

Service bulletin, and which actually swept the Lakes as anticipated. At the same time, several vessels, which sailed from port regardless of the bulletin, encountered the storm, and two of them were lost. In making any estimate of the work done and good already accomplished by this service, it should be borne in mind that the observers who do the actual work were put on duty after a hurried course of study, and without, in many cases, any previous knowledge of even ordinary military duty. No similar body of men has ever been raised, organized, and equipped. During the sixty days from November 1 to December 31, 1870, it has been clearly proved that men so raised and instructed could make the proper observations, and that, once made, these observations could be transmitted regularly and rapidly, three times daily, to the central points, and thence distributed promptly. This of itself was success enough, but, in addition to this, a tri-daily bulletin has been posted at several public places in every important city in the Union; weather maps, similar to those you saw in our office, put up in every Chamber of Commerce and Board of Trade now in the same cities, by which the movements of the atmosphere could be clearly traced; and, in addition to all this, the reports which are made synchronously are published synchronously throughout the country, thus far excelling, in point of circulation, the English reports, which have been the result of ten years' experiment. In England these reports are published once each day in the *London Times*, and reach a few thousand people, while ours are printed in several hundred newspapers, and are seen and read by hundreds of thousands. On the first of January the manifold map was commenced, and will be issued daily in all the large cities as soon as we get a sufficient number from the printer.

The next great work attempted by the Bureau will be to provide for the exhibition of storm-signals at points on the Lakes and along the coast. This will require more liberal appropriations from Congress, which will doubtless be readily made, now that the usefulness of the system has been well proved. The Chamber of Commerce of New York has already initiated a movement to raise funds to cooperate with the Government; and similar bodies will probably follow the example throughout the country.

Hon. Thomas B. Butler, Chief Justice of Connecticut, has made a valuable and interesting contribution to meteorological science, in his work entitled "The Atmospheric System Developed." It contains a large amount of original matter set forth lucidly, and forming altogether a theory of great strength. It is especially adapted for practical use by farmers and others whose prosperity may depend on accurate daily prognostications of the weather. Judge Butler assumes that the popular notion of meteorologists, that atmospheric phenomena are the result of mechanical commotions in a sort of aerial ocean—by the action of the sun's rays in heating the earth and lower atmosphere, and causing the latter to rise—is incorrect. He lays down three propositions, which he sustains by masses of facts:

"1. That the normal state of the atmosphere in the temperate zones is calm, fair weather.

"2. That the changes from that state, and all the states and changes constituting the weather, are produced by the passage of successive

organizations commonly called storms, but which, for reasons stated in the text, he terms 'conditions.'

"3. That the conditions result from the operation of a great, central, permanent organization, and originate in it, or in an atmospheric current called the counter, or upper trade, which is produced by and sent forth from that central organization, out over the temperate zones."

He then goes on to show that there are seven alternating and changing states of the atmosphere, and describes them and illustrates the manner in which they are produced, by a history of two passing conditions, one a summer belt of showers, and the other an autumn southeast storm. He enlarges on the fact that the atmosphere consists of strata or "stories," and that these are constituted by the interposition of the equatorial current or upper trade, proceeding from what he calls the central condition, and that the clouds of the different stories differ in function as well as in form. He analyzes and classifies the conditions, and tells in what localities one or other of them is generally to be found. He shows how each one of the diverse systems has its focal path, and that these paths change their location with the seasons; and that the climatology of the country, and all its varying characteristics, result from such changes. That part of his book he claims to contain the key for the explanation of every climatological fact peculiar to any section of this continent. A considerable portion of the work is devoted to the unfolding and illustration of rules for forecasting the weather, representing tests confirmed by the general observation and experience of the author for half a century.

It has been very recently said, that meteorology, unlike her sister sciences, has made no advance. The most hasty review of what has been done in determining the laws of storms, and premonishing society of their approach, establishes the fact that there is a *scientific* basis for the operations of the Signal Service.

A long series of observations has enabled meteorologists to reach some perfectly well-defined and unchallenged conclusions. Among these are the following:

In the United States, a large number of storms, which come in from the Gulf of Mexico, pursue the track of the Mississippi River, and ascend its tributaries, until they reach the States bordering on the Great Lakes. The moisture from the lakes always exerts an attractive influence upon the storm, causing it, from a distance, to deviate from its course and move toward the lakes.

The storms which strike upon the Pacific coast of the country, following the impulse they receive from the great band of westerly wind, overleap the Rocky Mountains, cross the plains, and sweep eastward, often causing great destruction of property on the lakes and in the New-England States or Canada.

These storms are of cyclonical or rotary character, rotating against the hands of a watch in our hemisphere, and with the hands of a watch in the southern hemisphere. Their velocity is such that they travel from the Mississippi to the Connecticut River in about twenty-four hours, and thence to St. John's, Newfoundland, in nearly the same time, or thirty-six miles an hour. These storms, after crossing the Rocky Mountains, become elongated from north to south, and move to the east side-foremost. Within the limits of prevalent westerly winds, when storms advance with very considerable rapidity, the direction of progress is always from west to east. This direction is not absolutely uniform, but has been observed to vary from about due east to N. 54° E.

Great storms of rain and snow are accompanied by a depression of the barometer near the centre of the storm, and a rise of the barometer near the margin; but this rise is not generally uniform along the entire margin.

The depression of the barometer at the centre of a storm sometimes amounts to more than an inch below the mean height; and the rise along some portion of the margin sometimes amounts to more than an inch above the mean height.

Winter storms commence gradually, and generally attain their greatest violence only after a lapse of several days; after a time their violence gradually diminishes, and at length they disappear entirely. This succession of changes requires a period of several days, sometimes one or two weeks, and possibly even longer. Sometimes all these changes are experienced over the same country; that is, the storm makes no progress from place to place. More commonly, however, the storm travels along the earth's surface; and, although the same storm may continue for one or two weeks, or even longer, its duration at any one place may not exceed one or two days.

For several hundred miles on each side of the centre of a violent storm the wind inclines inward toward the area of least pressure, and at the same time circulates around the centre in a direction contrary to the motion of the hands of a watch.

In Europe, as well as in the United States, on the north side of a great storm, the prevalent winds are from the northeast, while on the south side they are from the southwest.

The force of the storm is proportional to the magnitude and suddenness of the depression of the barometer; but very near the centre of a violent storm there is often a calm.

On the borders of a storm, near the line of maximum pressure, the wind has but little force, and tends outward from the line of greatest pressure.

The wind uniformly tends from an area of high barometer toward an area of low barometer; and this is probably the most important law regulating the movement of the wind.

In a great storm the centre of the area of high thermometer frequently does not coincide with that of the area of low barometer, or with the centre of the area of rain and snow. In the United States, on the northeast side of a storm, at a distance of over five hundred miles from the area of rain and snow, the thermometer sometimes rises even twenty degrees above its mean height.

The great storm of March, 1859, for example, in accordance with these laws, ran from West Texas, where it first struck our coast, in a northeast direction to Lake Michigan, which it reached in twenty-four hours, thence to the Atlantic coast in another twenty-four hours, and, finally, leaving the continent at St. John's, Newfoundland, ninety-six hours after its first announcement. Here was a regular movement about as rapid as a railroad train, and as easily kept under supervision. The storm of February 22, 1871, was anticipated, by cautionary telegrams from the Signal-Office for four days, to all cities eastward from San Francisco (where it first appeared), to the city of Oswego in New York.

Experience of the most accomplished navigators, meteorologists, and practical observers, has established, moreover, certain unquestionable premonitions of storms.

These have been given by various writers on meteorology as follows:

A premonition of an approaching gale is afforded to seaport towns by the agitation of the ocean and the disturbance of its slimy bed. The muddy appearance of the water in the sea, in anchoring depths, during violent storms, sometimes precedes the storm, being caused by heavy undulations affecting the bottom of the sea. This effect was remarkable around the Bermuda Islands in September, 1839, a day before the actual arrival of the tempest.

Clouds are of the utmost utility in for telling weather, especially the cirrus, cirro-stratus, and cumulo-stratus.

The cirrus, called by sailors "cat's tail," and sometimes by others the "curl cloud," is made up of wavy parallel or diverging fibres, or slender filaments like white lines pencilled on the blue sky. It is probably composed of minute snow-flakes or ice-crystals. Its movement is a fine index of the great atmospheric currents, and it is thus a valuable prognostic of stormy weather. It doubtless often reaches a height of ten miles above the earth. When the fine threads of the cirrus appear blown or brushed backward at one end, as if by a wind prevailing in these lofty regions, the wind on the surface will sooner or later veer round to that point.

The cirro-stratus, partaking of the form of both the cirrus and stratus, Buchan says, "is markedly a precursor of storms; and, from its greater or less abundance and permanence, it gives some indication of the time when the storm may be expected."

The cumulo-stratus is distinctly formed just

before rain begins. It is the forerunner of the lurid display of the thunder-storm, as Tennyson has painted it:

"The wild unrest that lives in woe
Would dote and pore on yonder cloud,
That rises upward always higher,
And onward drags a laboring breast,
And topples round the dreary west,
A looming bastion fringed with fire."

The "pocky cloud" is an almost unerring storm-warning. If clouds be red and lowering in the morning, the red color arises from a large amount of vapor in the vesicular state, when, as Forbes has shown, the blue rays of light are absorbed and the yellow and red rays pass. This gives rise to the weather-proverb—

"The evening gray and the morning red—
Put on your hat or you'll wet your head"—

and may sometimes prove ominous of a storm.

The approach of the "Norther" of Texas and Mexico is generally indicated, as an eminent observer tells us, by—"First, a general humidity of the atmosphere. Secondly, the peak of Orizaba Mountain visible and clear, the lower parts only being enveloped in dense, hazy clouds. Thirdly, the distant mountains, far inland to the southeast, exceedingly clear, together with excessive heat and depression in the animal kingdom."

Prof. Brocklesby has well pointed out the additional and important fact that the top of the storm always impends—overhangs—the track on which it is advancing, because the base of the storm is retarded by friction with the earth's surface. This is of great significance, as always enabling the close observer to give warning. This is more easily done, from the fact that the front of most storms is marked by a moist, warm atmosphere.

In the northern parts of the United States, according to Prof. Espy, the wind in great storms generally sets in from the north of east, and terminates from the north of west; while in the southern parts it generally sets in from the south of east, and terminates from the south of west.

Perturbations of the magnetic needle are inseparably joined with one or more of the three following phenomena: 1. General disturbances of the telegraphic lines—due to widespread auroras, which mark general movements of the atmosphere in high latitudes and over the Atlantic. 2. Disturbing currents of a more local character, occurring over the telegraphic lines some time before the storm appears to which they owe their origin, thus lengthening the distance and time at which the approach of the storm may be perceived. 3. Disturbing currents, still more restricted, accompanying the electric changes when the storm itself is passing. Blood-red streamers of aurora crossing the sky and meteoric and electrical exhibitions preceded the gale in which the Royal Charter went down. If we could have more magnetic and meteorological observations, the magnetic and electric states

of the atmosphere and auroras might be made our most valuable prognostics of storms.

It has also been discovered that the presence of large quantities of ozone (which can easily be ascertained by ozone test-papers) foreshadow an impending atmospheric storm.

These unbidden monitions, together with many others—as the sun setting red, a remarkably red color of the clouds; the sign almost infallible, at Mauritius, of the brick-dust haze in the horizon; a thick, muddy atmosphere, but extraordinarily clear on mountains; frequent shiftings of breezes from all points, thick fog flying fast to the south, a bright halo round the moon, stars very brilliant and unusually twinkling at low altitudes, noises in caverns and wells like a storm, moisture on walls and pavements, sea-birds coming to land, water-fowl flying about; the swell of the ocean rolling in, though the hurricane may be 600 miles distant; turtles floating in the calm, apparently in a state of stupor; the sea peculiarly clear at great depths, tides irregular; branches of trees not bent forward as by a stream, but constantly whirled about; water rising in wells and ponds; disturbances of currents on the telegraphic wires—are some of the oft-observed presages of the "thing of evil."

Within a few years, vast improvements have been made in meteorologic instruments, and the instruments in use by General Myer are of the most approved construction and of exquisite delicacy.

The ordinary barometer is that of Mr. James Green, of New York, the standard adopted by the Smithsonian Institute, and the Army and Navy of the United States. This barometer is after the original design of Fortin, in which the error of level is entirely got rid of. To the scale is attached a vernier by means of which the variation of the mercury in the tube is detected even to the $\frac{1}{16}$ th of an inch. It is an exceedingly rare thing for an accident to happen to this barometer.

The thermometers used are both erect and horizontal. By the first, the height of the column of mercury, and hence the temperature at any given moment, is read with exactness. By the latter, the maximum and minimum thermometers, are ascertained the highest and lowest range of the temperature in any given number of hours. These instruments are hung horizontally on hooks, and are never handled, the index in the tubes being steel and, when read, the index is set by means of a magnet.

The thermometers at the station of the Signal Service are fixed in the *Louvre boarded box* for thermometers, so scientifically constructed that, as nearly as possible, the mercury is protected from solar radiation on the one hand, and on the other, the circulation of the air is not impeded, since the sides of the box are open somewhat as window-shutters, to allow ventilation.

The hygrometric conditions of the atmos-

phere at every station of the Signal Service are noted by means of the wet and dry bulb thermometers, which furnish the most reliable indications of the moisture and saturation of the air, and for ascertaining the dew-point, relative humidity, and absolute humidity, and other aqueous phenomena. The readings of this instrument are confirmed by those of another instrument, the *hygrodeik*, which furnishes all the hygrometric results without any calculations by the observer, who merely copies certain figures to which the pointer of the *hygrodeik* points.

Invaluable as are the records made by observers from these instruments, their worth has been almost eclipsed by the more recent inventions of *self-registering barometers, thermometers, etc.* Among this class of scientific contrivances, General Myer has adopted the "Self-Registering Anemometer" for showing the velocity and force of the wind; the "Self-Recording Rain-Gauge;" the Thermograph of the Kew Observatory, indicating the temperatures; the Kew Barograph; the Peeler "Self-Recording Barometer;" Wild's Berlin "Self-Registering Barometer;" and Prof. Hough's celebrated Meteorograph and Self-Recording and Printing Barometer.

The meteorograph is an automatic machine which writes its own indications in lead pencil for every second in the twenty-four hours, upon a roll of paper, which is divided by lines and moves off a reel at a uniform rate of speed, which is adjusted by a clock. It indicates simultaneously the exact height, in inches and hundredths of an inch, of the barometer, and the wet and dry bulb thermometers. It thus records at one and the same moment the pressure, the temperature, and the hygrometry, of the air, with unerring precision. By a simple application of the photographic art, the register is taken on suitably-prepared paper, at the *instant the atmospheric changes are taking place*. This gives the Signal-Office an unimpeachable account of the minutest ripple on the great atmospheric ocean, and, when these photographs are put into a volume, they furnish a pictorial history of all the mutations of weather within a known area of the earth's surface.

As far as the barometric annals are concerned, the refinements of science have gone even further than this degree of accuracy, Hough's Printing Barometer not only doing the same work of his meteorograph, but also, by an automatic process, setting the type and making an actual impression on the paper, of its exact readings, once in every fifteen minutes.

The anemometer in use is that of Robinson, consisting of four hollow hemispheres or cups screwed on to the ends of two horizontal rods of iron crossing each other at right angles and supported on a vertical axis which turns freely. When placed in the wind, the cups revolve; and the arms are of such a length that when

a mile of wind has passed the anemometer, 500 revolutions are registered by the instrument. The accuracy of its construction may be tested by conveying it rapidly through the air on a perfectly calm day the distance of a mile and back again the same distance, and noting the number of revolutions made. The number of revolutions is registered by a system of index-wheels set in motion by an endless screw on the upright axis, which are read off in the same way as a gas-meter. The number of miles travelled by the wind during a day, an hour, or any other specified time, is found by multiplying the revolutions made in that time by 2, and dividing by 1,000. The rate per hour at which the wind blows at any time is found by observing the revolutions made, say, in two minutes; multiply by 30 and 2, or at once by 60, and divide by 1,000. Thus, suppose 800 revolutions were made in two minutes, the velocity of the wind would be at the rate of 48 miles an hour.

The observers at the various stations of the Signal Service are all sergeants of the United States Army. Previous to their entrance on duty, they are required to pass successfully through two examinations, after an extended course of studies and special training at Fort Whipple, Virginia. In this course they become thoroughly conversant with the meteorological treatises of Loomis, Buchan, and other writers. They are also required to become experts in practical telegraphy, so that they can use the telegraphic instrument with ease and accuracy.

The first examination of applicants for the post of observer-sergeant is but preliminary, and, to be successful, the applicant must show himself a good arithmetician, a writer of good English, and well acquainted with geography, especially the geography of the United States.

In the final examination, which, like the first, is conducted by an army board (consisting of Colonel Garrick Mallery, Major L. B. Norton, and Captain H. W. Howgate), the applicant is required to work out a variety of practical problems in instrumental meteorology, to display a full acquaintance with the instruments, and also with the laws of storms and the general principles of his science.

The observers, while under training at Fort Whipple, are instructed in all the duties and drills of the Signal Corps of the army, and thus, in time of war, are ready for field duty.

The arrangements by which observations are taken at the different stations, and transmitted thence by telegraph to the central office at Washington, have worked with great harmony and accuracy of result.

Every observer takes his observations at the same moment by Washington time and by instruments which have been carefully adjusted to a standard kept at the central office.

After taking his observations (thrice daily), the observer writes them out *in full* (not in figures) on manifold paper, which gives him at

least two exact and *fac-simile* copies of his reports. One of these he hands to the telegraphic operator for transmission to Washington; the other he forwards by mail to General Myer. Should the operator make a mistake in transmission, he cannot attach the blame to the observer, since the latter's manifold or duplicate *fac-simile* report shows exactly what was handed the operator. This novel and sagacious process secures great accuracy in telegraphing observations.

The reports forwarded by mail are carefully preserved and bound into a volume.

When the tri-daily telegrams reach the Signal-Office at Washington, they are immediately put into the hands of the meteorologist in charge of the office, who analyzes them and deduces from them a synopsis of the weather through the entire country, and also a brief statement of weather *PROBABILITIES* for the ensuing twenty-four hours.

These probabilities, and also the synopsis, are in thirty minutes telegraphed all over the country, and are received by all newspapers, Chambers of Commerce, and Boards of Trade, which desire to publish them, free of all charges. At the same time that the tri-daily telegraphic reports from the various stations are given to the chief meteorologist, copies of them are given to an officer whose duty it is to make the *manifold weather-maps* for the day. These maps are skeletons of the United States, with all the signal-stations on them. A dozen of these are laid on the table, and by stamping on them with a steel die, they receive certain characters, which indicate all the phases of the weather.

The direction of the wind is shown on each station by an arrow; likewise the barometric pressure by figures; the thermometric and anemometric figures are attached, as also characters which are capable of indicating cloudy weather, fair, rainy, and snowy.

These weather-maps are distributed to prominent hotels, custom-houses, and to as many other points as they can reach in time to be of any service to seamen and shippers.

Copies of them all are duly bound up in book form, and thus is preserved an accurate magazine of the year's 1,095 reports, and in a form suited to catch the eye and interest it, instead of repelling it, as is so often done in meteorological reports by long pages of solid figures.

One of the excellences of this system is, that every important storm and other atmospheric phenomenon is studied in all its details on the day it occurs, while the interest of the country, and of every observer, is at its height, and not months or years after the event, when curiosity has abated.

Experience has shown that the non-commissioned army officers employed are admirably competent for the signal duties assigned them, and, in their hands, the reports and telegrams have been transmitted with the pre-

cision and promptness of a regimental drill at West Point. The training and discipline of these soldiers in times of peace are exactly suited to the nature of telegraphic meteorology, requiring great accuracy and dispatch.

The discipline, knowledge, and sagacity acquired by this branch of the United States Army in the discharge of its scientific duties, are worth more to it and to the nation than any it could get in any national training-school, which would be far more expensive than the Signal Service.

Up to this time, the Signal-Office has only undertaken to organize, train, and equip its observers; to perfect its adopted instruments, and to test those which have been put before it for trial; to obtain an accurate knowledge of the laws of storms, their tracks and behavior in various parts of the country; to gather exact information of each day's weather-phenomena, and publish the same in all sections; to issue occasional bulletins of remarkable and threatening weather to seaports and large cities; and, lastly, to furnish each day, with their weather-maps, a telegraphic report of the atmospheric movements over the United States, and the *probabilities* of the weather for the current day.

Forecasts and predictions of weather have not been attempted, nor ought they to be attempted, until further experience and observation warrant them.

But, at an early day, it is expected the shipping ports on the lakes, the Gulf of Mexico, and the Atlantic seaboard, will be duly supplied with stations where appropriate *signals will be displayed*, giving cautionary storm-warnings for the benefit of commerce.

This is the ultimate aim of the Signal Service of which we have treated, and when the approach and force of storms, gales, and hurricanes, can be promptly announced beforehand, one of the great ends for which the service was instituted will be attained.

SUBWAY OF THE THAMES. This curious work may now be said to be practically completed. The passage under the Thames has been finished for some time past, as also the chambers at each end. The attention of the engineer and his assistants has been mainly directed to the application of engine-power to the working of the lifts, by which the passengers are to be let down and taken up by the shafts at the ends of the subway.

The shafts by which the subway is reached are at each end rather under 60 feet deep and 10 feet diameter; they are partly lined with brickwork and partly with iron. At the bottom of each shaft, under the level of the subway, a small steam-engine, of about 4 horse-power, is placed for use in raising and lowering the lifts, and for haulage of the single omnibus by which the passengers will be conveyed. The lift is an iron chamber, with a floor of about 6 feet by 5 feet, and a ceiling about 6 feet 6 inches high. The entrance to

the lift is by sliding iron doors; on its opposite sides it has pairs of roller-wheels which work in guide-rods fastened to the sides of the shaft. The lift is raised and lowered by a chain of great strength, which moves over a pulley at the top of the shaft, and is attached to a balance-weight, which also works between guide-rods. The balance-weight is a slab of cast-iron, with an opening in the centre by which it may be loaded according to the number of passengers in the lift. The lift, which weighs about 15 hundred-weight, is further connected with the balance-weight by a wire-rope attached to the bottoms of the weight and the lift respectively, and which passes round a pulley at the bottom of the shaft. A brake has been invented by the engineer, which is attached to the roof of the lift, and is applied by a screw worked from the roof on the inside. The desired effect of the application of the brake is to stop the lift in its descent, not instantaneously but gradually, and within a few feet. On arrival at the bottom of the shaft, the passengers emerge at each end to a waiting-room of about 24 feet long by 10 feet wide, with seats along the sides. From this they pass into the iron omnibus, which runs up close to the inner ends of the waiting-rooms. The first part of the journey from each end of the subway is down an incline of about 1 in 80 to the middle of the subway. The haulage up the last part of the ascent at each end is by an endless wire rope, worked by the steam-engine on the Surrey side. The lift is seated for 7 or 8, the omnibus for 14 persons. The first-class passengers descend the shafts last, and the omnibus is dispatched immediately on their arrival at the bottom of the shaft. The omnibus is 5 feet wide inside, and has cushioned seats with stuffed backs; there is a space of 2 feet 2 inches between the seats, which are placed lengthways along the sides of the vehicle. A brake, which the conductor will work with his foot, is fitted at each end of the omnibus. The gauge of the rails is 2 feet 6 inches.

SUN (ECLIPSE OF). The American observations of the total solar eclipse of 1869 (see *AMERICAN ANNUAL CYCLOPEDIA* for that year) throw much light on the formerly dark problems of the sun's constitution. The same phenomenon, which occurred December 22, 1870, furnished an opportunity to confirm the knowledge acquired in the previous year, and to extend the boundaries of discovery in the same field of research. The United States Government, responding to the general desire of the American people, who had been much gratified at the success of the observations in 1869, fitted out an expedition to the scene of totality of the December eclipse (in Spain, Sicily, and Africa), with a liberality of expenditure and care of preparation such as no other government exhibited in that connection. The principal astronomers, spectroscopists, and meteorologists, in the service of the United States,

were detailed for the agreeable duty. Several of the leading American colleges also fitted out parties of professors and assistants, at their own expense. The English Government acted tardily in the matter, but finally aided in sending out expeditions, which were composed of some of the most distinguished observers of solar phenomena in Great Britain. Germany, Italy, and other European countries, were also worthily represented on the occasion. The following are synopses of, or extracts from, reports so far as received from the observers of the different nationalities. They corroborate and supplement each other, and only from a comparison of the various statements can the seeker for information gain a clear idea of the net results of the expeditions. We condense, or quote, mainly on those portions that bear on the controverted questions of the nature of the protuberances, or mountains of flames, and the corona—the latter being the special subject of observation and theory.

Prof. Harkness, United States Navy, was stationed at Catania, Sicily. The eclipse commenced there at $11^h 35^m 27^s$, but unfortunately 15 minutes before totality a dense cloud hid the sun. At the moment of total obscuration, $1^h 11^s$, the cloud was sufficiently thin to allow the corona to be seen, but diminished in extent and brilliancy, appearing scarcely more than two-thirds as large as that visible at Des Moines, Iowa, at the eclipse of 1869. The professor reports:

With an Arago polariscope in hand, the first ten seconds were spent in observing that the sky was polarized all around the corona, while the corona itself showed no trace of polarization. Springing to the spectroscope, I saw a green line of which I found the reading to be about the same with that of 1869. The spectroscope, directed to many different parts of the corona by my friend Captain Tupman, E. M. A., showed the same green line. During the last few seconds of the totality, the thin cloud covering the sun became nearly dissipated, and the faint continuous spectrum of the corona became visible. I could not believe that the eclipse had lasted, according to the chronometer (Negus's, of New York), 115 seconds; it seemed a moment only. I think that our observations, though made at disadvantage by the high wind and the thin cloud, prove beyond all question that the corona does belong to the sun; that it is to a great degree, if not entirely, self-luminous, and that its light gives a green line at about 1474 divisions of Kirchhoff's scale. The observations by the polariscope go to prove that the light from the corona is not polarized. Five minutes after the totality was over, the sky became perfectly clear. The last contact was at 2 hours 19 minutes by the chronometer, which was, approximately, 1 hour 2 minutes 45 seconds slow of Syracuse local mean time.

Prof. Benj. Peirce, Superintendent of the United States Coast Survey, who was one of the Catania party, and had general charge of the American Government expedition, writes:

But just previous to the instant of total obscuration there was a break in the clouds, which was the more remarkable because it was raining and hailing at the time. This break did not extend a thousand feet from the place where we observed. But it gave us a superb view of the corona and the whole totality, and

enabled us to establish very important conclusions. It must be said, however, that there was just enough haze to deprive us of what I am disposed to call the false corona, and which I consider to be a part of our own atmosphere. But the true solar corona is clearly proved to be a solar atmosphere extending about 80,000 miles above the ordinarily visible surface of the sun. There were three different sources of proof of this conclusion. The work is done successfully.

Prof. C. N. Young, of Dartmouth College, New Hampshire, who was at Xeres, Spain, had the same trouble to encounter of obscuration by clouds till totality, but just then a rift in the veil opened the sun to view, and gave an opportunity for excellent observations. He says:

Our spectroscopic results completely confirm those of last year, except that the two faint lines, which I saw between D and E last year and suspected to be corona lines as well as 1474, were not seen at all at this time; 1474 was traced by Prof. Winlock to a distance of nearly 20' from the sun's limb. I traced it 16' on the West, 12' on the North, 14' on the East, and about 10' on the South. The principal chromosphere lines were also visible in the corona to a distance of 3' or 4'. Prof. Winlock and myself both agree in attributing this to the reflection of the haze around the sun. I am more confident as to this, because last year, in a clear atmosphere, the C line was certainly sharply terminated at the upper limit of the chromosphere or prominences under observation. But the most interesting spectroscopic observation of the eclipse appears to me to be the ascertaining at the base of the chromosphere, and, of course, in immediate contact with the photosphere, of a thin layer in whose spectrum the dark lines of the ordinary solar spectrum are all reversed. Just previous to totality, I had carefully adjusted the slit tangential to the sun's limb at the point where the second contact would take place, and was watching the gradual brightening of 1474 and the magnesium lines. As the crescent grew narrower, I noticed a fading out, so to speak, of all the dark lines in the field of view, but was not at all prepared for the beautiful phenomenon which presented itself when the moon finally covered the whole photosphere. Then the whole field was at once filled with brilliant lines, which suddenly flashed into brightness and then gradually faded away until, in less than two seconds, nothing remained but the lines I had been watching. The slit was very close, and the definition perfect. Of course I cannot positively assert that all the bright lines held exactly the same position that had been occupied by dark ones previously, but I feel very sure of it, as I particularly noticed several groups, and the whole arrangement and relative intensity struck me as perfectly familiar. This observation is a confirmation of Secchi's continuous spectrum at the edge of the sun, and I think tends to make tenable the original theory of Kirchhoff as to the constitution of the sun and the origin of the dark lines in the ordinary solar spectrum.

Prof. Young sums up his views as follows, concurring in the main with those of Mr. Lockyer, the eminent British authority on solar phenomena:

1. We have, I think, surrounding the sun, beyond any further reasonable doubt, a mass of self-luminous gaseous matter, whose spectrum is characterized by the green 1474 line. The precise extent of this it is hardly yet possible to consider as determined, but it must be many times the thickness of the red hydrogen portion of the chromosphere; perhaps, on an average, 8' or 10', with occasional horns of twice that height. It is not at all unlikely that it may even turn

out to have no upper limit, but to extend from the sun indefinitely into space.

2. This region undoubtedly reflects to us a certain amount of the ordinary photospheric sunlight. This reflected light is, of course, polarized radially to a considerable extent. Its spectrum ought to show the ordinary dark lines, but they are partly masked in the manner Mr. Lockyer has so happily explained, and partly by the faintness of the spectrum.

3. Our own atmosphere, even when clearest, must apparently extend this corona, both outward and inward, upon the moon's disk. Since, however, the inner edge of the coronal ring is far the brightest, the inward extension of the corona should be most marked, except at the very beginning or end of totality, and I have no doubt it is; that is to say, at the middle of totality the illumination of the moon's disk gives a somewhat exaggerated measure of the effect of our own atmosphere in extending the corona outward. Accordingly, I am disposed to think the effect of the atmosphere (when clear) is a very subordinate one, since in 1869 the light upon the moon's disk was only very trifling compared with that even a whole degree from the sun. This atmospheric light would also be polarized radially. Its spectrum would be mainly that of the chromosphere, prominences, and "leucosphere" combined, a discontinuous bright-line spectrum.

4. There must be a large subjective element, for two even skilled observers, standing side by side, describe phenomena differing in very essential points.

5. I am somewhat inclined to think with Oudemans that possibly cosmical dust between us and the moon may play an important part. Assuming a light cloud of such matter, one or two hundred thousand miles above the earth's surface and of great thickness, it becomes easy to account for the straight dark streaks, the varying form (if it does vary), and many other puzzling phenomena of the corona which can hardly be produced by portions of our own atmosphere deeply immersed in the lunar shadow, but which, I own, seem to me now less aurora-like and less certainly solar than they did a year ago. I do not see how optical tests by polariscope and spectroscope could discriminate between the effects of such a cloud and those of our own atmosphere.

Prof. Pickering managed the polariscope at Xeres. A brief account of his observations is furnished to *Nature* by Mr. S. P. Langley, who remarks:

Using successively an Arago polariscope, one of the form employed by Prazmowski, and a Savart, he (Prof. Pickering) is understood to have obtained, with all three, results pointing to a radial polarization of the corona. The light covering the moon's disk he observed to be polarized throughout in the same plane, and the observations showed that the Arago and other polariscopes dependent on color were sufficiently delicate to determine this plane with accuracy. At the same time Mr. Ross, his assistant, using the instrument employed by Prof. Pickering in the last eclipse, obtained the same results as were then found. Mr. Ross used a modification of the Bunsen photometer, and obtained several concordant measurements, showing that the light was equal to that of a standard candle at two feet. The writer used a Savart's polariscope attached to a small telescope of 1½ inch aperture, and having a field of about 2°. The observations with the Savart's polariscope being subject to ready misconception, the preparation for observation, and the appearance during it, are here given with some minuteness. Before the eclipse the Savart was so adjusted that the bands were most distinct when vertical, viewing the meridian sun reflected from water. None were visible when the sun was directly scrutinized before or after totality. During totality the appearance which presented itself was

unexpected. The bands were distinctly seen on the corona, and were brightest where normal to the limb and where tangential to it. As the polariscope was slowly rotated, no marked diminution of their brightness was seen, and, when it had been turned through 45° , they were as bright as before; distinctly visible even in color, and they so remained, the rotation being continued for greater security through a whole revolution, during the whole time they presented the appearance described, and characteristic of radial polarization. They were not noticed on the disk of the moon, but this may well have been from the observer's attention being so exclusively directed to verifying their persistency on the corona.

The most fortunate of all the American observers was Prof. Watson, of Michigan University, who was stationed at Carlentini, Sicily, and who obtained an unobscured view of the eclipse throughout its whole duration. As seen through his telescope, the rayed portion was most developed over the prominences. The corona appeared to him like a shell around the sun, about $5'$ high, and outside this shell the rays were less definite. He was strongly impressed with the idea that the shell represented a true solar atmosphere, and that the rayed structure was due to the atmosphere of the earth.

General Abbott, of the American expedition, with some members of the English party, ascended the western slope of Mount Etna to a height about 8,000 feet above the sea, hoping to secure a fine view of the eclipse, but did not succeed, on account of a heavy snow-storm at the time of totality.

Dr. Peters, of Hamilton College, made a similar attempt on the top of Mount Rossa, near Mount Etna, 3,120 feet above the sea, but was only partly successful, owing to the bad weather, witnessing only the commencement, the end of the totality, and the end of the eclipse in general.

Mr. Lookyer, reviewing the results of the American polariscope observations in Sicily, by Profs. Harkness and Eastman, Mr. Peirce, Jr., and others, regards them as settling the point that the solar corona not only radiates but reflects light to the earth.

At Gibraltar, where the Americans had a station, a cloudy sky interfered with the observations. Prof. Newcomb was able to see all four contacts, and took several measurements that were necessary for the work he has in hand, but barely caught a glimpse of the corona.

The English party at San Antonio, near Xeres, had to contend with the uncertain weather which proved so obstructive to the Americans, but succeeded in observing some of the points of the phenomena to their satisfaction. Mr. S. J. Perry says:

The red prominences were numerous, but none apparently very remarkable; but Mr. W. H. Browne, of Wadham College, Oxford, considers their color to have been of a bright yellowish-red tint. The same observer notices that the corona was perfectly free from striation, outline distinct, and approximately quadrilateral, but extending farthest in the direction of first contact. The brightest part of the corona

appeared to the unassisted eye to be scarcely more than one-tenth of the sun's diameter, fading rapidly when one-fifth, but being still clearly visible at seven-eighths. Some observed two curved rays, but the general appearance was that of a diffuse light interrupted in four places distinctly, and in a fifth faintly, by dark intervals. The corona was white, and rendered faint by the clouds. The darkness was never sufficient to prevent sketching with comfort without the aid of a lamp. Venus alone was visible. Totality ended by the formation of Baily's beads, and the corona was visible to the naked eye fifteen or sixteen seconds after totality. The corona was seen for $2' 50''$, totality lasting less than $2' 10''$. The clouds obscuring the sun appear to have almost destroyed all chance of detecting any except atmospheric polarization. Mr. Ladd remarked that the polarization was stronger on the corona than on either the moon's surface or the cloudy sky. No report has as yet been received of the polarization observations at San Lucar. The intensity of the light from the corona as seen through the clouds could not, I think, have been more than one-eighth of that of the bright moon, if so much, and consequently I was unable to detect the faintest trace of light through the three compound prisms I was using.

The English party that sailed for Sicily were very unlucky. Their steamer was wrecked on a sunken rock about nine miles north of Catania. A portion of the party went up Mount Etna, where a snow-storm shut out the principal part of the eclipse. The rest took position at Augusta, where the clouds, to some extent, marred the view. Mr. W. G. Adams, connected with the latter section of the expedition, reports:

I did not see the corona at the beginning of totality with my telescope. As the band of sunlight became exceedingly thin, and at the instant of its disappearance broke up into sections, I could not decide whether the lunar mountains had pierced the rim of light, or whether the dense cloud coming over the moon had cut out certain portions of the rim before obscuring the whole. After this, I could detect nothing of the disk of the moon for a full minute, then the cloud became thinner, and I found that by slowly moving the telescope I had kept the moon in the centre of the field. At the top and bottom, the limb was visible, but no light was seen outside it at these points. I saw the light of the corona near the point of beginning of totality covering some 20° of the limb, and also a trace of light near the point of emergence. I could not perceive any color on these portions of the corona, nor could I detect any difference of color on the two plates of my bi-quartz, the line of division of which was at right angles to the sun's path, i. e., inclined at 15° to the vertical. The moon was again observed, and again I detected light near the point of emergence, and placed the line of division of my bi-quartz radial to the moon, having the light in the centre of the field, but I could detect no trace of color on the two parts of the crystal, showing that the bi-quartz was not sufficiently delicate to detect the polarization under such unfavorable circumstances. The rim then became continuous, and the totality was over.

At Syracuse, Sicily, the English observers were in better fortune. Mr. Griffiths was able to determine the plane and amount of polarization at different points of the corona; and Messrs. Brothers and Freyer succeeded in taking some good photographs of the corona, one of which is very remarkable for its clear definition of that object, and of the rays extending out to a distance of two diameters from

the moon's limb. This photograph, when compared with a careful sketch made by Prof. Watson, proves the existence of the striking dark cusps on the corona. Notwithstanding the unpropitious weather at Gibraltar, Mr. Richard Abbott, of the English expedition, enjoyed a fair view of the corona and prominences. He says:

I was remarkably struck with the height and magnitude of the red flame-like appearance which extended as far, or, I think farther from the limb than the corona, unless it shaded off. The bright part of the corona was narrow and next to the moon, but the corona was not of equal width all round. The moon, to my eye, appeared globular. In no part did the corona or the prominences extend beyond one-eighth, or at most one-sixth of the moon's radius beyond the limb. I thought the moon darker than the sky. I noticed four high red prominences—there were more, but, when, for an instant, I took my eyes off the telescope, a dense black cloud had obscured every thing till the narrowest streak of the sun appeared on the western side, and nothing but the ordinary phenomenon of a partial eclipse was to be seen. The darkness during totality was not so great as I expected it would be. Two stars were seen, one near the sun, and the other overhead, but I can get no further information as to their exact position.

Another observer in the same vicinity makes the following record:

The eclipsed orb presented itself through a rent in the clouds not greater in area than ten times that of the disk of the moon's shadow. That part of the opening which was above the eclipsed orb was clear like the sun at twilight, and in it were visible to the naked eye the planets Venus, Mercury, and half a dozen stars. The remaining part was covered with a thin haze. The moon's shadow appeared to the eye, assisted by a somewhat weak binocular glass, to be a dark circular disk with an even boundary and of uniform shade. Within the corona, and touching the circumference of this shadow, appeared five or six spots of brilliant carmine, varying in form and size and at irregular distances apart. Two of these spots, or "red flames," as they are called, on the eastern side of the disk, and at about 55° and 80° respectively from the vertex, seemed decidedly the largest and most prominent; they were tongue-shaped, and protruded about one-sixth the width of the corona. In their neighborhood the corona was brightest and widest. There, too, the rays of the corona appeared to be gathered more distinctly into groups than elsewhere, faint shadows being visible between the groups. The corona consisted of brilliant rays of extremely faint prismatic hues; these rays at first sight appeared pretty evenly distributed all round, but closer examination seemed to detect the fact of there being bundles of rays in nearly regular groups. The width of the corona was about one-eighth the apparent diameter of the moon's shadow. It was very nearly concentric with the disk of the shadow; its boundary was well defined, but "jagged;" the perimeter, except opposite the two most prominent red flames above mentioned, where the boundary slightly protruded, was circular.

Fragmentary reports have come in from members of the English expedition at other places, and also from the German and Italian parties, but they give no additional information of importance.

SWEDEN AND NORWAY, two kingdoms in Northern Europe, united under one king; present king, Charles XV., born May 3, 1826; succeeded his father July 8, 1859. The United States Government was, in 1870, represented

at Stockholm by Major-General C. C. Andrews. The area and population of Sweden, according to the census of December 31, 1869, were as follows:

PROVINCES.	Sq. miles.	Total Inhabitants.	Males.	Females.	Proportion of males to 1,000 males.
Gothland	37,918	2,495,392	1,177,148	1,248,244	1.064
Swesland	82,638	1,217,967	584,618	633,349	1.083
Nordland	99,996	515,396	252,764	262,632	1.039
	170,516	4,158,757	2,014,530	2,144,227	1.064
In 1868		4,173,080			
In 1867		4,195,681			

The diminution of the population is partly accounted for by emigration, which in 1867 numbered 9,884, while in 1869 it had increased to 38,500. The area of Norway is estimated at 122,291 square miles; population, according to the census of 1865, 1,701,756. The emigration from Norway, in 1869, numbered 15,600. The number of persons born in Sweden, but not belonging to the Swedish nationality, in 1860, amounted to 22,519, of whom 7,248 were Laplanders, and 15,271 Finns. The number of foreigners residing in Sweden was 7,980. The population of the principal cities, in 1869, was: Stockholm, 184,650; Gothenburg, 55,046; Malmö, 24,627; Norrköping, 22,997. The budget for 1871 fixes the revenue at 42,680,000 rix-dollars; expenditure at 44,207,000 rix-dollars; deficit 1,527,000 rix-dollars; public debt, on December 31, 1869, 111,200,000 rix-dollars. During 1870, the public debt was further increased by a railroad loan of 40,000,000 rix-dollars. The army is composed of 105,250 infantry; 8,660 cavalry; 5,050 artillery; 1,180 corps of engineers; and 4,667 army train. The volunteer corps, formed since 1861, had a numerical strength, at the end of 1866, of 42,000 men. The marine numbered, August 1, 1867, 17 steamers, carrying 132 guns, and 31 sailing-vessels, carrying 330 guns. The imports, in 1868, were valued at 137,800,000 rix-dollars; exports at 119,700,000 rix-dollars. The movement of shipping consisted in 6,032 vessels entered, of 205,555 lasts, and 12,111 ships cleared, of 546,961 lasts (1 Swedish last=4.7 English tons). The merchant navy was composed, in 1868, of 3,268 vessels, of 94,746 lasts, and 844 steamers, of 9,810 horse-power. Length of railroads in operation, at the end of 1869, 1,143 miles; length of telegraph-lines, 4,275 miles; length of wire, 8,727 miles. In the Norwegian budget for the period of 1869-72, the annual revenue and expenditure were fixed at 5,092,000 specie-dalers (one specie-daler=\$1.07). Public debt, in 1868, 335,100 dalers. The value of the imports, in 1868, was estimated at 26,600,000 dalers; the exports at 31,900,000 dalers. The number of vessels entering Norwegian ports, in 1868, was 6,878, of 527,929 lasts; the number of clearances 6,758, of 511,028 lasts. The merchant navy, at the end of 1868, numbered 6,909 vessels, of 451,506

commercial lasts (1 commercial last=2 English tons). Length of railroads in operation, December 31, 1869, 231 miles. Length of telegraph-lines, 3,024 miles; length of wire, 4,433 miles.

According to the terms of the constitution of Norway, the whole legislative power of the realm is in the Storting, or Great Court, the representative of the sovereign people. The King has the command of the land and sea forces, but cannot declare war, or make peace, or bring foreign troops into the country, or send the native troops away, without the consent of the Storting. He makes all the appointments, but, with the exception of the governor-general, is not allowed to nominate any but Norwegians to public offices under the crown. He can only remit punishment of death, and not grant a complete pardon to criminals condemned by Norwegian courts of law. The King possesses the right of veto over laws passed by the Storting, yet only for a limited period. The royal veto may be exercised twice; but, if the same bill pass three successive times, it becomes the law of the land without the assent of the sovereign.

The Storting formerly assembled every three years; but, by a modification of the electoral law, adopted in March, 1869, it was resolved to hold annual sittings. Every native Norwegian of twenty-five years of age, who is a Burgess of any town, or possesses property in land to the value of \$150, or has been tenant of such property for five years, is entitled to vote; and, under the same conditions, if thirty years of age, to be elected. Toward the end of every third year the people meet in the parish church, without summons or special call, and choose three deputies, at the rate of one to fifty voters in towns, and one to a hundred in rural sub-districts. The deputies afterward elect among themselves, or from among the other qualified voters of the district, the Storting representatives.

The Storting, when elected, divides itself into two Houses, the "Lagthing" and the "Odelsting." The former is composed of one-fourth of the members of the Storting, and the other of the remaining three-fourths. The ordinary business of the Storting is to settle the taxes for each financial period of three years, to supervise the administration of the revenue, and to enact, repeal, or alter, any laws of the country. But the Storting can also form itself into a high court of justice for the impeachment and trial of ministers, judges, and other servants of the state. Before pronouncing its own dissolution, every Storting elects five state officers, whose duty it is to revise the public accounts, and to watch over the welfare of the realm.

The thoroughly democratic character of their institutions naturally causes the Norwegians to cling tenaciously to their autonomy, and to oppose all advances made by the King and the Diet of Sweden with a view to a closer union.

On the 19th of January, the King opened the Swedish Diet with a speech from the throne, in which he alluded to the imperative necessity of contracting a new loan for railroad purposes, and for the further development of other means of communication throughout the country. In regard to a revision of the treaty of union between Norway and Sweden, the King said that although he most earnestly desired such revision, he thought it advisable to adjourn all deliberations on the subject until a communication of the Storting of Norway might reach them, declaring its willingness to enter upon a discussion of the subject.

On the 16th of February the Diet passed a law admitting dissenters from the State Church and Jews to political rights. On April 15th the Lower House rejected a proposition of the Government concerning the separation of religious instruction from school instruction proper, and the transfer of the former to the clergy.

On the 19th of May the Minister of Finance handed in his resignation, and, as the Government was not successful in filling the vacant position, a ministerial crisis occurred on June 8d, which terminated by the formation of the following new Cabinet: Minister of Justice, Adlercreutz; Minister of the Interior, Bergström; Minister of Finance, Woern. No change in the foreign or domestic policy was involved.

The *Globus*, a semi-monthly periodical published in Dresden, in its number for May, 1870, contains an article on the extensive manufacturing of matches in Sweden. One factory at Jönköping is especially mentioned, in which alone, in 1869, 77,170,640 boxes were manufactured, of an aggregate value of 992,715 rix-dollars; 544 laborers were employed in the factory-buildings and 559 others worked at home. The aggregate wages during the year amounted to 214,000 rix-dollars. Of the quantity of matches manufactured throughout the country, which, although no reliable statement could be arrived at, was known to be enormous, one-third was exported to England, and more than one-half to Hamburg and Berlin.

SWITZERLAND, a federal republic in Europe. Area, 15,722 square miles; population, in 1860, 2,510,494; of which 1,476,982 are Protestants, and 1,023,480 Roman Catholics. President of the Federal Council, from July 4, 1869, to the close of the legislative session ending in 1870, F. Anderwert, of the Canton of Thurgau. The Government of the United States was represented by H. Rublee, minister resident accredited in 1869. Swiss minister at Washington, J. Hitz, accredited April 2, 1868. The division of the population, with regard to the languages spoken in the various parts of the country, is, according to a recent official statement, as follows: German was spoken in 867,065 families, or 69½ per cent. of the entire population; French in 123,438 families, or 23½ per cent.; Italian in 28,697 families, or 5½ per cent.; the Romanic languages in 8,905 families, or 1½ per cent. of the entire population.

The budget for 1870 estimates the revenue at 22,278,600 francs; expenditure at 22,891,500 francs; showing a deficit of 118,000 francs. Balance in the Treasury at the end of 1869, 12,065,258 francs. The army of the Swiss Confederation is composed as follows:

	Regular Army.	Reserve.	Landwehr.	Total.
Infantry.....	68,281	39,074	54,799	162,154
Sharp-shooters....	5,755	3,897	4,953	14,104
Cavalry.....	1,904	1,090	1,470	4,464
Artillery.....	8,058	5,386	4,650	18,094
Engineers.....	1,236	1,061	601	2,998
Sanitary Corps....	279	118	67	464
Total.....	85,563	50,146	66,539	202,248

The staff of the army, on April 15, 1870, was composed of 76 colonels, 93 lieutenant-colonels, 180 majors, 226 captains, and 292 lieutenants.

The Swiss custom-houses do not furnish any reports of the value of imports or exports.

On January 1, 1870, the length of railroads in operation was 840 miles; number of post-offices, 648; number of letters during 1869, 45,606,000; length of the telegraph-lines, 2,870 miles; length of wire, 6,211 miles; number of dispatches received and forwarded, 1,869,424.

Immediately upon the outbreak of the war between France and Germany, and notwithstanding the friendly assurances of France and Prussia that the neutrality of Switzerland was to be strictly respected, the Federal Government determined to place such a force on its frontiers as would render a violation of Helvetic territory a more difficult undertaking than if it were only defended by a respect for existing treaties. In little more than a week's time, through the military organization of the republic, in which every man is a soldier, either in the active contingent, or in the reserve, or the landwehr, five divisions were called to arms, and marched to the most threatened part of the frontier, the line separating Switzerland from Baden. These corps formed an effective force of 50,000 men. The Government issued treasury bills to the amount of 5,000,000 francs, bearing interest at the rate of four and a half per cent. per annum, and the money was immediately furnished by Swiss bankers and capitalists. During the latter part of August, the Government consulted with General Herzog,

commander-in-chief of the Swiss Army, and, upon his advice, recalled the entire military force on the frontier, leaving only two battalions of sharp-shooters as a corps of observation. The Federal Assembly, which had been convoked at the outbreak of hostilities, adjourned after transacting some business of minor importance, and was dismissed by its president with the following address:

Whatever may be the differences in our views about political, religious, and state matters, these differences cannot, for one moment, interfere with the one great idea of our common fatherland. No matter how great our divisions may be, divisions which spring from our difference of language, religion, customs, and peculiar national traits and habits, we are one, and inseparably united in the love of our country. This has again been proved at the outbreak of a war between two great nations on our borders, with whom we are on terms of peace and amity, but into the vortex of whose contest we were in imminent danger of being drawn. As free citizens of a peaceful state our only desire could be that our neighbors might be saved from the misery and calamity which are the inevitable consequences of such a contest, and that our own patriotic army might soon be able to return to their peaceful avocations.

On the 22d of June the Council of the Canton of Neuchâtel voted by a large majority in favor of the separation of Church and State.

The citizens of Bulle having complained to the Council of the Bund (Federal Council) of the recent establishment of Jesuit missions in the Canton of Freiburg, contrary to Art. 58 of the Federal Constitution, the Federal Council issued a proclamation to all the cantonal governments, reminding them that, according to the Federal Constitution, Jesuit missions are prohibited within the territory of the Swiss Confederation, and no member of the Society of Jesus is allowed to exercise the functions of priest or teacher in church or school. The Federal Council regretted to see this special and explicit constitutional decree disregarded, and made known its determination to use all the means in its power against a violation of this law. The papal nuncio, being suspected of having been instrumental in the introduction of Jesuits into Switzerland, a mass meeting was held at Langenthal, and a petition sent to the Federal Council, requesting the immediate removal of that dignitary, in case he should not in future confine himself to his diplomatic intercourse with the Federal Executive.

T

TENNESSEE. The population of this State, according to the census taken in 1870, is 1,258,326. In 1860 it was 1,109,802, having thus gained, within the last ten years, 148,519. In this respect, Tennessee occupies the tenth place among the States of the Union. Among the Southern States she is the second, the population of Kentucky only exceeding hers, and the excess is less than 100,000. The table on the following page gives the Federal census of the

State, by counties, for the years 1860 and 1870.

The State being divided into three great sections—East, Middle, and West Tennessee—the extent of her territorial surface and the amount of her taxable property appear from the following comparative table of assessments for the years 1860, 1861, 1868, and 1869, which has been compiled from the reports of the Comptroller:

EAST TENNESSEE.				
YEAR.	Acres of land.	Value.	Town lots.	Other prop'y.
1860.....	8,906,868	\$46,145,698	\$3,394,586	\$4,270,639
1861.....	8,558,633	46,320,812	4,123,476	4,239,173
1868.....	7,367,630	33,956,156	4,669,147	1,769,886
1869.....	7,225,989	30,812,718	5,369,197	2,136,597

MIDDLE TENNESSEE.				
1860.....	10,399,498	102,308,070	19,468,539	12,621,447
1861.....	10,392,331	92,017,563	18,126,359	12,531,047
1868.....	10,211,118	67,473,539	18,646,693	5,203,639
1869.....	10,204,806	68,690,380	19,605,474	5,679,112

WEST TENNESSEE.				
1860.....	6,763,841	60,842,784	18,445,930	5,499,619
1861.....	6,869,992	55,954,798	27,019,457	6,461,909
1868.....	6,533,256	*63,694,364	*4,165,463	3,502,660
1869.....	6,596,161	44,154,464	*4,805,856	*34,110,400

From this table it would appear that in 1869 the land in the whole State was accounted nearly 1,000,000 acres, and the aggregate value of her taxable property almost \$55,000,000 less than in 1860, while it is averred that the price of town lots, and the land generally, is now higher than before the late civil war. In one case there was a large decrease in the number of acres of land returned, yet the valuation was considerably larger; in another there was considerable increase in the number of acres returned, and a very heavy decrease in the valuation. And so it runs through the whole State. The Comptroller also, in his annual report, presented to the Legislature in December, 1870, avers that the present system of assessing property for taxation is unequal and unjust, and urges a radical change.

Concerning Middle Tennessee, which embraces thirty-five out of the eighty-four counties in the State, and contains about one-half of her entire population, the following table exhibits the number of residents in each of those counties, and the deaths which occurred

among them during the year ending June 1 1870, together with the number of farms under cultivation, and the industrial establishments at work within their respective limits at that date:

COUNTIES.	Population.	Deaths.	Farms.	Industrial Establish'mts.
Bedford.....	34,325	279	1,701	29
Cannon.....	10,510	194	1,503	1
Chestham.....	6,859	73	926	28
Coffee.....	10,200	140	1,206	53
Davidson.....	63,178	1,068	1,953	373

Williamson.....	25,298	292	2,413	33
Wilson.....	23,033	222	2,078	134
Total.....	539,381	6,573	55,613	2,173

Perhaps few States in the Union can present a smaller mortuary report for the population than Middle Tennessee.

The most important event of the year in the State was the adoption of a new State constitution. By an act passed on the 15th of No-

CENSUS TABLE FOR 1860 AND 1870.

COUNTIES.	1870.	1860.	COUNTIES.	1870.	1860.	C

* The value of town lots in Shelby County was included in the valuation of land in 1860, and in "other property" in 1869.

ember, 1869, the General Assembly provided for the calling of a convention, at Nashville, on the second Monday in January, 1870, and for the election of delegates, to revise the present constitution, or form a new one. Of the delegates chosen, sixty-five were Democrats or Conservatives, and ten Republicans.

They met on January 10, 1870, and continued in session till February 23d. In the preamble of the new constitution thus formed they recommended to the people, and in the ordinance appended they fixed the fourth Saturday in March, 1870, for a general election, for or against the constitution.

Before the convention adjourned the constitution was signed by sixty-six of its members. The Republican delegates, who, during the deliberations, had unsuccessfully opposed the adoption of certain provisions, refused to subscribe their names to it.

The provision imposing a poll-tax, as a qualification for voters, formed the subject of a warm and protracted debate. As to the amount of this tax, and the persons on whom it may be levied, section 28 of Article II. prescribes as follows:

All male citizens of this State over the age of twenty-one years, except such persons as may be exempted by law on account of age or other infirmity, shall be liable to a poll-tax of not less than fifty cents nor more than one dollar per annum. Nor shall any county or corporation levy a poll-tax exceeding the amount levied by the State.

The question of the right of suffrage, in connection with which the poll-tax was imposed, engaged the almost undivided attention of the convention for five days, a number of its members opposing the extension of the franchise to the negro, though a majority of them were for extending it to all without distinction of color. This subject was regarded as the most important among the matters brought before that body. There was a majority and a minority report presented to the convention from the Committee on Suffrage. The point on which they chiefly disagreed was that the latter proposed that the right of colored men to vote should not be incorporated in the organic law, but submitted to the people's suffrage as an independent proposition, and in a separate ticket from that relating to the ratification or rejection of the constitution; while the former proposed that it should be embodied in the constitution and be voted for or against by the people in one and the same ticket with it. Both reports had their friends among the delegates. The question being finally put, on January 28th, the majority report was adopted by a vote of 50 to 16. The relative provision was inserted in Article IV. of the constitution, concerning elections, and is as follows:

SECTION 1. Every male person of the age of twenty-one years, being a citizen of the United States, and a resident of this State for twelve months, and of the county wherein he may offer his vote for six months, next preceding the day of election, shall be entitled

to vote for members of the General Assembly, and other civil officers for the county or district in which he resides; and there shall be no qualification attached to the right of suffrage, except that each voter shall give to the judges of election where he offers to vote satisfactory evidence that he has paid the poll-taxes assessed against him for such preceding period as the Legislature may prescribe, and at such time as may be prescribed by law; without which his vote cannot be received. And all male citizens of the State shall be subject to the payment of poll-taxes and the performance of military duty within such ages as may be prescribed by law. The General Assembly shall have power to enact laws requiring voters to vote in the election precincts in which they may reside, and laws to secure the freedom of elections and the purity of the ballot-box.

In regard to the departments of the State government, the new constitution coincides with the old one on several points, and departs from them on others. Its chief provisions may be stated as follows: The legislative body, to be styled "The General Assembly of the State of Tennessee," consists of a Senate and a House of Representatives, the number of their members being made to depend on that of the qualified voters residing in the counties or districts represented by them respectively. For this purpose "an enumeration of the qualified voters, and an apportionment of the representatives in the General Assembly, shall be made in the year 1871, and within every subsequent term of ten years. At the several periods of making the enumeration, the number of representatives shall be apportioned among the several counties or districts, according to the number of qualified voters in each; and shall not exceed seventy-five, until the population of the State shall be one million and a half; and shall never exceed ninety-nine: *Provided*, That any county having two-thirds of the ratio shall be entitled to one member." The number of senators is to be apportioned at the same time and in the same manner, and shall not exceed one-third the number of representatives. "Not less than two-thirds of all the members to which each House shall be entitled shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized by law to compel the attendance of absent members." As a compensation for their services the members of each General Assembly shall be allowed the sum of four dollars per day, and four dollars for every twenty-five miles travelling to or from the seat of government; but "no member shall be paid for any day when he is absent from his seat in the Legislature, unless physically unable to attend." Both Houses are allowed free action in regulating their own affairs with regard to organization and mode of proceeding, and have "all other powers necessary for a branch of the Legislature of a free State;" but the power of legislating on several matters, usually exercised by legislative bodies elsewhere, is either abridged, or wholly denied them.

As to the executive department, the Governor is vested with the usual powers in ref-

erence to legislative enactments, as well as to reprieves and pardons.

Concerning the third department, the judicial power "is vested in one Supreme Court, and in such Circuit, Chancery, and other inferior courts as the Legislature shall from time to time ordain and establish in the judges thereof, and in justices of the peace. The Legislature may also vest such jurisdiction in corporation courts as may be deemed necessary; courts to be holden by justices of the peace may also be established. The Supreme Court shall consist of five judges, of whom not more than two shall reside in any one of the grand divisions of the State. The judges shall designate one of their own number who shall preside as Chief Justice. The concurrence of three of the judges shall in every case be necessary to a decision."

All State and county officers are to be chosen by the people at the ballot-box, in general or local elections. The following are the principal exceptions to this rule: "A Secretary of State, the Treasurer or Treasurers, and the Comptroller of the Treasury, are to be appointed by the joint vote of both Houses of the General Assembly. An Attorney-General and Reporter for the State shall be appointed by the judges of the Supreme Court. An Attorney for the State, for any circuit or district for which a judge having criminal jurisdiction shall be provided by law, shall be elected by the qualified voters of such circuit or district. Judges of the Supreme Courts shall appoint their clerks; chancellors shall appoint their clerks and masters;" but "the clerks of the inferior courts holden in the respective counties or districts shall be elected by the qualified voters thereof. The election of all officers and the filling of all vacancies, not otherwise directed or provided by this constitution, shall be made in such manner as the Legislature may direct." The respective terms of office are for judges of the Supreme, Circuit, Chancery, and other inferior courts as well as for the State Attorneys, general and local, eight years; for the clerks of the three first-named courts, six years; for the Secretary of State, four years; for the Governor, Treasurer, or Treasurers, and the Comptroller of the Treasury, and members of the General Assembly, two years.

Priests and ministers of the Gospel, of any denomination, on account of the duties of their calling, to which they must devote all their attention, are declared "ineligible to a seat in either House of the Legislature."

All persons who fight a duel, or send or accept a challenge to fight a duel, as well as their abettors and aiders, are "deprived of the right to hold any office of honor or profit in the State, and shall be punished otherwise in such manner as the Legislature may prescribe."

Among the miscellaneous provisions, the following seem to deserve a special notice:

ARTICLE XI. Section 7. The Legislature shall fix the rate of interest, and the rate so established shall

be equal and uniform throughout the State, but the Legislature may provide by law for a conventional rate of interest, not to exceed ten per cent. per annum.

Sec. 11. A homestead, in the hands of each head of a family, in this State, occupied as a residence, together with all the improvements on the same, to the value of, in all, one thousand dollars, shall be exempt from sale under legal process during the life of such head of a family, to inure to the benefit of the widow, and shall be exempt during the minority of their children occupying the same. Nor shall said property be alienated without the joint consent of husband and wife, when that relation exists. This exemption shall not operate against public taxes, nor debts contracted for the purchase money of such homestead, or for improvements thereon.

In this connection it may be mentioned that the citizens of Tennessee are also secured from imprisonment on account of their debts, section 18 of Article I., on the Bill of Rights, providing, "The Legislature shall pass no law authorizing imprisonment for debt in civil cases."

The education of youth and the school interest generally are recommended and provided for in Article XI., as follows:

SECTION 12. Knowledge, learning, and virtue, being essential to the preservation of republican institutions, and the diffusion of the opportunities and advantages of education throughout the different portions of the State being highly conducive to the promotion of this end, it shall be the duty of the General Assembly in all future periods of this government, to cherish literature and science. And the fund called the *common-school fund*, and all the lands and proceeds thereof, dividends, stocks, and other property of every description whatever, heretofore by law appropriated by the General Assembly of this State for the use of common schools, and all such as shall hereafter be appropriated, shall remain a *perpetual fund*, the principal of which shall never be diminished by legislative appropriation; and the interest thereof shall be inviolably appropriated to the support and encouragement of common schools throughout the State, and for the equal benefit of all the people thereof; and no law shall be made authorizing said fund or any part thereof to be diverted to any other use than the support and encouragement of common schools. The State taxes derived hereafter from polls shall be appropriated to educational purposes, in such manner as the General Assembly shall from time to time direct by law.

Section 14 ordains as follows:

The intermarriage of white persons with negroes, mulattoes, or persons of mixed blood, descendants from a negro, to the third generation, inclusive, or the living together as man and wife in this State, is prohibited. The Legislature shall enforce this section by appropriate legislation.

In educational matters, also, the children of white and negro parents must be taught separately, the one from the other. The foregoing 12th section, after the above-recited passage, has the following: "No school established, or aided under this section, shall allow white and negro children to be received as scholars in the same school." Section 16 is as follows:

The declaration of rights heretofore prefixed is declared to be a part of the constitution of this State, and shall never be violated on any pretence whatever. And to guard against transgression of the high powers we have delegated, we declare that every thing in the Bill of Rights contained is ex-

cepted out of the general powers of government, and shall forever remain inviolate.

At the general election held on March 26th, as previously appointed, the new constitution was ratified by a very large majority. The official returns having been canvassed, it was ascertained that 38,970 ballots had been cast for the "old constitution," and 98,286 for the "new constitution," showing the latter to have received 64,256 votes more than the former. By a proclamation, dated May 5th, the Governor announced this vote.

Various offences of a most grave and alarming character, as the murdering of citizens in their own houses, forcibly entered, and the hanging or shooting culprits taken out of the public prisons, or from the hands of the proper officers who had them in custody, were reported to have been committed in the State by masked or otherwise disguised persons, who had escaped, unpunished and unknown. On this account, the Legislature passed a bill on January 30, 1870, inflicting special penalties on such offenders, as follows:

AN ACT TO PRESERVE THE PUBLIC PEACE.

SECTION 1. *Be it enacted by the General Assembly of the State of Tennessee*, That if any person or persons, masked, or in disguise, shall prowl, or travel, or ride, or walk through the country or towns of this State, to the disturbance of the peace or to the alarming of the citizens of any portion of this State, on conviction thereof shall be fined not less than one hundred dollars, nor more than five hundred dollars, and imprisoned in the county jail of the county wherein convicted, at the discretion of the jury trying the case.

SEC. 2. *Be it further enacted*, That if any person or persons, disguised or in mask, by day or by night, shall enter upon the premises of another, or demand entrance or admission into the house or enclosure of any citizen of this State, it shall be considered *prima facie* that his or their intention is to commit a felony, and such demand shall be deemed an assault with an intent to commit a felony; and the person or persons so offending shall, upon conviction, be punished by imprisonment in the penitentiary not less than ten years nor more than twenty years.

SEC. 3. *Be it further enacted*, That if any person or persons, so prowling, travelling, riding, or walking through the towns or country of this State, masked or in disguise, shall or may assault another with a deadly weapon, he, or they, shall be deemed guilty of an assault with an attempt to commit murder in the first degree, and, on conviction thereof, shall suffer death by hanging: *Provided*, the jury trying the cause may substitute imprisonment in the penitentiary for a period of not less than ten years nor more than twenty-one years.

SEC. 4. *Be it further enacted*, That it shall be the duty of the several judges of the Circuit and Criminal Courts of this State to give this act in charge to the grand juries at each term of said Court.

SEC. 5. *Be it further enacted*, That the grand juries of this State shall have full power to compel the attendance of witnesses whenever they or any one of their body may suspect a violation of any of the provisions of this act.

SEC. 6. *Be it further enacted*, That the Governor of the State is hereby authorized to offer a reward of \$250 for the apprehension and delivery to the sheriff or jailer of any county in this State any person who may be guilty of a violation of the second or third section of this act.

SEC. 7. *Be it further enacted*, That this act shall take effect from and after its passage.

W. O'N. PERKINS,

Speaker of the House of Representatives.

D. B. THOMAS, Speaker of the Senate.

Passed January 30, 1870.

Judging the provisions of this law insufficient to reach and cure the evil, the Governor sent a special message to the Legislature at the beginning of February, requesting the passage of a law enabling him to apply the proper remedy, saying: "As not a single arrest has yet been made for the grossest violation of already existing laws, although such violations have been frequent, and the largest rewards allowed have been often if not invariably offered to bring the offenders to justice, it may be fairly concluded that such offenders are protected by organizations adequate, by terrorism, the force of numbers, or other means, to effect security against the ordinary civil process and officers of the law. The public misfortune seems not so much a want of law, as lack of power to enforce that we have."

A bill was hereupon introduced, but it did not meet all the requirements of the Governor's recommendation, "as it restricted him, in the appointment of officers to keep the peace, to the localities where they were to exercise their functions." The General Assembly, however, deeming, perhaps, that the use of military force was unnecessary to preserve order in the State, closed its session by final adjournment, about a month after the Governor's message, without having done any thing decisive upon the matter.

Under the circumstances, Governor Senter applied to the Federal Government for United States troops, dispatching his private secretary to Washington with a letter to the President for that purpose. Some influential Republicans in Tennessee and at the Federal capital, including her Representatives in Congress, availed themselves of the Governor's application for United States soldiers, as a favorable opportunity for executing a seemingly preconcerted plan to bring about a reconstruction of the State and remand her to a territorial condition, with a provisory government under military rule by the intervention of Congress. They caused a delegation of negroes from Tennessee to go to Washington and lay before Congress a memorial representing that outrages on Union men, especially of their race, perpetrated by those who in the late war fought for secession, were so frequent, of so heinous a character, yet always unpunished, that the petitioners must implore the Federal Government to protect them in their lives, and the exercise of their civil rights. Congress took the matter in hand and a Reconstruction Committee convened for the purpose of inquiring into the facts, and ascertaining the condition of affairs by the examination of witnesses, and other evidence.

This attempt at reconstruction, and the con-

temptation of even the possibility of its proving successful, created the most intense anxiety among the people of all classes in the State. Not only the Democrats and Conservatives, but by far the greatest number of the Republicans, deprecated the interference of Congress in the local affairs of Tennessee, as a crying injustice, subversive of all the recognized principles of self-government, and withal as a public calamity, destructive alike of the vital interests of the State in general, and of her citizens in particular. As to the foundation upon which it was sought to build up reconstruction, the people almost unanimously averred that five-sixths of the alleged outrages were false and mere fabrications; that the largest proportion of those which had really occurred were not of a recent date, but of years past; that their circumstances were immensely exaggerated for effect; that they, with few exceptions, were not caused by animosity on account of political opposition, but originated in personal feuds and quarrels, for other reasons, as is the case with people in all communities; and finally, that the outrages were reciprocal, they being perpetrated as much, if not more, by negroes and Republicans on whites and Democrats, as *vice versa*. The general testimony seemed to be that crime in Tennessee was about in the same proportion, according to population, as in the Northern States, and less now than it had ever been since, and even before, the late civil war.

A delegation from Nashville, consisting of prominent citizens, proceeded to Washington for the purpose of deprecating, in behalf of the State, the threatened reconstruction. Actuated by the same motive, the Speakers of both Houses of the General Assembly, representing the people and the interests of the community, went to the Federal capital on the 11th of March, 1870, and testified before the Committee on Reconstruction as to the actual condition of affairs in Tennessee. On their return home two weeks after, they stated that the negro delegation from Tennessee had presented at Washington the memorial above alluded to, "but were unable to specify any particular outrage alleged to have been committed; and that the majority of Republicans in Congress did not desire the reconstruction of Tennessee, and would vote against it. At the same time, they urged on the people the necessity of refuting with authentic proofs the charges made against them."

Governor Senter also was invited by the Reconstruction Committee to appear before them and testify on the state of affairs; which he did, his examination having taken place on the 9th and 12th of April, 1870. The substance of his testimony and answers to the various questions proposed by the committee may be set down as follows: He expressed his opinion, concerning the so-called Ku-klux, to be, "that there must be a very stringent organization, not only well organized, but well

officered, from the fact that they had committed outrages of very serious character, and neither money nor law had been able to reach them;" said that "outrages throughout the State had decreased in frequency from 1866 down to the close of 1869," at about which time several had occurred, which he enumerated, some of them perpetrated by negroes on whites, or on each other; some by whites on negroes, especially such as were under custody of the civil officers on the charge of crimes committed by them; that, these cases having come to his knowledge, he had requested the Legislature, by a special message, to furnish him with the means to repress violence, which they having failed to do, he had asked for military aid from the United States Government; declaring also to the committee that if they gave him troops in Tennessee he would keep order; said that his information was, that outrages "were diminishing since January;" that a great part of these outrages originated in political antagonism, the others could not be traced to politics, but were such as occur in any community; admitted that the disfranchisement of so many whites had had its effect in inflaming the bad feeling in the State, and thought that their enfranchisement ought to tend to allay the feeling of jealousy between the races; that "the enfranchisement of all men would tend to produce peace in the country," declaring that "his view both on the stump and in his conduct had been to encourage that idea;" that "before the war Tennessee was about as other communities with reference to disorders," that "now there was disorder, and a good deal of it; he could not say how much of it: compared with New York, in proportion to the number of inhabitants, perhaps there was more."

After the Governor's examination, the hearing of other witnesses on the subject continued for some time; but the reconstruction project, presenting apparently little hope of success, seems to have been gradually abandoned.

At the session of the Legislature embracing the end of 1869 and the first months of 1870, two bills were passed, on December 18th and February 24th, respectively, which seem important to taxpayers as well as to the State in regard to her revenue. The former repealed all laws and parts of laws imposing penalties and increased taxation for the non-payment of taxes. The latter, whose title is, "An act to sustain the credit of the State, and to amend the revenue laws of the State, and for other purposes," reduced the State tax one-half, yet enlarged the basis of taxation so that the amount of the public revenue would not be materially diminished by its operation. The first section enumerates the several kinds of property to be taxed, and the second determines the rate of the tax, as follows: "*Be it further enacted*, That there shall be assessed and collected for State purposes on the value of the property enumerated above and upon the capital, as now defined by law, of all persons engaged in

trade * * * the sum of twenty cents on every hundred dollars of said property and capital."

This act was subsequently repealed, or modified, chiefly in regard to the rate of taxation. During the summer session of May and the following months a tax bill was introduced, variously amended and finally concurred in by both Houses on July 6th, "making the tax forty instead of twenty cents on every hundred dollars' worth of taxable property, and increasing the tax on privileges." At the following session, which began on the first Monday of December, that rate was still further increased, a new revenue law having then been enacted which provides "that the State tax on every hundred dollars' worth of property upon which taxes are by law allowed for State purposes, shall be sixty cents;"—that is, thirty cents, if not paid in depreciated State money. Other less material alterations were made by this act, slightly increasing the tax on merchants, railroad and insurance companies.

The Legislature deliberated at this session on a great variety of subjects of general and local importance relating to State and county financial affairs, internal improvements, delinquent railroads, charitable institutions, the education of youth in various branches of instruction, and other matters. What most excited the people's interest, however, was the report presented to the General Assembly joint committee of six appointed to investigate the frauds alleged to have been perpetrated on the school-fund of the State. This committee had been appointed on November 11, 1869, and on February 28, 1870, authorized to prosecute the work of their investigation during the recess of the General Assembly. The Bank of Tennessee was the custodian of this fund, which, from the statement last made by the bank in 1863, appears to have consisted of \$663,752.65, gold and silver, "put up in kegs and boxes, and sealed." These were removed from the State in 1863 and deposited in the vaults of the different banks of Augusta, Georgia, except one bag containing \$50,000, which was placed in the counting-room of a firm doing business in that city, under the direction of the cashier of the bank. Subsequently he kept this keg by him at his lodgings, and finally removed it to the house of an Italian, a short distance from Augusta. Soon after the surrender, the Italian returned to his country, and since that time nothing more has been known in reference to the keg; whereupon the report says: "From impressions derive from various sources, and the inferences and circumstantial evidence afforded the commission by the various witnesses, they cannot come to any other conclusion than that through the Italian and the cashier the State has ultimately become loser to the amount of \$50,000 in gold * * * The committee are of the opinion that, considering all things, it would be wisest to allow this to go into the general account of losses that have so long burdened the State." The report further

shows that in 1866 the sum of \$612,250, in United States 7-80 bonds, was deposited as school-fund in the Tennessee National Bank which was established at Memphis in 1865, and afterward failed, whereby the State lost above \$200,000 on that deposit. The president of the bank testified before the investigating committee, and filed a written statement as part of his testimony, revealing the fact that his bank was appointed fiscal agent of the State, and became the depository of her funds, including the school-fund, through the political influence brought to bear in its favor by the leading Republicans in the Legislature, and out of it, in the State, "with the understanding that this bank was to support the Republican party and be their financial agent, and furnish money to 'run the machine' whenever they wanted it." He mentions a number of them by name, and also several sums paid them by himself and his agents on different occasions. In his written statement, dated April, 1870, he says: "Twenty thousand dollars was advanced to them by which to perpetuate their power in Memphis, through the metropolitan police of that city. Constant applications and assessments were made upon me for money to support the party in its manipulation of State and local politics. A good deal of money was used by the agents of the bank and myself among the leading and prominent members of the Legislature of 1866-'67, as also among leading and prominent Republican politicians in other sections of the State, in the appointment of this bank as fiscal agent." As to what money was used in these transactions, which the president seems to regard as the chief cause of the bank's failure, he stated: "The capital was but \$100,000; and to discharge all the indebtedness of the bank occasioned by the draws made to meet the obligations to pay members of the Legislature and others mentioned in this deposition, the funds of the bank were used indiscriminately, also my personal funds."

For several days during this session the two Houses met in joint convention for the purpose of choosing the State Secretary, the Comptroller, and the Treasurer, whom the new constitution empowers them to elect. The candidates for each office were numerous, and the balloting more so. The final result was obtained on May 22d, the officers elected being—Thomas H. Butler for Secretary of State, Edwin R. Pennebaker for Comptroller, and William Morrow for Treasurer.

The general election for the purpose of choosing the judges of the Supreme Court was held in August, as ordained by the constitution, and the following are the names of the judges elected: P. Turney, I. L. T. Sneed, A. O. P. Nicholson, T. A. B. Nelson, James W. Deaderick, and Thomas I. Freeman. They received a majority of 90,000 votes over the Republican candidates, who received less than 19,000. Six of them were now elected in order that they might hold two different courts

in two judicial districts for the same term, and thus dispose of the accumulated business the sooner; but, on the first vacancy occurring among them, it should not be filled, when their number shall be five ever afterward. They were qualified by Governor Senter on September 10th, and on the 11th they met, organized among themselves, and opened court in due form, when Judge Nelson announced that, by the unanimous consent of the bench, Judge A. O. P. Nicholson would be the Chief Justice.

Early in November, 1870, a suit was instituted against three of the judges of the Supreme Court by writs of *quo warranto*, served on Chief-Justice Nicholson, Judge Nelson, and Judge Sneed, commanding them to appear before the United States Court, and show by what authority they held their offices and emoluments, the basis of the suit being that they are laboring under the disqualification imposed by the fourteenth amendment. It is a civil process, based on an information which the said judges were cited to answer, by plea or otherwise, on the second Monday in January, 1871. It was generally supposed that the pretext of this suit was the opinion of the court shortly before delivered by Judge Nelson in the case of *Smith vs. Brazelton*, holding that during the late civil war "the Confederate States were entitled to equal beligerent rights with the United States," although this principle had been proclaimed in the decisions of other cases by the former Supreme Court of Tennessee, composed of judges well known to be Republicans of extreme views. It was also asserted as a matter of fact that "threats were made both before and after the commencement of the court that prosecutions would be commenced." Meantime the Supreme Court continued to sit and try its causes as if nothing had occurred. After a brief adjournment of about two weeks from the middle of November, it held its session for the December term in Nashville.

The Conservative and Democratic citizens of the State assembled in convention at Nashville, on the 18th of September, "for the purpose of nominating a candidate for Governor, and for taking such other steps as may be deemed necessary to secure a thorough organization." This meeting nominated John O. Brown by acclamation, and adopted the following platform:

We, the representatives of the Democratic party of the State of Tennessee, here in convention assembled, forgetting all past differences, and deprecating all attempts to engender old animosities, meeting on terms of perfect equality, and animated by common hopes and purposes, do heartily unite for the support and vindication of the principles and policy proclaimed by the great national Democracy.

Resolved, That the Southern States should be immediately restored to their rights under the Constitution of the United States as sovereign States of the American Union.

Resolved, That all citizens of the United States, under political disabilities, should be immediately relieved therefrom.

Resolved, That we denounce the present tariff, as well as the substitute lately introduced in the House of Representatives, from the Committee of Ways and Means, as a gigantic robbery of the labor and industry of the country; that they are solely designed to advance the interests of a few monopolists, and that this should no longer exist; and that no candidate is worthy of support who is not in favor of a low revenue tariff, which closely approximates to free trade; that, in the arrangement of any tariff, the necessities of life should be free of duty.

Resolved, That the internal revenue system of the United States is oppressive in its exactions; that it should be remedied; that its annoyances of stamps, licenses, and taxes upon sales and income, should be abolished; that the tax itself should be collected by State and county officers; and that the multiplication of Federal officers is wholly unnecessary and eats out the substance of the people, and that we pledge ourselves to labor for a thorough reform in this particular.

Resolved, That the practice of the Government in the enforcement of the revenue laws which authorizes the seizure and confiscation of the property of the citizens and their imprisonment, aided by the bayonet, without trial by jury and conviction, is subversive of the rights of the people, and in contravention of the Constitution, and should therefore be abandoned.

Resolved, That we denounce the profligacy in the present administration of the Federal Government; the corruption which has entered all its official stations; the favoritism which, overlooking fitness for office, has appointed to positions of public trust friends or tools of those who control public patronage; and the imbecility which directs the destinies of the republic without an apparent purpose, and manages its affairs with such embarrassment and disaster to the mutual interests of its people at home, and with such disregard of the rights and liberties of its citizens abroad.

Resolved, That we regard the act recently passed by Congress to enforce the fifteenth amendment as unconstitutional, unjust, and oppressive, an invasion of the rights of the States, subversive of the best interests of the people, and therefore urge its unconditional repeal.

Resolved, That the power of the Federal Government to assess and collect taxes on the bonds of the United States is clear and unquestioned, and we demand of Congress that a share of taxation equal to a fair average of the amount levied in each State on money loaned, shall be assessed and collected from all investments in bonds.

Resolved, That we are opposed to the system of national banks, and urge the immediate repeal of the law creating them; and that, in place of the notes of such banks, the Treasury notes of the United States shall be substituted.

Resolved, That the Democracy here assembled sympathize with the efforts of all people struggling for self-government; and we denounce the policy of the party in power to reduce whole States in our Union to a condition of vassalage to the General Government.

Resolved, That the present Administration of the Federal Government has been persistently subversive of the rights of the States, invasive of the Federal Constitution, necessarily tending to centralization and the annihilation of local self-government, and, unless repudiated by the country, will inevitably result in the destruction of republican liberty.

Resolved, That this convention tenders its thanks to the national Democracy of the North who have so nobly vindicated the great principles herein announced, and that the people of Tennessee will cordially unite with this party in the maintenance of free government.

The word "sovereign" applied to the States in the first of the foregoing resolutions was

subsequently objected to by many even among Democrats and Conservatives, as if it implied the doctrine of secession. This, and the supposed disagreement between himself and Mr. Brown on some other points of State policy, induced A. S. Colyar to announce himself an independent candidate for Governor in the same campaign. Mr. Brown, however, defended the use of the word "sovereign" as proper, indicating only the rights belonging and reserved to the States, as such, by the Constitution, yet excluding the right of secession, which he repudiated. Mr. Colyar subsequently withdrew his name, saying: "Since hearing the speech of General Brown, I have concluded to withdraw from the canvass for Governor. In reference to the three questions of State policy which prompted me first to become a candidate, I find that General Brown and myself agree."

The Republicans nominated as their candidate for Governor W. H. Wisener.

The election resulted in the success of the Democratic State ticket by a large majority. The whole number of votes cast in the State was 120,479, of which 78,979 were given to John C. Brown, the Democratic candidate for Governor, and 41,800 to W. H. Wisener, the Republican candidate, showing the majority of the former over the latter to have been 37,479.

The members of the General Assembly elected on November 8th were divided as follows: Of 25 Senators returned from their respective districts, 22 were Democrats and 3 Republicans. As to the Representatives, 59 were returned, of whom 48 were Democrats and 11 Republicans.

TERRITORIES OF THE UNITED STATES.

ALASKA.—Alaska, which was acquired from the Russian Emperor by the United States in 1867, at an expense of \$7,200,000, still remains an unorganized territory. Its population consists of about 2,000 whites and 60,000 Indians and half-breeds. The only resources of the Territory which have as yet rendered any profit to the Government or to private enterprise are its furs and fisheries, though timber is abundant, and minerals have been found in some localities. Some specimens of a dense bituminous coal have been collected near Cook's Inlet, about sixty miles from Sitka, where it is found in beds varying from eighteen inches to six feet in thickness, lying from thirty to sixty feet from the surface. It has been found quite serviceable for generating steam on board the Government vessels. The Government maintains its authority over this vast Territory by means of a small company of officials at Sitka. It is connected with the military department of the Pacific, which has its headquarters at San Francisco. A movement was begun in Congress at the session of December, 1870, to have Alaska organized as a county of Washington Territory, but the proposition was not carried through.

ARIZONA.—The Territory of Arizona lies on

the borders of Mexico, and is one of the oldest districts on the western part of the continent.

The following is the Federal census of Arizona Territory for the years 1870 and 1860:

COUNTIES.	1870.	1860.
Mohave	179
Pima	5,716
Yavapai	2,142
Yuma	1,621
Total	9,658	6,463

Tucson, the capital, has been inhabited over one hundred years, and has now a population of nearly 8,000. Prescott, the former capital, has 1,200 inhabitants, and Arizona City has 600. These are the principal towns. There are no railroads or telegraphs, and no public schools in the Territory. The population is nearly the same as that of twenty years ago, and was mostly acquired from Mexico with the Territory. There are some valuable mines in Arizona, which are worked to a moderate extent with profitable results, and many districts are well adapted to agriculture. The greatest drawback to the progress and prosperity of the Territory is the merciless depredations of the Apache Indians. During the past year there were many accounts of attacks upon persons and property in the outlying settlements and on the lines of travel. The military force of the United States in the Territory does not exceed 1,000, and the people are forced to protect themselves by volunteer companies. The Governor, in his last message, recommended the organization of military companies in all the settlements, and the extermination of the savages so far as possible. A. K. P. Safford is the Governor, and Richard C. McCormick represents the Territory in Congress. The latter is a Republican, and was elected over P. R. Brady, the Democratic candidate, by a majority of 570.

COLORADO.—Colorado, situated as it is on the direct line of travel through the Rocky Mountain region, is increasing rapidly in population, and the development of its resources.

The following is the Federal census of Colorado Territory for the years 1860 and 1870:

COUNTIES.	1870.	1860.
Arapahoe	6,829
Bent	593
Boulder	1,939
Clear Creek	1,596
Conejos	2,504
Costilla	1,779
Douglas	1,588
El Paso	867
Fremont	1,064
Gilpin	5,490
Greenwood	510
Huerfano	1,150
Jefferson	2,580
Lake	532
Lanier	588
Las Animas	4,276
Park	447
Pueblo	2,305
Saguache	304
Summit	365
Weld	1,478
Total	50,706	34,377

The natural advantages of the Territory are great and of various kinds. It is well adapted to agricultural pursuits, and in 1870 it produced 860,000 bushels of wheat, 575,000 bushels of corn, 825,000 bushels of oats and barley, and 800,000 bushels of potatoes. Its mines are also rich, and considerable progress has been made in developing their treasures. Gold and silver were shipped from the Territory during the year to the amount of \$5,454,000. A school of mines has been founded at Golden City, the corner-stone of which was laid on the 5th of August. The entire wealth of the Territory has been stated at \$50,000,000, or about \$1,250 for every individual of the population. Public lands were sold mostly to actual settlers, to the amount of 274,577 acres during the year.

Denver, the capital of the Territory, has about 8,000 inhabitants, and is growing rapidly. Its trade during the year amounted to \$10,000,000, and its manufactures to \$1,000,000. Four railroads converge there, the first of which was completed on the 24th of June last, and several others are in course of construction.

An interesting incident in the settlement of the Territory is the formation of colonies. The Union Colony, organized in New York, purchased land and took possession in April. The colonists each paid \$185 for their membership, and their land cost from \$3 to \$4 per acre. They founded the town of Greeley, which at the end of the year numbered 1,200 inhabitants.

There was a spirited political canvass in the Territory for the election of local officers and a delegate to Congress. The Republicans met in convention on the 18th of July, and nominated Jerome B. Chaffee for member of Congress. In their resolutions they indorsed the Administration of President Grant, favored immigration, but condemned the "importation of coolies," and asked for aid from the General Government in the construction of public works. The Democratic Convention was held on the 26th of July. George W. Miller was nominated for Congress, and a platform adopted containing the following resolutions among others:

Resolved, That we denounce the policy pursued by the Government in regard to the management of Indian affairs on the frontier; that Indian depredations of the most atrocious character go unpunished; that our homes are burned, our wives and children ravished and murdered, our property destroyed, and our repeated cries for protection are only answered by the appointment of another Quaker Indian agent.

Resolved, That we favor the taxation of United States bonds on the same basis as other property; that we are opposed to the present system of banking, as unjust, and favor the substitution of Treasury notes for national bank notes, thereby saving annually millions to the Government in interest paid to the national banks.

Resolved, That the Democratic party now, as of old, is opposed to a high protective tariff; that the people of the West have long groaned under unequal laws and unjust taxation, which the Eastern States have continually imposed upon the West; equal and exact justice shall be the rallying-cry of the Democracy.

The election resulted in the choice of Chaffee, the Republican candidate. The total vote cast

was 11,508, of which Chaffee received 6,450, and Miller 5,058, making Chaffee's majority 1,392.

A bill was introduced into the Territorial Legislature at its last session granting the right of suffrage to women, but after an extended debate it was indefinitely postponed by a vote of 15 to 10. Among the acts passed by the Legislature was one providing for a system of public instruction, and one establishing an agricultural college.

DAKOTA.—The Territory of Dakota was first organized in 1861, but since that time Wyoming has been set off from its western side. Its present area is 152,000 square miles, and its population 14,181. A school system has been established, and something has been done to develop the resources of the Territory. The construction of the Northern Pacific Railroad, which will cross it from east to west, will undoubtedly give a strong impulse to its growth. The capital is Yankton, and the present Governor is A. J. Faulk. M. K. Armstrong, Democrat, was elected to represent Dakota in the Forty-second Congress.

The following is the Federal census of Dakota Territory for the years 1860 and 1870:

COUNTIES.	1870.	1860.
Bonhomme	608
Brookings	163
Buffalo	246
Charles Mix	153
Clay	2,621
Deuel	37
Hutchins	37
Juynne	5
Lincoln	712
Minnehaha	355
Pembina	1,218
Todd	337
Union	8,507
Yankton	2,097
Unorganized portion of Territory	2,091
Total	14,181	4,837

IDAHO.—The Territory of Idaho has an area of 96,000 square miles. Its population is 14,998. The Territory was organized in 1863, though it has since been diminished in extent by the formation of Montana. The capital is Boise City. The present Governor is Samuel Bard, and Samuel A. Merritt, Democrat, represents the Territory in Congress. A proposition to grant the right of suffrage to women was lost in the Legislature at the last session by a tie-vote. Idaho is a rich mining district, the placer mines being among the richest of the country.

The following is the Federal census of Idaho Territory for the year 1870:

COUNTIES.	1870.
Ada	2,673
Alturas	680
Boise	8,333
Idaho	849
Lemhi	993
Nez Percés	1,607
Oneida	1,993
Onyhee	1,718
Shoshone	732
Total	14,998

INDIAN TERRITORY.—The Indian Territory still remains unorganized, though several bills have been introduced in Congress for its organization under the name of Oklahoma. The present population is about 17,000, mostly Indians and negroes. The principal tribes now occupying this district are the Choctaws, Chickasaws, Creeks, Seminoles, Cherokees, and Osages, some of whom were transferred thither from other parts of the country. The Government holds in trust for these Indians the sum of \$1,600,000, yielding an annual income of over \$100,000. The tribes have ceded nearly 40,000,000 acres of their lands to the United States, and the organization of the Territory would open these to settlement. The chiefs oppose this movement. In convoking a council of his people on this question, Colonel Wright, chief of the Choctaws, said:

Though our lands may not be immediately affected by a territorial government being organized, yet, should Congress be once allowed, without raising a voice against it on our part, to legislate over you on the ground of the adoption of the fifteenth amendment to the Constitution of the United States, they will claim us as citizens of the United States, if they have not already done it. Then there will be no end of legislation over your lands until your lands are donated away to other parties, who have no part or parcel with you in landed rights, and to other interests than yours. You have only to look back to your former homes and lands in the State of Mississippi to convince you of what is asserted, a portion of which was donated away by acts of Congress without compensating us a single cent, and without our consent, to railroad and school purposes, for the benefit of that State, to our loss and lasting injury, not only to ourselves, but to our posterity. What has been done, may be done again.

A general council of the tribes of the Territory was held in the latter part of the year at Ockmulgee, at which a constitution for their united government was adopted by a vote of 52 to 3, subject to ratification by the people. Pending the action, the council adjourned to June 5, 1871.

Article 1 of the constitution defines the boundaries of the Indian Territory, and guarantees to each nation entering into the contract the same right to transact commerce and exchange in any of said nations which each has in its own, subject only to conformity with the treaty of the United States and such laws as may be enacted according to the provisions of the Constitution. Article 2 distributes the powers of the government into executive, legislative, and judicial departments. Article 3 vests the legislative power in the General Assembly, composed of a Senate and House of Representatives. The Senate shall consist of one member from every nation, the population of which shall equal 2,000, and one additional member from every additional 2,000, or fractional part thereof greater than 1,000, provided that the nations whose individual population does not equal 2,000 may unite and be represented in the same ratio; and provided further, that the Ottawas, Peorias, and Quapaws, shall

be entitled to one Senator, and the Senecas, Wyandottes, and Shawnees, to one Senator. The House of Representatives shall consist of one member from each nation, and an additional member for every 1,000 of population, or fractional part thereof over 500, no person to be entitled to the office of member of the General Assembly but *bona-fide* citizens of the nation, who may have attained the age of twenty-five years. The term of office is to be for two years, and the mode of election is by qualified voters, according to the laws and usages of the nations voting. The compensation is fixed at four dollars a day, and four dollars for every twenty miles travelling, going and coming by the shortest practical route, and no member to receive pay for more than thirty days in any one annual session. The General Assembly has the power to legislate upon any but the following subjects: Those pertaining to intercourse and relations of the Indian Territory, the arrest and extradition of criminals escaping from one to another nation, the administration of justice between the members of nations in the Indian Territory and persons other than the nations, and the common defence and safety of the nations of said Territory. There are several other provisions pertaining to the legislative department which are identical with those in the Constitution of the United States. The judicial power is vested in the Supreme Court, three District Courts, and such inferior courts as may be provided by law. Three district judges constitute a Supreme Court when convened in semi-annual session at the capital of the Territory. One judge is to retire from office every two years, and the official term is six years. The Supreme Court has appellate jurisdiction from the inferior courts, and original jurisdiction is prescribed by law, but cannot interfere with the civil and criminal jurisdiction retained by each nation in the treaties of 1866. The courts have jurisdiction in matters of trade and intercourse between the several nations, and in all cases arising under the legislation of the government. The other provisions touching the judiciary are similar to those in the States. The executive power is vested in the Governor, whose term of office is two years. He must be thirty years of age, and his powers and duties are such as usually pertain to the office in the States. Provision is also made for a secretary, who is to be *ex officio* treasurer; also for an attorney-general, district attorneys, marshals, and deputies.

MONTANA.—The population of Montana, according to the Federal census for 1870, is distributed as shown in the table on page 713. The marshal estimated the number of Indians belonging to tribes in the Territory at 18,000. The principal towns are: Helena, 3,713 inhabitants; Virginia City (the capital), 867; Deer Lodge, 789; Diamond City, 460; Benton City, 436; Bannock City, 381; Radersburg, 311; Roseman City, 168.

Total.....	20,504

The people of the Territory have suffered much during the year from the depredations of Indians. The feeling with which they regard the original inhabitants of the Territory may be inferred from the following resolutions adopted at a mass meeting in Gallatin County:

Resolved, That the Indian of poetry and romance is not the Indian of fact; the former is said to be noble, magnanimous, faithful, and brave; the latter we know to be possessed of every attribute of beastly depravity and ferocity.

Resolved, That the mountain Indian can never understand the amenities of civilized life—he puts no faith in treaties, and makes his pledges and promises with intent to disregard them when interest or caprice shall dictate. The hospitality and kindness of the white settler he imputes to cowardice, and the largeness and annuities of the white man's government are received with the belief that that government fears him.

Resolved, That force is the only argument that will effectually persuade him to peace and friendship, as the now peaceful conduct of the Bannocks, Snakes, and Utes, sufficiently attests.

The same meeting expressed the thanks of the people to Colonel Baker for the severe punishment which he had dealt out to the Piegan Indians for depredations committed in the Territory during the preceding winter.

The Territorial election occurred on the 1st of August, and the Democrats were very generally victorious. M. O'avanagh was elected as delegate to Congress. The Governor of the Territory is James M. Ashley.

NEW MEXICO.—New Mexico has an area of 124,450 square miles, and a population of 91,852. The capital is Santa Fé, which has 4,600 inhabitants. The Governor is Wm. A. Pile, formerly of Missouri, the Secretary, Major Henry Wetter, and the Chief-Justice, Joseph G. Palen, all of them appointed by President Grant. J. F. Chaves represents the Territory in the national House of Representatives. The Territory is well adapted for agricultural enterprise, forming, as is claimed, one of the best fruit-growing districts on the continent. It is also supposed to be rich in mineral resources, though comparatively little has been done for their development. The Ralston silver-mines are said to be very rich, and a company has been organized for working them.

The following is the Federal census of the Territory of New Mexico for the years 1860 and 1870:

UTAH.—The Mormon community which settled the Territory of Utah has been subjected to adverse influences since its isolation has been destroyed by the completion of the Pacific Railroad, and during the past year the effect has been quite manifest both at Salt Lake and at Washington. A bill was introduced into Congress at the session of 1869-'70, intended to suppress polygamy, and bring Utah more completely into subjection to the laws of the United States. This was known as the Cullom Bill, and passed the House of Representatives by a vote of 94 to 32, but finally failed to become a law. It forbade plural marriages, under severe penalties, and provided ample means for the enforcement of all United States laws. It not only disfranchised all persons practising polygamy, and disqualified them from holding office, but provided for the punishment of the crime by fine and imprisonment. While the bill was pending, meetings were held in various parts of the Territory, at which its provisions were denounced, and solemn protests made against its passage. At a mass meeting held at Salt Lake City, on the 5th of April, a protest was addressed to the members of Congress, in which the following declarations were made:

Of the 150,000 estimated population of the Territory of Utah, it is well known that all except from five to ten thousand, are members of the Church of Jesus Christ of Latter-day Saints, usually called "Mormons." These are essentially "the people" of this Territory; they have settled it, reclaimed the desert waste, cultivated it, subdued the Indians, opened means of communication, made roads, built cities, towns, and settlements, established government, encouraged education, and brought into being a new State to add lustre to the national galaxy of our glorious Union. And we, the people who have done this, are believers in the principle of plural marriage or polygamy, not simply as an elevating, social relationship, and a preventive of many terrible evils which afflict our race, but as a principle revealed by God, underlying our every hope of eternal salvation and happiness in heaven. We believe in the preexistence of the spirits of men; that God is the author of our being; that marriage is ordained as the legitimate source by which mankind obtain an existence in this probation on the earth; that the marriage relation exists in and extends throughout eternity, and that without it no man can attain to an exaltation in the celestial kingdom of God. The revelation commanding the principle of plural marriage, given by God through Joseph Smith to the Church of Jesus Christ of Latter-day Saints, in its first paragraph, has the following language: "Behold, I reveal unto you

a new and everlasting covenant, and if ye abide not that covenant, then are ye damned; for no one can reject this covenant and be permitted to enter into my glory." With this language before us, we cannot forbid plural marriage among people of our religion. Let the revelation in any other light than as a vital principle appear in the eyes of others as it may, to us it is a divine command, of equal force with any ever given by the Creator of the world to His children in the flesh.

The bill was also complained of as destroying the religious liberty and civil rights of the people. Although this bill failed to pass, the United States officials in the Territory displayed unwonted vigor in enforcing the laws when they were in conflict with the regulations of the Mormon community. Governor Schaffer issued a proclamation in the early part of the year, forbidding "all musters, drills, or gatherings of the militia of the Territory of Utah, and all gatherings of any nature except by order of the United States Marshal." The execution of this decree was resisted with spirit in one or two instances, but was carried through with vigor by the marshal. A decision was rendered by Chief-Justice McKeon to the effect that the district courts of Utah or United States courts only had jurisdiction, and that grand juries can be summoned only by United States marshals under order of the district judge. By these two efficient proceedings, the power and influence of Brigham Young have been materially affected. By another judicial decision, a direct blow was struck at the institution of plural marriages, naturalization being refused on the ground that the applicants would not renounce the dogma of polygamy. The judge, in his opinion, made use of the following language:

An applicant for naturalization asks for a favor; asks for the high privilege of American citizenship, and he must show "to the satisfaction of the Court" that he is worthy of it. More than a witness in a litigated case; more than a party in a libel or criminal case, should he expect and be expected to answer questions. This Court needs not to be informed that many other courts have been very negligent, criminally negligent, in this matter of naturalization. The practice of such courts can form no precedents for this. There are some things of which courts are bound to take judicial notice, and this Court takes notice of the fact that it is in session in Salt Lake City, and in the Territory of Utah, and that here there are many men who defiantly trample upon the act of Congress against polygamy, and call their conduct liberty. Surrounded by such influences, guided by such leaders, aliens come into this court and ask for the high privilege of citizenship. Well, what are their views of American civilization? What do they believe to be the rights and duties of an American citizen? Before they take the oath of citizenship, let the Court "be satisfied" that they understand its full meaning, and recognize its solemn obligations. Let the Court "be satisfied" whether they believe the supreme law of the land to be the Constitution, the laws of Congress, and the treaties of the United States, or whether they believe it to be the revelations of some polygamic prophet. "Let the Court be satisfied" what pretended laws of God they mean to obey, and what positive laws of man they mean to defy. In this country a man may adopt any religion that he pleases, or reject all religion if he pleases. But no man must violate our laws and plead religion

as an excuse; and no alien should be made a citizen who will not promise to obey the laws. Let nations and aliens distinctly understand that in this country license is not liberty, and crime is not religion.

At the election which occurred in the fall, Wm. H. Hooper, Democrat, was elected delegate to Congress, receiving 21,656 votes out of a total of 23,100. The Republican candidate, Governor R. Maxwell, who received but 1,444 votes, was a vigorous opponent of the peculiar institutions of Mormonism.

Another circumstance which has a tendency to bring into the population of the Territory an element antagonistic to the Mormon institutions is the discovery of valuable silver-mines, which have already attracted considerable attention.

The following is the Federal census of Utah Territory for the years 1860 and 1870:

Yakima.....	423
The Disputed Islands.....	594
Total.....	23,901	11,594

The assessed value of the property in the Territory in 1869 was \$7,843,289. The present Governor is Edward S. Salomon. A delegate to Congress was chosen at the last election, which occurred on the first Monday in June. The total vote cast was 6,203, of which, Selucius Garfiede (Republican) received 3,469, or a majority of 735.

WYOMING.—The principal matter of interest in Wyoming during the year has been the exercise for the first time of the right of voting and sitting on juries by women. A grand jury consisting of men and women was empanelled at Laramie City on the 7th of March. In his opening address to the jury, Chief-Justice J. H. Howe said:

Ladies and Gentlemen of the Grand Jury: It is an innovation and a great novelty to see, as we do to-day, ladies summoned to serve as jurors. The extension of the political franchise is a subject that is agitating the whole country. I have never taken an active part in the discussion, but have long seen that woman was a victim to the vices, crimes, and immoralities of man, with no power to protect and defend herself from these evils. I have long felt that such powers of protection should be conferred on woman, and it has fallen to our lot here to act as pioneers in this movement and to test the question. The eyes of the whole world are to-day fixed upon this jury of Albany County. There is not the slightest impropriety in any lady occupying this position, and I wish to assure you that the fullest protection of the court shall be accorded to you. It would be a most shameful scandal that in our temples of justice and in our courts of law any thing should be permitted which the most sensitive lady might not with propriety hear and witness; and here let me add that it will be a sorry day for any man who shall so far forget the courtesy due and paid by every American gentleman to every American lady, as even by word or act to endeavor to deter you from the exercise of these rights, with which the law has invested you. I will conclude with the remark that this is a question for you to decide for yourselves. No man has any right to interfere. It seems to me to be eminently proper for women to sit upon grand juries, which will give them the best possible opportunities to aid in suppressing the dens of infamy which curse the country. I shall be glad of your assistance in the accomplishment of this object. I do not make these remarks from any distrust of the gentlemen of Albany County; on the contrary, I am exceedingly pleased and gratified with the indications of intelligence, love of law and good order, and the gentlemanly deportment, which I see manifested here.

On dismissing the jury, Justice Howe said:

To those ladies who are members of the grand jury, the Court also deems it but justice to say that by your intelligent, faithful, and conscientious discharge of duty, as well as by your great propriety of conduct, you have realized the just expectations of those who saw fit to confer upon you the right to participate in the administration of justice. If future grand juries in this county shall follow the example you have set, assurance will be thereby given to all, that crime and immorality will no longer be winked at, but all offenders will be brought to justice, and that the law and the courts may safely be relied upon for the protection of the people.

In writing of the matter afterward, the same judge said:

With all my prejudices against the policy, I am under conscientious obligations to say that these women acquitted themselves with such dignity, deco-

rum, propriety of conduct, and intelligence, as to win the admiration of every fair-minded citizen of Wyoming. They were careful, painstaking, intelligent, and conscientious. They were firm and resolute for the right as established by the law and the testimony. Their verdicts were right, and, after three or four criminal trials, the lawyers engaged in defending persons accused of crime began to avail themselves of the right of peremptory challenge to get rid of the women jurors, who were too much in favor of enforcing the laws and punishing crime to suit the interests of their clients! After the grand jury had been in session two days, the dance-house keepers, gamblers, and *demi-monde*, fled out of the city in dismay, to escape the indictment of women grand jurors! In short, I have never, in twenty-five years of constant experience in the courts of the country, seen more faithful, intelligent, and resolutely honest grand and petit juries than these.

At the election, which occurred on the 7th of September, the right of suffrage was very generally exercised by the women. W. T. Jones, the Republican candidate for Congress, was elected by a majority of 160 votes, though at the preceding election the Democratic majority was upward of 1,200. At Cheyenne ladies were nominated by the Republicans for the offices of county clerk and school superintendent, but they were defeated with the rest of the local ticket, though one of them received several votes more than any of her male associates on the ticket. The right to hold office was granted to women by the Territorial Legislature at its last session.

The following is the Federal census of Wyoming Territory for the year 1870:

COUNTIES.	1870.
Albany.....	3,021
Carbon.....	1,368
Laramie.....	2,527
Sweet Water.....	1,916
Utah.....	866
Total.....	9,118

TEXAS. Public affairs in this State during the year have been very quiet, and little has occurred worthy of record. There has been no political canvass, nor any election. The reconstruction measures having been completed in the early part of the year, the administration of the affairs of the State passed into the hands of her citizens. The Legislature assembled on the 8th of February, and, after ratifying the fourteenth and fifteenth amendments to the Federal Constitution, proceeded to an election of United States Senators. Lieutenant-Governor J. W. Flanagan (Republican) was chosen for the term ending March 3, 1875, and Morgan O. Hamilton (Republican) for the term ending March 3, 1871, and also for the full term commencing March 4, 1871. In the early part of January, 1871, the Legislature, taking the ground that the election for the latter term was illegal, and that the session in January, 1871, was not the one next preceding the vacancy, within the meaning of the act of Congress regulating the time of the election of Senators, chose General Reynolds (Republican) as United States Senator for the

term commencing March 4, 1871, and adjourned. The question came before the Senate at the first session of the Forty-second Congress, when the claim of General Reynolds was disallowed, and Mr. Hamilton was admitted to his seat. The bill readmitting the State to representation in Congress was passed on the 29th of March, 1870, and on the 26th of April the Legislature reassembled and continued in session until the 15th of August. Many important laws relating to the reorganization of the civil power in the State were passed at this session. Much trouble having been experienced in the counties on the northern and western frontier by roving bands of Indians, an act was passed for the enrolment of twenty companies of mounted rangers, each company to consist of fifty privates, and the requisite officers; to be armed with effective and approved breech-loading cavalry arms, and to serve for the period of twelve months on the frontier.

By a law passed at this session, providing for the organization of the militia, all able-bodied male citizens between the ages of eighteen and forty-five, residing in the State, with certain special exceptions, are made liable to military duty. The Governor is commander-in-chief of the military forces of the State, which consists of two classes—the State Guard of Texas, and the Reserve Militia. The former consists of all such persons liable to military duty as shall voluntarily enroll and equip themselves for service, while the latter comprises all liable to military duty not enrolled in the State Guard, and provision is made for the enrolment of all such in the several counties at least once in two years. The Governor appoints one adjutant-general, with the rank of colonel, who, in addition to the duties properly belonging to that office, acts also as quartermaster and commissary-general, as chief of ordnance, and as inspector-general. All fines, forfeitures, and assessments, imposed by way of punishment for violation of the laws governing the military forces of the State, are paid into the Treasury as a fund to aid in arming and equipping the State Guard. All persons liable to serve in the Reserve Militia may avoid such service by paying the sum of fifteen dollars, which becomes a part of the above fund. By this act great discretion and power are given to the Executive in cases of disturbances in the State. "It shall be the duty of the Governor," says the law, "and he is hereby authorized, whenever in his opinion the enforcement of the law of this State is obstructed, within any county or counties, by combinations of lawless men too strong for the control of the civil authorities, to declare such county or counties under martial law, and to suspend the laws therein until the Legislature shall convene and take such action as it may deem necessary. In this event the Governor, by his proclamation, shall designate the county or counties wherein the laws are to be so sus-

pending; and the Governor shall call out such part of the State Guard, or Reserve Militia, or State police, as may in his opinion be necessary to the suppression of disorder. The expense of maintaining the State Guard, or Reserve Militia, called into active service under this section, may, in whole, or in part, in the discretion of the Governor, be assessed upon the people of the county or counties where the laws are suspended." Whenever the laws are suspended as above provided, it is made the duty of the Governor to provide for the trial and punishment of offenders, and to prescribe all necessary regulations for the formation and government of courts-martial and military commissions.

For judicial purposes there is a Supreme Court, consisting of three judges, and the State is divided into thirty-five judicial districts, for each of which a district judge is elected, who is required to hold three terms of his court annually, in each county of his district. There are also justices of the peace, with jurisdiction in petty cases, who try issues by themselves, or with a jury of six men. For the purpose of maintaining the companies of rangers on the frontiers, the sum of \$750,000 was authorized to be raised by the sale of bonds, redeemable at the pleasure of the State, after twenty years, and payable after forty years, bearing interest at seven per cent. per annum in gold, payable semi-annually. A tax is to be assessed on all property and occupations according to general laws of the State, for the purpose of paying the interest on these bonds, and creating a sinking fund of two per cent. for the payment of the principal at maturity. A very important act relating to the public lands of the State was passed, by which it is provided that "every head of a family, who has not a homestead, shall be entitled to one hundred and sixty acres of land out of any part of the public domain as a homestead, upon condition that he or she will select, locate, and occupy the same for three years, and pay the office-fees on the same. And all single men, twenty-one years of age, shall be entitled to eighty acres of land out of any part of the public domain upon the same terms and conditions as are imposed upon the head of a family;" and any person who shall hereafter in good faith actually settle on any part of the public domain, not exceeding one hundred and sixty acres, shall upon furnishing satisfactory evidence of such settlement be entitled to purchase the same from the State at the price of one dollar per acre. Any person now occupying any part of the public domain in good faith may within twelve months from the passage of this act take the necessary steps to appropriate the same or a part thereof as a homestead, or to purchase the same, or a part thereof, according to the provisions above recited.

The holder of any genuine land certificate or other valid land claim against the State shall hereafter have the right to locate the same upon any part of the public domain as above

provided, not subject to the claim of actual occupants; but such location must be made prior to the 1st of January, 1875, or such certificate or claim will be forever barred.

By "an act to establish a system of public free schools for the State of Texas," it is provided that there shall be a Superintendent of Public Instruction, to be appointed by the Governor, with the advice and consent of the Senate, to hold office till the first general election, and thereafter to be elected by the people for a term of four years. The superintendent has general supervision of educational matters and general control over school officers, and is required to recommend to the Legislature such legislation in his department as he may deem expedient and useful. The county courts are made *ex officio* boards of school directors for their respective counties, with power to appoint a suitable number of school trustees in the county, and are required to "levy and have collected, when necessary, an *ad-valorem* tax on the taxable property of the county, not exceeding one per cent., for the purpose of building school-houses, under their supervision." They shall also require "all parents and guardians, in their respective counties, to send their children and wards to some public school, unless taught by private teachers, or in some other school or seminary of learning, at least four months in each year, under the penalty of forfeiting interest in the school fund for the time being." The board of school directors is made subject to the rules, direction, and supervision of the Superintendent of Public Instruction. All school funds, derivable from whatever source, are to be exclusively appropriated to the payment of teachers, and the salary of the superintendent and clerk. All moneys now standing to the credit of the school fund in the State Treasury, and all lands heretofore conveyed and set apart for establishing primary schools or academies in the several counties of the State, and all sums of money that may hereafter come to the State from fines and forfeitures set apart by law for school purposes, or from the sale of any portion of the public domain of the State, constitute the permanent school fund of the State; and this fund is directed to be consolidated and converted into United States funds. The fourth of the annual revenue derivable from taxation and the annual poll-tax of one dollar, and the interest accruing on the permanent fund, constitute the available school fund which is applicable exclusively to the payment of the expenses of the educational bureau.

At this session a law was passed exempting from execution for debt a homestead of not more than two hundred acres of land in the country, and in a city or village, a lot or lots not exceeding \$5,000 in value, exclusive of the value of improvements; also a law providing for the registration of voters. By the law regulating the holding of elections it is provided that general elections shall be held on the first

Tuesday after the first Monday in November, 1872, and every second year thereafter. Such elections are to be held at the county-seats of the several counties, and the polls are to be open four days from 8 o'clock A. M. to 5 P. M., of each day, with an hour's recess at noon. A State police was established, composed of 1 chief of police, 4 captains, 8 lieutenants, 20 sergeants, and 225 privates. The Adjutant-General of the State, when there is one, acts as chief of police. All sheriffs and their deputies, constables, marshals of cities and towns, and their deputies, and the police of cities and towns, are considered a part of the State police, and, under the direction of the Governor, or chief of State police, may at any time be called upon to act in concert with this force in preventing or suppressing crime, or in bringing offenders to justice. The chief of State police and his subordinates are subject to all orders of the Governor in relation to the preservation of the public peace, or the execution of the laws throughout the State.

Railroad enterprise has been active in Texas, and the Legislature was besieged by persons seeking land-grants and State aid. Few of the bills that were introduced in aid of these projects became laws. One of the most important was the proposed charter of the International Railroad. This line, also known as the Barnes road, connects with the Cairo and Fulton Railroad at or near Fulton, Arkansas, and is intended to pass through Texas in a southwesterly direction, *via* Jefferson, Tyler, Austin, and San Antonio, thence to the Rio Grande at or near Laredo. In aid of this enterprise \$5,000,000 in thirty-years bonds, to be secured by mortgage of the road, was asked of the State, and it was intended to have the road finished in five years. Aid was also asked for the United States and Mexico Railroad, projected from a point on the west bank of the Mississippi River, at the junction of the Ohio opposite Cairo, to pass through Missouri and Arkansas to some point on the Arkansas River near Fort Smith; thence through the Indian Territory to the junction of the Big Wichita and Red Rivers; thence through the State of Texas to the boundary of the United States and Mexico at Presidio del Norte on the Rio Grande, with a branch, at some point east of the 98th degree of longitude, to Lawrence, Kansas; thence on the Mexican side along the Conchos River to the city of Salvazar; thence to Altata on the Gulf of California, with a branch from Salvazar to the city of Mexico.

The Buffalo Bayou, Brazos, and Colorado will be rapidly extended to San Antonio. The Houston and Texas Central is in process of construction northward to its ultimate terminus on Red River, with a view of forming connections with the roads coming down from Kansas. The Washington County road, now owned by the Texas Central, is in process of construction to Austin, the capital of the State. The San Antonio and Mexican Gulf road com-

mences at Lavaca and is intended to extend to San Antonio. A road is projected to cross the Trinity River near Houston and extend through Eastern Texas, a rich and productive country, under the name of the Houston and Great Northern Railroad. The Houston Tap and Brazoria Railway Company being indebted to the Common-School Fund of the State, an act was passed requiring the Governor to sell the road at public auction, at Austin, to the highest bidder, or to bid it in for the benefit of the State if it should bring less than \$100,000 in gold.

The Southern Pacific Railroad, which has been chartered by Congress, was granted aid by the Legislature to the amount of \$16,000 per mile. The length of the principal railroads in operation in Texas is as follows:

	Miles.
Galveston, Houston, and Henderson	50
Buffalo Bayou, Brazos, and Colorado	88
Houston and Texas Central	120
Washington County	25
Texas and New Orleans	108
Houston Tap and Brazoria	50
Southern Pacific (in Texas)	30
San Antonio and Mexican Gulf	30
Total constructed	506
Texas and New Orleans	108
Total in operation	388

The finances of the State are considered to be in good condition. The amount of cash on hand on the 3d of September, 1867, when the provisional government was inaugurated, was \$20,232.26. The receipts from that date to the 16th of April, 1870, were \$1,384,190.80, and the expenditures \$1,024,891.81. The amount of cash in the Treasury, April 16, 1870, including balance of convention fund, but exclusive of school and other special funds, was \$416,709.19. The State debt is represented as not exceeding \$360,000, the principal items of which are the sum due for military services previous to the war, and the amount of money and supplies furnished the penitentiary since the war. The Auditorial Board, created by the provisional act of November 9, 1866, reported the total debt, principal and interest, on the 1st of December, 1867, at \$382,436.17. Deducting the sum of \$78,466.51 audited and un-audited non-interest notes, which are declared void by the constitution, there remains \$243,969.66 as the total debt on the 1st of December, 1867, which, with interest added to date and the amount audited, about \$60,000, due from the penitentiary, represents the total indebtedness of the State. The exact amount is not given, but it does not exceed \$360,000. In this statement of indebtedness the bonds issued to the Common School and University Funds, under the provisional act of November 12, 1866, amounting to \$216,541.08, and interest, are not included. The total value of property liable to taxation is estimated at \$250,000,000, although, owing to the irregularity and insufficiency with which the assessment has been conducted since the war, the last

assessment shows a taxable valuation of only \$149,665,386.

The public-school system of the State has not been put into operation, owing to the failure of the Legislature to make the necessary appropriation. The number of school-children in the State is reported at 160,000, of whom at least 100,000 enjoy no school advantages. The permanent school fund, exclusive of poll and property taxes subject to appropriation, amounts now to upward of \$2,575,000, most of which is already realized, or will be within a short period. In addition to this permanent school fund, the State holds in trust the usual appropriation of every sixteenth and thirty-sixth section of public lands. For the year 1871 it is anticipated that \$500,000 can be appropriated to public schools, without resorting to direct taxation.

After the organization of the State police force in July, to the end of the year, 978 arrests were made—109 of persons charged with murder, 180 charged with assault with intent to kill, and 894 with other felonies. Official reports of criminals evading justice, received from 166 counties, show a total of 2,790 persons charged with crime in those counties, and evading arrest—29 counties have not reported. Among those persons charged with crime, 702 were charged with murder, and in some cases two or more, even seven murders being charged to a single individual; 418 charged with assault with intent to kill, and 1,187 charged with other felonies. The most determined efforts were made by the Governor and the Legislature for the suppression of this lawlessness; and to this end the militia and State police were organized; a law was passed prohibiting citizens from carrying deadly weapons, and steps were taken toward an extensive increase in the number of jails. The stringent measures of the administration seem to have been productive of good.

The people of Texas are beginning to give more attention to the subject of internal manufactures and industry. In presenting this subject to the Legislature, the Governor said:

You will, without doubt, esteem it within your powers and duty to encourage, in every reasonable way, with a due regard to economy, the growth of every species of manufacture and industry. Much can generally be done in this way, without the expenditures of the public money, or the grant of exclusive or exceptional privileges, by the passage of general laws affording adequate protection to property. Manufactures, I believe, can be stimulated by relief from taxation for a short term of years, and the State's income not unfavorably affected thereby. And our broad and treeless prairies invite the experiment here of State encouragement to the planting of trees, which seems to have succeeded well in States similarly conditioned. Among the most important interests in our State, and one to which this necessity for protection more especially applies, is to that of stock-raising. It is estimated that Texas can supply, at this time, a million head for consumption beyond the State, besides other stock.

The following is the Federal census of Texas for the years 1860 and 1870:

THOMAS, GEORGE HENRY, Major-General United States Army, commander, at the time of his death, of the Military Department of the Potomac, one of the ablest, purest, and most successful of the military chiefs of the late war, born in Southampton County, Va., July 31, 1816; died in San Francisco, Cal., March 28, 1870. His family were of the planter class, possessed of a liberal competence, well educated and refined. His ancestors had been for several generations residents of Southeastern Virginia; his father was of Welsh and his mother of Huguenot French descent. His early opportunities of education were good, and at the age of twenty he had just entered upon the study of law when his friends secured him an appointment as cadet at the Military Academy at West Point. He entered in 1836, and, after a thorough and solid, rather than a brilliant course, he graduated in 1840, ranking twelfth in a class of forty-two members, among whom were Sherman, Ewell, Jordan, Getty, Herbert, Van Vliet, and others, who afterward attained celebrity. Assigned to duty on the

day of graduation as second lieutenant of the Third Artillery, he served in the regular Army for twenty years, during which time he rendered honorable and faithful service in the Florida War from 1840 to 1842; in command of various forts and barracks from 1842 to 1845; in the military occupation of Texas in 1845-'46; in the Mexican War from 1846 to 1848—participating in nearly all its leading battles; in the Seminole War in 1849-'50; as instructor in artillery and cavalry at West Point from 1851 to 1854; on frontier duty at various posts in the interior of California and Texas, leading several expeditions against the Indians, from 1855 to the autumn of 1860. During these twenty years he was repeatedly brevetted for gallant and meritorious services, and rose through all the grades to a captaincy of artillery, and in 1855 was made a major of the Second Cavalry, which regiment he commanded for three years. He was wounded in a skirmish with the Indians at the head-waters of the Brazos River, in August, 1860, and in the following November went East on a leave

of absence. During the winter of 1860-'61, he watched the culmination of that conflict of opinion which preceded the war, with the most painful anxiety. Relinquishing his leave of absence, he reported for duty at Carlisle Barracks, Pa., on the 14th of April, the day when the flag went down at Sumter, and less than forty-eight hours after the first shot was fired. On the 27th of May he led a brigade from Chambersburg across Maryland to Williamsport, and on the 16th of June rode across the Potomac in full uniform at the head of his brigade, to invade Virginia, and fight his old commanders; and a few days after he led the right wing of General Patterson's army in the battle of Falling Waters, and defeated the Confederates under Stonewall Jackson.

After serving through the brief campaign of the Shenandoah, General Thomas entered upon that wider sphere of action in which he was destined to win an undying reputation. The Department of the Cumberland, embracing at first only Tennessee and Kentucky, was created by the War Department August 15, 1861, and General Robert Anderson placed in command. At Anderson's request Sherman and Thomas were made brigadier-generals of volunteers, and assigned to his command. The remainder of 1861 was the period of organization. The first month's work that Thomas performed in the department was at Camp Dick Robinson, where he mustered into service eleven regiments and three batteries of Ohio, Indiana, Kentucky, and Tennessee troops, which he organized into the First Brigade, and which formed the nucleus of the division, then of the corps, and finally of the great army which he afterward commanded so long.

In the early autumn of 1861 the Confederates had organized a brigade in Eastern Tennessee and Southwestern Virginia for the special purpose of guarding the mountain-passes at Cumberland Gap and Pound Gap. Before the end of the year they had also organized two active forces to operate in front of these gaps, one under Marshall, which moved from the neighborhood of Pound Gap down the Sandy Valley; and the other, a larger force, under Zollikoffer, which occupied the road leading from Cumberland Gap to Lexington.

The first work of General Buell's campaign was to drive back these forces and occupy the two mountain-passes as a protection to his flank and rear. General Thomas had been placed in command of the First Division of the army, and on the 31st of December was ordered to move against Zollikoffer. In pursuance of this order, he fought and won the battle of Mill Spring, January 17, 1862, which was by far the most important military success that had yet been achieved west of Virginia; and, with the exception of the defeat of Marshall, near Prestonburg, nine days before, it was the first victory in the department. In this battle General Thomas laid the foundation of his fame in the Army of the Centre. It was the

largest and most important command he had held up to that time, and his troops came out of the fight with the strongest confidence in his qualities as a commander.

From the 30th November, 1861, to the 30th September, 1862, he commanded a division of General Buell's army without intermission, except that during the months of May and June he commanded the right wing of the Army of the Tennessee in and around Corinth. On September 30, 1862, he was appointed second in command of the Army of the Ohio, having previously refused the chief command, and served in that capacity in the battle of Perryville, and until October 30, 1862, when the old name of Department of the Cumberland was restored, and General Rosecrans assumed command. That officer reorganized the army into three distinct commands—right, left, and centre—and assigned Thomas to the centre, which consisted of five divisions. He held this command in the battle of Stone River, and until the 9th of January, 1863, when, by order of the War Department, the Fourteenth Army Corps was created, and Thomas commanded it during the summer campaign of Middle Tennessee and the Chickamauga campaign, which resulted in driving the enemy beyond the Tennessee River, and gaining possession of Chattanooga.

On the 27th of September he was ordered by General Sherman to return with a portion of his army into Tennessee and defend the department against Hood's invasion. By the end of October Sherman had determined to cut loose from his base and march to the sea. For this service he selected the flower of his grand army, including two of the best corps of Thomas's force.

By the 5th of November Hood was encamped on the banks of the Tennessee with 45,000 infantry and not less than 12,000 of the best cavalry in the South. Thus Thomas was confronted by that veteran army which had so ably resisted Sherman on his march to Atlanta. At the same date Thomas had an effective force of but 23,000 infantry and 7,000 cavalry. Convalescents and dismounted cavalry were coming back to him from Atlanta; raw recruits were moving from the North, and two divisions were *en route* from Missouri. The problem before him was how to delay the advance of the enemy until he could organize a force strong enough to win a battle. The history of this campaign is too well known to need repetition here.

Nashville was the only battle of our war which annihilated an army. Hood crossed the Tennessee late in November, and moved northward with an army of 57,000 veterans. Before the end of December, 25,000 of them were killed, wounded, or captured; thousands more had deserted, and the rabble that followed him back to the South was no longer an army.

The nation was by this time ready to recognize General Thomas's merits, and to under-

stand that it was solely by his remarkable abilities, without the influence of powerful friends, that he had attained a position second to that of no officer of the army. Honors and rewards were pressed upon him, but, with a simple dignity of character, he declined them all, satisfied with having done his duty. After the war, he was placed in command successively of the most important and difficult military departments, and, under circumstances often of great responsibility and delicacy, his conduct gave general satisfaction. In private life General Thomas's reputation was without a blemish or a stain. He was indeed the Chevalier Bayard of our time, *sans peur, et sans reproche*. His death was the result of apoplexy.

THOMSON, EDWARD, M. D., D. D., LL. D., Bishop of the Methodist Episcopal Church, born at Portsea, a suburb of Portsmouth, England, in October, 1810; died at Wheeling, Va., March 22, 1870. In 1819 he emigrated with his parents to this country, and settled in Wooster, Wayne County, Ohio. Notwithstanding the scarcity of good schools in so new a country, he was well trained in the elements of the sciences and the classics. His scientific taste inclining him to the medical profession, he entered the University of Pennsylvania, and received his diploma in 1829. Returning to Ohio, he entered upon the practice of his profession in Wooster. At this time he was a skeptic in religion, with an entire disbelief in the Bible and Christianity. With several other able and skeptical young men, he formed an infidel club, to meet weekly, and to seriously read and refute the Bible. The experiment resulted in Thomson's conviction of the inspiration of the Scriptures, and finally in his embracing the faith which he had rejected. He entered the Methodist Episcopal Church, and in 1838 began his ministerial work in the Ohio Conference. In 1836, he was located in Detroit, where his success as a pulpit orator drew throngs to his ministry. At the end of that year he was called to the principalship of the seminary in Norwalk, Ohio, which position he held for eight years. By the General Conference of 1844 he was elected editor of *The Ladies' Repository* at Cincinnati, and the following year was elected first President of the newly-founded Ohio Wesleyan University, at Delaware, Ohio, the first Methodist college in the State. He remained fifteen years, bringing the institution to the leading position it now holds in the education of the West. His success in the presidency of that college is in many respects without a parallel in the history of the Methodist Church. In 1860 the General Conference called him to the then stormy post of the editorship of *The Christian Advocate*, in New York, where he succeeded Dr. Abel Stevens, the accomplished historian of the Church. Dr. Thomson was elected to that hitherto conservative journal, as an antislavery champion, by the radical majority of the General Con-

ference, and a rival sheet, *The Methodist*, was at once started by the defeated party. But such was the ability and urbanity with which *The Advocate* was conducted that it came out of his hands with a larger subscription-list than he found. Few religious journals in the land did the country better service during the war for the Union than *The Christian Advocate*. The General Conference of 1864 elected Dr. Thomson to the Episcopacy, with Drs. Clark and Kingale. He had been a member of every General Conference since 1840, and received the doctorate of divinity from Augusta College, Ky., in 1844, and that of laws from the Wesleyan University, Conn., in 1855. His first work in his high office was a voyage around the world, the first ever made by a Methodist bishop. He visited the Methodist missions in Germany, Bulgaria, India, and China. The India mission he organized into an annual conference. On his return he passed in review the work of the Church in California, Oregon, and the new Territories. Subsequently he was actively engaged in his portion of the home work. The published volumes of Dr. Thomson are four, viz.: "Educational Essays," "Moral and Religious Essays," "Biographical and Incidental Sketches," and "Letters from Europe," with several prefaces.

TURKEY, an empire in Europe, Asia, and Africa. Grand Sultan, Abd-ul-Aziz Khan, born February 9, 1830. Area, 1,920,944 square miles. Population, 43,600,000. With regard to their religion, about 27,000,000 are Mohammedans, and about 16,000,000 Christians. The number of Catholics, according to a recent report made by a statesman in high position (*Augsburg Allgemeine Zeitung*, of April 16, 1870), is as follows: Catholics of the various Oriental rites, 410,000; Christians of the Latin rite (Roman Catholics), 991,000; Armenian Catholics, 77,800; total, 1,478,800. The principal cities in Turkey in Europe, and their population, are: Constantinople, 1,075,000; Adrianople, 100,000; Salonica, 100,000; Serayevo, 50,000; Gallipoli, 50,000; Philippopolis, 40,000; Sophia, 80,000. In Turkey in Asia: Smyrna, 150,000; Damascus, 120,000; Beyroot, 100,000; Brusa, 100,000; Erzurum, 100,000; Aleppo, 100,000; Bagdad, 40,000; Jerusalem, 25,000.

The expenses of the government, for 1869-'70, amounted to 4,072,168 purses, or \$88,691,-819.04; revenue, 3,550,289 purses, or \$77,325,-292; deficit, \$11,366,527.04. The foreign debt, at the end of 1869, was estimated at \$427,856,-000, and the home debt, which had been consolidated in 1865, amounted, on January 1, 1867, to \$166,980,000, bearing 5 per cent. interest. The floating debt, according to a report of the Minister of Finance, of July, 1869, amounted to £5,000,000 sterling, but is said to have reached £7,700,000 sterling at the end of that year.

On July 22, 1869, a law on the reorganization of the army was published, which fixes its numerical strength as follows:

1. Active standing army (Nizam).....	150,000
2. Reserves, first class.....	60,000
3. Reserves, second class (Redif).....	192,000
4. Troops for the defence of the empire, and for service in fortresses.....	800,000
Total.....	702,000

It is proposed to reduce the time of service in the active standing army from five to four years, in which case the annual contingent of the army would be 87,500 men. The fleet, in 1870, consisted of 13 iron-clads, of 216 guns; 27 screw steamers, of 645 guns; 9 corvettes and 13 avisos, of 820 guns; 12 gunboats, of 28 guns; and 35 transports, of 52 guns. Total, 109 steamers, of 1,761 guns. Besides, there were 53 sailing-vessels, of different construction and armament.

The vessels which entered the port of Constantinople, in 1868, numbered 22,141, of 5,037,448 tons; the number of clearances was 22,542 vessels, of 5,064,571 tons.

The introduction of railroads and telegraph-lines, to which the Government was formerly opposed, is likely to invite foreign capital, industry, and immigration. The length of railroads in operation in Turkey in Europe, in 1869, was limited to 182 miles, comprising the two lines from Varna to Rustchuk, and from Rustendjé to Tohernavoda. Concessions were made, however, for the construction of several lines, of an aggregate length of 1,260 miles, all of which are now being pushed forward energetically. In Asia Minor there have been, since 1867, about 145 miles of railroad in operation, running from Smyrna to various points in the vicinity. The length of telegraph-lines, in 1866, was 8,647 miles; length of wire, 17,679 miles.

Toward the latter part of July, 1870, the increasing uncertainty as to the ultimate result of the struggle between France and Prussia made gold more scarce every day, people became cautious, and credit was daily diminishing. Many failures in commercial circles were the immediate consequence. At the same time, Russian intrigues became rife in Servia, in favor of a panlavist movement, and the Government of the Sultan was compelled to prepare for future difficulties, in case of complications in those parts. Great activity was soon perceptible at the arsenal and at the Government works.

At the close of the year 1869 the relations between the Sultan and the Khedive, which had been greatly disturbed, became of a more pacific character. Ismael Pacha, after hesitating for some time to yield to the demands made in the Turkish note of November, 1869 (*see AMERICAN ANNUAL CYCLOPEDIA*), at last resolved to submit. He declared his readiness to yield his financial administration to the superintendence of the Porte, to reduce his military power, and to relinquish all direct negotiations with foreign powers. On December 9th, the Turkish firman, containing the demands of the Porte, was published at Cairo. In February, 1870, the three iron-clad frigates were given up to the Turkish Government,

which indemnified the Khedive for all his expenses. Nubar Pacha went to Constantinople, in order to negotiate with the Porte concerning the execution of the judicial reform which the Government of Egypt and the representatives of the foreign powers had agreed upon. Ali Pacha demanded some modifications, reducing the concessions by which the plan of the judicial reform had been yielded to the European powers. When these modifications were conceded by the representative of Egypt, the Porte sanctioned the reform, and authorized Nubar Pacha to confer with the European powers concerning its execution. Soon the Khedive gave new offence to the Porte, as he again appeared in the money-markets of Europe, endeavoring to negotiate some \$24,000,000 of additional obligations. To justify his breach of promise, the Khedive explained that he only intended to make a loan on his private property; but it was known in Constantinople that but little distinction was made in Cairo between the public exchequer and the private property of the Khedive. The Porte did not expressly forbid the loan, but endeavored to destroy the credit of the Khedive by publicly declaring (May, 1870) in London and Paris that the loan had no claim whatever to a legal recognition. England strongly supported the views of the Sultan, and prevailed upon the Khedive to pay a visit to the Sultan, at Constantinople, for the purpose of adjusting all the differences. The Khedive arrived at Constantinople on July 7th, and gave satisfactory explanations, and a complete reconciliation was reached.

In the latter part of the year a new complication arose between Turkey and Russia, as the Czar demanded a modification of the Paris Treaty of 1856. For a time a war was regarded as imminent, and extensive warlike preparations were made. Along the Danube, an army of observation was formed, and placed under the command of Omar Pacha, while a smaller corps of 20,000 men received orders to move toward the Greek frontiers. These naval and military preparations told heavily on the resources of the Treasury, and the Minister of Finance, Sadik Pacha, was compelled to enter the money-market to borrow various sums at 15 per cent. against deposit of Government securities. The Viceroy of Egypt offered 20,000 breech-loaders to the Sultan, and also a corps of 30,000 Egyptian troops for the camp of Rustchuk. (*See EASTERN QUESTION.*)

On January 21st, a law was promulgated, ordering the introduction of a uniform decimal system of weights and measures for the Ottoman Empire. On the 18th of May, a firman was published, decreeing the liberty of passage for all vessels through the Dardanelles and Bosphorus at all hours. This law did not, however, give general satisfaction, as a very heavy extra fee was charged for the permission.

The project of inviting Western emigration to Turkey was actively taken up, and the Turkish ambassadors in London and Paris re-

ceived orders to promise a free grant of land and exemption from taxation for ten years.

On the 5th of June, a most disastrous conflagration broke out at Pera, that part of Constantinople occupied by the foreign legations, the greater part of the foreign population and a vast number of native Christians. About noon a wooden house, situated on the highest part of the city, called the Taxsim, caught fire, and, freshened by a violent north wind, it spread with fearful rapidity over an extent almost incredible; from the Taxsim to what is called the Petit Camps des Morts, along the main street to some distance between the Galata Saray College, consuming all of the fine houses of the place, of stone as well as of wood. An immense number of dwellings were burned, and about 1,000 persons, men, women, and children. The loss was estimated to be nearly \$25,000,000. All of the finest cafés, the opera and shops, with all of their contents, were destroyed. According to careful count, over 7,000 buildings of all sorts were burned, many of them among the best in the city.

A ministerial crisis occurred in August, when the following new nominations were made: Mustapha Fazil Pacha, President of the Council of State, was named Minister of Finance; Sadik Pacha, Intendant of the Properties of the Church; Edheim Pacha, Minister of Justice; and Haidar Effendi, Prefect of Constantinople; Halil Bey was appointed ambassador to Vienna, and Rustem Bey ambassador to St. Petersburg.

At a meeting of the Divan of the Sublime Porte, on April 29th, the Sultan addressed the councillors on the state of the empire. He reviewed the events and progress of the past year, and said the Government would not be satisfied to stop with what had been effected. He promised that reforms in the civil polity, the development of education, and the fostering of trade, should have his careful attention, and that steps would shortly be taken for a thorough reorganization of the army and navy, and the improvement of the highways and lines of communication throughout the Turkish dominions.

U

UNITARIANS. The *Year-book* of the Unitarian Congregational Churches for 1871 gives lists of 347 societies in the United States and British America (against 334 in the preceding year), and 396 ministers (the same number as in the preceding year), of whom 148 were not settled. The number of Unitarian organizations was increased in 1870 by the establishment of the "Cape Cod Conference of Unitarian Congregational and other Liberal Christian Churches," organized November 30th, at Barnstable, Mass., and of the "Chicago Missionary Society," the object of which is to assist in the establishment of Unitarian Sunday-schools and churches in Chicago. No changes are reported in the *Year-book* in the list of periodicals, or in the Unitarian statistics of Great Britain, Hungary, and India. (See the account in *AMERICAN ANNUAL CYCLOPEDIA* for 1869.)

The Fourth National Conference of the Unitarians of the United States began at New York, on Wednesday, October 19th. The most important topic of discussion was on the preamble and the proposed alteration of Article IX. of the Constitution, which reads as follows:

Whereas, The great opportunities and demands for Christian labor and consecration at this time increase our sense of the obligations of all disciples of the Lord Jesus Christ to prove their faith by self-denial, and by the devotion of their lives and possessions to the service of God and the building up of the kingdom of His Son.—*Preamble of the Constitution of Unitarian Conference.*

To secure the largest unity of the spirit and the widest practical coöperation, it is hereby declared that all the declarations of this Conference, including the preamble and constitution, are expressions only of its majority, committing in no degree those who object to them, and dependent wholly for their effect upon the consent they command on their own merits from the churches here represented or belonging

within the circle of our fellowship.—*Article IX. of Constitution.*

Rev. Mr. Hepworth, of New York, began the anticipated battle by presenting a resolution altering the contested Ninth Article. With the desire to increase brotherly feeling in the denomination, he proposed that all the words after "Article IX." be omitted, and that the following be substituted:

Reaffirming our allegiance to the Gospel of Jesus Christ, and to secure the largest unity of the spirit and the widest practical coöperation, we invite to our fellowship all who wish to be followers of Christ.

In the animated discussion on this amendment, which lasted for two days, a number of prominent members of the denomination took part. Among others, Charles Lowe, Secretary of the American Unitarian Association, of Boston, Rev. James Freeman Clarke, Rev. Dr. Bellows, who was emphatic in demanding that the constitution of the National Conference must distinctly recognize the Christian character of the Unitarian denomination, Rev. Robert Laird Collier, and Mrs. Julia Ward Howe.

An amendment to Mr. Hepworth's resolution, offered by Rev. Mr. May, to retain Article IX., but to add to it the words, "*Provided*, that nothing in the article be construed as removing the Conference from its Christian basis," was lost. The vote was then taken on the resolution of Rev. Mr. Hepworth, which was carried by 266 to 83.

The following resolutions in behalf of the American Unitarian Association were also adopted by the Conference:

Resolved, That, in view of the great and growing opportunity of making known the principles and spirit of Unitarian Christianity, we earnestly recommend every church and society within the circle of

our fellowship to use all due diligence in raising funds which shall enable the American Unitarian Association to meet the great call from all quarters for the knowledge of the truths which we hold dear.

Resolved, That the churches be requested to raise \$100,000 for the use of the American Unitarian Association, next year, and that we approve the suggestion of the committee, that the second Sunday in November shall be known as "Collection Sunday."

The Hon. E. Rockwood Hoar, of Concord, Mass., was elected President, and George W. Curtis, of New York, first Vice-President.

A committee was appointed to raise \$100,000 to endow the theological school at Chicago, the property of which has been bought for \$50,000. The Conference also passed a resolution of sympathy with Humboldt College, Iowa.

UNITED BRETHREN IN CHRIST. The official statistics of the United Brethren for 1870 were reported as follows:

STATES.	No. of members.	No. of organized societies.	No. of church edifices.
Ohio	32,143	297	546
Indiana	20,588	634	248
Pennsylvania	18,586	573	280
Illinois	12,032	391	119
Iowa	7,398	306	44
Michigan	4,500	208	28
West Virginia	4,231	194	47
Kansas	3,227	161	10
Missouri	3,063	145	5
Maryland	2,959	67	29
Virginia	2,459	64	36
Wisconsin	2,038	96	14
New York	1,360	70	14
Canada	966	89	28
Oregon	787	42	6

California	300	30	2
Washington Terr'y.	186	7	1
Dakota Territory	92	4	..
Colorado Territory	58	4	..
Total	118,055	3,994	1,478

Sabbath-schools, 2,420, with 16,417 teachers and 112,425 scholars; collections for church purposes, \$580,288; value of church property, \$2,506,600; sittings in churches, 483,099; meeting-houses, 1,478.

The Church has four bishops, whose terms expire at the meeting of the next General Conference, namely, J. J. Glossbrenner, David Edwards, Jonathan Weaver, and John Dickson. The publishing-house of the Church, which is located at Dayton, O., published, in 1870, five papers: *The Religious Telescope*, weekly, circulation 9,204; the *Children's Friend*, semi-monthly, circulation 43,261; the *Missionary Visitor*, semi-monthly, 16,152; *Froehliche Botschafter*, weekly; *Jugendpilger*, monthly. The Church had six colleges: Otterbein University, at Westerville, O.; Hartsville University, at Hartsville, Ind.; Westfield College, at Westfield, Ill.; Lebanon Valley College, Annville, Pa.; Lake University, Leocompton, Kan.; and Western College, Western, Io.

UNITED STATES. The census of the population of the United States, although taken in June, 1870, had not been so far compiled, early in the ensuing year, as to show the number of inhabitants. As far as the work was finished, it presented the following results:

STATES.	1870.	1860.
Alabama	906,988	964,201
Arkansas	438,179	435,450

By reference to the table on the following page, the increase of population in some of the principal cities of the United States, for the last ten years, will be seen.

The fifteenth amendment to the Federal Constitution was ratified by the necessary number of States early in 1870. The Legislatures of twenty-nine States voted in favor of its ratification. On March 30th, the President in a message reported the votes to Congress and announced the result. (*See*, in this volume, p. 168, CONGRESS, U. S.) In that body a bill was at once introduced and speedily passed to secure the freedom of suffrage to the male colored population of each State. No serious resistance or obstacle was presented to this suffrage anywhere and it was quietly conceded. A majority of the new voters cast their ballots in favor of Republican candidates, and in many cases secured their election; but it was manifest before the close of the year that, under a party aspect, this suffrage of colored men was not a permanent element of strength to any political party. A few colored men have thus been elected to office. On the evening of the day of the first ratification of the amendment, the President, and some other distinguished advocates of the measure, were serenaded in

TABLE OF POPULATION OF SOME OF THE PRINCIPAL CITIES IN THE UNITED STATES.

Washington. The President, on making his appearance, was addressed by John W. Forney, late Secretary of the Senate, as follows:

Mr. President: On the part of the Republicans of the District of Columbia I am here to-night to return to you, in their name, the expression of their profound gratitude for the second proclamation which seals the great work of the war, in the overthrow of which you were the chief instrument. The first proclamation of your illustrious predecessor, which declared the downfall of slavery, was essential to that great moral victory which succeeded the triumph of arms. Mr. President, it is impossible to speak the feelings of the race liberated, first, by Mr. Lincoln, and second, enfranchised by yourself, on this interesting occasion. Those of us who have enjoyed the rights of citizenship for so long a time cannot express the emotions which swell their hearts this evening; and you, sir, may well conceive how they appreciate the great work which has been so splendidly consummated by yourself—the words of counsel, the words of cheer, the words of encouragement you have bestowed upon them—and, therefore, on this ineluctable night, they have come to tender you their heart-felt thanks for again proving yourself their liberator and their friend.

* Second enumeration.

To which President Grant replied as follows:

Sir: I can assure those present that there has been no event since the close of the war in which I have felt so deep an interest as that of the ratification of the fifteenth amendment to the Constitution by three-fourths of the States of the Union. I have felt the greatest anxiety ever since I have been in this house to know that that was to be secured. It looked to me as the realization of the Declaration of Independence. I cannot say near so much on this subject as I would like to, not being accustomed to public speaking, but I thank you very much for your presence this evening.

The crowd loudly cheered the President as he retired, and the band struck up "John Brown's body lies mouldering in the grave." Vice-President Colfax, in response to calls, then came forward and said:

Fellow-citizens: My heart rejoices with yours in that proclamation which declares to the people of this republic and to the people of the world the ratification of the fifteenth amendment to the Constitution. It is, indeed, a fortunate coincidence that the same voice that proclaimed the downfall of the rebellion and the salvation intact of this imperilled Union proclaimed afterward, as the Chief Magistrate of the land which by his valor and that of his fellow-

soldiers was saved from disruption, that, as this country has made all free, the same country has determined that every one should have in his hands the ballot to protect that country. Opposed, as it has been, in its progress to this final culmination, it will live in all history as the Magna Charta of this Republic of the United States.

Senator Sumner, of Massachusetts, was then waited upon, and, for the first time in his life, appeared and responded on such an occasion. He commenced by congratulating them on the great results accomplished in securing equal rights for all, which for years had been his hope and object—to see the promise of the Declaration of Independence become a reality. He would not say that it was entirely accomplished, for it was not. It was his nature to think more of what remains to be done than of what has been done—more of duties than of triumphs. He had only just heard from Philadelphia of a decision in a court of justice that a colored person of foreign birth could not be naturalized in this country because of color. This is in accordance with an old statute—a relic of the days of slavery. He had now a bill before the Judiciary Committee of the Senate striking the word “white” from our naturalization laws. It remains further that equal rights shall be received in all the public conveyances in the United States, that no one be excluded therefrom by reason of color. It also remains, he said, that you here in Washington shall complete this equality of rights in your common schools. You all go together to vote, and any person may find a seat in the Senate of the United States, but the child is shut out of the common school on account of color. This discrimination must be abolished. All schools must be open to all without distinction of color. In accomplishing this you will work, not only for yourselves, but will set an example for all the land, and most especially for the South. Only in this way can your school system be extended for the equal good of all; and now, as you have at heart the education of your children, that they should grow up in that knowledge of equal rights, so essential for their protection to the world, it is your bounden duty here in Washington to see that this is accomplished. Your school system must be founded on equal rights, so that no one shall be excluded on account of color.

Subsequently, Chief-Justice Chase, in reply to an invitation by the colored people of Cincinnati to attend the celebration of the adoption of the amendment, sent the following letter:

WASHINGTON, March 30, 1870.

Gentlemen: Accept my thanks for the invitation you have tendered me, in behalf of the colored people of Cincinnati, to attend their celebration of the ratification of the fifteenth amendment. My duties here will not permit me to be present except by good-will and good wishes.

Almost a quarter of a century has passed since some of you, probably, heard me declare, on the 6th of May, 1846, in an assembly composed chiefly of the people whom you now represent, that all illegal distinctions between individuals of the same commu-

nity founded on any such circumstances as color, origin, and the like, are hostile to the genius of our institutions and incompatible with the true theory of American liberty; “that true democracy makes no inquiry about the color of the skin, or the place of nativity, or any other similar circumstance of condition; and that the exclusion of the colored people as a body from the elective franchise is incompatible with true democratic principles.”

I congratulate you on the fact that these principles, not then avowed by me for the first time, nor ever since abandoned or compromised, have been at length incorporated into the Constitution and made part of the supreme law of the land.

Many, no doubt, would have been glad, as I should have been, if the great work consummated by the ratification of the fifteenth amendment could have been accomplished by the States through amendment of State constitutions and through appropriate State legislation; but the delays and uncertainties, prejudicial to every interest, inseparable from that mode of proceeding seemed to necessitate the course actually adopted. Nor does the amendment impair the real rights of any State. It leaves the whole regulation of suffrage to the whole people of each State, subject only to the fundamental law, that the right of no citizen to vote shall be denied or abridged on account of color, race, or previous condition of servitude. It is to be hoped that each State will so conform its constitution and laws to this fundamental law that no occasion may be given to legislation by Congress.

But the best vindication of the wisdom as well as justice of the amendment must be found in the conduct of that large class of citizens whom you represent. On the occasion to which I have referred I ventured to say that “the best way to insure the peaceful dwelling together of the different races is the cordial reciprocation of benefits, not the mutual infliction of injuries;” and I cannot now give you better counsel than I gave you then: “Go forward, having perfect faith in your own manhood and in God’s providence, adding to your faith, virtue; and to virtue, knowledge; and to knowledge, patience; and to patience, temperance; and to temperance, brotherly kindness; and to brotherly kindness, charity.”

Why not signalize your rejoicing in the rights secured under the fifteenth amendment by urging upon Congress the prompt removal of all political disabilities imposed upon our fellow-citizens by the fourteenth amendment? so that, through universal suffrage and universal amnesty, peace, good-will, and prosperity, may be established throughout our country.

Every good man must rejoice in the progress which the colored citizens of the United States have made in education, in religious culture, and in the general improvement of their condition. Every good man must earnestly desire their continued and accelerated progress in the same direction. All public and all private interests will be promoted by it; and it will insure, at no distant day, cordial recognition of their rights even from those of their fellow-citizens who have most earnestly opposed them.

No man can now be found who would restore slavery; a few years hence, if the colored men are wise, it will be impossible to find a man who will avow himself in favor of denying or abridging their right to vote.

Very respectfully yours,

S. P. CHASE.

Messrs. PETER H. CLARKE, etc., Committee.

The sudden outbreak of the war between Germany and France attracted attention to the rights and duties of neutrals, and led the President, on August 22d, to issue a proclamation enjoining neutrality upon American citizens during the contest, and declaring, so far

asseemed to be necessary, the respective rights and obligations of the belligerent parties and of citizens. (*See PUBLIC DOCUMENTS.*) Subsequently, on the appearance of French armed vessels in the waters of New York, and the apprehension of a practical blockade of the port by the same as against German merchantmen, the President, on October 8th, again issued a proclamation, declaring that any frequenting and use of the waters within the territorial jurisdiction of the United States by the armed vessels of either belligerent (France or the North-German Confederation and its allies), whether public ships or privateers, for the purpose of preparing for hostile operations, or as posts of observation upon the ships-of-war or merchant-vessels of the other belligerent lying within or being about to enter the jurisdiction of the United States, must be regarded as unfriendly and offensive, and in violation of that neutrality which it was the determination of the Government to observe; that ships-of-war of either belligerent should not leave any port of the United States within twenty-four hours after the departure of a merchantman of either belligerent; that war-vessels of either belligerent should not remain longer than twenty-four hours in any port of the United States unless for needed repairs and supplies; and that no vessel-of-war of either belligerent, after having entered one port and left it, should reënter such port or another of the United States until after having visited a European port or a port of its own government. The making of American ports depots for supplying materials of war to belligerents was also prohibited; and the proper officers were instructed to carry out the proclamation. This was substantially the law of neutrality proclaimed, but not enforced, by England as her law of neutrality between the United States and the Confederate States in the late civil war. The position was taken by the Prussian Government that private property on the high-seas should be exempt from seizure, and instructions to that effect were given to her naval officers. The communication of these instructions to the Secretary of State, by the Prussian minister at Washington, called forth the following letter of congratulation from the former:

DEPARTMENT OF STATE, }
WASHINGTON, July 22, 1870. }

SIR: I have the honor to acknowledge the receipt of your letter of the 10th inst., communicating to this Government the text of a dispatch from Count Bismarck to the effect that private property on the high-seas will be exempt from seizure by the ships of his Majesty the King of Prussia, without regard to reciprocity.

In compliance with the request further contained in your note, this communication has been officially made public from this department. It is now nearly a century since the United States, through Thomas Jefferson, Benjamin Franklin, and John Adams, then plenipotentiaries, and under the guidance of the great Frederick of Prussia, entered into a treaty of amity and commerce, to be in force for ten years from its date whereby it was agreed that, if war should un-

happily break out between the two contracting parties, all merchant and trading vessels employed in exchanging the products of different places, and thereby rendering the necessities, conveniences, and comforts of human life more easy to be obtained and more general, should be allowed to pass free and unmolested, and that neither of the contracting powers should grant or issue any commission to any private armed vessels, empowering them to take or destroy such trading-vessels or interrupt such commerce. The Government of the United States receives with great pleasure this renewed adherence of the great and enlightened German Government to the principles temporarily established by the Treaty of 1785, and since then advocated by this Government whenever opportunity offered. In 1854 President Pierce, in his annual message to Congress, said: "Should the leading powers of Europe concur in proposing a rule of international law to exempt private property upon the ocean from seizure by public armed cruisers, as well as by privateers, the United States will readily meet them on that broad ground." In 1856 this Government was invited to give its adhesion to the declaration of Paris, and Mr. Marcy, then Secretary of State, replied that the President proposed to add, to the first proposition in the declaration of the Congress at Paris, the following words: "And that the private property of the subjects or citizens of a belligerent on the high-seas shall be exempted from seizure by the public armed vessels of the other belligerent unless it be contraband." Thus amended, the Government of the United States will adopt it, together with the other three principles contained in the declaration. And again, in 1861, Mr. Seward renewed the offer to give the adhesion of the United States to the declaration of the Congress of Paris, and expressed a preference that the same amendment should be retained. Count Bismarck's dispatch, communicated in your letter of the 10th inst., shows that North Germany is willing to recognize this principle, even without reciprocity, in the war which has now unhappily broken out between that country and France. This gives reason to hope that the Government and people of the United States may soon be gratified by seeing it universally recognized as another restraining and humanizing influence imposed by modern civilization upon the art of war.

Accept the renewed assurance of my very high consideration. (Signed) HAMILTON FISH.

To Baron GEBOLT, etc.

On June 20th, the Attorney-General, E. Rockwood Hoar, of Massachusetts, resigned his position, and was succeeded by Amos T. Akerman, of Georgia. J. D. Cox, of Ohio, also resigned as Secretary of the Interior, and was succeeded by Columbus Delano, of Ohio.

The admission of Senators and Representatives in Congress from Virginia, Texas, and Mississippi, completed the work of reconstruction, as it had been undertaken by Congress, and the subject became one of less prominence. The attention of the public mind was turned more directly to questions of taxation, protection, and the reduction of debt. Some important points incidentally connected with the former of these subjects were presented for decision before the Federal Supreme Court. In the case where the question presented was whether or not the payee, or assignee, of a note made before the 25th of February, 1862, was obliged by law to accept in payment United States notes equal in nominal amount to the sum due, according to its terms, when tendered by the party bound to pay, the extent to which green-

backs were a legal tender was involved. The act of Congress declaring those notes a legal tender in the payment of debts was passed on February 25, 1862. Was this act constitutional and valid, so far as relates to debts previously contracted? This forms one of the most important points of the decision. Chief-Justice Chase, in delivering the opinion, said:

It becomes our duty, therefore, to determine whether the act of February 25, 1862, so far as it makes United States notes a legal tender in payment of debts contracted prior to its passage, is constitutional and valid, or otherwise. Under a deep sense of our obligation to perform this duty to the best of our ability and understanding, we shall proceed to dispose of the case presented by the record.

We have already said, and it is generally if not universally conceded, that the Government of the United States is one of limited powers, and that no department possesses any authority not granted by the Constitution.

It is not necessary, however, in order to prove the existence of a particular authority, to show a particular and express grant. The design of the Constitution was to establish a government competent to the direction and administration of the affairs of a great nation, and at the same time to mark, by sufficiently definite lines, the sphere of its operations. To this end it was useful only to make express grants of general powers, coupled with a further grant of such incidental and auxiliary powers as might be required for the exercise of the powers expressly granted. These powers are necessarily extensive. It has been found, indeed, in the practical administration of the Government, that a very large part, if not the largest part, of its functions have been performed in the exercise of powers thus implied. * * *

It has not been maintained in argument, nor indeed would any one, however slightly conversant with constitutional law, think of maintaining that there is in the Constitution any express grant of legislative power to make any description of credit currency a legal tender in payment of debts.

We must inquire, then, whether this can be done in the exercise of an implied power.

The rule for determining whether a legislative enactment can be supported as an exercise of an implied power was stated by Chief-Justice Marshall, speaking for the whole court, in the case of *McCulloch vs. The State of Maryland* (4 Wheaton, 121), and the statement then made has ever since been accepted as a correct exposition of the Constitution. His words were these: "Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional." And, in another part of the same opinion, the practical operation of this rule was thus illustrated: "Should Congress, in the execution of its powers, adopt measures which are prohibited by the Constitution, or should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects not intrusted to the Government, it would be the painful duty of this tribunal, should a case requiring such a decision come before it, to say that such an act was not the law of the land. But, where the law is not prohibited, and is really calculated to effect any of the objects intrusted to the Government, to undertake here to inquire into the degree of its necessity would be to pass the line which circumscribes the judicial department and tread on legislative ground." (*Ibid.*, 428.)

It must be taken, then, as finally settled, so far as judicial decisions can settle any thing, that the words "all laws necessary and proper for carrying into execution" powers expressly granted or vested

have in the Constitution a sense equivalent to that of the words, laws not absolutely necessary indeed, but appropriate, plainly adapted to constitutional and legitimate ends; laws not prohibited, but consistent with the letter and spirit of the Constitution; laws really calculated to effect objects intrusted to the Government.

The question before us, then, resolves itself into this: Is the clause which makes United States notes a legal tender for debts contracted prior to its enactment, a law of the description stated in the rule?

It is not doubted that the power to establish a standard of value by which all other values may be measured, or, in other words, to determine what shall be lawful money and a legal tender, is in its nature and of necessity a governmental power. It is in all countries exercised by the government. In the United States, so far as it relates to the precious metals, it is vested in Congress by the grant of the power to coin money. But can a power to impart these qualities to notes, or promises to pay money, when offered in discharge of preexisting debts, be derived from the coinage power, or from any other power expressly given?

It is certainly not the same power as the power to coin money. Nor is it, in any reasonable, satisfactory sense, an appropriate or plainly-adapted means to the exercise of that power. Nor is there more reason for saying that it is implied in, or incidental to, the power to regulate the value of coined money of the United States, or of foreign coins. This power of regulation is a power to determine the weight, purity, form, and impression, of the several coins and their relation to each other, and the relations of foreign coins to the monetary unit of the United States.

Nor is the power to make notes a legal tender the same as the power to issue notes to be used as currency. The old Congress, under the articles of Confederation, was clothed by express grant with the power to emit bills of credit, which are in fact notes for circulation as currency, and yet that Congress was not clothed with the power to make these bills a legal tender in payment. And this court has recently held that Congress, under the Constitution, possesses the same power to emit bills or notes, as incidental to other powers, though not enumerated among those expressly granted; but it was expressly declared at the same time that this decision concluded nothing on the question of legal tender. Indeed, we are not aware that it has ever been claimed that the power to issue bills or notes has any identity with the power to make them a legal tender. On the contrary, the whole history of the country refutes that notion. The States have always been held to possess the power to authorize and regulate the issue of bills for circulation by banks or individuals, subject, as has been lately determined, to the control of Congress, for the purpose of establishing and securing a national currency, and yet the States are expressly prohibited by the Constitution from making any thing but gold and silver coin a legal tender. This seems decisive on the point that the power to issue notes and the power to make them a legal tender are not the same power, and that they have no necessary connection with each other.

But it has been maintained in argument that the power to make United States notes a legal tender in payment of all debts is a means appropriate and plainly-adapted to the execution of the power to carry on war, of the power to regulate commerce, and of the power to borrow money. If it is, and is not prohibited, nor inconsistent with the letter or spirit of the Constitution, then the act which makes them such legal tender must be held to be constitutional.

Let us, then, first inquire whether it is an appropriate and plainly adapted means for carrying on war! The affirmative argument may be thus stated: Congress has power to declare and provide for carrying on war; Congress has, also, power to emit bills of

credit, or circulating notes receivable for Government dues, and payable, so far at least as parties are willing to receive them, in discharge of Government obligations; it will facilitate the use of such notes in disbursements to make them a legal tender in payment of existing debts; therefore, Congress may make such notes a legal tender.

It is difficult to say to what express power the authority to make notes a legal tender in payment of debts preëxisting in contract may not be upheld as incidental upon the principles of this argument. Is there any power which does not involve the use of money? And is there any doubt that Congress may issue and use bills of credit as money in the execution of any power? The power to establish post-offices and post-roads, for example, involves the collection and disbursement of a great revenue. Is not the power to make notes a legal tender as clearly incidental to this power as to the war power?

The answer to this question does not appear to us doubtful. The argument, therefore, seems to prove too much. It carries the doctrine of implied powers very far beyond any extent hitherto given to it. It asserts that whatever in any degree promotes an end within the scope of a general power, whether in the correct sense of the word appropriate or not, may be done in the exercise of an implied power. Can this proposition be maintained?

It is said that this is not a question for the court deciding a cause, but for Congress exercising the power; but the decisive answer to this is, that the admission of a legislative power to determine finally what powers have the described relation as means to the execution of other powers plainly granted, and then to exercise absolutely and without liability to question, in cases involving private rights, the powers thus determined to have that relation, would completely change the nature of the American Government. It would convert the Government which the people ordained as a Government of limited powers into a Government of unlimited powers. It would obliterate every criterion which this court, speaking through the venerated chief justice in the case already cited, established for the determination of the question whether legislative acts are constitutional or unconstitutional.

Undoubtedly, among means appropriate, plainly adapted, really calculated, the Legislature has unrestricted choice. But there can be no implied power to use means not within this description.

No one questions the general constitutionality, and not very many, perhaps, the general expediency, of the legislation by which a note currency has been authorized in recent years. The doubt is as to the power to declare a particular class of these notes to be a legal tender in payment of preëxisting debts.

The only ground upon which this power is asserted is, not that the issue of notes was an appropriate and plainly-adapted means for carrying on the war, for that is admitted, but that the making of them a legal tender to the extent mentioned was such a means.

This the court are not ready to admit, and say:

We are unable to persuade ourselves that an expedient of this sort is an appropriate and plainly-adapted means for the execution of the power to declare and carry on war. If it adds nothing to the utility of the notes, it cannot be upheld as a means to the end in furtherance of which the notes are issued. Nor can it, in our judgment, be upheld as such, if, while facilitating in some degree the circulation of the notes, it debases and injures the currency in its proper use to a much greater degree.

But there is another view which seems to us decisive, to whatever express power the implied power in question may be referred.

In the rule stated by Chief-Justice Marshall, the words "appropriate," "plainly adapted," "really

calculated," are qualified by the limitation that the means must be "not prohibited," but "consistent with the letter and spirit of the Constitution." Nothing so prohibited or inconsistent can be regarded as appropriate or plainly adapted or really calculated means to any end.

Let us inquire, then, first, whether making bills of credit a legal tender to the extent indicated is consistent with the spirit of the Constitution.

After an examination of this point, the Chief Justice concludes as follows:

We are obliged to conclude that an act making mere promises to pay dollars a legal tender in payment of debts previously contracted is not a means appropriate, plainly adapted, really calculated to carry into effect any express power vested in Congress; that such an act is inconsistent with the spirit of the Constitution, and that it is prohibited by the Constitution.

A dissenting opinion was delivered by Mr. Justice Miller, in which Justices Swayne and Davis concurred.

At the same term of the court, the authority of Congress to tax the circulation of State banks was sustained. The Chief Justice said:

Having thus, in the exercise of undisputed constitutional power, undertaken to provide a currency for the whole country, it cannot be questioned that Congress may constitutionally secure the benefit of it to the public by appropriate legislation. To this end Congress has denied the quality of legal tender to foreign coins, and has provided by law against the imposition of counterfeit and base coin on the community. To the same end Congress may discourage by suitable enactments the circulation as money of any notes not issued under its own authority. Without this power, indeed, its attempt to secure a sound and uniform currency for the country must be futile. Viewed in this light as well as in the other light of a duty on contracts or property, we cannot doubt the constitutionality of the tax under consideration. The three questions certified from the Circuit Court of the District of Maine must, therefore, be answered affirmatively.

Mr. Justice Nelson dissented, and read an opinion, which was concurred in by Mr. Justice Davis, in which, after noting the fact that there were four State banks in existence at the time of the adoption of the Federal Constitution, it was held that it is competent for the States to charter and establish State banks, and stated that this view had been three times distinctly affirmed by the court. It was then said that the bills or notes issued by State banks and put in circulation, instead of being the property of the banks issuing them, were in fact but their indebtedness, and as such they were not liable to the tax imposed. The General Government cannot tax the franchise nor the indebtedness of these institutions. The view was taken that this tax upon the issues of the banks in question was an unjustifiable attempt to crush them out of existence.

In regard to the right of a State to tax the shares of national banks, a case came up on a writ of error from the Court of Appeals in Kentucky, when the issue had been to recover a tax of fifty cents per share on the shares of the Bank of Louisville. Mr. Justice Miller delivered the opinion of the court, and said:

If the State cannot require of the bank to pay the

tax on the shares of its stock it must be because the Constitution of the United States or some act of Congress forbids it. There is certainly no express provision of the Constitution on the subject. But it is argued that the banks, being instrumentalities of the Federal Government, by which some of its important operations are conducted, cannot be subjected to such State legislation.

It is certainly true that the Bank of the United States and its capital were held to be exempt from State taxation on the ground here stated, and this principle, laid down in the case of *McCulloch vs. The State of Maryland*, has been repeatedly reaffirmed by the court. But the doctrine has its foundations in the proposition that the right of taxation may be so used in such cases as to destroy the instrumentalities by which the Government proposes to effect its lawful purposes in the States, and it certainly cannot be maintained that banks or other corporations or instrumentalities of the Government are to be wholly withdrawn from the operation of State legislation. The most important agents of the Federal Government are its officers, but no one will contend that when a man becomes an officer of the Government he ceases to be subject to the laws of the State. The principle we are discussing has its limitation, a limitation growing out of the necessity on which the principle itself is founded.

That limitation is, that the agencies of the Federal Government are only exempted from State legislation so far as that legislation may interfere with or impair their efficiency in performing the functions by which they are designed to serve that Government.

The judgment of the court below was affirmed, sustaining the legality of the tax.

In a case in which an administrator had made an investment in Confederate bonds, Chief-Justice Chase, presiding in the Fourth Circuit and District of Virginia, ordered a new settlement to be made. He said:

The important questions in the case are two:

First. Was the investment in the loan of the Confederate States one which a prudent person, acting as trustee or administrator, might make? And—

Second. Was the investment, being actually made in a loan to a politico-military organization formed for the purpose of overthrowing the Union of the States under the national Constitution and establishing a new confederation in a portion of those States, one which, under any circumstances, can be recognized in the courts of the United States as excusing the administrator from accounting for the funds in his hands to the parties otherwise entitled lawfully to receive them?

Upon the first question little may be said. It must indeed be regarded as already decided. The court of the State authorized by law to consider and sanction investments by administrators sanctioned the loan under consideration; and it is agreed that the most prudent and careful business men were in the constant habit of making such investments. It would seem, therefore, to be unreasonable to call in question the good faith or prudence of the administrator in the circumstances by which he was surrounded. If there had been no decision of the State court approving the investment, we could not say that the administrator ought to be charged if the investment were free from objection on other grounds.

This makes it necessary to consider the second question. But we need not examine it at length, for, in the case of *Botts vs. Crenshaw*, in this court, we held that the investment even of Confederate currency in Confederate bonds, by an attorney who had collected a debt due to a citizen of Kentucky, in the currency, under what were considered to be justifying circumstances, did not absolve him from accounting for its value, although, in that case as in this, the investment had been sanctioned by a court whose deci-

sion, but for the abnormal condition created by the rebellion, would have been conclusive.

This case, we think, covers the present in principle. Whatever may have been the motive inducing such an investment, however it may have been warranted by example, or even by judicial authority, itself involved in the general rebellion, it is impossible that it should receive the sanction of a court of the United States.

We must hold, therefore, the investment complained of to be inoperative as a discharge from responsibility to the complainant.

Numerous conventions, relating to industrial and social affairs, assembled during the year. The second annual Southern Commercial Convention convened at Cincinnati on October 4th. The attendance was large, and the subjects considered were as follows: 1. Direct trade between Southern Atlantic cities and Europe. 2. Southern Pacific Railroad. 3. Obstruction to navigation by narrow-span bridge-piers. 4. Continuous water-line communication between the Mississippi River and the Atlantic seaboard. 5. Removal of obstructions from the mouth of the Mississippi River. 6. Construction of permanent levees on the Mississippi River. 7. To abolish all charges on the navigable rivers of the United States. 8. The enlargement of the more important lines of canal in the United States so as to render them navigable for vessels propelled by steam. 9. Finance and taxation. 10. Free trade in money. 11. A settled policy, in the public interest, in regard to the disposition of the government lands. 12. That all railroad viaducts over navigable rivers be made highways for railroad companies, which will pay their *pro-rata* toll on the same; and that efforts be made to secure legislation to that effect. 13. The charges on passenger and freight traffic by rail and water lines. 14. To abolish throughout the whole country all license imposed on commercial travellers. 15. Removal of the national capital.

The committee on direct trade with Europe from Southern cities made the following report:

Your committee have given, in the limited time allowed them, all the attention which its paramount importance so eminently deserves. These interests involve the restoration of American shipping, which most important question occupies the public mind, the consideration of which the American people will require from their representatives in Congress, as it is alone to Congress we can look for relief. From them we require legislation to secure the desired result, which being accomplished, all sections of the country will be placed on an equal footing. The South will see ships under our own flag taking off their products and bringing in their imports *direct* to their own cities, saving the varied expenses of transportation, labor, etc., now involved in exports and imports through indirect ports. Under such proper arrangements ships loaded with the products of the South would return to their own ports, not only with such foreign merchandise as they require for trade and consumption, but with immigrants with large or small capital and sturdy muscle and energy, to settle her fertile, cheap lands, and develop her resources, to the direct benefit, not only to the South, but the country at large.

To accomplish these results your committee think that it is the true policy of the Government to grant

as a "bounty" to all builders of ships, when registered at the respective custom-houses of the country, an amount equal to all duties and taxes under the tariff and internal revenue laws which would be paid or incurred on all articles, foreign or domestic, used in their construction and outfits; and further, to purchase and withdraw, free of duty, from bonded warehouse at all ports where they may be, stores, supplies, and outfits of every description requisite for use or consumption during their voyage (which stores and supplies, on their return to a United States port, should be placed in charge of a Government officer, not to be landed without payment of duties assessed according to law); and that all repairs and outfits from time to time required be entitled to the same benefits proposed to be conferred as above. We also recommend the enactment by Congress of a general apprenticeship law wisely adapted to the end of supplying American seamen and officers to command our ships. Also to grant subsidies, in the way of mail contracts or otherwise, to lines established or to be established to the north or south of Europe or elsewhere, as their merits and services may deserve.

In the mean time, for a limited period to allow the purchase by *bona-fide* American citizens, in an individual or corporate capacity, of foreign-built ships, to be registered and placed under the American flag, to supply the present want of American-built ships, under such regulations as the practical wisdom of Congress may suggest.

Our country abounds in material—wood, iron, and copper—and mechanical skill ample for ship-building (mechanics in ship-building now seeking active employment in more profitable pursuits). Capital is ready, and it only requires legislation to secure the restoration of American shipping and direct trade between Southern ports and Europe.

The committee on a settled policy in regard to the disposition of the public lands reported to the effect that it should be the settled policy of the United States to regard the public lands not as capital or a source of revenue, but as a means of increasing the population and enlarging the wealth of the country; and to this end the homestead law should be sustained. The report was unanimously approved.

The committee on charges on passengers and freight traffic on railroads and water lines reported the following:

Resolved, That Congress be requested to pass such law as may be deemed necessary to establish a fair and equitable schedule of rates for freight and passenger transportation, without discriminating against local traffic, on all roads endowed by the Government, either by grants of lands or money, and that the same action be invoked by the State Legislatures with reference to the roads under their control.

The committee on free trade in money reported the following resolution, which was adopted:

Resolved, That all restrictions upon the rates of interest be removed, they being of the opinion that the price of money served to increase rather than diminish its cost. That, to bring the rate of interest to the lowest practicable standard, the trade in money should be left as free as the trade in merchandise; and this convention recommend to the several States the repeal of all usury laws, and of all statutes by which contracts expressed in money are treated exceptionally.

No final action was taken on the subjects of finance, taxation, and tariff.

A National Labor Congress was also held in Cincinnati. It convened on August 15th, and

claimed to represent 400,000 men. The first Labor Congress was held in Louisville, Kentucky, in 1865, at which not more than twenty-five or thirty delegates were present. The second was held in Baltimore, in August, 1866. At this meeting the work was so well done, and its objects so plainly set forth, as to attract attention. During the preceding year the labor agitation had assumed considerable proportions in Massachusetts, and the interest rapidly increased. The Crispins were just beginning to organize, and similar movements were in progress all over the country. Able newspapers and public men went over to the cause, and by the time of the meeting in Chicago, in 1867, the movement was fully established; and from this congress the real life of the movement dates. At Chicago the idea of labor unions, city, county, and State, was carried out. In 1868 the congress convened in New York, where a new feature was added. The woman-suffrage agitators and labor-reformers gained admission and recognition. At the congress at Philadelphia there was present a working-woman as delegate, and a warm discussion ensued against recognizing Miss Anthony, in which both parties were manifested; and lastly, there was a hearty rejection of color as a test, and the admission of some fifteen delegates of African descent. At the congress in Philadelphia, Cincinnati was selected as the next place of meeting. The following platform was adopted by the congress:

Whereas, It is not deemed advisable to change or modify the existing declaration of principles, but to reaffirm the same; and, for practical use, enunciate the substance thereof in a more convenient and concise form, with some additional resolutions; and,

Whereas, "all political power is inherent in the people, and free government founded on their authority and established for their benefit;" that all freemen are equal in political rights, and entitled to the largest political and religious liberty compatible with the good order of society, as also the use and enjoyment of the fruits of their labor and talents; and "no man or set of men are entitled to exclusive, separate emoluments, privileges, or immunities from the Government, but in consideration of public services;" and any laws destructive of these fundamental principles are without moral binding force, and should be repealed. To do so, however, is a difficult work, when such laws or usages are interwoven with pride, prejudice, and selfishness. Besides, experience shows that laboring people are more than others disposed "to suffer while evils are sufferable" than organize for their abolition; and

Whereas, We are admonished by the imperilled rights of labor throughout the United States to organize and agitate in our behalf, in the decree, "In the sweat of thy face shalt thou eat bread," and the adage that "The price of liberty is eternal vigilance," enthroned in our hearts and emblazoned as mottoes on our banners, assured of success over corrupt political schemers, and the speculators and bankers who are preying like harpies upon the fruits of honest labor, and thus restore to our political and social system that equilibrium of right and justice so necessary to good government and general tranquillity: be it

Resolved, That the laborers in all departments of useful industry are suffering from a system of monetary laws, which were enacted during the late war as measures, it was assumed, "necessary to the life of the nation," which is now sought to be perpetuated

in the interests of bondholders and bankers as a means to subvert the government of our fathers, and establish on its ruins an empire in which all political power shall be centralized to restrain and oppress the rights of labor, and subordinate its votaries to the merciless demands of aggregated capital.

Resolved, That the rate of interest on money is the governing power in the distribution of the products of industry and enterprise between capital and labor, and that the present rates are in excess and disproportionate to the increase of the national wealth, and oppressive to the producing classes.

Resolved, That the national banking system being inimical to the spirit of liberty and subversive of the principles of justice, without warrant in the Constitution of the United States, and wrongfully increasing the burdens of the wealth-producing classes millions of dollars annually, justice demands its repeal.

Resolved, That to provide a true national currency adapted to the genius of our institutions and the wants of the business of the country, the circulating notes of the national banks and the present greenbacks, which are not a full legal tender, should be withdrawn from circulation and their places supplied with a paper currency, based on the wealth of the nation; made a legal tender in the payment of all debts, public or private; declared the lawful money of the United States; and convertible at the pleasure of the holder into Government bonds bearing three per cent. interest per annum, subject to future legislation by Congress; the bonds likewise convertible into lawful money, at the option of the holder.

Resolved, That the claim of the bondholders for payment in gold of that class of indebtedness known as 5-90 bonds, the principal of which is legally and equitably payable in lawful money, is dishonest and extortionate, and hence we enter our solemn protest against any departure from the original contract, by funding the debt in long bonds, or in any way increasing the gold-bearing and untaxed obligations of the Government.

Resolved, That justice demands that the burdens of the Government should be so adjusted as to bear equally on all classes and interests; and that the exemption from taxation of Government bonds, bearing extortionate rates of interest, is a violation of all just principles of revenue laws.

Resolved, That Congress should modify the tariff so as to admit free the necessities of life, and such articles of common use as we can neither produce nor grow; also, to lay duties for revenue, mainly upon articles of luxury, and upon such articles of manufacture as, we having the raw material in abundance, will develop the resources of the country; increase the number of factories; give employment to more laborers, maintain good compensation, cause the immigration of skilled labor, the lessening of prices to consumers, the creating of a permanent home market for agricultural products, destroy the necessity for the odious and expensive system of internal taxation, and will soon enable us to successfully compete with the manufacturers of Europe in the markets of the world.

Resolved, That the National Labor Congress earnestly recommend the adoption of such measures among all classes of workmen, in all sections of the country, as will secure the adoption of the eight-hour system, and call upon the respective State Legislatures to follow the example of the national Congress in recognizing eight hours as a legal day's work.

Resolved, That the presence in our country of Chinese laborers in large numbers is an evil entailing want and its consequent train of misery and crime on all other classes of the American people, and should be prevented by legislation.

Resolved, As labor is the foundation and cause of national prosperity, it is both the duty and interest of the Government to foster and protect it. Its importance, therefore, demands the creation of an Executive Department of the Government at Washing-

ton, to be denominated the Department of Labor, which shall aid in protecting it above all other interests.

Resolved, That the protection of life, liberty, and property are the three cardinal principles of Government, and the first two more sacred than the latter, therefore, money for prosecuting wars should, as it is required, be assessed and collected from the wealth of the country, and not be entailed as a burden on posterity.

Resolved, That the public lands of the United States belong to the people, and should not be sold to individuals, nor granted to corporations, but should be held as a sacred trust for the benefit of the people, and should be granted, free of cost, to landless settlers only, in amounts not exceeding 160 acres of land.

Resolved, That the treaty-making power of the Government has no authority in the Constitution to "dispose of" the public lands without the joint sanction of the Senate and House of Representatives.

A resolution was also adopted by a close vote, recommending the immediate formation of an independent political organization, to be known as the "National Labor Reform Party."

On October 25th a convention of delegates, chiefly from the Northwestern States, assembled in Cincinnati to discuss the question of a removal of the national capital from Washington to some point in the West. The following resolutions were presented and adopted:

Whereas, The members of this convention are assembled for the purpose of considering the subject of removing the national capital to a place more central and convenient for the whole people: therefore,

Resolved, That the time has come when common justice and fair dealing to all parts and interests and rights of the States and people of the American Union demand the removal of the national capital to some location within the great valley of the Mississippi.

Resolved, That some eligible site should be selected as near as practicable to the centre of territory, of population, production, and transportation, and with reference to the future as well as the present demands of the nation.

Resolved, That we emphatically insist that no more appropriations of public funds shall be made for the erection of new buildings, enlargement of the Capitol grounds or other permanent improvements in the District of Columbia.

Resolved, That we reaffirm the resolutions adopted at the National Capital Convention held in St. Louis in October, 1889.

Resolved, That a committee of five be appointed by the president of this convention, charged with the duty of memorializing the Congress of the United States at its next session in favor of the passage of a joint resolution authorizing the President of the United States to appoint commissioners to examine into the question of the removal and relocation of the national capital, and to make report upon the same at an early day.

An Irish National Congress assembled at Cincinnati on August 23d, the object of which was to unite the various Irish organizations of the country in one body. It was not a part of the Fenian movement, although in sympathy with it.

The numerous reports of outrages, alleged to have been committed by secret organizations, in various Southern States, led to the appointment of a committee in the Senate of the United States, to investigate these disorders and

report thereon. North Carolina having been made the subject of a special communication from President Grant, the committee at once entered upon the investigation of the condition of affairs in that State, and submitted their report early in the year 1871. In prosecuting their inquiries, the committee summoned before them representatives of all shades of political opinion. "State and Federal judges, prosecuting officers, political editors, ministers of the Gospel, private citizens (both white and colored), members of what is properly known as the 'Ku-klux Klan,' magistrates, constables, members of the bar, men who have been scourged and abused by bands of men in disguise; and, indeed, all classes of persons from whom it was reasonable to expect such testimony could be elicited as would form the basis of a reliable judgment upon the subject of inquiry." Of the fifty-two witnesses examined twenty-nine were Republicans, and the remainder belonged to the Democratic or Conservative party. From the evidence thus obtained by the committee, it appears that the secret organization known as the Ku-klux Klan, with stern obligations and extreme penalties for revealing its secrets imposed upon its members, was instituted in North Carolina some time during 1868, and prior to the presidential election of that year, and that it has at different stages adopted the names of "The White Brotherhood," "The Constitutional Union Guards," and "The Invisible Empire." Soon after the organization of the order, the whipping of negroes and threats of violence to prominent men, because of their political opinions, were commenced, in many instances the names of the victims and the outrages to be committed having been voted upon in secret meeting. The message of the President shows that up to the 27th of October, 1870, twenty-one cases of whipping and shooting were reported as having occurred in Lincoln County; and from the 1st of December, 1868, to the 22d of December, 1870, a list of thirty-eight cases of outrages is furnished as having occurred in Alamance County. The committee give the names of ninety blacks and forty-four whites in the counties of Lincoln, Alamance, Catawba, Craven, Caswell, Chatham, Jones, Orange, Rockingham, Rutherford, Wake, and others, "nearly all of whom were whipped, and the remainder were shot, robbed, hanged, or driven from their homes," by the Ku-klux Klan, and allege that in none of these instances were the guilty parties convicted or punished. It is further asserted that the outrages perpetrated were inflicted upon members of the Republican party, both white and colored. Having concluded the investigation with reference to North Carolina, the conclusions, sealed and submitted to the Senate in the majority report, signed by five of the committee, were:

First. That the Ku-klux organization does exist, has a political purpose, and is composed of members

of the Democratic or Conservative party; that it has sought to carry out its purpose by murders, whipping, intimidations, and violence, against its opponents.

Second. That it not only binds its members to carry out decrees of crime, but protects them against conviction and punishment, first by disguises and secrecy, and secondly by perjury, if necessary, upon the witness-stand and in the jury-box.

Third. That of all the offenders against the law in this order—and they must be many hundreds, if not thousands, because these crimes are shown to be committed by organized bands, ranging from ten up to seventy-five—not one has yet been convicted in the whole State. Such being the state of affairs, it is surely not necessary that committees should argue the insufficiency of the reasons given for establishing an order which has led to such results. Whatever may have been the original purpose of the Ku-klux, or the offences of those to counteract whom they allege the order was established, it now has gone so far as to present the issue between government and anarchy, and, if it has not reached it, is fast approaching the point where in that issue there can be no neutrals.

A minority report, signed by Senators Blair and Bayard, was submitted, denying the above conclusions. They say:

The number of these outrages, detestable and wicked as they are, is nevertheless grossly and wildly exaggerated, and this no one can doubt who will examine the testimony and who has had any knowledge of the credulity and inaccuracy of statements characteristic of our well-meaning colored people. North Carolina is one of the largest States, territorially, in the Union, and is divided into eighty-seven counties, and contains nearly one and a half million of people. No act of lawlessness is actually proven to have been committed, excepting in one or the other of six, perhaps eight, of these counties, and yet it is proposed to employ violent and stringent measures of coercion and repression to the remaining nine-tenths of a State, against which no breath of evidence or proof of lawlessness has ever been adduced, but which, on the contrary, exhibits a condition of quiet almost suggesting the insensibility of despair. What cause can be alleged, what justification to the American people can be used, for this renewed and wanton invasion of a peaceful community? The statement that anarchy there exists is absurdly untrue, and testimony now laid before the Senate overwhelmingly establishes its untruth. If aggressive laws are to be enacted, let all disguise be cast off and the true reason avowed. It will not be less violent or wrong, but it will be less hypocritical and more manly. To any fair-minded man we confidently commit the proofs contained in the testimony now presented by the committee, and aver that in the face of such wrongs as have been inflicted upon our unfortunate and crushed people by the rulers placed over them, not by their own consent, but by the exercise of despotic powers by the Congress of the United States, no such example of equal submissiveness and patient endurance can be found in history as is now presented by the people of the State of North Carolina.

For the financial condition of the United States, see the article FINANCES. The foreign relations of the country are presented under the title DIPLOMATIC CORRESPONDENCE, and in the President's Message for December, 1870, for which see PUBLIC DOCUMENTS. For the military and naval affairs of the country, see ARMY and NAVY, respectively; and for the general condition of internal affairs, see CONGRESS and the States, respectively.

UNIVERSALISTS. The Universalist Register and Almanac for 1871 reports the follow-

ing statistics of the denomination in the United States and British America:

The number of meeting-houses does not include the union meeting-houses which Universalists own in common with other denominations. The *Almanac* gives no statistics of membership. Number of periodicals, 13.

To the former literary institutions of the denomination (*see* AMERICAN ANNUAL CYCLOPEDIA for 1869) Buchtel College was added in 1870. By a joint vote of the trustees of the Ohio Convention and the committee on education of that body, passed February 16, 1870, the location of the State Centenary School was established at Akron (Summit County), on condition that \$60,000 should be pledged within said county toward the establishment of such a school; which condition has been complied with. Of that sum Mr. John B. Buchtel, of Akron, pledged \$31,000, and the remaining \$29,000 was pledged by other friends of the cause in the county. The name of the Greenmount Liberal Institute, located at South Woodstock, Windsor County, Vt., and incorporated in 1848, was, by an act of the Vermont Legislature, in October, 1870, changed to Green Mountain Perkins Academy. At the annual session of the Iowa Convention of Universalists, held at Mount Pleasant, September 3, 1870, liberal offers were made from Mitchellville, pledging twenty acres of land for a site, and eighty acres more toward the buildings or endowment of an academy, in that State. The value of the property thus offered is about \$25,000. A special committee on a denominational school was appointed to consider the matter, ask for further offers of localities, and

report at a special meeting of the State Convention to be called early in 1871.

The General Convention held in September, 1870, was the centenary celebration of the establishment of the Universalist denomination in the United States. It met in Gloucester, Mass., which place had been chosen as the seat of the first Universalist society in the country, and the house of its founder, John Murray. The Hon. Sidney Perham, of Maine (member of Congress and Governor-elect of Maine), was chosen president. Delegates were present from twenty States and from the District of Columbia, and 242 ministers attended the centenary celebration. The completion of the Murray fund was urged as being of prime importance. By the plan of the Centenary Committee, indorsed by the convention of 1869, the income of the Murray fund (\$200,000) is pledged "in aid of theological students, the distribution of Universalist literature, church extension, and the missionary cause." The committee to whom the "Report of the Board of Trustees" was referred recommended that the receipts from the missionary boxes at the opening of January, 1871, be added to the fund, and the income from this source thereafter be used for the general expenses of the convention. A resolution, presented by Horace Greeley, to devote the Murray fund to the foundation of a Universalist publishing-house, after the general plan of the Methodist Book Concern, was not adopted by the committee. The General Convention also elected the Rev. J. M. Pullman and the Rev. A. St. John Chabre a committee to attend the next meeting of the American Unitarian Conference. The next General Convention will be held in Philadelphia, in September, 1871.

The *Universalist Register* for 1871 announces that the Murray fund is so nearly raised as to be assured in the early part of 1871.

URUGUAY, a republic in South America. President of the republic, General L. Battle, elected March 1, 1868. In 1829, Uruguay had a population of 74,000; in 1836, 128,371; in 1870, according to official reports, 387,421, of which 52 per cent. were foreigners. Area, 71,755 square miles. The statistics of immigration show for 1866, 9,827; 1867, 17,881; 1868, 16,892; 1869, 20,435. Among the immigrants in 1867 and 1868 were 15,021 Italians; the Spaniards and French were next in number. The import duties amount to about \$276,000 annually, but, as the other branches of revenue are not very productive, the budget usually shows a considerable deficit. The standing army numbers from 2,000 to 8,000 men; national guards, 20,000 men. The value of imports, in 1869, was \$16,880,678; exports, \$13,886,886. Importation can only be partly estimated, in consequence of the extensive smuggling-trade which is carried on at all points of the coast. It is the general impression that the aggregate value of imports and exports does not fall short of \$40,000,000. In

1869, the principal articles of export were: 375,116 salted hides, 458,987 dried hides, 55,052 bales wool, 12,250 tierces tallow, 7,875 sheepskins, and 1,399 bales horse-hair. The number of vessels entered at Montevideo from foreign ports was 1,567, of 686,380 tons; entries from ports in the Argentine Confederation, 717 vessels, of 198,621 tons; coastwise, 1,156 vessels, of 88,475 tons—total, 8,440 vessels, of 923,476 tons.

In January, the Government appointed a commission to take charge of the public debt and to advise the Government relative to the public credit and the commercial crisis. The improvement of the port of Montevideo was also decided upon.

A formidable insurrection broke out in the interior of the country during the latter part of March. The people of Uruguay are about equally divided into two great parties, the "Blancos" (whites) and "Colorados" (colored). The Colorados have for several years been in power, and the insurrection was favored and instigated by the Blancos, who, 2,000 strong, menaced the capital. They planned to seize the Government by a sudden uprising, and arranged to introduce troops into the city by means of steamboats from the river above. Their plans were, however, baffled, if not frustrated, by the promptness and energy of General Bustamante, the Minister of War. By his orders the leaders of the contemplated movement, about thirty in number, were arrested by night and lodged in the Cabildo. A few escaped in season and found temporary refuge in the different consulates until opportunity offered to fly the country. The guards in the city were strengthened and the steps of every suspected person constantly watched. Meanwhile the Minister of War hurried out troops, and, placing himself at their head, held the enemy in check. But the insurgents, although baffled in their designs on Montevideo for the time at least, appeared not at all discouraged, as the movement in the interior assumed greater proportions from day to day. The Government sent troops for its suppression without success, the insurgents, under command of Colonel Aparicio, remaining victorious in several engagements. During the latter part of September, General Caraballo, of the Government forces, suffered a serious defeat, in consequence of which the insurgents took possession of the city of Cerro-Largo. Caraballo effected a junction with the Government army under General Suarez, on the north side of the Rio Negro. Meanwhile the Blancos, under Medina and Aparicio, scoured the southern department unmolested, even coming up close to Montevideo. They made a daring attempt to seize a government steamer, for which purpose they introduced arms and men on board a small vessel, ostensibly loading flour for Paraguay, and which lay close by the steamer. But, suspicion being excited, an armed force made a descent on the flour-vessel, and captured the men and arms.

Aparicio again gave battle to Suarez and Caraballo, and defeated them in two successive engagements, at Casavalle and Corralito, and at the latter place compelled Caraballo to treat for a capitulation, after having agreed to an armistice. Caraballo, however, stole away under cover of the darkness, forfeiting his word of honor, to Paysandu, a city bordering on the Uruguay River, losing all his train, artillery, and, by demoralization, one-half of the remaining force. Suarez, with all his available force, 2,500 men of all arms, hastened to the support of Caraballo. The Blancos, numbering 7,000 men of all arms, instead of pursuing the Colorados, marched directly upon the capital. The Government was not altogether unprepared for this movement: Colonel Orfila, from Pern, had been intrusted with the task of fortifying the approaches to the city, which work had been satisfactorily done. The city was defended by 3,500 men, armed with needle guns, Spencer and Remington rifles. A constant picket-firing was kept up on both sides, and quite a number were killed and wounded daily. Desertions occurred to an alarming extent in the army defending the city, and the besieging army, although deficient in artillery and infantry, were confidently expecting an early surrender. The Secretary of War, Ordóñez, had left the city on November 8d to hasten the reorganization of the demoralized forces of Caraballo, but he arrived too late. The army having been disbanded, General Caraballo arrived at Montevideo with 20 officers on the 14th of November. General Suarez and a force of about 2,000 men were all that remained on the field, and, with 1,800 men inside the city, constituted the entire available force of the Government. On the morning of the 28th of November, the people of Montevideo were startled by a salute of twenty-one guns fired from the Cerro fort, where the light-house is situated, and their surprise was not decreased when they learned that at 2 o'clock A. M. on that day the Blancos had carried the position, capturing the garrison, consisting of 60 men and 6 officers, 10 pieces of artillery and a large store of ammunition, and doing all this with a loss of only two or three men. The attacking force, mostly Spaniards, serving as volunteers, surprised the garrison, and only a short and feeble resistance was made.

At noon of the same day President Battle, with the advice of his Cabinet and the commanding officers of his army, made an attempt to capture Union, a town three miles from Montevideo, and where the Blancos were making merry over their success of the night before. President Battle commanded in person, and the attacking force consisted of 1,600 men, with six pieces of artillery. The pickets of the Blancos were surprised on the right and centre, and where not killed were driven in upon their reserves. The garrison of the town was immediately marched to the front, accom-

panied by the pickets, who had now rallied, and engaged the Colorados, holding them in check until the arrival of reinforcements, when President Battle and his men were compelled to make a hasty retreat and to seek safety in flight, leaving behind them three pieces of artillery and about 800 men in killed, wounded, and prisoners. Elated by these successes, the Blancos organized a naval expedition, and on the 8th of December a dash was made into the port of Mevades, where were captured the steamer Anita, with 100 men on board, the passenger steamer Rio Uruguay, and the steamer Rio de la Plata. The steaming qualities of the America saved her, and she ran into Montevideo and gave the alarm. Toward morning of the 9th the fleet of the Blancos appeared in the harbor and captured the government steamer Oriental, which had on board a large quantity of powder. This was distributed among

the vessels, and then they left the Oriental, steaming away under cover of the fire from Cerro fort, which they had previously taken.

The Uruguayan Government was powerless, as their only war-ship was stationed at Colonia. It was finally agreed that the Blancos should give up the prizes to the Brazilian legation. This arrangement was soon afterward carried into effect. For three or four days the British *chargé d'affaires* at Buenos Ayres was endeavoring to effect a compromise between the rival factions. He succeeded in obtaining a note from the commander of the Blancos, Timoteo Aparicio, proposing the appointment of commissioners to meet commissioners to be appointed by the Government for the adjustment of all points at issue. The Government, however, did not accept the proposition in full, but demanded a modification of the bases upon which the negotiations are to take place.

V

VENEZUELA, a republic in South America. Area, 868,235 square miles. Population, 2,200,000, inclusive of about 600,000 unsettled aborigines, or Indians. The following table gives the number of the white or population of European descent in each of the thirteen States of the republic, according to official estimates:

Caracas.....	363,856	Cumaná.....	75,838
Barquisimeto....	313,881	Coro.....	73,331
Carabobo.....	230,509	Trujillo.....	60,087
Barinas.....	136,936	Apure.....	32,485
Maracaibo.....	89,718	Margarita.....	20,906
Mérida.....	84,843	Guayana.....	13,568
Barcelona.....	78,684		

Total..... 1,564,433

During the year ending June 30, 1868, the revenue, exclusively derived from customs duties, amounted to \$4,390,055; expenditure, \$4,560,760, more than one-half of the disbursements being for the maintenance of the army.

At the end of 1869 the internal and foreign debt comprised \$52,971,750. The foreign debt, contracted chiefly in England, comprises:

3 per cent. stock.....	\$14,060,000
1½ " " or deferred debt.....	6,911,750
6 " " loan of 1863.....	4,500,000
6 " " stock issued for arrears.....	1,000,000
6 " " loan of 1864.....	7,000,000

Total..... \$33,471,750

With the exception of the dividends on the 6 per cent. loan of 1864, no interest has been paid since the year 1865.

The army of the republic, in 1869, numbered 5,000 men. Besides the regular troops, there is a national militia, in which every citizen, from the eighteenth to the forty-fifth year, inclusive, must be enrolled.

In spite of the vast agricultural and mineral resources of the country, the trade of Venezuela is not very considerable. During the five years 1865-'69, the total imports averaged \$5,000,000; exports \$6,000,000 per annum.

The country continued to be devastated by intestine wars. President Monagas, with whom much fault had been found for the inactivity of the government against the revolution, took command of the army early in February. The eastern States were neutral, and had taken no part in the movement up to that time, while the western States had pronounced in favor of the revolutionists, and had furnished them 7,000 men. They had defeated the government troops at Adjuntas, near Caracas, and then attacked Valencia, but after a desperate battle, causing a loss on both sides of 400 men, were repulsed by the regular army, which held that city in strong force. General Antonio Guzman Blanco, one of the revolutionary candidates for the presidency, under date of the 22d of February, issued the following proclamation:

Our banner is the Constitution of 1864, which recognizes and grants to the Venezuelans the right of insurrection if the public authority interfere with their prerogatives, their guarantees, and liberties. These prerogatives, these guarantees, these liberties, all disappeared with the violation of the two cardinal principles of the federal republic: the liberty of election, which is the supreme right of the people, and the autonomy of the States, which is the supreme guarantee of all liberty in the confederation.

The revolution soon spread over the entire country, and, although at first only skirmishes took place between the opposing forces, the insurgents under Guzman Blanco soon became sufficiently strong to try a decisive blow. They marched on toward the city of Caracas, the capital of the country, which they took by assault, on the 27th of April, after two days' siege and hard fighting. Many disorders occurred, and several houses and shops were sacked. Guzman Blanco next day issued a proclamation, taking supreme control and naming a ministry; ignoring all legislation

and acts of the late government and Congress since June, 1868; refusing any further payments of foreign debt, or on any contracts or loans made with the late government.

After severe fighting Guzman Blanco took possession of Laguayra. Monagas abdicated, and left for Martinique. Blanco immediately prohibited any vessels from leaving Laguayra, as he was afraid they would carry away refugees, or convey supplies to the old government party, which still held possession of Porto Cabello. During the latter part of May, an expedition was fitted out under General Hernandez, of the Monagas party, for the purpose of blockading the ports occupied by the insurgents. Blanco, at the head of 8,000 men, left Laguayra to attack Coro, but General Hernandez raised an army of considerable strength, with which he started in pursuit. No collision took place, however, until on the 9th of September, when Hernandez, with 4,000 men, defeated Guzman's troops after a sanguinary combat, which lasted for thirty-six hours. On the 21st he dispatched a portion of his forces to attack the insurgents at San Felipe, where he was defeated, and fell back to Trujillo to attack General Daboin, who was at Chubarquin with a large body of men.

The government party still held the eastern part of Maracaibo and the city of that name. General Hernandez had proclaimed himself Governor of the State of Zulia, where he had raised an army of 1,500 men, and also a national guard. Every man in the State was to bear arms if called upon. All the ports were vigorously blockaded by the navy, which consisted of ten vessels, half of which were steamers. The consul of the North-German Confederation, together with the British Consul, arranged that a vessel-of-war of either nation should be present in Venezuelan waters at all times for the protection of their interests.

On November 12th, General Venancio, of the party of Guzman Blanco, captured Coro after seven days' fighting, when the triumph of the revolutionists was considered an accomplished fact. They had also captured the fort of Maracaibo, the last stronghold of the Monagas party. The city of Maracaibo was still held by the government until about the middle of December, when it had to be surrendered, and the whole republic was in the hands of Guzman Blanco, who went to the capital, Carácas, to establish his government. A correspondent at that place writes under date of December 24th:

The fearful effects of the civil wars which have raged almost continuously may be realized from the fact that, according to statistics for the last ten years, upward of sixty thousand persons have been killed in intestine war. A lamentable state of things to contemplate in this unhappy republic. The revolution has triumphed, but whether a settled peace will be secured it is impossible to predict.

VERMONT. There are encouraging evidences of advancement in this State. The population and prosperity have materially in-

creased, and the expected construction of a ship-canal, connecting the waters of Lake Champlain with the Upper Lakes, thus bringing Vermont into the great highway of traffic from the West to the seaboard, will stimulate her industry.

In the political history of the State for the last year there have been some important changes, and for the first time the gubernatorial chair became vacant by the death of its occupant. Governor P. J. Washburn died on February 7th, and, until the new election, the duties devolved upon Lieutenant-Governor W. Hendee, who was succeeded by John W. Steward, elected in September.

One of the most important occurrences was the assembling of the Constitutional Convention. On June 8th, the delegates from the several towns met, to take such action as they might deem appropriate on the amendments to the constitution proposed by the Council of Censors. The convention had no power to originate or propose amendments, but was confined to ratifying or rejecting, without alteration, such as were offered by the council. This council is composed of fourteen members, elected by the people, and convenes once in seven years. Its duty is to examine the constitution and its operation during the interval, and to draft and formally propose whatever amendments may be deemed necessary. The Legislature then provides for the appointment of a convention to take action thereon.

The articles of amendment which were presented to the convention were as follows:

ARTICLE I. Corporations shall not be created, nor their powers increased or diminished by special laws, except for municipal purposes.

ARTICLE II. Section 1. The General Assembly shall meet on the first Wednesday of October, biennially; the first election shall be on the first Tuesday of September, A. D. 1870; the first session of the General Assembly on the first Wednesday of October, A. D. 1870.

Sec. 2. The Governor, Lieutenant-Governor, Treasurer of the State, senators, town representatives, Assistant Judges of the County Court, sheriffs, high bailiffs, State's Attorneys, Judges of Probate, and justices of the peace, shall be elected biennially, on the first Tuesday of September, in the manner prescribed by the constitution of the State.

Sec. 3. The term of office of the Governor, Lieutenant-Governor, and Treasurer of the State, respectively, shall commence when they shall be chosen and qualified, and shall continue for the term of two years, or until their successors shall be chosen and qualified, or to the adjournment of the session of the Legislature at which, by the constitution and laws, their successors are required to be chosen, and not after such adjournment.

Sec. 4. The term of office of senators and town representatives shall be two years, commencing on the first Wednesday of October following their election.

Sec. 5. The term of service of the assistant judges of the county court, sheriffs, high bailiffs, State's attorneys, judges of probate, and justices of the peace, shall be two years, and shall commence on the first day of December next after their election.

ARTICLE III. Whenever the office of senator or town representative shall become vacant from any cause, the Legislature may provide by law for filling such vacancy.

ARTICLE IV. *Sec. 1.* The Judges of the Supreme Court shall be appointed by the Governor, by and with the advice and consent of the Senate.

Sec. 2. The term of office of the Judges of the Supreme Court shall be six years; provided that, under the first appointment made in pursuance of this section, one-third of the judges first appointed shall hold their office for a period of six years, and one-third thereof, last in the order of appointment, shall hold their offices for a period of two years.

Sec. 3. The Judges of the Supreme Court shall at stated times receive a reasonable compensation for their services, which shall not be diminished during the terms of their office.

ARTICLE—(*Proposed for adoption if Article II. is adopted and Article IV. is rejected.*) The Judges of the Supreme Court shall be elected biennially, and their term of office shall be two years.

ARTICLE V. Hereafter women shall be entitled to vote, and with no other restrictions than the law shall impose on men.

ARTICLE VI. *Sec. 1.* At the session of the General Assembly of this State, A. D. 1870, and at the session thereof every tenth year thereafter, the Senate may, by a vote of two-thirds of its members, make proposals of amendment to the constitution of the State, which proposals of amendment, if concurred in by a majority of the members of the House of Representatives, shall be entered on the journals of the two Houses and referred to the General Assembly then next to be chosen, and be published in the principal newspapers of the State; and, if a majority of the members of the Senate and of the House of Representatives of the next following General Assembly shall, respectively, concur in the same proposals of amendment, or any of them, it shall be the duty of the General Assembly to submit the proposals of amendment so concurred in to a direct vote of the freemen of the State; and such of said proposals of amendment as shall receive a majority of the votes of the freemen voting thereon shall become a part of the constitution of the State.

Sec. 2. The General Assembly shall direct the manner of voting by the people upon the proposed amendments, but enact all such laws as shall be necessary to procure a free and fair vote upon each amendment proposed, and to carry into effect all the provisions of the preceding section.

Sec. 3. The House of Representatives shall have all the new powers now possessed by the Council of Censors, to order impeachments, which shall in all cases be by a vote of two-thirds of its members.

Sec. 4. The forty-third section of the second part of the constitution of this State is hereby abrogated.

Of the proposed amendments Articles II. and VI. were adopted in all their sections, and are now a part of the constitution, and also an additional article providing that the judges of the Supreme Court shall be elected biennially, and their term of office shall be two years. The remainder of the amendments were rejected.

The first meeting of the Legislature under the new ordinance providing for biennial sessions was watched with more than ordinary interest, especially as both Houses were composed of an unusual number of new members.

Of things done, perhaps the most important were the changes in the school laws. These permit the towns to abolish school districts and substitute the town system; provide for the uniform examination of teachers; remove the restriction forbidding the employment of teachers after November, 1871, unless they are pro-

vided with a State certificate or normal-school diploma; raise the lower limit of the school age of children from four years to five; increase the time for which schools must be maintained, in order to draw public money, from sixteen to twenty weeks; require a more detailed school census; make it the duty of district committees and town boards to supply school-books to children whose parents cannot or will not supply them; and provide means for repressing truancy. The term of existence of the three normal schools was extended for three years, and the appropriations for them increased to \$1,000 apiece.

Among other important acts passed was one changing the forum for divorce trials from the Supreme to the County Courts, and another relating to alimony, custody of children, etc., in divorce cases.

A simplified general law for the forming of private corporations by voluntary association was passed.

The next election of congressmen was postponed to November, 1872. A reapportionment of State senators was made, giving four to Rutland County and reducing Washington County to two.

A State tax of five mills on the dollar was laid, and appropriations of \$30,000 for the Reform School (\$25,000 of it for a new building), for paying off the maturing bonds, and for State expenses, were made.

Of some 540 bills introduced, 300 became laws.

Two interesting acts relating to the inheritance of property were also passed. One providing that, when an intestate leaves no children, his widow shall take the whole of the estate, if it amounts to no more than \$2,000, and, if it amounts to more, that she shall take \$2,000, and half the remainder; and another, decreeing that, when any married woman shall die, leaving no children, all her present estate not disposed of by will shall go to her husband.

The evils of the law of summary attachment have been long felt and acknowledged. The Governor thus speaks of its operations:

A perfectly solvent business man is liable to a summary attachment of all his property upon a claim which may prove wholly groundless or even fictitious; his credit may be thereby seriously impaired, and perhaps his business broken up and destroyed. On the other hand, if a debtor be really insolvent, the first attaching creditor may absorb all his assets, leaving without satisfaction or redress all other creditors, frequently comprising widows and minors, who cannot exercise the sharp diligence the law requires.

A law which not only permits but encourages the application of all the property of an insolvent debtor to the payment of one greedy creditor, to the exclusion of all others, is so manifestly unjust that comment is unnecessary.

The returns of the recent census show a small increase of population during the last decade; it was thought probable; however, that, under the new apportionment of repre-

sentatives in Congress, the State would lose one member, and would therefore have to be redistricted before the next congressional election; but, after a short discussion in the Senate, the subject of redistricting the State developed a strong opposition to the proposition, and, as no argument was made in favor of the measure, it was finally voted to refer the matter to a committee.

The total funded debt, including coupon bonds and registered loan, is as follows:

Coupon bonds, due June 1, 1871.....	\$448,500	
Registered bonds, due June 1, 1871.....	2,000	\$450,500
Coupon bonds, due December 1, 1874.....	\$95,000	
Registered bonds, due December 1, 1874.....	150,500	245,500
Coupon bonds, due December 1, 1876.....	\$211,500	
Registered bonds, due December 1, 1876.....	83,500	295,000
Coupon bonds, due December 1, 1878.....	\$52,500	
Registered bonds, due December 1, 1878.....	47,000	99,500
		\$1,045,500
Less bonds in the Treasury.....	48,000	
Funded debt outstanding.....		\$1,002,500

The whole amount of bonds outstanding, redeemable in 1871, is \$450,500; of which \$378,500 were issued prior to the passage by Congress of the legal-tender act.

It is held by a recent decision of the Supreme Court of the United States, that the provisions of the legal-tender act are not retroactive, and that debts contracted prior to its passage are payable in coin.

The coupons on these bonds, due last June and yet unpaid, amount to \$2,280; of which \$1,920 have been presented and demanded in coin—payment in which was declined.

The Republican Convention which nominated Governor Steward assembled at Burlington on June 22d. The following resolutions were adopted:

Resolved, That the Republicans of Vermont reaffirm the general principles of free government upon which her institutions were originally founded, and from which have sprung the prosperity and progress of her people.

Resolved, That the mission of the Republican party is not ended, but that the great work it has thus far carried on it will continue. It will enhance individual liberty and enforce obedience to law. It will reduce the burden of taxation imposed upon the people by their enemies, while it will also continue to diminish the public debt and public expenditure. It will administer the government with rigid economy, and at the same time keep the public faith inviolate. It will sympathize, as it always has done, with all sincere struggles for liberty among foreign nations, while it also observes the most scrupulous fidelity to international law which it demands from other governments and peoples.

Resolved, That we cordially indorse the Administration of President Grant, and will in the future as in the past zealously support it in the same course of honor and benefit to the country.

Resolved, That we will heartily support at the polls the candidates for State offices this day nominated.

Resolved, That in the death of Governor Washburn the State has lost an able and popular chief magistrate. Revered and honored by the people of the State in his life, his memory will be held in affectionate regard.

A Democratic State Convention was also held in Montpelier, on June 17th. It was well attended. The following resolutions were passed:

Resolved, That the Democrats of Vermont recognize the Constitution of the United States as the supreme law from which the Federal Government derives its authority; that the rights and powers not therein delegated to the General Government belong to the States, and all attempts to usurp, override or impose conditions upon the several States without constitutional authority are unjust, oppressive, and subversive of the rights of the people.

Resolved, That the persistent and repeated violations of the Constitution and constitutional laws by the radical party, since that party has had control of the General Government, merit the condemnation of all good citizens, and have and shall receive the continual and determined opposition of the Democratic party.

Resolved, That the profligacy and corruption which have entered into all the official stations of the Federal Government, the favoritism that has appointed to positions of public trust the partisans or tools of those who control the public patronage, should be denounced by all true friends of the Union.

Resolved, That we still have faith in the wisdom and integrity of the people, and that ultimately they will rise in their majesty and strength and hurl from power our present corrupt rulers and restore the Government to its original purity.

Resolved, That we commend the ticket this day nominated, for Governor, Lieutenant-Governor, and Treasurer, to the cordial support of the freemen of the State on the first Tuesday of September next.

The State Temperance Society had their forty-second annual meeting at Castleton, on December 21st, when it was recommended that temperance men in each county should employ a competent lawyer to aid them in prosecuting all violations of the State liquor law to final judgment. It was also, on motion, recommended that a general convention be held at some convenient time and place during the winter, composed of delegates from the various temperance societies and churches throughout the State, in which all classes of the friends of temperance may be represented, for the purpose of awakening a more general and livelier interest and more efficient action in favor of the cause, and that a committee be appointed to present this resolution to the next meeting of the Grand Lodge of Good Templars of Vermont, and all other temperance organizations in the State, and to co-operate with them in making arrangements for such convention.

The prosperity of Vermont has been considerably enhanced by various railroad improvements. Some of the new enterprises promise additional prosperity, and among the most prominent of these is that of the Montpelier and Wells River Railroad, which has at length been commenced and its completion assured.

A most important railroad combination was the result of a lease effected by the Vermont Central of the Ogdensburg and Lake Champlain road for a period of twenty years. This transaction furnishes to the city of Boston cheap communication with the lakes.

Articles of consolidation of the Bennington and Rutland and Lebanon Springs Railroad Company were filed in the office of the Secretary of State in New York, on the 23d of April. The consolidation is perfected under a special act of the Vermont Legislature, and an act of New York, passed May 20, 1869. The new corporation is to be called the Harlem Extension Company, and the road extends from Chatham Four Corners, N. Y., to Rutland, Vt. The capital stock is fixed at \$400,000. The question has been agitated, among the people of Addison County and the managers of the Rutland road, of a new line in rivalry of the Burlington and Central, which will stretch from Whiting or Salisbury, across Addison County and Lake Champlain, making, in connection with the Plattsburg and Montreal Railroad, a through route to Ogdensburg. A bill was passed by the Legislature to incorporate the Walloomsac Company, formerly known as the Burden Railroad Company.

A great obstacle to the progress of public schools is the general want of qualified teachers, in consequence of the smallness of salaries. The returns of the schools for the year show that the average cost for teachers and current expenses has been only \$151.86. The school year is also represented as too short, the longest time being for thirty-six weeks in the year in one county, while in most it only reaches seventeen weeks. Some measures have already been taken to supply these defects, but they have not hitherto proved successful. A training-school for teachers is also desired, or, in other words, such Normal Schools as are found in other States. Nowhere else is an attempt made to sustain a Normal School on an appropriation less than \$5,000, but Vermont, until 1870, granted only \$500, and only to aid scholars who sign a declaration of their poverty. This all are reluctant to give, and only 200 out of the 800 who have entered the three Normal Schools were willing to accept State aid under such circumstances. These three Normal Schools, however, have been very beneficial and are gaining in public estimation and in the number of pupils. By an act of the last Legislature, \$1,000 was appropriated to each. It is thought that *one* Normal School, liberally supported, would meet all the wants of the State for years. The number of scholars at the public schools during the year was 72,950. The registers show that 79 schools have less than five children each; 549 schools have from five to ten each; 653 schools have from ten to twenty-five each. In 2,750 schools no less than 4,239 different teachers were employed during the year.

Neither the farmers nor the Legislature has furnished help to the Agricultural College, which has been incorporated with the University of Vermont, the charter having been so modified as to give the Legislature the choice of one-half the trustees. In order to enlarge the means of illustration, and to increase the

corps of professors, the trustees resolved, three years ago, to raise at least \$80,000 by subscription. This sum has been at last subscribed, and a portion has provided improved facilities for instruction in the agricultural and scientific department.

Quite a number of Woman Suffrage Conventions were held during the year, at which the principal advocates of the movement officiated; when the proposal was made in the Legislature to give woman the ballot, there was not a speech made for or against it, and the vote on its adoption stood 1 to 231. Their petition to the Constitutional Convention was also crowded out of consideration by pressure of other business.

Considerable excitement was created for a few days during the latter part of May, by a fresh Fenian movement upon the Vermont border. The Fenian army of 500 men were marshalled and armed at Fairfield, whence they marched into Canada. They were fired upon by the Canadian militia very near the line, and after a slight engagement fell back demoralized into Vermont, and the invasion of Canada from this State was ended. The United States Government arrested the officers for a breach of neutrality laws, and quiet was restored.

Many of the streams of Vermont were once filled with salmon, and a recent effort has been made to restock them with this fish.

The State-prison at Windsor has 94 convicts, 89 males and five females. Twelve of these entered since June 1st on sentences from nine months to ten years.

The following is the Federal census of Vermont for the years 1860 and 1870:

COUNTIES.	1870.	1860.
Addison.....	23,484	24,010
Bennington.....	21,235	19,436
Caledonia.....	22,247	21,709
Chittenden.....	36,489	28,171
Essex.....	6,511	5,736
Franklin.....	30,291	27,231
Grand Isle.....	4,063	4,376

Washington.....	26,508	27,613
Windham.....	26,086	26,923
Windsor.....	36,064	37,193
Total.....	330,552	315,098

VERPLANCK, GULIAN CROMMELIN, LL. D., an American scholar, author, jurist and statesman, born in New York City, August 6, 1786; died there, March 18, 1870. On his father's side he was descended from the Verplancks and the Crommelins, both eminent Dutch families, and the former among the early colonists of New Netherlands. His mother was daughter of the second and grand-daughter of the first President of Columbia College, both eminent divines. Mr. Verplanck was from his earliest childhood passionately devoted to study, and, through the teachings of his grandfather Johnson, and his grandmother Ver-

planck, he was fitted for and entered Columbia College in 1797, when but eleven years of age. He graduated with honor in 1801, the youngest Bachelor of Arts who ever received his diploma from that College. He studied law in the office of Josiah Ogden Hoffman, and in due season was admitted to the bar, and opened an office for practice in New-York City. He was already somewhat known as an eloquent speaker and orator, and his services were in requisition for Fourth of July and other popular occasions. In 1811 Mr. Verplanck was married to Miss M. E. Fenno, a very beautiful and accomplished lady, who died in Paris in 1817, and for whom he was a life-long mourner. In 1811 also, he fell under the displeasure of De Witt Clinton, then Mayor of New York, in consequence of his interference in behalf of a member of the graduating class of Columbia College at the commencement in that year. Verplanck, Maxwell, and the student who was the cause of the disturbance, were tried in the Mayor's Court on a charge of riot, and Mr. Clinton in his charge to the jury inveighed with great severity against Verplanck, and denounced him in the harshest terms. He and his associates were fined \$200 each, and paid the fines promptly, but from that time forward Mr. Verplanck for several years satirized Mr. Clinton unsparingly. He published a series of letters in the *Corrector*, over the signature of "Abimelech Coody, Ladies' Shoemaker," in which Mr. Clinton's public career, and his advocacy of the War of 1812, then just commencing, were handled with great severity. Clinton replied in a pamphlet entitled "An Account of Abimelech Coody, and other celebrated Worthies of New York, in a Letter from a Traveller," in which Verplanck, James K. Paulding, and Washington Irving, were attacked, and their figures, features, personal defects, and literary pretensions, made the subject of disparaging comment. Verplanck retorted in three successive pamphlets, afterward published in a single volume. The first of these, entitled "The State Triumvirate, a Political Tale," was directed against the general principles of Clinton's party. The second, "The Bucktail Bards," vaunted the virtues of his own political friends. The last, and the most effective as well as the happiest of the three, was entitled "The Epistles of Brevet Major Pindar Puff," De Witt Clinton, then Governor, being ridiculed in that character. Clinton, in his "Traveller" letters in 1814 had ridiculed Mr. Verplanck's literary pretensions; the last-named lampoon of Mr. Verplanck was directed at the literary character of the Governor.

Partly, perhaps, in consequence of this contest, Mr. Verplanck was elected to the Legislature in 1811, as the candidate of the malcontents, or party opposed to the War of 1812, and again in 1820, shortly after his return from Europe, where he had spent four years, and where his beautiful young wife had died. In the Legislature he was chairman of the Com-

mittee on Education, and introduced some important educational measures.

In 1821 he was appointed Professor of the Evidences of Revealed Religion and Moral Science in the General Theological Seminary of the Episcopal Church, in New York. For four years he performed the duties of this professorship, with what ability is shown by his treatise on the Evidences of Christianity, the fruit of his studies during this interval.

It was in 1825 that he published his essay on the Doctrine of Contracts, in which he maintained that the transaction between the buyer and seller of a commodity should be one of perfect frankness and an entire absence of concealment; that the seller should be held to disclose every thing within his knowledge which would affect the price of what he offered for sale, and that the maxim, which is compressed into the two Latin words, *caveat emptor*—the maxim that the buyer takes the risk of a bad bargain—is not only a selfish but a knavish and immoral rule of conduct, and should not be recognized by the tribunals.

In 1825 Mr. Verplanck was elected one of the three Representatives in Congress, to which New-York City was then entitled. He immediately distinguished himself as a working member. Then arose the great controversy concerning the right of a State to refuse obedience at pleasure to any law of Congress, a right contended for, under the name of nullification, by some of the most eminent men of the South, who also denied the power of Congress, under the Constitution, to levy duties on imported merchandise, for the purpose of favoring the home manufacturer, and maintained that it could only lay duties for the sake of raising a revenue. Mr. Verplanck favored neither this view nor their theory of nullification. His view of the subject was presented with great skill and force in a pamphlet entitled "A letter to Colonel William Drayton, of South Carolina," published in 1831.

While in Congress, Mr. Verplanck procured the enactment of a law for the further security of literary property. To use his own words, it "gave additional security to the property of authors and artists in their works, and more than doubled the term of legal protection to them, besides simplifying the law in various respects." It was passed in 1831, though Mr. Verplanck had begun to urge the measure three years before, when he brought in a bill for the purpose, but party strife was then at its height, and little else than the approaching elections was thought of by members of Congress.

During Mr. Verplanck's fourth and last term in Congress he became separated from his associates of the Democratic party by a difference in regard to the Bank of the United States.

Verplanck had leisure, during the interval between one session and another, for literary occupations. He wrote about one-third of an annual collection of miscellanies entitled "The

Talisman," which was published by Dr. Bliss in the year 1827 and the two following years. To these volumes he contributed the "Peregrinations of Petrus Mudd," a humorous and lively sketch, founded on the travels of a New-Yorker of the genuine old stock, who, when he returned from wandering over all Europe and part of Asia, set himself down to study geography in order to know where he had been. Of the graver articles, he wrote "De Gourges," a chapter from the history of the Huguenot colonists of this country; "Gelyna, a Tale of Albany and Ticonderoga," and several others. In conjunction with Robert C. Sands, a writer of a peculiar vein of quaint humor, he contributed two papers to the collection entitled "Scenes in Washington," of a humorous and satirical character. He disliked the manual labor of writing, and was fond of dictating while another held the pen. In 1833, he collected his public speeches into a volume. Among these is one delivered in August of that year in Columbia College, in which he holds up to imitation the illustrious examples of great men educated at that institution. In one of those passages of stately eloquence which he so well knew how to frame, he speaks of the worth of his old adversary, De Witt Clinton, the first graduate of the college after the peace of 1788, and pays due "honor to that lofty ambition which taught him to look to designs of grand utility, and to their successful execution, as his arts of gaining or redeeming the confidence of a generous and public-spirited people." In the same discourse he pronounced the eulogy of Dr. Mason, who had died a few days before.

After separating from the Democratic party, Mr. Verplanck was elected by the Whigs, in 1837, to the Senate of the State of New York, while that body was yet a Court for the Correction of Errors—a tribunal of the last resort—and in that capacity decided questions of law of the highest magnitude and importance. During the four years in which he sat in this Court, he heard the arguments in nearly every case which came before it, and delivered 71 opinions. These opinions of his form an important part of the legal literature of our State. If he had made the law his special pursuit, and been placed on the bench of one of our higher tribunals, there is no degree of judicial eminence to which he might not have aspired.

One of the most marked of the many discourses which he delivered was at Union College in the year 1836, the subject being "The American Scholar." His design was to show that the mental activity of America, the general dissemination of intelligence, the open path to every species of intellectual distinction, more than counterbalance the opportunities for scholastic retirement in which the New is as yet inferior to the Old World. In 1844 he began the editing of an edition of Shakespeare's plays, the publication of which was completed

in 1847, in three large octavos. Mr. Verplanck's labors consisted in a revision of the text, which he did with independence as well as carefulness. An excellent feature in his work was the pointing out of colloquial expressions often called Americanisms, which, obsolete in England, are yet preserved in this country. He gave original prefaces to the plays, characterized by the ease and finish common to his productions.

Mr. Verplanck was a member of the Board of Regents of the University of the State of New York from 1826 till his decease, and on the Library Committee for the State Committee for 1844 to his death, and Vice-Chancellor of the University since 1855. He was one of the Governors of the New York Hospital from 1823 to 1865, and always attentive to his duties. He was a member and most of the time President of the Board of Commissioners of Emigration, from its organization in 1847 to 1870; a Trustee of the Public School Society from 1833 to 1841, and connected with most of the public charities and institutions of New-York City.

VILLEMAIN, ABEL FRANÇOIS, a French author, professor, statesman, and academician, born in Paris June 11, 1790; died in that city, May 10, 1870. His early education was obtained at the Imperial Lyceum (near the *Lyceé Louis le Grand*), where he exhibited, while yet a child of twelve years, a proficiency in Greek and in composition so remarkable that the Professor of Rhetoric often left him in charge of the class. After completing his course at the Lyceum, in 1808, he commenced the study of law; but in a year or two, De Fontanes, who had made his acquaintance, and was charmed with his talents, persuaded him to qualify himself for a literary career by engaging in teaching. In 1810 he was appointed Adjunct Professor of Rhetoric in the *Lyceé Charlemagne*, and soon after Master of the Conferences in French Literature and of Latin Versification at the Normal School. In 1812 he was appointed to deliver the Latin oration at the general examination of the Lyceum, and acquitted himself with great ability. The same year he competed for the prize offered by the French Academy for the best essay on Montaigne, and his memoir was crowned by the Academy and received its high appreciation. Two years later (in April, 1814), by a special vote of the Academy, he read before them an essay on the "advantages and inconveniences of criticism," when he had the King of Prussia and the Emperor of Russia among his hearers. In 1816 he was again the orator of the Academy, reading before it an "Essay on Montesquieu," which had been crowned by that body. He was at this time Adjunct Professor of Modern History at the Sorbonne, but through Roger Collard's influence he was promoted to the professorship of French Eloquence in that venerable university, a position which he occupied with credit for ten years. In 1819 the young professor gave

to the public his first work, "The History of Cromwell, according to the Memoirs of the Time and the Parliamentary Records." This work was much admired for the simple elegance of its style and its sympathy with moderate liberalism in its political tone, and was translated into most of the languages of Europe. It was about this time that he entered upon political life, being appointed, by direction of Louis XVIII., chief of the division of printing and of books, and subsequently, under the Decazis ministry, Master of Requests to the Council of State. Both these posts appertained to the censorship of the press. In 1820 he was made a Chevalier of the Legion of Honor, and in 1821 chosen a member of the French Academy as successor to his old patron, De Fontanes. For the next five or six years M. Villemain devoted himself sedulously to the duties of his professorship, publishing in 1822 a translation of the new manuscript of "The Republic" of Cicero, then recently discovered by Cardinal Mai, with a preliminary essay and critical notes, and in 1825, *à propos* of the revolution in Greece, two works relative to that country: "Lascasis, or the Greeks of the Fifteenth Century," a dramatic study, and an "Essay on the Condition of the Greeks after the Mussulman Conquest." M. Villemain was at heart a Liberal, as his history of Cromwell demonstrated; and, as the Bourbons grew more intolerant and crushed with greater severity the freedom of the press each year, his love of liberty overpowered his devotion to the royal family, and he began to lean toward the opposition. In 1827, having resigned his professorship, he was appointed by the Academy, with Lacretello and Chateaubriand, to draw up the protest of the Academy addressed to Charles X., against the reestablishment of a rigorous censorship of the press. This protest cost him his position as Master of Requests, but he went back to his professorship at the Sorbonne, where he was received with the most hearty ovations, and attained a greater popularity than ever before. In 1830 he was elected to the Chamber of Deputies from Evreux, and at once took his place in the ranks of the Liberal party. He took an active part in the discussion and labors which ensued upon the transformation of the government into a constitutional monarchy, was a member of the committee on the revision of the charter, and succeeded in incorporating into it some of its best features. He was not long in the Chamber, for in 1831 Louis Philippe appointed him a member of the Royal Council of Public Instruction, and in 1832 vice-president of that Council. In the same year he was made a peer of France, and soon after elected perpetual secretary of the French Academy. His action in the Council was consistent with his avowed opinions in regard to the freedom of the press, and brought him once or twice into collision with the ministry. In the Soult Cabinet of May, 1839, he was

a member, as Minister of Public Instruction, and, with the exception of the brief duration of the Thiers Cabinet of March to October, 1840, remained in that position till December, 1844. To him was assigned the impossible task of framing a law, organizing secondary instruction, which should satisfy classes diametrically opposed to each other, the clergy and the liberals, the King and the university, the parties of the right and the left. After four years of harassing labor his project was laid before the Assembly, but it was, of course, unsatisfactory, and with broken health M. Villemain resigned his office. The Government proposed to grant him a pension of £3,000 per annum, with reversion to his family, but he refused to accept it. His health restored, he devoted himself with new zeal to literature, and to the duties of his scholarship at the Academy. In 1843 he was promoted to the rank of Grand Officer of the Legion of Honor. He took no active part in politics from this time onward, remaining quiet during the Revolution of 1848, the *coup d'état* of December, 1851, and the subsequent career of Napoleon III. The literature and the history of the past had greater charms for him than the life of the present age. Among the Frenchmen of the nineteenth century he stands preëminent for the grace and purity of his style and the elevated tone of his writings. His principal works were: "A course of French Literature of the Eighteenth Century," in five vols., which has been translated into English by Mr. W. Chase; "Literary Addresses and Miscellanies," 1823; "New Historic and Literary Miscellanies," 1827; "Studies in Ancient and Foreign Literature," 1846; "A View of Christian Eloquence in the Fourth Century," 1849; "Studies in Modern History," 1846; "Reminiscences of the History and Literature of our Times," 1856; "Selection of Studies in Contemporary Literature," 1857; "The Tribune of our Day, M. de Chateaubriand," 1857; "Essays upon the Genius of Pindar and upon Lyric Poesy," 1859. Aside from these there was an almost endless variety of essays, studies, addresses, notices and reports, addressed to the French Academy from his prolific pen, and many occasional publications, all exhibiting his peculiarly finished and classic style. He had been long engaged upon an elaborate "History of Gregory VII.," which was about ready for the press at the time of his death.

VIRGINIA. The bill for the admission of Virginia into the Union having become a law on the 26th of January, on the following day a military order was issued by General Canby transferring the government of the State to the civil authorities, and Governor Walker issued a proclamation for the assembling of the Legislature on the 8th of February. The Legislature then convened, and continued in session until July 11th. The Governor recommended that the immediate attention of the Legislature should be directed to filling the

various city, town, and county offices, to the organization of the militia and of the judiciary, and to the legislation required by the condition of the penitentiary, and the necessity of an asylum for insane colored citizens. With reference to the first suggestion, an act was passed providing that officers under the provisional government should continue in office until their successors were chosen under the constitution, and that their acts previously done should be valid. For the purpose of reorganizing the judiciary, the State was divided into 82 districts, for each of which a county judge was to be elected and a city judge was provided. There are five judges of the Supreme Court of Appeals, whose term of office is twelve years, and sixteen judges of the Circuit Courts, who hold office for eight years, while the term of office of the county and city judges is three years. All the judges of the State are chosen by a concurrent vote of the two branches of the Legislature. By the election law passed at this session, general elections are provided for each year, on the fourth Thursday in May, for township and city officers, and on the first Tuesday after the first Monday in November for State officers and members of Congress. A tax law was passed, providing for a levy of 50 cents on the \$100, on real estate, railway tracks, canal-beds (one-fifth to go for the purposes of free schools), and on personal property, while a poll-tax is levied for school purposes on all males over 21 years of age. There are also taxes on incomes, the earnings of railroad, canal, and express companies, licenses for merchants, peddlers, dealers, etc., and administrations, deeds, and suits at law. A plan was proposed by the State Superintendent of Education for the organization of free schools in the State, which provided for a Board of Education, to consist of the Governor, State Superintendent, and Attorney-General; also for county superintendents and district trustees. Schools are to be kept in each district at least five months in the year; separate schools, under the same regulations, to be provided for white and colored children. One half of the cost of instruction is to be defrayed by the State, the other half by the county, and the other school expenses by the district. Normal schools are to be established as soon as practicable. By acts passed at this session the following railroad companies were incorporated: Fredericksburg and Northern Neck, Rappahannock and Potomac River, and the Atlantic, Ohio, and Mississippi, under which name were consolidated the Norfolk and Petersburg, the Southside, the Virginia and Kentucky, and the Virginia and Tennessee Railroad Companies.

The Legislature assembled again on the 1st of October, and was in session at the close of the year.

In referring to the hopeful condition of the affairs of the State, Governor Walker, in his message, says:

Our people everywhere are adapting themselves to

the changed condition of affairs, with a promptitude, a wisdom, and moderation, worthy of all praise. In obedience to law, in the maintenance of order and the performance of all the duties appertaining to good citizenship, the people of Virginia challenge comparison with any State in the Union. Everywhere within the broad limits of the Commonwealth every citizen is safe and secure in his life, liberty, and the pursuit of happiness. Emerging from the terrible ordeal of a four years' baptism of blood, stripped of every thing save incorruptible honor, the people of this commonwealth have again resumed their place in the Union of their fathers, with earnest purpose and fixed determination to fulfil all the obligations of American citizens. More cannot be required of them—less they will not perform.

The finances of the State are not in a prosperous condition. Not only is the State debt very large, but the interest thereon has not been paid as it accrued. This is attributed to the increased expenses incident to the peculiar condition of affairs in the State, the administration of the government by military authority, and the partial failure to collect the public revenues. The recognized liabilities of the State on the 1st day of January, 1871, were as follows:

Debts issued under acts prior to the 17th of April, 1861.....	\$31,338,144 29
Interest due and unpaid thereon.....	5,312,185 43
Debt issued and that may be issued under the act of March 2, 1866, authorizing the funding of interest.....	7,692,810 38
Interest due and unpaid thereon.....	2,018,206 59
Debt on old James River Company stock.....	95,000 00
Interest due and unpaid thereon.....	19,800 00
Debt on James River and Kanawha Company bonds.....	201,130 97
Interest due and unpaid thereon.....	114,060 57

Amount of principal and interest on the 1st of January, 1871..... \$47,390,840 93

The assets and securities owned by the State on the 1st of January, 1870, with the balance in treasury added to the amounts of the bonds, held by the State, of sundry railroad companies, were in the aggregate \$33,963,276. Of the various stocks, bonds, and claims, some are at par, some are much below par, but constantly improving in value, while others are worthless. Of these assets \$2,612,776 are regarded as equal to or more valuable than State bonds. It is thought that in a few years other assets to the amount of \$10,048,267 will be available for the redemption of the State debt, while the sum of \$21,302,233.62 "is not now, and probably never will become, of much value to the State." In addition to this large amount, the State has lost, abandoned, or surrendered, \$9,789,092.

According to the *ad-valorem* system of taxation adopted by the constitution, the Governor estimates the whole actual value of property, real and personal, in the Commonwealth at \$728,115,589. This sum, at the rate of 40 cents on \$100—the rate established by the Legislature in 1866-'67, and which has since been continued—will produce \$892,462.35, which, increased by \$471,798.18 received from interest-paying securities held by the State, and other taxes and licenses, will amount to \$1,364,255.53, or more than the sum total of

the annual liabilities. In March, 1870, Governor Walker recommended the reorganization of the State debt by funding all the liabilities, except the sterling debt, including principal and interest, matured and maturing, to January 1, 1871, into the uniform class of new bonds bearing that date, and to run from ten to thirty years, at the option of the State, with interest payable semi-annually in New-York City; the new issue to be coupon bonds receivable for all debts and demands due the State. In December he reviews the various plans suggested as a solution of the financial problem, and maintains that "there is but one sovereign remedy for the evil which afflicts us, and that remedy is a strict fulfilment of our solemn obligations." For the purpose of apportioning the debt between Virginia and West Virginia, it was recommended that the question be submitted to arbitration, each State to select one disinterested arbitrator, and the two thus selected to choose a third, whose decision shall be final and binding on both States.

The people of Virginia have accepted in good faith the results of congressional reconstruction, and during the present year both political parties have been reorganized in harmony with the new condition of affairs. Early in July a conference of the conservative members of the Legislature was held, to consider measures for the organization of the Conservative party of the State. The committee, to whom was referred the question of organization, having decided that it was "inexpedient and unnecessary to call a convention, in view of the fact that there were no State offices to be filled at the next election," made a report, containing the following recommendations:

The committee are of opinion that it is of the utmost importance that the Conservative party of Virginia should be thoroughly reorganized for the approaching fall election. They, therefore, recommend:

1. That a committee of twenty-three members be appointed by this caucus, consisting of two members from each congressional district in the State and seven members from the city of Richmond, who shall be the Central Executive Committee of the Conservative party of Virginia, to continue in office until superseded by a regular convention of the people, and that seven members of the committee shall constitute a quorum for the transaction of business.

2. That the organization of the Conservative party maintained during the last gubernatorial canvass be revived, and perfected upon the basis of the plan adopted by the convention held in the city of Richmond on the 12th of December, 1867, except as hereinafter otherwise indicated, and to that end that the county and city superintendents of that canvass, or such others as may have been substituted for them, call meetings of the Conservative party of their respective counties and cities to assemble at their August courts, or at such other suitable time as they may designate, for the appointment of county and district superintendents, and to adopt all measures necessary for the perfect organization of the party and to contribute to its efficiency and success; and where there are no county or city superintendents these meetings may be called by any Conservative voters.

3. That it is recommended to the people of such

counties to present candidates for every office to be filled at the approaching elections, to be supported by the Conservative party at the polls.

4. That primary meetings be held in each township and ward to send delegates to a county and city convention to nominate candidates in each county and city, and that the county and city conventions appoint delegates to a convention for the congressional district to nominate a candidate for Congress to be supported by the Conservative party of its district.

The "Central Executive Committee of the State of Virginia," appointed by this conference, published an address to the people of the State, on the 4th of August, recommending a State policy in the coming canvass. It was also recommended that suitable nominations be made for the representatives of the State in Congress, so that the "favorable regard of Congress may be asked to the relief of the South by a more just and equitable distribution of the national currency; the relief of the great staple, tobacco, from ruinous specific taxation and those galling and oppressive restrictions which depress and deter the fair dealer, while they tempt the unfair to fraudulent evasion; money appropriations for the internal improvements of the State, bringing them in connection with the great transcontinental lines of communication, and an equal share in all the benefits of general legislation for the Union." Comparing the prosperous aspect of affairs in Virginia with the less orderly condition in some of the other Southern States, the committee say:

It is inseparable, perhaps, from the human disposition to overrate the evils of the present, which are sensible and felt, compared with those which are past, and of which the memory has become obscured. No revolution, however successful, ever brought with it the unmixed good which, in the ardor of hope, it was expected to achieve. The triumph of Conservatism in Virginia is no exception to the general law. It has not, in some unexplained way, relieved the people from the pressure of debt, nor repaired as by miracle the desolations of war. It has not, unaided, built up our railroads and canals, nor developed the hidden wealth of the field, the forest, and the mine. Hercules, as of yore, will aid only those who put the shoulder to the wheel. But we were strangely insensible not to acknowledge such blessings as the restoration of civil law in the place of irresponsible military power; the pure and equal administration of justice by judges of our own choosing; the reign of general quiet and order; the enactment of laws and their enforcement by a Legislature and an Executive freely elected; in a word, the autonomy of a self-governing people. Were incentives wanting to value such advantages at their proper worth, we need only survey the condition of those unhappy States which, in their struggles with radicalism, have been less fortunate in throwing off the incubus of that gross and truculent domination.

For the purpose of reorganizing the Republican party of Virginia, the Republicans of the State held a convention at Richmond on the 26th of September. A large number of colored delegates were members of the body. The committee on party organization recommended the formation of a State Central Committee consisting of twenty-five members—three from each congressional district, and

one for the State at large; one at large and one from each congressional district to be chosen by the convention. The committee was accordingly appointed, with ex-Governor Wells as chairman. The following series of resolutions was unanimously adopted as the platform of the Republican party in Virginia:

The Republicans in Virginia, in convention assembled, do resolve as follows:

1. That they approve and reaffirm the principles set forth as the creed of the party by the Republican conference of April last, and earnestly invite the co-operation of all men upon that liberal and comprehensive basis.

2. That the pledge then given, of support to the policy of Congress and the Administration of General Grant, has been justified by the great achievements of these branches of the government in the reduction of the public debt, the enhancement of the public credit, the augmentation of the public revenues, the lessening of taxes, the equalization of the currency among the States, the saving of interest by the funding of the national debt, the reduction of the army and navy expenses, the restoration of peace, the growth of the country in wealth and population, and the realization of the blessings of self-government under the auspices of the largest liberty, and the equality of all men before the law.

3. That in the enjoyment of these fruits of the national Administration, we feel it a pleasure, as well as a duty, to recognize and claim them as the result of Republican measures and Republican counsels, and commend them to the people as the best proofs of the wisdom and prudence with which our national affairs are conducted by the Executive and Congress.

4. That, notwithstanding the declaration heretofore made by our party for the exact and scrupulous enforcement of our constitution in all particulars, our special interest in our system of common schools does not allow us on this occasion to withhold from the people the expression of our settled distrust of what has already been done or may hereafter be done on this subject by the present General Assembly; and to exhort the people to look to and strive after Republican ascendancy, as the only hope of establishing a prosperous system of common schools, to which the Republican party is committed as one of its chief aims.

5. That we cannot but deplore the facility with which our whilom *true Republicans* in office have forgotten and abjured their pledges to General Grant and Congress, and the zeal they now display in opposition to both; but the remembrance of their venal professions, and of their falsity, enhances our wish and determination to show by the results of our elections this fall that the bulk of our people have been no parties to this game of deception, and are swift to condemn it.

6. That the contrivance, through means of a third party, termed "*Conservative*," to evade the issues between the great national parties—Republican and Democratic—is but a part of the artifices and deceptions which won the late inglorious victory in this State, is too palpable to mislead, and is unworthy of a frank and honorable foe.

7. That no disguise nor pretext can avail to save this third party, so far as it affects opposition to the Republican party, from being merged into the Democratic party, which alone constitutes that opposition, so that, in respect to all national issues, and all national elections, the *Conservative* party means nothing more nor less than the Democratic party, unless, indeed, this organization be a convenient house of refuge for time-servers, whose expectation may be to go over to that one of the two parties that shall prove to be the stronger, so that for the present these two parties have an equal interest in demolish-

ing this half-way house, and leaving its timorous inmates to make the same open fight which falls to their lot.

8. That while the baffled leaders of secession are announcing the failure of republican government and the inevitableness of monarchy or imperialism as its successor, our faith, on the contrary, is strengthened and confirmed in our republican government by late events; our sympathy stimulated in behalf of the people abroad, who are struggling for it, and our fervent gratitude to God aroused by the glad tidings of the spread of republican ideas among the nations of Europe.

9. That we are admonished by the course of the General Assembly that we have no chance of securing the fruits of our new constitution; nor the measures of relief required by the people, unless we shall demonstrate at the polls a strength that cannot be contemned, and a public will that must, sooner or later, be obeyed; and hence that we invoke our friends throughout the State to unusual activity and vigilance in the pending canvass, in order that we may not lose by evasion or delay what the people have decreed by a vote high unanimity.

10. That we earnestly recommend the formation of Union Republican tickets of county officers in the spirit of a conciliatory policy, and congratulate ourselves and the State upon the liberality and regard to the public service which have so far characterized these Republican nominations, especially in counties where the Republicans have undisputed sway.

11. That the Republican party of this State respectfully and earnestly asks Congress for such legislation as will secure to the people of this State the beneficent provisions of the homestead clause of their constitution through an amendment of the bankrupt laws of the United States, and for compensation to loyal men in the South for property taken for the use of the Government during the war, and the payment of all claims due citizens of the South for services rendered prior to the war, under such guards and restrictions as may be necessary to protect the Government from imposition.

12. That justice to all men, harmony among all classes, the protection of labor, the encouragement of capital, the education of all, the impartial administration of the laws, the development of our State resources, the moral, intellectual, and religious advancement of all our people, and, as the cap-stone of all inflexible devotion to that Union which makes of all these States one great nation, are the cardinal principles of the Republican party, and upon these rather than upon strifes of race or section we challenge the honorable rivalries of all men and all parties.

At the election held in November, three Republican and five Democratic Congressmen were chosen. The total vote cast was 166,559, and the Democratic majority 2,289.

The suit between Virginia and West Virginia concerning the jurisdiction over the counties of Berkeley and Jefferson, which had been pending for several years in the Supreme Court of the United States, was decided, in December of this year, adversely to Virginia. During the war the question of annexation to West Virginia was submitted to the people of these counties, who decided in favor thereof. Thereupon Virginia brought suit to annul the transaction, on the ground of alleged fraud in the election, and the action was finally decided by the dismissal of the complaint.

Soon after the restoration of civil power in the State, an exciting contest arose between George Chahoon and H. K. Ellyson concerning the possession of the office of Mayor of the

city of Richmond, which attracted much attention, not only in the State, but throughout the country at large. The "Enabling Act," so called, besides providing for the holding over of officers appointed under the provisional government, contained other sections. In pursuance of which provisions, Governor Walker on the 15th of March appointed members of the city council for the different wards of Richmond, who subsequently assembled, and, according to the said law, chose Mr. Ellyson mayor, and proceeded to appoint a chief of police and other officers of the police force. Mayor Chahoon, who had been appointed by General Schofield, in 1868, under the reconstruction acts, with his subordinates, refused to deliver up their offices to the newly-elected officials, regarding their election as illegal on the ground that the sections of the Enabling Act were unconstitutional, and claimed that they had a right to hold over, under the general provisions of the act, until there should be an election by the people. It was asserted, on the other hand, in behalf of Mr. Ellyson, that the act was constitutional; that Mr. Chahoon, being the appointee of the military power, had no title to the office after the readmission of the State; and, furthermore, that Chahoon, by holding the office of United States commissioner, was disqualified from holding the office of mayor by the State constitution. Upon his election, Mr. Ellyson requested a surrender of the office of Mr. Chahoon, who declined. On the same day Mayor Chahoon addressed a letter to Governor Walker, expressing apprehensions that a serious breach of the peace might arise, and requesting the Governor to furnish him with such force as would preserve order until the courts should decide upon the question at issue between Mr. Ellyson and himself. To this request the Governor replied that he could not recognize him as mayor, and added that he could "perceive no reason for a breach of the peace, nor how it can occur except through your act and approval." The request was accordingly refused. Mr. Ellyson, upon being refused possession of the office by Mr. Chahoon, immediately began to swear in upward of two hundred policemen, and proceeded to take possession of the public buildings. He succeeded in occupying the City Hall and the other buildings, except two or three station-houses, in one of which Mayor Chahoon, supported by about thirty of his police, was besieged. On the following day Mayor Chahoon applied to General Canby for assistance, which was granted, and the following note was addressed by General Canby to Mr. Ellyson:

HEADQUARTERS DEPARTMENT OF VIRGINIA, }
RICHMOND, VA., March 18, 1870.

Mr. H. K. Ellyson, Richmond, Va.

SIR: I will send, at two o'clock to-day, a commissioned officer and ten men to the Old Market Hall, as a guard for the building and the other public property that may be there, and shall request Mr. Chahoon to send away all the police force and other persons that may be there, except such messengers, clerks, etc.,

as may be necessary for the transaction of business. The officer of the guard will be instructed that his duties are simply to see that the property of the city is guarded, that free ingress and egress are secured to all persons having business in the building, and that the occupants are not ejected by force from their present possession.

This action cannot, of course, affect in any way any question involved in the pending controversy, and is taken purely as a precaution against any acts of disorder or violence, and until the question at issue can be brought to a judicial determination.

Very respectfully,

EDWARD CANBY, Bvt. Maj.-Gen. commanding.

Upon the receipt of this note Mayor Ellyson ordered the withdrawal of his police force, and the city was thus left with the military to preserve the peace, and two claimants to the Mayoralty, the one exercising his functions at the old Market Hall, and the other at the City Hall. General Canby's note was forwarded by Mr. Ellyson to the Governor, who, on the following day, addressed the general as follows:

COMMONWEALTH OF VIRGINIA, }
EXECUTIVE DEPARTMENT.
RICHMOND, VA., March 18, 1870. }

Major-General Canby, commanding, etc.

SIR: From the morning press and from other sources I learn that a military force under your command has been interposed to prevent the mayor of this city, elected, qualified, and acting under the laws of the State, from the proper discharge of his duties, and with the seeming intention of enabling another person, a mere pretender to that office, to discharge the "current business" of the office. As there has been no request by the Legislature or any of the civil authorities of the State for military aid, I cannot understand how or why the military forces of the United States should be employed in such a case, or why the military officer of the United States should discriminate against a recognized civil officer in favor of one not recognized as an officer by the laws or the constituted authorities of the State.

As Governor of the Commonwealth, I ask by what law or authority you have taken such action?

Very respectfully, your obedient servant,
G. C. WALKER, Governor of the State of Virginia.

In his reply to the Governor, General Canby used the following language:

I have not discriminated in favor or against either of the contestants in this case. The legal questions involved in this controversy are proper subjects for judicial determination by the civil courts, and the action taken by me has no other object than to aid in the preservation of the peace of the city until that determination can be reached, or the proper civil courts can take jurisdiction of the matters in question.

The warrant for that action is the instructions of the President of the United States and the Secretary of War to district department commanders, and the precedents established heretofore, taken under the authority of such instructions in precisely similar cases, some of which I have already had the honor to cite to your Excellency. These instructions are substantially that, until the legal questions involved in any controversy of this kind are solved, there can be no action by the military except by such interposition between the contending parties as may be necessary to prevent breaches of the peace and hostile collisions between citizens, and to the end that in any event the peace may be preserved.

I think it proper to add to this that from several conferences with Mr. Ellyson and one with Mr. Chahoon, I had reason to infer that this action would be concurred in by both, and that both would abstain from action of force that would be likely to produce

a hostile collision, until the courts could settle the questions involved in the controversy.

Meanwhile Chahoon had applied to Judge Underwood, of the United States Circuit Court, for an injunction against Ellyson, and on the 18th of March obtained an order to show cause, on the 23d, why an injunction should not issue. Ellyson claimed, among other things, in opposition to the motion, that the United States Courts had no jurisdiction of the case; that, if they had, there was a complete remedy at law, and no injunction could issue, and that his own election was legal. The argument, which was elaborate on both sides, occupied several days. Judge Underwood held that those sections of the enabling act under which Ellyson claimed to have been elected were unconstitutional, and that Chahoon, as the *de facto* if not the *de jure* mayor, could not be removed by the proceedings instituted by Ellyson. In closing his opinion, the judge says:

On the subject of the jurisdiction of the court, I have only time now to say that the length and breadth, the height and depth, of equity jurisdiction, as exercised by the greatest judges in England, was so great as to embrace almost all rights not clearly secured by the courts of law. The student of English jurisprudence will be filled with wonder at the power of the English chancellors, and with admiration of the wisdom and beneficence with which that power was generally exercised. There was hardly a fraud they did not expose, a wrong they did not redress, or a right they did not secure.

And when we reflect that these powers of the English chancellors, in all those cases in which a law of the United States is involved, have been conferred upon the Circuit Court of the United States, there can be no reasonable doubt that the court has authority sufficient to reach the necessities of this case; authority sufficient to protect from wrong and outrage every public officer appointed and acting under a law of the United States, as long as he shall be so acting and in the faithful discharge of his duty.

It is, therefore, ordered that the defendant Ellyson shall no longer assume to perform the functions of mayor of this city under color of a void and unconstitutional act. That defendant Euker and his associates of the fictitious council shall no longer play their game of pretended authority, and that defendant Poe and his confederates shall no longer impose upon this community as lawful police. In the interest of peace and of public order, the injunction, as prayed for in the complainant's bill, is awarded.

In the name and words of the President of the United States—"Let us have peace."

After the decision was rendered, the counsel for Ellyson announced that, for the purpose of getting the question before the Supreme Court of the United States as speedily as possible, they should advise their client to disobey the injunction, and, when arrested, to apply to Chief-Justice Chase for a writ of *habeas corpus*, to try the right of the arrest. Subsequently, a motion was made before the Chief Justice and Justice Nelson to dissolve the injunction, but, before the decision of this motion, an agreement was made by the parties, by which the question was brought before the Supreme Court of Appeals of the State. On the 11th of April Mr. Chahoon addressed a note to Mr. Ellyson,

deprecating the results that had followed from their contest, in the non-payment of the police, the school-teachers, laborers on the streets, etc., and proposing that they should both cease to exercise the duties of mayor, and leave the recorder or senior alderman to act as though there were a vacancy in the mayor's office. This proposition Mr. Ellyson declined, but submitted the following:

Participating in your desire for a speedy settlement of the matters in controversy, I propose the following: That we bring before a full bench of the Supreme Court of Appeals of Virginia (which meets to-morrow), by writs of *habeas corpus* sued out by a person you have confined in jail and by a person I have confined in jail, the question of the constitutionality of the law of the State known as the "enabling act," under which I hold office. Let us both waive all technical questions, and ask the judgment of the court on the main issue. If the court decides the law to be unconstitutional I will at once withdraw all claims to the office of mayor, and cease to exercise its duties. If the court declares the law constitutional, you are to dismiss all proceedings in the Circuit Court of the United States, and give up all claims to the office.

Mr. Chahoon having agreed to this proposition, Archibald Dyer, held in custody by order of Mr. Ellyson, and John Henry Bell, imprisoned by order of Mr. Chahoon, were brought before the Court of Appeals on writs of *habeas corpus*, and the question of the constitutionality of the enabling act was elaborately argued. The court decided those sections of the act, in pursuance of which Ellyson had been elected, constitutional. The judges, in their opinion, after declaring that there is nothing in the Constitution of the United States, or of the State, which the act contravenes, say:

We have now, we believe, noticed all the grounds taken in the argument by the counsel in this case, unless it be the ground that, by reason of what are called "the fundamental conditions" on which the State was admitted to representation in Congress, we have only advanced from a *provisional* to a *provincial* State, and have not yet gotten back to our original position as one of the sovereign States of the Union. What may be the meaning and effect of these conditions is a question which does not arise in this case, as we have endeavored to show that the right of the old incumbents to continue to hold offices is not made one of those conditions. It may not, however, be out of place to say that we regard Virginia as one of the sovereign States of the Union, and as the co-equal in every respect of Massachusetts, New York, Pennsylvania, or any of the old thirteen.

We have delivered a very long opinion in these cases, not because we have had any doubt or difficulty in deciding them, but because of the great importance of the question involved, the ability and earnestness with which it has been discussed, and the excitement which it has produced. If our decision shall have the effect of settling the question and restoring peace and quiet to the city of Richmond, we will rejoice to have had an agency in bringing about so desirable an end.

In obedience to this decision, Chahoon surrendered the office of mayor to Ellyson.

In the following table is given the Federal census of the State, by counties, for the years 1860 and 1870:

COUNTIES.	1870.	1880.	COUNTIES.	1870.	1880.	COUNTIES.	1870.	1880.

The subject of immigration has received much attention, and a Board with a State Superintendent has been organized. This Board has sent over 329 agents to Germany, and 250 to England, to assist in making known the resources of the State to the migrating classes and to the capitalists. 24,750 copies of pamphlets and other papers have been published in German and English, and placed in the hands of the agents for circulation. Within three months preceding June, 22 German and 16 English families, some of which brought from \$5,000 to \$10,000, numbering over 180 persons, settled in the State. The payment of most of the expenses of the Board is provided for by requiring the sellers of land to immigrants to pay five per cent., by way of commission fees, to the State for this purpose. The superintendent, however, reports that he has incurred expenses on account of the Board to the amount of \$3,900, to meet which, as well as other expenses accruing, he asked an appropriation of \$7,850 from the Legislature at its first session. The Legislature refused to make this appropriation.

At a meeting of the Richmond Board of Trade, held in October, many topics having an important bearing upon the commercial interests of the State were discussed. The Committee of the Board on Inland Trade report the extension of the Chesapeake and Ohio Railway, and its prospective completion to the Ohio River, as having already given a healthy impetus to business with the remote western counties of the State, as well as with those of West Virginia contiguous. "Within a short time past," they say, "arrangements have been perfected to transport freights through, without change of cars, to Alexandria, Baltimore, Phil-

adelphia, New York, Wheeling, Cincinnati, and Chicago, giving through bills at very reduced rates. This arrangement must result in effecting direct business connections with the great markets of the West, if properly appreciated and sustained by our merchants."

The year 1870 will long be memorable in the history of Virginia on account of great destruction of life and property. The first of the disasters was the falling in of the capitol at Richmond on the 27th of April. It having been announced that at 11 o'clock on that day the Court of Appeals would render their decision in the Ellyson-Chahoon mayoralty case, which had excited much interest in the community, an immense number of people, including many ladies, had assembled in the court-room in the second story of the capitol. Suddenly the heavily-laden gallery gave way, and fell with its great weight on to the floor of the second room, which broke through, and the whole mass of human beings and debris was precipitated into the hall of the House of Delegates below. Fortunately, the delegates of this body had not yet assembled. The greatest excitement and grief pervaded the community, and, when the unfortunate victims were taken from the ruins, it was ascertained that about 60 had been killed, and upward of 120 wounded. Meetings of the citizens were promptly held, and measures taken for the speedy relief of the sufferers.

In the latter part of September the valleys of the James and Shenandoah were visited by a sudden and destructive freshet, such as had not occurred during the century. In less than two days the water in the James River rose about twenty-four feet; a large portion of the city of Richmond was flooded, and great

damage was done to property. The rise in the Shenandoah River, which was also very sudden, is reported to have been nearly fifty feet, or twenty feet higher than during the great flood of 1852. The destruction of property in the counties of Rockingham, Shenandoah, Page, Warren, Clarke, and Jefferson was very great, including the entire crops of corn and hay, with the unthreshed crops of wheat, rye, and oats, along the river-bottoms. So suddenly did the freshet come on that the people in the lowlands did not have sufficient warning to preserve their property; dwellings, mills, locks,

bridges, fences, barns, and manufacturing establishments were swept away, and hundreds of laborers were deprived of employment. The loss of property by the flood is estimated at not less than \$5,000,000.

Another calamity that may be mentioned here was the burning of the Spottswood Hotel in Richmond, on the morning of December 25th, the flames having been first discovered about 2 o'clock, when most of the inmates were asleep. Eight lives were lost, and many persons were injured, while the loss of property was about \$300,000.

W

WELCH, Rev. BARTHOLOMEW TROW, D. D., a Baptist clergyman of extraordinary eloquence and earnestness, born in Boston, Mass., September 24, 1794; died at Newtonville, near Albany, December 9, 1870. He was of Revolutionary stock on both his father's and his mother's side. He received his early education in Boston, and at the age of seventeen migrated to Philadelphia, where he acquired the profession of an engineer, and labored at it diligently till 1824. He had united with the Baptist Church, under the care of Dr. Staughton, in 1815, and felt an inward drawing to the work of the ministry, which, however, he resisted till the Church called him to that office, in 1824. After a brief missionary tour in Western Pennsylvania, he was called, in 1825, to the pastorate of Catskill, N. Y., and, in 1828, he removed to Albany on the call of the First Baptist Church of that city, and six years later was transferred to the pastorate of the (new) Pearl Street Church, with which he remained till 1848. His reputation as a pulpit orator was already high when he removed to Albany, but it was wonderfully intensified during his residence there. Thousands listened with astonishment and delight to these bursts of eloquence, which carried all before them. Yet these gems of oratory, so far as the form of words went, though not in the thoughts they embodied, were the result of the inspiration of the moment. He left not more than half a dozen sermons, and those not his finest, in print, and he had no manuscript memoranda from which he could afterward write them out. He never wrote out a discourse. He was, nevertheless, a hard student. The leading points of all his sermons (with occasional exceptions) were carefully thought out; but he always depended upon the inspiration of the hour for the words in which to clothe them. And no man ever had a more perfect command of language. His diction was as pure as his thoughts were grand, practical, and poetic. It was always a marvel that a man who had never enjoyed the advantages of an early education could so readily and with graceful ease always select the fittest words

for the most lucid expression of his grand ideas. But, with the delivery of the sermon, the order, the thought, and the words were lost, except in the memory and hearts of his hearers. There they lived, and live to-day, and will live forever, but only in the general truths which they embodied, not in the words in which those thoughts were clothed. In 1848 Dr. Welch removed to Brooklyn, N. Y., and became the pastor of the Pierrepont Street Baptist Church. From a variety of causes, among which might be named his declining health, his ministry in Brooklyn, though fairly successful, was not such a triumph over all obstacles as that in Albany, and in 1854 he returned to his old home, and ministered, till his health entirely failed, to a small church in Newtonville. The eloquence which once won all hearts, and dazzled all minds by its brilliancy, now only gleamed out occasionally in its wonted splendor; but on great occasions he was still himself.

WEST VIRGINIA. This young State, embracing fifty-three of the counties separated from Virginia, numbers, according to the census of 1870, little less than four hundred and fifty thousand inhabitants.

The most important question, in a financial point of view, before the State, relates to the liquidation of her share in the debt which burdened Virginia at the time of the separation and in proportion to the number of citizens as well as the value and extent of territory severed from the old State. This obligation was acknowledged on the formation of the State, as appears from the ninth section of "An Ordinance to provide for the formation of a new State," passed on August 20, 1861, by the convention for the reorganization of the Government of Virginia, then assembled at Wheeling. In a report which the Second Auditor of the State of Virginia has lately submitted to the Legislature, the whole of her debt created under acts prior to April 17, 1861, and, therefore, subject to the said apportionment, is set down at \$37,250,330.02, including both principal and interest reckoned up to January 31, 1870.

The Government of Virginia has repeatedly invited the authorities of West Virginia to settle this matter; her request, however, seems to have met so far with no satisfactory answer. In his annual message to the General Assembly, dated December 7, 1870, the Governor of Virginia states:

All our efforts up to this time to effect a just settlement have proved unavailing. The Legislature of 1866-'67 instituted measures for the organization of a joint commission for the adjustment of this matter, but our action met with no favorable response from the State of West Virginia. In February last, you passed an act authorizing the Governor to appoint three commissioners to adjust and settle this claim. I at once transmitted a copy of this act to the Governor of West Virginia, and requested him to procure the enactment of a similar law by the Legislature of his State. I also appointed commissioners, who, at my instance, promptly repaired to the capital of West Virginia, and urged upon the Governor and Legislature the propriety and necessity of prompt action on their part. I am informed that the Legislature did authorize the appointment, by the Governor, of a commission to meet ours and adjust the debt; but, up to this time, the receipt of my communication by the Governor has not been acknowledged, nor, so far as I am informed, have any commissioners been appointed by him.

This mode of settlement, however, he judges to be too slow, and suggests the following:

The better course to be pursued is, for the two States to submit the whole question to arbitration. Let each State select one disinterested arbitrator, and the two thus selected, a third, to whom the whole subject shall be submitted, and their finding to be final and binding upon the two States.

Resolutions concerning this adjustment were then introduced in the Senate of Virginia, and referred to the Committee on Courts of Justice; which Committee, on December 28, 1870, reported a substitute in favor of arbitration.

The Governor of West Virginia ascribes the delay in the adjustment mainly to the unsettled political condition of Virginia since the war, she having been but recently restored to the Union. He disapproves the mode of settlement, proposed on the part of Virginia, by arbitration of strangers, "not entirely familiar with the history of the debt, and the peculiar circumstances under which much of it was created." As to the basis of adjustment, he considers that to be the just one which the ordinance of August 20, 1861, set forth in these words:

The new State shall take upon itself a just proportion of the public debt of the Commonwealth of Virginia, prior to the first day of January, 1861, to be ascertained by charging to it all State expenditures within the limits thereof, and a just proportion of the ordinary expenses of the State government, since any part of said debt was contracted, and deducting therefrom the moneys paid into the Treasury of the Commonwealth, from the counties included within the said new State during the same period.

The Governor of Virginia, on the contrary, had proposed the following:

I am equally clear as to the basis on which a settlement should be made. After deducting from the total debt the market or cash value of the assets or securities, bonds, stocks, etc., held by either State,

which originally belonged to the State of Virginia, the remainder of the debt should be apportioned between the two States in proportion to the population and taxable valuation of each.

Another point worthy of being carefully determined in the interest of West Virginia, he affirms to be, whether her portion of the debt, when duly ascertained, should be paid into the Treasury of Virginia, as claimed, or directly to the creditors of Virginia, which he thinks safer. From the embarrassed condition in which the financial affairs of Virginia appear to be, he suggests the possible danger of a double payment, observing: "If we bind ourselves to pay our proportion of the debt to the State of Virginia, may we not be still held liable to the holders of Virginia bonds?" He concludes by saying: "I hope the whole subject may receive prompt and careful examination, with a view of bringing about, at an early day, some arrangement that will be just to creditors, and mutually satisfactory to the people of the two States."

During the regular session of the Legislature of West Virginia in the first months of 1870, numerous acts and joint resolutions of general and local importance were passed. On the day next preceding the final adjournment, the Senate bill, repealing the act locating the seat of government at Charleston, was taken up in the House, and, upon a motion to have the bill read a second time, it was lost.

The Democratic State Convention assembled on June 8th. In the preparation of a platform to be presented to the convention, the members of the Committee on Resolutions disagreed among themselves. A majority and a minority report were therefore submitted to the assembly, "the principal difference between the two being that the majority report embraced a resolution indorsing the 'Flick Amendment,' not included in the other." This amendment proposed to strike out of the State constitution both the word "white," and the clause in Article III., section 1, which disfranchises persons who gave voluntary aid to secession, thus making negro suffrage a part of the organic law, and at the same time enfranchising that class of white citizens who are now excluded from the polls. It was a measure introduced in the Legislature by Republican members, and passed at the previous session; but the subsequent non-compliance with the law, which prescribes that an act proposing to amend the constitution must be published in every county, where a newspaper is printed, at least three months before the day of election in which the people should vote upon it, prevented the measure from being submitted to the popular vote. The indorsement of this amendment by the Democratic party was the subject of disagreement among the members of the Committee on Resolutions, and their disagreement spread itself also among the delegates of the convention at large. Many Democrats in the Legislature had voted for the amendment.

Motions to adopt the one or the other report were successively made, and a warm discussion took place, several delegates favoring, others opposing either motion, respectively. The motion "to adopt the minority report, as a substitute for the majority report," was finally put, and carried by a vote of 324 to 242. This report constituted the platform on which the Democratic party of West Virginia stood in 1870, and is as follows:

The Democratic and Conservative citizens of West Virginia, desiring to aid in preserving free government and in promoting the best interests of the State and country, present to the voters of the State the following declaration of principles, and invite their cooperation in giving them effect:

1. That the Federal Government has no right to deny to States of this Union the privilege of equal participation in its affairs, and that all distinctions against the equal representation of States in Congress, and all Federal interference in the purely domestic concerns of the States, are unwarranted by the Federal Constitution and ought to cease.

2. That the present system of national taxation, raising, as it does, the bulk of the Federal revenue from the labor rather than from the wealth of the country, is unfair and oppressive, and that this system should be so reformed as to relieve the industry of the country from its unjust burdens, abolish the unnecessary and vexatious features of stamps, licenses and income taxes, dispense with the swarms of Federal spies that pry into the private business of the people, eating out their substance, and provide for the collection of the Federal revenue by State and county officers.

3. That the Republican party, by voting to ratify the fifteenth amendment to the Constitution, has shamefully violated its pledge, that the question of suffrage should be retained within the control of the people of the States. Calling to political power an alien and inferior class, it has declared the white man incapable of self-government. In opposition to this monstrous doctrine, we invite all intelligent white men to unite with us in asserting the principle that the white race is the ruling race of this republic.

4. That the bill to enforce the fifteenth amendment, lately passed by Congress, is contrary to public morals, in that it offers premiums on perjury, subversive of the States, in that it gives Federal authority control of State affairs, and destructive of the peace of the country, in that it invests the negroes with exclusive and peculiar privileges, lifting them to power and dignity through the degradation of the whites.

5. That we are unalterably opposed to the bill lately introduced into the United States Senate by Senator Sumner for enforcing the social equality of the races, placing negroes upon juries, and abolishing all distinctions between the races.

6. That for the advancement of West Virginia in all her interests, and especially to secure good government to her people, we demand:

Thorough reform in our system of local offices and the greatest reduction in the number of such offices that may be consistent with the public interests.

Prompt collection of the large balances in favor of the State which, through Republican incompetency, have accumulated in the hands of delinquent sheriffs, such faithful management of the State finances as will prevent further deficiencies in the revenue, and such economy in appropriations as will secure the administration of the Government at the least cost to the tax-payers of the State.

A public policy that will invite immigration, capital, and enterprise into our State, in lieu of the measures of the dominant party for driving these elements of growth and greatness from our midst.

The continued exclusion of negroes from the public schools attended by white children, in opposition to

the radical policy of mingling the races in those institutions.

Full protection to the people against the outrages provided for by the registration law, and constantly committed by registration officers.

The prompt abolition of every test-oath upon the statute-books of the State.

And, finally, to wipe out the injustice and the disgrace incident to the disfranchisement in our midst of twenty-five thousand men of our own race, while negroes exercise the elective franchise without hindrance or condition, we demand a free ballot for white men, and the immediate enactment of such measures as will secure it.

The nominations were as follows: For Governor, John T. Beach; for Judge of the Court of Appeals, C. P. T. Moore; for Secretary of State, John M. Phelps; for Treasurer, J. S. Burdett; for Auditor, E. A. Bennett; for Attorney-General, Joseph Sprigg.

The enfranchisement of the negroes and the disfranchisement of the whites, together with the registration law and the manner of its execution at the hands of the Republicans, seem to have been the subjects which have almost entirely engaged the attention and impelled the action of the Democrats for some years past, but chiefly in 1870.

The Republicans met in State Convention at Parkersburg on June 22, 1870. The Committee on Platform submitted a majority report, which fully indorsed the action of the representatives in the last session of the Legislature, and also recognized the right of each individual to think, speak, and vote according to his best judgment and the dictates of his own conscience.

A resolution was reported favoring the removal of the disqualifications and restrictions imposed on late rebels, in the same measure as the spirit of loyalty directs, and as consistent with the safety of loyal people, and recommending such legislation as will be necessary to carry it out.

The whole State ticket was renominated.

The government of West Virginia was organized in 1861, and her organic law, subsequently framed and adopted by the Constitutional Convention, was ratified by the people in 1863 almost unanimously, the vote having been 27,748 for, and 572 against it. The only oath which this constitution authorizes the Legislature to require of the citizens is that of supporting the Constitution of the United States, and the constitution of the State. The restrictive provisions of the registration law, which the Legislature has subsequently enacted, the Democrats denounced not only as arbitrary and unjust, but also as contrary both to the letter and spirit of the State constitution. The report of the Auditor for the previous year showed the number of the disfranchised citizens in the State to have been 29,316, of whom the Democrats averred that "fully one-half were wrongfully debarred from the right to vote."

Concerning the duty of registration officers, and the right of citizens to register and vote,

in connection with the provisions of the Enforcement Act, so called, Governor Stevenson, by a letter dated September 8, 1870, requested the State Attorney-General to give his opinion in writing; whereupon this officer wrote him the following answer:

STATE OF WEST VIRGINIA,
ATTORNEY-GENERAL'S OFFICE,
CHARLESTON, September 9, 1870. }

To His Excellency, W. E. Stevenson:

DEAR SIR: In reply to your favor of the 8th inst., requesting my views in writing "as to the kind of affidavit required by the third section of the act of Congress entitled 'An act to enforce the rights of citizens of the United States to vote,'" etc., approved May 31, 1870, and who under said section would be entitled to vote by virtue of said affidavit, I have the honor of submitting the following opinion:

In every case where the applicant for registration has been refused to be registered, for the want of qualification under the laws of West Virginia, the supervisors and inspectors of election should reject the vote of such applicant, because his name is not on the register of voters, as required by Section 43 of Chapter 3, of the code of West Virginia. But in the exceptional case, provided for in the 3d Section of said act of Congress, that is to say, where a person has been refused registration, because of his "race, color, or previous condition of servitude," he should be allowed to vote (though not registered), if qualified according to the laws of our State, provided he present to said officer of election his affidavit, stating his offer to be registered, the time and place thereof, the name of the registrar or board of registration that refused to register him, and that he was refused to be registered "on account of race, color, or previous condition of servitude." It must be stated in said affidavit, that the refusal to register him was "on account of race, color, or previous condition of servitude," for the obvious reason that in no other case can a person be allowed to vote, unless his name is on the register of voters, as required by said Section 43, of Chapter 3 of said code. The views above expressed are fully sustained by Attorney-General Akerman, in his (recent) official instructions to General Goff, United States District Attorney for this State, directing him to dismiss all prosecutions against registrars, except where the offence consists in a refusal to register on account of "race, color, or previous condition of servitude," and also by Hon. Hugh L. Bond, Judge of the Fourth Judicial Circuit of the United States in and for the District of West Virginia, in his decision on August 29, 1870, at Martinsburg, West Virginia, in the *habes corpus* case of John McIlwee, registrar of Mineral County.

Yours, very respectfully, etc.,

A. B. CALDWELL, Attorney-General.

Contrary to the opinion of Judge Bond, cited in Mr. Caldwell's answer, Judge Jackson, of the same State, had decided, in a similar case, that the provision of the Enforcement Act is applicable to the white man as well as to the negro, the former being equally protected by it in his right to register and vote, if he takes the prescribed oath.

For the use of white voters, legally qualified, the Democrats also prepared and published a form of affidavit, apparently answering the requirements of Mr. Caldwell's construction of the Enforcement Act; such affidavit "to be filled up and sworn to by the legally-qualified white citizen who has been denied registration, and to be presented at the polls on the 27th of October, in accordance with the third sec-

tion of the Enforcement Act." They said: "The supervisor and inspector of election will render themselves liable to the penalties of the Enforcement Act, if they refuse to receive the vote of any citizen presenting this affidavit, and demanding the right of depositing his ballot." Several suits were instituted against election officers by citizens who thought themselves wronged in being refused to register and vote last fall.

The result of the popular vote at the said election was almost entirely favorable to the Democrats, and completely changed the political complexion of the State. They elected the Governor, all the State officers, a Judge of the Court of Appeals, two out of the three Representatives in Congress, and a majority of members in both Houses of the State Legislature, which now stand: Senate, 12 Democrats and 10 Republicans, most of whom are holding over; House of Delegates, 88 Democrats and 18 Republicans.

The following is the Federal census of West Virginia for the years 1860 and 1870:

COUNTIES.	1870.	1860.
Barbour.....	10,313	8,958

Wyoming.....	3,171	2,861
Total.....	442,083	376,598

With regard to the finances, the Governor, after referring the Legislature to the reports of the Auditor and Treasurer, gives the following statement:

Balance in the Treasury October 1, 1869..... \$ 66,187 10
Amount received during the year..... 587,321 11

In all..... \$653,498 21
Amount expended during the year..... 430,012 68

Balance in the Treasury, October 1, 1870..... \$213,475 58

This statement makes a favorable showing for the finances, but still does not set forth the whole amount in the Treasury. To do this there must be added to the above balance the invested irreducible school-fund, amounting to \$229,800, making the amount of funds actually in the State Treasury, at the beginning of the fiscal year, \$442,775.58.

The Auditor estimates the receipts and expenditures for the current year as follows:

Receipts..... \$606,879 00
Expenditures..... 589,997 80

Balance in the Treasury subject to appropriation at the end of the year..... \$66,881 20

Internal improvements, tending to facilitate land and water transportation, seem to be rapidly progressing in several parts of the State, and promise most beneficial results. The Governor makes particular mention of the various and expensive works which are vigorously pushed forward on the Baltimore and Ohio and the Chesapeake and Ohio Railroads. He points also to the improvements on the Great Kanawha and on the Little Kanawha Rivers, especially the former, which is under the management and superintendence of the "Board of Directors of the Great Kanawha River Improvement."

For the education of youth, the free school system has been introduced in the State, and since its establishment the evidence of its advantages has been steadily growing more clear. The increase of school-houses during the year was 495, and the whole number of school-houses, in 48 out of the 53 counties in the State, is 2,113. The number of youth of school age in the State is 162,430, a gain of 11,483 over the number reported the year previous. The whole number of pupils attending the public schools last year was 87,830; during the year previous, 73,310. The average attendance during last year was 55,088; during the year previous, 39,863. The permanent or irreducible school fund now on hand amounts to \$254,860.17. The amount of moneys received during the year, for school purposes, was \$562,761; and the total value of school property, reported from 48 out of the 53 counties, is \$1,057,473.94. There are three Normal Schools for the training of teachers in the State, superintended by a Board of Regents. The West Virginia University, whose new hall has been completed, continues to meet with success.

Charitable institutions are provided for by the State with commendable solicitude. The Hospital for the Insane at Weston is well managed. The number of patients in the hospital

at the time of the last annual report was 202; since that time 42 have been admitted, and 37 have been discharged or have died. The number in the hospital at the time of making the present report was, 207. The whole number under treatment during the year was 244; the average daily number, 205. The general health of the patients was good throughout the year. With regard to the insane confined in the jails, or otherwise supported at public expense in the State, a joint resolution had been adopted by the Legislature at the previous session, authorizing the Board of Public Works to make temporary provision for them, and the Governor was directed to communicate with the authorities controlling similar institutions abroad, "with a view of getting accommodations for the insane of West Virginia in the asylums of other States." The Governor made inquiries to that end himself, and caused them to be personally made abroad by the Superintendent of the Hospital for the Insane. Their endeavors have resulted in making them acquainted with the fact that for the class of insane designated in the resolution there was no accommodation to be obtained in the asylums of other States, they being themselves crowded. Wherefore he concludes, "these unfortunate people must be provided for by ourselves within the State."

The West Virginia Institution for the Blind, and Deaf and Dumb, was established and opened in 1870, at the town of Romney, in Hampshire County. It is too small to accommodate the applicants.

There is a "State Vaccine Agent" in West Virginia, appointed since 1868. His report, which he has lately presented, covers the whole period from 1863 to the present time. The report will be found interesting and instructive, as it relates to an important branch of the public health, and shows the means which may be adopted to prevent the spread of one of the most destructive maladies with which the human family is afflicted.

In the State Penitentiary there are 114 convicts, two of whom are females—112 cells are now finished. One tier of them was built during 1870.

The Governor called the attention of the Legislature to the law "providing for a registration of the qualified voters," and to the difficulty experienced in securing its proper execution during the year 1870, more especially at the recent general election of October. This he mainly ascribes to the arrest and imprisonment of registrars and members of boards of registration by United States officials, who construed the provisions of the so-called Enforcement Act in a manner different from the construction given it by the State authorities. He says: "These proceedings carried on under color of authority of the United States were potent in preventing the registration officers from discharging their duties under the State law." He insists on the necessity of protecting

the rights of legal voters, and preserving the purity of elections, to which a fair registration law, properly executed, is most conducive; and adds: "But, if the one at present on our books cannot be so modified as to be more strictly enforced hereafter than was possible at the recent general election, the sooner it is repealed altogether the better."

In connection with the general election last fall it may be mentioned that the negroes of West Virginia then exercised their privilege of voting for the first time.

WILLARD, Mrs. EMMA (HART), an eminent educator and author, the pioneer in the higher education of women in this country, born in Worthington Parish, Berlin, Conn., February 23, 1787; died in Troy, N. Y., April 15, 1870. Emma Hart was the next to the youngest of a family of seventeen children, and alternately labored in her allotted place in the family service, and engaged with assiduity in the studies which successively presented themselves to her. Astronomy was mastered in her fourteenth year, the study being prosecuted by moonlight, on the horseblock in front of the door. Miss Hart attended the village academy two years, and then engaged as teacher in the district schools. The improvements she inaugurated proved to be of great advantage to her pupils, and she soon became noted, throughout the portion of Connecticut in which she resided, for the thoroughness of her method of instruction, and the practical value of the knowledge she imparted. In August, 1809, she married Dr. John Willard, and abandoned for the time the calling of teacher. Financial reverses, however, fortunately for the general cause of education, induced her, in 1814, to open a boarding-school for girls in Middlebury. For four years she experimented and improved her system of instruction, and mastered by night the studies she proposed to train her scholars in. The advanced sciences were one by one introduced into the school. As she progressed, the field widened before her. Encouraged by her husband, she determined to establish a female seminary worthy of the name, and after much deliberation it was decided to locate on the headwaters of the Hudson. She laid her plans, fully matured, in a "Treatise on the Education of Woman," subsequently published, before Governor Clinton, who gave the movement his warmest sympathies and heartiest support. This was in 1818. Thus encouraged, Mrs. Willard opened her school in Waterford in the spring of 1819, and, in his message of 1820, Governor Clinton directed the special attention of the Legislature to the success already achieved by this, the "only attempt ever made in this country to promote the education of the female sex by the patronage of the government," stating that it had "already attained great usefulness and prosperity." The citizens of Troy, in 1820, tendered a building to Mrs. Willard, if she would remove the semi-

nary to their city, which offer she accepted, opening the school there in May, 1821. Her husband died in 1825, thus throwing the entire business management of the institution upon her. She was, however, equal to the task, and continued its successful management in every department, down to 1838, when her son and his wife relieved her of further care. She planned and carried out the establishment of a school for women in Athens, devoting to that purpose the proceeds (about \$1,100) of a work entitled "Journal and Letters," which she had published soon after her return. After her retirement from the Troy Seminary, Mrs. Willard became specially interested in the subject of common schools. She attended many conventions, and addressed teachers in various States. In 1846 she made a journey of 8,000 miles through the Western and Southern States, to all the principal cities, and was met by her former pupils everywhere with warm expressions of affection. In 1854 she attended the World's Educational Convention in London. Besides the two works mentioned above, Mrs. Willard published the following: "The Woodbridge and Willard Geographies and Atlases," comprising a Universal Geography and Atlas, a School Geography and Atlas, an Ancient Geography and Atlas, Geography for Beginners, and Atlas, 1823; "History of the United States, or Republic of America," 530 pp. (1828), brought down to 1852, with an Historical Atlas; "Universal History in Perspective," 526 pp., 1837; "Abridgment of American History," 1843; "Temple of Time, or Chronographer of Universal History," 1814; "A Chronographer of English History," on a similar plan, 1845; "A Chronographer of Ancient History," 1847; "Historic Guide," to accompany the "Temple of Time" and other Charts; "A Treatise on the Motive Powers which produce the Circulation of the Blood," 1846; "Respiration and its Effects, particularly as respects Asiatic Cholera," 1849; "Last Leaves of American History," containing a History of the Mexican War, and of California," 1849; "Astronomy," 1853; "Morals for the Young, or Good Principles instilling Wisdom," 1857. She had also issued three addresses—on "Female Education in Greece," 1832; an address read at Norwich on the same subject, 1832; an address to the "Willard Association for the Mutual Improvement of Female Teachers," 1838; "Political Position of Women," 1848; "Our Fathers;" "Bride Stealing;" an appeal against "Wrong and Injury," and a pamphlet and "An Answer" to Marion Wilson's "Reply;" Two poems, read at the "Farmington Centennial," 1840; a poem contributed to the *Statesman* in Albany; "Universal Peace to be introduced by a Confederacy of Nations meeting at Jerusalem," 1820; "Will Scientific Education make Woman lose her Sense of Dependence on Man?" answered in a contribution to the *Literary Magazine*, New York, 1821; a meta-

physical article on "General Terms," published in the *American Journal of Science and Arts*, vol. xxiii., No. 1, 1832; a volume of "Poems," 1830. Her school-books have had an immense sale, and have been translated into many of the languages of Europe and Asia.

WILLIAMS, Rev. ROWLAND, D. D., an English clergyman and author, born in Flintshire, Wales, 1817; died at Broad-Chalke, Wiltshire, January 18, 1870. He was the son of a canon of St. Asaph, and was educated as King's Scholar at Eton, where he was Newcastle Medallist, and proceeding thence to King's College, Cambridge, obtained in his first year Battie's University Scholarship. In 1841 he graduated; was elected a Fellow of King's; and was for eight years Classical Tutor of his college and subsequently became Vice-Principal and Professor of Hebrew at St. David's College, Lampeter. In 1850 he was chosen chaplain to the Bishop of Llandaff. He frequently acted as classical examiner for the Tripos at Eton and Cambridge. In 1853 he defended himself before the judicial committee of the Privy Council, against a charge of heresy connected with his "Review of Bunsen," and obtained in 1864 a reversal of such parts of the judgment of the Court of Arches as had been unfavorable to him. In anticipation of this event, he had, in 1862, resigned his office at Lampeter. In 1855 he published a volume of sermons preached at Lampeter and Cambridge, which involved him in controversies affecting somewhat his position at Lampeter, and induced him to accept, in 1859, from King's College the vicarage of Broad-Chalke, where he remained until his death. In 1856 he published "Christianity and Hinduism Compared." This was followed by "Christian Freedom in the Council of Jerusalem" (1858); "Persecution for the word of God" (1862); a Critical Preface to Desprez's "Daniel," in which the positions of Dr. Pusey are keenly controverted on philological grounds (1866); "Prophets of Israel and Judah," with historical illustrations, (1866); a review of a charge of the Bishop of Llandaff, addressed to the Bishop of St. David's; a Critical Appendix of his lordship's reply; several articles on Welsh subjects in the *Quarterly Review*; a paper in the *Archæologia Cambrensis* on the Obligations of the Anglo-Saxon Church to British Missionaries; a Defence of the Maynooth Grant; poems, "Orestes," an adaptation to English readers of the "Eumenides" of Æschylus; "Lays from the Cimbrio Lyre," and other works.

WISCONSIN. The Legislature assembled on the 12th of January, and continued in session until the 17th of March. The business transacted during this time, as compared with that of the preceding year, was as follows:

ACTS PASSED.	1869.	1870.
Appropriations.....	37	21
Joint Resolutions.....	8	25
Memorials to Congress.....	4	15
Private and Local Laws.....	471	517
General Laws.....	186	148

One of the most important general laws enacted was the "Esterly" bill, so called, intended to encourage the construction of railroads. It authorizes towns, cities, and villages, to take stock in railroads running through them, to the extent of \$5,000 a mile, and issue bonds therefor, on which they shall be authorized to appoint a railroad commissioner who shall have a vote in the company for each share of stock. To pay the interest on such bonds, the increased State tax, by reason of the increased value of property in such localities, and a proportionate amount of the State license fee on the railroads constructed by aid of such bonds (which is to be six per cent.), are set apart, not to be used, however, until the road is built. Acts were passed as follows: To protect the people from empiricism in the practice of medicine, by requiring a diploma of some medical college or society, or proof of five years' successful practice of medicine; to restore the system of county government by boards composed of chairmen of town boards of supervisors, senior aldermen of cities, and presidents of villages; regulating by stringent rules, for the security of policy-holders, the business of fire and life insurance, and putting them under the direction of an insurance commissioner, while, at the same time, the rate of license they are required to pay is decreased; providing for the election and classification of railroad directors so as to prevent "rings" from keeping control of them; giving the families of soldiers, who served during the war in the regular army, \$5.00 per month as State aid; for the establishment of an additional institution for the insane, and to charter the Madison and Portage Railroad Company. Joint resolutions were passed proposing an amendment to the constitution, prohibiting action by the Legislature, except in the enactment of general laws, etc. An attempt was made to secure the removal of the capital from Madison to Milwaukee, which was defeated in the Assembly by a vote of 56 to 80. A law having been passed fixing a bounty for the killing of wolves, lynxes, and wild-cats, within the boundaries of the State, and the number of applications for this bounty having been so large as to create doubts as to whether these wild animals had been killed within or without the State, Governor Fairchild advised the Legislature that it was "worth while to inquire how it happens that so large a proportion of the claims of this character come from counties bordering on other States."

The regular election was held November 8th, for Superintendent of Public Schools, members of the Legislature, members of the Forty-second Congress, and also upon the question of ratifying the proposed amendment to the State constitution abolishing grand juries. The total vote for Superintendent of Public Schools was 146,826, viz.: for Samuel Fallows (Republican), 77,929; for Dale (Democrat), 68,897; majority for Fallows, 9,032. Total vote upon the amend-

ment, 67,500; in favor of ratification, 48,894; against ratification, 18,606; majority for ratification, 80,288. The Legislature is Republican in both branches.

The finances of the State are in a sound condition. The reports of the Secretary of State and State Treasurer show that the balance in the Treasury belonging to the various funds at the close of the fiscal year, September 30, 1870, was \$183,627.11. The receipts and disbursements of the general fund during the year were as follows:

RECEIPTS.	
State tax and tax on suits.....	\$383,151 20
Railroad companies, taxes.....	247,396 72
Insurance companies, taxes and fees.....	88,950 31
From plank-roads, banks, pedlars, and other sources.....	17,297 89
Total.....	\$686,696 12
DISBURSEMENTS.	
Permanent appropriations.....	\$77,826 05
Legislative expenses—session of 1870.....	95,838 94
Penal and charitable institutions.....	238,908 36
To complete the State capitol.....	45,238 90
Interest on State debt.....	159,952 23
Miscellaneous.....	198,565 05
Total.....	\$906,329 58

Of the above disbursements the sum of \$316,830.31 was for the ordinary current expenses of the State—the same expenses for 1869 having amounted to \$314,405.86. The amount of the State debt has not been changed during the year, and consists of

State bonds outstanding.....	\$68,200 00
Certificates of indebtedness to the trust funds of the State.....	2,183,800 00
Currency certificates outstanding.....	57 00
Total.....	\$2,252,057 00

The total productive educational funds now amount to \$3,825,642.24, there having been an increase the present year of \$160,061.41. The system of loaning the trust funds to school districts for the erection of school-buildings has been adopted by the Legislature. During the last fiscal year the State sold 175,410 acres of public land, and still holds for sale 386,504 acres of school land at an average of \$1.13 per acre, 10,440 acres of university land at an average of \$2.00 per acre, and 105,879 acres of agricultural college land at an average of \$1.25 per acre. The Governor complains that these lands have been sold at prices below their value, and recommends that they "be immediately withdrawn from market, and that they be carefully appraised before any further sales are made."

The total amount of the war claims held by the State against the United States was originally \$1,742,202.98, of which the United States has paid \$1,862,811.26, leaving still unpaid the sum of \$379,891.72, in which is included an unsettled balance of \$136,400.58. It is believed that this latter sum will soon be adjusted and allowed by the General Government. The value of the taxable property of the State, as fixed by the State Board of Assessment, is \$455,900,800. The State tax levied the present year amounted to \$720,-

823.24, being 1.58 cents on the dollar. Of this sum \$175,000 is to be expended in the construction of buildings for State institutions. The attention of the Legislature has been called to the unequal assessment of property for taxation in different sections of the State. The Secretary of State asks, "Why should horses be valued at \$92.19 in Bayfield, and only \$8.85 in Kewaunee? or \$76.26 in Clark, \$75.58 in Dunn, \$63.14 in Rock, and \$65.95 in Walworth, and only \$16.75 in Manitowoc, and \$27.88 in Brown?" The same disparity is stated to exist in the values of other classes of taxable property. The amount, and value of taxable property, as assessed in the years 1869 and 1870, are shown in the following statement:

ARTICLES.	Value 1869.	Value 1870.
Horses.....	\$16,452,370	\$14,654,005
Cattle.....	10,959,454	10,354,721
Mules.....	353,200	319,784
Sheep.....	1,814,244	1,412,087
Swine.....	1,523,060	1,669,058
Wagons.....	4,176,435	3,869,513
Shares of bank stock.....	2,887,255	2,583,661
Watches.....	438,353	414,318
Pianos and Melodeons.....	834,924	811,997
Merchants' and Manufacturers' stock.....	12,385,914	19,672,274
Other personal property.....	80,911,428	23,456,120
Total personal property..	82,737,142	79,218,838
Total land.....	167,912,359	169,661,316
Total city and village lots....	75,582,095	77,985,389
All property assessed....	\$326,221,596	\$326,765,238

The various charitable institutions of the State are reported to be in excellent condition, while the results attained during the year by wise management will compare favorably with those of the best institutions in the country. During the past year, 144 pupils received instruction at the Institution for the Deaf and Dumb, of whom 122 were inmates at the close of the year, being an excess of 24 over the highest number at any previous time. The total expenditures for the year, including all repairs and improvements, amounted to \$28,834.93; while the estimated expenses for 1871, including extensive repairs and permanent improvements, are stated at \$38,864. \$19,722.40 have been expended for the support of the Institute for the Education of the Blind during the past year, and \$22,158.45 for the completion of the new building, making the total cost of the whole structure about \$155,655. The number of pupils receiving instruction during the year was 64. Excellent results have attended the management of the Soldiers' Orphans' Home School. The children are making the most of their opportunities, and will bring no discredit upon the State when they shall have gone forth into the world to care for themselves. The whole number of pupils in attendance during the year was 331, for the support of whom the sum of \$41,877.40 was expended.

The subject of the treatment of the insane has received the most careful consideration, and the management of the hospital has been

highly successful. The whole number under treatment was 532. Among the inmates at the close of the year were 77 Germans, 50 Irish, 18 English, 28 Norwegians, 52 New-Yorkers, 27 natives of Wisconsin, and 7 each of Pennsylvania, Ohio, and New Hampshire. The assigned causes of insanity were, 136 ill health, 70 religious excitement, 47 each to intemperance, puerperal fever, and hereditary tendencies, 46 each to overwork and epilepsy, 45 to disappointed affections, and 44 to domestic troubles. The current expenses for the year were \$80,518.87, and the sum of \$7,844.94 was expended for permanent improvements. A site for an additional institution has been selected at Oshkosh, on the banks of Lake Winnebago, where a tract of land containing 387 acres has been purchased. There has been an alarming increase in the percentage of the insane during the last twenty years, which is shown in the following statement:

YEARS.	Insane.	Population.	Per cent.
1850.....	54	305,391	000 17
1860.....	293	775,881	000 36
1870.....	691	1,055,559	000 65

The proportion of insane to the total population in 1850, was one to every 5,655; in 1860, one to 2,812; in 1870, one to 1,528.

The number of convicts in the penitentiary at the close of the year was 217. Although an appropriation of \$33,000 is asked for current expenses for 1871, it is believed that this is the last large appropriation that will be needed, and that the institution hereafter will be self-sustaining. On the 2d of May the workshops of the State-prison were destroyed by fire, causing a loss of about \$70,000.

The report of the Superintendent of Public Instruction shows the following school statistics for the year:

Number of children over four and under twenty years of age.....	412,481
Number that attended school during the past year.....	264,525
Number of school districts in the State.....	4,803
Number of teachers required to teach the schools.....	5,661
Amount expended for public educational purposes.....	\$3,094,160

The average wages of male teachers in the country districts is \$41.77 per month, and that of females \$27.40. In the cities the average salary per annum for male teachers is \$1,001, or \$100.10 per month; and for females \$870 per annum, or \$37 per month. The highest salaries are paid in Milwaukee—being \$2,500 per annum to male teachers, and \$1,200 to female. The total number of pupils in the State attending the public schools, private schools, academies and colleges, and other educational institutions, is estimated at 295,000 (an increase of 5,000 over the number estimated for last year), which shows a very large proportion of school population not in attendance upon any school. The two State Normal Schools at Whitewater and Platteville are now in successful operation, and have thus far fully satisfied

the expectations of the people. The citizens of Wisconsin manifest a lively interest in the welfare of their State University. The average attendance has materially increased during the past year, and the standard of education is constantly rising. The chair of Geology, Mining, and Metallurgy, has been recently added. The Female College building is in process of construction and will be ready for occupancy in 1871. The whole number of pupils in attendance at the Reform School the past year was 239, of whom there were 206 remaining on October 1st. The amount expended for the support of the school during the year was \$32,103.04.

The following is the Federal census of Wisconsin for the years 1860 and 1870:

The United States census for 1870 shows a

gratifying increase in the agricultural products of the State as compared with 1860, while there has been a greater increase in manufacturing industry during the same period. The amount of wheat produced to each inhabitant was 20.1 bushels in 1860, and 24 bushels in 1870, showing a gain of nearly 62 per cent. In 1860 the number of manufactories was 3,068; persons employed therein, 15,414; value of products, \$27,849,467; while in 1870 there were 7,186 establishments, with 89,055 employes, and products valued at \$85,624,966, showing an increase in establishments of 4,072, of employes 28,641, and of products of \$57,775,499. Other interesting statistics are as follows:

Public debts, counties, cities, towns	\$3,738,965
Number of libraries	2,857
Number of volumes	880,508
Number of church organizations	1,799
Number of church edifices	1,896
Seating capacity of churches	455,038
Value of church property	\$4,749,983
Number of newspapers	173
Circulation	281,685

The following agricultural, manufacturing, and social statistics are compiled from the United States census for 1870:

IMPROVED LANDS.

Number of acres	5,795,533
Bushels of wheat	25,323,647
Bushels of rye	1,856,736
Bushels of corn	14,875,968
Bushels of oats	19,873,794
Bushels of barley	1,627,569
Pounds of wool	4,086,633
Bushels of potatoes	6,642,845
Pounds of butter	22,257,117
Pounds of cheese	1,494,145
Tons of hay	1,280,432
Pounds of hops	4,738,222
Estimated value of all farm productions	\$77,507,261
Value of manufactures produced	85,624,966
Total taxes levied in each county	4,763,815

PAUPERS.

Number supported during the year	1,538
Cost of support	\$147,879

Railroad enterprise has not been inactive in Wisconsin during the year. The roads from Madison to Portage, and from Eagle to Elkhorn, have been completed; work on the Baraboo air-line road from Madison northwesterly has been pushed forward energetically. The Green Bay and Lake Pepin is in process of construction from Green Bay to New London. The West Wisconsin road has 115 miles completed, and will undoubtedly be finished to the city of Hudson early in the summer of 1871. The Milwaukee and Northern Railroad is open to Oedarburg, and another section will be completed in 1871. At the close of the year it was intended to commence work immediately on the Portage, Winnebago, and Lake Superior Land Grant Railroad, and also on the road from Oshkosh to Ripon, the latter of which, it is expected, will be completed during 1872.

The State Board of Immigration have been

very active in their efforts to induce immigrants to settle in Wisconsin: 24,000 pamphlets have been issued in various languages for distribution, and agents have been employed at Milwaukee and Chicago to give information and assistance to immigrants intending to settle in the State.

The following statement shows the number arriving in Wisconsin for settlement, from April to October 10, 1870, as reported by the Milwaukee and Chicago agents:

MONTH.	German.	Scandinavian.	Great Britain.	Poland.	Holland.	France.	Total.
April	808	182	76	10	43	8	1,197
May	1,936	1,709	248	86	89	69	4,067
June	1,746	1,831	117	184	15	3,893
July	1,703	3,034	70	211	3	5,021
August	538	546	73	108	10	1,270
September	92	712	67	16	4	81	923
October 10, 1870.	15	156	48	18	233
	6,968	8,170	699	560	99	186	16,533

WÜRTEMBERG, a kingdom in South Germany. King, Charles I., born March 6, 1823; succeeded his father, June 25, 1864. Area, 7,532 square miles; population, according to the census of 1867, 1,778,396.*

The army of Würtemberg, in 1869, consisted of 34,953 men, of which 14,153 were in active service.

The session of the Würtemberg Diet was opened on October 21st. A further credit of 3,700,000 florins was demanded by the Government to cover the extraordinary expenses of the war, and was granted, after a short debate, almost without a dissenting vote. Minister Scheurlin then spoke on the question of German unity, and remarked that, as the elections for the present Diet had taken place at a time when that important question had been in an entirely different phase of its development, the Government had thought it advisable to order elections for a new Diet, to which the treaty agreed upon with the North-German Confederation would be submitted for approval. This declaration being given, the minister read a royal decree ordering the dissolution of the Chamber of Deputies.

The elections took place in December, and their result was, as had been anticipated, decidedly in favor of union. On the 19th, the new Diet was opened by the King. The treaty with the North-German Confederation was immediately referred to a committee, and, on December 23d, the Lower Chamber voted in favor of the treaty by 74 yeas against 14 nays. A few days after, the Upper Chamber likewise approved of the treaty by a vote of 26 against 3.

CHASE, Right Rev. CARLTON, D. D.—Birth, 82; death, 82; graduates at Dartmouth, 83; career, 83.

CHASE, Chief-Justice.—Letter in answer to an invitation of colored people, 726; decision on legal tenders, 728; on an investment in Confederate bonds, 730.

CHAUVENET, WILLIAM, LL. D.—Birth, 83; death, 83; eminent mathematician, 83.

Chemical Examination of American Grapes and Wines.—Analysis of Prof. C. M. Wetherill, 83; table of results, 84; analysis of foreign varieties, 84.

Chemistry.—Atomic theory, Sir William Thompson on, 84; defends Caudry's proposition, 84; cites Kinetic theory of gases, 86; refers to experiments of De la Tour, Faraday, and others, 86; address of Prof. H. E. Roscoe before British Association, 86; hydrogenium amalgam, 87; constitution of ammonium amal-

gam, 87; researches on vanadium, 88; no such element as jargonium, 88; ozone, 89; chemical action of sunlight, 89; artificial gems, 90; mineral crystallization by cold, 90; chlorine as a refining agent, 90; anhydrous fluoride of silver, 91; artificial alizarine, 91; paper on, by J. W. Young, 91; use of, as dye-stuff, 92; new explosive powders, 92; "safety explosive compound" of Percy A. Blake, 92; varieties patented by Nobel, 92; invention of the Nora-Gyttorp mills in Sweden, 93; chemical changes of hides into leather, 93; preparation of anthracene, 93; improved method of making lead-paints, 94; manufacture of sulphide of carbon, 94; gas-furnace for chemical operations, 95; composition of iron-rust, 95; presence of carbonic acid in atmosphere, 95; cause of, 95; analysis of ooze or chalk-mud, 95; new volatile and saccharine substance, 96; soluble glass, 96; analysis of soot, 96; exportation of, to West Indies, 96; uses of glycerine, 97; utilization of sewage, 97; relative purity of air, 97; poisonous cosmetics, 98; adulterated aniline dyes, 98; test as to the adulteration of milk, 98.

CHICHESTER, Rt. Rev. ASHHURST TURNER GILBERT, D. D., Bishop of.—Birth, 99; death, 99; career, 99.

Chili.—President, 99; revenue, 99; expenditures, 99; Anglo-Chilian loan, 99; debt, 99; army, 99; navy, 99; provinces, 99; population, 99; area, 99; railroads, 100, 227; railroad over Plaudron Pass, 100; Prof. Rosetti's report of survey, 100; passes over the Andes, 100; Congress elections, 100; Araucanian troubles, 101; decision of President in case between Argentine and British Governments, 101; guano, 101; agriculture, 101.

China.—Government, 101; Emperor's titles and genealogy, 101; regency, 101; population, 101; Manchuria, 101; Corea and Foochoo, 101; province of Ill, 102; Mongolia, 102; suppression of the Taeping, 102; cultivation and use of opium, 102; loss of Toorkistan, 102; revenue and duties, 102; commercial statistics, 102; exports and imports, 102; specie, 102; arrivals and clearances in Chinese ports, 102; outrages on missionaries at Hang-kow, 102; proclamation of Wang, 102; Tien-tsin massacre, 102, 225; attack on Sisters of Charity, 104; murder of French consul, 104; flight of foreigners to American steamship Manchou, 105; imperial decree after massacre, 105; letters of Protestant missionaries to French consul at Shanghai, 105; note of Chinese embassy to French foreign minister, 105; demands of French Government, 106; Burlingame's mission, 106; Mohammedan rebellion in Yunnan, 106; do. in Soongaria, 106; success of rebels, 106; Russians called in, 106; war favorable to Government in 1870, 107; relations of China with United States, 224.

*CLARENDON, Rt. Hon. GEORGE WILLIAM FREDERICK VIL-
LIERS, fourth Earl of*.—Birth, 107; death, 107; at Oxford, 107; early diplomatic career, 107; minister to Spain, 107; in House of Lords, 108; Lord-Lieutenant of Ireland, 108; Foreign Secretary, 108; attitude toward United States, 108.

CLARK, Sir JAMES, Bart., M. D.—Birth, 108; death, 108; career, 108.

COLBURN, ZERAH.—Birth, 108; engineer, 108; editor of scientific journals, 108; suicide, 109.

COLES, Captain COWPER PHELPS, R. N.—Birth, 109; death, 109; naval career, 109; inventor of ship's armor, 109; loss of the Captain, 109.

COLFAX, SCHUYLER.—President of the Senate, 117; speech when serenaded, 725.

Colombia, United States of.—Government, 109; States, 109; area, 109; population, 109; revenue, 109; expenditures, 109; debt, 109; army, 109; commerce, 109;

- railroad, 100; presidential election, 110; message on education, 110; Panama, 110; telegraphs, 110; independence of Spanish Antilles, 110; Darien Canal treaty, 110; United States exploring expedition, 110; Atrato route, 111; Medill's plan for surface canal, 111.
- COLVER, REV. NATHANIEL, D. D.**—Birth, 111; death, 111; in War of 1812, 111; temperance and antislavery advocate, 112; founder of Tremont Temple, Boston, 112; establishes "Colver Institute" at Richmond, 112.
- Commerce of United States.**—Trade with Canada, 112; imports, 112; reexports, 112; exports, 112; foreign exports at New York, 112; goods entered for consumption, 112; for warehousing, 112; free, 112; specie, 112; withdrawals from warehouse, 112; customs at New York, 112; classes of merchandise arrived, 114; exports from New York, 114; comparative commerce of New York, 114; tonnage of United States, 114; ship-building, 115; entrances and clearances from United States for British North America, 115.
- Congregationalists.**—Convention in New York, 115; Pilgrim Memorial Convention at Chicago, 115; American Board of Foreign Missions, 115; Hawaiian churches, 115; missionary funds contributed by native Christians, 115; statistics of missions, 116; American Home Missionary Society, 116; Congregationalism in Great Britain, 116; France, 116; Switzerland, 116; membership, 116.
- Congress, United States.**—Second session of the Forty-first convenes, 117. In the Senate a bill to define and regulate the jurisdiction and powers of the Supreme Court, 117; a bill to repeal appellate jurisdiction in *habeas corpus* cases presented, 118; do. to remove all political disabilities, 118; resolution to annul all political disabilities, 118; do. relative to a denial of the protection of the law, 118; do. on a paper currency, 118; do. on repudiation, 118; do. on a tariff, 118.
- In the Senate, a bill to perfect reconstruction in Georgia, 119; amendment offered, 120; wholly unnecessary, 120; ratification made under duress, 120; the rebel States should be made to feel the power of this nation, 120; a direct impeachment of the whole reconstruction policy, 120; this is not a question which concerns simply the State of Georgia, 121; what is the effect of coercing Georgia to adopt the amendment? 121; we want an evidence of their change of purpose since secession, 121. There are a doctrine and a principle within the present measure which may be returned like a poisoned chalice, 122; proceedings in Georgia, 122; the coercion imposed on Georgia by the proposed amendment, 123; who is to determine when an amendment to the Constitution is ratified? 123; the question as to what is the Constitution belongs to the political department of the Government, 123; there is no coercion about it, 124; no excuse or apology for the action of Georgia, 124; eminently desirable to obtain the free adoption by that people of the fifteenth amendment, 125; the ratification by three-fourths absolutely null and void, 125; let us test it, 125; important that the fifteenth amendment should be ratified, 125; important that we should require Georgia to ratify this amendment, 126; an explanation, 126; without this requirement Georgia will not ratify, 126; what power is legitimate to organize a government for Georgia, 127; shall Congress divest the people of Georgia of this power? 127; if the State will come under the radical banner, all will be right, 127; attempt to justify these proceedings, 128; the provisions of the bill, 128; it is not Georgia alone that is interested, 129; what a spectacle to present to the world! 129; vote on the amendment, 129; agreed to, 130; Georgia did all that your acts under the fourteenth amendment required, and now it is proposed to take her in hand again, 130; two reasons given, 130; proceedings of her Legislature, 130; no members disqualified, 131; can you reinstate the negroes? 131; bill passed, 131.
- In the House, the bill from the Senate passed after a brief debate, 131; vote, 131.
- In the House, the bill to admit the State of Georgia to representation in Congress considered, 132; the features of the bill, 132; facts respecting Georgia, 122; admission of members to this House, 133; hesitation of the Senate, 133; their report, 133; theory upon which this bill is urged, 134; object to prolong the term of office of the men who now control the State, 134; its avowal, 134; design to establish a principle that will authorize Congress to seize any State, 134; the bill passed, 135; the vote, 135.
- In the Senate, the House bill considered, 135; an additional section moved, 135; the Bingham amendment objected to, 135; its adoption by the House has been regarded as a rebel victory, 135; position of the Senator from Illinois, 136; position taken by the Senator from Vermont, 136; when does a State government of a new State go into operation? 136; the true doctrine, 137; shall men take advantage of their own wrong? 137; shall the Bingham amendment, prohibiting the State government to continue in office, be stricken from the bill? 137; progress of reconstruction in Georgia, 137, 138; it is claimed that the State Legislature may continue its existence for two years, 139; on what ground? 139; the act of admission relates back, 139; estopped from accepting any such doctrine, 139; no case in the world can be clearer, 140; as plain and flagrant an attempt at usurpation in Georgia as ever marked the course of any men seeking power by illegitimate means, 140; the Bingham amendment words of despair to loyal men, 140; sources of power in Congress, the two constitutional amendments, 140; also three other sources, each of which is overflowing, 140; necessity of the case, 140; guarantee clause, 140; *a pluribus unum*, 141; this guarantee invoked for the protection of Georgia, 141; act of March 2, 1867, 141; several courses open to Congress all equally within its powers, 142; Congress a High Court of Equity with Georgia at its bar, 142; what is the meaning of all this wild talk about the Constitution being construed in the light of modern progress? 143; can Congress do any one of these things which the provisions of the Constitution say it shall not do? 143; we are engaged in the transaction of grave and important business, 143; features of the bill, 143; can Congress deny to a State, in the form of a condition contained in the act of admission, a power secured to the State by the Constitution of the United States? 144; fundamental principles to be borne in mind in every constitutional discussion, 144; can they point out the provision which confers the power in this case? 144; views of Senators, 144; amendment offered, 145; lost, 145; another offered, 145; substitute proposed, 145; adopted, 145; other amendments moved and adopted or rejected, 146; bill passed, 147.
- In the House, the bill reported with amendments of the Senate, 147; amendments added and the bill passed, 147; Senate refuse to concur, 147; conference, 148.
- In the Senate, a resolution offered to admit Virginia to representation in Congress, 148; she has complied

in all respects with the reconstruction acts, 148; were the members of the Legislature required to take the test oath? 149; amendment moved, 149; remands the State to its previous condition on a certain contingency, 149; manifestly improper, 149; no authority under the Constitution for unequal States, 149; we have a right to protect ourselves against a recision of the fifteenth amendment by Virginia, 150; thus to remand her would nullify her ratification, 150; we have a right to protect a State government after having reconstructed it, 150; the power claimed by some States to retract their ratification, 150; the amendment confesses the power of a State to retract, 151; the proposed amendment of the Constitution utterly void, 151; when an amendment is proposed every State in the Union must be represented in the two Houses of Congress, 151; two-thirds of both Houses are required to propose amendments, 151; Congress will have for evermore the power to protect reconstruction, 152; amendment rejected, 152; another amendment moved, 153; amendment to the amendment offered, 153; modified and agreed to, 153; another amendment moved, 153; rejected, 153; another amendment moved, 153; rejected, 153; another amendment offered, 153; a few questions asked, 154; what theory is entertained by these Senators, 154; is a State constitution void because it conflicts with an act of Congress? 155; if that act is a compact between Congress and a State? 155; there can be no compact between Congress and a State, 155; resolution laid aside and House bill considered, 155.

In the House, a bill for the admission of Virginia reported, 155; the bill, 155; a compromise measure, 156; is the State entitled to be represented in Congress? 156; some think we should be in no hurry to admit her, 156; amendment moved and agreed to, 157; a substitute offered and adopted, 157; bill passed, 157.

In the Senate, the House bill considered, 158; amendment offered, 158; other amendments offered and agreed to, 158; Senators decline to vote, on the passage of the bill, in its favor, 159; bill passed, 160.

In the House, the amendments of the Senate to the bill for the admission of Virginia concurred in, 160.

In the House, a bill reported for the admission of Mississippi, 160; the bill, 160; similar to the Virginia bill, 161; amendment offered and lost, 161; bill passed, 161.

In the Senate, the House bill for the admission of Mississippi to representation in Congress considered, 162; condition of Mississippi, 163; votes on the clauses submitted to the Constitution, 163; committee recommend all conditions to be stricken out of the bill, 163; we have power to put in conditions, 163; these States are in a peculiar condition, 163; the provisions of the Constitution, 164; Mississippi entitled to representation by virtue of the provisions of the Constitution, 164; the argument for State rights proceeds on a misapprehension, 165; nothing clearer than that the equal rights of all must be placed under the safeguard of one uniform law, 165; two great title-deeds of the republic, 165; all these powers essentially national, 165; it is for Congress to determine in its discretion how republican government shall be maintained, 165; human rights, in this land, do not depend on the Congress of the United States, 166; the Federal Government is one of limited powers, 166; amendments rejected and bill passed, 166.

In the House, a bill considered to admit the State of Texas to representation in Congress, 167; amendment offered, 167; rejected, 167; bill passed, 167.

In the Senate, the House bill amended and passed, 168; House concurs, 168.

Message of the President relative to the ratification of the fifteenth amendment, 168; communication of the Secretary of State declaring the vote, 169.

In the House, a bill reported to enforce the fifteenth amendment, 169; the bill, 169, 170; bill passed, 170.

In the Senate, the bill from the House considered, 171; explanation of the bill, 171; a bill reported by the Judiciary Committee, 171; its features, 171; moved to strike out all of House bill after enacting clause and insert Senate bill, 173; the bill, 173, 174; the distinction in doctrine and philosophy between the two bills, 175; the idea of the bill, that the enforcement of the rights of persons to be in the United States courts, 175; how are troops to act to enforce the provisions of the bill? 176; the President may surround the polls with troops, 176; what are the troops then to do? 176; if this can be done in a free country, let us talk no more about the one-man power, 176; the speech better suited for twenty years ago, 177; times have changed if the fugitive-slave law of 1850 is made the model of legislation, 177; what is the language of the constitutional amendment? 177; what is its effect? 177; why not enforce by laws other prohibitions of the Constitution? 178; what is proposed to be done? 178; has not Congress the power to prescribe the mode and manner of electing members of Congress? 178; is this bill limited to members of Congress? 179; it reaches all officers from the highest to the lowest, 179; we should endeavor to guard against the wholesale frauds in the election of President, 179; amendment offered, 179; the amendment, 180; never such a proposition made before in Congress, 180; at midnight you are asked to adopt it, 180; as important as any thing in the bill, 181; amendment to the amendment rejected, 181; reoffered in part, 181; agreed to, 181; other amendments offered and agreed to, 182, 183; bill passed, 183.

In the House, a disagreement with the amendments of the Senate, and committees of conference appointed, 183; report, 183; agreed to, 183.

In the House, a bill introduced to establish a uniform system of naturalization, 184; features of the bill, 184; motion to reject the bill lost, 185; bill passed, 185.

In the Senate, a substitute to the naturalization bill reported, 186; amendments offered, 186; this amendment involves the whole Chinese problem, 186; other amendments offered and rejected, 186; substitute rejected, 187; amendments offered to House bill, 187; moved to strike out the word "white," 187; agreed to, 188; amendment relative to Chinese offered, 188; what is their condition, 188; the Senate do not comprehend this question, 188; you have no means of administering oaths to Chinamen, 188; the proposition to strike out the word white is nothing more nor less than to admit Chinese, 188; it embraces the whole pagan races of the world, 189; if the Chinese come here at all, I do not want them here as slaves, 189; the fate of the proposition to strike out the word "white," 189; its history, 189, 190; foolish interpretation of the Declaration of Independence, 190; it has nothing to do with the question, 191; Congress has plenary power over this subject, 191; exaggeration of immigration, 191; what is the American principle that should guide us here? 192; shall Chinamen be citizens? 192; by the American maxim the Chinaman is entitled to a vote, 193; may Indians be naturalized? 193; moved to reconsider the vote

- on the word "white," 193; what is the objection to Chinese? 194; the simple question is a practical one, how shall we serve our country? 195; motion to reconsider agreed to, 195; has a Chinaman a natural and moral right to become a citizen of the United States? 196; he has not, 195; we may refuse it without violating any right, 195; amendment rejected, 196; other amendments, 196; bill passed, 197; amendments concurred in by the House, 197.
- In the House, a joint resolution on Cuba reported, 197; the resolution, 197; a substitute, 197; amendment, 198; object of the resolution, 198; what is the duty of the United States? 198, 199; declarations of Great Britain and Spain, 200; state of the question, 201; views of the minority, 202; is the acquisition desired, 203; amendments offered, 204; substitute adopted, 204; act appointing legal holidays in the District of Columbia, 204; other proceedings, 205.
